Laudalkammen. 74°17' S, 9°36' W. The NE part of Helsetskarvet, in Milorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Major Arne Laudal (1892-1944), Resistance leader of Milorg in southern Norway during World War II. Executed by the Nazis.

Mount Laudon. 74°13' S, 64°03' W. A prominent mountain rising to about 1600 m, 11 km N of Mount Crowell, at the NW end of the Guettard Range, in southern Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Thomas S. Laudon, USARP geologist at Byrd Station, 1960-61, and a member of the University of Wisconsin geological party to the Eights Station area in the summer of 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Lauff Island. 73°03' S, 126°08' W. A small island, 3 km N of Cape Dart, Siple Island, off the coast of Marie Byrd Land. Discovered and photographed aerially during OpHJ 1946-47. Named by US-ACAN in 1962, for Cdr. Bernard John Lauff (b. Aug. 15, 1919, Milan, Mich. d. Nov. 5, 1995, London), USN, taken Japanese pow at Midway during World War II, and commanding officer of the *Glacier* during OpDF II (i.e., 1956-57). From the 1960s Capt. Lauff was UN naval attaché, and lived in London.

Launch Channel. 66°17' S, 110°30' E. The body of water between Bailey Peninsula and Shirley Island, at the E side of the Windmill Islands, off the Budd Coast. First mapped from air photos taken in 1947 by OpHJ and in 1948 by OpW. Named by US-ACAN in 1963, for the only craft which can safely use this shallow, narrow channel. The Russians call it Proliv Uzkij.

Launch Rock. 67°46' S, 68°56' W. A submerged rock, SW of the Glover Rocks, off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for the *John Biscoe*'s launch used to chart this area in 1963, during a survey by an RN Hydrographic Survey unit. US-ACAN accepted the name later in 1964. It appears on a 1964 British chart.

Mount Launoit. 72°34' S, 31°27' E. Rising to 2470 m, between Mount Brouwer and Mount Imbert, in the Belgica Mountains. Discovered by BelgAE 1958-59, under Gaston de Gerlache, and named by him as Mont de Launoit, for the Count Paul de Launoit (1891-1981), industrialist, a sponsor of the expedition. US-ACAN accepted the name Mount Launoit in 1966.

Mont de Launoit *see* **Mount Launoit**

Islote Laura *see* [1]**Blake Island**

Islotes Laura. 63°39' S, 59°02' W. A group of small islands in Bone Bay, along the NW coast of Trinity Peninsula. Named by the Argentines to signify Blake Island (which the Argentines call Islote Laura) and offlying rocks. *see* [1]**Blake Island**, for the origin of the name.

Cabo Laure. 64°46' S, 63°21' W. A cape at the SE end of Anvers Island, in the Palmer Archipelago. Named by the Argentines for the distinguished Argentine naval officer Diego Laure (1851-1931). Rather surprisingly, the Chileans seem to have accepted the name.

The *Laurence M. Gould*. A 2966-ton, 76-meter American research and supply vessel to Antarctica, built in Louisiana in 1997, and launched in 1998, the 2nd Antarctic research vessel to be built and operated by ECO (her sister ship, the *Nathaniel B. Palmer*, was the first). Named for Larry Gould, she has icebreaking capabilities. Replacing the *Polar Duke*, she was chartered by the NSF from Raytheon, and was in Antarctic waters in 1998-99 and 1999-2000 (both times with Capt. Warren Sanamo as skipper). She was back every season thereafter, plying between Punta Arenas and Palmer Station.

Isla Laurie *see* **Laurie Island**

Laurie, Alec Hibburd. b. April 16, 1907, Edinburgh, son of Malcolm Laurie, professor of zoology at St Mungo's, Glasgow, and lecturer in biology at the Royal College of Surgeons, Edinburgh, by his wife Helena Agnes Phillips. The family moved to Harpenden, in Herts, and after Sedbergh and Cambridge, Alec became a zoologist on the *William Scoresby*, 1929-30, and on the *Discovery II*, from Oct. to Nov. 1930. He was on the *Scoresby* again in 1931, but surveying the Peru current. On April 2, 1932, in Harpenden, he married Margaret Edith Halbert Mason, an American, and they moved to Reigate. In World War II he was part of the inventions group called the Wheezers and Dodgers. He died in April 1987, in Cambridge.

Laurie Automatic Weather Station. 77°33' S, 169°54' E. An American AWS, at an elevation of 23 m, about 13 km ESE of Cape Crozier, on Ross Island. It began operating on Dec. 15, 1981, as Cape Crozier AWS, changed its name for a daughter of Dr. Charles Stearns, the founder of the AWS project, and ended operations on Jan. 12, 1986, when it was removed.

Laurie II. An American automatic weather station, at an elevation of 38 m, installed in Feb. 2000 (*see also* **Laurie Automatic Weather Station**). In Nov. 2004 the tower was raised, and the site was visited again on Jan. 7, 2006.

Laurie Island. 60°44' S, 44°37' W. An irregular-shaped island, about 20 km long in an E-W direction, it is the most easterly of the South Orkneys, and has a permanent ice-cap. Discovered and charted in its W end in Dec. 1821 by George Powell (he did not circumnavigate it). Named Laurie's Island, for Richard Holmes Laurie (1766-1858), Chartseller to the Admiralty, who published a map of the area on Nov. 1, 1822 (*see* **Mapping of Antarctica**). In Jan. 1823, Weddell charted it in its entirety, and, not knowing it had been named, named it Weddell's Island. It appears as such on his 1824 chart. He later changed the name to Melville's Island, for the lord of the Admiralty (*see* **Melville Highlands**), and that name appears on his map of 1825. On the 1838 map drawn up by FrAE 1837-40, it appears as Île Laurie. On a British chart of 1839 it appears as Laurie Island, and on a British chart of 1864 it appears as Lauries Island. Partially triangulated and mapped in 1903, by ScotNAE 1902-04, it was the site of their camp here, a scientific station actually, called Omond House, which, in 1904, became the Argentine base of Órcadas. Re-surveyed by the Discovery Investigations in 1933-34, it appears as Laurie Island on their 1934 chart. US-ACAN accepted the name Laurie Island in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The 1970 Argentine gazetteer accepted the name Isla Laurie.

Lauringrabben. 74°20' S, 9°34' W. A small nunatak in Helsetskarvet, in Milorgfjella, in the N part of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for businessman Kolbein Lauring (1914-87), Resistance leader during World War II.

The *Lauritz Berg*. Norwegian whale catcher working for the *Ronald* in 1910-11.

Lauritzen Bay. 69°07' S, 156°50' E. A very broad bay, about 20 km wide, choked with bay ice and ice shelf, it indents the coast of Oates Land between Cape Yevgenov and Coombes Ridge. The W side of the bay is made up of Coombes Ridge and Matusevich Glacier Tongue. Photographed aerially by OpHJ 1946-47. On Feb. 20, 1959, Phil Law sketched and photographed it, while on an ANARE expedition here on the *Magga Dan*. Named by ANCA on July 22, 1959, for Knud Lauritzen, owner of the *Magga Dan*. US-ACAN accepted the name in 1961.

Cabo Lauro. 67°24' S, 67°58' W. A cape, about 40 km NE of Cape Alexandra (which is the extreme SE point of Adelaide Island), off the W coast of the Antarctic Peninsula. Named by the Chileans for Lauro Miranda, of the Chilean Navy's Instituto Hidrográfico, who did oceanographic work here during ChilAE 1970-71. The Argentines call it Cabo Rosario.

Lausflaeet *see* **Loze Mountain**

Laussedat Heights. 64°47' S, 62°30' W. A series of elevations rising to about 1340 m, and extending eastward for 13 km, in the SW part of Arctowski Peninsula, on the NE side of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base O that same season. Named by UK-APC on Sept. 23, 1960, for Aimé Laussedat (1819-1907), the father of photogrammetry. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

The *Lautaro*. Originally a U.S. ship, she was launched on Nov. 27, 1942, and later bought by the Chilean Navy, serving on various Antarctic expeditions which that country undertook in the late 1940s and early 1950s: 1948-49 (skipper was Capitán de corbeta José Duarte V.); 1950-51 (Capt. Victor Bunster del Solar), 1953-54 (Capt. Patricio Carvajal Prado); 1954-55 (Capt. Hernán Prat V.); 1956-57 (Capt. Jorge Paredes Wetzer); 1957-58 (Capt. Mario Poblete Garcés); 1958-59 (Capt. Pedro Sallato P.); 1961-62 (Capt. Christian Storaker Pozo). A ship of this name was used during ChilAE 1991-92 (Capt. Francisco Guzmán Vial); ChilAE 1992-93 (Capt. Guzmán); ChilAE 1994-95 (Capt. Eduardo Caprile Sebres); ChilAE 1996-97 (Capt. Luis Azócar Nelson); ChilAE 1997-98 (Capt. Azócar); ChilAE 1998-99 (Capt. Azócar); ChilAE 1999-2000 (captains Carlos Risso and Ronald von der Weth).

Canal Lautaro *see* **Argentino Channel**

Isla Lautaro *see* **Lautaro Island**

Islote Lautaro *see* **Låvebrua Island**

Paso Lautaro. 62°22' S, 59°43' W. A narrow marine passage between Fort William and Passage Rock, it extends N toward Chaos Reef and S toward Roca Remolino. Named by the Chileans, presumably after the *Lautaro* (rather than, say, in association with any other feature with the name Lautaro).

Lautaro Island. 64°49' S, 63°06' W. An island, 1.5 km long, just W of Lemaire Island, off the W entrance of Bryde Channel, in Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Probably discovered in Feb. 1898, by BelgAE 1897-99. ChilAE 1946-47 surveyed it, mis-charted it off the NW point of Lemaire Island, and named it Isla Practicante Coloma (the best way to translated "practicante" is as "hospital corpsman"), for Suboficial Luis Coloma Rojas, a member of the expedition. It appears as such on their 1947 chart. Re-surveyed by ChilAE 1948-49, and named by them as Isla Lautaro, for the *Lautaro*. It appears as such on a Chilean chart of 1951, and was the name accepted by the 1974 Chilean gazetteer. On an Argentine chart of 1953, it appears as Isla Graciela, named after the wife of Capt. Benigno Ignacio M. Varela, skipper of the *Chiriguano* during ArgAE 1949-50. However, on an Argentine chart of 1957 it appears as Isla Crámer, named for Ambrosio Crámer (1792-1839), Argentine hydrographer and cattle rancher of French extraction, who was killed in the rebllion against the dictator de Rosas. The 1970 Argentine gazetteer accepted that name. It appears on a 1956 U.S. Hydrographic Office chart as Graziella Island. It was photographed aerially by FIDASE in 1956-57. US-ACAN accepted the name Lautaro Island in 1968, and UK-APC followed suit on Dec. 20, 1974. It appears as such in the 1976 British gazetteer.

Bahía Lauzanne *see* **Lauzanne Cove**

Baie Lauzanne *see* **Lauzanne Cove**

Lauzanne Cove. 65°05' S, 63°23' W. A cove, 3 km wide, immediately S of the Guyou Islands, between Sonia Point and Gaudin Point, on the S side of Flandres Bay, along the Danco Coast, on the W coast of Graham Land. First charted in 1904, by FrAE 1903-05, and named by Charcot as Baie Lauzanne, for Stéphane Lauzanne, chief editor of the French newspaper *Le Matin*, 1900-15. It also appears on their charts as Baie Saint-Lauzanne (which is wrong). It appears as St. Lauxanne Bay (which is very wrong) on a 1943 U.S. Hydrographic Office chart, and, as a consequence on a 1949 Argentine chart as Bahía St. Lauxanne, on one of their 1956 charts as Bahía Saint Lauxanne, and on another from 1958 as Bahía Saint Lauxane. It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Lauzanne Cove on Sept. 23, 1960, and US-ACAN followed suit in 1965. It appears as such on a 1974 British chart. Today, the Argentines call it Bahía Lauzanne.

Lava Crag. 62°00' S, 57°38' W. Rising to 173 m above Destruction Bay, on the E side of King George Island, in the South Shetlands. It is capped by basalt lava from the extinct volcano of Melville Peak, hence the name given by the Poles in 1984.

[1]**Lava Point**. 63°00' S, 60°37' W. A headland built of lava, on the SE coast of Port Foster, on Deception Island. Apparently it appears on Don Hawkes' 1961 geologic map of Deception Island. The Argentines call it Punta Negra (i.e., "black point"). Named descriptively by the Poles on Sept. 1, 1999.

[2]**Lava Point**. 64°53' S, 62°56' W. The SE tip of Bryde Island, at Paradise Harbor, on the Danco Coast, on the W coast of the Antarctic Peninsula. It is built of Lower Cretaceous lavas, hence the name given by the Poles on Sept. 1, 1999.

Lava Tongue Pass. 78°14' S, 162°41' E. A prominent gully bisecting Radian Ridge, in the Royal Society Range of Victoria Land. Named by NZ-APC for the lava flow that fills this feature. US-ACAN accepted the name in 1994. Oddly, although the NZ gazetteer makes references to Lava Tongue Pass in the descriptors of other features, it does not list the pass at all as a feature itself.

Punta Lavalle. 67°02' S, 67°32' W. A point, just W of Bagnold Point, on the S side of Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. Named by the Argentines.

Lavallee Peak. 72°04' S, 164°56' E. Rising to 2175 m, just NW of Gibraltar Peak, in the West Quartzite Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Lt. David Oliver Lavallee (b. May 17, 1925, Los Angeles. d. Dec. 15, 1990), USN, biological diver at McMurdo, 1963-64, 1964-65, and 1966-67. NZ-APC accepted the name on Dec. 4, 1968.

Lavallee Point. 76°37' S, 159°50' E. The most northerly point on Shipton Ridge, in the Allan Hills of Victoria Land. Discovered and reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for "Lieut. Lavallee," helicopter pilot who helped in establishing the expedition in the Allan Hills that year. US-ACAN accepted the name in 1965, and NZ-APC followed suit on July 15, 1965, with ANCA also accepting the name on Aug. 10, 1966. Reading this entry in conjunction with Lavallee Peak (above), one wonders if there could possibly have been two Lt. Lavallees, USN, in that part of Antarctica at the same time, one a scuba diver (the David O. Lavallee of **Lavallee Peak**) and this one, a helo pilot? US-ACAN and NZ-APC are both unilluminating on the subject. The answer is it is one and the same man, and he was a diver, not a helicopter pilot. There was no helo pilot named Lavallee. The reason for even mentioning all this, of course, is to solve this problem. It is quite clear that all the gazetteers concerned, including the SCAR gazetteer which collates information from the others, all three have such self-proclaimed high standards for the inclusion of an entry (i.e., they have to be fully satisfied with their research before an ID number is allocated). Yet, and this is quite clear from all their respective descriptors, that they were well aware of the conundrum, but couldn't reconcile a diver being a helo pilot as well. So, they deliberately left it vague, with no further checking.

Låvebrua Island. 63°01' S, 60°35' W. Rising to an elevation of 95 m above sea level, it lies 1.1 km ESE of South Point, on Deception Island, in the South Shetlands. Charted by Foster during the *Chanticleer* Expedition of 1828-31. Named by Norwegian whalers operating out of Deception Island in the 1920s. The descriptive name means "the threshing-floor bridge" in Norwegian. On Capt. Johannessen's 1919-20 chart it appears as Bismark (sic). It was re-charted by the Discovery Investigations in 1927. ChilAE 1946-47 re-surveyed it, and named it Islote Lautaro, after the *Lautaro*. It appears as such on their 1947 chart. ArgAE 1946-47, did the same thing, but named it Islote Chaco, for the *Chaco*. It appears as such on their 1948 chart. It was re-surveyed in 1948-49, by an RN Hydrographic Survey unit led by Cdr. David Penfold, who named it Jon Islet, for his youngest son, Jonathan D. "Jon" Penfold (b. 1943, Bromley, Kent). It appears on Penfold's 1949 chart. On Nov. 15, 1951, UK-APC accepted the name "Låvebrua (Jon) Islet," but on a 1953 British chart it appears as Låvebrua Islet, and that was the name accepted by UK-APC and US-ACAN, and which appears in the 1955 British gazetteer and the 1956 American Gazetteer. Sometimes the accent mark was used, sometimes not, and spelling mistakes occurred occasionally. On July 7, 1959, UK-APC changed the name to Låvebrua Island, and US-ACAN accepted that in 1963. The 1970 Argentine gazetteer accepted the name Islote Chaco, while the 1974 Chilean gazetteer accepted Islote Lautaro. Last plotted in late 2008, by the UK.

The *L'Aventure*. French yacht, skippered by Christian Galard, which visited the Antarctic Peninsula in 1998-99, and 1999-2000.

LaVergne Glacier. 85°19' S, 170°45' W. A tributary glacier, about 11 km long, flowing E along the S slopes of Seabee Heights, and entering Liv Glacier close SW of McKinley Nunatak. Named by US-ACAN in 1966, for Lt. Cdr. Cornelius B. de LaVergne, deputy commander of Antarctic Support Activity, at McMurdo, during OpDF 61 (i.e., 1960-61).

Monte Lavín *see* **Neilson Peak**

Gora Lavochkina *see* **Rileyryggen**

Lavoisier Island. 66°12' S, 66°44' W. A low island, 28 km long and 8 km wide, between Rabot Island and Watkins Island, and SSW of Renaud Island (it is separated from that island by Pendleton Strait), in the Biscoe Islands. It is completely covered in ice which falls away to the sea in the form of cliffs. Its summit, about 300 m above sea level, is smooth with some undulations on the surface. Roughly charted by FrAE 1903-05, and named by Charcot as Île Nansen, for Fridtjof Nansen (*see* **Mount Nansen**), the Norwegian Arctic explorer. It appears as such on Charcot's 1906 map. A British map of 1908 has a Nansen Island lying N of the island named by Charcot, but this island does not exist (and was therefore expunged from further maps). On a 1914 map, Bongrain calls it Île Renaud, confusing it with Renaud Island. It appears on all international maps and charts, and other references, as Nansen Island (or some translated name thereof), and as such appears in the British gazetteer of 1955. It even appears on Rymill's 1938 map (reflecting BGLE 1934-37) as Nansen Islands (taking in the neighboring islands as well). ChilAE 1946-47 named it Isla Serrano, after 1st Lt. Fernando Serrano Reinella, surgeon on the *Iquique* during that expedition (*see also* **Punta Serrano**). It appears as such (i.e., Isla Serrano) on a Chilean chart of 1962, and in the Chilean gazetteer of 1974. In 1948 the Chileans were also referring to it as Isla Domeyko, and Isla Ignacio Domeyko, in honor of Ignacio Domeyko (*see* **Domeyko Glacier**). It appears as such (i.e., as Isla Domeyko) on some of their maps of that period. It appears on a 1953 Argentine map as Isla Mitre, named for Gen. Bartolomé Mitre (1821-1906), statesman, soldier, historian, poet, and journalist. FIDASE photographed it aerially in 1956-57, and, in order to avoid confusion with the other Nansen Island (q.v.), farther north, it was renamed by FIDS as Lavoisier Island, for Antoine-Laurent Lavoisier (1743-1794), the French chemist and pioneer in the study of metabolism. UK-APC accepted this new situation on Sept. 23, 1960, and US-ACAN followed suit in 1962. It appears as such on a British chart of 1961.

Lavrenov Point. 62°20' S, 59°34' W. A point, 2.7 km W of Newell Point and 2.6 km SE of Catharina Point, on the N coast of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the painter Tsanko Lavrenov (1896-1978).

Lavris Peak. 76°49' S, 125°56' W. A snow-capped peak rising to 2745 m, in the NE portion of Mount Hartigan, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS

from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for William C. Lavris, meteorological technician at Byrd Station in 1959.

Bukhta Lavrova. 66°30' S, 126°57' E. A bay, SE of Cape Spieden, on the Banzare Coast. Named by the Russians.

Roca Law *see* **Low Rock**

Law, Nel. b. 1914, as Nel Isobel Allan. A painter, she married Phil Law on Dec. 20, 1941. She was at Mawson Station in 1960-61, the first woman ever to visit an Antarctic ANARE station. She died in 1990.

Law, Phillip Garth. The big name in Australian Antarctica after Mawson. b. April 21, 1912, Tallangatta, Victoria, son of schoolteacher Arthur James Law and his wife Lillie. A teacher himself, boxer, mountain climber, skier, and physicist, he married Nel Allan (*see* **Law, Nel**, above), in 1941. He was senior adviser to ANARE in 1947 and 1948, being appointed senior scientific officer on July 7, 1947. From 1949 he was leader of ANARE, as well as being, for the same period, director of the Antarctic Division for the Department of External Affairs. As such he was head of all of Australia's Antarctic endeavors from 1949 to 1966, and went south on several occasions. For exact dates of Law's career during this period, *see* **ANARE**. In 1949-50 he was an observer on the *Norsel* during NBSAE 1949-52. In 1954 he established Mawson Station, and in 1957-58 led a traverse across Australian Antarctic Territory (*see also* the Bibliography). He retired in 1977 and, after that, accompanied several tourist tours to Antarctica as lecturer. He died on Feb. 28, 2010.

Law Base. 69°23' S, 76°22' E. Also called Law Station. Summer station built by the Australians in 1986-87, on Broknes Peninsula, 3 km from the coast, in the Larsemann Hills, on the Ingrid Christensen Coast of Princess Elizabeth Land, 2 km from the new Progress Station. Biology and geology were studied. One got there by helicopter. As the years went by, it became superfluous to Australian Antarctic needs, and they gave it to the Rumanians, who were looking for a permanent station. On Jan. 13, 2006, the base was inaugurated as Law-Racovitza Station.

Law Dome. 66°44' S, 112°50' E. A large ice dome, 200 km across and almost circular, rising to 1395 m, directly S of Cape Poinsett, about 125 km ESE of (behind) Casey Station, it forms the bulk of the land behind the Budd Coast of Wilkes Land. Roughly mapped by USGS from air photos taken during OpHJ 1946-47. Between 1962 and 1965 the dome was subjected to intensive glaciological and geophysical surveys by ANARE. Named by ANCA on Aug. 10, 1966, for Phil Law. US-ACAN accepted the name in 1970. Drilling was conducted here, and in Feb. 1993 bedrock was reached. Nicknamed "Law's Head," in reference to Phil Law's bald dome.

Law Dome A Automatic Weather Station. 66°44' S, 112°45' E. An Australian AWS, at an elevation of 1376 m, installed on May 27, 1997 next to Law Dome AWS (see below). It was removed on Feb. 25, 1998.

Law Dome Automatic Weather Station. 66°44' S, 112°50' E. An Australian AWS, at an elevation of 1376 m, 110 km inland from Casey Station, which operated from April 17, 1986 to July 2, 1998, part of that time concurrently with Law Dome A.

Law Dome Station. 66°53' S, 113°15' E. Australian summer scientific base, really a refugio, on Cape Folger, in the vicinity of the Budd Coast.

Law Dome Summit South *see* **DSS Automatic Weather Station**

Law Glacier. 84°05' S, 161°00' E. About 16 km wide, between the S end of the Queen Elizabeth Range and the MacAlpine Hills, it flows gradually ENE from the Polar Plateau to Bowden Névé. Named by the NZ Southern Survey Party of BCTAE in 1957 for B.R. Law, general manager of ICI (New Zealand), and deputy chairman of the Ross Sea Committee for that expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on Dec. 7, 1976.

Law Hut. Tim Bowden, in his book *The Silence Calling*, describes this hut as the "ingeniously designed incinerating toilet at Mawson [Station]." It was named for Phil Law, "an honour deeply appreciated by the former ANARE director."

Law Islands. 67°15' S, 59°02' E. A group of small islands off the E end of Law Promontory, at the W side of the entrance to Stefansson Bay. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. First visited by an ANARE party led by Peter Crohn in 1956, and named by ANCA on Feb. 18, 1958, in association with the nearby promontory. US-ACAN accepted the name in 1961.

Law Landing. 68°55' S, 77°55' E. A shingle beach on Macey Peninsula, in the Rauer Islands. On Jan. 11, 1957, an ANARE party led by Phil Law on the *Kista Dan* was searching in this area for the site for a new Australian station, and made the first landing on this beach. Named by ANCA on March 7, 1991.

Law Plateau. 73°05' S, 70°25' E. A high ice plateau, rising to about 1100 m, it extends eastward from the Mawson Escarpment, between that escarpment and the Grove Mountains, behind the Ingrid Christensen Coast. First mapped by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for Phil Law. US-ACAN accepted the name on Oct. 20, 2009. First plotted in 73°00' S, 72°00' E, it has since been replotted.

Law Promontory. 67°15' S, 58°47' E. Between 24 and 28 km long, and mainly ice-covered, it extends generally eastward from the coast just N and NW of Stefansson Bay. First mapped by personnel on the *William Scoresby* in Feb. 1936. Photographed aerially by LCE 1936-37, and remapped from these photos in 1946, by Norwegian cartographers, who named it Breidhovde (i.e., "broad knoll"). Renamed by ANCA on Nov. 28, 1955, for Phillip Law, who flew over and photographed this promontory in Feb. 1954. It was first visited by Peter Crohn's ANARE party in May 1956. US-ACAN accepted the Australian naming in 1965.

Law-Racovitza Station. 69°23' S, 76°23' E. On Jan. 13, 2006, the Australians, who no longer needed their Law Base, on Broknes Peninsula, in the Larsemann Hills, in Princess Elizabeth Land, officially donated it to the Rumanians, who had been looking for a permanent Antarctic base, and at the inauguration it was renamed Law-Racovitza. The spelling of the name Racovitza is used here deliberately to conform to the way Emile Racovitza's name is spelled in English, even though the name is invariably seen as Law-Racovita Station. Teodor Negoita was the first leader. The transfer became official on Feb. 20, 2006.

Law Station *see* **Law Base**

Lawford, Lionel Robert Patrick. b. March 27, 1916, Nairobi. In 1933 he became a midshipman, RN; a sub lieutenant in 1937; lieutenant in 1938; he was serving on the *Janus* in 1941 when he was decorated for bravery when his ship took part in the sinking of an Italian convoy in the Mediterranean (Battle of Cape Matapan). Later in the war he commanded the destroyer *Windsor*. He was promoted from lieutenant commander to commander in 1950, and in Jan. 1954 took command of the *Veryan Bay* (going aboard on March 4) in Antarctica, 1954-55. He married, retired in 1958, and lived in Hawthorne, Durham. He died in Richmond, Yorks, in 1977.

Lawinennunatak. 72°48' S, 166°14' E. In the Lawrence Peaks, in Victoria Land. Named by the Germans.

Cape Lawrance. 78°30' S, 164°00' W. The S entrance to Floyd Bennett Bay, on the W side of the Bay of Whales, on the Ross Ice Shelf. Named by Byrd during ByrdAE 1928-30, for Charles Lanier Lawrance (1882-1950), inventor of the Wright Whirlwind JC5 airplane engine, and president of the Wright Aeronautical Corporation. The cape has gone now, broken away when the Bay of Whales reconfigured. It appears in the 1958 NZ gazetteer, for historical purposes.

Lawrance, George. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

[1]**Mount Lawrence**. 67°51' S, 62°31' E. Rising to 1230 m, just N of Mount Coates, in the David Range, in the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Named by ANCA on Oct. 11, 1960, for Joseph M. "Joe" Lawrence, diesel mechanic at Mawson Station in 1959. US-ACAN accepted the name in 1965.

[2]**Mount Lawrence** *see* **Lawrence Peaks**

Lawrence, George *see* **Lawrance**

Lawrence, Stuart James. b. Jan. 23, 1944, Cleethorpes, Lincs. He joined BAS on Aug. 10, 1970, as 2nd officer on the *John Biscoe*. He was promoted to 1st officer on the *Bransfield* in 1972-73, and was acting master on the same vessel before being promoted to actual master of that ship in 1974. In 1975-76 he and Chris Elliott

skippered the *John Biscoe*, but after that cruise he returned to the *Bransfield*, as skipper with John Cole, until (at least) 1999-2000, by which time he had done 30 summers in Antarctic waters. He married Sue, who died just before he retired in 2003 to Cornwall.

Lawrence Channel. 67°21' S, 67°35' W. A marine channel running N-S in Laubeuf Fjord, between Arrowsmith Peninsula (on the Loubet Coast) and Wyatt Island, on the W coast of Graham Land. Named by UK-APC on Nov. 13, 1985, for Capt. Stuart Lawrence. US-ACAN accepted the name.

The *Lawrence H. Gianella*. A 39,624-ton, 615-foot U.S. Military Sealift Command oil tanker, named for a World War II hero. Built by the American Shipbuilding Company, in Tampa, she was launched in 1985. She was in several times at McMurdo, for example in Jan. 1999. She was there for the 2007-08 season, arriving at McMurdo on Jan. 8, 2008, discharged 6.8 million gallons of fuel, and left on Feb. 3, 2008.

Lawrence Hills. 72°29' S, 68°44' E. A group of rock hills on the E side of the Lambert Glacier, 9 km N of the Mawson Escarpment. Mapped by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA on Nov. 27, 1973, for Thomas Fulton Coleman "Tom" Lawrence, deputy secretary (research and engineering) of the Australian Department of Manufacturing Industry (formerly the Department of Supply), who, being very pro-Antarctic, was the perfect man to place in charge of the Antarcic end of the department. It was Tom Lawrence who had much to do with changing the name of Wilkes Anare Station to Casey Station. The Russians call them Nunataki Tatishcheva.

Lawrence Nunatak. 84°50' S, 67°02' W. Rising to 1540 m, 5 km W of Snake Ridge, along the ice escarpment which trends SW from that ridge, in the SW part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lawrence E. Brown, USARP surveyor who wintered-over at Palmer Station in 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Lawrence Peaks. 72°50' S, 166°20' E. Also called Mount Lawrence. A mountain complex of high peaks separating Seafarer Glacier from the head of Mariner Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1966-67, for the leader of that party, J.E.S. Lawrence. NZ-APC accepted the name, and US-ACAN followed suit in 1968. The peaks, all individually named by the Germans, are (working from N to S): Lawinennunatak, Aklestadberg, Wenzelberg, Endelsleiste, Nicks Nase, Pedersenberg, Weiss-Spitze, Brandalberg, Kotheberg, and Schnidrighorn.

Lawrie Glacier. 66°04' S, 64°36' W. Flows NW into the head of Barilari Bay, between Mount Genecand and Mezzo Buttress, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Robert Lawrie (1903-1982), Lancashire-born alpine and polar equipment specialist, who assisted BGLE in their choice of equipment. US-ACAN accepted the name in 1971. Mr. Lawrie became a well-known mountain climber, and, following in his father's footsteps as a bootmaker, developed and manufactured his own climbing footwear, moving his business to London and providing boots for Everest expeditions from 1933 onwards, including the famous one in 1953. He was also a famous racing driver. Note: The British plot this feature in 66°05' S, 64°30' W.

Glaciar Laws *see* **Laws Glacier**

Laws, Richard Maitland "Dick." b. April 23, 1926, Whitley Bay, Northumberland. He got his degree in natural sciences from Cambridge in 1944, and in 1947 Brian Roberts inducted him into FIDS as a biologist, to study seals at Signy Island. He sailed from Tilbury on the *John Biscoe* on Dec. 19, 1947, bound for Port Stanley, and was leader and zoologist at Signy Island Station for the winters of 1948 and 1949. He left Antarctica in 1950, went to Port Stanley, and from there took the *Andes* up to Rio, and then across to Britain, arriving at Southampton on April 16, 1950. On board, he met Maureen Holmes, and they stayed in touch. Back in Cambridge in 1950, he registered for a PhD, and then in 1951 wintered-over as first base leader in South Georgia (Arthur Mansfield was there too, as were Ian Biggs, Allan MacArthur, and Jack Newing). His proposals of a revised elephant seal management program were accepted by the British government. In 1953-54 he was 7 months in Antarctic waters, aboard the *Balaena*, as junior whaling inspector (the only way one could get to study whales in those days; he measured a 97-foot blue whale). He then joined the National Institute of Oceanography, as a biologist. In 1954 he married Maureen in Estoril, Portugal (Mansfield was at the rather riotous wedding, as was Sam Glassey, the met man from Port Stanley; *see* **Falkland Islands Dependencies Aerial Survey Expedition**). He resigned from the NIO in 1966, and Cambridge sent him out to Uganda, to study large animals at the Nuffield Unit of Tropical Animal Ecology, at the Queen Elizabeth National Park. He then moved on to Kenya, as director of the Tsavo Research Project, studying the ecology and physiology of the elephant and hippo. In 1969 Sir Vivian Fuchs offered him the job of head of BAS's life sciences division, and on June 12, 1973 he succeeded Fuchs as director of BAS (until 1987). In 1985 he became master of St Edmund's House, Cambridge.

Laws Glacier. 60°38' S, 45°38' W. A confluent glacier system flowing S into Marshall Bay, on the S coast of Coronation Island, in the South Orkneys. Surveyed in 1948-49 by Fids from Signy Island Station, and named by UK-APC on March 31, 1955, for Dick Laws (q.v.) who, with Derek Maling, surveyed this glacier. US-ACAN accepted the name in 1956. It was further surveyed by Fids from Signy between 1956 and 1958. The Argentines call it Glaciar Laws.

Lawson, Howard. b. 1904, Hannibal, Mo. He went to sea at 15, and was a seaman on the *Bear of Oakland*, 1933-34, during the 1st half of ByrdAE 1933-35. He went back to work for the Matson Navigation Company, as a bosun, and was still sailing for them in 1943, still as a bosun.

Lawson Aiguilles. 67°50' S, 66°15' E. A line of sharply-pointed peaks in the S part of Mount Rivett, in the Gustav Bull Mountains of Mac. Robertson Land. One of the peaks was used as an astronomical station by Dave Carstens, surveyor at Mawson Station in 1962. Another was used as a tellurometer station in Feb. 1968, by John Manning, surveyor at Mawson in 1967 (and, of course, in the summer of 1967-68). Named by ANCA for Edgar J. "Eddie" Lawson, diesel mechanic who wintered-over at Mawson Station in 1964 and 1967, and who assisted Manning with the survey work in 1968. US-ACAN accepted the name in 1971.

Lawson Creek. 77°43' S, 162°16' E. A meltwater stream, 400 m long, flowing SE from the SW tip of Rhone Glacier to the NW corner of Lake Chad, in Taylor Valley, in Victoria Land. Named by US-ACAN in 1996, for Wendy Julia Lawson, glaciologist at the University of Canterbury, NZ, leader of an expedition that studied glacial processes on Taylor Glacier during the 1991-92 and 1992-93 summer seasons.

Lawson Nunatak. 67°56' S, 62°51' E. A small, tooth-like nunatak, 3 km (the Australians say 5 km) SE of Branson Nunatak, in the Masson Range of the Framnes Mountains, in Mac. Robertson Land. Surveyed by John Manning's party from Mawson Station in Feb. 1968, its position being fixed by intersection from trigonometrical stations. Named by ANCA on Oct. 22, 1968, for Eddie Lawson (*see* **Lawson Aiguilles**), who helped with the survey. US-ACAN accepted the name in 1971.

Lawson Nunataks. 70°47' S, 159°45' E. A line of nunataks about 6 km long, 7.4 km SW of Keim Peak, in the Usarp Mountains, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Gerald J. Lawson, USARP biologist at McMurdo, 1967-68. ANCA accepted the name.

Lawson Peak. 66°11' S, 65°36' W. A peak, a prominent landmark when seen from the SW, it rises to about 600 m, 5.5 km SE of Cape Evensen, on the NE side of Auvert Bay, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers. Named by UK-APC on Sept. 23, 1960, for Sir Arnold Lawson (1867-1947), British ophthalmic surgeon whose work in tinted glass led to improvements in snow goggles. US-ACAN accepted the name in 1965.

Lay-brother Rock. 60°34' S, 46°13' W. A rock awash, 3 km SW of Despair Rocks, and 11 km NW of Route Point, WNW of the Larsen Islands, off the W end of Coronation Island, in the South Orkneys. Roughly charted by Petter

Sørlle and Hans Borge in 1912-13. On Sørlle's 1930 chart it appears as Dovzboen (i.e., "Dove's rock"), which may be named after the whale catcher *Dove*. Whether Sørlle named it that in 1912, when he was actually doing the charting, is not known. It seems to appear on a 1917 British chart as Monigote Rock. Monigote is the Spanish word for "lay-brother," but why the British would call it that is not clear. In fact, this reference sounds doubtful in the first place. What sounds a lot less dubious is the 1930 Argentine chart that has it as Roca Monigote. What seems most likely is that the Argentines named it Roca Monigote, in 1930, or thereabouts, during one of their relief expeditions to Órcadas Station, and that the 1917 reference is an error (should, perhaps, say 1927). Surveyed and named by personnel on the *Discovery II* in 1933, it appears on their 1934 chart as Lay-Brother Rock. It appears pluralized as Rocas Monigote on a 1945 Argentine chart. US-ACAN accepted the name Lay-brother Rock (i.e., with a small "b"), while UK-APC accepted Lay-Brother Rock (i.e., with a big "b") on Sept. 8, 1953. The British gazetteer of 1955 accepted the big "b." The name accepted by the 1970 Argentine gazetteer was Roca Monigote.

Layered Peak. 69°22' S, 76°24' E. A conical hill consisting of several horizontal layers of strata, on the E side of Zhongshan Station, in the Larseman Hills. Named descriptively by ANCA on Nov. 24, 1987. The Chinese have also named this hill, but one cannot be sure which of 3 possibles it is — Fuyu Ling, Nanxingan Ling, or Gushi Yan.

Layman Peak. 84°51' S, 179°35' E. Rising to 2560 m (the New Zealanders say about 2700 m), 5 km E of Mount Bellows, and 6 km N of McIntyre Promontory, in the NW portion of Anderson Heights, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed by USAS from West Base on Flight C of Feb. 29-March 1, 1940. Surveyed by Albert P. Crary during the U.S. Ross Ice Shelf Traverse of 1957-58, and named by him for Frank Layman, mechanic with that traverse, and with the Victoria Land Traverse Party of 1958-59. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Layther, Norman Frank. b. Feb. 28, 1924, Auckland, NZ, son of a farmer. In 1941 he went into the British merchant marine, as a 3rd radio officer on the *Charles F. Meyer*, plying the Atlantic during World War II, and in Arctic convoys. He was at the Sicily landings, and was torpedoed twice, once in the Mediterranean and once in the Atlantic. After the latter episode he wound up being lodged in a Bowery flophouse in NYC. He was picked as radioman for Base B, during the winter of 1944, during Operation Tabarin, and fulfilled the same function at Port Lockroy Station in the winter of 1945. Immediately after his return to Britain, in 1946, he left London for NZ, married Natalie in 1955, in 1960 was in England, living in Horley, Sussex, and in 1961 moved to Putney, London. He had become a pilot during World War II, and in the 1950s and 60s flew commercial aircraft in Malaya, and in 1969 was in Bahrein, as a pilot for Gulf Air, until he lost the hearing in one ear and had to retire. In the 1970s he lived at Wimbledon. He died there in 1983.

Cape Lázara. 64°20' S, 56°55' W. The most northeasterly point of Snow Hill Island. Named Cabo Costa Lázara by ArgAE 1953-54, for Lt. Costa Lázara, Argentine Navy pilot killed in a flying accident at the Espora Naval Base. It appears as such on an Argentine chart of 1957, and was the name accepted by the 1970 Argentine gazetteer. UK-APC accepted the name Cape Lázara on May 13, 1991, and US-ACAN followed suit.

Baie Lazarev *see* **Lazarev Bay**

Lazarev, Mikhail Petrovich. b. Nov. 3, 1788, in Vladimir, near Moscow, he graduated from the Russian Naval Academy in 1803, and then spent 5 years in the British Navy, serving all over the world. On his return to Russia he fought in the battles against the Anglo-Swedish fleet in the Baltic. Between 1813 and 1816 he sailed around the world as commander of the *Suvorov*, and from 1819 to 1821 he was 2nd-in-command of von Bellingshausen's expedition, commanding the *Mirnyy* to the Antarctic, and circumnavigating the continent. He was one of the first to sight the continental ice shelf, on Jan. 27, 1820. He commanded the *Kreiser* as that vessel sailed around the world between 1822 and 1825, and in 1829 commanded the *Azov* at the Battle of Navarino. In 1833 he was promoted to vice admiral, and became captain of the Black Sea Fleet. He died in Vienna in July 1851, while undergoing medical treatment.

Lazarev Bay. 69°29' S, 72°05' W. A rectangular bay, 24 km long and 22 km wide, between Cape Vostok (on Alexander Island) and the N point of Rothschild Island, and bounded on the S by ice shelf joining the 2 islands. Part of the Wilkins Ice Front used to form the head of the bay. The N coast of Alexander Island was first seen from a great distance in Jan. 1821, by von Bellingshausen's expedition of 1819-21. The bay itself was first mapped by Searle of the FIDS in 1959-60, from 1947 air photos taken by RARE 1947-48. He plotted it in 69°20' S, 72°00' W. Named by UK-APC on March 2, 1961, for Mikhail Lazarev. US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. It was replotted from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, it appears in the 1977 British gazetteer.

Lazarev Coast *see* **Lazarevkysten**

Lazarev Ice Shelf. 69°37' S, 14°45' E. About 80 km long, it fringes the Princess Astrid Coast of Queen Maud Land, between Leningradskiy Island and Verblyud Island. First photographed aerially by GermAE 1938-39, and plotted from these photos. Explored and mapped by SovAE 1959, and named by the USSR as Shel'fovyj Lednik Lazareva, for Mikhail Lazarev. US-ACAN accepted the translated name Lazarev Ice Shelf in 1971. The Norwegians call it Lazerevisen (i.e., "the Lazarev ice").

The *Lazarev More*. Soviet fisheries vessel in Antarctic waters in 1985-86 (*see* **The *Mys Juno***). Name means "the Lazarev Sea."

Lazarev Mountains. 69°32' S, 157°20' E. A chain of mountains, extending southward for about 40 km (the Australians say about 57 km) from Magga Peak, in Oates Land, along the W side of Matusevich Glacier, southward of Eld Peak, and separated from the Wilson Hills by Pennell Glacier. Photographed aerially by OpHJ 1946-47, and again by SovAE 1957-58, being named by the latter as Gory Lazareva, for Mikhail Lazarev. ANARE re-photographed them aerially in 1959, and Phil Law, that year, named them the Jacka Mountains, for Dr. Frederick John "Fred" Jacka, who had wintered-over at Heard Station in 1948, and who was to be head of the Mawson Institute in Adelaide, 1965-92. However, ANCA accepted the name Lazarev Mountains on Nov. 19, 1963, and US-ACAN followed suit in 1967.

Lazarev Scientific Station. 69°59' S, 12°55' E. Soviet base established 30 m above sea level on the Princess Astrid Coast, on March 10, 1959. Base leader for the 1959 winter was Yuriy Aleksandrovich Kruchinin, and for the 1960 winter, Leonid Ivanovich Dubrovin. The station closed in Feb. 1961, and was replaced with Novolazarevskaya (New Lazarev).

Lazarev Sea. 67°30' S, 4°00' E. Beyond the Fimbul Ice Shelf, in the Weddell Sea. Named by the Russians as More Lazareva (which means the same thing), and plotted by them in 68°00' S, 7°00' E. The name More Lazareva is in the SCAR gazetteer, but Lazarev Sea is not.

Lazarev Seamount. 60°09' S, 36°49' E. A submarine feature out to sea beyond the coast of Queen Maud Land. Named for Mikhail Lazarev.

Lazarev Trough. 65°35' S, 130°00' E. An undersea feature. Named by Galina Agapova, of the Geological Institute, of the Russian Academy of Sciences, as Zhëlob Lazareva, for Mikhail Lazarev. The name was accepted by international agreement in Aug. 1985.

Gory Lazareva *see* **Lazarev Mountains**

Kupol Lazareva. 70°18' S, 5°30' E. A dome, due S of Pryamougol'naya Bay, in Queen Maud Land. Named by the Russians.

More Lazareva *see* **Lazarev Sea**

Shel'fovyj Lednik Lazareva *see* **Lazarev Ice Shelf**

Zhëlob Lazareva *see* **Lazarev Trough**

Lazarevisen *see* **Lazarev Ice Shelf**

Lazarevkysten. 68°51' S, 90°44' W. The name means "the Lazarev coast" in Norwegian, and indicates the coast, 19 km long, between the W point of Cape Eva in the N to the point of Zavadovskijbreen in the S, on Peter I Island. Named for Mikhail Lazarev. Name also seen as Lazarew Küste.

Lazarew Küste *see* **Lazarevkysten**

Lazzara Ledge. 77°23' S, 160°46' E. A flat-topped ridge rising to about 1900 m, NE of Mount Dragovan, it comprises the central part of the divide between Haselton Glacier and Wreath Valley, in th Apocalypse Peaks of Victoria Land. Named by US-ACAN in 2005, for Matthew A. "Matt" Lazzara, of the USAP

Antarctic Meteorological Research Center field team, who worked in various Antarctic locations, including McMurdo, for 8 summer seasons between 1994 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

LCE 1936-37 *see* **Lars Christensen Expedition**

Le Bastion. 66°49' S, 141°23' E. A rocky eminence in the N part of Port Martin. So named in 1950 by the French because from its advance position and its shape it seems to be a bastion guarding the French station.

Le Bélier. 66°40' S, 139°59' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name signifies the zodiac sign Aries.

Le Blanc, Jean-Marie-Louis. b. Dec. 27, 1817, Pordic, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Le Blanc, Ralph *see* **LeBlanc**

The *Le Boulard*. French 14-meter aluminum sloop, skippered by Jean Masse-Monzo, which visited the South Shetlands and the Antarctic Peninsula in 1995-96 and 1996-97, and the Antarctic Peninsula in 1998-99. She was back in 2008-09.

Le Breton, Louis. b. Jan. 15, 1818, Douarnenez, Brittany. Draftsman and surgeon's aide (surgeon 3rd class) on the *Astrolabe* during FrAE 1837-40. On Dec. 4, 1839, the day they were leaving Hobart for the ice, Ernest Goupil, the artist, died, and Le Breton took over his responsibilities. He died in France in 1866.

Le Bris, Yves-Sylvain. b. July 14, 1813, Quimper, France. Ordinary seaman on the *Zélée* during FrAE 1837-40. He ran at Guam on Jan. 10, 1839.

Le Cancer. 66°40' S, 139°59' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name signfies the zodiac sign Cancer.

Le Capricorne. 66°40' S, 139°59' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name signifies the zodiac sign of Capricorn.

Le Carrefour. 66°50' S, 139°18' E. The crossroads of a marked trail, used as a storage area, of provisions and matériel, on the continental glacial plateau, SW of Dumont d'Urville Station, about 33 km from the coast of Adélie Land. Named by the French in 1956.

Roca Le Cerf *see* **Klo Rock**

Le Cerf, Jean-François. b. April 19, 1815, Tremelor, France. Junior seaman on the *Zélée* during FrAE 1837-40. He left sick at Valparaíso on May 28, 1838.

Le Couteur Glacier. 84°42' S, 170°30' W. Between 24 and 28 km long, it flows from the NW slopes of Mount Hall and Mount Daniel, then NW along the W side of the Lillie Range, into the Ross Ice Shelf, immediately E of Gough Glacier. Named by the Southern Party of NZGSAE 1963-64, for Peter C. Le Couteur, geologist with the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Le Couteur Peak. 72°09' S, 165°59' E. A prominent peak, rising to about 2600 m, between Cirque Peak and Omega Peak, in the N part of the Millen Range, at the head of Pearl Harbor Glacier. Named by the Southern Party of the NZ Federated Mountain Clubs Antarctic expedition of 1962-63, for Peter Le Couteur (*see* **Le Couteur Glacier**). NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Caleta Le Dantec. 63°21' S, 55°32' W. A cove, 11 km ESE of Cape Alexander, on the S coast of Joinville Island, off the extreme NE coast of Trinity Peninsula, off the Antarctic Peninsula. Named by the Chileans for 1st Lt. Fernando Le Dantec Gallardo, of the Chilean Navy, officer on the *Piloto Pardo*, who took part in hydrographic work in this area in 1971. The Argentines call it Caleta Bianchi.

Le Déan, Yves. b. Feb. 21, 1813, Plougnet, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

The *Le Diamant*. French tourist vessel in Antarctic waters in 2004-05, and 2005-06. She could carry 199 passengers.

Le Donjon. 66°40' S, 140°02' E. A rocky island NE of Lamarck Island, in the Géologie Archipelago. Named by the French in 1977, for its silhouette, which reminded them of a dungeon.

Le Doux, Joseph-Louis. b. Feb. 23, 1816, Boulogne. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Le Feuvre, Charles Frank "Charlie." Pronounced "Le Fever" (at least it was in Antarctica). Nicknamed "Todd." b. Nov. 29, 1928, St. Peter Port, Guernsey, Channel Islands, son of Charles George Le Feuvre and his wife Hilda Florence Le Tissier. He joined the Army as a volunteer, becoming a sergeant with the Royal Signals, and a signalman with the 16th Airborne. He became radio operator on the first part (1955-57) of the British Royal Society Expedition, wintering-over at Halley Bay in 1956. He arrived back in London on March 13, 1957, on the *Magga Dan*. In 1958 he joined FIDS, wintered-over at Signy Island Station in 1959, then, in 1959-60 he summered at Base D, and in the winter of 1960 was stationed at Base Y. In 1963 he was back at Base D for the winter. He pioneered diving programs in Antarctica, and also spent a short while on Bird Island, in South Georgia, with Harry Dollman, preparing the way for Lance Tickell's albatross program. On Dec. 6, 1964, he arrived in Australia, went to Alice Springs in 1965, worked as catering manger on an Aborigine settlement there for about a year, and then moved to Melbourne. In 2007 he moved out to Healesville, Vic., with his second wife Teresa. *See also* **LeFeuvre Scarp**.

Le Goupil *see* **Legoupil**

Le Gros, Austin Philip Bichard. b. Jan. 1888, St Peter's Parish, Jersey, Channel Islands, but raised in St. Helier, the third son of building contractor John Clarence Le Gros and his wife Marie Louise. In 1903 he apprenticed in sail as a merchant seaman to Alexander Richards, of Aberdeen, for 4 years, and plied the seas all over the world from Sydney to the Americas to Calcutta. In 1915, by which time he had progressed to 2nd mate, he moved permanently to Sydney, married Olive Edith Rate in Hurstville in 1915, and settled in Kogarah. In Feb. 1916 he entered the service of the Australian government, and on Dec. 13, 1916 signed on as 2nd mate on the *Aurora*, 1916-17, when that vessel went to Cape Evans to relieve the Ross Sea Party of BITE 1914-17. After the expediton, on Aug. 22, 1917, he signed up in Sydney for the Australian Imperial Force, to go to Europe to fight the Germans, and a month later his mother died in Essex (his father had died in 1909, in London). He was a private, a sapper in the Engineers, and on one occasion was jailed for 5 days for using insubordinate language to an officer. He finally got to Egypt just as the war was ending. Back in Sydney in 1919, he went back to sea, and in 1924 was serving on the *Goulburn*. He died in Kogarah in 1968, and Olive died there in 1970.

Le Gros Rocher. 66°40' S, 139°51' E. A major rocky massif, overlooking the sea via a steep slope to the E, in the part of Cap Géodésie, W of the Astrolabe Glacier Tongue. Named descriptively by the French at the time they took their first gravimetric measurements, in 1958. The name has been discontinued.

Le Guillou, Élie-Jean-François. b. June 30, 1806, Quimperle, Finisterre, France. Surgeon 2nd class on the *Zélée* during FrAE 1837-40. His behavior during the expedition was so bad that Dumont d'Urville specifically recommended to the French government that he be excluded from all honors. However, this didn't stop Le Guillou from being awarded the Légion d'Honneur, albeit as late as 1860. His book on the expedition was published in 1842. In 1846 he was in Madagascar, and in 1856 he was finally promoted sugeon 1st class. In 1857 he was in French Guiana, where he contracted a liver ailment, and almost died. He was medical officer with the corps de Francs-Tireurs during the Franco-Prussian war of 1870-71.

Massif Le Havre *see* **Havre Mountains**

Montes Le Havre *see* **Havre Mountains**

Le Jaune, Joseph. b. Aug. 24, 1817, Amiens. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Le Kouglof. 66°39' S, 140°01' E. A large, rocky massif with a sharp point, at the extreme SW of Cuvier Island, in the Géologie Archipelago. So named by the French because its shape reminded them of the kouglof, an Alsatian cake. The name was discontinued in 2009.

Le Lama. 66°39' S, 139°57' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name signifies both a llama and a lama.

Le Lieur de Laubepin, Théodore-Charles. b. Oct. 11, 1820, Nantes. Apprentice seaman on the *Astrolabe* during FrAE 1837-40.

Le Lionceau. 66°40' S, 140°01' E. A small, rocky island in the Géologie Archipelago. Named by the French in 1977, in relation (size-wise) to Lion Island.

Canal Le Maire *see* **Lemaire Channel**

Isla Le Maire *see* **Lemaire Island**

Le Marais. 66°46' S, 141°34' E. A small area, mainly ice-covered, but bounded by several rock exposures, forming part of the peninsula behind Cape Découverte. Charted by the French, and named by them in 1951. The name means "the marsh." During the summer months, muddy pools of melting water form here. US-ACAN accepted the name in 1962.

Île Le Mauguen *see* **Carrel Island**

Le May Range *see* **LeMay Range**

Le Mestre, François-Marie. b. April 28, 1807, Ploemeur, France. Ordinary seaman on the *Zélée* during FrAE 1837-40. He ran from the scurvy-ridden expedition at Talcahuano, Chile, on May 3, 1838.

Le Moigne, Louis-Léon. b. Jan. 21, 1810, Rochefort. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Le Petit Prince. 61°54' S, 58°03' W. A lone offshore stack in Corsair Bight, W of False Round Point. Named by the Poles in 1984, for St.-Exupéry's hero.

Le Petit Prince Seamount *see* **Saint-Exupéry Guyot**

Le Phare. 66°48' S, 141°28' E. The summit of Cape Mousse, between the Port-Martin peninsula and Cape Découverte, in the Géologie Archipelago. Named descriptively by the French in 1950 ("phare" means "lighthouse").

(Cerro) Le Poing *see* **Admiralen Peak**

Le Poing *see* **Wegger Peak**

Le Pont de la Croix. 66°40' S, 140°00' E. A glaciated area in the form of a bottleneck, in the NW part of Pétrel Island, in the Géologie Archipelago. So named by the French because below its surface is a watercourse connecting Chenal du Lion with Chenal Ouest. The name, meaning "the bridge of the cross," was discontinued in 2009.

Le Pré *see* **Anse du Pré**

Le Preux, Aristide-Robert. b. March 25, 1813, Verdun. Ordinary seaman on the *Zélée* during FrAE 1837-40. He died of scurvy off the coast of Chile, on April 1, 1838.

Le Prince, Eugène. b. Oct. 30, 1814, Pleslin, France. Junior seaman on the *Astrolabe* during FrAE 1837-40. On May 12, 1838, after the expedition returned from Antarctica with scurvy running riot, he ran at Talcahuano, Chile, on May 12, 1838.

Le Rocher Gris. 66°41' S, 139°56' E. A rocky islet at the head of Baie Pierre Lejay, midway between Gouverneur Island and Cap André Prud'homme. Named descriptively by the French in 1958 ("the gray rock").

Le Sagittaire. 66°40' S, 139°59' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name signfies the zodiac sign Sagittarius.

Mount Le Schack *see* **Mount LeSchack**

Le Scorpion. 66°40' S, 139°59' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name signfies the zodiac sign Scorpio.

Le Signal. 66°40' S, 140°01' E. A rocky dome in the center of Rostand Island, it forms the summit of that island, in the Géologie Archipelago. Named by the French in 1977, for the triangulation signal station they placed here. The name has been discontinued.

Le Souffleur. 66°39' S, 139°58' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. "Souffleur" is a French theatrical term, meaning a "prompter."

The *Le Sourire*. French yacht which made 2 trips in Antarctic waters in 2002-03, skippered by Hugues Delignières. She had a crew of 2. She was back in 2005-06, carrying 8 passengers.

Le Taureau *see* **Île Fiorèse**

Le Vaux Peak. 76°40' S, 125°43' W. A small peak on the E side of the crater rim of Mount Cumming, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Howard A. Le Vaux, aurora physicist at Byrd Station in 1959, and a member of the Marie Byrd Land Traverse Party of 1959-60.

Le Verseau. 66°39' S, 140°00' E. A little islet, between Port-Martin and Cape Jules, to the NE of Zélée Glacier, in the Géologie Archipelago. In accord with other names given by the French for islets surrounding Pétrel Island that were named after Zodiac signs, this was named Îlot du Verseau, for Aquarius. The name was later changed to Le Verseau.

Leabotnen. 74°19' S, 9°38' W. A cirque (or corrie) between Holstnuten and Rognnesegga, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Rolv Lea (1891-1941), Resistance leader in Oslo during World War II, executed by the Nazis; and his brother, Leiv Lea (1895-1942), who died during Gestapo interrogation.

Leach Nunatak. 77°36' S, 146°25' W. A nunatak, 6 km WSW of Mount Ronne, in the Haines Mountains, in the Ford Ranges of Marie Byrd Land. First mapped by USAS 1939-41. Remapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Edwin B. Leach, USN, aviation electronics technician, the Williams Field division chief responsible for the maintenance of electronic equipment on all U.S. aircraft in at McMurdo during OpDF 67 (i.e., 1966-67).

Leads. Cracks in the pack-ice through which ships pick their way.

League Island *see* **League Rock**

League Rock. 67°46' S, 69°04' W. A distinctive rounded rock, rising to 6 m above sea level, SW of Box Reef, on the NW side of Quest Channel, off the SW end of Adelaide Island. Charted by an RN Hydrographic Survey unit on the *John Biscoe*, in early 1963. It appears as League Island in the 1963 British gazetteer, but on Feb. 12, 1964 it was renamed League Rock by UK-APC, and US-ACAN accepted that name later in 1964. It appears as such on a British chart of 1964. It was so named because it lies one league away from Base T, on Adelaide Island.

Leah Ridge. 70°13' S, 65°00' E. A rock ridge 1.5 km NW of Dawson Nunatak, and 8 km SE of Mount Béchervaise, in the Athos Range of the Prince Charles Mountains. It was intersected in Nov. 1966, by an ANARE survey party, and climbed by the party that December. Named by ANCA for the code word "Leah," used at Mawson Station to identify that ANARE party. US-ACAN accepted the name in 1971.

Cape Leahy. 73°43' S, 119°00' W. An ice-covered cape marking the N extremity of Duncan Peninsula, Carney island, along the coast of Marie Byrd Land. Discovered and photographed aerially on Jan. 24, 1947, during OpHJ 1946-47, and named by Byrd for Fleet Admiral William Daniel Leahy (1875-1959), USN, naval adviser to President Truman at the time, and who helped to get the expedition off the ground. US-ACAN accepted the name in 1957.

Cerro Léal *see* **Léal Bluff**

Léal Bluff. 63°53' S, 57°35' W. A rounded bluff rising to 485 m, 3 km inland (NE) from Cape Lamb, on the SW side of Vega Island. Named by ArgAE 1958-59 as Cerro Léal (they thought it was a hill, hence the term "cerro"), it appears as such on their 1959 chart. Major (later General) Jorge Edgard Léal (b. Salta, Argentina), was deputy leader at Esperanza Station in the winter of 1953. He was base leader at San Martín Station in 1954, and at General Belgrano Station for the winter of 1957. He led the first Argentine land traverse to the South Pole, in 1965 (*see* **South Pole** for details, and also **Operación 90**). On Dec. 31, 1969, he was made first director of the new Dirección Nacional del Antártico, as part of the Argentine Ministry of Defense. Surveyed by Fids from Base D between 1958-61. On Feb. 12, 1964, UK-APC accepted the name Leal Bluff (i.e., without the accent mark), and US-ACAN followed suit that year. The accent mark was added later. Since 1978, the Argentines have also (indeed, it seems, instead) called it Cerro Rodríguez Argumedo, named for Evaristo Sixto Rodríguez Argumedo (*see* **Deaths**, 1957).

Lealand Bluff. 67°27' S, 59°33' E. A high, rounded bluff which falls steeply to the sea, at the SW corner of William Scoresby Bay, in the E part of Enderby Land. The rock cliffs of this bluff trend northwestward for about 1.5 km to Brown Bluff. Named by personnel on the *William Scoresby*, who charted this area in Feb. 1936. US-ACAN accepted the name in 1953.

Leander Glacier. 71°56' S, 167°41' E. A major tributary glacier, it flows from the area W of Mount Black Prince, and then S between Shadow Bluff and the McGregor Range, into the N side of Tucker Glacier (at its junction here, it is deceptively narrow and unimpressive), in the Admiralty Mountains. Partially surveyed by NZGSAE 1957-58, who also observed upper parts of the glacier from Mount Midnight and Mount Shadow, and from here they saw that it has a very large névé surrounded by many magnificent peaks rising to over 3000 m above sea level. They named it for their World War II ship, the *Leander* (which did not visit Antarctica). NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Leap Year Fault. 72°00' S, 166°00' E. A 250-

km-long linear feature, mostly under ice, which separates the Robertson Bay geological group (71°30' S, 167°E) on the E from the Bowers geological group (72°S, 165°E) on the W, in the Transantarctic Mountains. It stretches from McKenzie Nunatak in the N to Mount Burton and Mount McCarthy in the north.

Leap Year Glacier. 71°42' S, 164°15' E. A tributary glacier between the Molar Massif and Mount Sterling, in the Bowers Mountains, it flows SE into Black Glacier. Named by the Northern Party of NZGSAE 1963-64, which arrived here in the new year of 1964 (a leap year), after climbing out of Sledgers Glacier. NZ-APC accepted the name in 1964, and US-ACAN followed suit that year.

Lear Spire. 78°05' S, 161°30' E. A distinctive pointed spire rising to 2470 m, 5 km S of Ugolini Peak, in the Colwell Massif of Victoria Land. Named by US-ACAN in 1995, for D'Ann Figard (b. Jan. 22, 1949, Alexandria, Va.), of USGS, SCAR librarian. Miss Figard began as a USGS cartographer with the Special Mapping branch (later called National Mapping), married her boss John Stacey Lear, Jr., was transferred to International Activities, and for 10 years supervised the modernization of the SCAR library in Reston, Va. She later married Steven Atkinson.

Leary, George Robert William. b. early 1868, at No. 1 Vine Court, just off Porter Street, Hull, Yorks, but raised partly next door to the Spread Eagle Inn, son of Lincolnshire sailor William Leary and his wife Mary Ann Elizabeth "Lizzie" Morris. In 1890, in Hull, he married Elizabeth Oakley, a girl from Harwich, Essex, and they moved into the house next door to his parents, at Abercrombie Terrace, in Hull, and raised a family. He joined the Merchant Navy, and was a seaman on the *Montebello*, when, in July 1902, he transferred to the *Morning*, for the 1903 and 1904 relief voyages during BNAE 1901-04. He became a cook in June 1904, and was discharged in October of that year. He died in 1941, in Hull.

Leask, John *see* **The *Simbra***

Leavett, James *see* **USEE 1838-42**

Leay Glacier. 65°10' S, 63°57' W. Flows NNW into Girard Bay to the W of Hotine Glacier, on the Graham Coast, on the W coast of Graham Land. First roughly mapped in 1909, by FrAE 1908-10. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Petra Leay (b. 1928), map curator with the Directorate of Overseas Surveys, 1953-59, who contributed to the mapping of the Antarctic Peninsula. It appears on a British chart of 1960. In 1957, in Northwood, Mdsx, she married Derek Searle of the FIDS. US-ACAN accepted the name in 1971. In the 1974 British gazetteer, it appears misspelled as Levy Glacier. From 1984 to 1988, Mrs. Searle was senior map officer at BAS.

Ozero Lebed' *see* **Lebed Lake**

Lebed Lake. 68°37' S, 78°13' E. A saline lake in the S part of the Vestfold Hills. Photographed aerially during OpHJ 1946-47, again by SovAE 1956, and yet again by ANARE in 1957 and 1958. Named by the Russians as Ozero Lebed' (i.e., "swan lake"). ANCA accepted the name Lebed Lake.

Gora Lebedeva. 73°23' S, 62°05' E. A nunatak, NE of Trail Glacier, on the S side of Mount Menzies, in the Prince Charles Mountains. Named by the Russians.

LeBlanc. *See also* **Le Blanc**

LeBlanc, Ralph Paul "Frenchy." b. Oct. 1921, St. Martinville, La., son of grocer Albert W. LeBlanc and his wife Vienna. He joined the USNR, and was a lieutenant (jg) at Guadalcanal, surviving two plane crashes during World War II. He was of Breaux Bridge, La., when he became co-pilot of *George-I*, the Martin Mariner which crashed on Thurston Island on Dec. 30, 1946 (*see* **Deaths**, 1946), during OpHJ 1946-47. Lt. Kearns was flying the plane at the time, and he pulled LeBlanc from the burning wreckage. But LeBlanc was badly burned, and his feet were frozen. His legs had to be amputated en route home on the *Philippine Sea*, and he lost the use of one arm. He was transferred to the Naval Hospital in Philadelphia, and then back to Breaux Bridge, where he married and started a family. He died on Aug. 21, 1994.

Cape LeBlanc. 71°44' S, 98°46' W. The ice-covered N extremity of Noville Peninsula, which is also the northernmost point on Thurston Island. Named by US-ACAN in 2003, for Frenchy LeBlanc.

Cape Lebland *see* **Cape Leblond**

Cabo Leblond *see* **Cape Leblond**

Cap Leblond *see* **Cape Leblond**

Cape Leblond. 66°04' S, 66°36' W. Forms the NE end of Lavoisier Island, as well as the SW entrance point of Pendleton Strait, in the Biscoe Islands. Charted in 1909, by FrAE 1908-10, and named by Charcot as Cap Leblond, for Auguste Leblond (1856-1934), mayor of Rouen, and president of the Norman Geographical Society. He led the reception committee at Rouen to welcome back Charcot's expedition. It appears as such on Charcot's maps. It appears on a 1914 British chart as Cape Leblond, on a 1946 USAAF chart as Cape Le Bland, and on a U.S. Hydrographic Office chart of that year as Cape Le Blond. As a consequence it appears on a Chilean chart of 1947 as Cabo Le Blond. The name Cape Leblond was accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1961. It was photographed aerially by FIDASE in 1956-57. It appears on a 1962 Chilean chart as Cabo Leblond, and that was the name accepted by the 1974 Chilean gazetteer. Since 1978 it has been appearing on Argentine charts as Punta Florida, named for the Argentine victory in the battle of Florida (this is not pronounced as the U.S. state is pronounced in English, that is). However, the Argentines generally refer to this feature as Cabo Leblond.

LeBreton, Louis *see under* **Le Breton**

Mount Lechner. 83°14' S, 50°55' W. A prominent mountain, rising to 2030 m, it surmounts the SW end of the Saratoga Table, in the Forrestal Range (it is the highest mountain in that range), in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Maj. Ralph C. Lechner, U.S. Army, airlift coordinator on the staff of the commander, U.S. Naval Support Force, Antarctica, 1964-66. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Ilôt de l'Échouage. 66°40' S, 140°00' E. A rocky island at the SW entrance to the channel that the French call Chenal Pedersen, S of Marégraph Island, and immediately off Carrel Island, in the Géologie Archipelago. Named by the French for an occasion on which they ran aground here during a reconnaissance.

Mount Leckie. 70°26' S, 66°00' E. A roughly circular outcrop rising to about 150 m above the plateau, about 4 km SSE of Mount Gardner, and about 5 km E of the Martin Massif, in the Porthos Range of the Prince Charles Mountains. Visited in Dec. 1956, by Bill Bewsher's ANARE Southern Party of 1956-57. Named by ANCA on July 22, 1957, for Flight Lieutenant Douglas Walter "Doug" Leckie (b. June 30, 1920), RAAF, who commanded the Antarctic Flight at Mawson Station when it was set up in the summer of 1953-54, and again, at the same station, for the winter of 1956, and at Wilkes Station in the summer of 1958-59. US-ACAN accepted the name in 1967.

Leckie Range. 67°55' S, 56°27' E. A group of peaks, about 80 km S of Edward VIII Bay (the Australians say about 38 km SSE of that feature), in Kemp Land. Various individual peaks in this range were spotted from Norwegian whaling ships, and appear on the 1947 Norwegian whalers' chart No. 3. These include Poloksen and Polhesten, as well as what was later identified as Leslie Peak. Others in the range include Mount Allport, and Mount Cook, the highest point on the main massif of the range. Named by ANCA on Aug. 11, 1955, for Doug Leckie (*see* **Mount Leckie**). US-ACAN accepted the name in 1962.

Mount Lecointe. 83°09' S, 161°09' E. A conspicuous mountain, rising to 3620 m, 5 km NW of Mount Rabot, in the Queen Elizabeth Range, the central of 3 mountains (Mount Bonaparte being the third) lying by themselves, about 70 km inland from the Ross Ice Shelf, and about 42 km SSE of Mount Markham. Discovered by Shackleton during BAE 1907-09, and named by him for Georges Lecointe. US-ACAN accepted the name, and NZ-APC followed suit.

Lecointe, Georges. b. April 29, 1869, Antwerp. Belgian navigating officer and astronomer. As early as 1895, de Gerlache picked him to be hydrographer, 2nd-in-command of BelgAE 1897-99, and captain of the *Belgica*. After the expedition, in South America, he left the ship, and traveled through the Andes. He was later scientific director at the Royal Astronomical Observatory at Uccle, in Belgium. He was interned in Holland, 1914-18, and died in Uccle on May 27, 1929.

Lecointe Guyot. 65°06' S, 93°00' W. An undersea tablemount out to sea beyond Marie Byrd Land. It has a least depth of 280 m. Discovered by the *Polarstern* in April 1995. The name was suggested in Feb. 1997, by Rick Hagen, of the Alfred Wegener Institute, for Georges Lecointe. The name was accepted by international agreement in June 1997.

Lecointe Island. 64°16' S, 62°03' W. An elongated island, 6 km long, and 680 m high, the largest of a group of islands, it is separated from the NE coast of Brabant Island by Pampa Passage to the NW, in the Palmer Archipelago. First roughly surveyed as a probable island, in Jan. 1898, by BelgAE 1897–99. De Gerlache named the N extremity of this island Cap Kaiser. Its insularity was confirmed when FrAE 1903–05 charted it. It seems that whalers in the area were calling it Kaiser Island around 1920, for that was the name shown on charts prepared by Lester and Bagshawe during their British Imperial Antarctic Expdition of 1920–22. ChilAE 1946–47 named the island (or at least part of it) Isla Alice, after Alice Ingeborg Wilson (*see* **Ensenada Alice**), and they still call the whole island by that name (the name was accepted by the Chilean gazetteer of 1974). It appears on an Argentine chart of 1953 as Isla Kaiser, and that was the name accepted by the 1970 Argentine gazetteer. Surveyed by Fids on the *Norsel* in April 1955. The entire island was named by UK-APC on Sept. 4, 1957, as Lecointe Island, for Georges Lecointe, and it appears as such on a British chart of 1959. US-ACAN accepted that name in 1965.

Mount Lecroix *see* **Mount Lacroix**

Punta Lecuyer *see* **Lécuyer Point**

Lécuyer Point. 64°50' S, 63°30' W. Forms the S side of the entrance to the harbor of Port Lockroy, on the W coast of Wiencke Island, in the S entrance to Gerlache Strait, in the Palmer Archipelago. Discovered by FrAE 1903–05, and named by Charcot. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. The Argentines call it Punta Lécuyer, and the Chileans tend to call it Punta Lecuyer (i.e., without the accent).

Leda. 66°40' S, 140°01°E. A reef in the Baie de Gémeaux, W of Bernard Island, in the Géologie Archipelago. Named by the French in 1977, as Récif Léda, for the figure in Greek Mythology, the name was later shortened and de-accented.

Récif Léda *see* **Leda**

Leda Ridge. 70°52' S, 68°32' W. Runs NE-SW on the W side of Ganymede Heights, E of Jupiter Glacier, in the E part of Alexander Island. Photographed aerially by RARE 1947–48, and mapped by FIDS cartographers in 1959–60 from those photos. BAS did geological work here in 1983–84. In association with Jupiter Glacier, this ridge was named by UK-APC on Nov. 13, 1985, for Leda, one of the satellites of the planet Jupiter. US-ACAN accepted the name.

Ledda Bay. 74°23' S, 131°20' W. A shallow embayment, or bight, indenting the N side of Grant Island for 20 km, off the coast of Marie Byrd Land. Discovered and charted by the *Glacier* on Feb. 4, 1962. Named by US-ACAN in 1966, for Raymond J. Ledda, Jr. (b. Nov. 30, 1930. d. Oct. 7, 2002, Oyster Bay, NY), USN, quartermaster on the ship at the time.

Lednik Ledenëva. 71°25' S, 12°53' E. A glacier, due E of Mount Deildenapen, in the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Ledenika Peak. 63°38' S, 58°45' W. Rising to 1020 m in Srednogorie Heights, 2.68 km SW of Razvigor Peak, 6 km SE of Hanson Hill, 6.66 km E of Wimple Dome, and 10.89 km NNW of Sirius Knoll, it surmounts Malorad Glacier to the N and Russell West Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Ledenika Cave, in northwestern Bulgaria.

Ledingham, Roderic Bentley "Rod." b. 1943, Shardlow, Notts, but raised partly in London, Bolton, and Inverness, son of Leslie A. Ledingham and Hilda L. Lloyd. After Aberdeen University, he joined BAS in 1966, as a meteorologist, and wintered over at Adelaide Island (Base T) in 1967, and as officer-in-charge at Fossil Bluff Station in 1968. In 1970 he emigrated to Australia, and worked as a geologist there. He and his wife, Jean (*see* **Women in Antarctica**, 1977) wintered-over at Macquarie Island twice, in 1977 and 1980, with Rod as base leader both times, and Jean as medical officer. He spent many summers with ANARE, and was voyage leader on several ANARE expeditions, as well as many times in Antarctica as a lecturer on tourist ships.

Obryv Ledjanaja Stena. 79°25' S, 29°45' W. A bluff, NE of Parry Peninsula, in Coats Land. Named by the Russians.

Gora Ledjanoj Bugor. 73°03' S, 69°04' E. A nunatak, due S of Cruise Nunatak, on the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Nunataki Ledjanye. 72°55' S, 60°40' E. A group of nunataks, NE of Mitchell Ridge, in the Goodspeed Nunataks, in the southern Prince Charles Mountains. Named by the Russians.

Lednikov Bay. 66°34' S, 92°22' E. Also called Glacial Bay. A small bay, just W of McDonald Bay, on the coast of Queen Mary Land, East Antarctica. Mapped in 1955 from photos taken during OpHJ 1946–47. Re-mapped by SovAE 1956, and so named by the Russians that year as Bukhta Lednikovaja (i.e., "glacier bay"), because of its location at the terminus of a small glacier ("lednik" means "glacier" in Russian). ANCA translated the name on Oct. 11, 1960, and US-ACAN accepted the translated name in 1962.

Bukhta Lednikovaja *see* **Lednikov Bay**

Kotlovina Lednikovaja *see* **Amery Basin**

Ozero Lednikovoe. 71°33' S, 71°23' E. A lake, due W of Nunatak Narvskij, in the Prince Charles Mountains. Named by the Russians.

Nunatak Ledorez. 71°29' S, 65°21' E. A very isolated nunatak, SW of Mount Hay, in the Prince Charles Mountains. Named by the Russians.

Gora Ledovaja. 72°45' S, 68°38' E. An isolated nunatak, NE of Petkovic Glacier, in the Mawson Escarpment. Named by the Russians.

Ozero Ledovoe. 70°40' S, 68°44' E. A lake, just to the W of Jetty Peninsula, in Mac. Robertson Land. Named by the Russians.

Astronomicheskij Punkt Ledovyj. 71°20' S, 64°18' E. An astronomical point, rather than an actual feature, SW of Mount Lugg, in the Prince Charles Mountains. Named by the Russians.

The *Lee* *see* **The *Samuel P. Lee***

Mount Lee. 71°33' S, 74°05' W. A somewhat isolated, snow-covered mountain, rising to 590 m, in the central part of Harris Peninsula, between Verdi Inlet and Brahms Inlet, on Beethoven Peninsula, in the SW part of Alexander Island. Discovered by RARE 1947–48, roughly mapped by them, and named by Finn Ronne as Mount Paul Lee, for Rear Admiral Paul Frantz Lee, USN, who came from the Bureau of Ships in 1946 to become chief of the Office of Naval Research, and who organized naval support for Ronne's expedition. US-ACAN accepted the name. Re-mapped in 1959–60 by Searle of the FIDS, from the RARE photos. He plotted it in 71°27' S, 74°35' W. UK-APC accepted the name on March 2, 1961. It was replotted from USN air photos taken in 1967–68, and from U.S. Landsat images taken in Jan. 1973. Jackie Ronne told a story about Admiral Lee. After the expedition, he came up to her, opening the conversation with "Madame, you have disappointed me." "Why," she asked, in all innocence, assuming that he was about to upbraid her for going on the expedition, as a publicity stunt. "Because you did not produce the first citizen of the Antarctic." Admiral Lee retired in 1948.

Lee, William P. "Bill." Oiler from Seattle, he was on the *North Star* during USAS 1939–41.

Lee Glacier. 81°15' S, 159°07' E. Flows SE into Jorda Glacier, in the Churchill Mountains. At its head are Mount Frost and Mount Coley. Named by NZ-APC on Feb. 27, 2003, for Sandra Lee, a former minister of conservation, for her contribution to environmental protection in Antarcica and its surrounding waters. US-ACAN accepted the name in 2003.

Lee Island. 67°35' S, 62°52' E. Just W of Teyssier Island, and just N of Entrance Island, in Holme Bay, off the coast of Mac. Robertson Land. Discovered and photographed aerially by LCE 1936–37, and mapped from these photos (but, apparently not named) in 1946, by Norwegian cartographers. Named by ANCA on July 22, 1959, for Reginald Thomas "Pat" Lee (b. April 19, 1922), diesel mechanic at nearby Mawson Station in 1957 and again in 1966. US-ACAN accepted the name in 1965. It has been visited many times by ANARE parties.

Lee Lake. 77°02' S, 162°08' E. A tiny lake at the SE corner of Redcliff Nunatak, on the S flank of Mackay Glacier, in Victoria Land. Redcliff Nunatak projects as a rounded mound of granite 300 m above the glacier surface. The ice is piled up on the W side and sweeps around the N and S sides to the lee side, where it is much lower, and where this lake has formed from meltwater. Named descriptively by Grif Taylor's Western

Journey Party, during BAE 1910-13. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

[1]**Lee Nunatak**. 70°28' S, 65°56' E. About 4 km S of Mount Gardner, in the Porthos Range of the Prince Charles Mountains. Mapped by Australian cartographers from ANARE aerial photography, and named by ANCA on July 31, 1972, for Evan Lee, who wintered-over as weather observer at Davis Station in 1963.

[2]**Lee Nunatak**. 71°01' S, 159°58' E. Rising to 1920 m, 6 km NW of Penseroso Bluff, in the NW part of the Daniels Range of the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Chun Chi Lee, USARP biologist at McMurdo, 1967-68.

Lee Peak. 86°25' S, 151°35' W. A peak along the W side of Scott Glacier, 5 km N of Mount Denauro, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Frank P. Lee, aerial photographer during OpDF 1965, OpDF 1966, and OpDF 1967.

Mount Leech. 72°09' S, 99°47' W. A peak, 8 km NW of Mount Hubbard, in the Walker Mountains of Thurston Island. First delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Robert E. Leech, entomologist from the Bernice P. Bishop Museum, who took part in a USARP airborne insect program in the areas of the Ross Sea, the Bellingshausen Sea, and the Amundsen Sea, in 1959-60. First plotted in 72°05' S, 99°59' W, it has since been replotted.

Punta Leech. 62°11' S, 58°50' W. A point projecting out to sea toward a small island, about 1550 m E of Suffield Point, in the N part of Fildes Bay, King George Island, in the South Shetlands. Named by the Chileans for entomologist Roberto Leech, of the Insituto Antártico Chileno, who took part in ChilAE 1967-68. *See also* **Mount Leech**.

Mount Leek. 75°49' S, 68°31' W. A mountain, rising to about 1100 m, W of Spear Glacier, it is the most northeasterly of the Hauberg Mountains, in Ellsworth Land. Discovered aerially by RARE 1947-48. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for New Zealander Gouke M. Leek, glaciologist at Byrd Station, 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Leek, Paul Hylton. b. July 25, 1937, Sheffield, son of agricultural fitter Harold Leek and his wife Norah Widdowson. In 1958, after studying physics at Liverpool University, he was engaged, on the strength of his mountain climbing and electronics experience, at £400 a year plus bed and board, to be a FIDS ionosphere physicist, leaving Southampton on the *Shackleton*, and, after a trip through Cape Verde, Montevideo, and the Falklands, wintering-over at Port Lockroy Station in 1959, summering there in 1959-60, and wintering again in 1960, his salary rising sharply to £520 soon after he first arrived. In early 1961 he went to South Africa, on the *Shackleton*, and traveled there for a few months, then back to London, where he went to work for LEO (Lyons Electrical; the same people who owned the coffee houses). On Jan. 26, 1963, in Fulham, he married Doris Munden, and late that year went to work for MEL (Mullard Equipment), in Crawley. In 1969 he and his family moved to Montreal, where he worked for RCA for 2 years, then on to the Atomic Energy of Canada until 1976, when he moved to Connecticut with Philips of North America. In 1981 he went to work with an X-ray company, and in 1987 he started his own business, L & W Research, which he still runs.

Lees, Thomas Hans Orde *see* **Orde-Lees**

Leese, Joseph. b. Aug. 5, 1884, in Chell, Wolstanton, Staffs, son of stone miner Wilmot Leese and his wife Mary Ann Porter. He joined the Royal Navy at 15, and trained on the *Impregnable*, at Devonport, finally becoming an able seaman, and as such served on the *Terra Nova*, during BAE 1910-13. He became a coalminer, and died at Brookhouse Road, Meir, in Stoke-on-Trent, on Dec. 19, 1948. His death certificate says "Lees."

LeFeuvre Scarp. 69°21' S, 63°18' W. An irregular cliff-like elevation rising to anywhere between 750 and 800 m, 17.5 km W of Cape Reichelderfer, on the Wilkins Coast, on the E side of Palmer Land, it marks the N side of the divide between Bingham Glacier and a smaller, unnamed glacier just to the north. Photographed aerially by Ellsworth in 1935, again in 1940, during USAS 1939-41, and on Dec. 22, 1947, by RARE 1947-48. Surveyed by Fids from Base E on Aug. 14, 1947. From all these efforts, particulary the RARE photos, Searle of the FIDS mapped this feature. Armed with Searle's work, Fids from Base E re-surveyed this scarp in Jan. 1962. Named by UK-APC on Aug. 31, 1962, for Charlie Le Feuvre (sic). US-ACAN accepted the name later in 1962. It appears as Le Feuvre Scarp (which is really correct, as the man's name is not LeFeuvre) on the 1979 USGS sketch map of the N part of Palmer Land.

Punta Lefèvre *see* **Lefèvre-Utile Point**

Lefèvre Point *see* **Lefèvre-Utile Point**

Punta Lefèvre-Utile *see* **Lefèvre-Utile Point**

Lefèvre-Utile Point. 64°50' S, 63°31' W. A point, 1.5 km W of Curie Point, on the N side of Doumer Island, in the Palmer Archipelago. Discovered by FrAE 1903-05, and named by Charcot, for Louis Lefèvre-Utile (1858-1940), French biscuit manufacturer, whose Gaufrette Iceberg celebrated FrAE 1908-10. UK-APC accepted the name Lefèvre Point, on Nov. 21, 1949, and US-ACAN accepted the name Lefèvre-Utile Point in 1950. The Chileans call it Punta Lefèvre-Utile, and the Argentines call it Punta Lefèvre.

Cabo Legoupil *see* **Cape Legoupil**

Cap Legoupil *see* **Cape Legoupil**

Cape Legoupil. 63°19' S, 57°54' W. At the NE side of the entrance to Huon Bay, and terminating in Schmidt Peninsula, it forms the SE limit of Covadonga Harbor, 27 km SW of Prime Head, on the N coast of Trinity Peninsula. Discovered by FrAE 1837-40, and named by Dumont d'Urville for Ernest Goupil (q.v.). The erroneous form of the name, Legoupil, has been used for so long that it has become correct. In fact, Dumont d'Urville himself named it Cap Legoupil in 1838, and charted it thus. It appears on the expedition's 1842 map as Cap Le Goupil, and as Cap Goupil on Vincendon-Dumoulin's 1847 map. A Spanish map of 1861 has it has Cabo Goupil, and a Chilean map of 1908 as Cabo Legoupil. It is Cap Goupil on a French map of 1912, and Cape Goupil on a U.S. chart of 1943. On two separate U.S. charts of 1946 it is shown as Cape Goupil and Cape Legoupil, and on a Chilean sketch of 1948 it is listed as Rocas Periodista Serrano. It shows as Cabo Legoupil on a 1947 Chilean chart, and as Cabo Le Goupil on an Argentine chart of 1949, and that is how it is listed in the Chilean gazetteer of 1974, as well as in the Argentine gazetteer of 1970. ChilAE 1947-48 made a complete survey of this area, and named the point at the end of this cape as Punta Guerra (a term no longer used), for one of the officers on the expedition. US-ACAN accepted the name Cape Legoupil in 1952, and UK-APC followed suit on Sept. 8, 1953. On a French chart from 1954 it is shown as Cap Le Goupil, as Kap Legoupil on a German map of 1954, as Kaap Legoupil on a Dutch map of 1955, and as Mys Legupil' on a Russian chart of 1961. A move was afoot in 1974, by the Chileans, to have it redefined as Punta Legoupil, but this was rejected. Today, both the Chileans and the Argentines accept the name Cabo Legoupil.

Kaap Legoupil *see* **Cape Legoupil**

Kap Legoupil *see* **Cape Legoupil**

Punta Legoupil *see* **Cape Legoupil**

Bahía Legrú *see* **Legru Bay**

Cabo Legru *see* **Syrezol Rocks**

Cap Legru *see* **Legru Bay**, **Martins Bay**

Legru Bay. 62°10' S, 58°12' W. A bay, 3 km wide, indenting the S coast of King George Island immediately NE of Martins Head, in the South Shetlands. Charcot, during FrAE 1908-10, named a cape here as Cap Legru, but, as it turned out, the feature he named was not a cape at all, but a head, and was subsequently renamed Martins Head. In order to preserve Charcot's naming, this bay was given the name Legru Bay. After FIDASE aerial photography of the area in 1956-57, and FIDS ground surveys between 1957 and 1959, UK-APC accepted the new name, Legru Bay, on Sept. 23, 1960. US-ACAN accepted this later in 1960. The Argentines call it Cabo Legrú (they need the accent mark).

Cabo Leguillou *see* **Cape Leguillou**

Cap Leguillou *see* **Cape Leguillou**

Cape Leguillou. 63°32' S, 59°50' W. Forms the N tip of Tower Island, at the NE end of the Palmer Archipelago. Roughly charted on March 3, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Cap Leguillou, for Élie Le Guillou. It appears as such in Vincendon-Dumoulin's 1847 atlas, and, on an 1861 Spanish

chart, it appears misspelled as Cabo Leguillon. It appears as Cape Leguillou on a British chart of 1901, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a Chilean chart of 1947 it appears as Cabo Leguillou, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

LeGuillou, Élie-Jean-François *see under* **Le Guillou**

Mys Legupil' *see* **Cape Legoupil**

Cabo Lehaie *see* **Lehaie Point**

Cape Lehaie *see* **Lehaie Point**

Lehaie Point. 64°30' S, 62°47' W. Forms the SW point of Hulot Peninsula, and therefore also the SW extremity of Brabant Island, in the Palmer Archipelago. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Houzeau de Lehaye (sic), for Monsieur Houzeau de Lehaie (sic), a supporter. It appears as such on Lecointe's map of 1899, and de Gerlache's of 1900. On Dr. Frederick Cook's 1900 English language version of these maps, it appears as Cape Houzeau de Lehaye. During FrAE 1903-05 Charcot charted it and re-defined it as a point. On a 1949 Argentine chart it appears as Cabo Houzeau de Lehaye, and that name was accepted by the 1970 Argentine gazetteer. It appears on a 1956 U.S. Hydrographic Office chart as Cape Lehaie. Photographed aerially by FIDASE in 1956-57. The name Lehaie Point was accepted by UK-APC on Sept. 23, 1960, and by US-ACAN later that year. It appears as such on a British chart of 1961. On a Chilean chart of 1962, the name Cabo Lehaie refers to the W point of Hulot Peninsula, but the 1974 Chilean gazetteer accepted the name for the SW point, as the Americans and British do. The Argentines today also call it Cabo Lehaie. It is somewhat difficult to determine which of the Lehaie family de Gerlache had in mind. Probably the botanist Jean Houzeau de Lehaie (1867-1959).

Lehen, Christopher Alan "Chris." b. Dec. 31, 1939, Stanley, Falkland Islands, son of laborer Maurice Lehen and his wife Annie Elizabeth Newing, and cousin of John Cheek. In June 1954 he and Cheek were apprenticed to FIDS, as wireless operators and meterological observers. Cheek wintered-over at Base D as radio operator in 1960 and 1961, and in between winters (1960-61) he returned to the Falklands. Lehen went to Base D as his summer replacement during that time. He then wintered-over (again as radio operator) at Base B in 1961. He retired from FIDS in 1969, and moved to NZ, where he worked in telecommunications for the NZ Post Office Telecom, and finally retired at the end of 2004.

Bahía Lehrke *see* **Lehrke Inlet**

Ensenada Lehrke *see* **Lehrke Inlet**

Lehrke, Lester V. b. Aug. 29, 1910, Carlos, Minnesota, son of farmer Henry G. Lehrke and his wife Ida. He joined the U.S. Navy on Sept. 9, 1927, was bosun's mate on the *Bear* during USAS 1939-41, went ashore at East Base, and became that base's sailmaker and communications man, replacing Holly Richardson, who had to return to the USA on the *Bear*. He later became a lieutenant. He died on Sept. 24, 1988, in Moreno Valley, Calif., and is buried in Riverside. He was married to Mary.

Lehrke Bay *see* **Lehrke Inlet**

Lehrke Inlet. 70°49' S, 61°45' W. An ice-filled inlet, 13 km wide, indenting the Black Coast in a SW direction for about 27 km between Cape Boggs and Cape Sharbonneau, on the E coast of Palmer Land. Discovered in Dec. 1940 by members of USAS from East Base. They photographed it aerially and roughly surveyed it from the ground, and named it Lehrke Bay, for Lester Lehrke. It appears as such on a 1942 USAAF chart, plotted in 70°45' S, 61°35' W, and it also appears that way on Finn Ronne's 1949 map. Surveyed again by Fids from Base E, and shown to be narrower than first reported. It appears on an Argentine chart of 1949 as Bahía Lehrke, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Lehrke Inlet in 1952, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1962 as Ensenada Lehrke, and that was the name accepted by the 1974 Chilean gazetteer. It was photographed aerially by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1973. In the 1974 British gazetteer, it appears horribly mangled as Lewicke Inlet.

Leibert Cirque. 77°30' S, 160°55' E. A cirque opening S to the feature called Labyrinth, between Mount Electra and Mount Dido, on the S side of the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Gregg Leibert, PHI helo pilot with USASP in 7 consecutive field seasons from the 1996-97 season. NZ-APC accepted the name on Nov. 30, 2004.

Leigh Hunt Glacier. 85°00' S, 174°10' E. A small tributary glacier, between 11 and 13 km long, and 2.5 km wide, flowing NNW into Keltie Glacier in a small icefall (the Americans say it feeds the Brandau Glacier, just W of Hare Peak). Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Arthur Leigh Hunt, friend of Byrd and Mawson, and founder and first chairman of the NZ Antarctic Society (1933). NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Leigong Shan. 69°23' S, 76°14' E. A hill in the Larsemann Hills. Named by the Chinese.

Cape Leininger. Named by Ronne just after RARE 1947-48, for Joseph Leininger (*see* **Leininger Peak**). A term no longer used.

Pico Leininger *see* **Leininger Peak**

Leininger Peak. 70°34' S, 62°15' W. Rising to 1135 m (the British say 1325 m), at the N side of the base of Eielson Peninsula, on the Wilkins Coast, on the E coast of Palmer Land. Probably discovered from the ground in 1940, during USAS 1939-41. Photographed aerially in late 1947, by RARE 1947-48, and surveyed from the ground and charted in 1947 by the Weddell Coast Sledge Party in Jan. 1948. Named by Finn Ronne for Cdr. Joseph Edward Leininger (1911-1996), USNR (at New Orleans), who devised the plans for alterations to, and the loading of cargo onto, the *Port of Beaumont, Texas*, the RARE ship. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. Photographed aerially by USN in 1966, and re-surveyed from the ground by BAS personnel from Base E in 1973. The Argentines call it Pico Leininger.

Leipzig Island *see* **Nelson Island**

Leister Peak. 75°10' S, 113°54' W. A peak, 5 km N of Early Bluff, in the Kohler Range of Marie Byrd Land. Lichens and mosses are found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Geoffrey L. Leister, biologist with the USARP Marie Byrd Land Survey Party of 1966-67.

Leitch Massif. 71°55' S, 164°36' E. A mountain massif forming the N part of the West Quartzite Range, in the Concord Mountains. Named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition, for Evan C. Leitch, geologist with this 1962-63 party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Leitet. 72°14' S, 1°25' E. An ice plain between Vendeholten Mountain and Vendehø Heights, in the Sverdup Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians, probably from the Old Norse word "leiti," meaning an elevation.

Bahía Leith *see* **Inverleith Harbor**

Caleta Leith *see* **Leith Cove**

Puerto Leith *see* **Inverleith Harbor**, **Leith Cove**

Leith Cove. 64°52' S, 62°50' W. A small anchorage in the NE part of Paradise Harbor, along the Danco Coast, on the W coast of Graham Land. Its coasts are formed by ice cliffs, high and inaccessible, and in its SE corner a glacier discharges. Named by whalers here for the home port (Leith, Scotland) of Salvesen & Co., whalers. David Ferguson surveyed it in 1913-14, and it appears on his 1921 chart as Leith Harbour. It appears on an Argentine chart of 1949 as Puerto Leith, on a 1966 Chilean chart (misspelled) as Puerto Leih, and the name Puerto Leith was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, when the Argentines found that the Chileans were calling it Puerto Leith too, they changed their name to Caleta Leith. It was photographed aerially by FIDASE in 1956-57, and, between 1956 and 1958, it was surveyed from the ground by Fids from Base O. UK-APC accepted the name Leith Cove on Sept. 23, 1960, and US-ACAN followed suit in 1963. Obviously, this feature is not to be confused with Leith Harbour, in South Georgia.

Leith Harbour *see* **Inverleith Harbor**, **Leith Cove**

[1]**Punta Leiva**. 64°32' S, 62°00' W. A point forming the extreme N of Lientur Island, NE of

Nansen Island, off the W coast of the Antarctic Peninsula. Named by the Chileans for René Leiva García, a Chilean Navy cabo on the *Piloto Pardo*, who took part in ChilAE 1961-62.

[2]**Punta Leiva** *see* **Punta Albornoz**

Bay Lejay *see* **Baie Pierre Lejay**

Kupol Lejtenanta Smidta. 71°07' S, 3°17' W. An ice rise on the ice fringing the Princess Martha Coast of Queen Maud Land. Named by the Russians.

Lekander Nunatak. 85°04' S, 64°29' W. Rising to 1815 m, along the SW edge of the Mackin Table, 3 km NE of Bessinger Nunatak, in the southern Patuxent Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Bryant Alexander Lekander (b. July 17, 1929, Toivola, Minn., but raised in Hibbing, and in Detroit. d. Sept. 14, 2005, Fargo, ND), USN, mechanic who wintered-over at Pole Station in 1960. UK-APC followed suit with the naming on Nov. 3, 1971, and it appears in the 1974 British gazetteer. Senior chief Lekander retired from the Navy in 1967, after more than 20 years service, and became a teacher for a long time in Italy.

Mount Leland. 77°16' S, 161°18' E. A rock peak, 1.5 km W of Victoria Upper Glacier, in Victoria Land. Named by US-ACAN in 1976, for Capt. Bainbridge B. Leland (b. July 13, 1921), U.S. Coast Guard, skipper of the *Burton Island* during OpDF 1968 (i.e., 1967-68) and OpDF 1969 (i.e., 1968-69).

Canal Lemaire *see* **Lemaire Channel**

Chenal (de) Lemaire *see* **Lemaire Channel**

Fondeadero Lemaire. 65°03' S, 63°53' W. An anchorage, 6 km SW of Cape Renard, in the entrance to Lemaire Channel, off the W coast of Graham Land. Named by the Chileans, in association with the channel.

Île Lemaire *see* **Lemaire Island**

Isla Lemaire *see* **Lemaire Island**

Lemaire Channel. 65°04' S, 63°57' W. A channel, about 11 km long, and an average of 1.5 km wide, it extends in a NE-SW direction from Splitwind Island and False Cape Renard to Roulin Point and Cape Cloos, and separates Booth Island from the Graham Coast, on the W coast of Graham Land. Discovered by Dallmann in 1874. First navigated and roughly charted on Feb. 12, 1898, by BelgAE 1897-99, and named by de Gerlache as Chenal Lemaire, for Lt. (later Capt.) Charles-François-Alexandre Lemaire (1863-1926), of the 5th Regiment of (Belgian) Artillery, explorer of the Congo, who helped with the organization of de Gerlache's expedition. It appears as such on Lecointe's 1899 chart, but as Chenal de Lemaire on de Gerlache's 1900 map. On Dr. Frederick Cook's 1900 English language version of those maps it appears as Lemaire Strait, and on Arctowski's it appears as Lemaire Channel. It was re-surveyed by in 1904, by FrAE 1903-05. It appears on a 1908 Argentine map as Estrecho de Lemaire, and on Gourdon's 1910 map as Canal de Lemaire. It appears as Lemaire Channel on a British chart of 1930. It was re-charted in 1935, by BGLE 1934-37, when it was shown to extend SW to Duseberg Buttress. It appears as such on Rymill's 1938 map of the expedition, as well as on a British chart of 1948, and that was was the name (and definition) accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1960. It was photographed aerially by FIDASE in 1956-57, and surveyed and charted from the ground by a FIDS-RN team between 1956 and 1958. It appears on a Chilean chart of 1947 as Estrecho Lemaire, but the 1970 Argentine gazetteer and the 1974 Chilean gazetteer both accepted the name Canal Lemaire.

Lemaire Island. 64°49' S, 62°57' W. An island, 7 km long and 2.5 km wide, 1.5 km W of Duthiers Point, it forms the N side of Paradise Harbor, off the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 10-11, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Lemaire, for Charles Lemaire (*see* **Lemaire Channel**). It appears as such on the expedition charts, and, on Dr. Frederick Cook's 1900 English language version of those charts, it appears as Lemaire Island, as it does on a 1901 British chart. It was further charted by Lester and Bagshawe during their British Imperial Antarctic Expedition of 1920-22, and again by the Discovery Investigations in 1937, it appearing as Lemaire Island on their chart of that year. US-ACAN accepted the name Lemaire Island, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1959. It was photographed aerially by FIDASE in 1956-57, and, between 1956 and 1958, was surveyed from the ground by Fids from Base O. On a 1959 USAF chart it appears in error as Bryde Island. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Lemaire. However, we are told that today the Argentines use the name Isla Le Maire. However, this hardly seems credible. *See also* **Useful Island**.

Lemaire Point *see* **Muñoz Point**

Lemaire Strait *see* **Lemaire Channel**

Lemanis Valley. 80°01' S, 155°50' E. A partly ice-free valley intruded at the entrance by a lobe of ice from Hatherton Glacier, it lies between Ituna Valley and Lindum Valley, and 11 km WNW of Derrick Peak, in the Britannia Range. Named in association with the Britannia Range by Mike Selby's 1978-79 University of Waikato party. Leimanis was an old Roman fort, settlement, and port in Kent, which gave its name to the present-day town of Lympne. NZ-APC accepted the name, and US-ACAN followed suit.

Lemasters Bluff. 73°20' S, 162°12' E. A rock bluff at the E extremity of the Lichen Hills, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Max E. Lemasters, USN, air operations officer at McMurdo, 1967.

Mount LeMasurier. 75°27' S, 139°39' W. An ice-free coastal mountain rising to over 800 m, between Mount Vance and Mount Langway, in the central part of the Ickes Mountains, on the coast of Marie Byrd Land. Discovered and photographed aerially by USAS 1939-41. Named by US-ACAN in 1970, for Wesley E. LeMasurier, geologist with Marie Byrd Land Survey II, 1967-68.

LeMay Range. 70°55' S, 69°20' W. Also called Army Range, and United States Army Range. A mountain range, about 60 km long, it has peaks rising to over 2000 m, and extends in a NW-SE direction from Snick Pass to Uranus Glacier, in the eastern-central part of Alexander Island. Stellar Crests and Grikurov Ridge are included in this range. Discovered aerially by Ellsworth on Nov. 23, 1935. The N and E portions were roughly mapped from these photos in 1936-37 by U.S. cartographer W.L.G. Joerg. Very roughly positioned in 1936-37, by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Re-sighted by RARE 1947-48, photographed by them aerially on Dec. 3, 1947, and named by Finn Ronne in 1948 as U.S. Army Range. It appears that way on the 1948 American Geographical Society's map. However, on Finn Ronne's 1948 map, it appears variously as as Le May Range and Le May Mountains, named by Ronne for Gen. Curtis Emerson LeMay (1906-1990), deputy chief of Air Staff for Research and Development of the USAAF, which furnished equipment for RARE. On 1949 Ronne maps it appears variously as LeMay Mountain Range and LeMay Range. US-ACAN accepted the name LeMay Range in 1949 (at the expense of U.S. Army Range). On a 1956 U.S. Hydrographic Office chart the name Le May Range appears, signifying Mims Peak, Titan Nunatak, and other summits in this area. Mapped by Searle of the FIDS in 1959-60, from the RARE photos. The name Lemay Range appears in the 1961 British gazetteer, but UK-APC followed suit with the American spelling on Aug. 31, 1962.

The *Lena*. Soviet refrigeration ship, research ship, and icebreaker, one of the two ships that went to Antarctica with the first SovAE (1955-57), Captain Aleksandr Ivanovich Vetrov commanding. There were 147 men aboard, and 7 women. She was back again for SovAE 1956-58, same captain.

Prohod Lena *see* **Lena Passage**

Zaliv Lena *see* **Casey Bay**

Lena Bay *see* **Casey Bay**

Lena Canyon. 64°07' S, 91°15' E. A submarine canyon in the Davis Sea. Discovered by personnel on the *Lena*, during the first SovAE (i.e., 1955-57). Named by the Russians for the *Lena*. It runs between 66°45' S and 61°30' S, and between 92°30' E and 90°00' E. *See also* **Ob' Canyon**.

Lena Passage. 66°34' S, 92°58' E. A marine passage, 0.75 km wide, between the SW part of the Haswell Islands and Vetrov Hill, W of Mirnyy Station, on the coast of East Antarctica. Mapped by SovAE 1956, and named by them as Prohod Lena, for the *Lena*. ANCA accepted the translated name Lena Passage on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Lender, Wilhelm. Flight mechanic specialist on the *Schwabenland* for GermAE 1938-39.

Lenfant Bluff. 70°22' S, 160°03' E. A rock bluff marking the S side of the mouth of Svendsen Glacier, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Claude J.M. Lenfant, USARP biologist at McMurdo, 1967-68.

Lengerich Neumann, Johannes "Hans." Known in Chile as Juan. b. Germany. In Germany, he was the organizer and first director of the Research Institute for the Fishing Industry, and then came to the University of Chile, as a marine biologist. From 1939-41 he was director of the Escuela de Pesca de San Vicente, and went on ChilAE 1946-47 as the ichthyologist in charge of obtaining samples of Antarctic fish. He was back in Antarctica in 1955-56.

Punta Lengua *see* **Duclaux Point, Spit Point**

Lenie Passage. 64°44' S, 64°23' W. A marine passage, 1.5 km wide, running NW-SE between (to the NE) the Gossler Islands and the Stayaway Skerries, and (to the SW) the Joubin Islands, off the SW part of Anvers Island, in the Palmer Archipelago. Charted from the *Endurance* between 1969 and 1971. Named by US-ACAN in 1975, for Pieter J. Lenie, skipper of the *Hero* from 1972 to 1984. In Jan.-Feb. 1973 Capt. Lenie became the second to navigate and carry out soundings of this passage. UK-APC accepted the name on Dec. 20, 1974.

Leningrad Bay *see* **Leningradskiy Bay**

Leningradbukta *see* **Leningradskiy Bay**

Leningradkollen *see* **Kupol Leningradskij**

Leningradskaya Station. 69°30' S, 159°23' E. Soviet base in Oates Land, opened in 1969-70 as a summer station, and then on Feb. 25, 1971 as a wintering station. An average of 17 men wintered-over. **1971 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1972 winter**: Anatoliy Nikolayevich Vorob'yev (leader). **1973 winter**: Lev Ivanovich Leskin (leader). **1974 winter**: Arnol'd Bogdnovich Bedretskiy (leader). **1975 winter**: Vladislav Mikhaylovich Piguzov (leader). **1976 winter**: Anatoliy Nikolayevich Vorob'yev (leader). **1977 winter**: Igor' Antonovich Korzhenevskiy (leader). **1978 winter**: Vasiliy Semenovich Krylov (leader). **1979 winter**: Boris Sergeyevich Chernov (leader). **1980 winter**: Lev Ivanovich Yeskin (leader). **1981 winter**: Vladimir Vasil'yevich Agafonov (leader). **1982 winter**: Valeriy Sergeyevich Ippolitiv (leader). **1983 winter**: Lev Ivanovich Yeskin (leader). **1984 winter**: Pavel Maksimovich Nikolayev (leader). **1985 winter**: Nikolay Petrovich Dvorak (leader). **1986 winter**: Vladimir Makarovich Loginov (leader). **1987 winter**: Gennadiy Ivanovich Bardin (leader). **1988 winter**: Aleksandr F. Pochernin (leader). **1989 winter**: Anatoliy Semenovich Aleksandrov (leader). **1990 winter**: Vladimir Porvirevich Bryzhin (leader). After this season, the station was closed due to difficult access.

Kupol Leningradskij. 70°06' S, 13°00' E. An ice dome S of Leningradskiy Bay, between the Lazarev Ice Shelf and the ice shelf the Norwegians call Nivlisen, fringing the Princess Astrid Coast of Queen Maud Land. The Norwegians call it Leningradkollen (which means roughly the same thing).

Ostrov Leningradskij *see* **Leningradskiy Island**

Zaliv Leningradskij *see* **Leningradskiy Bay**

Leningradskiy Bay. 70°00' S, 12°30' E. Also called Leningrad Bay. It indents the ice shelf fringing the Princess Astrid Coast of Queen Maud Land, just W of the Lazarev Ice Shelf, between that ice shelf and the ice shelf the Norwegians call Nivlisen, N of the Schirmacher Hills. Leningradskiy Island is at the head of the bay. Mapped by SovAE 1959, and named by them as Zaliv Leningradskij, for their city. US-ACAN accepted the name Leningradksiy Bay in 1970. The Norwegians call it Bukhta Leningrad.

Leningradskiy Island. 70°08' S, 12°50' E. An ice-covered island at the head of Leningradskiy Bay, at the W margin of the Lazarev Ice Shelf, on the Princess Astrid Coast of Queen Maud Land. The surrounding ice shelf encircles the island on all but the N side, and this island rises nearly 100 m above the level of it. Discovered and mapped by SovAE 1961, and named by them as Ostrov Leningradskij, in association with the bay. US-ACAN accepted the nme Leningradskiy Island in 1970.

Pik Leningradskogo Universiteta *see* **Sverre Peak**

Punta Léniz *see* **Leniz Point**

Léniz Gallejo, Clorindo. Chief stoker on the *Yelcho* when that ship rescued Frank Wild's party from Elephant Island in 1916, during BITE 1914-17.

Leniz Point. 64°54' S, 63°05' W. The N extremity of the small peninsula on which stands Mount Banck, it also forms the SE entrance point of Ferguson Channel, and is located 1.5 km S of Bryde Island, on the Danco Coast, on the W coast of Graham Land. BelgAE 1897-99 made a landing here on Feb. 10, 1898, and charted it. Surveyed by ChilAE 1950-51, and named by them as Punta Léniz, for Clorindo Léniz Gallejo (see above). It appears as such on their 1951 chart, and was the name accepted by the 1974 Chilean gazetteer. In 1956 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base O. On Sept. 23, 1960, UK-APC named it Barbaro Point, after Venetian nobleman Daniello Barbaro (1513-1570), a photography pioneer. US-ACAN accepted the name Leniz Point in 1965, but apparently without the accent mark. In 1978 the Argentines tried calling it Punta Jorobada ("humpbacked point"), but the Argentine gazetteer of 1991 accepted the name Punta Barbaro.

Lennard, John *see* **USEE 1838-42**

Lennon Glacier. 69°12' S, 79°51' W. Flows SW into the outer part of Lazarev Bay, in the N part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for Peter Wilfred "Pete" Lennon (b. 1950), BAS glaciologist from 1974 to 1978, who wintered-over at Fossil Bluff in 1975, and worked on Alexander Island, 1974-76. US-ACAN accepted the name in 1995.

Lennox-King Glacier. 83°25' S, 168°00' E. A large, steep, and impassable valley glacier, 60 km long, flowing NE from Bowden Névé, between the Holland Range and the Queen Alexandra Range, and then falling into Richards Inlet, on the S side of Mount Asquith, at the Ross Ice Shelf. Named by NZGSAE 1959-60, for Lt. Cdr. James Lennox-King, RNZN, leader at Scott Base from Nov. 1959 to Nov. 1960. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

The *Lennuk*. A 44-foot Estonian GRP-balsa sandwich yacht, built in Finland, skippered by Mart Saarso (b. 1962), which visited the Antarctic Peninsula in 1999-2000, during the first ever Estonian round-the-world trip in a yacht. The trip began on Oct. 16, 1999, and other crew included Meelis Saarlaid, Tiit Riisalo, Margus Kastehein, Tiit Pruuli, and Janno Simm. A seventh member changed 15 times at different ports.

Lens Peak. 66°08' S, 65°24' W. Rising to about 500 m on the S side of Holtedahl Bay, just E of Conway Island, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from those photos. In keeping with the practice of naming several features in this area after pioneers in the research into snow blindness, and the design of snow goggles, this feature was named by UK-APC on Sept. 23, 1960. US-ACAN accepted the name in 1965.

Lensen Glacier. 72°18' S, 166°48' E. A tributary glacier, 27 km long and 3 km wide, and possessing a common divide with Wood Glacier, it flows NE (the New Zealanders say it flows NW) into Pearl Harbor Glacier just E of Mount Pearson, in the Victory Mountains of Victoria Land. Crosscut Peak is at the head of this glacier. Named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Gerald J. Lensen, a member of NZGSAE 1957-58, who mapped the area of Tucker Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Lensink Peak. 71°04' S, 65°25' E. The most easterly of a group of 3 peaks 8 km SE of the Husky Massif, and about 30 km E of Mount Hicks, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1960. Named by ANCA for William H. "Bill" Lensink, weather observer at Wilkes Station in 1960. US-ACAN accepted the name in 1967.

Islas Lent *see* **Detaille Island**

Lent Island(s) *see* **Detaille Island**

Morena Lentochka. 73°26' S, 62°58' E. A moraine, S of Fisher Glacier. Named by the Russians.

Lenton, Ralph Anthony. b. July 13, 1923. A major figure in Antarctic history. During World War II, he went to sea as a deck hand in Sept. 1942, working for the Anglo-Saxon Petroleum Company out of London. On Feb. 6, 1944, at Greenock, he signed on to their tanker, the *Miralda*, for the Atlantic crossing, arriving in New York on March 23, 1944. Then he became a radio operator in the North Atlantic, with the

Fleet Air Arm, flying in Swordfish. He joined FIDS in 1947, as a radio operator, and sailed from Tilbury on Dec. 19, 1947, on the *John Biscoe*, bound for Port Stanley. He wintered-over at Signy Island Station in 1948, and also helped with the biological and survey work. He was at Base G in 1948-50, including the wintering-over of 1949, as deputy leader, and in the winter of 1951 was FIDS leader and radio operator at Base B. In the winter of 1952 he was base leader at Port Lockroy Station. In 1953 he returned to Port Stanley on the *John Biscoe*, and then, on the same ship, back to Southampton, arriving there on June 11, 1953. In late 1953 he sailed from England, and wintered-over in 1954, as the first leader at the new Base F, on Galíndez Island. During BCTAE he was radio operator and 2nd-in-command of the Advance Party, 1955-56, helped build Shackleton Base in Feb. 1956, and crossed the continent with Fuchs as radio operator and carpenter. He moved to North America, married Helen, a Canadian, and lived in Massachusetts, Washington, DC, and Canada. He was going to go on Walter Pederson's early 1970s skidoo trip from McMurdo to the South Pole, but the expedition never happened. He died on Oct. 16, 1986, in Montreal. His son, Anthony, just about to go to Antarctica as a usarp, took his ashes down and scattered them over the continent for which Ralph Lenton had done so much.

Lenton Bluff. 79°00' S, 28°13' W. A rock bluff rising to about 600 m, marking the NE side of the mouth of Jeffries Glacier, in the Theron Mountains. First mapped in 1956-57 by BCTAE, and named by them for Ralph Lenton. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Lenton Cove. 60°44' S, 45°36' W. A small cove, NE of Lenton Point, it provides a safe landing area on the SE coast of Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and photographed by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the point.

Lenton Point. 60°44' S, 45°37' W. The SW extremity of a small, rocky peninsula at the NE side of Clowes Bay, on the S side of Signy Island, in the South Orkneys. Roughly surveyed in 1933 by the Discovery Investigations. Re-surveyed in 1947 by FIDS. Named by UK-APC on March 31, 1955, for Ralph Lenton. US-ACAN accepted the name in 1956.

Lentz Buttress. 85°40' S, 127°36' W. A prominent rock bluff, rising to 2800 m, 8 km ENE of Faure Peak, it forms a projection along the N side of the Wisconsin Plateau, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Malcolm W. Lentz, USN, who wintered-over as officer-in-charge at Pole Station in 1962.

Mount Leo. 69°29' S, 67°00' W. Rising to 1270 m, with steep rock cliffs on its S side, this isolated mountain stands at the SE margin of Forster Ice Piedmont, on the W side of the Antarctic Peninsula. Roughly surveyed by BGLE in 1936-37, photographed aerially in 1948 by RARE 1947-48, and re-surveyed, in more detail, by FIDS in 1958. Named by UK-APC on Aug. 31, 1962, for its resemblance to a lion lying down. US-ACAN accepted the name later in 1962.

Glaciar León *see* **Glaciar Jobet**

Isla León *see* [1]**Lion Island**

Lake Leon. Unofficial name of a lake just E of Lake Chad, in Taylor Valley.

Pasaje León *see* **Lion Sound**

Seno León *see* **Lion Sound**

Leonard Canyon. 65°00' S, 145°00' E. Submarine feature off George V Land.

Glaciar Leonardo *see* **Leonardo Glacier**

Leonardo Glacier. 64°42' S, 61°58' W. Flows into Wilhelmina Bay between Sadler Point and Café Point, on the W coast of Graham Land. Charted by BelgAE 1897-99. Named by UK-APC on Sept. 23, 1960, for the great Italian artist Leonardo Da Vinci (1452-1519). US-ACAN accepted the name in 1965. The Argentines call it Glaciar Leonardo.

Utësy Leonida Ivanova. 81°56' S, 162°25' E. A bluff, SE of Cape May, in the area of the Ross Ice Shelf. Named by the Russians.

Île Leonie *see* **Léonie Island**

Isla Léonie *see* **Léonie Island**

Islas Léonie *see* **Léonie Islands**

Léonie Island. 67°36' S, 68°21' W. The largest and most westerly of the Léonie Islands, it is 1.5 km long and rises to 455 m (the British say 495 m) above sea level, in the entrance to Ryder Bay, along the SE side of Adelaide Island. Discovered and charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Île Léonie. Further charted in Feb. 1936, by BGLE 1934-37, who used the name Léonie Island. US-ACAN accepted the name Léonie Islet in 1953, it appears as such on a 1954 British chart, and was the name accepted by UK-APC on Sept. 20, 1955. However, on July 7, 1959, UK-APC renamed it Léonie Island, and it appears as such on a British chart of 1961. US-ACAN accepted that name in 1963. It appears on a Chilean chart of 1962 as Isla Léonie.

Léonie Islands. 67°36' S, 68°17' W. A group of small islands in the entrance to Ryder Bay, on the SE side of Adelaide Island. In Jan. 1909, during a charting by FrAE 1908-10, Charcot named the largest of this group as Léonie Island. In Feb. 1936, during a survey, BGLE 1934-37 extended the use of the name to cover the whole group. It appears as Léonie Islands on Rymill's 1938 map of the expedition. The name Léonie Islets appears on a 1948 British chart. Further surveyed by Fids from Base E between 1948 and 1950. The name Léonie Islets was accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1953. However, on March 31, 1955, UK-APC renamed them Léonie Islands, and US-ACAN followed suit in 1956. The Chilean gazetteer of 1974 accepted the name Islas Léonie, which is also what the Argentines call it. Charted by an RN Hydrographic Survey unit on the *Endurance*, in 1976-77. It appears on a British chart of 1980 as Léonie Islands. Others in the group include Anchorage Island, Lagoon Island, Donnelly Island, and Limpet Island.

Léonie Islet *see* **Léonie Island**

Léonie Islets *see* **Léonie Islands**

Bukhta Leonova *see* **Leonova Bay**

Leonova Bay. 66°12' S, 101°06' E. A bay in the Bunger Hills, on the coast of Queen Mary Land, in East Antarctica. Charted by SovAE 1956, and named by the USSR as Bukhta Leonova, after Arctic explorer Leonid Ivanovich Leonov (1896-1952). ANCA translated the name to Leonova Bay.

Leopard Cove. 64°55' S, 62°55' W. A large cove in the area of Paradise Harbor, between Mount Inverleith and Hauron Peak, it expands southward at the expense of Petzval, on the Danco Coast, on the W coast of Graham Land. Several sea leopards were seen here in 1985, and the feature was named by the Poles on Sept. 1, 1995.

Leopard Island. 65°15' S, 64°18' W. About 330 m long, and 330 m west of the extreme SW end of Skua Island, in the Argentine Islands, to the NE of Grandidier Channel, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted and named in 1935 by BGLE 1934-37. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. The South Americans call it Isla Leopardo.

Leopard seals. *Hydrurga leptonyx*. Also called sea leopards. Earless, carnivorous, aggressive, solitary seals of the family Phocidae, they breed exclusively in Antarctica. They have powerful jaws, huge canines, and they prey on adult and young penguins, young seals, and other warm-blooded beings — the only seals to do this. They have black-spotted, gray coats, can grow to 12 feet long and 840 pounds in weight, and are not commercially important.

Bajo (Fondo) Leopardo *see* **Sea Leopard Patch**

Banco Leopardo *see* **Sea Leopard Patch**

Isla Leopardo *see* **Leopard Island**

Islote Leopardo. 64°21' S, 62°53' W. A little island in the Pi Islands, SE of Eta Island, in the Melchior Islands, in Dallmann Bay, in the Palmer Archipelago. Named by the Argentines.

Manchón Leopardo Marino *see* **Sea Leopard Patch**

Cap des Léopards *see under* **D**

Leopold and Astrid Coast. 67°20' S, 84°30' E. That part of the coast of Princess Elizabeth Land lying between the W extremity of the West Ice Shelf (81°24' E) and Cape Penck (87°43' E). Discovered and explored aerially on Jan. 17, 1934, on a flight from the *Thorshavn* by Lt. Alf Gunnestad and Capt. Nils Larsen. Named by Lars Christensen as Leopold og Astrid Kyst, for the king and queen of Belgium. US-ACAN accepted the translated name in 1947. The Australians tend to call it King Leopold and Queen Astrid Coast.

Leopold Coast *see* **Luitpold Coast**

Leopold Land *see* **Luitpold Coast**

Leopold og Astrid Kyst *see* **Leopold and Astrid Coast**

Mount Lepanto. 72°44' S, 168°27' E. A major peak, rising to 2910 m (the New Zealan-

ders say 3130 m), 3 km SE of Mount Freeman, at the E end of the Victory Mountains, in Victoria Land. Spurs radiate from this mountain to Whitehall Glacier and Tucker Glacier. Named by NZGSAE 1957-58, for the battle of Lepanto in 1571. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Punta Lepe *see* **Crabeater Point**

Lednik Lepëhina *see* **Lepekhin Glacier**

Lepekhin Glacier. 72°43' S, 69°58°E. A large glacier, about 100 km long, flowing north-northeastward from the Mawson Plateau, on the E side of the Mawson Escarpment, and terminating eastward of the Clemence Massif where the confluent ice enters the E side of the Lambert Glacier. It is the glacier recorded in the Russian gazetteer of 1987, as Lednik Lepëhina, and plotted in 72°20' S, 70°25' E. US-ACAN accepted the translated name on Oct. 20, 2009.

Lepitsa Peak. 63°44' S, 58°38' W. An ice-covered peak rising to 1110 m in the NE foothills of the Detroit Plateau, on the W side of Zlidol Gate, 1.49 km WSW of Belgun Peak, 2.19 km ESE of Mount Schuyler, 2.88 km SSE of Sirius Knoll, 5.75 km NW of Bozveli Peak (in Trakiya Heights), and 3.42 km NNE of Skoparnik Bluff, it surmounts the head of Russell West Glacier to the N and Victory Glacier to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Lepitsa, in northern Bulgaria.

Lepley Nunatak. 73°07' S, 90°23' W. A small, but conspicuous rocky nunatak, 3 km SW of Dendtler Island, near the inner part and E end of the Abbot Ice Shelf. Discovered on Feb. 9, 1961 by helicopters from the *Glacier* and the *Staten Island*. Named by US-ACAN in 1962, for Larry K. Lepley, oceanographer who was marooned here with three other men, from Feb. 12 to Feb. 15, 1961, by a severe snowstorm.

Cerro Le Poing *see* **Admiralen Peak**

Leppard, Norman Arthur George. b. July 3, 1932, Kingston, Surrey, son of Arthur J. Leppard and his wife Elizabeth Hart. He joined FIDS in 1953, as an assistant surveyor, and summered at Base B in 1953-54, and then wintered-over at Base D in 1954 and 1955. In the summer of 1955-56 he surveyed Coronation Island, in the South Orkneys. On Nov. 3, 1957, at Montevideo, he joined the *Shackleton*, for a summer tour to the FIDS bases. He and his wife, Dinah Gibson (whom he had married in Surrey, in 1960), died in May 1998 after a car crash in Suffolk.

Leppard Glacier. 65°58' S, 62°30' W. A large valley glacier, flowing E into Scar Inlet to the N of Ishmael Peak, on the Oscar II Coast, on the E coast of Graham Land. Discovered and partially photographed aerially on Dec. 20, 1928, by Wilkins, who thought it was a channel, and called it Crane Channel. He also photographed what is now Crane Glacier. The confusion among the geographic terms in this area stems from the Wilkins flights of that year. Wilkins was confused by what he saw below him, and that confusion was perpetuated for years until FIDS surveyed the area from the ground in 1955, one of the assistant surveyors at Base D in 1954-55 being Norman Leppard (q.v.), for whom UK-APC re-named (and re-defined) this feature on Sept. 4, 1957. It appears thus on a British chart of 1961. US-ACAN went along with the new situation in 1963.

Mount Lepus. 70°40' S, 67°10' W. A large, rocky massif rising to about 900 m, and separated into 2 distinct sections by a deep saddle, it is located between Millett Glacier and Bertram Glacier, about 16 km E of Wade Point, on the W coast of Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the constellation Lepus. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Lerche, Wilhelm Gotffried. b. April 20, 1864, in Stettin, Pomerania, son of Wilhelm Gottfried Lerche and his wife Anna Luise Jeanette Crelinger. An officer with the Hamburg-Amerika Line, he was 1st officer on the *Gauss* during GermAE 1901-03.

Lerchenfeld Glacier. 77°55' S, 34°15' W. Flows in a west-northwesterly direction between Bertrab Nunatak and the Littlewood Nunataks, and coalesces with the S flank of Schweitzer Glacier before both glaciers discharge into the head of Vahsel Bay, on the Luitpold Coast. Discovered by GermAE 1911-12, and named by Filchner as Graf Lerchenfeld Gletscher, for Graf Hugo von und zu Lerchenfeld-Köfering (1843-1925), a supporter. They roughly mapped it in 77°50' S, 346 15' W. It appears on a 1923 chart as Lerchenfeld Glacier, but is misspelled as Lerchenfield Glacier on a 1942 USAAF chart. US-ACAN accepted the name Lerchenfeld Glacier in 1949 (they had rejected the proposed Graf Lerchenfeld Glacier), and, with that name, it appears on a 1957 *National Geographic* map, plotted in 78°00' S, 34°00' W, as it does also on a 1971 British chart. It appears on a 1966 Argentine chart as Glaciar Lerchenfeld. The coordinates were corrected from U.S. Landsat images taken on Jan. 27, 1973, and, with the new coordinates, the feature was accepted by UK-APC on Dec. 9, 1981, and US-ACAN followed suit. The Germans call it Lerchenfeldgletscher.

Lerchenfeldgletscher *see* **Lerchenfeld Glacier**

Lerebourg, Louis. b. 1864, France. A former torpedo artificer, he was an able seaman on the *Polynesien*, in the late 1890s, during that merchant ship's run from Marseille to Noumea to Sydney. He was an able seaman on the *Pourquoi Pas?* during FrAE 1908-10.

Mount LeResche. 71°31' S, 166°17' E. A prominent mountain, rising to 2040 m, at the extreme N end of the Homerun Range, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for Robert E. LeResche, biologist at McMurdo, 1966-67 and 1967-68.

Punta Lermanda. 63°19' S, 57°55' W. A point on the N coast of Kopaitic Island, between Punta Lilo and Punta Hildegard, at Covadonga Harbor, Trinity Peninsula. Named by ChilAE 1947-48, for 1st Lt. Surgeon Víctor Lermanda Celis, who was on the *Covadonga* during that expedition. He performed two appendicitis operations during the expedition, one of them peritonitis. The patients were seamen Esteban Trevia and Germán Béjar.

Ustup Lermontova. 81°36' S, 30°30' W. A very isolated ridge, inland from the Filchner Ice Shelf. Named by the Russians.

Bahía Leroux *see* **Leroux Bay**

Baie Leroux *see* **Leroux Bay**

LeRoux, W.D. Oiler from Seattle, on the *North Star* during USAS 1939-41. Of Seattle.

Leroux Bay. 65°36' S, 64°16' W. A bay, averaging 8 km wide, indenting the Graham Coast for about 14 km between Nuñez Point and Península Magnier (the narrow peninsula surmounted by the Magnier Peaks), or (to put it another way) between Takaki Promontory and Chavez Island, on the W coast of Graham Land. Discovered and surveyed by FrAE 1903-05, and named by Charcot as Baie Leroux, for Capitán de fragata Eugenio Leroux of the Argentine Navy. On Charcot's 1906 map it appears as an ill-defined indentation into the coast S of Lahille Island, as it does also on Matha's 1911 chart. Following this lead, it also appears (as Leroux Bay) on a British chart of 1908, and on a British photo of 1916. It was re-surveyed by FrAE 1908-10, and, on Charcot's 1912 map the name Baie Leroux was applied to (what are now known as) Leroux Bay and Bigo Bay collectively. More accurately delineated in 1935-36, by BGLE 1934-37, and on Rymill's 1938 map of that expedition the name Leroux Bay is applied to the feature we know today. US-ACAN accepted that situation in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57, and, between 1956 and 1958, was surveyed from the ground by a FIDS-RN team. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Bahía Leroux.

Les Brisants du Lion. 66°39' S, 140°01' E. An area of reefs, N of Lion Island, in the Géologie Archipelago. So named by the French in 1977, due to their closeness to Lion Island, and also because the word "brisant" means "breaker" or "reef."

Les Dents. 68°57' S, 70°58' W. A conspicuous landmark consisting of 4 sharp, tooth-like needle rocks, all of the same height, rising to about 1500 m S of Mount Bayonne, between that mountain and Mount Paris, in the Rouen Mountains, in the N part of Alexander Island. Discovered and first roughly mapped in Jan. 1909, by FrAE 1908-10, and named descriptively by Charcot (the name means "the teeth"). The feature appears on a British chart of 1916, and also on Stephenson's 1940 map of BGLE 1934-37, who photographed it aerially. It appears on a British chart of 1948 as The Needles, and that was the name accepted by UK-PC on Sept. 8, 1953. It appears as such in the 1955 British

gazetteer. It appears on a 1953 Argentine chart translated as Los Dientes. Further mapped by Searle of the FIDS in 1959-60, from air photos taken by RARE 1947-48. US-ACAN accepted the French name in 1965. The Argentine gazetteer of 1970 accepted the name Agujas Los Dientes (i.e., "the teeth needles"), a name shared by the Chileans.

The *Les Éclaireurs*. A 6000-ton, 99-meter cargo and passenger merchant ship built for the Argentine government in 1949, at Cantieri Reuniti dell'Adriatico, at Monfalcone, Italy, the sister ship of the *Le Maire* and the *Lapataia*. She could do 15 knots, and could take 71 crew and 100 passengers. She made her first trip, to Ushuaia, in Feb. 1952, and took part in ArgAE 1953-54 (Captain Ricardo S. FitzSimon) and ArgAE 1956-57 (Capt. Enrique I. Paquien). In Jan. and Feb. 1958, under the command of Capt. Eduardo J. Llosa, she took down two loads of about 100 tourists each to Antarctica. She was decommissioned on Aug. 12, 1963, and on Sept. 5, 1968, befitting her name, she became a lighthouse in the Río de la Plata, and an object of target practice.

Glaciar Les Éclaireurs *see* **Support Force Glacier**

Punta Les Eclaireurs. 63°11' S, 55°24' W. A point, on the SE side of Ambush Bay, on the N coast of Joinville Island. Named sans accent mark, by the Argentines, after the ship *Les Éclaireurs*.

Les Galets. 66°40' S, 139°57' E. A little valley with a shingly bottom (hence the name — "galets" means "shingles"), in the central part of Gouverneur Island, in the S part of the Géologie Archipelago. Named by the French in 1964, for the nature of the soil.

Les Jumeaux *see* **La Balance** (under **L**)

Les Poissons. 66°40' S, 139°59' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The name "the fishes" signifies the zodiac sign Pisces.

Les Sept Îles. 66°40' S, 139°59' E. A group of islands and islets in Baie Pierre Lejay, W of Pétrel Island, in the central part of the Géologie Archipelago. Named by the French in 1958, for the feature of the same name in Brittany.

Mount LeSchack. 85°25' S, 124°00' W. A distinctive flat-topped mountain rising to 2265 m, on the N side of Perkins Canyon, in the Wisconsin Range of the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for Leonard A. LeSchack, traverse seismologist at Byrd Station in 1958.

Lesidren Island. 62°26' S, 60°09' W. Measuring 800 m by 600 m, it is the second largest and southernmost island in the Zed Islands, between Phanagoria Island and Koshava Island, from which it is separated by channels 130 m and 140 m wide respectively, 1.4 km N of Williams Point, off the N coast of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Lesidren, in northern Bulgaria.

Leskov, Arkady. Name is properly Lyeskov. 3rd lieutenant on the *Vostok*, during von Bellingshausen's expedition of 1819-21.

Leskov Island. 66°36' S, 85°10' E. An ice-covered island, rising to an elevation of 184 m above sea level, 10 km NW of Mikhaylov Island, in the West Ice Shelf. The Australians call it an elevation in the surface of the ice shelf. Discovered by SovAE 1956, who named it Ostrov Leskova (later Kupol Leskova) (i.e., "Leskov island" or "Leskov dome"), for Arkady Leskov. ANCA accepted the name Leskov Island on Oct. 24, 1962, and US-ACAN followed suit in 1965.

Kupol Leskova *see* **Leskov Island**

Obryv Leskova. 80°30' S, 28°22' W. A bluff, S of Flat Top, in the NW part of the Shackleton Range. Named by the Russians.

Ostrov Leskova *see* **Leskov Island**

Colinas Leslie *see* **Leslie Hill**

Sedlovina Leslie *see* **Leslie Gap**

Leslie, David. b. Scotland. Sealing captain from New Bedford, Mass., co-owner and skipper of the *Gleaner* during the 1820-21 season in the South Shetlands. He was succeeded as captain by Thomas Boyd, on July 5, 1821, at Valparaíso. He lived in the Mason house, on Main Street, New Bedford.

Leslie Gap. 62°33' S, 60°12' W. A crescent-shaped, ice-covered saddle at an elevation of over 300 m, extending 2.7 km in a S-N direction between Leslie Hill and Vidin Heights, on Livingston Island, in the South Shetlands. Its midpoint is located 5.93 km N by E of Hemus Point, and 6 km NNW of the highest point of Melnik Ridge. It separates the glacial catchment of Kaliakra Glacier from an ice-cap segment draining into Hero Bay. Named by the Bulgarians on Aug. 19, 1997, in association with Leslie Hill.

Leslie Hill. 62°34' S, 60°12' W. A hill, rising to about 530 m, W of Moon Bay, and northward of Mount Bowles, in the E part of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on July 7, 1959, for David Leslie. US-ACAN accepted the name in 1960. The Argentines pluralize the feature, as Colinas Leslie.

Leslie Peak. 68°00' S, 56°30' E. A rock outcrop with a conical peak at its S end, about 8 km S of Mount Cook, in the Leckie Range, in Kemp Land, in Enderby Land. Plotted by Australian cartographers from ANARE air photos. Named by ANCA on July 29, 1965, for Leslie D. "Les" Miller, radio officer at Mawson Station in 1964, a member of one of the survey parties which carried out a tellurometer survey traverse passing through the Leckie Range in 1965. US-ACAN accepted the name in 1967. *See also* **Miller Ridge**.

L'Esperance, Joseph Gerard V. Coxswain on the *Bear* during the 2nd half of USAS 1939-41.

Lesser Antarctica *see* **West Antarctica**

Lesser Mackellar Island. 66°58' S, 142°39' E. A small island, immediately NE of Greater Mackellar Island, in the Mackellar Islands, 3 km N of Cape Denison, in the middle of Commonwealth Bay. Discovered by AAE 1911-14, and named by Mawson in association with (and reflecting its proportionate size to) Greater Mackellar Island. US-ACAN accepted the name in 1963.

Lesser rorqual *see* **Minke**

Lesser sheathbill *see* **Sheathbills**

Caleta Lester *see* **Lester Cove**

Lester, Maxime Charles. Conceived illegitimately in Rome, son of a free spirit, Maria Kline Luzogno, by a gentleman named Signor Sabina (first name unknown). Pregnant, Maria struck out on her own for London, and settled in Marylebone, where her son Maxime Charles Sabina was born on Sept. 25, 1891. When Charles (as he was called) was a little lad, his mother, a very pretty lady, doing what she could to survive in style in late Victorian London, including working for years as an "artist's model," moved for a while to Kensington, where, in 1895, she had another child, Hermione (father unknown, but British this time). Maria legally changed her son's name to Luzogno, and then the family moved back to Marylebone, to live in an apartment at 43 Chapel Street. Having had enough of an exotic background that rivaled that of Victor Marchesi (q.v.), Charles changed his last name to Lester, and joined the Merchant Navy, became an officer (and a lieutenant in the Royal Naval Reserve), and, as such, he left Liverpool on the *Metagama*, bound for Canada, on April 3, 1915 arriving in Halifax, Nova Scotia, where he stayed for a while, joined the Canadian Navy, and served in the North Atlantic. He was surveyor and navigator on the British Imperial Antarctic Expedition of 1920-22, and after the expedition re-joined the Merch, and was back in southern waters on the *William Scoresby* in 1926-27, and again in 1928-29, as part of the Discovery Investigations. On March 29, 1930 he was transferred to the *Vivid*. On April 9, 1932, still a lieutenant, he was placed on the RNR retired list, and on Dec. 31, 1932 was promoted to lieutenant commander (ret.). He died on March 3, 1957, in Surrey.

Lester, William J. *see* **USEE 1838-42**

Lester Cove. 64°54' S, 62°36' W. Between Steinheil Point and Forbes Point, it forms the SW arm of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. In 1956-57, it was photographed aerially by FIDASE 1956-57, and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for M.C. Lester. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Caleta Lester.

Lester Peak. 79°49' S, 83°42' W. A prominent, snow-free peak at the S side of Hyde Glacier, in the Edson Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lester A. Johnson, meteorologist at Little America V in 1958.

Banco Letelier *see* **Letelier Bank**

Letelier Bank. 62°28' S, 59°39' W. On the SW side of Ash Point, on Greenwich Island, in

the South Shetlands. Named by ChilAE 1964-65, as Banco Letelier, presumably for a member of that expedition. It appears as such on their 1965 chart. UK-APC accepted the translated name on March 31, 2004. Plotted by the UK, in late 2008.

Letnitsa Glacier. 63°03' S, 62°36' W. Flows SE for 1.8 km, from the SE slopes of the Imeon Range, E of Organa Peak and S of Riggs Peak, and terminates in Hisarya Cove, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town in northern Bulgaria.

Letourno, Godfrey *see* **USEE 1838-42**

Lettau Automatic Weather Station. 82°41' S, 174°17' W. American AWS at an elevation of 55 m, on the Ross Ice Shelf. Named for meteorologist Bernard H. Lettau. Began operating on Jan. 29, 1986.

Lettau Bluff. 76°57' S, 167°00' E. A rock and ice bluff, rising to 200 m above the Ross Sea, and forming the central part of the W edge of Beaufort Island. Named by US-ACAN in 1999, for Heinz H. Lettau, of the University of Wisconsin, an authority on Antarctic meteorology, who was active in the planning and development of the meteorological program and equipment for Plateau Station, 1966-68. He co-wrote (with Paul Dalrymple and Sarah H. Wollaston) an analysis of the 1958 meteorological data from Pole Station. NZ-APC accepted the name on Nov. 4, 1999.

Lettau Peak. 77°57' S, 162°30' E. A triangular peak rising to 2455 m, 1.5 km WNW of Fogle Peak, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for Bernhard Lettau, program manager for polar ocean and climate sciences at the NSF's Office of Polar Programs, from 1976.

Mount Letten. 66°55' S, 51°03' E. A mountain, about 1.75 km SE of Mount Storer, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA for Herbert Letten. US-ACAN accepted the name in 1965.

Letten, William Herbert. Known as Herbert. b. Nov. 26, 1892, Newport, Monmouthshire, but grew up in Penarth, Glamorganshire, son of Devon seaman Henry John Letten and his Liverpool wife Mary. Donkeyman (4th engineer) on the *Discovery* during both halves of BANZARE 1929-31. He died in April 1989, in Canterbury, Kent.

Letzte-Chance-Kamm. 71°37' S, 163°25' E. A crest, in the Gateway Hills, in the Bowers Mountains. Named by the Germans ("last chance crest").

[1]**The *Leucotón***. Originally a U.S. ship, the *ATA 200*, built at Gulfport Boiler & Welding Works, Port Arthur, Texas, and launched on Sept. 8, 1944, she was bought by the Chilean Navy on Sept. 29, 1947, arriving in her new country on Feb. 2, 1948. Renamed the *Leucotón*, she served as a patrol vessel on ChilAE 1951-52 (Captain Luis Gauche Délano); ChilAE 1952-53 (Capt. Reinaldo Roepke Rudloff); ChilAE 1954-55 (Capt. Germán Valenzuela Labra; *see* [2]**Caleta Valenzuela**); ChilAE 1955-56 (Captain Pablo Weber Münnich; *see* **Caleta Weber**); ChilAE 1959-60 (Captain Carlos Fanta Núñez). She was lost in a very strong gale on Aug. 2, 1965, in Bahía San Pedro.

[2]**The *Leucotón***. Chilean ship used on ChilAE 1999-2000 (captains Sergio Cabezas Dufeu, Kurt Hartnung, and Humberto Ramírez).

Islote Leucotón. 63°56' S, 60°44' W. A little island, reaching an elevation of 28 m above sea level, it is the northernmost and largest of the Tetrad Islands, SSE of Mikkelsen Harbor, Trinity Island, in the Orléans Strait. Named by ChilAE 1951-52, for the first *Leucotón*. The name was accepted by the 1974 Chilean gazetteer.

Leuthner, Walter Frank. b. Nov. 30, 1894, St. Paul, Minn., and raised there and in Alexandria, Minn., son of German immigrants, baker Joseph H. Leuthner and his wife Bertha Nietz. As a young man he worked for his father, as a bakery salesman, in Alexandria, and was shot in the left arm, and could never use it after that. In the 1920s he joined the Merchant Marine, as a scullion with the United States Line, and was a seaman on the *City of New York* during ByrdAE 1928-30. At the end of the expedition, he left Wellington on the *C.A. Larsen*, arriving back in New York on April 25, 1930. He died on Oct. 22, 1987, in Alexandria, Minn.

Mount Levack. 78°18' S, 85°05' W. Rising to 2670 m, 21 km E of Mount Ostenso, in the central part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Herb Levack.

Levack, Herbert T. b. 1916, on a farm near Athol, Mass., but raised partly in Hartford, Conn., son of milling machine operator Edmund Levack and his wife Esther Thompson. He was drafted into the Army on Aug. 2, 1941, in Hartford. After 2 years he went to Air Force flight school, and in 1944, after graduating from flight school, married Mary Long. In the last years of World War II he was a command pilot flying B-24s in Europe, and stayed on in the Air Force after the war. He was in Korea, flying C-124s, and flew many times in the Arctic. As a major and C-124 (Globemaster) pilot, he was operations officer of 52nd Troop Carrier Squadron (63rd Wing), at McMurdo Sound in 1956-57, during OpDF II. On Nov. 25, 1956, he was co-pilot of the plane that dropped Dick Patton over the Pole (Col. Crosswell was pilot). He was back in Antarctica for OpDF IV (i.e., 1958-59) and again for OpDF 64 (i.e., 1963-64). He also helped set up Byrd Station. He retired as a colonel, after 24 years. He later worked at the Aeronautical Charts and Information Center, in St. Louis, and died in Hartford, on Jan. 30, 2010, aged 93.

Punta Levalle. 62°36' S, 59°52' W. The point immediately E of Punta Pallero, on the E coast of Half Moon Island, of the E coast of Livingston Island, in the South Shetlands. Named by the Argentines.

Gora Levanovskogo *see* **Skeidsberget Hill**

Levanovskogo Mountain *see* **Skeidsberget Hill**

The *Levant*. Whaling ship, built in Newbury, Mass., in 1831, that left Sag Harbor, NY, in 1852, supposedly bound for Antarctic waters, under the command of Capt. Mercator Cooper. His unpublished log book, now in the Long Island Room of the East Hampton Library, NY, states that [after leaving the Chatham Islands] on Jan. 25, 1853 they were in 69°56' S, 167°50' E; on Jan. 26, 1853 they were in 70°10' S, 168°09' E; and that on Jan. 27, 1853, "At 11.30 we reached the floe, put a craft to the sea, directed toward the floe, and disembarked there. We saw a large number of penguins on the ice. Here the ice is broken up into solidly massed plates, and one finds, mingled to the floe, along the front of ice, a lot of large icebergs that overhang the water by four to fifteen feet, and appear, when one moves back, of a considerable height. There are two or three very high peaks of mountains far away." A sketch of the coast accompanies the text. On Jan. 28, 1853 they were in 70°20' S, 169°30' E. This puts them off the Pennell Coast of Oates Land, in northern Victoria Land. On Feb. 2, 1854 they sighted the Balleny Islands. After the cruise the *Levant* was sold in China, and in 1855 was reported lost.

Lednik Levashova. 71°45' S, 35°25' W. A glacier. Named by the Russians. However, *see* **Nunatak Izmajlova** for details of this feature.

Levassor Nunatak. 63°40' S, 58°07' W. A conspicuous, horseshoe-shaped nunatak, rising to about 550 m, 1.5 km inland, in the middle of the W end of Cugnot Ice Piedmont, and on the N side of Prince Gustav Channel, Trinity Peninsula. Surveyed by Fids from Base D in 1960-61, and mapped by FIDS cartographers from these surveys. Named by UK-APC on Feb. 12, 1964, for Émile Levassor (1844-1897), automobile pioneer. US-ACAN accepted the name later in 1964. One of the Argentine Antarctic expeditions named it Cerro Gancedo, after a member ot the expedition, and it has been seen as such since 1978.

Level Valley. 77°59' S, 161°08' E. A distinctive ice-free valley descending northeastward from the Pivot Peak cirque, in the Wilkniss Mountains of Victoria Land. In keeping with the practice of naming several features in this area after things surveying, this one was named by NZ-APC in 1992, for the surveyor's level. US-ACAN accepted the name in 1993.

Leveng, Joseph. b. Nov. 11, 1806, Le Beausset, France. Baker on the *Zélée* during FrAE 1837-40.

Glaciar Lever *see* **Lever Glacier**

Lever Glacier. 65°30' S, 63°40' W. A glacier, at least 10 km long, and 2.5 km wide at its mouth, it flows WNW, then WSW into the head of the NE arm of Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly surveyed in Jan. 1909 by FrAE 1908-10. It appears on Charcot's 1912 map. Roughly surveyed in its lower part in Aug. 1935, during BGLE 1934-37, it appears on

Rymill's 1938 map of that expedition. Named by UK-APC on Sept. 22, 1954, for William Hulme Lever (1888-1949), 2nd Viscount Leverhulme, a financial patron of BGLE. US-ACAN accepted the name in 1955. It appears as such on a British chart of 1957. It was partially photographed from the air by FIDASE in 1956-57. The British plot it in 65°29' S, 63°35' W. It appears on a Chilean chart of 1962 as Glaciar Lever, and that was the name accepted by the Chilean gazetteer of 1974. The Argentines also call it that.

Lever Nunataks. 78°04' S, 161°08' E. A string of nunataks extending in a linear fashion from the small peak known as Fulcrum, at Creagh Icefall, in the Wilkniss Mountains of Victoria Land. Named descriptively by US-ACAN in 1994. NZ-APC accepted the name.

Leverett Glacier. 85°38' S, 147°35' W. A slow-moving glacier, about 80 km long (the New Zealanders only say over 30 km long), and between 5 and 6 km wide (the New Zealanders say 20 km wide), it flows northward from the Watson Escarpment, between the California Plateau and the Stanford Plateau, and then, with a change of direction to the WNW, between the Tapley Mountains and the Harold Byrd Mountains, and finally terminates at the head of the Ross Ice Shelf close E of Scott Glacier. Discovered in Dec. 1929 by Larry Gould's party during ByrdAE 1928-30, and named by Gould for Frank Leverett (1859-1943), glacial geologist at the University of Michigan. However, during ByrdAE 1933-35, Quin Blackburn observed the glacier, and renamed it Leverett Plateau. Later investigations revealed that it is, in fact, a glacier. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Leverett Plateau *see* **Leverett Glacier**

Levesque, Roland. of Beverley, Mass., Driver on the Byrd Station trail party led by Jack Bursey in Jan.-Feb. 1956.

Levi Peak. 84°08' S, 165°06' E. A rock peak, 3 km NW of Mount Stanley, at the W edge of Grindley Plateau. Named by US-ACAN in 1966, for Gene S. Levi, meteorologist who wintered-over at Hallett Station in 1963, and summered-over there in 1964-65.

Mount Levick. 74°08' S, 163°10' E. A prominent mountain, rising to 2390 m (the New Zealanders say 2773 m), at the NW side of the Tourmaline Plateau, westward of Mount Melbourne and eastward of Mount Baxter, in the Deep Freeze Range of Victoria Land. First charted by Campbell's Northern Party during BAE 1910-13, and named by them for Murray Levick (q.v.), a member of that party. US-ACAN accepted the name, and NZ-APC followed suit.

Levick, George Murray. Known as Murray, and even as "Toffer" or "Tofferino," or "the old sport." b. July 3, 1876, Newcastle, England, son of Welsh civil engineer George Levick and his wife Jeannie Sowerby. He grew up in London, and, after St Paul's School, qualified as a doctor at Barts in 1902, and was a Royal Navy surgeon from then on, specializing in physical training. From 1908 to 1909 he served on the battleship *Essex*, under Scott, and went on BAE 1910-13. Scott's first impression of the doctor (written in his published journal) was, "I am told that he has some knowledge of his profession, but there it ends. He seems quite incapable of learning anything fresh. Left alone, I verily believe he would do nothing from sheer lack of initiative." Scott observed Levick's constant amiability and his "vacant smile," and said he "cheerfully accepts any amount of chaff." "In short, I am afraid there is little to be expected of him." Before the *Terra Nova* had reached Melbourne, Scott was writing, "Levick has a really charming nature." He was medical officer with Campbell's Northern Party, during that expedition, and wrote *Antarctic Penguins*, in 1914. On Nov. 21, 1915, after action at Gallipoli, he became Fleet Surgeon, and retired as such. On Nov. 16, 1918, at Westminster, he married the remarkable Audrey Beeton, famous lacrosse player and future explorer, daughter of Sir Mayson Beeton, and granddaughter of Mrs Beeton of cookbook fame. Between the wars he was medical officer in charge of the Electrical Treatment Department at St Thomas's Hospital, in London, and was involved with physiotherapy at the Ministry of Pensions Hospital, and with the healing power of sunlight in tuberculosis cases. In 1932 he founded and developed the Public Schools Exploring Society, and was in Intelligence during World War II, training Commandos for extreme weather conditions. He died on May 30, 1956, at Budleigh Salterton, Devon. Audrey died on July 23, 1980.

Nunataki Levickogo. 72°50' S, 75°17' E. A group of nunataks, NW of the Gale Escarpment and Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Named by the Russians.

Gora Levitana. 83°27' S, 56°00' W. A nunatak, immediately E of Madey Ridge, in the Neptune Range, in the Pensacola Mountains. Named by the Russians.

Levko Glacier. 72°25' S, 96°02' W. Flows from Pallid Crest to the E end of Thurston Island, entering Seraph Bay between Tierney Peninsula and Simpson Bluff. Named by US-ACAN in 2003, for George N. Levko, USN, photographer's mate in the Eastern Group of OpHJ 1946-47, which obtained aerial photos of this area.

Hrebet Levski *see* **Levski Ridge**

Vrah Levski *see* **Levski Peak**

Levski Peak. 62°40' S, 60°07' W. Rising to 1430 m in the W end of Levski Ridge, next E of Shipka Saddle, 2 km E of Lyaskovets Peak, and 2.15 km W of Great Needle Peak, it surmounts Huron Glacier to the N and Macy Glacier to the S, in the Tangra Mountains of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 1995-96, and named by them on March 15, 2002, for Vasil Levski (1837-1873), hero of the Bulgarian liberation movement.

Levski Ridge. 62°40' S, 60°03' W. The central ridge of the Tangra Mountains, on Livingston Island, in the South Shetlands. The highest point is in Great Needle Peak (about 1600 m). The ridge extends 8 km between Shipka Saddle to the W and Devin Saddle to the E, and is bounded by Huron Glacier to the N, by Macy Glacier and Boyana Glacier to the SW, and by Srebarna Glacier and Magura Glacier to the SE and S. Mapped by the British in 1968, and by the Argentines in 1980. Named by the Bulgarians on March 15, 2002, in association with Levski Peak, which rises to 1430 m in the W end of the ridge.

Islotes Levy *see* **Levy Island**

Levy Glacier *see* **Leay Glacier**

Levy Island. 66°20' S, 66°35' W. An isolated, snow-covered island in Crystal Sound, 12 km E of Gagge Point (which is on Lavoisier Island), between Lavoisier Island and the Bernal Islands, off the Loubet Coast, on the W coast of Graham Land. Photographed aerially by RARE 1947-48, and again by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W in 1958. Mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Henri Arthur Levy (1913-2003), U.S. physical chemist specializing in determining, by neutron diffraction, the location of hydrogen atoms in ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines pluralize the feature as Islotes Levy.

Kap Lewald. 66°47' S, 89°18' E. A cape, due W of Posadowsky Bay, just E of the West Ice Shelf. Named by the Germans.

Lewandowski Point. 75°36' S, 162°13' E. A rugged, partially ice-free point on the coast of Victoria Land, it marks the S side of the mouth of Clarke Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for John R. Lewandowski, USN, chief construction electrician at McMurdo in 1965-66 and 1966-67.

Cape Lewis. 66°30' S, 124°30' E. An ice-covered cape at the W side of Maury Bay, on the coast of East Antarctica. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Thomas Lewis, gunner on the *Relief*, and later the *Peacock*, during USEE 1838-42. It seems very odd that this man should have been picked to honor with a feature, in that he is just a name among many crew members. What one means by that is that he didn't do anything. What makes this even more curious is that Lewis Island (q.v.) may have been named after him too.

Glaciar Lewis *see* **Lewis Glacier**

[1]**Mount Lewis**. 77°14' S, 161°31' E. Rising to 1450 m, at the SW end of Rutherford Ridge, in the Saint Johns Range of Victoria Land. A rock gable on the SW face of the mountain provides an easily recognized landmark when viewed from southward. Named by US-ACAN on Jan. 15, 2008, for Adam R. Lewis, research assistant professor at North Dakota State University, who has made significant contributions to understanding the Late Cenozoic vegetation history of the McMurdo Dry Valleys. NZ-APC accepted the name on April 7, 2008.

[2]**Mount Lewis** *see* **Lewis Chain**

Picos Lewis *see* **Lewis Peaks**

Punta Lewis *see* **Lewis Point**

Lewis, Arthur Frederick "Joe." b. Nov. 30, 1930, Leigh, Lancs, son of Joseph Lewis and his wife Olive Mary Jagger. He was nicknamed "Joe, after his father. He was living in Tyldesley, Manchester, when he joined FIDS in 1950, as a meteorologist, and wintered-over at Base F in 1951, and at Base G in 1952. At the end of his tour, he returned to Port Stanley, where he picked up the *Fitzroy* headed back to London, where he arrived on Feb. 3, 1953. He was back for the winters of 1954 and 1955, this time at Base D. He returned to London on March 2, 1956, aboard the *Highland Princess*. Later that year, in London, he married Jean Levack, and in 1957 they moved to the Falkland Islands, where Joe worked at the Met Office, at Port Stanley. Back to Bracknell, Berks, in 1963, he was leading a Boy Scout party in canoes when he had an accident that broke his back, leaving him in a wheelchair for the rest of his life. In 1986 he retired to Pensilva, Cornwall, got into local politics, and was awarded the MBE. He died on Feb. 3, 2005, in Plymouth.

Lewis, Arthur George. Known as George Lewis. b. Oct. 23, 1931, York, son of Arthur Willibrord Lewis and his wife Margaret Elizabeth Rampton Bray. George's father worked as a commercial rep for his father's knitting needle manufacturing company, Abel & Morrals. George went to several different schools in the south of England, and during World War II was evacuated to Devon. He left school at 15, and between 1949 and 1951 was in the RAF, as a ground radar fitter. He stayed in radar on civvy street, and between 1952 and 1956 was in guided weapons development, going to Germany in 1956 as a technical writer and interpreter, and teaching at night school in Duisburg. He joined FIDS in 1958, as an ionosphere physicist, and wintered-over at Port Lockroy Station in 1959. He had a German girlfriend who would send messages to him in German Morse code. They would often refer to him as "George the Smooth," to distinguish him from George White, whom they called "George the Rough." He then wintered-over at Halley Bay Station in 1960. In 1963 and 1964 he wintered-over at Scott Base (the NZ base), as senior technical officer and scientific leader. He and Gerald Holdsworth climbed Mount Erebus and returned to base in 23 hours. On the way back from Auckland on the *Oronsay*, he met Lancashire teacher Dorothy Park, and they were married in 1966, in Kirby, in the Lake District. Involved in nuclear research, and studying mathematics and physics, he became senior scientist with the Geological Survey in Lerwick, in the far north of Scotland, taking his family, and building a house there. In 1978 he left Lerwick for Edinburgh, as senior scientist with the World Digital Data Centre, and the family moved to Peebles. In 1984, still in Edinburgh, he became senior scientic officer with the Geological Survey, and retired in 1992. While at Lerwick, he had begun to manifest signs of aortic bifurcation, and in 1994 finally had a heart bypass. He was at home in Peebles on Feb. 9, 1996, when he took the shovel and said to his wife, "I'm dressed for the Antarctic. I'm going out to clear the snow." He had a massive heart attack, and died instantly, in the snow, the way he would have wanted to go.

Lewis, Charles. A ship's engineer who had worked for years on Bowring sealers out of St. John's, Newfoundland, and who was handpicked by Capt. Bobby Sheppard to be chief engineer on the *Eagle* in 1944-45, during the 2nd phase of Operation Tabarin.

Lewis, David Henry. b. Sept. 16, 1917, Plymouth, Devon, but raised in NZ and the Cook Islands, son of Welsh mining engineer Trevor A. Lewis and his wife Carinna A.B. O'Neill, an Irish doctor. Mountain climber, international yachtsman, explorer, adventurer, author, he served with the British Army as a medical officer with the 9th Parachute Battalion in France during World War II, then worked as a doctor in Port Royal, Jamaica, and with his Lithuanian wife Perle Michaelson, became involved in Michael Manley's independence movement there. Back in England in the late 40s, and a Communist, he worked as a doctor in East Ham, and was involved in the setting up of the National Health Service. In 1956 he and his wife split up, and in the early 1960s he became a Transatlantic yacht racer, and circumnavigated the world in the mid-60s with his 2nd of three wives, Fiona Grant, a South African. In 1967 he made a champagne flight to Antarctica (*see* **Clarke, Ian**, for more details of this flight). His first Antarctic voyage was on the *Ice Bird* (q.v. for details), in 1972-74. In 1977 he was one of the founders of ORF (Oceanic Research Foundation), a nonprofit company that would sponsor several Antarctic trips, including 3 of Lewis's own — the *Solo* (q.v.) expedition in 1977-78; the *Dick Smith Explorer* Expedition (q.v.) of 1981-82; and the Frozen Sea Expedition (q.v.), of 1982-84. He finally went blind, but adventured to the end, dying at Gympie, Queensland, on Oct. 23, 2002.

Lewis, Gary Henry. b. June 24, 1939. A Wellington NZ policeman who was at Scott Base from Oct. 22, 1969 to Nov. 6, 1970, as senior technical officer in charge of the geophysical observatory. He ran the Otago University's VLF program there. He was back at Scott between Dec. 10, 1973 and Jan. 13, 1976, i.e., he wintered-over again, 1974 and 1975, and then spent a couple of weeks (Oct. 22 to Nov. 3, 1976) at Scott again, investigating radio noise. He summered-over at Vanda Station, as base leader, from Oct. 29, 1979 to Feb. 16, 1980.

Lewis, Gordon. b. April 4, 1927, Southampton. On Sept. 16, 1958 he joined FIDS, and was a marine electrical officer on ships in Antarctic waters. He retired from BAS (as FIDS had become) on July 27, 1989. He declined his Polar Medal, and died in March 1997, in Southampton.

Lewis, James Battaile. b. June 30, 1810, Virginia, son of John Hancock Lewis and his wife Mary Muse. He joined the U.S. Navy and became a midshipman on March 31, 1831, being stationed on the *Potomac*. He was promoted to passed midshipman (a rank later re-designated ensign) on June 15, 1837. He served on USEE 1838-42, joined the *Flying Fish* at Fiji, transferred to the *Peacock*, and left sick from Oahu to return home to Jefferson Co., Va., where he married Anne Catherine Hume on June 16, 1841, became a farmer, and had several children. He was promoted to lieutenant on Sept. 8, 1841, went onto the Navy reserve list on Sept. 13, 1855, and was dismissed on May 23, 1861, having gone south. He died on Dec. 13, 1883.

Lewis, John Harding. b. May 23, 1922. He joined the RAF at 17, was one of the Battle of Britain pilots, and in 1949-50 was the pilot who flew over Marguerite Bay, guiding the *John Biscoe* in to pick up the stranded Fids from Stonington Island. He was a squadron leader, and an instructor at the Central Flying School, when he was picked to lead the air back-up, as senior pilot, for Fuchs' Antarctic crossing during BCTAE 1956-58. He was with the advance party on the *Theron*, in Nov. 1955, and in March 1956 returned to the UK. In Nov. 1956 he went back to Antarctica on the *Magga Dan*, and wintered-over at Shackleton Base in 1957, and then made the Transantarctic crossing. After the expedition, he returned to Wellington, and there caught the *Rangitoto* heading for Southampton, where he arrived on May 12, 1958. He retired as group captain, and died in Jan. 1990, in York.

Lewis, Mark Peter David. b. Nov. 10, 1949. BAS meteorologist, physicist, and field assistant who wintered-over at South Georgia in 1978 and 1979. In 1980-81 he was on a plateau in the Antarctic Peninsula, and wintered-over in 1981 as base commander at Rothera Station. He spent 2 summers assisting geologists on Alexander Island and James Ross Island. In 1983 he wintered-over as base commander at Faraday Station. In 1990, in Henley-on-Thames, he married Karen L. Rogers.

Lewis, Peter *see* **USEE 1838-42**

Lewis, Thomas *see* **USEE 1838-42**

Lewis Bay. 77°22' S, 167°35' E. Indents the N coast of Ross Island between Mount Bird and Cape Tennyson, and is the island's biggest bay. Charted by BNAE 1901-04. Named by US-ACAN in 1964, for Capt. Price Lewis, Jr., USN, captain of the *Staten Island* during OpDF IV (i.e., 1958-59). In 1963 and 1964 he was assistant chief of staff and ship group commander, U.S. Naval Support Force, Antarctica. NZ-APC accepted the name.

Lewis Bluff. 75°53' S, 140°36' W. A rock bluff at the confluence of Paschal Glacier and White Glacier, 11 km SE of Mount McCoy, on the coast of Marie Byrd Land. Photographed aerially by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for David L. Lewis, USARP ionosphere physicist at Byrd Station in 1963.

Lewis Chain. 80°23' S, 26°50' W. A chain of 4 rock nunataks, aligned N-S, and rising to 1110 m, forming part of the La Grange Nunataks, on

the W side of Gordon Glacier, in the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE. They named the highest and southernmost one as Mount Lewis, for John H. Lewis. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. On Dec. 20, 1974, UK-APC dropped the name Mount Lewis, and re-applied Squadron Leader Lewis' name to the whole chain. US-ACAN accepted that in 1975.

Lewis Cliff. 84°17' S, 161°05' E. An irregular cliff, about 20 km long, it extends S from Mount Achernar along the W side of Walcott Névé. Named by US-ACAN in 1966, for Aviation Electronics Technician 2nd class Richard E. Lewis of Summit, Pa., injured (but not killed) in the Neptune plane crash of OpDF II (*see* **Deaths**, 1956, and **Operation Deep Freeze II**, Oct. 19, 1956).

Lewis Glacier. 67°45' S, 65°40' W. The northerly of 2 glaciers flowing ESE into Seligman Inlet, on the Bowman Coast, on the E coast of Graham Land. Photographed aerially in 1940, by USAS 1939-41. Charted in 1947 by Fids from Base D and Base E, who named it for William Vaughan Lewis (1907-1961), Welsh glacial geomorphologist, and lecturer at the department of geography, at Cambridge. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Glaciar Lewis, and that was the name accepted by the 1970 Argentine gazetteer.

Lewis Hill. 63°51' S, 58°04' W. Rising to 75 m, and topped by 3 volcanic plugs, 1.5 km ENE of Stoneley Point, in the N part of James Ross Island. Surveyed by FIDS between 1952 and 1954. BAS did geological work here between 1981 and 1983. Named by UK-APC on April 3, 1984, for Mark Peter David Lewis. US-ACAN accepted the name.

[1]**Lewis Island**. 66°06' S, 134°22' E. A small, rocky island, rising to an elevation of 30 m above sea level, and marking the E side of the entrance to Davis Bay, on the Wilkes Coast. Delineated from air photos taken during OpHJ 1946-47. The first landing on the island was on Jan. 7, 1956, by an ANARE party. Named by ANCA on July 22, 1957, and US-ACAN followed suit in 1963. The Australians say it was named for Thomas Lewis (*see* **Cape Lewis**), but the Americans say it was named for James B. Lewis. Perhaps both are true. The Australians built a hut here in 1959, 20 m above sea level.

[2]**Lewis Island** *see* **Tonkin Island**

Lewis Nunatak. 85°40' S, 88°05' W. An isolated, mainly snow-covered nunatak, about 16 km SE of the Davies Escarpment, and 22 km SW of Nolan Pillar, at the S end of the Thiel Mountains. Named by Bermel & Ford, leaders of the USGS Thiel Mountains Party here in 1960-61, for Charles R. Lewis, USGS geologist in the McMurdo Sound and Balaena Islands areas in 1955-56. US-ACAN accepted the name in 1962.

Lewis Passage *see* **Lewis Sound**

Lewis Peaks. 67°15' S, 67°30' W. Prominent twin peaks rising to about 1065 m (the British say about 950 m), 5 km E of Day Island, they surmount the W part of Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. First roughly surveyed in 1909, by FrAE 1908-10. Re-surveyed in Sept. 1948 by Fids from Base E, who named them for Flight Lt. John Lewis (q.v.), pilot of the Auster aircraft used from the *John Biscoe* for reconnaissance of ice conditions in Marguerite Bay in Feb. 1950. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. The feature appears on a British chart of 1961. The Argentines call them Picos Lewis.

Lewis Point. 69°54' S, 62°25' W. A point, rising to 510 m, marked by rocky exposures on its N side, and surmounted by an ice-covered dome rising to 510 m, at the S side of the mouth of Anthony Glacier, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially in 1940 by USAS 1939-41, and probably seen from the ground by the same expedition. Photographed aerially in late 1947 by RARE 1947-48, and, that same season surveyed from the ground and charted by a combined sledging party of RARE personnel and Fids from Base E. Named by Finn Ronne for Col. Richard L. Lewis of the Army Quartermaster Corps, in Austin, Tex., who supplied field equipment and clothing to RARE for testing. Col. Lewis' name was originallly applied to what would later be called Tonkin Island. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and alsi in the 1955 British gazetteer. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Lewis Ridge. 83°13' S, 167°35' E. A rugged, ice-covered ridge, 22 km long, it extends eastward from the Holland Range, between Morton Glacier and Hewitt Glacier, and terminates at Richards Inlet, at the Ross Ice Shelf. Named by US-ACAN in 1966, for Cdr. George H. Lewis, USN, captain of the *Burton Island* in 1964.

Lewis Rocks. 76°18' S, 145°21' W. An area of rock outcrops, 5 km in extent, at the SW foot of Mount June, in the Phillips Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for John Hubbard Lewis (b. April 13, 1929, Jamestown, NY), Texas Tech geologist with the USARP Fosdick Mountains party here in 1967-68.

Lewis Snowfield. 71°25' S, 71°20' W. A low, undulating snowfield extending westward from the Walton Mountains and the Staccato Peaks (i.e., both of which bound it to the E) to Beethoven Peninsula and Eroica Peninsula (i.e., both of which bound it to the W), and northward from the Bach Ice Shelf (i.e., which bounds it to the S) to the Wilkins Ice Shelf (i.e., which bounds it to the N), in southern Alexander Island. Surveyed by BAS between 1961 and 1973. Named by UK-APC on May 30, 1975, for Sir Ernest Gordon "Toby" Lewis (1918-2006), governor of the Falkland Islands, 1971-74. US-ACAN accepted the name in 1976. It appears in the 1977 British gazetteer.

Lewis Sound. 66°20' S, 67°00' W. In the Biscoe Islands, it runs NW-SE and separates (to the NE) Lavoisier Island, Krogh Island, and DuBois Island from (to the SW) Watkins Island and the Adolph Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, as Lewis Passage, for Sir Thomas Lewis (1882-1945), British physiologist specializing in the skin's reaction to temperature. US-ACAN accepted the name later in 1960. It appears as such in the 1961 British gazetteer. However, as this feature does not provide safe passage for a ship, the name was changed to Lewis Sound, a name accepted by UK-APC, and by US-ACAN in 1965. The Chileans call it Canal Oliver, for Carlos Oliver Schneider (q.v. under **O**). The Argentines call it Canal Arenales, after General Antonio Alvárez de Arenales (*see* **Inverleith Harbor**).

Lewis Spur. 82°34' S, 52°13' W. A rock spur, rising to about 1500 m, 2.5 km W of Frost Spur, on the N side of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Atles F. Lewis, who wintered-over as aviation structural mechanic at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Lewis-Smith, Ronald Ian. b. Jan. 29, 1942, Aberdeen. After Aberdeen University, he worked as a BAS plant ecologist at Signy Island Station in 1964-65. He was back in the 1965-66 season, wintered over there in 1966, and summered in 1966-67, enough time for him to prepare the first ever comprehensive report on Antarctic vegetation. From 1969 to 1974 he led the British Antarctic Research team in the International Biological Program's Tundra Biome Project, and in 1975 became head of BAS's plant biology and environment section. He was many other seasons at BAS stations, as well as spending 1985-86 at Casey Station (Australian) and Baia Terra Nova Station (Italian) in 1995-96. He married Elinor Margaret Miller.

Lewisohn, Walter Pickett. b. Sept. 10, 1910, Eatontown, near Long Branch, NJ, son of broker Walter Lewisohn and his wife Selma (who later married Bartow Farr). He grew up in NYC, and went to Yale and the University of Wisconsin, and was radio operator on the *Jacob Ruppert* during ByrdAE 1933-35. On Feb. 7, 1943, at Drawbridge Down, NY, he married Helen Elizabeth Poussette-Dart, but in 1946 they were divorced in Miami. He re-married, to journalist and writer Florence Davis, and they spent years in the Caribbean. He died on Feb. 18, 1991, in London.

Lewisohn Nunatak. 77°38' S, 142°50' W. An

isolated nunatak, 16 km SE of the Mackay Mountains, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Walter P. Lewisohn.

Lewiston, William Andrew. b. April 17, 1921, Woodward, Iowa, son of Clyde R. Lewiston and his wife Ida. He joined the U.S. Navy in 1941, and took over as military leader of McMurdo Base from E.E. Ludeman for the winter of 1959. He retired as a captain in 1965, died in Safford, Arizona, on Nov. 1, 2002, and is buried in Fort Rosecrans National Cemetery.

Estrecho Lewthwaite *see* **Lewthwaite Strait**

Lewthwaite Strait. 60°42' S, 45°07' E. A marine passage, 4 km wide, running N-S between Coronation Island and Powell Island, in the South Orkneys. Discovered by Powell and Palmer on Dec. 9, 1821, and charted and navigated by Powell on Dec. 11-12. Named by Powell as Lewthwaite's Strait, for John Lewthwaite, inventor and teacher of navigation in Prince's Street, Rotherhithe, London, with whom Powell left his chart and journal of the Antarctic waters before sailing on his last voyage. It appears as such on Powell's chart of 1822. Weddell independently charted it on Jan. 19, 1823, and named it Spencer Straits, or Spencer's Straits (*see* **Santa Cruz Point**, for an explanation of that name). It appears as such on Weddell's chart published in 1825. The name has been seen spelled in a variety of ways over the years, on various maps and charts prepared by various countries, but it does appear as Lewthwaite Strait on an 1839 British chart. It was re-surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart. US-ACAN accepted the name Lewthwaite Strait in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentines had been calling it Estrecho Lewthwaite since 1908, and that was the name accepted by the 1970 Argentine gazetteer of 1970. John Lewthwaite, in 1834, proposed a harpoon filled with Prussic acid that would kill a whale faster.

Lexington Table. 83°05' S, 49°45' W. A high, flat, snow- and ice-covered plateau, 24 km long and 16 km wide, and rising to about 1600 m, just N of Kent Gap and the Saratoga Table, in the central part of the Forrestal Range, in the Pensacola Mountains. Discovered and photographed aerially on Jan. 13, 1956 (*see* that date under **Operation Deep Freeze I**). In association with the Saratoga Table, it was named by US-ACAN in 1957, for the early U.S. aircraft carrier, the *Lexington* (never in Antarctica). It appears on a *National Geographic* map of 1957, plotted in 83°25' S, 49°30' W. Re-mapped by USGS from USN air photos taken in 1964, and from USGS ground surveys conducted during their Pensacola Mountains Project of 1965-66. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Leyton, Eduardo Ramón *see* **Órcadas Station**, 1951, 1953

LGB00. 68°39' S, 61°07' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 1830 m, installed on Jan. 5, 1982, and removed on Jan. 21, 1989.

LGB00-A. 68°39' S, 61°07' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 1830 m, installed on Dec. 5, 1987, and removed on Aug. 31, 1993. It was replaced by LGB00-B (see below).

LGB00-B. 68°39' S, 61°07' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 1830 m, installed on Nov. 13, 1993, to replace LGB00-A (see above). It was removed on Feb. 13, 1995, and replaced with LGB00-C (see below).

LGB00-C. 68°39' S, 61°07' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 1830 m, installed on Feb. 15, 1995, to replace LGB00-B (see above). It was still going in 2009.

LGB10. 71°17' S, 59°13' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 2620 m, installed on Jan. 1, 1990. It was removed on April 10, 1990, and a new one installed on Jan. 1, 1991. This new one was removed on April 5, 1991, and a new one installed on Jan. 2, 1993. This latest one was removed on Oct. 24, 1994, and replaced with LGB10-A (see below).

LGB10-A. 71°17' S, 59°13' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 2620 m, installed on Nov. 22, 1993, to replace LGB10 (see above). It was removed on May 8, 2006.

LGB20. 73°50' S, 55°40' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 2741 m, installed in Jan. 1991, and removed on Sept. 1, 2004.

LGB35. 76°03' S, 65°00' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 2342 m, installed on Dec. 21, 1993, and still operating in 2009.

LGB46. 75°51' S, 71°30' E. Australian automatic weather station near Davis Station, at an elevation of 2352 m, installed on Nov. 7, 1994, and removed on May 6, 1997.

LGB59. 73°27' S, 76°47' E. Australian automatic weather station in Mac. Robertson Land, at an elevation of 2537 m, installed on Jan. 25, 1994, and removed on Jan. 28, 2004.

LGB69. 70°50' S, 77°04' E. An Australian automatic weather station near Davis Station, at an elevation of 1854 m, installed on Jan. 22, 2002, and replaced, on Feb. 2, 2007, with LGB69-A (see below).

LGB69-A. 70°50' S, 77°04' E. Australian automatic weather station near Davis Station, at an elevation of 1854 m, which, on Feb. 2, 2007, replaced LGB69 (see above).

Lhasa Nunatak. 85°07' S, 171°18' E. A long, narrow snow-free rock ridge, trending in a NW-SE direction for 14 km between the central part of Snakeskin Glacier and Jensen Glacier, to the E of the Supporters Range. Surveyed by the Southern Party of NZGSAE 1961-62, and so named by them because its central peak bears a striking resemblance to a Tibetan monastery perched on top of a hill. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

L'Hostis, Gonéry. b. Dec. 9, 1892, Plougrescant, Côtes d'Armor, Brittany, France. He joined the Merchant Marine at 15, and was a stoker on the *Pourquoi Pas?* during FrAE 1908-10. He continued as a stoker on merchant vessels up to the time of World War II, plying the Atlantic back and forth continuously between New York and Le Havre, as a fireman on a number of French merchant ships, sometimes in company with his elder brother Édouard and his younger brothers Louis (a steward) and Charles.

Liadov Glacier. 71°32' S, 73°45' W. Flows ENE from Harris Peninsula into Brahms Inlet, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Ljadova, for Russian composer Anatol Liadov (1855-1914). US-ACAN accepted the translated name in 2006.

Lianhua Jiao. 69°25' S, 76°02' E. A reef in the Larsemann Hills. Named by the Chinese.

Lianhua Shan. 69°22' S, 76°19' E. A hill in the Larsemann Hills. Named by the Chinese.

Isla Liard *see* **Liard Island**

Mount Liard. 80°58' S, 158°51' E. A peak, 10 km E of Mount Durnford, and rising to 1770 m on the ridge S of Cooper Snowfield, in the Churchill Mountains. Named by US-ACAN in 2003, for for one of their own men (1949-80), geographer Theodore J. Liard, Jr. (1918-2002). NZ-APC accepted the name on Feb. 27, 2003.

Pic Liard *see* **Liard Island**

Liard Island. 66°51' S, 67°25' W. A mountainous, rocky, triangular island, with steep ice-cliffs, 21.5 km long and 10 km wide, it rises to 915 m above sea level, in the north-central part of Hanusse Bay, off the Loubet Coast, on the W coast of Graham Land. Separated from Arrowsmith Peninsula by the Isacke Channel, and from Adelaide Island by the Buchanan Passage, it is mostly ice-free in summer. Discovered by FrAE 1908-10, and charted by them as a pyramid-shaped peak, which Charcot named Pic Liard (he estimated its height at 760 m). US-ACAN accepted the name Liard Island in 1953, and UK-APC followed suit on Sept. 8, 1953. The Chileans and Argentines call it Isla Liard.

Mount Liavaag. 77°22' S, 86°29' W. Rising to 1820 m, between Mount Holmboe and the Holth Peaks, near the N end of the Sentinel Range, in the Ellsworth Mountains. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Lauritz Liavaag.

Liavåg, Lauritz Ludvig Martin. b. Sept. 28, 1892, Ålesund, Norway, son of Bertel Liavåg and his wife Jensine. He went to sea in 1912, as an able seaman on the Norwegian ship *Clyde*, sailing between Valparaíso and the Great Northwest, and by the early 1920s had worked his way up to 1st officer. While on a coal ship plying between Dieppe and Cardiff, he met Georgette Bréard, and they married and moved to Brooklyn in 1926. Legend has it that he worked on the construction of the Empire State Building. He was 2nd mate on the *Wyatt Earp* during Ellsworth's 1st and 2nd expeditions, 1933-34 and 1934-35. He was 1st mate on the same ship during the 3rd expedition, 1935-36, and later, during Ellsworth's

last expedition, 1938-39. On Jan. 15, 1939 he and two other men were standing on a bergy bit, chipping at it for water, and they fell in. Liavåg got his right knee crushed between two sections of ice, and Ellsworth immediately canceled the expedition and quickly sailed for Hobart. While Liavåg had been in Antarctica, his wife and son had moved to Dieppe, and from there to Norway.

The *Libertad*. Argentine ship, belonging to the Dirección Nacional de Turismo, in Buenos Aires, which, between Dec. 26, 1968 and Feb. 28, 1969, conducted four tourist cruises to the South Shetlands and the Antarctic Peninsula. Captain Ismael René Martínez. Between Dec. 18, 1971 and Jan. 22, 1972 she made two more tourist cruises, same places, same captain. Same thing, two cruises, in the 1972-73 season, same captain.

Islotes Libertad. 63°00' S, 55°49' W. The W sub-group of the Wideopen Islands, N of Joinville Island. Charted by ArgAE 1953-54, and named by them after the home town of one of the officers on the *Chiriguano*, during that expedition. The feature appears on an Argentine chart of 1957.

Base Libertador General Bernardo O'Higgins Riquelme *see* **General Bernardo O'Higgins Station**

Libertador General San Martín Refugio. 64°11' S, 58° 21' W. Argentine refuge hut, more commonly known as Libertador, built by the Army personnel from Esperanza Station on Aug. 17, 1955, on a rock surface on the N side of Persson Island, off the SW side of James Ross Island.

The *Liberty*. Sealer from Newcastle, England, which sailed in company with the *Mellona*, in the South Shetlands, in 1821-22. She anchored at Clothier Harbor for most of the season. Captain Peacock commanding. On April 21, 1822, she arrived at Rio.

Liberty Hills. 80°06' S, 82°58' W. A line of rugged hills and peaks with bare rock E slopes, 16 km in extent, and about 11 km NW of the Marble Hills, they form part of the W wall of Horseshoe Valley, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1964, in keeping with the "heritage" motif.

Liberty Rocks. 62°19' S, 59°28' W. A group of 3 offshore rocks SE of Mellona Rocks, on the NW side of Nelson Strait, ENE of Newell Point (which is on Robert Island), in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Aug. 31, 1962, for the *Liberty*. The feature appears on a British chart of 1962. US-ACAN accepted the name in 1965. Last plotted by UK-APC in late 2008.

Bahía Libois *see* **Libois Bay**

Baie Libois *see* **Libois Bay**

Libois, F. He was with Charcot at Jan Mayen Island in 1902, and was engineer, 2nd mechanic, and carpenter on the *Français*, during FrAE 1903-05, and stoker and carpenter on the *Pourquoi Pas?* during FrAE 1908-10. He was the oldest man on the expedition.

Libois Bay. 65°04' S, 64°03' W. A small cove on the W side of Cholet Island, entered between Rozo Point (the NW end of Cholet Island) and Paumelle Point (the NW end of Booth Island), in the Wilhelm Archipelago, off the W coast of the Antarctic Peninsula. First charted by FrAE 1903-05, and named by Charcot as Baie Libois, for F. Libois. US-ACAN accepted the name Libois Bay in 1952. Both the Chileans and Argentines call it Bahía Libois.

Lice. There are 2 types in Antarctica: *Mallophaga*, or biting lice (37 species), and *Anoplura*, or sucking lice. They are parasitic on seals and birds (*see also* **Fauna**).

Lichen Hills. 73°18' S, 162°00' E. Escarpment-like hills, 3 km S of the Caudal Hills, on the W margin of the upper Rennick Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for the lichens collected by them at several places here. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

[1]**Lichen Island**. 69°20' S, 75°32' E. A small island, 8 km N of the Bølingen Islands, and 4 km NW of Cleft Island, in the S part of Prydz Bay. Named Lorten (i.e., "the turd") by the Norwegians. First visited on Feb. 5, 1955, by an ANARE sledging party led by Phil Law, who, showing appropriate sensitivity, changed the name to Lichen Island, for the rich growth of lichens they found here. ANCA accepted Mr. Law's naming, and US-ACAN followed suit in 1961.

[2]**Lichen Island** *see* **Vegetation Island**

Lichen Lake. 68°29' S, 78°25' E. About 1 km long, and constricted in the middle, it is located in Lichen Valley, in the Vestfold Hills. It was one of several lakes investigated by ANARE biologists wintering-over at Davis Station in 1974. Named by ANCA in association with the valley.

Lichen Peak. 76°56' S, 145°24' W. Also called Botany Peak. Between Saunders Mountain and the Swanson Mountains, in the Ford Ranges of Marie Byrd Land. Discovered in Dec. 1934 by Paul Siple's sledge party during ByrdAE 1933-35, and named by Siple for the lichens found here. US-ACAN accepted the name.

Lichen Promontory. 77°31' S, 166°14' E. The promontory between Horseshoe Bay and Maumee Bight, on the W side of Ross Island. It terminates to the N in Rocky Point. Named by NZ-APC.

Lichen Valley. 68°29' S, 78°25' E. A valley, about 60 m deep, about 1.25 km N of Luncke Ridge, in the N part of the Vestfold Hills. So named by ANCA for the number and variety of lichens found here.

Lichens. Symbiotic associations of algae and fungi. There are about 420 known species of lichens in Antarctica (*see also* **Flora**, **Mosses**, and **Liverworts**). They grow preferentially on dark-colored, heat-absorbing rock (this was proved by ByrdAE 1933-35, which collected 89 species, 84 of them new, from areas never before ventured into), are slow-growing and photosynthesize immediately, being particularly well-suited to survival in the extreme cold. Bright orange lichens growing on cliffs in the South Shetlands are visible for several miles. William Napier brought back several specimens of one he found in the South Shetlands in 1820-21. James Eights collected some in 1830, and Hooker collected some from Cockburn Island, during RossAE 1839-42. On Jan. 18, 1895 the crew of the *Antarctic* discovered the first lichens within the Antarctic Circle. BelgAE 1897-99 collected 45 species on the W coast of Graham Land, 28 being new to science. Of the varieties brought back by BNAE 1901-04, five were new. Despite the fact that much of his work was lost when the *Antarctic* was crushed in 1903, Carl Skottsberg brought 46 species back from SwedAE 1901-04, nine of which were new to science. Von Drygalski brought back three new species from his GermAE 1901-04, and Bruce brought some back from ScotNAE 1902-04. During his first Antarctic expedition, FrAE 1903-05, Charcot brought back 16 species, four of them new, and in 1904 Edgar Szmula brought back a species from the South Orkneys. BAE 1907-09 brought back 13 new lichens, one being new, and FrAE 1908-10 brought back 112 species, 90 being new (so they said; this was not so much an exaggeration as an inaccuracy). BAE 1910-13 collected 17 species, eight of them new, and Shackleton's famous BITE 1914-17 brought back 2 species (they would have brought more, but they were fighting for their lives). Lichens were noted on Elephant Island during Shackleton's last expedition (on the *Quest*, 1920-22). BANZARE 1929-31 collected some lichens, as did BGLE 1934-37 (quite a large collection), the various voyages of the Discovery Investigations, and USAS 1939-41. Lichen collecting continued, unabated, through Operation Tabarin and FIDS days, into IGY, OpDF, BAS, and the present day.

Lichte Trough. 76°25' S, 30°00' W. An undersea feature out to sea off the Luitpold Coast. Named by Heinrich Hinze in Jan. 1997, for Heinrich Lichte (1910-1988), a geodesist who specialized in glaciology. The name was accepted by international agreement in June 1997.

Lichtner Seamount. 67°33' S, 0°40' W. An undersea feature out to sea off the coast of Queen Maud Land. Named by Heinrich Hinze in 1999, for Werner Lichtner (1945-1989), German cartographer. The name was accepted in April 2000 by international agreement.

Liddiard, Thomas Richard Arthur. b. 1884, Balmain, Sydney, son of William Liddiard and his wife Elizabeth Jane White. He joined the merchant service at 17, as a boy sailor on the Norwegian merchant ship *Edward*. He was promoted to able seaman, and as such worked on a variety of ships, including the *Gothic* and the *Rio*, and on Nov. 5, 1913, he signed on to the *Aurora* as an able seaman, at £5 per month, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on March 19, 1914, with a £5 bonus. During the war he was on the *Kyarra*, making the run between Marseille and Sydney, through Port Said, Suez, Colombo, and Fremantle. He then went to the *Marsina*, for its run between New Guinea and Sydney. As World

War I ended he was an able seaman on the *Woolgar*, on her Melbourne to Sydney run, then transferred to the *Leura*. He never married, and lived with his brother Radford, a carpenter, in Petersham, NSW, remaining a seaman until he died in Sydney in 1951.

Pasaje Lidia *see* **Paso Vidaurrazaga**

Lidke Ice Stream. 73°30' S, 76°30' W. An ice stream, about 40 km long, flowing N into Stange Sound, E of Mount Benkert and the Snow Nunataks, on the English Coast of Ellsworth Land. Mapped by USGS from USN air photos taken in 1965-66. First visited by a USGS field party in Jan. 1985. Named by US-ACAN for USGS geologist David James Lidke, a member of that field party. UK-APC accepted the name on Nov. 13, 1985. *See also* **Nikitin Glacier**. The Americans plot it in 73°57' S, 77°20' W, and the British in 73°43' S, 76°45' W.

Lidkvarvet. 74°39' S, 10°38' W. A partly ice-covered mountain in the NE part of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for postmaster Ingvald Lid (b. 1889), chairman of the Postmans Union, and Resistance leader during World War II. "Kvarv" is the Norwegian word for a round of logs in a log-house.

Lie Cliff. 76°42' S, 117°37' W. A prominent rock cliff at the E foot of Mount Steere, in the Crary Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Hans P. Lie, USARP ionosphere physicist at Siple Station in 1970-71 and 1973-74.

Lie-Up Point *see* **Rink Point**

Liebig Peak. 66°46' S, 66°00' W. A prominent peak rising to about 2245 m near the E end of Protector Heights, on the Loubet Coast of Graham Land. It is identifiable from both Darbel Bay and Lallemand Fjord. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in 1958-59. Named by UK-APC on Sept. 23, 1960, for Justus von Liebig (1803-1873), German pioneer of physiological chemistry. US-ACAN accepted the name in 1965.

Liebigsporn. 73°46' S, 161°28' E. A spur on the W side of the peak the Germans call Geipelstein, NE of Clingman Dome, and NW of Wasson Rock, at the head of Priestley Glacier, in Victoria Land. Named by the Germans.

Liebknecht Range. 71°48' S, 11°22' E. A mountain range, 16 km long, just N of the glacier the Norwegians call Vestre Høgskeidet, it forms the SW arm of the Humboldt Mountains, in the W portion of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-photographed aerially by SovAE 1961, and plotted by them in 71°50°S, 11°24' E. The Russians named it in 1966 as Hrebet Karla Libknehta, for Karl Liebknecht (1871-1919), a German revolutionary who, with Rosa Luxemburg, founded the German Communist Party. US-ACAN accepted the name Liebknecht Range in 1970.

Mount Lied. 70°30' S, 65°33' E. A prominent pyramidal peak, rising to about 1737 m on the N face of the Porthos Range, about 11 km ENE of Mount Mervyn, in the Prince Charles Mountains of Mac. Robertson Land. Discovered in 1956 by Bill Bewsher's ANARE Southern Party, and named by ANCA for Nils Lied. US-ACAN accepted the name in 1962.

Lied, Nils Tønder. b. June 21, 1920, Norway. A naval commander, one of the heroes of Telemark during that World War II raid. He moved to Australia in 1948, and wintered over on Heard Island with ANARE in 1951. He was a weather observer at Mawson Station in 1956. He was again a weather observer, but also assistant radio officer, at Davis Station in 1957 and again in 1961. In early 1962, just for fun, he made the world's longest ever golf drive — across the ice. The ball traveled for 2640 yards (1½ miles). They called him "Father Lied" down on the ice, partly because he seemed so old (he was in his 30s), and partly because of the pipe. He died in Dec. 1993, during the Tasmanian floods.

Lied Bluff. 68°31' S, 78°16' E. A rocky hill rising to 125 m, and with an almost perpendicular S face, 2.5 km N of Club Lake, in the N central part of Breidnes Peninsula, in the Vestfold Hills, near Langnes Fjord. Photographed aerially by LCE 1936-37, and mapped from these photos in 1947 by Norwegian cartographers (who, however, did not name it). First visited in 1958 by an ANARE sledging party led by Bruce Stinear. Named by ANCA on Aug. 11, 1958, for Nils Lied. US-ACAN accepted the name in 1961.

Lied Promontory. 69°22' S, 76°18' E. The W promontory of Broknes Peninsula, in the Larsemann Hills. Named by ANCA, for Nils Lied.

Île Liège *see* **Liège Island**

Liège Island. 64°02' S, 61°55' W. An island, 14 km long and 5 km wide, immediately NE of Brabant Island, it is one of the major islands in the Palmer Archipelago. The E coast was roughly charted between Jan. 23 and Jan. 25, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Liège, for the Belgian province of Liège, which had contributed to his expedition. It appears as such on Lecointe's 1899 chart, and on de Gerlache's 1900 chart. On Dr. Frederick Cook's 1900 English language version of these charts, it appears as Liège Island. On a 1901 British chart is is shown as "Hoseason island (Liege Island)" (sic), as one big island. The whole coast of the island was roughly charted on Feb. 13, 1905, by FrAE 1903-05, and the island appears, again as Île Liège, on Charcot's 1906 map. On a 1908 British chart (as well as on one from 1938) it appears as Liege Island (thus altering the meaning entirely), but on a 1916 British chart it appears as Liège Island, as it does on a 1949 British chart, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the in 1955 British gazetteer, and on a British chart of 1962. Photographed aerially by FIDASE in 1956-57. The Argentines had translated it as Isla Lieja as early as 1908, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It has occasionally been seen as Liége Island, and even as Lüttich Island.

Isla Lieja *see* **Chanticleer Island**, **Liège Island**

Lien, Gordon Chester. b. April 19, 1909, Stanby, Wash., son of Norwegian immigrant parents, teamster Oluf M. Lien and his wife Petra B. Jensen. He went to sea as an assistant engineer when he was 19, and plied the waters of the great Northwest in the 1930s. He was 2nd engineer on the *North Star* during USAS 1939-41. He died on June 20, 1975, in Stanwood, Wash.

The *Lientur*. Formerly a U.S. ship, launched on June 5, 1944, she was bought by the Chilean Navy, and served as an oil tanker on the following Antarctic expeditions: ChilAE 1949-50 (Capt. Victor Wilson Amenábar); ChilAE 1950-51 (Capt. Víctor Bunster del Solar for this season); ChilAE 1951-52 (Capt. Eduardo Sanhueza Carmona); ChilAE 1952-53 (Capt. Luis Mansilla Yevens); ChilAE 1953-54 (Capt. Mario Mutis Osuna); ChilAE 1955-56 (Capt. Jorge Wiegand Lira); ChilAE 1956-57 (Capt. Jorge Thornton Strahan); 1957-58 (Capt. Hugo Castro Jiminez; on Jan. 9, 1958, the *Lientur* met up with the *John Biscoe* in Port Lockroy); 1958-59 (Capt. Hugo Alsina Calderón); 1960-61 (Capt. Jorge Sabugo Silva); 1961-62 (Capt. Marcos Ortiz Gutmann). During this season she helped transport the University of Wisconsin field party under Martin Halpern which studied the Duroch Islands; 1962-63 (Capt. Luis de los Ríos Echeverría); 1963-64 (Capt. Luis Araya Peters); 1964-65 (Capt. Sergio Fuenzalida Vigar); 1965-66 (Capt. Sergio Sánchez Luna); 1966-67 (Capt. Sergio Sánchez Luna); 1967-68 (Capt. Samuel Ginsberg Rojas); 1972-73 (Capt. Jorge Valdés Romo); 1976-77 (Capt. Alfonso Herrera Correa); 1977-78 (Capt. Victor Deformes Ducó); 1983-84 (Capt. Christian de Bonnafós Gándara).

Isla Lientur *see* **Enterprise Island**

Islotes Lientur. 62°20' S, 59°30' W. Two islands, notable for their height (about 58 m above sea level), about 700 m N of Newell Point (which is on the N side of Robert Island), in the South Shetlands. The larger of the 2 islands is about 360 m long. Named by ChilAE 1949-50, for the *Lientur*. The Argentines descriptively call them Islas Prominentes.

Lientur Channel. 64°50' S, 63°00' W. Between Lemaire Island and Bryde Island, it connects Paradise Harbor with Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. First roughly charted in Feb. 1898, by BelgAE 1897-99. It was charted as both Bryde Channel and Lemaire Channel by Lester and Bagshawe during their British Imperial Antarctic Expedition, but had been previously named Bryde Channel by whalers, in association with Bryde Island. Surveyed by ChilAE 1949-50, and named by them as Canal Lientur, for the *Lientur*.

It appears as such on a 1951 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1953 Argentine chart as Canal Argentino. On a 1954 Argentine chart the name Canal Lautaro appears, but is applied collectively to this feature and South Channel. On one of their 1957 charts the name is applied to this feature and Ferguson Channel collectively, and that was the situation accepted by the 1970 Argentine gazetteer. They have also call it Brazo Norte. It was photographed aerially by FIDASE in 1956–57. On Sept. 23, 1960, UK-APC accepted the name Bryde Channel. US-ACAN accepted the name in 1965.

Lier, Leif. b. Aug. 18, 1895, Hamar Hed, Norway, son of Anders Lier and his wife Hanna. One of Norway's celebrated aviators, he learned to fly in Hungary in 1921, and after 7 hours solo-flying bought a plane and flew it home over Germany and Sweden. He owned 17 airplanes, flew much commercial air time in Northern waters, including Norwegian Air runs, and was picked to go down to Antarctica as whale spotter for the *Kosmos* fleet in the 1929–30 season. At 6 P.M., on Dec. 26, 1929 (Christmas Day on the other side of the Dateline), after several successful flights from the *Kosmos*, he and Dr. Ingvald Schreiner set out on a reconnoitering mission in their Gipsy Moth to inspect the edge of the pack-ice to the west of the *Kosmos*, and were never seen again. The plane had fuel for 5 to 6 hours, provisions for 48 hours, but no radio.

Lierjuven. 74°40' S, 10°58' W. A nunatak in Pionerflaket, in the most northeasterly part of Sivorgfjella, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Per Lie (1907–1945), trade union secretary and Norwegian Resistance leader, who died in a German concentration camp.

Lieske Glacier. 85°05' S, 156°50' E. A tributary glacier flowing N from the N slopes of Mount Olympus in the Britannia Range, between Johnstone Ridge and Dusky Ridge, into Hatherton Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Bruce J. Lieske, meteorologist who wintered-over at Little America in 1957. ANCA accepted the name on Aug. 27, 1975.

Ligeti Ridge. 62°00' S, 28°00' W. An undersea ridge in the Southern Ocean, E of the South Orkneys. The name was approved by international agreement in June 1987.

Cabo Light *see* **Cape Fiske**

Cape Light *see* **Cape Fiske**

Mount Light. 74°16' S, 61°59' W. Along the S side of Barcus Glacier, 10 km ESE of Mount Nash, in the Hutton Mountains, on the Lassiter Coast of Palmer Land. Mapped in Dec. 1947 by a combined sledging team of personnel from RARE 1947–48 and Fids from Base E. Named by Finn Ronne in 1948 for neurosurgeon and aviator Richard Upjohn Light (1902–1994), president of the American Geographical Society, 1947–56. Dr. Light married his first cousin, the remarkable aerial photographer Mary Meader. Re-mapped by USGS from USN air photos taken between 1965 and 1967. US-ACAN accepted the name in 1968, and it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. *See also* **Cape Fiske**.

Light Lake. 60°42' S, 45°39' W. A small lake about 320 m east of Thulla Point, in the W part of Signy Island, in the South Orkneys. Named by UK-APC for zoologist Jeremy James Light (b. 1943), BAS limnologist at Signy Island Station for the winter of 1970, and base commander there in 1971. He was back there in the summer of 1972–73, working in this area. US-ACAN accepted the name in 1975.

Mount Lightbody. 78°05' S, 162°50' E. A buttress-type mountain, rising to 2046 m, in the W part of Tasman Ridge, 2.5 km NE of Mount Hooker, to which it is joined, and overlooking Ball Glacier to the N and Hooker Glacier to the S, in the Royal Society Range, in Victoria Land. Named by US-ACAN on April 5, 2009, for John W. "Jack" Lightbody, NSF program officer in the Office of Polar Programs, for the IceCube Neutrino Project (which began in 2000, and is ongoing). Until 2007, he was also deputy director for the NSF's division of physics, and then deputy assistant director of NSF's directorate of mathematics and physical sciences.

Lightfoot, Henry. Midshipman on the *Adventure* during Cook's voyage of 1772–75.

Lightfoot, Richard Milne. b. Oct. 9, 1943. Glaciologist at Casey Station in 1973.

Lighthouses. If a navigational beacon is 4 meters tall or more, and has a footprint of at least 4 sq meters, then it is considered a lighthouse. Consequently, there are no lighthouses in Antarctica. But, there are some beacons that are called lighthouses. The first "lighthouse" erected in Antarctica was the one at Fish Point, Deception Island, in 1922–23, then the most southerly in the world. The first Argentine lighthouse in Antarctica was called Primero de Mayo, and was erected on Lambda Island in 1942, and one was erected at Cape Ann by crew from the *King*, in 1947–48. Argentina built one on Nelson Island, South Shetlands, in the 1952–53, season, which really annoyed the British (as it was, they claimed, their territory). There is a rather gaudy one at Jubany Station, and Arctowski Station and Esperanza Station both have one. San Martín Station now claims the world's most southerly lighthouse.

Cime Liguria. 79°58' S, 81°41' W. A ridge, more than 10 km long, and consisting of at least 3 separate peaks (the name means "Liguria summits"), 10 km SE of Parrish Peak, and forming a wall on the SE side of the glacier between Parrish Peak and Lippert Peak. Named by the Italians on Feb. 22, 2002, for the region of Liguria, in Italy, which was the home of Paolo Gardino, the first to climb this feature, in 1997.

The *Lili II*. Portuguese yacht in Antarctic waters in 2002–03. She could carry 4 crew.

Glaciar Lilienthal *see* **Lilienthal Glacier**

Lilienthal Glacier. 64°21' S, 60°48' W. Flows W into Cayley Glacier between Pilcher Peak and Baldwin Peak, at Brialmont Cove, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956–57, and from ground surveys conducted by Fids from Portal Point between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, for Otto Lilienthal (1848–1896), the German aeronautics pioneer. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Lilienthal.

Lilienthal Island. 66°12' S, 110°23' E. One of the Donovan Islands, just N of Glasgal Island, in Vincennes Bay, off the Budd Coast. Mapped from air photos taken during OpHJ 1946–47. Re-photographed aerially by ANARE in 1956, and also by SovAE 1956. Named by Carl Eklund in 1957 for Billie R. Lilienthal, USN, aerographer at Wilkes Station that year. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Liljequist, Gösta Hjalmar. b. April 1914, Sweden. One of the major radio meteorologists in Sweden since 1941, he was much satirized because of his dialect. He was assistant meteorologist on NBSAE 1949–52. In 1951 at the base, Maudheim, he was the first to observe what became known as the Liljequist Parhelion, a rare halo optical phenomenon. In 1993 he wrote the book *High Latitudes: A History of Swedish Polar Travels and Research*. He died on Feb. 18, 1995.

Liljequist Heights. 72°06' S, 2°48' W. About 3 km S of Grunehogna Peaks, on Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land, this feature comprises Preikestolen Ridge and the Gösta Peaks. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Liljequisthorga, for Gösta Liljequist. US-ACAN accepted the translated name in 1966.

Liljequisthorga *see* **Liljequist Heights**

Lillie, Denis Gascoigne "Ooze." b. 1884, Kensington, London, son of Tasmanian John G. Lillie and his Irish wife Eliza. He grew up in Belgravia and, from 1889, in Devon. He was the marine biologist on BAE 1910–13. Also a caricaturist (he did several of the expeditioners), some of his works are in the National Portrait Gallery. The boys called him Lithley, or Lithey, or Hercules. He died in 1963, in Exeter.

Lillie Glacier. 70°45' S, 163°55' E. A large glacier, about 160 km long and up to 20 km wide, between the Bowers Mountains on the W, and the Concord Mountains and Anare Mountains on the E, it flows to the coast at Ob' Bay, and forms Lillie Glacier Tongue, which was discovered during BAE 1910–13, and named by them for Denis Lillie. Subsequently the whole glacier took the name in association with the tongue. The lower half of the glacier was plotted by ANARE personnel on the *Thala Dan* in 1962, which explored the area and utilized air photos taken during OpHJ 1946–47. The whole feature was mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Lillie Glacier Tongue. 70°34' S, 163°48' E. Also called Lillie Ice Tongue. Rising to an elevation of about 38 m above sea level, it is the prominent seaward extension of Lillie Glacier into Ob' Bay, extending N from the coast of Oates Land for a distance of about 30 km between Cape Cheetham and Cape Williams. Discovered in Feb. 1911 by Harry Pennell, skipper of the *Terra Nova*, and named by him for Denis Lillie. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Lillie Ice Tongue *see* **Lillie Glacier Tongue**

Lillie-Marleen. 71°12' S, 164°31' E. A hut established by the Germans in Jan. 1980, during GANOVEX I, on what later became known as Lillie Marleen Sporn, Mount Dockery, on the Pennell Coast of Victoria Land. The name is a play on words — Lillie Glacier (where it is) and the famous German song "Lilie Marleen." It was open sporadically until 1993.

Lillie Marleen Sporn. 71°12' S, 164°30' E. A spur on Mount Dockery, on the Pennell Coast of Victoria Land. Named by the Germans.

Lillie Range. 84°50' S, 170°25' W. A range of mountains extending NNE from the Prince Olav Mountains (in the vicinity of Mount Fisher) to the Ross Ice Shelf. Mount Hall, Mount Daniel, Mount Krebs, and Mount Mason are some of the features in this range. Named by the Southern Party of NZGSAE 1963-64, for Arnold Robert "A.R." Lillie (1909-1999), professor of geology at the University of Auckland. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Lilliput Nunataks. 66°08' S, 62°40' W. A group of 3 nunataks trending SE-NW, snow-free on their SE sides, and rising to between 600 and 700 m, 5 km NW of Gulliver Nunatak, at the head of Adie Inlet, on the Oscar II Coast, on the E side of the Antarctic Peninsula. Charted by FIDS, and photographed aerially by RARE 1947-48. Surveyed by BAS personnel from Base E in 1964-65. Named by UK-APC on July 21, 1976, for the land in *Gulliver's Travels*. US-ACAN accepted the name later that year.

Punta Lillo. 63°19' S, 57°55' W. A point on the W coast of Kopaitic Island, between Punta Lermanda and Punta Pelusa, at Covadonga Harbor, just N of Cape Legoupil, Trinity Peninsula. Named by the Chileans for Senior 1st class cabo Gastón Lillo Díaz, of the Chilean Navy, hospital corpsman on ChilAE 1947-48.

Limbert, David William Sharper "Dwm." b. Dec. 5, 1927, Barnet, Herts, son of William Limbert and his wife Emily Rebecca Sharper. He joined the Met Office, and was a member of the first part (i.e., 1955-57) of the British Royal Society Expedition, wintering-over as meteorologist at Halley Bay in 1956, and returning to London on the *Magga Dan*, on March 13, 1957. He was back at Halley Bay Station after IGY, as a FIDS meteorologist for the winter of 1959, and, after the expedition, left Cape Town on the *Carnarvon Castle*, arriving back in Southampton on March 18, 1960. He was back at Halley Bay for the summer of 1977-78; in 1981-82 he was back in Antarctica, base-hopping; and was at Halley Station again in 1985-86. He died of cancer on May 3, 2009.

Limbert Automatic Weather Station. 75°24' S, 59°57' W. An American AWS, at an elevation of 40 m, on the Ronne Ice Shelf, and named for Dave Limbert. Installed in Dec. 1995.

Mount Limburg Stirum. 72°34' S, 31°19' E. Rising to 2350 m, on the N side of Polarinstitutt Glacier, and 1.5 km N of Mount Boë in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by Gaston de Gerlache, the leader of the expedition, as Mont de Limburg Stirum, for Count Charles de Limburg Stirum, a patron. US-ACAN accepted the name Mount Limburg Stirium in 1966.

Limestone Valley. 60°42' S, 45°37' W. A valley extending NW from Cemetery Bay, leading directly to Jane Col, on Signy Island, in the South Orkneys, and serving as a route to the W coast of the island. Biological work was done here up to 1973 by BAS personnel from Signy Island Station. So named by UK-APC on Dec. 20, 1974, because of the limestone exposure in the cliff above the valley. US-ACAN accepted the name in 1975.

Limit Islet *see* **Limit Rock**

Limit Rock. 61°54' S, 57°38' W. A rock awash, 3 km E of North Foreland (the NE cape of King George Island), in the South Shetlands. It was known to sealers as early as 1821. Charted by personnel on the *Discovery II* in 1937, and named by them as Limit Islet because it marks the E limit of the foul ground surrounding North Foreland. It appears on a 1942 chart as Limit Islet. It appears on an Argentine chart of 1949, as Roca Límite, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Limit Rock on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. Last plotted by the UK, in late 2008.

Roca Límite *see* **Limit Rock**

Limitrophe Island. 64°48' S, 64°01' W. An oval-shaped island, 0.8 km long, directly E of Christine Island, SE of Bonaparte Point, and 1.5 km S of Anvers Island, in the Palmer Archipelago. So named by personnel at nearby Palmer Station in 1972 because it lies near the limit of the usual field operation carried out from that station from 1965. UK-APC accepted the name on Dec. 20, 1974, and US-ACAN followed suit in 1975.

Limmershin Cliffs. 64°00' S, 58°13' W. Cliffs, with a face rising to about 100 m above sea level, on the S side of Holluschickie Bay on James Ross Island, they extend WSW-ESE for about 2 km, then turn SE for another 2 km before vanishing under snow and ice inland. Named by UK-APC on Nov. 15, 2006, for Limmershin, the winter wren in Rudyard Kipling's *The Jungle Book*.

Limont, Joseph *see* **USEE 1838-42**

Limpet Island. 67°38' S, 68°18' W. The most southerly of the Léonie Islands, in the entrance to Ryder Bay, close off the SE coast of Adelaide Island. The Léonie Islands were discovered and roughly surveyed in Jan. 1909, by FrAE 1908-10. This particular island was surveyed in Oct. 1948 by Fids from Base E, and named by them as Limpet Islet for the large number of Antarctic limpet shells (*Nacella concinna*) found here. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. On July 7, 1959, UK-APC, doing away with the term "islet," renamed it Limpet Island, and it appears as such on a British chart of 1961. US-ACAN followed suit with the new British naming in 1963. It appears on a 1982 British chart. The Chileans call it Islote Lapa (which means the same thing).

Limpets. *Patinigera polaris*. Marine gastropods, snails with flattened shells, found in Antarctica.

Linchpin Ice Rise. 69°04' S, 67°27' W. A small ice rise, N of Miller Ice Rise, near the Wordie Ice Front, at Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Mapped from U.S. Landsat images taken between 1973 and 1979. So named by UK-APC on Feb. 15, 1988 because the ice rise played a key role in maintaining the position of the ice front, as observed in 1979. US-ACAN accepted the name. It was found in 1998 to have disappeared, following the retreat of the Wordie Ice Shelf.

Linck Nuataks. 82°41' S, 104°12' W. A group of 4 small, ice-covered nunataks, at the SE end of the Whitmore Mountains. 3 of them are aligned and together, while the fourth lies 4 km away. Visited and surveyed by the Horlick Mountains Traverse Party on Jan. 2, 1959, and named by the party surveyor, William H. Chapman, for M. Kerwin Linck (1908-1998), chief of the Branch of Special Maps at USGS. US-ACAN accepted the name in 1962.

Lincoln, Bert Clive "B.C." b. 1888, Adelaide, but raised in Darlingon, near Sturt, SA, son of Henry Lincoln and his wife Fanny. He joined the Merchant Navy, and on May 7, 1912, at Sydney, he signed on to the *Aurora* as an able seaman, at £5 per month, for the 2nd voyage south during AAE 1911-14. He left the ship on March 18, 1913, at Lyttelton, NZ, but was rehired as an able seaman on Sept. 1, 1913, at £5 per month. He kept a diary of his part of the expedition. He left the ship for the last time on Oct. 25, 1913, thus not getting to Antarctica for that 3rd and last voyage south. For World War I, he enlisted on June 30, 1915, at Keswick, SA, and on July 5, joined the 3rd Light Horse, seeing action in Egypt and Palestine with the 4th Australian Battalion of the Imperial Camel Corps, was promoted to corporal on July 1, 1916, and in early 1917 spent 39 days in hospital wth hemorrhoids. He was killed at the Battle of Amman, on March 30, 1918.

Mount Lincoln Ellsworth *see* **Mount Ellsworth**

Lincoln Nunatak. 67°27' S, 68°43' W. A snow-capped nunatak with a rocky W face, rising to about 800 m above the Fuchs Ice Piedmont, at the end of a ridge running westward from Mount Mangin, on Adelaide Island. Surveyed by Fids from Base T in 1961-62. Named

by UK-APC on Feb. 12, 1964, for Flight Lt. Warren David Lincoln (b. June 24, 1924. d. Aug. 2004, Dorset), RAF, pilot with the BAS Aviation Unit at Base B for the winter of 1962, and who spent the summer of 1962-63 with the BAS Aviation Unit stationed at Base T (Adelaide Island). US-ACAN accepted the name later in 1964.

Punta Lincoyan *see* **Cape Rey**

Lind, Albin *see* **Órcadas Station**, 1906

Lind Glacier. 65°23' S, 64°01' W. Flows W from Alencar Peak into the S part of Collins Bay, on the Graham Coast, on the W coast of Graham Land. First charted by FrAE 1908-10. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for surgeon James Lind (1716-1794), Scottish founder of modern naval hygiene, and pioneer in the fight against scurvy. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Lind Ridge. 75°48' S, 132°33' W. Forms the S wall of Coleman Glacier, in the Ames Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Larry W Lynd, glaciologist at Byrd Station, 1968-69.

Linda Automatic Weather Station. 78°26' S, 168°24' E. An American AWS, east of Minna Bluff, on the western Ross Ice Shelf, at an elevation of 43 m, installed in Jan. 1991. Named for Linda Keller, long-time scientist with the AWS project. The tower was raised in Nov. 2004, and the site was visited in Jan. 2007, and again on Oct. 30, 2008.

Lindbergh Inlet. 78°25' S, 167°00' W. A small inlet, about 5 km wide and 6 km long, which marks a more-or-less permanent indentation in the N seaward edge of the Ross Ice Shelf, about midway between Discovery Inlet and the Bay of Whales. Discovered in Jan. 1902, during BNAE 1901-04, but not named. Recharted and photographed aerially on Jan. 15, 1929, during ByrdAE 1928-30, and named by Byrd for American aviator Charles Lindbergh (1902-1974). It was last confirmed as a feature in Jan. 1947, during OpHJ 1946-47, but since then the coastline along here has changed quite drastically. It appears in the NZ gazetteer.

Lindblad, Lars-Eric. b. Jan. 23, 1927, Solna, Sweden. He emigrated to the USA in 1951 and became a U.S. citizen. He first went to Antarctica on a tour, in the 1964-65 season, and formed his famous company, Lindblad Travel, in 1965. He led the first American tour to Antarctica, on the chartered *Lapataia*, in Jan. and Feb. 1966, and from the 1969-70 season led several expeditions on his ship, the *Lindblad Explorer* (see below). He died on July 8, 1994, in Stockholm, while on vacation.

Lindblad Cove. 63°51' S, 59°27' W. A cove, 5 km wide, between Almond Peak and Auster Point, in Charcot Bay, Trinity Peninsula. Named by US-ACAN in 1995, for Lars-Eric Lindblad. UK-APC accepted the name on Dec. 11, 1995.

The *Lindblad Explorer*. Lindblad Travel's 2398-ton ship for 18 years, she was built in Finland, and launched on Dec. 14, 1969 as the world's first passenger expedition ship, expressly built for polar travel, 239 feet long, with an ice-hardened hull, a shallow draft, a bow-thruster, and the highest ice-rating of any passenger ship. She had a 13.5 knot speed, and carried sophisticated equipment and safety gear, including Zodiac landing boats. She had 5 decks — Explorer, Yacht, Salon, Boat, and Bridge — and carried 98 passengers (later extended to 108). **1969-70**: Three cruises to the South Shetlands and the Antarctic Peninsula, between Jan. 24 and March 20, 1970, led by Mr. Lindblad himself. Skipper: Ludvig Gjesdal. One of the tourists was Robert Cushman Murphy (*see* **Mount Murphy**). **1970-71**: Skipper Bjarne Aas. In Jan. and Feb. 1971, she did 2 cruises, led by Mr. Lindblad himself. They visited the Balleny Islands, Cape Hallett, and Ross Island. **1971-72**: Skipper Bjarne Aas. 2 cruises, one in late 1971 and the other in late 1972. Both ended in disaster. On Dec. 24, 1971, the vessel ran aground in Gerlache Strait, and the passengers had to be rescued by the *Piloto Pardo* and the *Yelcho*. The *Lindblad Explorer* was later towed off by the *Urangan*. On Feb. 11, 1972, she ran aground again, this time in the South Shetlands, and 90 passengers (mostly Americans and Canadians) had to be rescued by the *Piloto Pardo*. 54 crew members were also taken off, but the captain and 15 crew members stayed behind, pumping water. This time the *Arctic* towed her off 18 days later. **1972-73**: She did 5 cruises to the South Shetlands and the Antarctic Peninsula, with skippers Hasse Nilsson and Rolf Nordell. **1973-74**: Two cruises, led by Mr. Lindblad. Skippers: Hasse Nilsson and Rolf Nordell. The first cruise left NZ in Dec. 1973, and visited the Balleny Islands, the Ross Sea, the South Shetlands, and the Antarctic Peninsula, The second left Ushuaia in March 1974, and did the Antarctic Peninsula and the South Shetlands. **1974-75**: Four cruises to the South Shetlands and the Antarctic Peninsula. Skipper: Hasse Nilsson. **1975-76**: South Shetlands and the Antarctic Peninsula. Skipper: Hasse Nilsson. **1976-77**: Skipper Hasse Nilsson. 3 cruises to the South Shetlands and the Antarctic Peninsula. **1978-79**: To the South Shetlands and the Antarctic Peninsula. Skipper Hasse Nilsson. **1979-80**: Skipper Lars Erik Granquist. Antarctic Peninsula, the South Shetlands, Peter I island, the Ross Sea, and the Balleny Islands. On Christmas Day 1979, with 108 passengers (most of them Japanese) and crew aboard, she ran aground in the Gerlache Strait, near Wiencke Island, in an all-too-familiar scene, her hull was punctured, and the passengers were rescued by the *Yelcho*. The ship was in no danger of sinking, and 54 crew members stayed on board waiting for the Russian tug *Urangan*. That season a Japanese film crew was aboard, shooting scenes for the movie *Virus*. **1980-81**: Four cruises to the Antarctic Peninsula, Peter I Island, the Ross Sea, Commonwealth Bay, and the Balleny Islands. Skipper was Hasse Nilsson. **1981-82**: Hasse Nilsson skipper. She made 2 cruises from NZ, to the area of the Ross Sea, and on Jan. 7, 1982, landed tourists on Scott Island. **1982-83**: Hasse Nilsson skipper. She was in at the South Shetlands, the South Orkneys, the Ross Sea, and Peter I Island. **1983-84**: Skipper Leif Skog. She made 3 cruises from South America to the Antarctic Peninsula, the South Shetlands, and the South Orkneys. She made a 4th cruise to the Ross Sea and the Balleny Islands. After this cruise the ship was sold to Society Expeditions Cruises, Inc., re-named the *Society Explorer*, becoming their second ship in 1985. In the 1985-86 season she was not in Antarctica proper. Werner Wolkerstorfer was skipper that year, and also in 1986-87, when she was in Antarctic waters, visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula. In 1987 West German shipowner Heiko Klein bought Society Expeditions Cruises, Inc., and the *Society Explorer* was operated as part of his company Discoverer Rederei, which also owned the *World Discoverer*, Society Expeditions' first ship. Heinz Aye skippered the ship for 9 cruises during the 1987-88 season, in the South Shetlands, South Orkneys, and the Antarctic Peninsula. The *Society Explorer* circumnavigated Antarctica. She was back, for another 9 cruises to the South Shetlands, South Orkneys, and the Antarctic Peninsula, in 1988-89, under the command of captains Ralf Zander and Karl-Ulrich Lamper, and again in 1989-90 and 1990-91 (both times under Capt. Lamper), and finally in 1991-92 (under Capt. Aye). In 1992 she was bought by Explorer Shipping, and renamed the *Explorer*. As such, she was in Antarctic waters (South Shetlands, South Orkneys, Antarctic Peninsula) in 1992-93 (under captains Uli Demel and Leif Skog), and 1994-95 (under Capt. Leif Skog, and with Jackie Ronne and her family aboard). She was back in 1995-96 (Captains Skog and Demel), 1996-97 (same skippers), 1997-98 (same skippers), 1998-99 (Capt. Demel), 1999-2000 (Captains Demel and Skog), and 2000-01 (Captains Demel and Skog). In June 2004 the ship was bought by G.A.P. Adventures (i.e., Great Adventure People), out of Toronto, and was in Antarctic waters again in 2005-06. Just before dawn on Nov. 23, 2007, during a 19-day tour of the Falklands and South Shetlands, she hit a submerged berg in the South Shetlands and went down. All 154 persons aboard — crew and passengers — were rescued by the *Nordnorge*, after 4 hours in lifeboats. They were put up in Chilean and Uruguayan stations on King George Island, before being flown to Punta Arenas. The blame was laid at the feet of the captain, Bengt Wiman, who, on his first Antarctic cruise, misjudged ice conditions. He hit too much thick ice too quickly, apparently. There was also a failure of one of the ship's watertight doors. Capt. Wiman left G.A.P. soon thereafter. Curiously, on the day the *Explorer* went down, Abercrombie & Kent changed the name of their cruise ship — the *Explorer II* — to *Minerva*.

Lindblad Travel, Inc. Formed in 1965 by Lars-Eric Lindblad. A member of the U.S. Tour Operators Association, Lindblad claimed to be 37 percent cheaper than any other Antarctic cruising expeditions. Mr. Lindblad himself led the first American tourist cruise to Antarctica,

in Jan. and Feb. 1966, on the *Lapataia*. There were two tours to choose from, a 16-day and an 18-day, and the prices ranged from US$3750 to $10,500 per person (depending on several things). It was cheaper for Intrepids Club members, the club being formed by Lindblad to offer repeat company travelers special advantages (there were over 3000 Intrepids by the late 1980s). In 1987-88 Lindblad offered 3 tours, but more expensive, ranging from US$5100 to $24,450, but these were 27-day, 24-day, or 18-day. Included in the price were accommodations, meals (as specified), hotel service charges, taxes and landing fees, sightseeing, shore excursions and landings, visas, transfers, porterage, and lectures by the experts accompanying the tours. Air fare was extra, as were tips. Schedules were subject to weather, politics, etc, and were dictated by el capitán. Like Society Expeditions Cruises and the others (except Mountain Travel, Adventure Network, and maybe a few more), Lindblad, in the late 1980s, was offering only a taste of Antarctica, so one could not expect to follow in the footsteps of Scott and Amundsen (but would be well looked after in comfort). The actual number of days spent south of 60°S were 4,5,6, or 7, and you could expect to visit such places as Hope Bay, Paulet Island, Fildes Peninsula, Cuverville Island, Paradise Bay, Port Lockroy, Lemaire Channel, Peltier Island, the Argentine Islands, Palmer Station, Deception Island, Arctowski Station, Bellingshausen Station, Nelson Island, Petermann Island, Halfmoon Island, and Greenwich Island — in other words the South Shetlands and Graham Land. In 1968 Lindblad used the *Navarino* (Peter Scott was tour leader). In 1968-69 the *Aquiles* was used, and then, from 1969 to 1987, the *Lindblad Explorer* was Lindblad's ship. In 1987-88 they used the *Illiria*, and then in 1988-89 they acquired the *Antonina Nezhdanova*. The company ceased operations in 1989.

Isla Lindenberg *see* **Lindenberg Island**

Lindenberg Island. 64°55' S, 59°40' W. A circular island, 0.8 km across, 17.5 km N of Robertson Island, and about 56 km ENE of Cape Fairweather, off the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula, it rises to about 200 m above the Larsen Ice Shelf, near the ice front, NE of the Seal Nunataks. Discovered on Dec. 11, 1893, by Carl Anton Larsen, charted by him as a volcanic island, and named by him as Lindenbergs Sugarpot, or Lindenberg's Sugar-Top, or Lindenbergs Sukkertop, or Lindenbergs Zuckerpot, or Lindenberg Volcano, or Lindensbergs Volcano, for Carl Lindenberg (1847-1921). Herr Lindenberg and Scotsman William Robertson (*see* **Oceana Nunatak**, and **Robertson Islands**) were the two principal shareholders of the ship chandlering company of Woltereck and Robertson, of Hamburg, which sent Larsen to Antarctica on a whaling reconnaissance in 1892-93, and again in 1893-94. It appears as such on Larsen's 1894 chart. It is interesting to see "pot" and "top," and it is shaped like a sugar-loaf. Petersen's 1895 map shows it as Lindenbergs Zuckerhut, whereas his 1896 map has it as Lindebergs Vulkan. On Friederichsen's 1895 German map it appears as Lindenberg Zuckerhut, on Bruce's 1896 map (from DWE 1892-93) as Lindenberg's Sugar-Loaf Volcano, on the 1900 map prepared by BelgAE 1897-99 as Île Lindenberg, and on British charts of 1901 and 1937 as Lindenberg Island. On an Argentine chart of 1946, it appears as Isla Lindenberg, and that was the name accepted both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Lindenberg Island on Jan. 22, 1951, and US-ACAN followed suit in 1952. It was surveyed by Fids from Base D between 1952 and 1954. It appears as Lindenberg Island in the 1955 British gazetteer. In 1981-82, the volcano was reported to be active.

Lindenberg's Sugar-Loaf *see* **Lindenberg Island**

Lindenbergzuckerhut *see* **Lindenberg Island**

Linder Glacier. 71°41' S, 163°03' E. A steep tributary glacier flowing from the S slopes of Mount Bernstein and moving S to enter Hunter Glacier, in the Lanterman Range of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Lt. (jg) Michael A. Linder, USNR, communications and administrative officer who wintered-over at McMurdo in 1967.

Linder Peak. 79°52' S, 83°12' W. A somewhat lower, but very imposing, peak, immediately S of Mount Dolence, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Harold W. Linder, geophysicist with the USARP Ross Ice Shelf party, 1961-62.

Mount Lindley. 81°46' S, 159°05' E. Rising to 1760 m (the Australians say about 2220 m), on the W side of Starshot Glacier, 6 km N of Mount Hoskins, and 46 km SE of Mount Albert Markham. Discovered by BNAE 1901-04, and named by them for Lord Nathaniel Lindley (1828-1921), the judge, a member of the committee which made the final draft of instructions for the expedition. US-ACAN accepted the name, and ANCA followed suit.

Lindley, Granville Peabody. b. Nov. 6, 1890, Ansonia, Conn., son of contractor Benjamin Lindley and his wife Minnie. He was raised partly in Milford, Conn., and then in Woonsocket, RI, where his parents ran a boarding house on Main Street. He became a marine lubricating engineer for a company in New York, lost a part of his hand on the job, married, moved to Worcester, Mass., and went to sea in 1930, as an electrician with the Merchant Marine. He was chief electrician on the *Jacob Ruppert*, during ByrdAE 1933-34. He left Little America on the same ship on Feb. 5, 1934, and arrived back in the USA on April 9, on the *Virginia*, with Vic Czegka. After the expedition, he moved to Barrington, RI, and in 1938 installed a radio station on Pitcairn Island. During World War II he was a senior inspector with the Navy Department, living at East Weymouth, Mass., and working out of the office of the supervisor of shipbuilding, in Boston. He retired from the Navy in 1955, and died on Dec. 18, 1956, at Wickford, RI.

Lindner, Phillip Francis. b. July 22, 1914, Brooklyn, son of funeral chauffeur (later salesman) Philip L. Lindner and his wife Margaret Garby. He went to sea in 1933, at the age of 19, as a merchant marine officer, and sailed continually between the Caribbean and New York on a succession of ships. He went to Antarctica as an additional mate on the *North Star* for the 2nd half of USAS 1939-41. He died in Dec. 1987, in Patchogue, NY.

Lindqvist Island *see* **Lindqvist Nunatak**

Lindqvist Nunatak. 80°39' S, 20°38' W. A nunatak, rising to 1470 m, 10 km S of Chevreul Cliffs, near the E end of Shotton Snowfield, in the E part of the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Frans Wilhelm Lindqvist (1862-1931), Swedish inventor (in 1892) of the Primus stove (q.v.). US-ACAN accepted the name. It appears in the 1974 British gazetteer. Concentration was momentarily lost during the compilation of the 1977 British gazetteer, in which the feature is listed as Lindqvist Island.

Cape Lindsay *see* **Cape Lindsey**

Lindsay, Alexander *see* **Órcadas Station**, 1909

Lindsay, Kay L. b. Aug. 7, 1941. Australian entomologist at Ohio State University, from 1964 wife of Antarctic geologist John Lindsay (*see* **Lindsay Peak**). She was one of Lois Jones' all-women research team of 1969-70. This party (*see* **Women in Antarctica**) flew to the South Pole on Nov. 11, 1969, and became the first women ever to set foot at 90°S. She later lived in Houston, Tex., but died on April 21, 2001.

Lindsay Automatic Weather Station. 89°00' S, 89°51' W. An American AWS near the South Pole, at an elevation of 2815 m, installed on Jan. 26, 1993, and removed on Jan. 22, 1994.

Lindsay Nunatak *see* **Syningen Nunatak**

Lindsay Peak. 84°37' S, 163°32' E. A basaltic peak rising to 3210 m, 6 km WNW of Blizzard Peak, in the Marshall Mountains. Named by the Ohio State University party to the Queen Alexandra Range in 1966-67, for John Francis Lindsay (b. Jan. 22, 1941, Gosford, NSW), geologist with the party (*see also* **Lindsay, Kay L.**). US-ACAN accepted the name in 1968.

Cabo Lindsey *see* **Cape Lindsey**

Cape Lindsey. 61°06' S, 55°29' W. Forms the N entrance point of Emma Cove, and, at the same time, the W extremity of Elephant Island, in the South Shetlands. Roughly charted by Powell, it seems to have been named by him, appearing on his 1822 chart. It appears, misspelled as Cap Lindsay on the 1838 map produced by FrAE 1837-40. It appears on Frank Wild's map of 1923, and was re-surveyed by the Discovery Investigations in 1927, appearing on their charts

of 1927 and 1932. On the DI's chart of 1934 it appears misspelled as Cape Lindsay. On an Argentine chart of 1939 it appears as Cabo Lindsey, and on one of their 1949 charts as Cabo Lindsay. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 22, 1954. The 1974 Chilean gazetteer accepted the name Cabo Lindsey. We are told that the Argentine gazetteer accepted the name Cabo Lindsay. The cape was resurveyed by the British Joint Services Expedition.

Lindsey, Alton Anthony "Al." b. May 7, 1907, Monaca, Pa., son of Methodist minister Earl C. Lindsey and his wife Lois Haughton Whitmarsh. At Allegheny College, in Pittsburgh, he met fellow Eagle Scout Paul Siple, and the two remained lifelong friends. Then he went to Cornell as a graduate student and instructor in biology, a course interrupted when he became a biologist on the shore party of ByrdAE 1933-35. During the expedition, he assisted Siple, and conducted independent researches. He went back to Cornell, until 1937, when he got his PhD, and then went to American University, in Washington, DC, 1937-40; the University of Redlands, Calif., 1940-42; the University of New Mexico, 1942-47; and finally Purdue, from 1947. Along the way, in 1939, he married Elizabeth, and in the 1950s was involved in the planning for IGY, and also in the NZ effort to preserve the old explorers' huts. One of the famous plant ecologists, he retired from Purdue in 1973, to become professor emeritus, and died shortly after midnight, on Dec. 19, 1999, at his home in Tulsa, Okla. He wrote 10 books althogether, including a couple of funny ones, using the pseudonym Windan Waters.

Lindsey Islands. 73°37' S, 103°18' W. A group of islands just off the NW tip of Canisteo Peninsula, in the Amundsen Sea. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Alton Lindsey.

Lindstrøm, Adolf Henrik. b. 1865, Hammerfest, Norway, son of carpenter Johan Lindstrøm and his wife Marie Matiasdatter. He was cook and handyman with Sverdrup on the *Fram*, in the Arctic, 1898-1902; was with Amundsen as cook and botanist on the *Gjøa* at the Northwest Passage, 1903-06; and was the cook on NorAE 1910-12, in Antarctica, one of the shore party with Amundsen. He remained in charge of Framheim, keeping meteorological records. He was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. He was in Siberia between 1914 and 1916, and died in 1939.

Lindstrøm Peak. 86°18' S, 160°10' W. Rising to 2640 m, 3 km NW of Mount Kristensen, on the W side of Nilsen Plateau, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Adolf Henrik Lindstrøm. Somewhere near here Amundsen named a mountain as Mount A. Lindstrøm. That was in 1911, when he was racing for the Pole, and the actual peak he had in mind is not now precisely identifiable, so US-ACAN selected this one.

Lindstrom Ridge. 79°43' S, 156°00' E. A ridge, 6 km long, on the W side of Green Glacier, it forms the E end of the Meteorite Hills, in the Darwin Mountains. Named by US-ACAN in 2001, for Marilyn Martin Lindstrom (b. 1946), curator of Antarctic meteorites at the NSAS Johnson Space Center in Houston, for many years.

Lindum Valley. 80°03' S, 155°58' E. An ice-filled valley opening northward to Hatherton Glacier, 8 km WNW of Derrick Peak, in the Britannia Range. In association the Roman name of Britannia, it was named by Mike Selby's 1978-79 University of Waikato (NZ) field party here, for Lindum, the Roman name for the town of Lincoln. NZ-APC accepted the name, and US-ACAN followed suit.

Line Glacier. 72°59' S, 167°50' E. Flows from the S part of the E slopes of the Malta Plateau, then E between Collins Peak and Mount Alberts, into Borchgrevink Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Kenneth Line, traverse engineer with the USARP glaciological party at Roosevelt Island, 1967-68.

Line Islands. 67°56' S, 67°14' W. A small group of islands running E-W in a straight line between Horseshoe Island and Camp Point, off the Fallières Coast, on the W coast of Graham Land. First plotted by BGLE 1934-37. Charted by an RN Hydrographic Survey unit on the *John Biscoe* in 1966, and named descriptively by them. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. The feature appears in the 1974 British gazetteer, and on a 1976 British chart.

Islotes Línea *see* **Line Islands**

Linehan, Daniel J. "Dan." b. 1904, Beverly, Mass., son of hay and grain merchant Daniel M. Linehan and his wife Louise Fogg. The "earthquake priest," a doctor of geology from Harvard, college football player, ordained in 1936, who discovered the T phase, one of the 4 types of earthquake waves. He was already a respected seismologist by World War II, pioneered the field of seismic prospecting, and from 1938 directed Boston College's seismological labs at Weston, Mass. He achieved notoriety as the Jesuit geologist who searched for St. Peter's tomb under the basilica in Rome in 1951-52, and was photographed by Margaret Bourke-White in 1953. On July 6, 1954 rich NY lawyer turned explorer Wilbur E. Dow approached him to see if he would go to the North Magnetic Pole 5 days hence. This was rather short notice, but the priest went, on their vessel, the *Monte Carlo*. They got back to Boston on Sept. 16, 1954, after a successful trip. He did scientific work on the *Atka* in Antarctica in 1954-55, and then again in the Ross Sea area during OpDF I (i.e., 1955-56). He celebrated New Years Day mass at Scott's Hut. He was back at McMurdo Sound in 1956-57, and again in 1957-58. He conducted the first Catholic mass at the South Pole; 7 men attended. His seismic soundings determined the depth of the ice in Antarctica, and established that there was bedrock beneath. He died in 1987.

Linehan Glacier. 83°15' S, 162°41' E. About 17.5 km long, it flows NE from Prince Andrew Plateau, along the N side of Turnabout Ridge, to enter Lowery Glacier. Named by US-ACAN in 1966, for Father Linehan.

Lines, Peter *see* **USEE 1838-42**

Lines Ridge. 72°34' S, 68°19' E. A narrow, broken ridge, about 17 km long, at the N end of the Mawson Escarpment. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1958, and 1973. Named by ANCA on Nov. 27, 1973, for John Dunstan Lines (b. 1920), assistant director of the (Australian) Division of National Mapping.

Lingetoppane. 70°56' S, 11°48' E. A nunatak in the S part of the Schirmacher Hills, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Martin Linge (1894-1941), who fought the Nazi menace in Norway during World War II, and was killed while leading his men in battle during the Måløy Raid.

Punta Liniers *see* **Gaudin Point**

Islote Link *see* **Link Stack**

Link Island. 63°16' S, 57°56' W. A small island at the outer (northwestern) margin of the Duroch Islands, about 5 km NW of Halpern Point, in the area of Covadonga Harbor, Trinity Peninsula, off the NE coast of Graham Land. The island appears as Islote Sub-teniente Ross, on the 1949 chart drawn up by ChilAE 1947-48, and as Isla Ross on a Chilean chart of 1951. It was Islote Ross on a 1959 Chilean chart, and as such appears in the Chilean gazetteer of 1974. Fear of confusion with James Ross Island, prompted US-ACAN to name it Link Island in 1964, for David A. Link, USARP field assistant with the University of Wisconsin Geological Party here in 1960-61. UK-APC accepted the name on Dec. 15, 1982, and it appears in the 1986 British gazetteer.

Link Stack. 65°36' S, 64°34' W. A rocky pillar forming the NW point of Chavez Island, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. So named by UK-APC on July 7, 1959 because at this point the FIDS winter surveys from Base J were linked with the 1957-58 summer surveys conducted by the RN Hydrographic Survey unit. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Islote Link.

Linn Mesa. 73°32' S, 163°20' E. A small mesa, 5 km S of the Chisholm Hills, in the Southern Cross Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Paul E. Linn, USN, utilitiesman at McMurdo, 1963 and 1967.

Linnaeus Terrace. 77°36' S, 161°05' E. A rock terrace on the N side of Oliver Peak, on the S slopes of Wright Valley, in the Asgard Range, in the McMurdo Dry Valleys of Victoria Land. Mapped by USGS from USN air photos taken in 1970. Named by Imre Friedmann (*see* **Friedmann Valley**), who established a USARP field

camp on this terrace in Dec. 1970, for the study of microbial flora living in rocks. A scientific area of concentrated activity, this terrace was designated SSSI #19. Carolus Linnaeus (Karl von Linné) (1707-1778) was the great Swedish botanist. US-ACAN accepted the name.

Linnormegget *see* **Linnormegget Hill**

Linnormegget Hill. 72°08' S, 14°27' E. A rock hill, 5 km S of the Linnormen Hills, in the S part of the Payer Mountains, in the easternmost part of the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition, and named by them as Linnormegget (i.e., "the dragon's egg"), in association with the Linnormen Hills. US-ACAN accepted the name Linnormegget Hill in 1966.

Linnormen *see* **Linnormen Hills**

Linnormen Hills. 72°04' S, 14°33' E. A group of hills forming a curved ridge that trends NW-SE, close E of Skavlhø Mountain, in the S part of the Payer Mountains, in the easternmost part of the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Linnormen (i.e., "the dragon"). US-ACAN accepted the name Linnormen Hills in 1966.

Linsley Peninsula. 72°03' S, 98°11' W. A broad, roughly rectangular, ice-covered peninsula protruding into the S part of Murphy Inlet, in northern Thurston Island, and dividing the inlet into 2 arms at the head. First plotted from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1972, for Lt. Cdr. Richard G. Linsley, USN, LC-130 Hercules pilot who made flights in support of the USARP party working here in 1968-69.

Linthicum, Francis *see* **USEE 1838-42**

Linton Knoll. 62°08' S, 58°10' W. A knoll, extending down slope to the N as a narrow snow-free band joined to Flabellum Bastion, on King George Island, in the South Shetlands. Named by UK-APC on April 23, 1998, for geomorphologist David Leslie Linton (1906-1971), British professor of geography at the universities of Edinburgh (1929-45), Sheffield (1945-48), and Birmingham (1948-71). He was employed by FIDS during the field season of 1958-59. Plotted by the UK in late 2008.

Linton-Smith Nunataks. 70°17' S, 72°45' E. A group of nunataks between Jennings Promontory and the Reinbolt Hills, on the E side of the Amery Ice Shelf. First photographed aerially during OpHJ 1946-47. Their position was fixed by intersection from Corry Rocks and Rubeli Bluff by ANARE surveyors in 1968. Named by ANCA on May 18, 1971, for Norman "Norm" Linton-Smith, senior technical officer with the Antarctic Division, in Melbourne. He was a member of the ANARE Amery Ice Shelf glaciological traverse of 1970. US-ACAN accepted the name in 1973.

Linwood Peak. 77°36' S, 147°13' W. An isolated peak on Hershey Ridge, 22 km W of Mount Ronne, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Linwood T. Miller.

The Lion *see* **Cape Rey**

The *Lion*. A 95-ton two-masted U.S. whaling/sealing schooner out of Mystic, Conn., built by Irons & Grinnell in 1849 in Stonington. 59 feet 8 inches long, 18 feet 5 inches wide, with a draft of 8 feet 9 inches, she had a square stern. In 1852-53, in company with the *Aeronaut*, she was in the South Shetlands, under Capt. Clark. The following season, 1853-54, she was back, this time with the *Aeronaut* and the *Wilmington*, but this time under Capt. Jerry Buckminster. On the way back from the expedition, as the ships were crossing the Drake Passage, the *Lion* became separated from the others. She was lost on the English Bank, off the mouth of the River Plate, on March 22, 1854.

Lion, Lazare. b. July 24, 1797, Toulon. Food supply officer on the *Zélée* during FrAE 1837-40.

Anse du Lion *see* under **D**

Les Brisants du Lion *see under* **Les**

Chenal du Lion *see under* **D**

Île du Lion *see* [2]**Lion Island**

Piste du Lion *see under* **P**

Tête du Lion *see under* **T**

Lion Glacier *see* **Glaciar Jobet**

[1]**Lion Island**. 64°41' S, 63°08' W. An island, 2.5 km long and 1.5 km wide, on the NW side of Gerlache Strait, separated from the E coast of Anvers Island by Lion Sound, and 1.5 km NE of Cape Astrup (on Wiencke Island), in the Palmer Archipelago. Discovered by BelgAE 1897-99. Surveyed by the Discovery Investigations in 1927, it appears (named; it may not have been their original name) on their 1929 chart. It looks like a reclining lion when seen from the SW. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and also on a British chart of 1959. It appears translated on a Chilean chart of 1947, as Isla León, and on an Argentine chart of 1949 as Isla Lion. There is also a 1948 Argentine reference to is as Isla de Lion. It was further charted by Fids on the *Norsel* in April 1955, and was photographed aerially by FIDASE in 1956-57. The name Isla León was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

[2]**Lion Island**. 66°39' S, 140°01' E. A small, rocky island, about 320 m NNE of Pétrel Island, in the central part of the Géologie Archipelago. Surveyed by the French in 1949-51, and named by them as Île du Lion, for the rock summit of the island, which looks like a lion's head. US-ACAN accepted the translated name in 1956. In 2009 the French discontinued their name.

[3]**Lion Island**. 76°51' S, 162°33' E. A small island, E of the mouth of Hunt Glacier, in Granite Harbor, between Cape Archer and Dreikanter Head, in Victoria Land. Named by Grif Taylor's Western Jourey Party, during BAE 1910-13. US-ACAN accepted the name in 1967, and NZ-APC followed suit.

Lion Sound. 64°40' S, 63°09' W. A small passage between Lion Island and the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99. Surveyed (and perhaps named) by the Discovery Investigations in 1927, it appears as such on their 1929 chart, certainly named in association with Lion Island. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, and on a British chart of 1959. It appears on an Argentine chart of 1949 as Seno Lion (which means roughly the same thing), but on one of their 1953 charts translated all the way as Seno León, a name that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, when the Argentines found out that the Chileans were using the same name, they changed theirs to Pasaje León.

Le Lionceau *see under* **Le**

Lions Cove. 62°08' S, 58°08' W. Between Lions Rump and Mazurek Point, at the Bransfield Strait, at the W side of the entrance to King George Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, in association with Lions Rump.

Lions Rump. 62°08' S, 58°07' W. A conspicuous, steep headland rising to 58 m, and forming the SW side of the entrance to King George Bay, on King George Island, in the South Shetlands. On the Discovery Investigations' chart of 1932 it appears in error as Martin Head. Surveyed and named descriptively by the personnel on the *Discovery II* in Jan. 1937. Astronomical observations were made here at that time. It appears on their chart as both Lions Rump and Cape Lion's Rump. As Cape Lions Rump it appears on a 1938 British chart, as Cabo Lions Rump on a Chilean chart of 1947, as Cape Lion's Rump (i.e., with the apostrophe) on a 1948 British chart, and on an Argentine chart of 1949 as Cabo Lion's Rump. On an Argentine chart of 1953 it appeared translated as Cabo Anca de León, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer, even though the subleties of the British naming would be lost in any translation. It was without the apostrophe that Cape Lions Rump was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On Sept. 23, 1960, UK-APC shortened the name to Lions Rump, and US-ACAN followed suit that year. Don Hawkes mapped it as Lions Rump in 1961, and it appears that way on a British chart of 1962.

Cape Lion's Rump *see* **Lions Rump**

Glacier Liotard *see* **Liotard Glacier**

Mount Liotard. 67°37' S, 68°34' W. Rising to 2225 m (the British say about 2100 m), it has a conspicuous ice-covered peak, and stands midway between Mount Gaudry (to the N) and Mount Ditte (to the S), in the S part of Adelaide Island. Discovered and roughly surveyed in Jan. 1909, by FrAE 1908-10. Re-surveyed in Oct.

1948 by Fids from Base E, who named it for André-Franck Liotard. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears in the British gazetteer of 1956, and on a 1961 British chart. It appears on a 1957 Aregentine chart as Monte Pequeño Gaudry (i.e., "little mount Gaudry"). Further surveyed by Fids from Base T in 1961-62, and first climbed by an RN party on Feb. 19, 1962.

Liotard, André-Franck. b. Feb. 27, 1905. He got his degree in 1926, in Paris. French explorer and scientist. He joined the *John Biscoe* at Montevideo in Jan. 1948, and spent 1947-48 as an observer at FIDS bases in Antarctica. In 1948-49 he led the abortive French Polar expedition of that year, but was back again in 1949-50, on the *Commandant Charcot*. He arrived on the coast of Adélie Land on Jan. 20, 1950, and set up Port-Martin Station. He led the wintering-over team at Port-Martin in 1950, and, on Jan. 9, 1951, was relieved by the team under Michel Barré.

Liotard Glacier. 66°37' S, 139°30' E. A channel glacier, 10 km long and 5 km wide, flowing NNE from the continental ice and terminating in a small tongue about 6 km W of Hélène Island. Delineated from air photos taken during OpHJ 1946-47, and named by US-ACAN in 1955, for André-Franck Liotard. It seems the French did not accept this name until 1995, as Glacier Liotard.

Pointe Liouville *see* **Liouville Point**

Liouville, Jacques. b. 1879. He was Charcot's nephew. Assistant medical officer and zoologist on the *Pourquoi Pas?* during FrAE 1908-10. Later he became director-in-chief at the Institute of Science, and spent years in Morocco. He died in 1960.

Liouville Point. 65°10' S, 64°09' W. Marks the NE end of Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered in 1909 by FrAE 1908-10, and named by Charcot as Pointe Liouville, for Jacques Liouville. It appears as such on his maps of 1911 and 1912. It appears as Point Liouville on a 1943 U.S. Hydrographic Office chart. The Argentines have never managed to get this name right. On one of their 1949 charts it appears as Punta Leonville, and on one from 1953 as Punta Liuville. Unfortunately, the 1970 Argentine gazetteer accepted the second of these names. It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Liouville Point on July 7, 1959, and it appears as such on a 1963 USHO chart. US-ACAN accepted that name in 1971.

Lipen Glacier. 64°29' S, 63°16' W. A glacier, 5 km long and 3.5 km wide, NE of Paris Peak, flowing northeastward from the E slopes of the Trojan Range into the head of Patagonia Bay W of Thompson Peninsula, on Anvers Island, in the Palmer Archipelago. Named by the Bulgarians on June 3, 2010, for the settlement of Lipen, in northwestern Bulgaria.

Lippert Peak. 79°59' S, 81°56' W. A sharp-pointed peak at the end of a ridge that extends W from the Douglas Peaks into Horseshoe Valley, 8 km SE of Strong Point (which this peak resembles), in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for George E. Lippert, USARP biologist at Palmer Station in 1965.

Islote(s) Lippmann *see* **Lippmann Islands**

Lippmann Islands. 65°30' S, 64°26' W. A group of small islands, 3 km in extent, close off the NW tip of Lahille Island, off the W coast of Graham Land. FrAE 1903-05 roughly mapped it as a single island, and it was named by Charcot as Île Lippmann, for Gabriel Lippmann (1845-1921), the 1908 Nobel Prize-winning French physicist, and a member of the Commission des Travaux Scientifiques for FrAE 1908-10. It appears as such on Charcot's map of 1906. It appears as Lippmann Island on a 1916 British photograph. On Rymill's 1938 map of BGLE 1934-37, it appears as Lippman Island (sic), and, consequently, on a 1946 Argentine chart as Isla Lippman. On a 1948 British chart it appears as Lippmann Islet, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On an Argentine chart of 1953 it appears as Islote Lippmann. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team in 1958. On July 7, 1959, UK-APC did away with the name for the one island, and extended it to the group, as Lippmann Islands, and that situation was accepted by US-ACAN later that year. It appears as such on a British chart of 1960. This seems to be the first time the group was named, and leads one to believe that the name Islotes Lippman (sic), seen on a 1957 Argentine chart, was simply a typing error. However, today, the Argentines do call the group Islotes Lippmann. The name Islotes Lippmann appears on a 1962 Chilean chart, but the 1974 Chilean gazetteer accepted the name Islote Lippmann for the largest island in the group.

Lippmann Islet *see* **Lippmann Islands**

Lipps Island. 64°46' S, 64°07' W. A small, rocky island, about 350 m W of Litchfield Island, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1956-57, and work was done here by USARP personnel from Palmer Station from 1965 on. Named by US-ACAN in 1975, for Jere Henry Lipps (b. Aug. 28, 1939, Los Angeles), professor of geology at the University of California at Davis, and paleontological biologist who studied shallow-water benthic foraminifera here between 1971 and 1974, during which time he was leader of that particular USARP team. In 1989 he went to Berkeley. UK-APC accepted the name on Dec. 20, 1974, and it appears in the 1976 British gazetteer.

Mount Liptak. 78°45' S, 84°54' W. Rising to over 3000 m, with twin summits, 11 km SE of Mount Craddock, in the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Lester Harry "Les" Liptak II (b. Sept. 26, 1930), USN, aviation machinist's mate who served as plane captain on the first reconnaissance flights to this vicinity, in Jan. 1958.

Gora Lira *see* **Mount Lira**

Mount Lira. 67°52' S, 48°53' W. A mountain, 8 km E of the Condon Hills, in Enderby Land. The geology of this mountain was investigated by SovAE 1961-62, who named it descriptively as Gora Lira (i.e., "lyre mountain"). ANCA accepted the translated name on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Lis Point. 62°08' S, 58°32' W. A promontory below Urbanek Crag, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Capt. Marian Lis, skipper of the *Zabrze* during PolAE 1976-77.

Île Lisboa *see* **Lisboa Island**

Lisboa Island. 65°11' S, 64°11' W. The most southwesterly of the small islands off the SW end of Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted by FRAE 1908-10, and named by Charcot as Île Lisboa, after Henrique Carlos Ribeiro Lisboa (1849-1920), Brazilian minister to Uruguay, who assisted Charcot's expedition at Montevideo. It appears as such on Charcot's 1912 map. It appears as Lisboa Islet on a 1943 U.S. Hydrographic Office chart, and on a 1953 Argentine chart as Islote Lisboa, which was the name accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Lisboa Island on July 7, 1959, and US-ACAN followed suit in 1971.

Lisboa Islet *see* **Lisboa Island**

Lishness Peak. 78°53' S, 84°45' W. Rising to about 2200 m at the E side of Nimitz Glacier, 1.5 km SE of Wilson Peak, near the S end of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Alton Lynne "Al" Lishness (b. Jan. 31, 1931, Moscow. d. June 9, 2008, Bangor, Maine), with VX-6 from 1956 to 1962, as radioman on R4Ds and P2Vs, and in the "Connie" crew. He was in the Navy from March 28, 1949 to July 1, 1982, and, on Jan. 28, 1958, was radio operator on an R4D exploratory flight to this area.

Mount Lisicky. 78°27' S, 162°05' E. Rising to 2120 m, about 12 km NW of Mount Cocks, in the Royal Society Range of Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1963, for Capt. Joseph F. Lisicky (b. Sept. 7, 1917, Allentown, Pa. d. Nov. 6, 1994, Allentown), U.S. Marine Corps, maintenance officer for OpDF 60 (i.e., 1959-60), and who served several summers at McMurdo. NZ-APC accepted the name.

Nunatak Lisignoli. 65°57' S, 60°59' W. One of the numerous nunataks on Jason Peninsula named by the Argentines, this one presumably for César Augusto Lisignoli (*see* **Lisignoli Bluff**).

Lisignoli Bluff. 82°31' S, 42°41' W. A rock bluff, rising to 610 m, it forms the N end of the Schneider Hills, in the Argentine Range of the

Pensacola Mountains. Surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, photographed aerially by USN in 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for César Augusto Lisignoli, Argentine glaciologist and leader at Ellsworth Station in 1961. He was also leader at Almirante Brown Station for the 1966 winter. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Lisiya Ridge. 65°45' S, 64°11' W. An ice-covered ridge, 11 km wide, with precipitous, partly ice-free NW slopes, at the base of Magnier Peninsula, on the Graham Coast, on the W coast of Graham Land. It extends 16 km in a NE-SW direction, between the heads of Leroux Bay and Bigo Bay. It is bounded by Comrie Glacier to the S, and a tributary to Luke Glacier to the east. Mount Bigo stands at its SW extremity, as does Mount Perchot in its central part. Mapped by the British in 1971. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Lisiya, in southwestern Bulgaria.

Shel'fovyj Lednik Lisjanskogo. 69°27' S, 35°42' W. An ice shelf, named by the Russians. As it is actually a stretch of the Filchner Ice Shelf, the name will not be recognized by any other country, and probably not even by the Russians themselves.

Cabo Lista. 63°01' S, 62°38' W. A cape on the NW coast of Smith Island, in the South Shetlands. The Maglizh Rocks lie off this cape. Named by the Argentines. Also known as Cape Lista.

Cape Lista *see* **Cabo Lista**

Caleta Lister *see* **Lister Cove**

Glaciar Lister *see* **[1]Lister Glacier**

Mount Lister. 78°04' S, 162°41' E. A massive mountain, terminating in a sharp peak (4025 m; the New Zealanders say 4069 m), it is the highest point in the Royal Society Range, in Victoria Land, westward of McMurdo Sound, along the W shore of the Ross Sea. Discovered in Jan. 1902, by BNAE 1901-04, and named by them for Joseph Lister, president of the Royal Society, 1895-1900 (*see also* **[1]Lister Glacier**). US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Lister, Harold "Hal." b. 1922. He was with the Merchant Navy and the Royal Navy during World War II, and subsequently studied geology at Durham University. He was with the British North Greenland Expedition, 1952-54, as glaciologist, and was in a similar capacity in Antarctica, for BCTAE, when he became one of the first to cross Antarctica by land, during BCTAE 1955-58. He was also in charge of South Ice in 1957.

Lister Cove. 62°30' S, 60°04' W. Midway between Williams Point and Edinburgh Hill, along the NE coast of Livingston Island, on McFarlane Strait, in the South Shetlands. First roughly charted by Weddell in 1820-23, and named by him as Listers Cove. It appears on Powell's 1831 chart as Lister's Cove. Further charted by the Discovery Investigations in 1935. There is a 1938 British reference to it as Listers Harbour. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. UK-APC accepted the name Lister Cove on July 7, 1959, and US-ACAN followed suit in 1960. It appears as such on a British chart of 1962. The Argentines call it Caleta Lister. Last plotted by the UK, in late 2008.

[1]Lister Glacier. 64°05' S, 62°19' W. A glacier, 8 km long and 1.5 km wide, flowing NE into Bouquet Bay just S of Duclaux Point, on the NE side of Brabant Island, in the Palmer Archipelago. It appears (unnamed) on a 1953 Argentine chart. Mapped by FIDS cartographers in 1959 from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Joseph Lister (1827-1912), the surgeon, founder of antiseptic surgery. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Glaciar Lister. *See also* **Mount Lister**.

[2]Lister Glacier. 77°59' S, 163°05' E. A glacier flowing NE from a large cirque immediately N of Mount Lister, on the E side of the Royal Society Range, in Victoria Land. A small proportion of the snow from the E face of Mount Lister enters the head of this glacier by a steep icefall, but the majority of it flows E in a small, ill-defined sheet between Lister Glacier and Hooker Glacier. Surveyed in Sept. 1957 by the NZ Blue Glacier Party of BCTAE, and named by them in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Lister Heights. 80°31' S, 28°35' W. Rock heights rising to about 1160 m on the E side of Stratton Glacier, 6 km SW of Flat Top, in the W part of the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE, and named by them for Hal Lister. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Lister Nunataks. 73°27' S, 160°32' E. An isolated group of nunataks in the N portion of Priestley Névé, about 24 km SSW of Brawn Rocks, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Larry W. Lister, VX-6 helicopter flight crewman during OpDF 66 (i.e., 1965-66), OpDF 67 (i.e., 1966-67), and OpDF 68 (i.e., 1967-68).

Listers Harbour *see* **Lister Cove**

Liston Nunatak. 70°54' S, 63°45' W. A large nunatak, rising to anout 2200 m, immediately NW of Heintz Peak, in the Welch Mountains of central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976 for Cdr. John M. Liston, USN, operations officer for Antarctic Support Activities during OpDF 69 (i.e., 1968-69), and executive officer for OpDF 70 (i.e., 1969-70). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Liszt. 71°31' S, 73°00' W. A snow-covered mountain rising to about 600 m (the British say about 250 m) above sea level, with a scarp on its SE side, between the heads of Brahms Inlet and Mendelssohn Inlet, 8 km NE of Mount Grieg, on Beethoven Peninsula, in the SW part of Alexander Island. A number of mountains in this vicinity were photographed aerially during RARE 1947-48, and in 1959-60 Searle of the FIDS mapped this one, using the RARE photos, and plotted it in 71°27' S, 72°57' W. Named by UK-APC on March 2, 1961, for Hungarian composer Franz Liszt (1811-1886), perhaps the greatest pianist of all time. US-ACAN accepted the name later in 1961. It appears on a 1962 U.S. Hydrographic Office chart. It was replotted from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, it appears in the 1977 British gazetteer.

Mount Litchens. Near Cordiner Peaks. There is a reference to this mountain in the U.S. Antarctic journal of 1974, but that seems to be about it.

Isla Litchfield *see* **Litchfield Island**

Litchfield, Douglas Bernard "Doug." b. July 3, 1927, London, son of Henry J. Litchfield and his wife Marjorie N. Belfrage. He joined FIDS in 1954, as a general assistant and mountain climber, and wintered-over at Base N in 1955, returning to London on the *Highland Princess* on March 2, 1956. In 1957 he went to Australia, but in 1959, in Conwy, Wales, he married Marcia L. Montague.

Litchfield, Thomas Elmer. b. Feb. 9, 1911, Craddock, Va. He was a ship's engineer in the Merchant Marine when he was picked to go south as 2nd assistant engineer on the *Bear of Oakland*, 1933-34, and 1st assistant engineer, 1934-35, during ByrdAE 1933-35. He was still sailing, as chief engineer, on merchant ships, during World War I. He died in Jan. 1972.

Litchfield Island. 64°46' S, 64°06' W. A rocky island, 0.8 km long, and rising to an elevation of 50 m above sea level, 0.8 km S of Norsel Point, it forms the W side of Arthur Harbor, off the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed by FIDS in 1955, and named by UK-APC on Sept. 4, 1957, as Litchfield Islet, for Doug Litchfield (q.v.), who took part in the survey of the island that year. It appears as such on a British chart of 1958, and US-ACAN accepted the name that year. On July 7, 1959, UK-APC redefined it as Litchfield Island, and it appears as such on a British chart of 1960. It appears on a Chilean chart of 1962 as Isla Litchfield, and that name was accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Litchfield Island in 1963. There are many birds here, and it was designated SPA #17.

Litchfield Islet *see* **Litchfield Island**

Litell Rocks. 71°24' S, 162°00' E. An area of rock outcrops within the lower Rennick Glacier, 8 km E of the N end of the Morozumi Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Richard J. Litell, public information officer with the NSF's Office of Antarctic Programs, who spent 4

seasons in Antarctica between 1960 and 1964. NZ-APC accepted the name.

The *Litke*. Soviet icebreaker during IGY (1957-58). Named for Fyodor Petrovich Litke, the celebrated Russian navigator and Arctic explorer of the 19th century. Capt. K.A. Dublitskiy.

Gora Litke *see* **Litke Nunatak**

Litke Nunatak. 67°36' S, 51°40' E. About 18 km E of Perov Nunataks, at the E margin of the Scott Mountains, in Enderby Land. Named by SovAE 1961-62, as Gora Litke, for the *Litke*. ANCA accepted the name Litke Nunatak on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Islote(s) Litten *see* **Puffball Islands**

Litten Island *see* **Puffball Islands**

Cabo Little *see* **Cape Little**

Cape Little. 74°05' S, 61°04' W. The S entrance point of Wright Inlet, at the E extremity of the peninsula between Wright Inlet and Keller Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, while they were photographing Wright Inlet, during USAS 1939-41. Due to a navigational error, the feature was plotted in 74°40' S, 60°30' W, and, as such, appears on a 1942 USAAF chart, and on a 1943 U.S. Hydrographic Office chart of 1943. Photographed aerially on Nov. 21, 1947 by RARE 1947-48, and surveyed in Dec. 1947 from the ground, by a combined sledging team of RARE personnel and Fids from Base E. Ronne originally named it Cape Easson, for Ethel Easson Kelsey, mother of his radio operator. It appears as such on a 1948 American Geographical Society map. However, by 1948 he had changed the name to Cape Little, to honor Delbert Morse Little (1898-1991), assistant chief for operations, at the U.S. Weather Bureau, who arranged the program for sending weather reports from Ronne's expedition. It appears as such on Ronne's map of 1949, and was the name accepted by US-ACAN, and by UK-APC on Jan. 28, 1953. It appears as such in the 1955 British gazetteer, and also on a 1956 British chart. It appears as Cabo Little on an Argentine chart of 1952, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. *See also* **Kelsey Glacier**.

[1]**Mount Little**. 70°30' S, 65°16' E. A mountain immediately N of Mount Mervyn, and about 6 km S of Mount Kirkby, in the Porthos Range, in the Prince Charles Mountains in Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1965. Named by ANCA for Sydney George "Syd" Little (born Dec. 11, 1935), electrical fitter-mechanic who wintered-over at Mawson Station in 1967, and again as technical assistant at Casey Station in 1969. US-ACAN accepted the name in 1970.

[2]**Mount Little**. 77°00' S, 143°51' E. A mainly ice-free mountain, 5 km SW of Mount Swan, in the Ford Ranges of Marie Byrd Land. First mapped by USAS 1939-41, and named by Byrd for Harold H. Little, captain, USN, who contributed to, and assisted in, Admiral Byrd's first two Antarctic expeditions. US-ACAN accepted the name in 1971.

Little America. Admiral Byrd's Antarctic base. Also known as L.A.S. (Little America Station). Actually, there have been 5 separate Little Americas, for different Byrd expeditions. Little Americas I, II, III, and IV were all roughly in the same place, near Kainan Bay, at the Bay of Whales, but in Jan. 1955 they were calved off into the sea by 2 enormous icebergs. Little America V was built farther to the west.

Little America I. 78°40' S, 164°03' W. Originally known as Little America, when subsequent Byrd bases were set up it became, in restrospect, Little America I. This was the first Little America, built by Byrd as base camp for ByrdAE 1928-30. It was finished in Jan. 1929, and closed after the expedition came to an end, on Feb. 19, 1930. Each man had an individual room, there was a mess hall, a gym, a blacksmith's forge, an administrative room, a garage for the tractor, and a hangar for the planes. It had 60-foot-high antennas.

Little America II. 78°40' S, 164°03' W. Built over Little America I, this was the base camp for ByrdAE 1933-35. Finished in Feb. 1934, it was bigger and better than the first one. It had electric light and power, broadcasting and field communications, aviation service, 3 planes, an autogiro, 4 tractors, machine shops, a meteorological station, a lab and scientific staff for 22 branches of science, a dairy plant with 4 head of cattle, medical facilities, galley, library, a meteor observatory, sound motion picture theatre, and almost 150 dogs. The radio towers were still visible above the snow as late as 1947.

Little America III. 78°35' S, 163°52' W. Also called West Base (q.v.), this was one of the 2 bases of USAS 1939-41. This site was selected by Paul Siple under the general directions of Admiral Byrd, and set up 11 km to the NE of the previous Little America, at the Bay of Whales, just south of Eleanor Bolling Bight. By March 6, 1940 construction had finished. There were 3 main buildings under one roof, all the buildings being connected by snow tunnels.

Little America IV. 78°35' S, 163°56' W. American base, 4 km N of Little America III, this was set up on the shore of the Bay of Whales, as the headquarters for OpHJ 1946-47. The site was selected on Jan. 6, 1947 by Clifford Campbell and Paul Siple, 2.5 km from the ships bringing the expedition to Antarctica. Construction began on Jan. 17, 1947, by the Seabees led by Cdr. Reinhardt, all under the direction of Admiral Byrd. It was a temporary tent city, with 54 main tents, several other smaller ones, and an airstrip. 197 men wintered-over.

Little America V. 78°19' S, 162°22' W. **Dec. 26, 1955**: The *Glacier*, the *Greenville Victory*, and the *Arneb*, all left McMurdo to locate a site for Little America, or LAS (Little America Station), or LAV (Little America V). **Dec. 28, 1955**: The 3 ships reached the Bay of Whales, or what was left of it, and Byrd flew in a helo to his old camp, Little America. **Dec. 29, 1955**: Admiral Dufek selected the site for Little America V, the main base of OpDF I (1955-56) and for America's participation in IGY (1957-58). He picked the site for its snow ramp. It was 30 miles NE of the previous Little America sites, and was at Kainan Bay (on the opposite side of the Ross Ice Shelf from McMurdo Sound). Paul Siple led an 8-man party to survey it. The cargo ships *Greenville Victory* and *Arneb* arrived. The *Glacier* bulldozed an iceport into the banks of Kainan Bay, so unloading could be effected. **Dec. 29, 1955**: Unloading of supplies from the two cargo ships began, 5043 tons all told. **Jan. 4, 1956**: At 10 A.M., Dufek dedicated 5 acres of frozen ground as Little America V. The temperature was 38°F. **Jan. 5, 1956**: Vic Young began the first construction. **Jan. 14, 1956**: Jack Bursey led a team out of Little America to Byrd Station (*see* **Byrd Station**). **Jan. 16, 1956**: Eight buildings were finished. The bay ice started to break up. This necessitated the frantic unloading of the *Arneb*, and of getting everything off the ice. The supply dump they had made on the ice had to be moved with great speed, causing havoc. **April 10, 1956**: The first weather balloon was released. **April 16, 1956**: The Seabees finished construction of all the base buildings. Admiral Byrd directed the construction. The base was 6000 yards by 4500 yards in area. There were 16 Clements huts, 2 scientific towers, and various shops and tunnels. The long tunnel would be called Main Street. **1956 winter**: 73 men, including: Lt. Cdr. Robert G. Graham (officer-in-charge); Herb Whitney (scientific leader); William McInvale (chief commisaryman); Lt.-Cdr. Stanley C. Povilaitis (cook); Lt. Donald Mehaffey (supply officer); Lloyd Beebe (Disney cameraman, a civilian), Edward Ehrlich (medical officer), Chief Petty Officer Kenneth "Doc" Aldrich (hospital corpsman), Chet Twombly (civilian meteorologist), Lloyd "Hammer" Hon (lead builder); Willie Burleson (construction mechanic for the powerhouse generator), Will Beckett (chief utilitiesman); Bill Stroup (chief electrician), Donald Watson (surgical technician), George Moss (surveyor chief), Peter Bol (chaplain). There were two hospital corpsmen, a medical officer, and an infirmary. **1956-57 summer**: Lt. Cdr. James E. Waldron, Jr. relieved Graham. Eddie Goodale turned down the offer of being military leader there in OpDF II. **1957 winter**: Waldron was relieved by Lt. Cdr. Howard J. Orndorff. Bert Crary was scientific leader that winter (1957). **Nov. 28, 1957**: Lt. Cdr. T.N. Thompson relieved Orndorff as military leader. Little America was the nerve center for all the U.S. IGY bases from 1957-58, as well as being the home base for Byrd Station. The top American scientist of IGY (Crary) was here, as were all the military chiefs. It was the field scientific headquarters for the entire U.S. IGY program, and the headquarters of IGY Antarctic weather control (*see* **Weather Central**). It was the "Capital of Antarctica," an epithet soon taken over by McMurdo Station. **1958 winter**: Pat Maher was wintering-over commander of the Navy detachment. Crary was again scientific leader. **Jan. 18, 1959**: The station was closed, headquarters for the OpDF

expeditions in subsequent years being transferred to McMurdo. During the 15 months of IGY the station had moved 1400 yards to the NW, and by early 1960 was on the edge of the barrier, about to calve off, and that is what it did, sometime in the 1960s when no one was looking.

Little America Basin. 77°30' S, 162°00' W. An undersea feature out to sea beyond the Bay of Whales. Named by international agreement in June 1988, in association with Little America.

Little Glacier *see* **Kelsey Glacier**

Little Jeana Weather Station. 81°40' S, 170°00' E. A Ross Ice Shelf weather station opened by the USA on Oct. 6, 1964, at an elevation of 54 m above sea level. It ceased operating on Oct. 2, 1965, and was defunct from that time on.

Little Mac Automatic Weather Station *see* **Megadunes B**

Little Razorback Island. 77°40' S, 166°31' E. Also called Razorback Island, and Small Razorback Island. The smallest and most easterly of the Dellbridge Islands, in Erebus Bay, off the W side of Ross Island, in McMurdo Sound, it rises to an elevation of about 30 m, and lies about 0.8 km to the NNE of Big Razorback Island. Discovered during BNAE 1910-04, and named by Scott in association with Big Razorback Island. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Little Rockford Station. 79°35' S, 156°46' W. Also known as NAAF Little Rockford. U.S. manned weather station, comprising 3 wanigans and an improvised shelter, built at an elevation of 591 m, on the Shirase Coast of Marie Byrd Land, in Dec. 1958, and used in the 1958-59 summer. In 1959-60 it was moved to 79°30' S, 147°19' W, and opened again for the 1960-61 season. Constructionman 2nd class Joseph Nemeth, Jr. (b. Sept. 4, 1933, Cleveland, O. d. Jan. 1, 1969, Vietnam), USN, was de facto commander from Oct. 11, 1960 through that summer. 6 men total. It was open again in 1961-62 (closed for the season on Feb. 11, 1962), 1962-63 (Bob Seiders was there early in 1963), 1963-64, and 1964-65, being finally closed in Feb. 1965.

Little Thumb. 68°19' S, 66°53' W. Also called Thumb, and Neny Fjord Thumb. A small, isolated rock tower, rising to 825 m, on the SE side of Neny Fjord, close S of The Spire, at the NW end of the Blackwall Mountains, on the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936-37, by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. Climbed on Jan. 22, 1948 by Fids from Base E and personnel of RARE 1947-48. Re-surveyed by FIDS in 1948-49. In 1949 Dick Butson referred to it as Thumb, and Bill Latady as The Thumb, but various "crude" names alluding to the male member are (and always have been) also commonly used for this geographical feature. UK-APC accepted the name Little Thumb on March 31, 1955, and US-ACAN followed suit in 1956. There is also a 1955 reference to it as Neny Fjord Thumb. The Chileans call it Cerro Pulgar Negro, and the Argentines call it Monte Pulgar Negro.

Little Tioga. 60°43' S, 45°38' W. A small, but distinctive, outcrop of rock in the ice sheet on the SE slopes of Tioga Hill, Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the hill.

Littleblack Nunataks. 81°35' S, 156°20' E. A scattered group of 11 small, black nunataks at the SE side of Byrd Névé, above the Byrd Glacier and the Nimrod Glacier, 6 km SE of All-Blacks Nunataks, and 24 km SW of Mount Nares of the Churchill Mountains, and 41 km SW of Mount Albert Markham. Discovered and charted by NZGSAE 1960-61, who named them descriptively. NZ-APC accepted the name, and ANCA followed suit on Nov. 19, 1963. US-ACAN accepted the name in 1970.

Mount Littlepage. 77°12' S, 160°03' E. Rising to over 2000 m, between Mount DeWitt and Mount Dearborn, just W of the N end of the Willett Range, in Victoria Land. Named by US-ACAN in 1964, for Jack L. Littlepage, biologist at McMurdo in 1959-60, 1961, and 1961-62. NZ-APC accepted the name.

Littlespace Island *see* **Sucia Island**

Littleton, Joseph Lee "Joe." b. April 17, 1914, Norfolk, Va. as George Littleton, son of Queen Esther Littleton. Queen Esther was the daughter of Cary Littleton, a laborer at the Norfok Navy Yard, and his wife Josephine, and was precisely 13 when she gave birth to the lad (father unknown). A couple of years later Queen Esther had another son, Leon (father unknown). As she was working as a servant for a private family, this was all too much for the Littletons, and young George was farmed out to Cary Littleton's brother Joe Lee Littleton, also a laborer at the Yard. In 1920, Queen Esther married 22-year-old car mechanic Charles Esquege "Charley" Ferrand, who had just got out of the Army. Young George took the name Joe, joined the U.S. Navy, and served as cook 3rd class on the *Bear*, during both halves of USAS 1939-41, one of only four blacks (with George Gibbs, Cyrus Napier, and David Taylor) on the expedition. During the 2nd half of the expedition, he was promoted to cook 2nd class. He married Ethel. He died on Sept. 30, 1980, and is buried in Norfolk. Ethel died in 2002, aged 83, and is buried with him. Queen Esther died in 1963. Charley Ferrand, who signed up as a private in the Army in 1943, at the age of 45, became a sergeant during World War II, and died in 1976, in New York, where he is buried with Queen Esther. Joe's brother, Leon A. Littleton, died in Michigan in 2007.

Littlewood Nunatak *see* **Littlewood Nunataks**

Littlewood Nunataks. 77°53' S, 34°20' W. A group of 4 brick-red, lichen-covered nunataks, each one 50 m in width, rising to about 250 m, between Schweitzer Glacier and Lerchenfeld Glacier, on the Luitpold Coast. Filchner discovered and roughly charted them in Jan. 1912. On Jan. 28, 1959, they were visited by a USGS party led by John C. Behrendt, who mapped them (in 77°55' S, 34°00' W), and named them for William H. "Bill" Littlewood, civilian oceanographer with the U.S. Hydrographic Office (from 1949), who went south on the *Edisto*, and worked in the Weddell Sea area during OpDF I (i.e., 1955-56), and as chief oceanographer in 1956-57 (as part of Task Force 43.7 to Ellsworth Station), 1957-58, and 1958-59 (as one of Behrendt's party). They appear as such on the American Geographical Society's map of 1962. However, on a 1962 U.S. Hydrographic Office chart they appear plotted in 77°50' S, 34°20' W. On a 1963 USHO chart they appear singularized as Littlewood Nunatak. US-ACAN accepted the pluralized name, and UK-APC followed suit on Dec. 9, 1981. They have since been replotted.

Littleyear, Lawrence *see* **USEE 1838-42**

Litvillingane *see* **Litvillingane Rocks**

Litvillingane Rocks. 71°52' S, 1°44' W. Two isolated nunataks, the E one having a small outlier, 5 km S of Bolten Peak, on the E side of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Litvillingane (i.e., "the mountainside twins"). US-ACAN accepted the name Litvillingane Rocks in 1966.

Litwin Bay. 62°00' S, 58°35' W. Between Davey Point and Cieslak Point, in front of Usher Glacier, on the Joannes Paulus II Coast, on King George Island, in the South Shetlands. Named by the Poles in 1984, for Jozef Litwin, helo pilot on PolAE 1978-79.

Litz Bluff. 72°11' S, 99°08' W. An ice-covered bluff, 3 km W of Mount Borgeson, in the Walker Mountains of Thurston Island. Rock salients mark the face of the bluff. Named by US-ACAN in 2003, for Ensign Martin Eugene "Gene" Litz (b. March 11, 1926, Baltimore), navigator and 2nd pilot of PBM Mariner aircraft in the Eastern Group of OpHJ 1946-47.

Litz Glacier. 72°07' S, 99°04' W. Flows NE from the vicinity of Smith Peak and Litz Bluff, in the north-central part of Thurston Island, to enter the W part of Peale Inlet, N of Guy Peaks. Named by US-ACAN in 2003, for A.K. Litz (b. 1920), who joined the U.S. Navy in 1941, served on the *Yorktown* during World War II, and was chief photographer's mate in the Eastern Group of OpHJ 1946-47.

Liupan Shandi *see* **White Hill**

Liv Glacier. 84°55' S, 168°00' W. A steep valley glacier, 60 km long, emerging from the Polar Plateau just SE of Barnum Peak, and flowing N through the Queen Maud Mountains, to enter the Ross Ice Shelf between Mayer Crags (to the W) and the Duncan Mountains (to the E). Discovered in 1911 by Amundsen on his way to the Pole, and named by him for Liv Nansen (b. 1893, Baerum, Norway. d. 1959), the daughter of Fridtjof Nansen, the Norwegian Arctic explorer. Byrd selected this glacier up which to fly to the

Pole on Nov. 28, 1929. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Liv Glacier Auxiliary Naval Air Facility *see* **Beardmore Glacier Camp**

Livdebotnen *see* **Livdebotnen Cirque**

Livdebotnen Cirque. 71°45' S, 11°21' E. In the NE side of Mount Flånuten and the W side of Botnfjellet Mountain, in the central part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Livdebornen (i.e., "the shelter cirque"). US-ACAN accepted the name Livdebotnen Cirque in 1970.

The *Lively*. The smaller vessel on Biscoe's voyage of 1830-32 (*see* **Biscoe Expedition**). She was a 46-ton cutter, built in 1794, and commanded on the way south by Capt. Smith. About Nov. 1830, at the Falklands, before the expedition reached Antarctic waters, Capt. Avery took over. The ship was wrecked in the Falklands on the homeward voyage from Antarctica, in 1832, with her crew of 10.

Cape Lively *see* **Lively Point**

Punta Lively *see* **Lively Point**

Lively Point. 65°52' S, 66°11' W. Forms the SW extremity of Renaud Island, in the Biscoe Islands. The Biscoes were discovered in 1832, by John Biscoe, and were first roughly surveyed by FrAE 1903-05 and FrAE 1908-10. Renaud Island was again roughly surveyed in 1935-36, by BGLE 1934-37. In association with Tula Point, this point was named Cape Lively by UK-APC on Sept. 22, 1953, for the *Lively*. It appears in the 1955 British gazetteer, and on a 1957 British chart. US-ACAN accepted that name. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC redefined this feature as Lively Point, and UK-APC followed suit in 1960. It appears as such on a British chart of 1960. It appears on a Chilean chart of 1962 as Cabo Lively, but ChilAE 1962-63 renamed it Cabo Aguirre Romero, for pilot L. Aguirre Romero, of the *Yelcho*, the ship that rescued Shackleton's men from Elephant Island in Aug. 1916, during BITE 1914-17. That was the name accepted by the 1974 Chilean gazetteer. The Argentine call it Punta Lively.

Livermore, John. Mess boy on the *Discovery II*, 1933-37.

Liverpool Bay *see* **Destruction Bay**

Liverpool Beach. 62°39' S, 60°36' W. A crescent-shaped beach, extending 1.8 km on the W side of the small, ice-free promontory ending in Hannah Point, on the S coast of Livingston Island, in the South Shetlands. It is bounded by Hannah Point to the W, Ustra Peak to the NE, and the terminus of Verila Glacier to the N. One of the most popular tourist sites in Antarctica, it is frequented by cruise ships. Mapped by sealers as early as 1821, it was remapped by the Argentines in 1959, by the British in 1962 and 1968, by the Chileans in 1971, by the Argentines again in 1980, by the Spanish in 1991, and by the Bulgarians in 2005 and 2009. Named by the Bulgarians on Dec. 6, 2010, for the city of Liverpool, which sent so many sealing ships to the South Shetlands in 1820-21.

Liverworts. Small, creeping, mosslike plants of the class Hepatopsida which, along with mosses (q.v.) make up the Bryophytes (*see also* **Flora**), which total 100 or so of the 800 species of plants in Antarctica. They predominate in maritime areas.

Living quarters. Originally men lived on the ships themselves, and that could (and did) get tiresome. During the Heroic Era (q.v.) the explorers built crude huts, but, by Byrd's time, more luxurious living quarters were the order of the day. Nowadays it is all mod cons (modern conveniences). Men have lived on beaches, ice floes, ice shelves, islands, under boats, in ice caves, in tents, under the ice, in huts, wanigans, scientific stations, in fact most places.

Isla Livingston *see* **Livingston Island**

Livingston Island. 62°36' S, 60°30' W. Also called Smiths Island, and Smolensk Island. The largest of the South Shetlands, it lies between Greenwich Island (to the NE) and Snow Island (to the SW), and extends from 59°48' W to 61°13' W. It is about 61 km long and between 3 and 30 km wide, and has two peaks on it, Mount Friesland and Rotch Dome. Discovered by William Smith on Feb. 19, 1819, the first recorded sighting of land in Antarctica (at Williams Point). Roughly charted by Smith in Oct. 1819, by Bransfield in Jan. 1820, and again by von Bellingshausen on Jan. 25, 1821. It was recharted several times by sealers in the 1820-21 and 1821-22 seasons. It seems that the first name given to the island was Friesland Island (or some such spelling thereof), and it appears that way on Palmer's 1820 chart. By 1821 it was being called Livingstone's Island (sic), possibly after Capt. Andrew Livingston, whose "copious and valuable communications" were acknowledged by Purdy in his South Atlantic Ocean sailing directions. Capt. Livingston (1787-1859), a Scottish mariner, opened up a school of navigation and nautical astronomy at 105 Duke Street, Liverpool, and got into the infant guano trade. It appears on an 1839 British chart as Livingston Island, which was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also in the 1956 American gazetteer. Both the Chileans and the Argentines call it Isla Livingston.

Livingston Island Station *see* **Base P**

[1]**The *Livonia***. A 216-ton sealing snow, built in 1815, and owned by Capt. Christian William Kennedy, of Whitechapel, London, out of Valparaíso, which was in the South Shetlands during the 1820-21 season, under the command of Captain Samuel Nowell. On May 16, 1821 the vessel arrived at Valparaíso, with 700 sealskins. She was back in Antarctic waters for the 1821-22 season, and then headed up to Lima, where she was seized by the Peruvian government in 1822, and condemned, along with her cargo.

[2]**The *Livonia***. A 71.6-meter Estonian ship, with a crew of 32, which could take 88 passengers, in Antarctic waters in 1994-95 and 1995-96, with Enn Soer skipper on both occasions. She visited the South Shetlands, the South Orkneys, and the Antarctic Peninsula. Also known as the *Marine Challenger*.

Livonia Rock. 62°02' S, 57°34' W. A rock awash, 0.75 km S of Cape Melville (the E extremity of King George Island), in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by the UK on Sept. 23, 1960 for the original *Livonia*. US-ACAN accepted the name later in 1960. Last plotted by the UK, in late 2008.

Isla Lizard *see* **Lizard Island**

Lizard Hill. 63°31' S, 57°01' W. A narrow, curving rock ridge, rising to 355 m (the British say 1170 m), 3 km SW of Trepassey Bay, and 0.8 km E of Ridge Peak, near the N end of Tabarin Peninsula, on Trinity Peninsula. Probably first seen by SwedAE 1901-04, but certainly not named by them. Surveyed and charted in March 1946 by Fids from Base D, who named it descriptively. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952.

Lizard Island. 65°41' S, 64°27' W. A completely snow-covered island, between 5 and 6 km long and about 0.75 km wide, it is the only named island in the group the Argentines call Islotes Correo, and lies parallel to the NE coast of Bigo Bay, being separated from that coast by a channel about 800 m wide, off the Graham Coast, on the W coast of Graham Land. Discovered and mapped in 1935, by BGLE 1934-37, and named by Rymill for its shape. It appears on his 1938 map of the expedition, as well as on a 1948 British chart, and was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1946 as Isla Lizard, but on one of their 1953 charts fully translated as Isla Lagartija, and that latter name was the one accepted by the Argentine gazetteer of 1970. The Chilean gazetteer of 1974 went for Isla Lizard. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957-58. It appears in the 1961 British gazetteer as Lizard Islands, but that was a simple mistake.

Lizard Islands *see* **Lizard Island**

Lizard Nunatak. 69°30' S, 71°03' W. Rising to about 800 m in the Nichols Snowfield, in the N part of Alexander Island. Surveyed by BAS from 1968 on. So named by UK-APC on Dec. 8, 1977 for its shape, and also in association with Serpent Nunatak to the NE. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Lizard Point. 84°48' S, 163°40' E. A low morainic point along the W side of the upper Beardmore Glacier, between Berwick Glacier and Mount Bartlett, marking the S side of the entrance to Table Bay. Named by BAE 1910-13. US-ACAN accepted the name in 1966, and NZ-APC followed suit.

Lizards Foot. 77°13' S, 162°51' E. A rocky

spur rising to 570 m (the New Zealanders say about 731 m), it forms the E end of the snow-covered ridge descending from Mount Evans along the S side of Debenham Glacier, and, therefore, also forming the E end of the Saint Johns Range, in Victoria Land. Charted and named descriptively by BAE 1910-13. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Lizotte Creek. 77°42' S, 162°29' E. A meltwater stream, 2 km long, flowing SE from the extreme SW tip of Matterhorn Glacier, to the NE end of Lake Bonney, in Taylor Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 1996, for Michael P. Lizotte, biologist with the University of Wisconsin, at Oshkosh, who studied algal physiology and ecology in perennially ice-covered lakes in the McMurdo Dry Valleys from 1985 onwards.

The *Lizzie P. Simmons*. Known informally as the *L.P. Simmons*. A sealing schooner from Provincetown, Mass., owned by brothers Joshua E. and Gideon Bowley, ships provisioners. Her skipper in the North Atlantic in 1868-70 was John R. Dunham. She was sold in 1872 to a company in New York, and left New London, Conn., on July 24, 1872, bound for the South Shetlands, under Capt. Jerry Potts. The crew were: Joseph G. Tinker (1st mate), Charles Jerry Slate (2nd mate), Ethan A. Collins, Charles L. Knight, John Spillane, William Griffin, Joseph Culletin, George West, John Miller, John Tappan, William J. Cummings, Franklin Comstock, G. Elliott Cornish, Dudley A. Brand, Nicholas Hart, Joseph West, and Joseph Smith. On Aug. 2, 1873 the ship left New London again, again bound for the South Shetlands under Capt. Potts. She remained in and about Antarctic waters for 2 years. Also aboard: Henry Fargo, George A. Williams, William H. Stanton, Patrick Kierns, William Griffin, Edward Heim, Richard O. Crocker, David ?, Francis Harty, Charles Frank, Joseph Enos, Frank Martin, Joseph Williams, Nicholas Hennessey, Harry Kennedy, José Luco Regand, Antone Silva, José Canades Millo, William Leighton, Edward Louis Van Zick, Harry McCracken, John Carroll, Michael Kennedy, John Squires, William Slack, Dudley A. Brandt, Joseph West, Patrick Bransfield, Francis H. Bacon, August Reinger, Manuel Silva, Daniel C. Littlefliar. While on this expedition, they met Dallmann's expedition on the *Grönland*. On July 10, 1875 she left New London again for the South Atlantic, this time under Capt. James W. Buddington, who had just returned from the South Shetlands in the *Franklin*. The *L.P. Simmons* made another South Atlantic trip, leaving New London on June 17, 1876, again under Buddington, but on July 22, 1876, he switched to the *Florence* and went down to the South Shetlands. Sanford S. Miner took over the *L.P. Simmons*, but there is no evidence they were in Antarctic waters. On May 31, 1877, Buddington took the ship out of New London, bound for the North Atlantic, and on Dec. 27, 1878, Buddington again led an expedition to the South Atlantic. The ship was in Arctic waters in 1883, under Capt. Roach.

Lednik Ljadova *see* **Liadov Glacier**

Llamazares, Aníbal Gregorio *see* **Órcadas Station**, 1949

Mount Llano. 84°48' S, 173°21' W. A mountain peak rising to 1930 m (the New Zealanders say about 1600 m), 10 km (the New Zealanders say about 7 km) NE of Mount Wade, in the foothills of the Prince Olav Mountains. Discovered and surveyed by the U.S. Ross Ice Shelf Traverse of 1957-58 under Bert Crary, and named by him for George Albert Llano (b. Nov. 22, 1911, Havana. d. Feb. 9, 2003, Lakeland, Fla.), botanist often in Antarctica. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Llano Point. 62°10' S, 58°26' W. A small promontory, S of Suszczewski Cove, Admiralty Bay, King George Island, in the South Shetlands. Named by American ornithologists Wayne Trivelpiece and Nick Volkmann, in 1977, for George Llano (*see* **Mount Llano**). Poland accepted the name in 1980.

Grupo Llanquihue *see* **Llanquihue Islands**

Islas Llanquihue *see* **Llanquihue Islands**

Llanquihue Islands. 65°53' S, 65°06' W. A group of islands to the E of Larrouy Island, they form the E side of Harrison Passage, and extend S for 14 km from and including Dog Island, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed by ChilAE 1946-47, and named by them as Grupo Llanquihue, for the Chilean province of the same name. It appears as such on their 1947 chart. In 1956-57 the group was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. On July 7, 1959, UK-APC accepted the name Straggle Islands, from the scattered arrangement of the group. It appears as such on a British chart of 1960. On a Chilean chart of 1962, it appears as Islas Llanquihue, and that was the name accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Llanquihue Islands in 1965. The Argentines call the group Islas Straggle. The group also includes Cat Island.

Lliboutry Glacier. 67°29' S, 66°42' W. Flows SW from the Boyle Mountains into Bourgeois Fjord, on the Loubet Coast, on the W coast of Graham Land. BAS personnel from Rothera Station did geological work here in 1980-81. Named by UK-APC on April 3, 1984, for Louis-Antonin-François Lliboutry (b. 1922), French-Chilean physicist, glaciologist, and mountain climber, who made a detailed study of the glaciers on the Antarctic Peninsula. He was director of the Laboratory of Glaciology at Grenoble, 1958-83. US-ACAN accepted the name. It appears in the 1986 British gazetteer. Originally plotted in 67°30' S, 66°46' W, it has since been replotted.

Cerro Llorente. 63°42' S, 58°22' W. A hill, rising to 478 m, 14 km N of Pitt Point, on the E coast of the Antarctic Peninsula. Named by the Chileans for Capt. Raúl Llorente Rodrigo, of the Chilean Army Engineers, who took part in ChilAE 1947-48, and who helped in the creation of General Bernardo O'Higgins Station. *See also* **Mount d'Urville**.

Llosa, Eduardo J. Capitán de fragata of the Argentine vessel *Les Éclaireurs*, in 1958, when that ship became the first official tourist ship to Antarctica.

Llosa, Guillermo. Argentine naval officer. In 1902 he was alférez (ensign), and in Oct. 1904 was promoted to teniente de navío. He was commander of the *Uruguay* from Dec. 15, 1910 to June 4, 1911.

Cabo Lloyd *see* **Cape Lloyd**

Cape Lloyd. 61°08' S, 54°01' W. Forms the N end of Clarence Island, in the South Shetlands. Roughly charted by Bransfield in Feb. 1820, it was namd by him as Lloyds Promontory, appearing as such on his chart of that year, as well as on an 1822 British chart. On Goddard's chart of 1822 it appears as Lloyd's Promontory, and it ws generally seen that way until 1825. On a British chart of 1839 it appears as Lloyds Cape, and on Friederichsen's 1895 German map it appears as Cap Lloyd. On an Argentine map of 1908 it appears as Cabo Lloyds, on Charcot's 1912 map as Cap Lloyds, and on Frank Wild's 1923 chart as Cape Lloyds. On British charts of 1927 and 1949 it appears as Cape Lloyd, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1939 as Cabo Lloyd, and that was the name accepted by both the 1970 Argentine gazetteer (after they had rejected the proposed Promontorio Lloyd) and the 1974 Chilean gazetteer. ChilAE 1975-76 named the NE extremity of this cape as Punta López (q.v.). Last plotted by the UK, in late 2008.

[1]**Mount Lloyd**. 83°13' S, 165°44' E. Rising to 3210 m (the New Zealanders say 3020 m), N of the head of Hewitt Glacier, 11 km N of Mount Miller, and 20 km W of Mount Tripp, in the Holland Range (the New Zealanders say the Queen Alexandra Range), about midway between Shackleton Inlet and the Beardmore Glacier, on the W side of the Ross Ice Shelf. Discovered and named by BAE 1907-09. US-ACAN accepted the name in 1949, and NZ-APC followed suit.

[2]**Mount Lloyd** *see* **Mount Humphrey Lloyd**

Lloyd, John. b. Aug. 24, 1821, London. On Dec. 28, 1839, at Hobart, he joined the *Zélée* as a junior seaman for the last Antarctic trip of FrAE 1837-40.

Lloyd, Ronald Martin "Ron." BAS medical officer who wintered-over at Halley Bay Station in 1966. He later lived in Liverpool, as an RNR surgeon lieutenant, but in 1977 moved to Canada, becoming a major in their army. He retired to private practice in Ontario.

Lloyd, William *see* **USEE 1838-42**

Lloyd Hill. 62°29' S, 59°53' W. Rising to 335 m (the British say 415 m), SW of Mount Plymouth, in the W part of Greenwich Island, in the South Shetlands. Henry Foster in 1829, during the *Chanticleer* Expedition of 1828-31, recorded the name Lloyd's Land for a feature in the area. However, that may have been an early alternative name for Greenwich Island. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS between 1957 and 1959. UK-APC, on Aug. 31, 1962, named

this feature thus, in order to preserve Foster's naming (if not the actual name), and US-ACAN followed suit in 1965. Last plotted by the UK, in late 2008.

Lloyd Icefall. 72°04' S, 165°27' E. A large icefall, about 6 km wide, at the head of Lillie Glacier, it flows from the Polar Plateau to the N of the Millen Range, between that range and the King Range, in northern Victoria Land. Named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Roger Lloyd, field assistant with the Southern Party of that expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Lloyds Cape *see* **Cape Lloyd**

Lloyds Island *see* **Greenwich Island, Rugged Island**

Lloyd's Land *see* **Greenwich Island, Lloyd Hill**

Lloyd's Promontory *see* **Cape Lloyd**

Loades Peak. 68°53' S, 53°47' E. A prominent peak at the E end of the Knuckey Peaks, it resembles a seated figure when viewed from the SE. It was a prominent landmark on the overland route taken by an ANARE tractor party in 1974 from Mawson Station to the Knuckeys, where they established a base camp. Named by ANCA on Aug. 27, 1975, for Donald R. "Don" Loades, carpenter who wintered-over at Mawson in 1974, and who was a member of the 1974 tractor party. He had also wintered-over at Wilkes Station in 1968.

Loaf Rock. 64°48' S, 63°55' W. A low rock, 5 km W of Biscoe Point, off Biscoe Bay, on the SW coast of Anvers Island, in the Palmer Archipelago. Charted by an RN Hydrographic Survey unit in 1956-57. So named by UK-APC on July 7, 1959, because it is shaped like a flat loaf of bread. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Lobeck Glacier. 77°13' S, 161°46' E. Flows NE for 6 km between Rutherford Ridge and Kuivinen Ridge, and terminates upon rock cliffs overlooking Miller Glacier (but not in any way feeding that glacier), in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for geographer and geologist Armin K. Lobeck (1886-1958), professor of geology at Columbia University, in NY, 1929-54. His 1939 textbook, *Geomorphology*, was widely used in training geomorphologista active in Antarctica. NZ-APC accepted the name on April 7, 2008.

Isla Lobel *see* **Lobel Island**

Lobel Island. 64°59' S, 63°53' W. An island, 1.3 km long, 3 km SW of Brown Island, it is one of the southernmost of the Wauwermans Islands, in the Wilhelm Archipelago. The name Île Loicq de Lobel was appplied by Charcot, during FrAE 1903-05, to an island in this vicinity, and appears as such on his 1906 map. Charcot, during FrAE 1908-10, named a feature in this vicinity as Îles Loíc de Lobel. It appears as such on Matha and Rey's 1911 map, but in the singular, as Île de Loíc de Lobel. The man in question was French engineer Baron Loïcq de Lobel, of the French Geographical Society, who, at that very moment was attempting to link Alaska with Siberia, by rail. On a 1943 U.S. Hydrographic Office chart the name Loïe de Lobel Islands (sic) refers to the W group of the Dannebrog Islands, but on a 1949 USHO chart it refers to the E group of the Dannebrog Islands. On a 1949 Argentine chart the name Islas Loíe de Lobel (sic) refers to the E group of the Wauwermans Islands, and includes Pardoner Island and Wedneday Island. This situation was accepted by the 1970 Argentine gazetteer. Following an RN Hydrographic Survey unit survey here in April 1952, led by Frank Hunt on the *John Biscoe*, the name of the present island (i.e., what we know today as Lobel Island) was named Johnston Island, for Capt. Bill Johnston. It appears as such on Hunt's 1952 chart. On an Argentine chart of 1953 the group appears as Grupo Loíe de Lobel, but on a 1957 Argentine chart the group appears as Islas Johnston, referring to the present feature and nearby islands. That name was accepted by the 1970 Argentine gazetteer. However, the present feature by itself appears on a 1958 Argentine chart as Isla Johnston. In Feb. 1957, it was re-surveyed by another RN Hydrographic Survey unit, who used it for a triangulation station. On July 7, 1959, UK-APC accepted the name Lobel Island, and it appears as such on a British chart of 1960. US-ACAN accepted the name in 1965.

Cordón Lobell. 63°33' S, 57°58' W. A mountain chain, about 20 km SSE of Cape Ducorps, in the central part of Trinity Peninsula. Named by the Chileans for Milt Lobell. This naming is not as unexpected as it first appears; the Chileans think Milt was Chilean.

Lobell, Milton John "Milt." b. Dec. 28, 1912, NYC, but raised in Seattle, son of Rumanian immigrant Milo Lobell, a machine embroiderer, and his Hungarian immigrant wife Helene Steiner. He graduated from the University of Washington in 1935, and in 1936 began work as an aquatic biologist with the U.S. Bureau of Fisheries, working on the Colunbia Stream Survey, 1936-38. He married Eva Mae Petersen on June 10, 1940. He was a biologist with the Division of Fishery, in the Wildlife Service, in Washington, DC. He was a member of USAS during its 2nd phase, 1940-41. He died on Oct. 8, 1988.

Playa Lobería. 62°27' S, 60°48' W. A beach, about 175 m long, immediately NE of Punta Doris, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1984-85 because here is found Cape Shirreff's main seal rookery.

Monte Lobo. 63°23' S, 56°12' W. A mountain W of Monte Café, on the SW coast of Joinville Island. Named by the Argentines.

Islote Lobodón *see* **Lobodon Island**

Lobodon Island. 64°05' S, 61°35' W. An island, immediately SE of Auguste Island, and 5.5 km NE of Wauters Point (which is on Two Hummock Island), in the Palmer Archipelago. Roughly charted on Jan. 23, 1898, by BelgAE 1897-99, but apparently not named by them. Photographed aerially by FIDASE in Dec. 1956. Named by UK-APC on Sept. 23, 1960 for the crabeater seal (*Lobodon carcinophagus*). US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. ChilAE 1961-62 re-surveyed it, and it appears on their 1962 chart as Islote Cordovez, named for Capitán de navío Enrique Cordovez Madariaga (*see* **Bahía Cordovez** and **Seno Enrique**). That was the name accepted by the 1974 Chilean gazetteer. The Argentines call it Islote Lobodón.

Acantilado Lobos. 62°27' S, 60°46' W. A cliff, E of Punta Lobos (the extreme SE entrance point to Bahía Mansa), on the E coast of Cape Shirreff, on Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because of the presence on the cliff of lobos finos (fur seals).

Punta Lobos. 62°27' S, 60°47' W. A point that marks the extreme SE of the entrance to Bahía Mansa, on the E coast of Cape Shirreff, on Livingston Island, in the South Shetlands. Named by the same people who named Acantilado Lobos, and for the same reason.

The *Loca Lola*. Swiss yacht in Antarctic waters in 1993-94, visiting the South Shetlands and the Antarctic Peninsula, under the command of Jean Nydegger.

Locator Island. 65°11' S, 64°30' W. The highest and westernmost of the Roca Islands, about 320 m north of the largest island in that group, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in Dec. 1956, and again in March 1958 from the helicopter off the *Protector*, and mapped by FIDS cartographers from these efforts. So named by UK-APC on July 7, 1959, because this distinctive island provides a useful mark for locating one's position while navigating French Passage to the north. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Mount Locke. 71°24' S, 169°06' E. A snow-capped coastal peak rising to 1190 m, at the NE end of the DuBridge Range, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Cdr. Jerry L. Locke, USN, helicopter pilot with VX-6 during OpDF 68 (i.e., 1967-68).

Mount Lockhart. 76°28' S, 145°06' W. A prominent northerly projection from the main massif of the Fosdick Mountains, 6 km NE of Mount Avers, in the Ford Ranges of Marie Byrd Land. Discovered aerially on Dec. 5, 1929 by ByrdAE 1928-30. Named by US-ACAN in 1947, for Ernest E. Lockhart (q.v.), a member of the biological area that visited this area in 1940, during USAS 1939-41.

Lockhart, Ernest Earl. Known as Earl. b. Sept. 10, 1912, Boston, son of Clinton Daniel Lockhart and his wife Celeste Althea Westhaver. He graduated from MIT in 1934, got his masters degree in 1935, and his doctorate in 1938. He went to Sweden to study biochemistry, and on his return became the physiologist and radio operator at West Base during USAS 1939-41. He

then began a career at MIT, as a researcher and teacher of nutrition. In 1956 he became research director of the Coffee Brewing Institute, in NYC, and in 1965 went over to Coca Cola, in Atlanta, as assistant reseach director, staying with them until his retirement in 1978. He and his wife Helen retired to West Dennis, Mass., and he died on July 26, 2006.

Lockhart Ridge. 85°02' S, 174°50' W. A conspicuous ridge, about 6 km long, extending W along the S side of Yeats Glacier, and terminating at Shackleton Glacier. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for CWO James J. Lockhart, pilot with the U.S. Army Aviation Detachment, which supported the expedition. US-ACAN accepted the name in 1966.

Lockheed Mountains. A prominent range of "high and noble mountains" on the Antarctic Peninsula. Discovered on Dec. 20, 1928 by Wilkins, who named them for his plane. The Whirlwind Glaciers poured energetically down from their slopes. However, the Lockheeds do not seem to exist, although well into the 1940s they were still in the record books.

Lockley, Gordon Joseph "Jock." b. 1916, Eastbourne, but grew up partly in Chelsea, son of William H. Lockley and his wife Elsie Eleanor P. Saunders. After Westminster City School and Chelsea Polytechnic, he became a biologist and meteorologist, and in 1935 was appointed attendant in the department of zoology, at the Natural History Museum in London, where he worked under Dilwyn John (q.v.) for many years. He was also an RNVR lieutenant, 1940-46. In 1939, in Chelsea, he married Deborah Dixon, and they moved to Eton. His first son had just been born when, in 1944, he joined Operation Tabarin, for its second phase, as base leader of the 1945 wintering party at Port Lockroy Station. His second son was born while Jock was wintering on the ice. On Oct. 22, 1945, on pack-ice off the W coast of Graham Land, he became the first man ever to capture a crabeater seal. When Tabarin became FIDS in July 1945, he automatically became the first FIDS leader of Lockroy. He went back to the UK in 1946, and in 1947, about the same time his third son was born, he transferred to Fisheries, going to Kenya in 1948. In 1949 his only daughter was born, and in 1951 he transferred to Tanganyika, as a British government fisheries officer. In 1961 he became senior fisheries officer, and in 1981 was with the Technical Division of the NZ Fishing Industry Board, retiring in 1987.

Lockley Bay. 64°48' S, 63°22' W. A small NE-facing bay E of Lockley Point, on Wiencke Island, in the Palmer Archipelago. Surveyed and charted by personnel on Operation Tabarin in 1944-45, and named by them as Davies Bay, for Gwion "Taff" Davies. On Nov. 15, 2006, UK-APC named it, but as Lockley Bay, in association with the point.

Lockley Point. 64°47' S, 63°23' W. A low, ice-covered point, 1.5 km NE of Noble Peak, on the NW side of Wiencke Island, on the coast of the Neumayer Channel, in the Palmer Archipelago. Probably discovered in Feb. 1898, by BelgAE 1897-99. Re-discovered and charted by Port Lockroy Station personnel in 1944, during Operation Tabarin, and later named by FIDS for Jock Lockley. UK-APC accepted the name on Nov. 21, 1949, and it appears on a British chart of 1950. US-ACAN followed suit with the naming in 1951. It appears in the 1955 British gazetteer.

Port Lockroy. 64°49' S, 63°30' W. A harbor, or bay (both actually), 0.8 km long and the same wide, between Flag Point and Lécuyer Point, on the W side of Wiencke Island, in the Palmer Archipelago. Discovered on Feb. 19, 1904 by FrAE 1903-05, roughly charted by them the following day, and named by Charcot as Port-Lockroy, for Étienne-Auguste-Édouard Lockroy (1840-1913; known as Édouard), French politician who helped get government support for Charcot's expedition. It appears as such on Charcot's charts of 1906 and 1912. On various charts drawn up by FrAE 1908-10, it also appears as Port Lockroy (i.e., without the hyphen). On David Ferguson's 1918 chart it appears as Port Lacroix, which is an almost understandable error, as the pronunciation is almost the same. On a British chart of 1921 it appears as Port Lockroy. It was re-charted by the Discovery Investigations in 1927, and appears on their 1929 chart, and also on a British chart of 1952. The bay was used by Wilkins as a base for flying operations, Dec. 18-9, 1929. Surveyed by Operation Tabarin personnel from Port Lockroy Station in 1944-45. It appears variously on Chilean charts of 1947 as Bahía Lockroy and Caleta Lockroy. Charted by an RN Hydrographic Survey unit in 1951. Port Lockroy was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Puerto Lockroy. For the famous British station here, *see under* **P**, for **Port Lockroy Station**.

Puerto Lockroy *see* **Port Lockroy**

Mount Lockwood. 84°09' S, 167°24' E. A projecting-type mountain, 8 km S of Mount Bell, it forms part of the E face of Grindley Plateau, in the Queen Alexandra Range. Discovered and named in 1908, during BAE 1907-09, and named by Shackleton. Mr Charles Barrett Lockwood (1856-1914), senior surgeon at Barts, in London, was an old friend of Shackleton's companion, Marshall. US-ACAN accepted the name in 1966, and NZ-APC followed suit.

Lockwood, F. b. NZ. Seaman on the *City of New York* during ByrdAE 1928-30. That is how he is listed in connection with the expedition, but the NZ newspapers referred to him as T. Lockwood.

Cape Lockyer *see* **Lockyer Island**

Isla Lockyer *see* **Lockyer Island**

Lockyer Island. 64°27' S, 57°36' W. An island, 4 km long, off the S shore of James Ross Island, between that island and Snow Hill Island, in the SW entrance to Admiralty Sound. Crozier suggested the name to Ross, and Ross named it Cape Lockyer, on Jan. 7, 1843, the date they saw it from a distance. Capt. Nicholas Lockyer (1782-1847), RN, was a friend of Crozier's. It appears as such on Ross's charts of 1844 and 1847, and as Cap Lockyer on Friederichsen's 1895 German map. On March 9, 1902, SwedAE 1901-04 re-defined it. It appears on Sobral's 1904 Argentine chart as Isla Lockyer, and that was the name that would be accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On Charcot's 1912 map it appears as Île Lockyer. On a 1921 British chart it appears as Lockyer Island, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was further surveyed by Fids from Base D in Sept. 1952. It has occasionally been misspelled.

Lodge Rock. 68°41' S, 67°32' W. A low, snow-capped rock, rising to an elevation of about 25 m above sea level, between Barn Rock and Hayrick Island, in the Terra Firma Islands, in Marguerite Bay, off the Graham Coast, on the W coast of Graham Land. The Terra Firma Islands were first visited and surveyed in 1936, by BGLE 1934-37. This particular rock was surveyed in 1948 by Fids from Base E, who named it for a low ledge on one side of this rock where they could drive their sledges safely. It provided lodgement clear of the sea-ice pressure area for a depot for FIDS sledging parties in 1948-49. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Gora Lodochnikova. 71°41' S, 9°42' E. A nunatak E of Sandnesstaven Peak, at the N end of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Loesenerplatte. 72°02' S, 5°10' E. A platform on the SW side of Hamarskorvene Bluff, in the Mühlig-Hofmann Mountains of Queen Maud Land. Named by the Germans. *See also* Lösener.

Mount Loewe. 70°32' S, 67°43' E. A mountain with a rounded top, rising to 1130 m above sea level from the plateau surface of the Loewe Massif, it is the most northerly of the Amery Peaks, 10 km NE of Mount Seaton, in the eastern Aramis Range, in the Prince Charles Mountains. Discovered by Bill Bewsher's ANARE Southern Party of 1956. Named by ANCA on Feb. 15, 1958, for Fritz Loewe. US-ACAN accepted the name in 1962.

Loewe, Fritz Philipp. b. March 11, 1895, Schöneberg, Berlin, son of judge Eugen Loewe and his wife Hedwig Makower. In 1909, on a climbing expedition in the Alps, he began a lifelong interest in glaciology. In World War I he served in the German Army, as a radio operator, rising to corporal, and winning the Iron Cross First Class. He became a teacher, and then a meteorologist. On Sept. 3, 1927, in Berlin, he married Else Koester. In the late 1920s and early 1930s he was in the Arctic with Alfred Wegener and Ernst Sorge, and during a wintering-over in 1930-31 he got frostbite, then gangrene, and some of his toes had to come off. A victim of anti-Jewish Nazi Germany, he lived at Cambridge, 1934-37, as a meteorologist with the

Scott Polar Research Institute, and in 1937 emigrated to Australia, in 1939 establishing the meteorology department at the University of Melbourne. He became an Australian citizen in 1944. He was a member of the 1947–48 ANARE party to Heard Island on the *Wyatt Earp*, and was with the French Polar Expeditions to Antarctica of 1950–51 and 1951–52, the latter as an observer at Port-Martin during the winter-over of 1951. In the late 1950s he studied glaciers in Pakistan. He died on March 27, 1974, at Heidelberg, Melbourne. *See also* **Plateau Fritz Loewe** (under **F**).

Loewe Automatic Weather Station *see* **AO28**

Loewe Massif. 70°34' S, 68°00' E. A large rock massif in the E part of the Aramis Range, in the Prince Charles Mountains. The surface of the massif is largely an undulating plateau, from which Mount Loewe and the Medvecky Peaks rise. The plateau is at an average elevation of 1000 m above sea level, and 600 m above the ice on its N flank. Discovered by Bill Bewsher's ANARE party of 1956, and named by ANCA on May 18, 1971, in association with Mount Loewe. US-ACAN accepted the name in 1973.

Loewenstein Peak. 77°18' S, 161°08' E. An ice-free peak rising to 1539 m, 1.2 km (the New Zealanders say 5 km) NE of Vashka Crag, at the W end of a line of peaks that mark the divide in the eastern Cruzen Range, in Victoria Land. Named by US-ACAN in 2005, for Robert F. Loewenstein, of the Yerkes Observatory, and later with the department of physics and astronomy at Northwestern University, in Illinois, a member of the USAP astrophysical research team at Pole Station for 13 seasons between 1991 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Lofgren, Charles Eric "Charlie." b. Sept. 27, 1893, Malden, Mass., son of Swedish immigrant parents, baker Alexander Lofgren and his wife Anna. He left school to work as a book keeper in a belt shop, in Everett, Mass., then went to Washington, DC, and got into advertising, working in the art department of an electrical company. He married Una J. Hawthorne, a girl from a Tennessee family, and they would live in the nation's capital. He joined the U.S. Naval Reserve, served under Byrd in Washington, 1917–18 and 1922–28, and retired after 16 years as a chief petty officer, becoming a member of the Fleet Reserve Association. He was personnel officer and member of the shore party of ByrdAE 1928–30. He was a commander in the USNR. He died on Nov. 26, 1971, in Washington, D.C., and was buried in Arlington National Cemetery.

Lofgren Peninsula. 72°08' S, 96°00' W. An ice-covered peninsula, about 35 km long, it projects between Cadwalader Inlet and Morgan Inlet, on the NE side of Thurston Island. Discovered on helicopter flights from the *Glacier* and the *Burton Island* during the USN Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN later in 1960, for Charles Lofgren.

Loftus Glacier. 77°33' S, 162°46' E. A small valley glacier at the E side of Mount Weyant, between that mountain and Mount McLennan, and flowing N to join Newall Glacier, in Victoria Land. Named by US-ACAN in 1964 for chief journalist Leo G. Loftus (b. 1923. d. April 4, 2008, Kiarnock, Va), USN, who was at McMurdo every summer from 1959 to 1964. NZ-APC accepted the name.

Lofty Promenade. 77°31' S, 168°52' E. An inclined glacial course, 11 km long and 1.5 km wide, in the E part of Ross Island, it is partly framed between the S elements of the Kyle Hills and Guardrail Ridge, as it descends ESE from 2600 m near Mount Terror to 200 m near Allen Rocks. The glacial surface is relatively smooth and affords an unobstructed route between the area of Cape Crozier and Mount Terror. So named by US-ACAN on Oct. 27, 2000 because it is similar to a public place where one takes leisurely walks. NZ-APC accepted the name on Feb. 20, 2001.

Logan, Bernard *see* **USEE 1838–42**

Loggie, Charles. b. ca. 1755, in Plymouth, son of Scottish naval captain James Loggie. As a child he cut his head badly, and had to be trepanned, although this did not stop him joining the Navy. He transferred from the *Nautilus* to the *Resolution* on Jan. 7, 1772, as an able seaman for Cook's 2nd voyage, 1772–75, and, for a brief while, kept a diary. He had a wild streak, did Loggie, brought on by the trepanning in his youth, no doubt, and not mitigated at all by the sheer quantity of grog he consumed, and on Jan. 6, 1773 was sent before the mast for arguing with the boatswain. On Jan. 2, 1774 he pulled a knife and cut up a couple of midshipmen. For this he got a dozen lashes. On March 18, 1775 he and fellow tipplers Coghlan and Maxwell went into the galley, knives drawn, looking for the cook. On another drunken occasion he started yelling at Captain Cook himself who, sympathizing, took more than he normally would have, but finally had to have young Loggie chained up. On another occasion Loggie attempted to stab said Maxwell, and for this was flogged and sent before the mast. He somehow survived the voyage, and even more surprisingly made lieutenant in 1776. On Sept. 15, 1776, in Gosport, he married Elizabeth Hewett, and they went to live in Stoke Damerel, in Devon, and then in Alverstoke, Hants, having a couple of children along the way. While serving on the *Marion* in 1782, Loggie got drunk again, and struck the captain, who challenged him to a duel. That was the end of Loggie.

Logie Glacier. 85°18' S, 175°20' W. A tributary glacier, about 16 km long and 3 km wide (the New Zealanders say 24 by 6 km), flowing W through (and surrounded on both sides by) the Cumulus Hills, to enter the E side of the Shackleton Glacier just NE of Vickers Nunatak. Named by the Southern Party of NZGSAE 1961–62, for William Raymond "Ray" Logie (b. 1933, Invercargill, NZ), field mechanic and maintenance officer who wintered-over at Scott Base in 1961, and who was deputy leader there in 1962–63. He was seconded to USARP, and worked on Roosevelt Island that season. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Loïcq de Lobel Islands *see* **Lobel Islands**

Mount Loke. 77°29' S, 162°33' E. A horn-shaped peak immediately E of the most easterly alpine glacier on the S wall of Wright Valley, between Goodspeed Glacier and Denton Glacier, in the Asgard Range of Victoria Land. Named by VUWAE 1958–59, for the Norse god. NZ-APC accepted the name, and US-ACAN followed suit in 1972.

Lokehellene *see* **Lokehellene Cliffs**

Lokehellene Cliffs. 71°56' S, 8°47' E. Steep rock cliffs forming the W side of Nupsskarvet Mountain, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Lokehellene (i.e., "the Loke slopes"). Loke is the name given by the Norwegians to the old Norse god the English-speaking world normally refers to as Loki. Sigyn was his wife. US-ACAN accepted the name Lokehellene Cliffs in 1967.

Løken Moraines. 66°17' S, 110°37' E. A line of N-S trending moraines, about 11 km long, between 0.8 and 3 km inland from the Windmill Islands, just E of the bases of Clark Peninsula, Bailey Peninsula, and Mitchell Peninsula, along the Budd Coast. First mapped from air photos taken by OpHJ 1946–47 and OpW 1947–48. Rephotographed aerially by ANARE in 1956, and by SovAE 1956. Named by Carl Eklund for Olav Helge Løken (b. 1931, Norway), glaciologist at Wilkes Station in 1957. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Lokey Peak. 71°50' S, 64°06' W. A small, sharp peak, or nunatak, at the SE extremity of the Guthridge Nunataks, in the Gutenko Mountains of central Palmer Land. Named by US-ACAN in 1976, for William M. "Bill" Lokey, Holmes & Narver manager of Palmer Station for the winter of 1975. He had previously wintered-over at McMurdo in 1970 and 1974. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Ostrov Lokot' *see* **Lokot' Island**

Lokot' Island. 68°51' S, 77°53' E. An island, with an elevation reaching 27 m, 3 km NNE of the northernmost point of Torckler Island, in the Rauer Islands. Charted by SovAE 1956, and named by the Russians as Ostrov Lokot'. ANCA accepted the translated name on March 7, 1991.

Cape Lola *see* **Point Lola**

Cerro Lola *see* **Mount Lola**

Monte Lola *see* **Mount Lola**

Mount Lola. 60°44' S, 44°43' W. Rising to 170 m, it surmounts Point Lola at the NE side of the entrance to Uruguay Cove, on the N coast of Laurie Island, in the South Orkneys. Charted (but not named) by ScotNAE 1902–04. Surveyed in 1915 by Ignacio Espíndola (q.v.) and again in early 1930 by Ángel Rodríguez (q.v.), it appears as Cerro Lola, on the 1930 Argentine chart drawn up by Don Ángel. It was re-surveyed by

the Discovery Investigations in 1933, and appears on their 1934 chart as Mount Lola. That was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. The Argentine gazetteer of 1970 accepted the name Cerro Lola, but, today, the Argentines tend to call it Monte Lola. Who was Lola?

Point Lola. 60°44' S, 44°43' W. Forms the E side of the entrance to Uruguay Cove, on the N coast of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce as Russ Point, for Russ, one of his Siberian sledge dogs. It appears as such on their 1906 chart of the expedition. Surveyed in 1915 by Ignacio Espíndola (q.v.), and again in early 1930 by Ángel Rodríguez (q.v.), it appears as Punta Lola on the 1930 Argentine chart drawn up by Capt. Rodríguez, named in association with the mountain. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Point Lola. On a 1943 U.S. Hydrographic Office chart it appears as Cape Lola. UK-APC accepted the name Lola Point on Sept. 8, 1953, and US-ACAN followed suit that year. it appears as such in the 1955 British gazettteer. However, on July 7, 1959, UK-APC renamed it Point Lola, and US-ACAN followed suit in 1963. The Argentine gazetteer of 1970 accepted the name Punta Lola.

Punta Lola *see* **Point Lola**

Lola Automatic Weather Station. 74°08' S, 163°26' E. An Italian AWS at Sarao Point, in the middle of the Tourmaline Plateau, in the Deep Freeze Range of Victoria Land, installed in Jan. 1990, at an elevation of 1620.92 m.

Lola Point *see* **Point Lola**

Vrah Lom *see* **Lom Peak**

Lom Peak. 62°43' S, 60°16' W. Rising to 870 m in Friesland Ridge, 1 km NW of St. Methodius Peak, and 930 m NNE of Tervel Peak, it overlooks Ruen Icefall to the N, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians in 1995-96, and named by them on March 15, 2002, for the town of Lom, in Bulgaria.

Punta Loma. 62°16' S, 58°59' W. A point on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Argentines.

Lomas Ridge. 64°22' S, 57°35' W. A ridge, trending NNW-SSE for 3 km long, midway between Jefford Point and Tortoise Hill, in the SE part of James Ross Island. Named by UK-APC on Dec. 11, 1995, for Simon Andrew Lomas (b. 1965), BAS geologist, a member of the field party in this area, 1994-95. He did not winter-over. US-ACAN accepted the name in 1996.

Lombán, Luis Alberto *see* **Órcadas Station**, 1947

Mount Lombard. 64°28' S, 59°38' W. Rising to about 560 m, it is the highest peak dominating the mountain mass whose S extremity is Cape Sobral, on the Nordenskjöld Coast, on the E coast of Graham Land. Mapped by FIDS cartographers from surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Alvin Orlando Lombard (1856-1937), U.S. tractor pioneer. US-ACAN accepted the name later in 1964.

Lombardi, Lucio Eduardo *see* **Órcadas Station**, 1945 and 1947

Monte Lomo *see* **Jabet Peak**

Lomonosov Mountains. 71°31' S, 15°20' E. A somewhat isolated chain of small mountains, extending for about 28 km in a NE-SW direction, between Mushketov Glacier and Entuziasty Glacier, about 30 km E of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by them as Gory Lomonosova, for scientist and poet Mikhail Vasil'yevich Lomonosov (1711-1765). US-ACAN accepted the name Lomonosov Mountains in 1970. The Norwegians call them Lomonosovfjellet (which means the same thing).

Gory Lomonosova *see* **Lomonosov Mountains**

Lomonosovfjella *see* **Lomonosov Mountains**

Lonclas, Elzéard-Alfred. b. April 23, 1824, Toulon. He was 13 when he went on the *Astrolabe* as an apprentice seaman during FrAE 1837-40. On April 23, 1839 he became a junior seaman.

Roca Lone *see* [1]**Lone Rock**, **Lonely Rock**

[1]**Lone Rock**. 62°20' S, 58°50' W. An isolated rock, awash, 2.5 km S of Duthoit Point (the E end of Nelson Island), in the South Shetlands. Charted and named descriptively by personnel on the *Discovery II* in 1935. It appears on their 1937 chart, and also on British charts of 1942 and 1948, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1949 as Roca Lone, one of of their 1953 charts translated as Roca Sola, and on one of their 1954 charts translated in error as Roca Laine. On one of their 1957 charts it appears as Roca Solitaria, and that name was accepted both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

[2]**Lone Rock** *see* **Lonely Rock**

Lonely One Nunatak. 71°12' S, 161°18' E. An eroded rock outcrop rising above the relatively featureless ice in the stream of the Rennick Glacier, at the W side of the confluence of that glacier and Gressitt Glacier, about 26 km NW of the Morozumi Range. So named by the Northern Party of NZGSAE 1963-64 because of its relative isolation. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Lonely Rock. 64°06' S, 57°03' W. A rock, about 45 m long, and rising to an elevation of about 7 m above sea level, 6 km N of Cape Gage, and E of Ula Point, James Ross Island, on the W margin of Erebus and Terror Gulf. Surveyed and charted by Fids from Base D in Sept. 1945, and named by them as Lone Rock, for its small size and completely isolated position. It appears as such on a 1949 British chart, and that was the name accepted by US-ACAN and UK-APC. It appears as such in the 1955 British gazetteer. On a 1954 Argentine chart it appears as Roca Lone. On Feb. 12, 1964, UK-APC changed the name somewhat in order to avoid confusion with Lone Rock (see above). US-ACAN accepted the new name later in 1964. The Argentines today call it Roca Solitaria (which means the same thing). It appears on a 1971 Chilean chart as Rocas Solitarias, but the 1974 Chilean gazetteer accepted the name Roca Solitaria. However, when they found out that was also the Argentine name, they changed it back to the plural form, regardless of the inaccuracy of it all.

Lonewolf Nunataks. 81°20' S, 152°50' E. A group of isolated nunataks, 40 km NW of the Wilhoite Nunataks, at the S side of Byrd Névé, about 95 km W of Mount Albert Markham. Discovered by NZGSAE 1960-61, and named by them for their isolation. The 5 principal features in this group — Erina Nunatak, Grae Cliff, Quet Nunatak, Tiger Nunatak, and Za Za Bluff — were all named for NZARP dogs in this area in 1959-60. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Long, Andrew K. He joined the U.S. Navy, and on Jan. 1, 1818 became a midshipman. On March 3, 1827 he was promoted to lieutenant, and was commander of the *Relief* during USEE 1838-42. On Oct. 12, 1844 he was promoted to commander, and was placed on the reserve list on Sept. 13, 1855, being promoted to captain the following day. He retired on Oct. 1, 1864, and died on Oct. 6, 1866.

Long, Jack Becker. b. Feb. 5, 1936, Contra Costa, Calif., son of high school teacher Fred E. Long and his wife Meda Becker. A mechanic by trade, he was an experienced Sno-Cat driver when he learned of the upcoming IGY through his brother Bill (*see* **Long Hills**), and applied for OpDF III. After a month in Christchurch, NZ, he left for McMurdo in Oct. 1957, and then on to Little America, traveling on a Neptune airplane, and from Little America on to Byrd Station, where he began the Marie Byrd Land Traverse Party of 1957-58, led by Charlie Bentley. His job was to keep all the mechanical equipment running. He wintered-over in 1958, at Byrd Station, and was on the Horlick Mountains Traverse, of 1958-59 (his brother Bill was also on that expedition). In 1959 he returned to the USA, and was involved in preparing larger vehicles for use on the Polar Plateau. He was back in Antarctica in 1959-60, as a member of the Ross Ice Shelf Survey Traverse, and also took part in the one-month-long Discovery Deep Traverse. He wintered-over at McMurdo in 1960, building the garage facilities there, and in 1960-61 took part in the McMurdo to Pole Traverse, with Bert Crary (q.v. for details). In Feb. 1961 he returned to the USA, and on July 31, 1961, in Contra Costa, married Valerie Oppenheim Dike.

Later that year he returned to Antarctica, and oversaw the transition from manual engines to automatic, and in 1962-63 was a member of the Queen Maud Land I Traverse. He planned the logistics for (but did not go on) the University of Wisconsin's Queen Maud Land Traverse II, III, and IV (1964-65, 1965-66, and 1967-68), but he was in Antarctica all those seasons. After that, and having by now acquired his degree in mechanical engineering, he went to work at the Lawrence Livermore Lab, in Livermore, Calif. In 1975 he retired, went into the business of prefabricated metal building, and in 1981 went into property management, in Livermore.

Long, Pierre-Sébastien. b. March 6, 1809, Le Bausset, France. Pilot on the *Astrolabe* during FrAE 1837-40.

Long Bluff. 72°32' S, 96°46' W. A conspicuous rock bluff on the W side of Long Glacier, in the SE part of Thurston Island. Named by US-ACAN in 2003, for W.A. Long, USN, chief pharmacist's mate in the Eastern Group, during OpHJ 1946-47. Assigned to the Jan. 11, 1947 search flight commanded by Lt. (jg) James L. Ball, Long was the first to sight the wreck of the *George I* on Noville Peninsula, which led to the rescue of the survivors.

Long-finned pilot whale. Order: Cetacea (whales); sub-order: Odontoceti (toothed whales); family: Delphinidae (dolphins). *Globicephala malaena* is one of the pilot whales, and the only one found in Antarctic waters. Formerly rarely seen, it is now the third most visible whale south of 60°S. It grows to 20 feet and weighs 3 tons. It has a square, bulbous head, and a distinct, sickle-shaped dorsal fin. It is also called the blackfish.

Long Fjord *see* **Langnes Fjord**

Long Gables. 78°11' S, 86°14' W. Also called Mount Long Gables. Prominent twin peaks (4150 m and 4110 m), joined by a col, and rising from the main ridge of the Sentinel Range, between Mount Anderson and Mount Viets, in the Ellsworth Mountains. The lower rock exposures are in the form of steep buttresses. Discovered by the Marie Byrd Land Traverse Party of 1957-58 under Charles R. Bentley, and named by him for Jack B. Long (q.v.), a member of the party. US-ACAN accepted the name in 1960. The mountain was first climbed on Jan. 12, 1967.

Mount Long Gables *see* **Long Gables**

Long Glacier. 72°30' S, 96°43' W. About 13 km long, in the SE part of Thurston Island, it flows S into the Abbot Ice Shelf 22 km W of Harrison Nunatak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Fred A. Long, Jr., USN, VX-6 aviation machinist who wintered-over at Little America in 1957, and elsewhere in Antarctica in the summer seasons of 1960-61 and 1962-63.

Long Hills. 85°18' S, 118°45' W. A group of hills and rock outcroppings, about 10 km in extent, midway between the Wisconsin Range and the Ohio Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for William Ellis "Bill" Long (b. Aug. 18, 1930, Velva, near Minot, ND; brother of Jack B. Long), world class mountain climber and geologist. He replaced Vern Anderson on the Marie Byrd Land Traverse of 1957-58 (his brother Jack was on that one), and was back in Antarctica again in 1958-59, again with Jack, on the Horlick Mountains Traverse. He was also a member of the Ohio State University expedition to the Horlick Mountains in 1960-61 and 1961-62, and on the expedition to the Nilsen Plateau in 1963-64. It was Bill Long who found the defining geology linking Antarctica with Gondwanaland. In 1966 he was a member of the first team ever to climb Mount Vinson.

Long Island. 63°46' S, 58°12' W. An island, 5 km long in a NE-SW direction, and 0.8 km wide, opposite the mouth of Russell East Glacier, and 3 km S of Trinity Peninsula, on the NW side of Prince Gustav Channel. It was not mapped by SwedAE 1901-04, during the original survey of the Prince Gustav Channel in 1903. Discovered, surveyed, charted, and named descriptively by Fids from Base D in Aug. 1945. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a 1951 Chilean chart as Isla Larga (i.e., "long island"), and on a 1953 Argentine chart as Isla Long. Photographed aerially by FIDASE in 1956-57, and further surveyed from the ground by Fids from Base D in 1959-60. It appears on a Chilean chart of 1962 as Isla Larga, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The Argentines built General Pedernera Refugio here in 1966.

[1]**Long Lake**. 62°12' S, 58°58' W. A narrow lake, about 150 m long, near the head of Hydrographers Cove, Fildes Peninsula, King George Island, in the South Shetlands. This lake was surveyed from 1968, by personnel from Bellingshausen Station, and named descriptively by them as Ozero Dlinnoe. It appears as such in a 1973 report by L.S. Govorukha and I.M. Simonov. On Feb. 7, 1978, UK-APC accepted the translated name Long Lake, rather than say, Lake Dlinnoye, in order to avoid confusion with Dlinnoye Lake in the Schirmacher Hills. US-ACAN accepted the name. This feature is not to be confused with the other Long Lake (see below).

[2]**Long Lake**. 67°01' S, 142°40' E. A long, thin lake, slightly curved in shape, between Round Lake and Alga Lake, at Cape Denison. Named descriptively by Mawson during AAE 1911-14, it appears on the expedition's maps. ANCA accepted the name on March 7, 1991.

Long Peak. 78°44' S, 83°54' W. A bare rock peak rising to about 1200 m on the extended ridge line 11 km ENE of Mount Landolt, in the SE part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1985, for James W. Long, NSF physician and consultant on Antarctic health matters for 10 years.

Long Peninsula *see* **Langnes Peninsula**

Long Ridge. 75°51' S, 69°12' W. About 6 km long, trending N-S, and rising to about 1180 m above sea level at the N end, N of Srite Glacier, and W of Mount Leek, in the Hauberg Mountains, in southern Palmer Land. First visited by a USGS expedition in 1977-78. Named descriptively by UK-APC on Jan. 20, 2007.

[1]**Long Rock**. 62°41' S, 61°12' W. A large, linear rock, rising to an elevation of 2 m above sea level, on the N side of Morton Strait, 3 km N of the E end of Snow Island, and SSW of Devils Point (which is on Livingston Island), in the South Shetlands. Surveyed and named descriptively by personnel on the *Discovery II* who charted the intricate passage between Snow Island and Livingston Island in 1930-31, it appears on their chart of 1933. It appears, translated, as Roca Larga, on a Chilean chart of 1947, and that was the name accepted by the 1974 Chilean gazetteer. UK-APC accepted the name Long Rock on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. On an Argentine chart of 1953 it appears as Rocas Larga (which doesn't seem to make much sense grammatically), and, apparently, that was the name accepted by the 1970 Argentine gazetteer. However, today, the Argentines use the form Rocas Largas. Last plotted by the UK, in late 2008.

[2]**Long Rock**. 66°27' S, 98°30' E. An elongated area of exposed rock, about 2.5 km SE of Cape Charcot, on Melba Peninsula, in Queen Mary Land. Named by Mawson during AAE 1911-14. ANCA accepted the name on March 7, 1991.

Long Sound *see* **Lang Sound**

Long Valley. 86°13' S, 147°48' W. An ice-filled valley, 10 km long, extending NW from Mount Blackburn as far as Griffith Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Walter H. Long, Jr., USN, VX-6 photographer on OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Punta Longavi *see* **Cape Mascart**

Mount Longburst *see* **Mount Longhurst**

Longhorn Spurs. 84°36' S, 174°45' W. A high ridge, 20 km long, extending N from the Prince Olav Mountains, between Massam Glacier and Barrett Glacier, to the edge of the Ross Ice Shelf. A series of rock spurs extends from the W side. Visited by the Texas Tech Shackleton Glacier expedition of 1964-65, and so named by them for the resemblance of the spurs to the horns of longhorn cattle. US-ACAN accepted the name in 1966.

Mount Longhurst. 79°26' S, 157°18' E. A prominent mountain, rising to 2845 m (the Australians say about 2350 m), W of Mill Mountain, it forms the highest point of Festive Plateau, in the Cook Mountains (the Australians say in the Britannia Range), on the W side of the Ross Ice Shelf. Discovered during BNAE 1901-04, and named by Scott for Cyril Longhurst (1879-1948), secretary of the expedition. It is occasionally (and erroneously, yet amusingly) seen as Mount Long-

burst. Due to this error, the name Mount Longburst is in the process of being perpetuated.

Longhurst Plateau. 79°23' S, 156°20' E. A narrow, snow-covered extension of the Polar Plateau, just W of Mount Longhurst, it rises to 2200 m above sea level, is between 30 and km long, and between 9 and 16 km wide, and is bounded on the S by the upper Darwin Glacier, and on the E by McCleary Glacier. Traversed by the Darwin Glacier Party of BCTAE in 1957-58, and named by them as Longhurst Tongue, in association with the nearby mountain. US-ACAN accepted the name Longhurst Plateau in 1968.

Longhurst Tongue *see* **Longhurst Plateau**

Cabo Longing *see* **Cape Longing**

Cape Longing. 64°33' S, 58°50' W. A rocky cape on the E coast of Graham Land, it forms the S end of the large, ice-covered promontory called Longing Peninsula, which marks the W side of the S entrance to Prince Gustav Channel, and divides Trinity Peninsula from the Nordenskjöld Coast. Discovered and mapped in 1902 by SwedAE 1901-04. When Nordenskjöld looked out of his winter hut on Snow Hill Island, this feature lay in the direction of his "land of longing," i.e., the land he wanted to explore, and so he called it Längstans Udde, which was later translated direct into English. It appears on a British chart of 1921, as Cape Longing. In Aug. 1945, Fids from Base D surveyed it, and thought it to be separated from the mainland by an ice-filled channel at Longing Gap, but Fids from Base D, in Nov. 1947, found it to be joined to the mainland by a low col. Cape Longing was the name accepted by US-ACAN in 1947, and by UK-APC on Jan. 22, 1951. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. The Argentines have been calling it Cabo Longing since at least 1908, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, a 1969 Argentine chart has it as Cabo Deseo, and that name came in handy when the Argentines found that the Chileans had duplicated their name. They (the Argentines) then changed their name to Cabo Deseo.

Longing Col *see* **Longing Gap**

Longing Gap. 64°25' S, 58°57' W. A low isthmus (the British describe it as an ice-covered col), 3 km wide, it forms a constriction in the promontory N of Cape Longing, between that cape and Trinity Peninsula and the Nordenskjöld Coast, in Graham Land. It is used to avoid the long detour around the cape, in association with which it was named Longing Col by FIDS before 1957 (it appears on one of their maps of that year). In 1960 the Argentines built Ameghino Refugio here. Surveyed by Fids from Base D in 1960-61. UK-APC accepted the name Longing Gap on Feb. 12, 1964, and US-ACAN followed suit that year.

Longing Peninsula. 64°30' S, 58°50' W. A peninsula, 14 km long, terminating in its S end at Cape Longing, at the NE extremity of the Nordenskjöld Coast, where it (this peninsula) separates the Larsen Ice Shelf from the Prince Gustav Ice Shelf, on the NE coast of the Antarctic Peninsula. Longing Gap marks the N end of the peninsula. Discovered and roughly charted by SwedAE 1901-04, who named it Cape Longing. BAS did geological work here in 1987-88. Named Longing Peninsula by UK-APC on May 13, 1991, in association with the cape and the gap. US-ACAN accepted the name.

Longley, William S. *see* **USEE 1838-42**

Longmen Zui. 62°12' S, 58°56' W. A spur on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Longquan Hu *see* **Lake Scandrett**

Longridge Head. 67°28' S, 67°40' W. A headland which forms the NW entrance point of Whistling Bay, on Arrowsmith Peninsula, it also marks the S end of a small coastal ridge which extends 5 km northward along the Loubet Coast, on the W coast of Graham Land. Discovered in 1909 by FrAE 1908-10, who roughly charted this area. Surveyed in Sept. 1948 by Fids from Base E, and named descriptively by them. It appears on Ray Adie's chart of 1954. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957.

Longs Nunatak. 66°28' S, 110°43' E. A coastal nunatak, about 1.75 km NW of Campbell Nunatak, it faces on Penney Bay (it is on the E side of that bay), at the S end of the Windmill Islands. First mapped in 1955 from air photos taken by OpHJ 1946-47. Re-photographed aerially in 1956 by ANARE and by SovAE 1956. Sighted by Carl Eklund in 1957, and named by him for Robert L. Long, Jr., ionosphere physicist at Wilkes Station in 1957. US-ACAN accepted the name in 1960. Photographed aerially yet again by ANARE in 1965, and included in an ANARE triangulation by Alan McLaren that year. ANCA accepted the name on March 23, 1967.

Mount Longstaff *see* **Longstaff Peaks**

Longstaff Peaks. 82°54' S, 165°42' E. A series of high peaks just W of Davidson Glacier, in the north-central part of the Holland Range. Discovered during BNAE 1901-04, and named by them as Mount Longstaff, for Col. Llewellyn Wood Longstaff (1841-1918), the main backer (to the tune of £25,000) of the expedition. NZ-APC later re-defined the feature, and US-ACAN accepted that change in 1966.

Longtan Hu. 69°23' S, 76°15' E. A lake in the Larsemann Hills. Named by the Chinese.

Longwire Station *see* **Byrd VLF Substation**

Longxiu Gou. 69°33' S, 76°22' E. A gully in the Larsemann Hills. Named by the Chinese.

Longyan Jiao. 69°23' S, 76°07' E. A reef in the Larsemann Hills. Named by the Chinese.

Longyan Shan. 69°23' S, 76°18' E. A hill in the Larsemann Hills. Named by the Chinese.

Longyang Xia. 69°23' S, 76°20' E. A strait in the Larsemann Hills. Named by the Chinese.

Lonneker, George. Taken on as a last minute replacement at Stewart Island, NZ, on Bull's *Antarctic* Expedition of 1893-95.

Mont Loodts *see* **Mount Loodts**

Mount Loodts. 72°32' S, 31°11' E. Rising to 2420 m, immediately E of Mount Lorette, in the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Mont Loodts, for Jacques Loodts, geodesist with the expedition. US-ACAN accepted the name Mount Loodts in 1962.

Lookalike Peaks. 63°56' S, 57°58' W. Two flat-topped peaks at the northernmost limit of Stickle Ridge, 2 km SW of Smellie Peak, on James Ross Island. So named by UK-APC on Nov. 15, 2006, because the two peaks have almost identical symmetrical profiles and gross geology.

The Lookout. 68°36' S, 77°57' E. A hill, rising to 90 m, 0.8 km from the coast, it is the highest summit on the W end of Breidnes Peninsula, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers. First visited by ANARE parties from Davis Station in 1957. Named descriptively by ANCA on Aug. 11, 1958. US-ACAN accepted the name in 1961.

Cabo Lookout *see* **Cape Lookout**

Cape Lookout. 61°17' S, 55°12' W. Also called Cabo Vigía. A steep bluff, rising to 240 m (the Chileans say 230 m) above sea level, marking the SE extremity of Elephant Island, in the South Shetlands. Charted by Powell in 1821-22, and named by him for its good location as a lookout spot. It appears on his chart published in 1822. On the 1838 chart drawn up by FrAE 1837-40 it appears as Cap Lookout, yet in Vincendon-Dumoulin's 1847 atlas it appears as Pointe Lookout. It is shown as Cape Lookout on a British chart of 1839, but on Frank Wild's 1923 chart it appears as Cape Look-out. It is Cape Lookout on a 1940 British chart. On a Chilean chart of 1947, it appears as Cabo Lookout, and that name was accepted by the 1974 Chilean gazetteer. US-ACAN accepted the name Cape Lookout in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1953 Argentine chart it appears fully translated as Cabo Vigilante, but on one of their 1958 charts it appears as Cabo Fossatti. The name Cabo Vigilante was the one accepted by the 1970 Argentine gazetteer. Last plotted by the UK, in late 2008.

Pointe Lookout *see* **Cape Lookout**

Lookout Dome. 83°03' S, 156°27' E. An ice-covered, dome-shaped elevation, rising to 2470 m, in the N part of the Miller Range. Probably the highest point in the area, it affords extensive views over the head of the Nimrod Glacier. Discovered by the Northern Party of NZGSAE 1961-62, used by them as a survey station, and named by them for its strategic position. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1966.

Lookout Islands. 68°45' S, 77°52' E. A group of 3 small islands and associated rocks in the Rauer Islands. From here periodic watch was kept on the ice fronting Sørsdal Glacier, in preparation for the July 1983 traverse from the Rauers to Davis Station by a field party from the Frozen Sea Expedition. The successful crossing of the sea ice in front of the glacier was only

possible through repeated surveillance from these islands. Named by ANCA.

Lookout Lake. 68°36' S, 77°57' E. A small lake, 0.8 km NNE of The Lookout, in the W part of Breidnes Peninsula, in the Vestfold Hills. First visited by ANARE parties from Davis Station in 1957. Named by ANCA in association with The Lookout. US-ACAN accepted the name in 1965.

Lookout Nunatak. 72°23' S, 163°54' E. A nunatak, in the middle of an icefall overlooking Gallipoli Heights, 11 km SE of Monte Cassino, in the Freyberg Mountains of Victoria Land. So named by NZARP geologist P.J. Oliver because the nunatak served as a lookout on the initial visit to the area in the 1981–82 season. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Looming *see* **Mirages**

Loomis, Raymond Wesley. b. April 10, 1925, Los Angeles. He joined the U.S. Navy, and served in World War II, after which he went to the Naval Academy at Annapolis, graduating in 1949. As a lieutenant (jg) he served in Korea, and was Seabee in charge of construction at Hallet Station in 1956–57. He served in Vietnam, and retired as a captain, dying in Trabuco Canyon, Calif., on June 25, 1999.

Mount Lopatin. 72°51' S, 168°04' E. Rising to 2670 m, 10 km ESE of Mount Riddolls, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Boris Lopatin, Soviet exchange scientist at McMurdo, 1968.

Loper, Richard Fanning. b. Feb. 3, 1800, Stonington, Conn. He was a ship's master at the incredible age of 15, commanding the schooner *Nancy Cobb* between 1817 and 1819. He was 2nd mate on the *Hero* during the 1820–21 voyage to Antarctica as part of the first Fanning-Pendleton Sealing Expedition. Immediately after the expedition, he settled in Philadelphia, and began a packet ship trade between that city and Hartford, Conn. In 1826 he married Nat Palmer's niece, Margaret Mercer Baird, and, in 1840, after skippering several ships, he became a famous inventor, shipbuilder, and wealthy yacht racer. He died in Brooklyn, on Nov. 8, 1880, and is buried in a family plot at St. Paul's Episcopal Church, 3rd Street, Philadelphia. His widow died in 1898.

Loper Channel. 61°23' S, 55°23' W. A marine channel running E-W between Elephant Island and Gibbs Island, in the South Shetlands. Named for Richard Fanning Loper. The name was originally given to the passage between Elephant Island and King George Island, and appears that way on a 1940 British chart, and also on a 1943 U.S. Hydrographic Office chart. On Nov. 6, 1980, UK-APC restricted the name to the present feature. One has also seen the names Loper Sea Channel, and Loper Strait, and on a 1977 Argentine chart it appears as Pasaje Espíritu Santo, named for the *Espíritu Santo*. Plotted by the UK, in late 2008.

Loper Sea Channel *see* **Loper Channel**

Loper Strait *see* **Loper Channel**

Cerro López *see* **López Nunatak**

Islotes López *see* **Moss Islands**

Monte López *see* **Doumer Hill, Stokes Hill**

Mount Lopez. 72°01' S, 101°41' W. In the Walker Mountains, 8 km E of Landfall Peak, in the W part of Thurston Island. Delineated from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1960, for Maxwell A. Lopez. Originally plotted in 72°01' S, 101°53' W, it has since been replotted.

Picacho(s) López *see* **López Nunatak**

[1]**Punta López**. 61°06' S, 53°57' W. A point at the NE extremity of Cape Lloyd, on Clarence Island, in the South Shetlands. Named by ChilAE 1975–76, for Admiral Raúl López Silva, who gave the orders for the expedition. The Chileans accepted the name in 1977.

[2]**Punta López** *see* **Ferrer Point**

[3]**Punta López** *see* **Punta Pallero**

Lopez, Maxwell Albert. b. 1926, Brooklyn, son of Maximo Lopez and his English wife Clarice G. Elson. He was an ensign, a pilot/navigator in the U.S. Naval Reserve, and was living in Newport, R.I, when he sailed to Antarctica on the *Pine Island*, and was killed on Dec. 30, 1946, in the Martin Mariner crash during OpHJ, which killed 2 others as well (*see* **Deaths**, 1946).

Bahía López de Bertodano *see* **Bertodano Bay**

López de Bertodano, Juan. b. Dec. 31, 1871, Argentina. Engineer 1st class, he was chief engineer on the *Uruguay* in 1903, during the rescue of SwedAE 1901–04. He died on Sept. 14, 1932. *See* **Bertodano Bay**.

López Nunatak. 62°29' S, 59°39' W. A steep-sided, granitic nunatak rising to 275 m (the British say 255 m), 1.3 km SE of Ash Point, on Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946–47, and named by them as Picacho Correa. It appears as such on their 1947 chart. It appears on 1951 Chilean chart as Picachos Teniente López, named for 1st Lt. Sergio López Angulo, communications officer on the *Iquique* during that 1946–47 expedition, but on a 1961 Chilean chart the name had been abbreviated to Picachos López. However, on a 1962 Chilean chart it appears as Cerro López, and on one of their 1963 charts as Picacho López, that last being the one accepted by the 1974 Chilean gazetteer. There is a 1964 reference to it as López Peak. In 1964 it was further charted by an RN Hydrographic Survey unit on the *Protector*. The name Lopez Nunatak (i.e., without the accent) appears in the 1965 British gazetteer, and on a British chart of 1968. The accent mark was accepted by UK-APC on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears as such in the 1974 and 1986 British gazetteers. *See also* **Ferrer Point**. Note: Beware the British gazetteer, which gives the latitudinal coordinates erroneously as 62°59' S.

López Peak *see* **López Nunatak**

Loppa. 72°33' S, 20°00' E. A small nunatak S of Lussa, and E of the upper part of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians ("the flea").

Lopyan Crag. 63°42' S, 58°23' W. A narrow, rocky hill extending 1.7 km in a NW-SE direction and rising to 583 m in Erul Heights, 1.98 km SE of Gigen Peak, 2.27 km SW of Coburg Peak, 2.22 km NW of Huma Nunatak, 2.64 km NE of Siniger Nunatak, and 3.63 km E of Roman Knoll, it surmounts Russell East Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Lopyan, in western Bulgaria.

Cap Loqui *see* **Cape García**

Punta Loqui *see* **Loqui Point**

Loqui Point. 65°55' S, 64°58' W. Marks the S side of the entrance to Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1903–05, and named by Charcot as Cap García, after Rear Admiral García of the Argentine Navy (*see* **Cape García**). The N cape of Barilari Bay he named Cap Loqui, for Capitán de fragata Esteban de Loqui of the Argentine Navy. All that appears on Charcot's 1906 map. However, the maps of Charcot's next expedition, FrAE 1908–10, show Cap García to be the northern one. The southern one (the one he had originally called Cap García) was left unnamed on the 1908–10 map. In order to continue Charcot's naming, the name of the southern cape has now been given as Loqui Point, because Cap García has been accepted all these years as the name for the northern cape. This is a good example of a phenomenon of name-changing which happens not infrequently in Antarctica. UK-APC accepted the name Loqui Point on Sept. 22, 1954, and US-ACAN followed suit in 1956. It appears as such on a 1957 British chart. Photographed aerially by FIDASE in 1956–57. The name Punta Loqui appears on a 1962 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer. Don Esteban (b. 1857) was governor of Tierra del Fuego, and assisted Charcot in Jan. 1904. He was later the Argentine consul in El Salvador.

Lord, Ronald Alexander "Ron." b. Feb. 12, 1932, Southampton. He joined the RAF, and was a flight lieutenant when he wintered-over as a FIDS pilot at Base B in 1960 and 1961. Still a flight lieutenant in 1965, when he won the DFC for his work in Borneo as commander of 225 Helicopter Squadron, at RAF Kuching. After that he was posted to RAF Ternhill, in Shropshire, and died in Exeter in Feb. 1992.

Lord Bank. 67°50' S, 69°15' W. A submarine bank, with a least depth of 18 m, WSW of the entrance to Quest Channel, off Adelaide Island. Surveyed from the *Endurance* in Jan. 1980. It appears on a British chart of 1981, named for Capt. James Trevor Lord (b. 1933), RN, skipper of the *Endurance*, 1978–80. UK-APC accepted the name on Dec. 9, 1981, and US-ACAN followed suit.

Lord Glacier. 75°12' S, 138°41' W. About 10 km long, it flows from Coulter Heights to Hull Bay, on the coast of Marie Byrd Land. Named by US-ACAN in 2003, for Neal E. Lord, geophysicist at the University of Wisconsin, whose research focused on theoretical and field analysis

of the ice stream area of West Antarctica from the late 1980s on.

The *Lord Melville*. A 210-ton London sealing snow, owned by Messrs Clark & Wright, merchants. On Sept. 19, 1820, she sailed out of Gravesend, Kent, under the command of the Clark part (Capt. John Clark), bound for the South Shetlands and the 1820-21 season. After taking 10,000 fur seal skins and 25 tons of elephant seal oil, the vessel was wrecked in the early part of 1821, and the chief officer and 10 of the crew were forced to winter-over in 1821 on King George Island.

Lord Nunatak. 80°21' S, 24°01' W. A nunatak, rising to about 1075 m, 2.5 km SW of Baines Nunatak, midway between the Herbert Mountains (to the W) and the Pioneers Escarpment (to the E), in the Shackleton Range. Photographed aerially by USN in 1967, survyed from the ground by BAS personnel from Halley Bay Station, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Canadian explorer, William Barry Lord, Royal Artillery, co-author (with Thomas Baines) of *Shifts and Expedients of Camp Life, Travel and Exploration* (London, 1871). US-ACAN accepted the name.

Loren Nunataks. 83°36' S, 53°52' W. A line of low nunataks, rising to about 1640 m, 5 km E of Rivas Peaks, between the Median Snowfield and the Torbert Escarpment, in the Neptune Range of the Pensacola Mountains. In 1963-64 they were surveyed from the ground by USGS, and photographed aerially that same season by USN, being mapped by USGS from these efforts. Named by US-ACAN in 1968, for Loren Brown, Jr., aviation machinist who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Lorentzen, Bjarne. b. April 10, 1900, Aalesund, Norway, son of telegraph manager Birger Lorentzen and his wife Lenchen Smith. Cook who arrived in Antarctica on the *Norsel* on Jan. 6, 1951, to replace John Snarby, on NBSAE 1949-52. He died in Lødingen, Norway.

Lorentzen Peak. 71°45' S, 2°50' W. A peak, 8 km S of Vesleskarvet Cliff, on the NW side of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Lorentzenpiggen, for Bjarne Lorentzen. US-ACAN accepted the translated name Lorentzen Peak in 1962.

Lorentzenpiggen *see* **Lorentzen Peak**

Mount Lorette. 72°32' S, 31°09' E. An ice-free mountain, rising to 2200 m, close W of Mount Loodts, in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by leader Gaston de Gerlache as Mont Notre-Dame de Lorette, for the patron saint of aviators, Notre Dame de Lorette, partly because it looks like a cathedral in shape. The name, also seen as Mont N.-D. de Lorette, was shortened and translated to Mount Lorette by US-ACAN in 1965.

Mount Lorius. 72°28' S, 162°21' E. Rising to 1690 m, 4 km N of Mount Allison, in the Monument Nunataks, S of the head of Rennick Glacier. Mapped by the U.S. Victoria Land Traverse Party of 1959-60. Named by US-ACAN in 1964, for Claude Lorius. NZ-APC accepted the name.

Lorius, Claude. French glaciologist. b. Feb. 25, 1932, Besançon, France. In 1955 he answered an ad looking for people to go south, and, after a stint in Greenland, he wintered over at Charcot Station in 1957. He was a member of the U.S. Victoria Land Traverse Party of 1959-60. He led the French Polar Expedition of 1964-66, and was at Vostok Station for the winter of 1984.

Rocas Lorn *see* **Lorn Rocks**

Lorn Rocks. 65°31' S, 64°56' W. A group of rocks, 20 km W of the N end of Lahille Island, in the Biscoe Islands, on the W side of Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from 1956-57 aerial photographs taken by FIDASE. So named by UK-APC on July 7, 1959 because they are small, forlorn, and deserted. They appear on a 1961 British chart. US-ACAN accepted the name in 1971. They appear on a 1962 Chilean chart as Rocas Lorn, and that was the name accepted by the 1974 Chilean gazetteer.

Lake Lorna. 67°47' S, 62°47' E. Also known as Lorna Lake. A small meltwater lake, between Fearn Hill and Mount Ward, in the North Masson Range of Mac. Robertson Land. Discovered by a 1956 ANARE party led by John Béchervaise, and named by ANCA after his wife Lorna Fearn (*see also* **Fearn Hill**).

Lorna Lake *see* **Lake Lorna**

Lorne Automatic Weather Station. 78°15' S, 170°00' E. An American AWS on the Ross Ice Shelf, at an elevation of 46 m, installed in Jan. 2007, and name for the father-in-law of AWS scientist George Weidner. It was raised on Nov. 4, 2008.

Lorten *see* **Cleft Island**, **Lichen Island**

The *Los Angeles*. One of the two Lockheed Vega planes taken by Wilkins on his expedition of 1928-30.

Cerro Los Bucles *see* **Fidase Peak**

Los Dientes *see* **Les Dents** (under **L**)

Agujas Los Dientes *see* **Les Dents** (under **L**)

Los Pozos *see* **Montes Aguayo**

Nunataks Los Pozos *see* **Montes Aguayo**

Islotes Los Provincianos *see* **Yoke Island**

Punta Losardo. 71°52' S, 61°10' W. A point, W of Cape Hattersley-Smith, on the Black Coast, on the E coast of the Antarctic Peninsula. Named by the Argentines for Humberto Francisco Losardo, a cabo mayor who was killed in Tierra del Fuego in the Avro Lincoln B019 coming back from Antarctica on March 22, 1950.

Lose Platte *see* **Loze Mountain**

Lösener, Kurt. Flight mechanic for the *Boreas* during GermAE 1938-39. *See* **Loesenerplatte**.

Lednik Loshkina *see* **Styles Glacier**

Lost Seal Stream. 77°36' S, 163°14' E. A glacial meltwater stream, about 2.2 km long, draining from the W margin of Commonwealth Glacier into the NE end of Lake Fryxell, in the Taylor Valley, in Victoria Land. Named by Diane McKnight, leader of a USGS team that studied the hydrology of streams flowing into Lake Fryxell in several seasons between 1987 and 1994. The name commemorates an encounter with a living Weddell seal that wandered into the area N of Lake Fryxell in Nov. 1990, then entered the camp area, and had to be evacuated by helicopter to New Harbor. A mummified seal is prominent at the mouth of the stream. US-ACAN accepted the name in 1992.

Lost Valley. 64°02' S, 58°24' W. A valley, running NNE-SSW, to the N of Gin Cove, and W of Patalamon Mesa, on James Ross Island. BAS did geological work here between 1981 and 1983. Named by UK-APC on April 3, 1984, in association with Hidden Lake to the east. It appears in the 1986 British gazetteer. US-ACAN accepted the name.

Puerto Lote *see* **Lagarrigue Cove**

Lotzegletscher. 70°45' S, 162°51' E. A glacier in the Explorers Range, in Victoria Land. Named by the Germans.

Cape (de) Loubat *see* **Loubat Point**

Pointe de Loubat *see* **Loubat Point**

Punta Loubat *see* **Loubat Point**

Loubat Point. 65°04' S, 63°56' W. Forms the NE side of the entrance to Deloncle Bay, on the Graham Coast, on the W coast of Graham Land. Probably discovered in Feb. 1898, by BelgAE 1897-99. Charted by FrAE 1903-05, and named by Charcot as Pointe de Loubat, for Joseph Florimond Loubat (1831-1927), American philanthropist created Duc de Loubat by the Pope in 1893 for his contributions to the church. Much of his work was done in his adopted home, Paris. It appears as such on Charcot's maps of 1906 and 1908. Further charted in 1935-36, by BGLE 1934-37. It appears on a 1943 U.S. Hydrographic Office chart as Cape de Loubat. UK-APC accepted the name Loubat Point on Sep. 22, 1954, and US-ACAN followed suit in 1955 (after rejecting the proposed Cape Loubat). It appears as such in the 1956 American gazetteer, and also on a British chart of 1958. Photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1962 as Punta Loubat, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Costa Loubet *see* **Loubet Coast**

Terre Loubet *see* **Loubet Coast**

Loubet Coast. 67°00' S, 66°00' W. Between Cape Bellue and the head of Bourgeois Fjord, on the W coast of Graham Land. Explored and roughly charted in Jan. 1905 by FrAE 1903-05. It was further charted by FrAE 1908-10, and named by Charcot as Terre Loubet (i.e., "Loubet land"), for Émile-François Loubet (1839-1929), the president of France, 1899-1906, and a patron of Charcot's first expedition. Charcot applied the name to the mainland coast E of Adelaide Island, but with its N and S limits undefined. On Shackleton's 1919 map, and on a British chart of 1930, the name appears as Loubet Coast, with its limits undefined. Further charted in 1935-36,

by BGLE 1934-37. It appears on a 1942 USAAF chart as Loubert Coast (a misspelling that is very easy to make), on a 1946 Argentine chart as Costa Loubet, and on a Chilean chart of 1947 as Costa de Loubet. The names Tierra Loubet and Tierra de Loubet have also been seen. US-ACAN accepted the name Loubet Coast in 1947, with the limits we know today, and UK-APC followed suit on Nov. 21, 1949. It appears as such on a British chart of 1951, and in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57. The British Base W was here. The British plot this feature in 67°00' S, 67°00' W, and the Chileans (whose 1974 gazetteer accepted the name Costa Loubet) in 66°55' S, 66°16' W.

Loubet Land *see* **Loubet Coast**

Loubet Strait *see* **The Gullet**

Loudon, William McLelland. b. NZ. Boilerman on the *Jacob Ruppert* during the 2nd half of ByrdAE 1933-35. He kept a diary.

Loudwater Cove. 64°46' S, 64°05' W. A small, west-facing cove, 0.8 km long, immediately NE of Norsel Point, it is the southernmost indentation in Wylie Bay, on the SW coast of Anvers Island, in the Palmer Archipelago. Surveyed in 1955 by Fids from Base N, who named it for the thundering noise the water makes as it comes into this cove from the sea. UK-APC accepted the name on Sep. 4, 1957, and it appears on a 1958 British chart. US-ACAN followed suit with the naming in 1963.

Louis Glacier *see* **Rubble Glacier**

Mount Louis McHenry Howe *see* **Mount Howe**

Louis Philippe Coast *see* **Trinity Peninsula**

Louis Philippe Land *see* **Trinity Peninsula**

Louis Philippe Peninsula *see* **Trinity Peninsula**

Louis Philippe Plateau. 63°37' S, 58°27' W. A plateau, rising to about 1370 m above sea level and occupying the central part of Trinity Peninsula, it is 8 km wide, and runs in a NE-SW direction for 17.5 km long from Windy Gap to Russell West Glacier. Surveyed by Fids from Base D between 1945 and 1947. Named by UK-APC on Nov. 21, 1949, in order to preserve Dumont d'Urville's 1838 naming of Trinity Peninsula as Terre Louis Philippe, a name which did not stick. Louis-Philippe of France (1773-1850), King of France, 1830-48, was the honoree. It appears in the 1955 British gazetteer, and also on a 1962 British chart. US-ACAN accepted the name in 1964. The British hyphenate Louis-Philippe, but the Americans don't. ChilAE 1947-48 named the SW part of this feature as Meseta de Ingenieros (i.e., "engineers plateau"). The NE part they named Meseta Teniente de Aviación Toro Mazote, for Carlos Toro Mazote (q.v. under **T**). The whole plateau was photographed aerially by FIDASE in 1956-57. Since 1978 the feature has been called Cordón Angustia (i.e., "anguish chain") by the Argentines, for "the state of mind of the Argentine expedition to the South Pole"). Today, the Chileans call the whole feature Cordón Puga, for Federico Puga Borne (*see* **Croker Passage**, and **Punta Spring Refugio**).

The *Louise*. A 449-ton bark, built in 1852 in St. John's, New Brunswick, and owned by How & Co., of Bristol, England. On Aug. 9, 1859, she left Melbourne, bound for Guam, under the command of Capt. Edwin Keates. During that voyage she found herself in (or, at least, very, very close to) Antarctic waters, and on Sept. 4 of that year, Keates claimed to have seen an island in 59°21' S, 119°07' W, that may have been Dougherty Island (q.v.). Capt. Hassett took command of the *Louise* after this expedition.

Île Louise *see* **Louise Island**

Îlot Louise *see* **Louise Island**

Isla Louise *see* **Louise Island**

Monte Louise *see* **Louise Peak**

Mount Louise *see* **Louise Peak**

Pic Louise *see* **Louise Peak**

Sommet Louise *see* **Louise Peak**

Louise Island. 64°36' S, 62°23' W. An ice-covered island, about 1 km long and about 0.5 km wide, 1.5 km E of Cape Anna, between that cape and Emma Island, in the SW side of the entrance to Wilhelmina Bay, along the Danco Coast, on the W coast of Graham Land. Discovered on Jan. 29-30, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Louise, for his sister. The name also appears on the expedition charts as Îlot Louise, and on Dr. Frederick Cook's 1900 English language version of the maps, it appears as Louise Island. Lester and Bagshawe, while amending Capt. Johannessen's 1919-20 chart during their British Imperial Antarctic Expedition of 1920-22, amended this island a little further than they should have, calling it Emma Island. It appears on a 1949 Argentine chart as Isla Louise, but on one of their 1953 charts it appears as Isla Luisa, a name accepted by the 1970 Argentine gazetteer. It was recharted by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Louise Islet on Sept. 4, 1957, but on July 7, 1959 changed that to Louise Island, a name accepted by US-ACAN in 1963. The Chilean gazetteeer of 1974 accepted the name Isla Louise.

Louise Islet *see* **Louise Island**

Louise Peak. 65°05' S, 64°00' W. Rising to 625 m, 1.5 km N of Gourdon Peak, on Booth Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1904, by FrAE 1903-05, and named by Charcot as Pic Louise, for the sister of Ernest Gourdon. It appears as such on Charcot's 1906 map. However, it appears on his 1908 map as Sommet Louise. It appears by error as Mount Sainte Louise on a 1930 British chart, and the French, who should have definitely known better, translated this on one of their 1937 charts as Mont Sainte-Louise. It appears as Louise Peak on a 1943 U.S. Hydrographic Office chart, but the name accepted by UK-APC on Sept. 20, 1955, was Mount Louise, and US-ACAN followed suit in 1956. On an Argentine chart of 1953 it appears as Pico Luisa, and that was the name accepted by the Argentine gazetteer of 1970. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team between 1956 and 1958. On July 7, 1959, UK-APC renamed it Louise Peak, and US-ACAN followed suit in 1960. On a Chilean chart of 1962 it appears as Monte Louise, and that was the name accepted by the 1974 Chilean gazetteer. It appears as Louise Peak in the 1974 British gazetteer.

Lovegrove, Ian William. b. April 15, 1945, Wallasey, Cheshire, son of John W. Lovegrove and his wife Ellen Blyth. He spent 30 months at Rothera Station as a BAS polar guide and general assistant, wintering-over in 1982 and 1983, and then a further 35 months as base commander at various stations (Rothera, 1983-84, and Halley Bay, 1984-89, when they were rebuilding). He was nearly 10 years with BAS, and then went into education.

Lovegrove Point. 60°41' S, 45°39' W. The N entrance point of Express Cove, on the W side of Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, for Ian Lovegrove. US-ACAN accepted the name.

Lovegrovebreen. 75°01' S, 12°25' W. A glacier between Juckeskammen and Flisegga, in the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Geoffrey William "Geoff" Lovegrove, BAS surveyor who wintered-over at Halley Bay Station in 1965 and 1966.

Lovejoy Glacier. 70°48' S, 160°10' E. A broad glacier flowing ENE through the Usarp Mountains, along the E side of Sample Nunataks, between those nunataks and Anderson Pyramid, in the Usarp Mountains. In its lower course it runs side by side with the larger Harlin Glacier to the S, without a ridge separating them, and then they both flow E into the Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. Owen B. Lovejoy, VX-6 R4D co-pilot who supported USGS's Topo East survey in 1962-63. He was back in 1963-64. NZ-APC and ANCA both accepted the name.

Lovell Glacier. 72°00' S, 69°30' W. Flows SW from the Dione Nunataks into Stravinsky Inlet, in the S part of Alexander Island. Named by UK-APC on April 12, 2010, for Sir Alfred Charles Bernard Lovell (b. 1913), radio astronomer, director of the Joddrell Bank Observatory, at the University of Manchester, 1945-80. At the time of writing (Oct. 2010), Sir Bernard was still alive.

Lovering Island. 69°22' S, 76°21' E. A small, round island about 3.7 km NW of Law-Racovitza Station, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for John F. Lovering, vice chancellor of Flinders University, and chairman of the Antarctic Science Advisory Committee (ASAC), from its inception in 1985 until 1990.

Lovill Bluff. 73°22' S, 126°54' W. A rock and snow coastal bluff at the W end of Siple Island, off the coast of Marie Byrd Land, 22 km SW of the summit of Mount Siple, it marks the N side of the entrance to Pankratz Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-

ACAN in 1966, for James E. Lovill, meteorologist-in-charge at Byrd Station in 1965.

Lovísolo, José C. *see* **Órcadas Station**, 1935

Kar Lovushka. 70°52' S, 67°40' E. A pass on the W side of McLaren Ridge, at the head of Battye Glacier, in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Isla Low *see* **Low Island**

Low, Andrew. Brother of William Low. A Scottish sealing captain, he commanded the *Adeona* in the Falkland Islands and the South Shetlands during the 1822-23 season. He remained skipper of the *Adeona* until 1832. In the 1820s, he was involved in the settlement of the Falkland Islands. He also bought the *Dart*, and sent her to the Falklands under William Low and other skippers. However, other sources say the *Dart* was bought by L. Low, and that Andrew was appointed skipper on Sept. 8, 1823, leaving Gravesend on Sept. 13, bound for the South Seas.

Low, David. b. 1859, Peterhead. Ordinary seaman on the *Scotia*, during ScotNAE 1902-04. He lived in Dundee.

Low, F.G. Captain of the Boston sealer *Esther*, 1820-21. There is reason to believe his name may actually have been Edward.

Low, William. Scottish sealing captain, brother of Andrew Low. In Aug. 1823, he and his brother Andrew bought the *Dart* from Francis and Thomas Duell, and on Sept. 8, 1823 William was appointed the *Dart*'s skipper. He took the vessel down to the South Seas for the 1823-24 season (it is not certain that he went to the South Shetlands that season). He was involved in the settlement of the Falkland Islands, in the 1820s. For over 30 years he was involved in sealing and whaling in South America, and developed the most intimate knowledge of the waters. He died in Chiloé. Darwin met him, and said that he "strikingly resembled the old buccaneers."

Low Cliff. 77°37' S, 166°27' E. A low cliff in North Bay, Ross Island. Descriptively named by BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Low Head. 62°09' S, 58°08' W. A headland 1.5 km SSW of Lions Rump (the W side of the entrance to King George Bay, on King George Island), between that feature and Martins Head, in the South Shetlands. Surveyed by personnel on the *Discovery II* in 1937, and named descriptively by them as Cape Low Head. It appears on their chart of that year, and on a 1938 British chart. On a Chilean chart of 1947 it appears translated as Cabo Cabeza Baja, and on a 1949 Argentine chart it appears as Cabo Low Head. On an Argentine chart of 1953 it appears as Cabo Promontorio Bajo, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. UK-APC accepted the name Cape Low Head on Sept. 20, 1955, and US-ACAN followed suit in 1956. On a 1960 U.S. Hydrographic Office chart it appears by error as Martins Head. On Sept. 23, 1960, UK-APC shortened the name to Low Head, and US-ACAN followed suit later that year. Don Hawkes mapped it as such in 1961, and it appears on a 1962 British chart.

Cape Low Head *see* **Low Head**

Low Island. 63°19' S, 62°07' W. An island, 14 km long and 8 km wide, it lies 22 km SE of Smith Island, and is the most southwesterly of the main islands in the South Shetlands. It appears as Low Island in Capt. John Davis's log of Jan. 31, 1821, named for its low elevation (some say it might have been named for Capt. Edward Low, the sealer—*see* **Low, F.G.**). Landings were made on the island on Feb. 2, 1821, by both Capt. Davis and Capt. Burdick, and the name appears in Burdick's log of Feb. 15, 1821, and on Powell's chart of 1822. On Weddell's chart, published in 1825, it appears as Jamesons Island (one does not know who or what Jameson was; *see* **Jameson Point**). On Powell's 1828 chart it appears as "Jameson's or Low Island." The position of the island was determined by Foster from a position E of Cape Possession and from Deception Island, in Jan.-March 1829, during the *Chanticleer* Expedition of 1828-31, and appears on his (and Kendall's) 1829 chart as "Jameson Island or Low Island." It appears in Biscoe's log of March 5, 1832, and on a British chart of 1839. Although there was an Argentine tendency to translate it as Isla Baja, it appears as Isla Low on a 1908 Argentine map. On Charcot's map of 1912 (reflecting FrAE 1908-10), it appears as Île Jameson, but on Bograin's 1914 map of the same expedition, it appears as "Île Jameson ou Low." It was re-surveyed by the Discovery Investigations in 1930-31, and appears as Low Island on their 1931 and 1933 charts. On a 1943 U.S. Hydrographic Office chart it appears as "Low Island (Jameson Island)," and consequently on an Argentine chart of 1946 as "Isla Low (Jameson)." US-ACAN accepted the name Low Island in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. It was photographed aerially by FIDASE in 1956. There is a 1948 Chilean reference to it as Isla Jerónimo de Alderete, named after Gerónimo de Alderete (*see* **Aagaard Glacier**), but the Chilean gazetteer of 1974 accepted the name Isla Low. On an Argentine chart of 1953 it has been translated as Isla Baja, and that was the name accepted by the 1970 Argentine gazetteer (they therefore made the decision that it was not named for Capt. Low). Originally plotted in 63°17' S, 62°09' W, it was re-plotted by the UK, in late 2008.

Low Lake. 67°01' S, 142°41' E. The largest and lowest lake at Cape Denison, it lies in a depression between the 2 ridges at the ends of which are Beryl Hill to the W and Petrel Hill to the E. The descriptive name appears on maps prepared by AAE 1911-14, and was named by Mawson. ANCA accepted the name on March 7, 1991.

Low Nunakol *see* **Low Nunatak**

Low Nunatak. 77°07' S, 162°14' E. A nunatak, about 1.5 km long, rising to about 450 m above sea level (rising to about 50 m above the surrounding ice surface), in the Cotton Glacier, 3 km N of the W end of Killer Ridge, between (on the one hand) Mackay Glacier and Mount Suess, and (on the other) the Gonville and Caius Range, in Victoria Land. Formerly called Low Nunakol, that descriptive name appearing on the map produced by BAE 1910-13. US-ACAN accepted the name Low Nunatak on Jan. 15, 2008, and NZ-APC followed suit.

Low Point *see* **Monroe Point**

[1]**Low Rock**. 62°17' S, 58°38' W. A low rock surrounded by foul ground, and rising to an elevation of 3 m above sea level, 1.5 km SW of Stranger Point (the S extremity of King George Island) in the South Shetlands. An unnamed rock in essentially this position was charted by David Ferguson in 1913-14. It appears on his 1918 chart, and is probably this rock. More accurately charted, and descriptively named, by personnel on the *Discovery II* in 1935 and 1937. It appears on a 1947 Chilean chart translated as Roca Baja, on a 1948 Argentine chart of 1948 as Roca Low, and (misspelled) on an Argentine chart of 1954, as Roca Law. UK-APC accepted the name Low Rock on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer, and on a 1962 British chart. It appears on a Chilean chart of 1962 as Rocas Bajas, but it was the name Roca Baja that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

[2]**Low Rock** *see* **Hetty Rock**

[3]**Low Rock**. 71°12' S, 67°12' E. Named by the Russians. However, this seems like an odd name coming from the Russians, unless it is a translation of a Russian name that eludes this author. With these coordinates as given in the SCAR gazetteer, this feature would be located on the W side of Mount Lanyon, in the Prince Charles Mountains.

Low Summit. 77°40' S, 166°44' E. The S portion of Turks Head, on the W side of Ross Island. Named by Frank Debenham during his plane table survey in 1912, during BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Low Tongue. 67°33' S, 62°00' E. A tongue of rock about 165 m long and about 12 m high, projecting from the icy coast of Mac. Robertson Land, just W of Holme Bay, and about 44 km W of Mawson Station. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Lagøtangen. First visited by ANARE western parties in 1954-55. On Aug. 20, 1957, ANCA translated it directly into English, and US-ACAN accepted that name in 1965.

Lowd, Wilfred H. b. Sept. 30, 1900, Worcester, Mass., son of carpenter turned pattern maker Curtis Lowd and his wife Abbie. He trained as a carpenter. He married Marion G. Dunning, and in 1930 they were living in Brooklyn, where he was working as an assistant foreman with the Edison Company. He joined the U.S. Navy and was an able seaman and carpenter on the *Jacob Ruppert* during both halves of ByrdAE 1933-35.

During World War II, he was a construction mechanic 1st class in the U.S. Navy. He died on Jan. 7, 1973, in Magnolia Springs, Alabama.

Mount Lowe. 80°33' S, 30°16' W. A mountain with 2 peaks, the higher rising to 990 m (the British say 910 m), on the S side of the mouth of Blaiklock Glacier, it is the westernmost peak in the Shackleton Range. First surveyed and mapped in Oct. 1957, by BCTAE 1956-58, and named by them for George Lowe. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Lowe, Charles *see* **USEE 1838-42**

Lowe, Harold Phillip. Leader at Vanda Station in 1970. He was back in Antarctica with NZARP in 1972-73.

Lowe, Wallace George. Known as George. b. 1924, Hastings, NZ, son of Arch Lowe. Educated at Marlborough, he was a mechanical engineer in the Royal Engineers during World War II. In 1945 he became a teacher, then a mountain climber. His tramping club in Hastings included Jo Goymour (*see* **Jefford, Brian**). In 1951-52 he went on his first Himalayan expedition, with Ed Hillary, got his MA at Cambridge in 1952, and was part of the support party that got to within 1000 feet of the summit of Everest during the most famous mountain climb of all time, the 1953 expedition that propelled Hillary to an acme of fame. He went into development engineering, met Fuchs in 1954, and was invited to be the NZ photographer and *Times* correspondent who crossed the continent with Fuchs in 1957-58 during BCTAE. He was involved in the movie *The Crossing of Antarctica*, and lectured widely in the UK and Europe. He helped Hillary write a couple of books, and from 1959 to 1963 taught at Repton, in Derbyshire, also going on Himalayan and other expeditions. On Sept. 8, 1962, at Henley-on-Thames, he married Susan Hunt, Sir John Hunt's 2nd daughter. From 1963 to 1973 he taught at, and was headmaster of, Grange School, in Santiago, Chile, and then returned to England to be a school inspector for outdoor activities, until 1984. In 1989 he and others set up the Sir Edmund Hillary Himalayan Trust UK, and in 1998 he was awarded the OBE. His second wife was Mary.

Lowe Bluff. 85°58' S, 137°12' W. A high, ice-covered bluff between Alaska Canyon and the head of Kansas Glacier, along the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for William G. Lowe, radioman who wintered-over at Byrd Station in 1957.

Lowe Glacier. 82°58' S, 160°25' E. A tributary glacier, 11 km long, in the Queen Elizabeth Range, it flows S from a saddle common with Prince of Wales Glacier, about 6.4 km E of Mount Gregory, and joins Princess Anne Glacier. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, and named by them for David Reginald Cecil Lowe (b. Auckland), field assistant with the McMurdo Ice Shelf Project, and a member of the party. He also wintered-over at Scott Base in 1965. In 1965-66 he was leader of the Northern Party to Campbell Glacier, and in 1966-67 was 2nd-in-command at Scott Base. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name, on Aug. 10, 1966.

Lowe Nunataks. 72°13' S, 98°56' W. A cluster of low peaks, or nunataks, 2.5 km SE of Mount Borgeson, in the Walker Mountains of Thurston Island. Named by US-ACAN in 2003, for Photographer's Mate W.L. Lowe, air crewman in the Eastern Group of OpHJ 1946-47, which obtained aerial photos of this area.

Lowe Peak. 81°40' S, 161°22' E. Rising to 1060 m, 5 km S of Mount Kolp, at the NW end of the Nash Range. Named by NZ-APC on Feb. 27, 2003, for Peter Allan Lowe, who wintered-over at Hallett Station in 1961, as a technician on the geomagnetic project. US-ACAN accepted the name later in 2003.

Lowell, James *see* **USEE 1838-42**

Monte Lowell Thomas *see* **Thomas Mountains**

Mount Lowell Thomas *see* **Thomas Mountains**

Lowell Thomas Mountains *see* **Thomas Mountains**

Lower Fang *see* **The Fang** (under **F**)

Lower Ferrar Glacier *see* **Ferrar Glacier**

Lower Jaw Glacier. 78°22' S, 162°57' E. The east-flowing southern branch of the glacier on the E side of the ridge that runs N from the peak they call Shark Fin, in the Royal Society Range of southern Victoria Land. Upper Jaw Glacier runs into it, and then the two coalesced branches run into Renegar Glacier, which, in turn, flows into Koettlitz Glacier. Named by NZ-APC in 1980. The name was accepted by US-ACAN in 1994. *See* **Upper Jaw Glacier** for why these two glaciers are so named.

Lower Miers Stream. 78°07' S, 164°09' E. Flows from Lake Miers to the Koettlitz Glacier, in Victoria Land. Named by NZ-APC on Dec. 1, 1993, in association with nearby Miers Glacier.

Lower Staircase. 78°25' S, 161°45' E. The lower, eastern portion of Skelton Glacier, between The Landing and Clinker Bluff, in Victoria Land. Surveyed and named descriptively in 1957, by the NZ party of BCTAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Lower Victoria Glacier *see* **Victoria Lower Glacier**

Lower Wright Glacier *see* **Wright Lower Glacier**

Lower Wright Refuge. 77°26' S, 162°37' E. A refuge hut established by the New Zealanders in Nov. 1971, to the west of Wright Lower Glacier, in Wright Valley, Victoria Land.

Lowery Glacier. 82°35' S, 163°15' E. About 100 km (the New Zealanders say 60 km) long, it flows N from the Bowden Névé (at the Prince Andrew Plateau), being fed by icefalls and tributary glaciers from that névé, along the E side of the Queen Elizabeth Range (being enclosed by that range and the coastal mountains of the Ross Ice Shelf, and also receiving flow from icefalls and tributary glaciers from that range and those coastal mountains), to enter the Nimrod Glacier 30 km E of Cape Lyttelton. Named by the NZ Geographical and Topographical Survey of 1959-60, for James H. "Jim" Lowery, a member of one of the field parties on this expedition, who was severely and permanently injured when a Snocat fell through a crevasse off Cape Selborne in Nov. 1959. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Lowest points in Antarctica. The Bentley Subglacial Trench is 8326 feet (2538 m) below sea level, which is also the lowest point on Earth not covered by seawater (although it is covered in ice). The deepest lake is Radok Lake, at a depth of 1335 feet. The lowest accessible point in Antarctica is Deep Lake, in the Vestfold Hills, about 50 m below sea level.

Mount Loweth. 73°27' S, 93°33' W. Also called Mount Hogan. A snow-topped mountain rising to 1420 m, with a steep rock cliff on the NE side, 10 km ENE of Anderson Dome, in the E end of the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61. Named by US-ACAN in 1963, for Hugh F. Loweth, U.S. government officer with the Office of Management and Budget, who, for many years, helped formulate U.S. Antarctic policy. He retired on July 1, 1986, after 40 years of government service.

Mount Lowman. 70°39' S, 160°03' E. Rising to 1610 m, on the E central slopes of the Pomerantz Tableland, 3 km SE of Rinehart Peak, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Henry R. Lowman III, USARP biologist at McMurdo, 1967-68.

Mount Lowry. 84°33' S, 64°09' W. Rising to 1020 m, 4 km NW of Wrigley Bluffs, in the Anderson Hills, in the northern Patuxent Range of the Pensacola Mountains. Surveyed by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for James K. Lowry, USARP biologist from the Virginia Institute of Marine Science, who wintered-over at Palmer Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Lowry Bluff. 74°22' S, 163°19' E. Rising to 1070 m, it forms the E extremity of Nash Ridge, in the Eisenhower Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for George Lowry, biologist at Palmer Station, 1965-66.

Lowry Massif. 80°37' S, 158°12' E. A compact block of ridgelines, about 5 km long, without a prominent culminating summit, rising to about 1800 m on the S side of Byrd Glacier, and 5 km SSW of Mount Tuatara. A section of Shackleton Limestone was measured here by USAP geologist Ed Stump, on Nov. 21, 2000. Named by US-ACAN in 2003, for Patrick H. Lowry, a member of Stump's Arizona State Uni-

versity field parties of 1977–78 and 1978–79, the latter season in the area of the Byrd Glacier. NZ-APC accepted the name on Feb. 27, 2003.

Loyd, John *see* **USEE 1838–42**

Loyd, William *see* **USEE 1838–42**

Løyndeknatten *see* **Shinobi Rock**

Gora Loze *see* **Loze Mountain**

Loze Mountain. 71°37' S, 11°17' E. Rising to 2130 m, it surmounts the W wall of Grautskåla Cirque, in the NW part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and first plotted from these photos. Remapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition. Remapped again by SovAE 1960–61, and named by the USSR in 1960–61 as Gora Loze, in order to preserve Ritscher's naming of Lose Platte (i.e., "loose plateau") for an area near here which nowadays cannot be determined. US-ACAN accepted the name Loze Mountain in 1970. The Norwegians call it Lausflaeet.

Mount Lozen. 72°07' S, 168°24' E. Rising to 2460 m, at the NW side of the head of Tocci Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Michael R. Lozen (b. March 1945), USN, radioman at McMurdo in 1967.

Lozen Nunatak. 62°39' S, 60°08' W. Rising to 440 m, in the upper Huron Glacier, 1.5 km SE of Kuzman Knoll and 900 m NE of Zograf Peak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004–05, and named by them on April 11, 2005, for Lozen Monastery of St. Spas, in western Bulgaria.

Lozen Saddle. 62°39' S, 60°08' W. A saddle, at an elevation of 437 m, between Lozen Nunatak and Zograf Peak, on Livingston Island. It provides overland access from the area of Wörner Gap to Shipka Valley. Mapped by the Bulgarians during their Tangra survey of 2004–05, and named by them on April 11, 2005, in association with the nunatak.

Lu Shan. 62°14' S, 58°58' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Luansheng Dao *see* **Twin Island**

Mount Lubbock. 73°13' S, 169°08' E. A high coastal peak, rising to 1630 m, immediately N of Cape Jones, and eastward of Mount Phillips, at the S end of Daniell Peninsula, in Victoria Land. Discovered in Jan. 1841 by Ross, who named it for barrister, astronomer, and great mathematician Sir John Lubbock, 3rd Bart. (1803–1865), of the banking house of Lubbock, treasurer and vice president of the Royal Society, 1830–35 and 1838–45, and, at roughly the same period of time, first vice chancellor of the University of London. US-ACAN accepted the name in 1951, and NZ-APC followed suit.

Lubbock Ridge. 84°50' S, 175°25' W. A high ridge, trending for about 8 km long in an E-W direction, it extends W from Mount Wade, and terminates in a steep bluff at the E side of Shackleton Glacier, between Cathedral Peaks and Taylor Nunatak. Named by Al Wade (q.v.), leader of the Texas Tech Shackleton Glacier Party of 1962–63, for Lubbock, Texas, the home of Texas Tech, to which all 3 members of the party were affiliated. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Lucas, James. An apprentice with the Marine Society, he went to the South Shetlands aboard the *Susanna Ann*, during that vessel's second trip, 1824–25. His father, James Lucas, owned the vessel.

Lucas Island. 68°30' S, 77°57' E. A small island, just W of the Vestfold Hills, 3 km NW of Plog Island. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Plogsteinen (i.e., "the plow stone"). Remapped by ANARE in 1958, and named by ANCA on Aug. 11, 1958, for William Charles "Bill" Lucas (b. July 29, 1928), diesel mechanic who was the among the first group of winterers at Davis Station, in 1957. US-ACAN accepted the name in 1965.

Lucas Nunatak. 67°48' S, 62°11' E. An isolated nunatak, about 1.8 km S of Woodberry Nunataks, and about 6 km S of the main massif of the Casey Range, in the Framnes Mountains. Photographed aerially by LCE 1936–37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Visited by an ANARE party led by Ian Landon-Smith, in April 1962. Named by ANCA for mountain climber Frederick Michael "Mike" Lucas (b. Feb. 5, 1924. d. Nov. 10, 2006), ex-RN lieutenant commander, and officer-in-charge at Mawson Station in 1962. US-ACAN accepted the name in 1965.

Lucchitta Glacier. 74°24' S, 99°56' W. A glacier, about 30 km long, flowing S from the Hudson Mountains into Pine Island Bay. Named by US-ACAN in 2003, for Baerbel Koesters Lucchitta (b. Oct. 2, 1938, Münster), USGS geomorphologist and planetary geologist, one of the first women in the field of astrogeology, and a specialist in the use of satellite imagery for geological and glaciological studies from the early 1980s to the early 2000s. One of the pioneers in the use of imagery for glacier velocity measurements in Antarctica.

Bukhta Luchistaja *see* **Luchistaja Bay**

Luchistaja Bay. 66°04' S, 101°21' E. In the Bunger Hills. Mapped by SovAE 1956, and named by the Russians as Bukhta Luchistaja. ANCA translated it.

Cerro Lucía. 63°27' S, 57°02' W. A hill about 7 km S of Sheppard Point, in the N part of Tabarin Peninsula, in the extreme NE part of Trinity Peninsula. Named by the Chileans for Lucía Hiriart de Pinochet, wife of the president of Chile. She took part in the 1977 presidential voyage to Antarctica, aboard the *Aquiles*.

Monte Lucía *see* **Chair Peak**, [1]**Mount Tennant**

Lucia Automatic Weather Station. 74°57' S, 161°46' E. An Italian AWS, NW of Tomovick Nunatak, in Victoria Land, which began operating on Jan. 25, 2007.

Lucia Peak. 80°18' S, 155°23' E. A peak, 3 km NW of Adams Crest, in the Ravens Mountains, in the Britannia Range. Named by US-ACAN in 2001, for Chief Master Sergeant Charles R. Lucia, who served with the 109 Airlift Wing, as chief of maintenance control during the transition of LC-130 aircraft operations from from the U.S. Navy to the Air National Guard.

Lucifer Crags. 62°40' S, 61°10' W. A rocky bluff at the S extremity of President Beaches, extending to within 500 m of Devils Point, on Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 2, 1993. Plotted by the UK in late 2008. The only penguin rookery on Byers Peninsula is situated on the N side of these crags.

Luck Nunatak. 75°19' S, 72°32' W. A nunatak, 3 km SW of Mount Caywood, in the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from ground surveys conducted by USGS in 1961–62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1966, for George D. Luck, crew member of the Dakota that, on Nov. 26, 1961, flew into the area that would become Eights Station in 1961. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Lucy *see* **Mount Henry Lucy**

Lucy Glacier. 82°24' S, 158°25' E. A wide glacier flowing SE from the Polar Plateau, between Laird Plateau and McKay Cliffs, into the Nimrod Glacier, between the Cobham Range and the Geologists Range. Named by NZ-APC for William Robert "Bill" Lucy (b. Timaru, NZ), surveyor at Scott Base in 1963–64, during which he was on the McMurdo Ice Shelf Party. He wintered-over at Scott Base in 1964. He also took part in NZGSAE 1964–65 (which explored this region), as a surveyor with the Geologists Range field party. He was back on the McMurdo Ice Shelf Project in the summers of 1965–66 and 1966–67. In 1969 he was winter leader at Vanda Station. NZ-APC accepted the name, ANCA followed suit on Aug. 10, 1966, and US-ACAN accepted the name later in 1966.

Ludeman, Emmert Edward "E.E." b. July 2, 1922, Waukesha, Wisc., son of high school teacher Karl Ludeman and his wife Valborg. He joined the U.S. Navy, and was a lieutenant commander when he took over from Scott Marshall as officer-in-charge of McMurdo Base on Nov. 28, 1957. He in turn handed over to William Lewiston. He died on Nov. 9, 2001, in Bend, Oregon.

Ludeman Glacier. 84°27' S, 172°40' E. A valley glacier, 22 km long, flowing N through the Commonwealth Range into the E side of the Beardmore Glacier at a point 20 km N of Mount Donaldson. Named by US-ACAN in 1966, for E.E. Ludeman.

Mount Luders. 68°07' S, 55°30' E. A prominent mountain in the Dismal Mountains of

Kemp Land, about 13 km SW of Cyclops Peak. Plotted from 1959 ANARE aerial photos. Named by ANCA for David John "Dave" Luders (b. April 3, 1943), officer-in-charge at Casey Station in 1972, and at Mawson Station in 1974, during the latter being leader of a tractor train party that established a base camp at Knuckey Peaks. Later in the 1970s he was working in the New Hebrides (very definitely not in Antarctica).

Ludogorie Peak. 62°43' S, 60°11' W. Rising to about 350 m in Friesland Ridge, 1 km NNW of Needle Peak, 1 km SSE of Preslav Crag, 3.25 km SW of the summit of Peshev Ridge, and 1.2 km NE of Radomir Knoll, it overlooks Prespa Glacier to the W and S, Macy Glacier to the NE, and Brunow Bay to the E, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Ludogorie region in northeastern Bulgaria.

Ludvig Glacier. 70°45' S, 166°09' E. A tributary glacier flowing N between Arthurson Bluff and Mount Gale into Kirkby Glacier, near the coast of northern Victoria Land. Named by ANARE for Ludvig Larsen, chief officer of the *Thala Dan*, the ship that carried ANARE along this coast in 1962. ANCA accepted the name, and US-ACAN followed suit in 1964. NZ-APC also accepted the name.

Ludwig Glacier *see* **Ludvig Glacier**

Mount Ludwig Hansen *see* **Hansen Spur**

Luff Nunatak. 71°06' S, 71°28' E. A narrow nunatak, about 4.5 km long, W of Foster Nunatak, in the S part of the Manning Nunataks, in the E part of the Amery Ice Shelf. The Mannings were photographed aerially by OpHJ 1946-47, and again by ANARE in 1957, and then visited by SovAE 1965 and by ANARE in 1969. Named by ANCA for Trevor S. Luff, senior diesel mechanic at Mawson Station in 1970, and a member of the ANARE glaciological traverse party to the Amery Ice Shelf in Jan. 1970. US-ACAN accepted the name in 1973.

Mount Lugering. 71°42' S, 162°57' E. Rising to nearly 2000 m, on the W side of the Lanterman Range of the Bowers Mountains, it marks the N side of the terminus of Hunter Glacier, where it joins Rennick Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Seabees utilitiesman Donald Russell Lugering, USN (b. 1935, Quincy, Ill.), who wintered-over at Pole Station in 1965.

Mount Lugg. 71°13' S, 64°43' E. A partly snow-covered mountain, about 9 km S of Mount Hicks, in the Prince Charles Mountains. Photographed from the Mount Willing and Mount Hicks geodetic stations in 1971, during the ANARE Prince Charles Mountains Survey. Named by ANCA on May 18, 1971, for Des Lugg (*see* **Lugg Island**). US-ACAN accepted the name in 1973. The Russians call it Gora Sojuz-21.

Lugg Island. 68°32' S, 77°57' E. A small island, rising to an elevation of about 27 m above sea level, 1.5 km NW of Lake Island, off the W end of Breidnes Peninsula, in the Vestfold Hills, about 5 km N of Davis Station. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946, by Norwegian cartographers. Named by ANCA for Dr. Desmond James "Des" Lugg (b. May 17, 1938, Adelaide), medical officer and 2nd-in-command at Davis Station in 1963. He visited the island for biological studies. In 1968 he became senior medical officer with the Antarctic Division, Melbourne, and was officer-in-charge of the ANARE Prince Charles Mountains surveys in 1969-1970 and 1970-1971. In 1980-81 he was scientific leader of the International Biomedical Expedition to Antarctica. He also led some ANARE summer relief voyages. US-ACAN accepted the name in 1970.

Lugger Glacier. 76°58' S, 160°50' E. A broad glacier, 4 km wide, and about 5.5 km long, with an even surface, occupying the upland northward of Mount Bergen and Mount Gran, in the Convoy Range, and flowing N to the head of Alatna Valley. In keeping with the practice of naming certain features in the Convoy Range for ships and things nautical, this one was named by NZ-APC in 1980, as Cruiser Glacier. However, in 1991, NZ-APC changed the name to Lugger Glacier, for the lugger, a small vessel with four cornered sails set fore and aft (*see* **Ships**). US-ACAN accepted the name in 2006. Interestingly, neither of the two names seems to appear in the NZ gazetteer.

Luhrsen Nunatak. 71°59' S, 161°41' E. A nunatak, 5 km SSE of Mount Alford, at the SE end of the Helliwell Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Richard H. Luhrsen, assistant to the USARP representative at McMurdo, 1967-68.

Pic Luigi de Savoie *see* **Savoia Peak**

Pico Luigi Di Savoia *see* **Savoia Peak**

Luigi di Savoia Peak *see* **Savoia Peak**

Luigi Peak *see* **Savoia Peak**

The *Luis Alcázar* *see* **The *Capitán Luis Alcázar***

Luis Carvajal Station *see* **Teniente Carvajal Station**

Punta Luis Cruz. 69°35' S, 69°01' W. A point S of Cape Jeremy, on the coast of George VI Sound, on the W coast of the Antarctic Peninsula. Named probably by ChilAE 1946-47, probably for one Luis Cruz, probably a member of the expedition.

Pico Luis de Saboya *see* **Savoia Peak**

Península Luis Felipe *see* **Trinity Peninsula**

Luis Risopatrón Refugio *see* **Coppermine Cove Refugio**

Luis Risopatrón Station. 63°19' S, 57°55' W. Not to be confused with the refugio of the same name, at Coppermine Cove, this Chilean base was built by the army in Feb. 1957 on a rock surface, 40 m above sea level, at Cape Legoupil, Trinity Peninsula, 150 m from the coast, and 50 meters from General Bernardo O'Higgins Station. It was named Base Científica Geógrafo Luis Risopatrón, for the geographer Luis Risopatrón. There were 5 buildings, used mostly for summer biological work, and it could accommodate 12 persons. **1957 winter**: Luis Correa Z. (leader). **1958 winter**: Pedro Medina Arriaza (leader). **Aug. 10, 1958**: The living quarters burned, and the personnel were taken to General Bernardo O'Higgins Station.

Isla Luisa *see* **Louise Island**

Pico Luisa *see* **Louise Peak**, **Mount Wheat**

Punta Luisoni. 70°42' S, 61°37' W. A point, NE of Lehrke Inlet, on the Black Coast, on the E coast of the Antarctic Peninsula. Named by the Argentines.

Luitpold Coast. 77°30' S, 32°00' W. The NW coast of Coats Land, mainly fringed by ice shelf, it extends along the coast from the vicinity of Hays Glacier (in 27°54' W) to the E limit of the Filchner Ice Shelf (in 36°W). Discovered on Jan. 30, 1912, by GermAE 1911-12, and named by Filchner as Prinzregent Luitpold Land, for the Bavarian noble, Luitpold (1821-1912), prince regent of Bavaria from 1886 to 1912. The SW limit of the land was in the vicinity of Vahsel Bay but the NE and S limits remained undefined. The name appears translated in several different languages. In Jan. 1915 it was further charted by BITE 1914-17, and in 1918 Wordie was the first to refer to it as the Luitpold Coast. Shackleton, on his 1919 map, calls it Luitpold Land. On the same map, he also called it the Leopold Coast (sic). On Bartholomew's 1922 map it appears as Prince-Regent Luitpold Land, on a 1945 Argentine chart it appears as Tierra del Príncipe Regente Leopoldo, on one of their 1946 charts as Costa Leopoldo, and on one of their 1952 charts as Costa Luitpold. Its boundaries appear in various ways over the years, on different maps and charts, but, as we know it today, the name was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1956. ArgAE 1953-54 named it Costa Confín ("confín" meaning "outer limit"), because it marks the SE limit of the Weddell Sea. It appears as such on an Argentine chart of 1957, and was the name accepted by the 1970 Argentine gazetteer. It was re-charted by BCTAE between 1955 and 1957, and re-mapped again from U.S. Landsat images taken in the 1970s.

Luitpold Land *see* **Luitpold Coast**

Luke Glacier. 65°42' S, 64°02' W. A glacier, at least 24 km long, it flows NW into the head of Leroux Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly surveyed in 1909 by FrAE 1908-10, it appears (unnamed) on Charcot's 1912 map. Re-surveyed in 1935-36 by BGLE 1934-37, it appears (still unnamed) on Rymill's 1938 map of that expedition. Named by UK-APC on Sept. 22, 1954, for George Lawson Johnston (1873-1943), 1st Baron Luke, the head of Bovril, a contributor to the expedition. US-ACAN accepted the name in 1955, and it appears on a U.S. Hydrographic chart of that year, as well as on a 1957 British chart. It was photographed aerially by FIDASE in 1956-57, and re-surveyed from the ground by Fids from Base J in 1957-58. The British plot it in 65°46' S, 63°55' W, which is probably more

accurate than the American coordinates given at the head of this entry.

Lukovit Point. 62°34' S, 60°28' W. A point, 2.74 km WSW of Siddons Point, and 5.6 km E of Kuklen Point, on the coast of Hero Bay, Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town in northern Bulgaria.

Lully Foothills. 70°49' S, 69°38' W. A large group of peaks and nunataks rising to about 900 m between the Purcell Snowfield and the head of Schubert Inlet, this feature extends 24 km in a NE-SW direction, bounded to the E by Quinault Pass and to the W by Vivaldi Glacier, between that glacier and the LeMay Range, in the west-central part of the N part of Alexander Island. Apparently discovered and roughly mapped in 1940, during USAS 1939-41. Re-photographed aerially in late 1947 by RARE 1947-48, and mapped from these photos in 1959-60, by Searle of the FIDS. He plotted it in 70°44' S, 70°02' W. Named by UK-APC on March 2, 1961, for Jean-Baptiste Lully (1639-1687), the composer. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with those new coordinates, the feature appears in the 1977 British gazetteer.

Lulow Rock. 85°36' S, 68°30' W. A prominent rock, rising to 1695 m, the most northerly exposed rock along the face of the Pecora Escarpment, in the Pensacola Mountains. Surveyed by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for William F. "Bill" Lulow, who wintered-over as cook at Plateau Station in 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mount Lumière *see* **Lumière Peak**

Pic Lumière *see* **Lumière Peak**

Pico Lumière *see* **Lumière Peak**

Sommet Lumière *see* **Lumière Peak**

Lumière Peak. 65°18' S, 64°03' W. Rising to 1065 m, 5 km SE of Cape Tuxen, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Sommet Lumière, for French physician Auguste Lumière (1862-1954), a patron of the expedition, who, with his brother Pierre, was a movie pioneer. It appears as such on Charcot's 1906 map. The feature was re-surveyed by FrAE 1908-10, and appears on Charcot's 1910 map as Pic Lumière. It appears on Olaf Holtedahl's 1929 chart as Mount Lumière. It was re-surveyed again in 1935-36, by BGLE 1934-37, and appears on Rymill's 1938 map of that expedition. It first appears as Lumière Peak on a USAAF chart of 1946, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 22, 1954. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and further surveyed from the ground by a joint FIDS-RN team in 1958. It appears on a Chilean chart of 1962 as Pico Lumière, and that name was accepted by the Chilean gazetteer of 1974. Sometimes the Chileans do not use the accent mark. It was first climbed in 1965 by Frank Stacey, Tony Bushell, and Terry Tallis, of BAS.

Arrecife(s) Lumus *see* **Lumus Rock**

Roca Lumus *see* **Lumus Rock**

Lumus Reef *see* **Lumus Rock**

Lumus Rock. 65°13' S, 65°18' W. A rock awash, 6 km WNW of Sooty Rock, on the N side of the entrance to Buchanan Channel, and 11 km WNW of the Betbeder Islands, it marks the SW extremity of the Wilhelm Archipelago. Discovered in Feb. 1936, by BGLE 1934-37, charted by them as a reef, and named by them as Lumus Reef, after one of the expedition's cats, the only one to survive the Antarctic winter. It appears as such on Rymill's 1938 map of the expedition, and also on a 1948 British chart. It was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears on an Argentine chart of 1946 as Arrecife Lumus (i.e., "Lumus reef"), and on a Chilean chart of 1947 as Isla Toqui, but it was the name Arrecife Lumus that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, on a 1963 Argentine chart it appears as Arrecifes Lumus. In 1969 an RN Hydrographic Survey unit on the *Endurance* re-charted it as a single rock, and UK-APC renamed it Lumus Rock on Nov. 3, 1971. US-ACAN accepted the new name in 1972. It appears on a British chart of 1974, and also in the British gazetteer of that year. Today, the Argentines call it Roca Lumus. Note: This feature is pronounced as if it had 2 "m"s in it. For the reason for this, and for more on Lummo, *see* **Cats**.

Bahía Luna *see* **Moon Bay**

Cerro Luna. 64°48' S, 63°01' W. A hill, with sloping and completely snow-covered sides, in the W part of Lemaire Island, N of Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. The name first appears on a 1951 Chilean chart.

Puerto Luna *see* **Moon Bay**

Luna Bay. 62°35' S, 60°00' W. An Argentine weather station at Moon Bay, Livingston Island, in the South Shetlands (*see* **Moon Bay**).

Gora Luna-Devyat' *see* **Luna-Devyat' Mountain**

Luna-Devyat' Mountain. 71°40' S, 11°50' E. Rising to 1880 m, it forms the E end of the Eidshaugane Peaks, in the E part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the Russians in 1966 as Gora Luna-Devyat' (i.e., "Luna-9 mountain"), honoring Soviet space scientists. US-ACAN accepted the name Luna-Devyat' Mountain in 1970. The Norwegians call it Luna 9-haugen (which means the same thing).

Gora Luna-9 *see* **Luna-Devyat' Mountain**

Luna 9-haugen *see* **Luna-Devyat' Mountain**

Lunar Crag. 71°08' S, 68°42' W. One of the rock summits in Planet Heights, it rises to about 1200 m at the head of Pluto Glacier, in the E part of Alexander Island. Photographed aerially by RARE 1947-48, and mapped from these photos in 1959-60 by Searle of the FIDS. Surveyed by BAS from 1968. In keeping with the practice of naming several features in this area for things astronomical, UK-APC named this one on Dec. 8, 1977. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Mount Lunch-Ho! *see* **Mount Frödin**

Luncke Range. 72°02' S, 24°42' E. A range of peaks rising to 3020 m, extending in a N-S direction for 16 km between Jennings Glacier and Gjel Glacier, in the central part of the Sør Rondane Mountains. They include the Brattnipane Peaks. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Lunckeryggen (i.e., "the Luncke ridge"), for Bernhard Luncke (1894-1963), Norwegian cartographer who plotted the maps in H.E. Hansen's *Atlas of Parts of the Antarctic Coastal Lands*, in 1946, and a 1957 revision covering the Sør Rondanes. US-ACAN accepted the name Luncke Range in 1966, the term "range" being more appropriate.

Luncke Ridge. 68°29' S, 78°25' E. A fairly prominent ridge on the N side of the E extremity of Langnes Fjord, in the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographer Bernhard Luncke. Seen in 1957, by an ANARE party led by Bruce Stinear from nearby Pioneer Crossing, and named by them for Bernhard Luncke (*see* **Luncke Range**). ANCA accepted the name on Aug. 11, 1958, and US-ACAN followed suit in 1967.

Lunckeryggen *see* **Luncke Range**

Lund, Gustav. Of Elko, Minn. He was on the *North Star* for the 2nd half of USAS 1939-41.

Lund Island *see* **Petermann Island**

Mount Lunde. 66°58' S, 50°28' E. A mountain ridge close S of Mount Gleadell, in the W part of the Tula Mountains, in Enderby Land. Discovered by the ANARE Amundsen Bay Party under Peter Crohn, in Oct. 1956. Named by ANCA on Nov. 24, 1961, for Jan Lunde, senior diesel mechanic at Wilkes Station in 1960. US-ACAN accepted the name in 1965.

Lunde Glacier. 71°53' S, 6°15' E. A large glacier, about 40 km long, flowing NW between Håhellerskarvet and Jøkulkyrkja Mountain, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Lundebreen (i.e., "Lunde glacier"), for Norsk Polarinstitutt geologist Torbjørn Lunde (b. 1928), who wintered-over as glaciologist at Norway Station in 1957 and 1958, during NorAE 1956-60. US-ACAN accepted the name Lunde Glacier in 1966.

Lundebreen *see* **Lunde Glacier**

Lundström Knoll. 80°31' S, 20°25' W. A rock knoll rising to about 1400 m, to the NE of Chevreul Cliffs, at the E end of the Pioneers Escarpment, in the Shackleton Range. Mapped by USGS from USN air photos taken in 1967, and from ground surveys conducted by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Johan Edvard Lundström (1815-1888), Swedish inventor of the first true "strike-on-box safety match," 1855. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Lundströmsee. 80°27' S, 29°29' W. A melt stream carrying ice from the S foot of Mount Gass to the lake the Russians call Ozero Zelënoe, in the Haskard Highlands, in the W part of the Shackleton Range. Named by the Germans.

Lunik Point. 70°32' S, 163°06' E. An ice-covered coastal point, 5 km NE of Mount Dergach, and forming the W side of the entrance to Ob' Bay, 16 km E of Mount Bruce, on the Pennell Coast of Oates Land. Photographed and plotted aerially by SovAE 1958, and named by them as Mys Lunnik, for the first Soviet moon module. US-ACAN accepted the translated name Lunik Point in 1964, and NZ-APC followed suit.

Gora Lunina. 72°13' S, 2°41' E. A nunatak in the SE part of the Gjelsvik Mountains, in Queen Maud Land. Named by the Russians.

Mys Lunnik *see* **Lunik Point**

Ostrov Lunnyj *see* **Lunnyj Island**

Lunnyj Island. 68°46' S, 77°54' E. A small, irregular-shaped island, rising to an elevation of 32 m above sea level, 3.2 km N of the NE cape of Filla Island, in the Rauer Islands. Charted by SovAE 1956, and named by the Russians as Ostrov Lunnyj. ANCA accepted the name Lunnyj Island.

Luojia Shan. 69°24' S, 76°23' E. A hill in the Larsemann Hills. Named by the Chinese.

Luotuo Dao. 69°23' S, 76°11' E. An island in the Larsemann Hills. Named by the Chinese.

Mount Lupa. 68°26' S, 66°43' W. A flat-topped, ice-covered mountain, rising to over 1625 m, near the heads of Romulus Glacier and Remus Glacier, between Romulus Glacier and Martin Glacier, just ESE of Black Thumb, and 8 km E of the head of Rymill Bay, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Re-surveyed in 1948-49 by Fids from Base E, who named it for the she-wolf who raised Romulus and Remus in Roman mythology. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. Further surveyed by Fids from Base E between 1958 and 1961.

Glaciar Lurabee *see* **Lurabee Glacier**

Lurabee Channel *see* **Lurabee Glacier**

Lurabee Glacier. 69°22' S, 64°03' W. A glacier, 45 km long, flowing NE to the Larsen Ice Shelf between Cape Walcott and Cape Hinks, on the E coast of Palmer Land. Discovered and photographed aerially by Wilkins on Dec. 20, 1928. He thought it was a channel cutting E-W through the Antarctic Peninsula, between Scripps Heights and Finley Heights, and plotted it in about 70°20' S. He named it Lurabee Channel, for Lura B. Shreck (San Francisco realtor Ray Shreck's wife; she was born on Oct. 12, 1891, in St. Joseph, Mo., and died on March 8, 1955, in San Mateo, Calif.), who had helped Wilkins in many ways over the years. In fact Wilkins and Lura crossed the Atlantic together in the *Stavangerfjord*, in 1928, minus Ray. It appears on Wilkins' map of 1929, and on the American Geographical Society's map of that year it appears as Lura B. Schreck Channel. On Nov. 21, 1935, Ellsworth photographed it aerially. U.S. cartographer W.L.G. Joerg, working from Ellsworth's (and Wilkins') photos, redefined the feature as a glacier, named it Lurabee Glacier, and plotted it in 69°00' S, 63°30' W. It appears as such on his 1937 map, on a 1940 U.S. Hydrographic Office chart, and on various other maps and charts. It was roughly surveyed from the ground in 1940, by USAS 1939-41. It appears on a 1947 Chilean chart as Glaciar Lurabee. US-ACAN accepted the name Lurabee Channel in 1947, but had it plotted in 70°20' S. It was further surveyed from the ground in Nov. 1947, by a joint sledging team of Fids from Base E and personnel from RARE 1947-48. UK-APC followed suit with the naming on Jan. 28, 1953, but with the coordinates 69°12' S, 63°45' W, which is how it appeared in the 1955 British gazetteer. It was surveyed again by Fids from Base E in 1960-61. The 1977 British gazetteer had the correct coordinates. The Americans plot this feature in 69°15' S, 63°37' W.

Lurker Rock. 68°03' S, 68°44' W. Rising to an elevation of 3 m above sea level, 5 km NE of Dismal Island, of the Faure Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Charted by an RN Hydrographic Survey unit on the *John Biscoe* in 1966. Named descriptively by UK-APC on Nov. 3, 1971. It is covered by ice, especially at high water, and lurks in the water, often looking like a piece of floating ice, waiting for unsuspecting shipping. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer.

Lurky Rocks. 60°43' S, 45°35' W. A group of rocks E of Polynesia Point, Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. Partially submerged at high tide, the rocks are a hazard to boats in the area, hence the descriptive name given by UK-APC on Sept. 29, 2004.

Lusa. 72°32' S, 20°00' E. A small nunatak N of Loppa, and E of the S part of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians ("the louse").

Lush, George Ronald. b. April 1, 1919, Winchester, son of Frank Lush and his wife Hazel L. Murrant. Naval lieutenant, he was bosun, tractor driver and handyman on the first part (1955-57) of the British Royal Society Expedition, wintering-over in 1956 at Halley Bay. He returned to his wife in Portsmouth, on the *Magga Dan*, arriving in London on March 13, 1957. He wintered-over again at Halley Bay Station, in 1959, as FIDS base leader. On April 1, 1963, he was promoted to lieutenant commander. He later established a Royal Society research station in the Aldabra Islands, in the Indian Ocean, and was director there from 1969 to 1971. He died on July 14, 1973, in a car crash in Thirsk, Yorks.

Anse Lussich *see* **Lussich Cove**

Caleta Lussich *see* **Lussich Cove**

Lussich Cove. 62°06' S, 58°20' W. On the SE side of Martel Inlet, in Admiralty Bay, off Ullmann Point, King George Island, in the South Shetlands. Charted in Dec. 1909 by FrAE 1908-10, and named by Charcot as Anse Lussich, for Antonio Dionisio Lussich (1848-1928; name originally Luksic; his father had emigrated to Uruguay from Croatia) of Montevideo, sailor, writer, and shipowner, who assisted FrAE 1903-05 and FrAE 1908-10, while those expeditions were in Montevideo. He created the Arboretum Lussich. It appears as such on Charcot's charts of 1910 and 1912. It appears on a Chilean chart of 1947, as Caleta Lussich, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Lussich Cove in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Last plotted by the UK, in late 2008.

Luther Peak. 72°22' S, 169°50' E. Rising to 820 m (the New Zealanders say 798 m), 17.5 km SE of Mount Peacock, in the Admiralty Mountains, it overlooks Edisto Inlet, to the W of Moubray Bay, in northern Victoria Land. Charted by radarscope photographs taken in March 1956, by a USN reconnaissance survey off the *Edisto*. Named by US-ACAN in 1956, for Cdr. (later Capt.) Roger William Luther (b. June 28, 1911. d. June 8, 2006, Hawaii), captain of the *Edisto* in 1955-56. NZ-APC accepted the name.

Lütkennupen. 74°18' S, 9°32' W. A mountain crag NE of Holstnuten, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for lawyer Carsten Johan Scheel Lütken (1886-1963), a Milorg Reistance leader in eastern Norway, arrested in 1941.

Lüttich Island *see* **Liège Island**

Lutz Hill. 77°32' S, 169°02' E. Rising to about 1000 m, 1.5 km SE of The Tooth, in the Kyle Hills of Ross Island. Named by Theodore J. Rosenberg, for Larry F. Lutz, electrical engineer with the Institute for Physical Sciences and Technology, at the University of Maryland, a specialist in the development of scientific research instrumentation for ground based, balloon, and rocket sounding programs for USAP. He had 17 summer seasons at McMurdo, Pole Station, and Siple Station, between 1980 and 2000. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Lützow-Holm, Finn. b. May 23, 1890, Naesseby, Norway, but grew up in Risør, son of parish priest Ole Arentzen Lützow-Holm and his wife Marie Riddervold Jensen, and younger brother of Olaf Lützow-Holm. A commander in the Norwegian Naval Air Service, in 1929-30 he was

a pilot on Riiser-Larsen's expedition on the *Norvegia*. He was a member of the committee of NBSAE 1949-52, and died on June 4, 1950, in Oslo.

Lützow-Holm, Olaf. b. 1887, Kristiania (Oslo), but grew up in Risør, son of parish priest Ole Arentzen Lützow-Holm and his wife Marie Riddervold Jensen, and older brother of Finn Lützow-Holm. In 1915 he and Thorleif Bache reached the top of Aconcagua, on skies. He led the 1916 and 1918 wintering-over parties at Órcadas Station. He was chief of the magnetic section of the Geophysical Obervatory, at Pilar, in Argentina, and was still alive in the late 1950s.

Lützow-Holm Bay. 69°10' S, 37°30' E. A large bay, about 200 km wide, indenting the E coast of Queen Maud Land between between the Princess Ragnhild Coast and the coastal angle immediately E of the Flatvaer Islands, at the Prince Olav Coast. The Queen Fabiola Mountains are behind it. Discovered by Riiser-Larsen in 2 airplane flights from the *Norvegia* on Feb. 21 and Feb. 22, 1931. Named in 1935 by Bjarne Aagaard, as Lützow-Holmbukta, for Finn Lützow-Holm. US-ACAN accepted the translated name in 1947.

Lützow-Holmbukta *see* **Lützow-Holm Bay**

Luyan 1. 69°25' S, 76°08' E. A hill in the Larsemann Hills. Named by the Chinese.

Luyan 2. 69°26' S, 76°08' E. A hill in the Larsemann Hills. Named by the Chinese.

Luyan 3. 69°26' S, 76°08' E. A hill in the Larsemann Hills. Named by the Chinese.

Luyan 4. 69°26' S, 76°08' E. A hill in the Larsemann Hills. Named by the Chinese.

Luz Range. 72°03' S, 4°49' E. A mountain range, 22 km long, next E of the Gablenz Range, in the Mühlig-Hofmann Mountains of Queen Maud Land. It includes Petrellfjellet, Snøbjørga Bluff, and associated features. Discovered aerially by GermAE 1938-39, and named by Ritscher for Walter Luz (1898-1969), commercial manager of Deutsche Lufthansa (he would be head of the company during World War II). US-ACAN accepted the name in 1970.

Gory L'va Berga *see* **Berg Mountains**

Dolina L'va Tolstogo. 72°02' S, 25°48' E. A valley in the area of Mount Bergersen, at the W side of Byrdbreen, in the Sør Rondane Mountains. Named by the Russians for Leo Tolstoy (1828-1910), the writer of *War and Peace*.

Lyall, David. b. June 1, 1817, Fordoun, Kincardineshire, but raised in Auchenblae, Abderdeenshire, son of Charles Lyall and his wife Elizabeth Callum. After a stint as surgeon on a whaling ship in Greenland, he joined the RN in 1839. He was assistant surgeon on the *Terror* during RossAE 1839-43, and was also responsible for botanical research. After the expedition, he served in the Mediterranean and explored the coast of NZ, and also collected the world's largest buttercup. In 1852-54 he was in the Arctic, as senior surgeon on Sir Edward Belcher's expedition in search of Sir John Franklin, and he was in the Baltic during the Crimean War. He spent a lot of time in the Americas, and finally settled down to a job in Kew Gardens, retiring in 1873 to Notting Hill, London, with his Welsh wife Fanny Anne Rowe (whom he had met while he was medical officer of Pembroke Dockyard, and had married in 1866, in Wales) and their children. In the late 1870s they moved to Cheltenham, Glos, where he died on Feb. 25, 1895, still holding the post of deputy inspector general of the Fleets.

Lyall Basin. 70°30' S, 167°25' E. A submarine feature just off the coast of Oates Land. Named in association with the Lyall Islands.

Lyall Islands. 70°41' S, 167°20' E. Between Cape Hooker and Cape Dayman, just outside the entrance to Yule Bay, about 5 km W of Cape Moore, off the coast of Oates Land, in northern Victoria Land. There are 4 islands in this group: Unger Island, Surgeon Island, Novosad Island, and Hughes Island. Discovered by Ross in 1841, and named by him for David Lyall. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Vrah Lyaskovets *see* **Lyaskovets Peak**

Lyaskovets Peak. 62°40' S, 60°09' W. Rising to about 1450 m, it is the easternmost peak of Mount Friesland (i.e., the summit of the island), 2.55 km ENE of the most northwesterly peak of the same mountain, and 3.35 km SSE of Kuzman Knoll, and surmounts Huron Glacier to the N and Brunow Bay to the S. Mapped by the British in 1968. Named by the Bulgarians on Aug. 19, 1997, for the town of Lyaskovets, in Bulgaria.

Lyddan Bank. 73°30' S, 21°00' W. A submarine feature in the Weddell Sea, off the Princess Martha Coast, it has a least depth of 200 m. Named by Heinrich Hinze in Jan. 1997, in association with the Lyddan Ice Rise. The name was accepted by international agreement in June 1997.

Lyddan Ice Rise. 74°10' S, 21°00' W. An ice-covered island, about 72 km long, with 3 narrow arms in the form of a trefoil, at the SW extremity of the Riiser-Larsen Ice Shelf, between that ice shelf and the Stancomb-Wills Ice Tongue, about 30 km off the Princess Martha Coast. First seen on Jan. 17, 1967, by BAS personnel from Halley Bay Station, as they were doing geological work on the Brunt Ice Shelf near to the station. Roughly mapped by them in 74°10' S, 20°30' W, and named by them as Christmas Box Ice Rise, because the discovery coincided with the delayed broaching of Christmas provisions. It appears as such on a map of 1973. On Nov. 5, 1967 it was photographed aerially by William R. McDonald (q.v.), during a VX-6 reconnaissance flight over the coast in an LC-130 Hercules, and mapped by USGS from these photos. Named by US-ACAN in 1970, as Lyddan Island, for Robert Henry Lyddan (b. Dec. 3, 1910, Webster, Ky. d. June 26, 1990, Fairfax, Va.), with USGS from 1933, assistant director, 1956-68, a long-time force in Antarctic mapping, and chief of the topographic division. It appears on a 1970 American Geographical Society map, as Lyddan Island, and plotted in 74°30' S, 20°05' W. In the 1977 U.S. gazetteer, it appears in 74°25' S, 20°45' W. On June 11, 1980, UK-APC accepted that, and it appears as such in the 1982 British gazetteer. However, working from U.S. Landsat images taken in Feb. 1974, it was delineated as an ice rise, and its position was corrected. With the new name and coordinates, it appears in the 1986 British gazetteer.

Lyddan Island *see* **Lyddan Ice Rise**

Lyeskov *see* **Leskov**

Lyftingen *see* **Lyftingen Peak**

Lyftingen Peak. 72°17' S, 3°15' W. Between Wilson Saddle and the upper part of Viddalen Valley, just SE of Kjølrabbane Hills, near the SW end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named descriptively by them as Lyftingen (i.e., "the deck on a Viking ship"). US-ACAN accepted the name Lyftingen Peak in 1966.

Mount Lymburner. 77°26' S, 86°30' W. Rising to 1940 m, 6 km WNW of Mount Weems, near the N end of the Sentinel Range, in the Ellsworth Mountains. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for Red Lymburner.

Lymburner, James Harold "Red." b. April 24, 1904, Caistor Township, Lincoln County, Ontario, son of carpenter George Malcolm Lymburner (known as Malcolm) and his wife Annie Christie. Canadian Airways pilot out of Montreal who was reserve pilot on Ellsworth's 1935-36 expedition to Antarctica. He was the pilot proper on Ellsworth's 1938-39 Antarctic expedition over the American Highland. A test pilot during World War II, he married Jessie R. Tice. He died on Aug. 5, 1990, in Clay County, Fla. He and his wife (who died in 1969) are both buried in Caistor, Ont.

Cabo Lynch *see* **Keltie Head**

Isla Lynch *see* **Lynch Island**

Mount Lynch. 78°10' S, 162°04' E. One of the high peaks in Rampart Ridge, it rises to 3340 m between Shupe Peak and Bishop Peak, in Victoria Land. Named by US-ACAN in 1994, for John Lynch, NSF representative at the South Pole for a portion of the summer season since 1986. He was later program manager for polar aeronomy and astrophysics, within the NSF's Office of Polar Programs.

Lynch, Juan Carlos *see* **Órcadas Station**, 1932, 1933, 1934

Lynch, Thomas Bowen. b. Aug. 25, 1832, Providence, RI. When he was 17, he and his brother went out to California, to join the gold rush, which they soon gave up. Lynch joined the Merchant Marine, and in the 1850s found himself in the Black Sea, during the Crimean War, on a British ship taking troops to Balaclava, even claiming to have witnessed the Charge of the Light Brigade. After surviving the usual shipwrecks and other calamities of the sea, he returned home to marry Jane Goodwin Gough in 1864. He blockaded Southern ports during the Civil War, and became a sealing captain in the South Orkneys in 1879-80, as skipper of the *Express*. His last ship was the *Ileen*, and he retired from the sea in 1890, to Peace Dale, RI, and died there on Jan. 28, 1920.

Lynch Island. 60°39' S, 45°36' W. In the E part of Marshall Bay, close off the S coast of Coronation Island, in the South Orkneys. Roughly surveyed and charted by Petter Sørlle in 1912-13. Surveyed in 1933 by the Discovery Investigations. Re-surveyed in 1948-49 by Fids from Signy Island Station, who named it Lynch Islet, for Capt. Thomas B. Lynch. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. On July 7, 1959, UK-APC redefined it as Lynch Island, and US-ACAN accepted that name in 1963. The Argentines call it Isla Lynch. There is a lot of grass here, and it was designated SPA #14 in 1967.

Lynch Islet *see* **Lynch Island**

Lynch Point. 75°05' S, 137°44' W. A rocky point at the seaward end of an unnamed peninsula, between Frostman Glacier and Hull Glacier, on the coast of Marie Byrd Land. Photographed aerially on Dec. 18, 1940, by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Ensign William R. Lynch, Jr., USNR, damage control officer on the *Glacier*, in these waters in 1961-62.

Lynn Automatic Weather Station. 74°14' S, 160°30' E. An American AWS, on Reeves Glacier, at an elevation of 1772 m, it began operating on Jan. 19, 1988, and was removed on Jan. 4, 1998. Named for a friend of Dr. Charles Stearns, the founder of the AWS program.

Lynsky Cove. 66°19' S, 110°27' E. In the N side of Pidgeon Island, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1963, for Chief Builder James Edward Lynsky (b. Aug. 11, 1914, Mass. d. Aug. 20, 1996, Port Hueneme, Calif., son of Thomas Aloysius Lynsky, a footman at the Copley Plaza Hotel, and his wife Julia E. Mackin), USN, at Wilkes Station in 1958.

[1]**The *Lynx***. A 187-ton brig, built in Java, and registered in NSW, she was bought in 1818 by a group of men including her new captain, Richard Siddons. She left Sydney Harbour on Nov. 3, 1820, under Siddons' command. Two of the crew were Joseph George Thoms and John Guard. She was in the South Shetlands for the 1820-21 sealing season, then wintered-over in the Falklands, and was back in the South Shetlands in 1821-22, in company with the *Huron* and the *Cecilia*. It is possible she had a tender named the *Union*. She left the South Shetlands on Feb. 20, 1822, and, on her way back to Sydney, she stopped off at Macquarie Island, and arrived back in Sydney Harbour on June 19, 1822, with 5000 seal skins and 40 tons of whale oil (they called it an unsuccessful voyage). She was sold in 1823. On Nov. 18, 1836, while under the command of Capt. Shaw, she was wrecked in NZ.

[2]**The *Lynx***. Whaler owned by the Newfoundland Steam Whaling Company, she was operating out of NZ in southern (but not Antarctic waters) in 1907, when, in Nov. 1907, she joined the *Puma* to become whale catchers for the factory ship *Sobraon* in Antarctica. She remained in Antarctic waters, on and off, until 1910, Capt. Emmensen (name sometimes seen as Amundsen) commanding. It was from the *Lynx* that Nokard Davidsen fell and drowned on Jan. 22, 1908. After this expedition, the *Lynx* and the *Puma* returned to St. Johns, Newfoundland, to continue their main job of supplying the company's local stations. It then worked for the Rose-au-Rue Company (the successor to the Newfoundland Steam Whaling Company), and served as a British ship in World War I.

Rocas Lynx *see* **Lynx Rocks**

Lynx Rocks. 62°32' S, 60°33' W. Rocks awash in Hero Bay, to the W of Siddons Point, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Richard Siddons' vessel, the *Lynx*. US-ACAN accepted the name in 1960. The Argentines call them Rocas Lynx. Last plotted by the UK, in late 2008.

Pico Lyon *see* **Lyon Peak**

Lyon Nunataks. 74°50' S, 73°50' W. An isolated group of nunataks, rising to about 1250 m, W of the Grossmann Nunataks, WNW of the Merrick Mountains, and 50 km NW of the Behrendt Mountains, in Ellsworth Land. They include Grossenbacher Nunatak, Holtet Nunatak, Christoph Nunatak, and Isakson Nunatak. Surveyed by USGS on the 1961-62 Antarctic Peninsula Traverse, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Originally named Johnson Nunatak, in Jan. 1962, for Floyd Johnson. Re-named by US-ACAN in 1966, for Owen R. Lyon (b. June 3, 1928, Hot Springs, Mont. d. June 6, 2007, Lynden, Wash.), USN, hospital corpsman and chief petty officer in charge of Eights Station in 1965. The feature appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Lyon Peak. 63°47' S, 60°48' W. A peak rising to about 1000 m, S of Milburn Bay, on the W side of Trinity Island, in the Palmer Archipelago. ArgAE 1953-54 charted it as Monte Torre, but this was almost certainly confused with Tower Hill (q.v.). Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on Sept. 23, 1960, for Percy Comyn Lyon (1862-1952) of the British Department of Scientific and Industrial Research, who was chairman of the interdepartmental committee on research and development of the Falkland Islands Dependencies, 1917-20. US-ACAN accepted the name later in 1960. Today, the Argentines call it Pico Lyon.

Lyons Cone. 77°38' S, 162°30' E. A cone-shaped peak, about 4 km NNE of Matterhorn, it rises to 1850 m on the ridge separating the heads of Lacroix Glacier, Newall Glacier, and Suess Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for William Berry Lyons (*see* **Lyons Creek**). NZ-APC accepted the name.

Lyons Creek. 77°44' S, 162°16' E. A meltwater stream, 1500 m long, flowing NE along the S side of the Taylor Glacier into the W end of Lake Bonney, in Taylor Valley, in Victoria Land. Named by US-ACAN in 1996, for geochemist William Berry Lyons, geologist at the University of Alabama, who, from 1985 on, studied the geochemistry and paleolimnology of the streams and lakes of the McMurdo Dry Valleys. From 1993 to 1997, he was chief scientist of the LTER (Long-term Ecological Research) field team in the dry valleys, and, as a member of the University of New Hampshire field party of 1988-89, he participated in glaciochemical investigations that collected two ice cores, 150 and 175 m deep, from the upper Newall Glacier, in the vicinity of this peak.

Lyrittaren. 71°25' S, 12°40' E. A small mountain mass, similar to Mount Deildenapen (which stands just eastward), in the Östliche Petermann Range, in the N part of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the landmark"). The Russians call it Gora Dneprovskaja.

The *Lys*. Polish vessel in Antarctic waters in 1985-86, skipper unknown.

Mount Lysaght. 82°49' S, 161°19' E. Rising to 3755 m, 2.5 km N of Mount Markham, in the N part of the Queen Elizabeth Range. Discovered in 1908 by BAE 1907-09, and named by Shackleton for his old friend Gerald Stuart Lysaght (1868-1951), who would (much) later accompany Shackleton's *Quest* expedition as far as St. Vincent. US-ACAN accepted the name in 1966.

Gora Lysaja. 74°00' S, 67°00' E. A nunatak in the group of nunataks the Russians call Gory Dmitrija Solov'ëva, immediately NW of Mount Maguire, in the S part of the Lambert Glacier. Named by the Russians.

Lysell, Wilhelm. b. March 29, 1873, Karlshaven, Sweden. In Dec. 1901, when the *Gauss* pulled into Cape Town on her way south for GermAE 1901-03, Lysell and two other Swedish able seamen joined the expedition as replacements, and went to Antarctica.

Lysithea Peaks. 70°53' S, 68°30' W. A range of prominent and rugged peaks, forming the W side of Flatiron Valley. Named by UK-APC on Jan. 18, 2002, in keeping with the names of other things Jovian in the area, after one of the moons of Jupiter.

Lysle, William. Captain of the *Hopefull* during the expedition of 1833-34 led by Henry Rea. He resigned in the Falkland Islands, after the expedition.

Bahía Lystad *see* **Lystad Bay**

Lystad, Isak Kristian Tønder. b. Dec. 17, 1895, Kristiansund, Norway, son of ship's engineer Paul Adolf Lystad and his wife Jensine Wilhelmine. In the Merchant Marine from 14, he was a ship's mate when he came to the USA in 1922, moving to Bellingham, Wash. He became a U.S. citizen, and married Jany. In the 1930s he became 2nd mate, and then skipper, of the Bureau of Indian Affairs ship *North Star* , which would make the run up from Seattle to Alaska and back on a regular basis. He and his crew

went to Antarctica as one of the two ships of USAS 1939-41. Later a lieuenant commander in the U.S. Naval Reserve, he died in Seattle on May 26, 1945.

Lystad, Tinus Andersen. b. 1860, Sandehered, Norway, as Tinus Andersen, son of farmer Anders Olsen and his wife Juliane Larsdatter. He married Berthine, and they had several children, before moving to Sandefjord in 1899. He was manager of the whaler *Nor*, in the South Shetlands in 1906-07. On March 18, 1907 he was in at Stanley on the *Svip*, so he could get a whaling license from the Falkland Islands government, and he was back in the South Shetlands in 1907-08, and 1908-09. Lystad's escapades as a blockade runner (he objected strenuously to paying the British a license fee for whaling, in what he regarded as neutral territory) caused embarrassment to his boss Chris Christensen, and he was replaced by Capt. Rove for the 1908-09 season.

Lystad Bay. 67°50' S, 67°17' W. Also called Horseshoe Bay, Horseshoe Island Cove. A large bay, 4 km wide, it indents the W side of Horseshoe Island for 4 km, in the NE part of Marguerite Bay, on the W side of the Antarctic Peninsula. Its shores are formed by high ice-cliffs whose rocky summits are ice-free in summer. First surveyed in 1936-37 by BGLE 1934-37, and visited in 1940 by the *Bear* and the *North Star* during USAS 1939-41. Named (it seems) by UK-APC on March 31, 1955, for Capt. Isak Lystad. US-ACAN (it seems) accepted the name later that year. The Chileans call it Bahía Lystad, and the Argentines call it Caleta Herradura (i.e., "horseshoe cove").

Lystad Island *see* **Omega Island**

Cape Lyttelton. 82°21' S, 164°39' E. Also spelled (erroneously) Cape Lyttleton. It forms the S entrance point of Shackleton Inlet, between that inlet and Cape Goldie, along the W edge of the Ross Ice Shelf. Discovered by the South Pole Party in Dec. 1902, during BNAE 1901-04, and named by Scott for the NZ town of that name (*see* **Lyttelton Range**). Lyttelton was home base for the *Discovery* during this expedition, and it was from here that Scott set out on the last leg of his journey south, in 1901. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Lyttelton Peak. 82°18' S, 158°56' E. Also spelled (erroneously) Lyttleton Peak. Rising to 2335 m (although the New Zealanders say it could be as high as 3050 m above sea level), it is the highest peak in the Cobham Range. Mapped by NZGSAE 1961-62, and named by them for Sir Charles John Lyttelton (1909-1977), 10th Viscount Cobham, famous cricket player and governor general of NZ, 1957-62. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Lyttelton Range. 71°33' S, 167°45' E. A range, 24 km long, and narrow, it trends NW, and forms the W wall of the upper part of Dennistoun Glacier, 16 km S of the Dunedin Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for the NZ town of Lyttelton, whose Harbour Board and citizens have been so vital (and hospitable) to so many expeditions (and not just Americans) over the decades.

Lyttelton Ridge. 66°22' S, 63°07' W. Also called Antarctic Tetons. A dark, jagged ridge, rising to 425 m, it extends 6 km in a NW-SE direction along the W side of Churchill Peninsula, on the E coast of Graham Land. Charted in 1947 by FIDS, who named it for Oliver Lyttelton (1893-1972), British minister of production, a member of the War Cabinet which created Operation Tabarin, and (from 1954) 1st Viscount Chandos. The feature was photographed aerially in 1947 by RARE 1947-48. UK-APC accepted the name on Jan. 20, 1951, and US-ACAN followed suit in 1953.

Cape Lyttleton *see* **Cape Lyttelton**

Mount Lyttleton. 66°24' S, 65°22' W. A conspicuous, and almost entirely snow-covered mountain, near the head of Cardell Glacier, on the W coast of Graham Land. Photographed aerially by RARE 1947-48. Named by UK-APC on Sept. 23, 1960, for Westcote R. Lyttleton (1877-1956), NZ works director of the British company Triplex Safety Glass, who, in or about 1912, introduced laminated safety glass for use in snow goggles. US-ACAN accepted the name in 1965.

Lyttleton Peak *see* **Lyttelton Peak**

The *Lyubov Orlova* *see* **The *Orlova***

Lyulin Peak. 62°37' S, 59°49' W. A sharp double peak, rising to about 200 m above sea level, and with rocky, ice-free slopes, surmounting Renier Point, 1.75 km NE by E of Mesta Peak, 7.35 km ENE of Delchev Peak, and forming the E extremity of Delchev Ridge and the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for Lyulin Mountain in their home country.

Lyutitsa Nunatak. 62°32' S, 59°38' W. A rocky peak, 1.1 km N of Vratsa Peak, 1.9 km WSW of Ilarion Ridge, and 2.5 km E by N of Momchil Peak, it rises to 430 m above the ice-cap on Breznik Heights, and overlooks Musala Glacier to the N, E, and S, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-5, and named by them on Dec. 15, 2006, for the medieval fortress of Lyutitsa, in the eastern Rhodope Mountains of Bulgaria.

m. Stands for meters

M83 *see* **Baldrick Automatic Weather Station**

Maagoe Peak. 79°33' S, 85°00' W. Rising to 1850 m, at the N end of Gifford Peaks. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Steffen "Steve" Maagoe (b. June 13, 1936, Czechoslovakia. d. March 5, 1975, San Diego), ionosphere scientist who wintered-over at Eights Station in 1964.

Maan Shan. 69°23' S, 76°22' E. A hill in the Larsemann Hills. Named by the Chinese.

Maas, Henry. b. 1905, Germany. He went to sea in 1928, and was 3rd engineer on the *Europa* when he transferred to the *Schwabenland*, in the same position, for GermAE 1938-39.

Maaske Dome. 85°58' S, 144°00' W. An ice-capped, domelike elevation, 3 km long, rising above the N part of California Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Gary L. Maaske, USN (b. 1931), helicopter pilot at McMurdo, 1962-63 and 1963-64.

Mabee, Henry *see* **USEE 1838-42**

Cape Mabel. 60°41' S, 44°40' W. Forms the N tip of Pirie Peninsula, on the N coast of Laurie Island, in the South Orkneys. Probably first seen in 1823 by Weddell, who explored this coastline, it was charted by ScotNAE in 1903, and named by Bruce for Agnes Mabel Kerr, the future wife of Harvey Pirie. It appears on a 1930 Argentine chart as Punta Mabel. It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 expedition chart as Cape Mabel. It appears on a 1947 Argentine chart as Cabo Mabel. US-ACAN accepted the name Cape Mabel in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1970 Argentine gazetteer, as Punta Mabel.

Isla Mabel *see* **Mabel Island**

Islote Mabel *see* **Mabel Island**

Punta Mabel *see* **Cape Mabel**

Mabel Island. 60°40' S, 44°42' W. An island, 2.4 km NW of Cape Mabel, off the N coast of Laurie Island, in the South Orkneys. It appears on a 1930 Argentine chart with the descriptive name of Islote Piragua (a piragua is a type of canoe), and that is the name seen in the 1970 Argentine gazetteer. The feature was charted by personnel on the *Discovery II* in 1933, and named by them as Mabel Islet, in association with the cape. It appears as such on the expedition chart of 1934, on a 1945 Argentine chart as Islote Mabel, and on a 1947 Argentine chart as Isla Mabel. US-ACAN accepted the name Mabel Islet in 1952, and UK-APC followed suit on Sept. 20, 1955. On Jul 7, 1959, UK-APC renamed it Mabel Island, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1961.

Mabel Islet *see* **Mable Island**

Mabel One. A small, remote, and temporary U.S. field camp of the 1970s, in Marie Byrd Land, about 1300 km from McMurdo. There were some 15 scientists, 20 military, and 3 helicopters, in 5 Jamesway huts, which had been airlifted there.

Mount Mabelle Sidley *see* **Mount Sidley**

Mabus Point. 66°33' S, 93°01' E. An ice-covered coastal point, marked by prominent rock outcrops, just S of the Haswell Islands, marking the E limit of McDonald Bay, on the coast of Queen Mary Land. Charted by AAE 1911-14. Photographed aerially by OpHJ 1946-47, and newly charted by cartographer Gard Blodgett from these photos. Named by US-ACAN in 1955, for Lt. Cdr. Howard William Mabus (b. June 11, 1907, Miss. d. April 21, 1991, Shasta, Calif.), USN, executive officer on the *Edisto* dur-

ing OpW 1947–48. This feature later became the site of Mirnyy Station. ANCA accepted the name on Oct. 22, 1968.

Roca Mac Dugall *see* **Roca MacDugall**

Estrecho Mac (or **Mc**) **Farlane** *see* **Estrecho McFarlane**

Caleta Mc Intyre *see* **Alvaro Cove**

Fiord MacKeller *see* **Mackellar Inlet**

Glaciar Mc Neile *see* **McNeile Glacier**

McAdams, Charles Rupert, Jr. b. July 3, 1921, Belmont, NC, son of Dr. Charles Rupert McAdams, Sr., and his wife Grace Eloise Ezell. He married Betty Jane Silcox. While he was medical officer on OpHJ 1946–47, his first child was born, in Feb. 1947, and his parents contacted Radio WBT in Charlotte, who contacted Ed Murrow in NYC, who contacted the CBS stringer at base camp in Antarctica, who then contacted Dr. McAdams, who was a thousand miles away on the ice. Dr. McAdams later worked in Arabia, and then settled down to practice in Charlotte.

Mount Macalester. 79°41' S, 84°20' W. A prominent peak, rising to 2430 m, in the central part of the Soholt Peaks, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN for Macalester College, St. Paul, Minn., the alma mater of Gerald Webers (*see* **Webers Peaks**). They built a field hut here, called Camp Macalester.

MacAlister, Hector Ewan. b. Inverness, Scotland, son of Malcolm Johnson MacAlister and his wife Isobel Joy Russell. BAS biological field technician who wintered-over at Signy Island Station in 1988 and 1989, and for several summers between 1990 and 1995, at Husvik, in South Georgia, where he operated the biological field station.

Mount McAllister. 68°44' S, 65°54' W. Rising to 1975 m, on the W side of Weyerhaeuser Glacier, 6 km NW of Mount Blunt, on the E coast of Graham Land, overlooking the Larsen Ice Shelf. Photographed aerially in 1940 by USAS 1939–41, again in 1947 by RARE 1947–48 and by the USN between 1966 and 1969, it was surveyed from the ground by Fids from Base E between 1958 and 1961. Named by US-ACAN in 1977, for Lt. R.M. McAllister, of the U.S. Coast Guard, operations officer on the *Burton Island* during OpDF 1975 and OpDF 1976. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

MacAllister, Neil Robert Douilly. b. Aug. 26, 1942, Croydon, Surrey, son of Robert Henry Douilly MacAllister and his wife Sheila McCaig. He joined BAS in 1969, as a general assistant, and wintered over at Base E in 1970, 1971, and 1973. He died in Nov. 1990, in London.

McAllister Hills. 77°29' S, 160°22' E. A hill group, or bastion, between Shapeless Mountain and Wright Upper Glacier, in Victoria Land. Named by US-ACAN in 2004, for Major George R. McAllister, Jr., 109th Airlift Wing, New York Air National Guard, LC-130 command pilot in a pre-season McMurdo to Pole Station flight on Oct. 16, 1999. NZ-APC accepted the name on Nov. 30, 2004.

MacAlpine Hills. 84°13' S, 160°30' E. A chain of mainly ice-free bluff-type hills, they extend from Mount Achernar SW along the S side of Law Glacier, to Sylwester Glacier. Named by US-ACAN in 1966, for Ensign Kenneth D. MacAlpine, USNR, a member of VX-6, injured in the Neptune plane crash at McMurdo Sound in Oct. 1956 (*see* **Deaths**, 1956).

Punta Macaroni *see* [2]**Macaroni Point**

Macaroni penguins. *Eudyptes chrysolophus*. Discovered by Brandt, and found in the South Shetlands and South Orkneys. They are similar to rockhoppers (which are not found in Antarctica). They are 28 inches tall, weigh 8 pounds, are orange-plumed, and smell like goats. Four of them used to live on Signy Island, and these four would come back each year, amid all the chinstraps and gentoos, and live quite amicably in this foreign company. A macaroni was said to have been seen on Humble Island, near (what would become) Palmer Station, on Jan. 6, 1956, but this may have been a hoax.

[1]**Macaroni Point**. 61°52' S, 57°59' W. The SE tip of Ridley Island, N of King George Island, in the South Shetlands. Named by the Poles in 1984, for the macaroni penguins nesting there. This term will not be accepted by other countries, as it conflicts with the other Macaroni Point.

[2]**Macaroni Point**. 62°54' S, 60°32' W. The NE extremity of Deception Island, in the South Shetlands. It was known to the early 19th-century sealers, and Palmer refers to it as North Head in his log of Nov. 15, 1821. It appears on a 1953 Argentine chart as Punta Noreste (i.e., "northeast point"). Surveyed by FIDS in Jan. 1954, and named by them for the colony of macaroni penguins here. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1965. It appears on a 1964 Argentine map as Punta Macaroni, but on a 1967 map as Punta Nordeste. The Chileans call it Punta Froilán, for naval captain Froilán González, governor of the town of Punta Arenas, 1906–07, who authorized Adolf Andresen's whaling fleet to establish a station in Whaler's Bay, on Deception Island.

Mount McArthur. 71°11' S, 70°20' W. Rising to about 1450 m, it is the highest peak in the Walton Mountains, on Alexander Island. Surveyed by BAS from 1968 onwards. Named by UK-APC on Dec. 8, 1977, for Malcolm McArthur (b. 1947), BAS geophysicist who wintered-over at Base E in 1971 and 1972, and who worked in the N part of the island. US-ACAN accepted the name.

MacArthur, Allan Ian. b. May 22, 1928, Marvit, Hebrides, son of schoolmaster Donald W. MacArthur and his wife Annie Morrison McLeod. After studying at Glasgow University, he joined FIDS on a 3-year contract as a meteorologist, and was flown to Montevideo, catching the *John Biscoe* from there, and sailing via the Falklands and Base G, to Base B (Deception Island), where he summered for 3 months. Then he transferred to Grytviken, in South Georgia for the winter of 1951. Then back to Port Stanley in the Falklands, then to Base F for the winter of 1952. In 1953 the *John Biscoe* came to pick him up, taking him all the way back to Southampton, arriving there on June 11, 1953. He volunteered to go south again, but changed his mind, and began studying for the ministry (Church of Scotland). In Dec. 1954 he married Effie McLeod, and took whatever jobs he could (travel industry, courier, etc) to pay his way through school, finally being ordained in 1973, and moving to Lochcarron, in Ross-shire, where he stayed as parish priest.

McArthur, P. On Nov. 20, 1911, at Hobart, he signed on to the *Aurora* as 3rd engineer, at £7 10s per month, for the first voyage south during AAE 1911–14. He left the expedition at Hobart, on March 12, 1912.

McArthur Glacier. 71°20' S, 67°29' W. Between Christie Peaks and Swine Hill, flowing W from Palmer Land, through the N part of the Batterbee Mountains, into George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Alistair Hugh McArthur (b. 1941), BAS geophysicist who was base commander at Base E for the winters of 1967 and 1968. He was later much involved in Outward Bound and other adventure training, and senior consultant with Odyssey Consultants, in Melbourne. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

MacArty, Timothy *see* **McCarthy, Timothy**

MacAyeal Ice Stream. 80°00' S, 143°00' W. Flows W between Bindschadler Ice Stream and Echelmayer Ice Stream to the junction of the Shirase Coast and the Siple Coast, one of several major ice streams draining from Marie Byrd Land into the Ross Ice Shelf which were investigated and mapped by USARP personnel from 1983–84 onwards, and named Ice Stream A, Ice Stream B, etc., according to their position from S to N. Macayeal was Ice Stream E. *See also* (in this order) **Mercer Ice Stream**, **Whillans Ice Stream**, **Van der Veen Ice Stream**, **Kamb Ice Stream**, **Bindschadler Ice Stream**, and **Echelmeyer Ice Stream**. In 2003 US-ACAN renamed this one for Douglas R. "Doug" MacAyeal (b. 1954), of the Institute of Quaternary Studies at the University of Maine at Orono, a member of the USARP glaciological party during the Ross Ice Shelf Project of 1976–77, and later of the department of geophysical sciences at the University of Chicago, who studied these ice streams, as well as the Ross Ice Shelf, between 1989 and 2002. NZ followed suit with the naming on May 15, 2003.

MacAyeal Peak. 80°01' S, 159°43' E. Rising to 1100 m, 3.2 km WNW of Brandwein Nunataks, in the north-central part of the Nebraska Peaks. Named by US-ACAN in 2000, for Doug MacAyeal (*see* **MacAyeal Ice Stream**). NZ-APC followed suit with the naming on Feb. 20, 2001.

Mount Macbain. 83°06' S, 162°18' E. A prominent mountain, rising to 2205 m, between the mouths of Cornwall Glacier and Helm Glacier, in the Queen Elizabeth Range. Named by

US-ACAN in 1966, for Cdr. Merle Macbain (b. Sept. 1, 1904, Bottineau, ND. d. June 29, 1991), USN, World War II and Korea, public information officer, U.S. Naval Support Force, Antarctica, during OpDF III (i.e., 1957-58) and OpDF IV (i.e., 1958-59). He was technical adviser on the 1955 movie *Mr Roberts*.

MacBride, Hugh *see* **USEE 1838-42**

McCafferty Spur. 79°17' S, 156°04' E. On the N face of Butcher Ridge, in the Cook Mountains, 9 km NW of Mount Ayres. Named by US-ACAN in 2001, for Anne E. McCafferty, USGS geophysicist who, in 1991-92, as part of a joint USGS-German project, was one of the first group to make an aeromagnetic flight over Butcher Ridge and the Cook Mountains, while she was taking part in an aeromagnetic survey over the Ross Ice Shelf.

McCain Bluff. 70°19' S, 160°05' E. A bold rock bluff at the N side of the mouth of Svendsen Glacier, in the Usarp Mountains, in Oates Land. Mapped by USGS from ground surveys, and air photos taken by USN, 1960-62. Named by US-ACAN in 1970, for John C. McCain, biologist at McMurdo, 1967-68.

McCaleb, Thomas S. Instructor in the Institute of Geographical Exploration, at Harvard. Chief radio engineer on the *Jacob Ruppert* during ByrdAE 1933-35.

Punta McCall *see* **McCall Point**

McCall Point. 67°02' S, 66°38' W. On the E side of Lallemand Fjord, 6 km NW of Salmon Cove, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers in 1960, from aerial photographs taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W between 1958 and 1959. Named by UK-APC on Sept. 23, 1960, for John Gill McCall (1923-1954), engineer from the University of Alaska, who first measured the detailed internal movement of a cirque glacier (in Norway), in 1951-52. US-ACAN accepted the name in 1965. The Argentines call it Punta McCall.

McCallie Rocks. 68°18' S, 78°39' E. Two rounded, dark-gray rocks in the sea, about 100 m in diameter, in the Vestfold Hills. Survey Station NM/S/267 was established here in Jan. 1979. That season Michael Francis McCallie (b. June 8, 1947, Flint, Mich. d. Sept. 22, 1985, in a helicopter crash at Uniontown, Pa.) was the highly-decorated helo pilot who flew several expeditioners around the Vestfold Hills, and made the first ever aerial landing on these rocks. Named by ANCA.

Lake McCallum. 68°38' S, 78°01' E. A lake, 10 meters below sea level, on the Mule Peninsula of the Vestold Hills. Visited by an ANARE geological and biological party in Jan. and Feb. 1972. Named by ANCA for R. Alan T. McCallum, weather observer at Davis Station in 1969.

Mount McCallum. 71°01' S, 162°45' E. A prominent peak rising to about 2200 m, immediately NW of Mount Marwick, and 3 km NNW of Mount Sturm, at the head of Rastorguev Glacier, in the Explorers Range of the Bowers Mountains, in Oates Land, in northern Victoria Land. The name was proposed by Malcolm Laird (*see* **Laird Plateau**), for atomic physicist and mountain climber Graham John McCallum (b. 1928, NZ. d. 1981, in an avalanche on Mount Ruapehu), who worked in Antarctica in 1963-64. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

McCallum Pass. 67°23' S, 68°18' W. A pass running NW-SE between, on the one hand the NE ridge of Mount Mangin, and on the other Stokes Peaks and the ridge on the S side of Stonehouse Bay, leading from Wright Peninsula to the Fuchs Ice Piedmont, in the S part of Adelaide Island. Surveyed by Fids from Base T in 1961-62. Named by UK-APC on Feb. 12, 1964, for Hugh Campbell Gordon McCallum (known as Gordon McCallum. b. 1937), FIDS general assistant and mountain climber who wintered-over at Wordie House in 1960 and at Base T (Adelaide Island) in 1961. He was the first to traverse this pass, in 1961, with Alan Crouch. US-ACAN accepted the name later in 1964.

McCalman, Donald "Don." b. Sept. 1927, Glasgow. FIDS assistant surveyor in the South Shetlands, 1957-58, and leader at Base D for the winters of 1958 and 1959. He married Jean in Kenya, and retired to Kincraig, near Kingussie, Inverness-shire. On June 2, 2008 he had a bad stroke, which threw him into hospital.

McCalman Peak. 63°37' S, 57°47' W. Rising to 550 m (the British say about 400 m), it is the summit of a ridge that trends E-W 5 km N of Crystal Hill, on the N side of the Prince Gustav Channel, Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Don McCalman. US-ACAN accepted the name later in 1964.

Glaciar McCance *see* **McCance Glacier**

McCance Glacier. 66°43' S, 65°55' W. Flows NNW into Darbel Bay, just W of Widdowson Glacier, on the Loubet Coast, on the W coast of Graham Land. In 1960 FIDS cartographers plotted this feature in 66°46' S, 65°51' W, from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in the same season. Named by UK-APC on July 7, 1959, for biochemist and physiologist Robert Alexander McCance (1898-1993), of the department of experimental medicine at Cambridge, who advised British polar expeditions on sledging rations between 1938 and 1958. It appears on a British chart of 1961. In 1964, US-ACAN accepted this name, but with the coordinates shown at the head of this entry. The Argentines list it as Glaciar McCance, with almost the same coordinates as the American ones.

Mount McCann. 73°34' S, 77°37' W. Rising to about 700 m, between Espenschied Nunatak and Mount Thornton, in the west-central part of Snow Nunataks, S of Carroll Inlet, on the English Coast of Ellsworth Land. Discovered and photographed by USAS 1939-41. Mapped by USGS from USN air photos taken in 1965-66. Named by US-ACAN in 1968, for Capt. Kenneth Allan McCann (b. Oct. 22, 1913, Marysville, Wash. d. Aug. 23, 1999, Santa Rosa, Calif.), commander of the *Eltanin* from Sept. 1965 to Sept. 1966. He had also been skipper of the *Private Joseph F. Merrell*, during OpDF 65 (i.e., 1964-65). It appears on the 1968 USGS sketch map of the Bryan Coast. UK-APC accepted the name on Dec. 20, 1974. *See also* **McCann Point**.

McCann Glacier. 71°33' S, 164°33' E. A tributary glacier, flowing E between Mount Radspinner and Markinsenis Peak, from the E slopes of Mount Stirling, into Lillie Glacier. Mapped by USGS from ground surveys, and from air photos taken by USN, 1960-64. Named by US-ACAN in 1970, for J.M. McCann, USN, chief utilitiesman at McMurdo for the winter of 1962, the summer of 1963-64, and the summer of 1964-65.

McCann Point. 83°22' S, 169°38' E. The E side of the mouth of Beaver Glacier, where that glacier enters the Ross Ice Shelf. Named by US-ACAN in 1966, for Kenneth McCann (*see* **Mount McCann**).

Cape McCarroll *see* **McCarroll Peak**

McCarroll Peak. 66°03' S, 62°46' W. Rising to 1105 m, at the S side of Richthofen Pass, on the Oscar II Coast, on the E coast of Graham Land. In Oct. 1902, during SwedAE 1901-04, Nordenskjöld named the pass as Richthofen Valley. On Dec. 20, 1928, Wilkins flew over it and named the S side of the "valley" Cape McCarroll, for Henry George McCarroll (1901-1950), Detroit businessman and aircraft pioneer. In the 1956 U.S. gazetteer, the name Cape McCarroll was wrongly given to what would become Mount Fritsche. On March 3, 1958, UK-APC applied the McCarroll name to this peak (i.e., McCarroll Peak) instead, and US-ACAN followed suit in 1960.

[1]**Mount McCarthy**. 70°24' S, 66°31' E. A steep-sided ridge, rising to 1860 m (the Australians say 1555 m), the most easterly peak in the Porthos Range of the Prince Charles Mountains. First visited in Dec. 1956 by Bill Bewsher's ANARE Southern Party. Named by ANCA for James William Parker "Jim" McCarthy (b. Feb. 20, 1919, Port Melbourne, Vic. d. Aug. 17, 1994), senior meteorologist and 2nd-in-command at Mawson Station during the winter of 1956. He had also led the wintering-over teams at Heard Island in 1950 and Macquarie Island in 1952 (neither of which is in the Antarctic). US-ACAN accepted the name in 1962.

[2]**Mount McCarthy**. 72°35' S, 166°14' E. Rising to 2865 m (the New Zealanders say 2895 m), 1.5 km NW of Schofield Peak, at the N side of the Webb Névé, in the Barker Range, and 20 km S of Mount Watt, bordering on the plateau, in Oates Land, in Victoria Land. Named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for Mortimer McCarthy. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

McCarthy, Mortimer "Morty." b. April 15, 1882, Kilbrittain, near Kinsale, Cork, Ireland, son of John and Mary McCarthy, and brother of Tim McCarthy. A merchant seaman from 1901, he served as such in the South African War and on Nov. 25, 1910, at Lyttelton, NZ, he joined the crew of the *Terra Nova* as an able sea-

man for BAE 1910-13. He lost two fingers to frostbite during that expedition. He served in the Merchant Navy during World War I, and settled in Lyttelton, working on local ships, and then as night watchman at Lyttelton Harbor. In 1962-63 he visited Antarctica again with 2 other veterans of that expedition, as guests of the U.S. Navy. At that stage he was the oldest man ever to set foot on Antarctica. He died on Aug. 11, 1967, in a fire at his home.

McCarthy, Timothy F. "Tim." b. July 15, 1888, Lower Cave, Kilbrittain, near Kinsale, Cork, Ireland, son of John and Mary McCarthy, and brother of Morty McCarthy. He joined the Royal Navy, and was able seaman, RNR, on the *Endurance* during BITE 1914-17. He was one of the *James Caird* party. Three weeks after landing in England from the expedition, he was a leading seaman on the *Narragansett*, and was killed at his gun post, in the English Channel, on his first day of action against the enemy — March 16, 1917.

McCarthy Glacier. 86°04' S, 127°24' W. A broad glacier at the S side of the Wisconsin Plateau, it flows W to merge with the lower part of Olentangy Glacier before the combined glaciers enter Reedy Glacier just SW of Mount McNaughton. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Robert J. McCarthy (q.v.), U.S. Marine Corps pilot who made flights over this general area during OpHJ 1946-47.

McCarthy Inlet. 78°50' S, 45°00' W. Also called Fierle Bay. Ice-filled, it is the largest and most northerly of 3 inlets indenting the E side of Berkner Island (*see also* **Roberts Inlet** and **Spilhaus Inlet**), on the Filchner Ice Shelf. Discovered aerially by personnel from Ellsworth Station in 1957-58, who surveyed it from the ground, and roughly plotted it in 78°50' S, 46°00' W. They named it for Lt. Cdr. Charles J. McCarthy, USNR, VX-6 commander at Ellsworth during IGY (1957-58), and military leader of the station for the winter of 1957. At least that's the story that's come down. The reason for the question mark is that they called it McCarty Inlet, not McCarthy Inlet, and it seems hardly likely that US-ACAN would approve that spelling in 1960, and that it would appear as such on an American chart of 1961 and a U.S. map of 1962. But that's what happened. The mistake is so glaring, and was perpetuated for so long, that one might suspect that the feature was not named for Mac McCarthy at all, but for Gen. Chester McCarty. However, McCarthy was, indeed, at Ellsworth in 1957, so it has to be for him that the feature was named. US-ACAN rectified the error in 1965, and the new name, McCarthy Inlet, is on a U.S. map of 1970. The inlet was further delineated from U.S. Landsat imagery of 1973. UK-APC accepted McCarthy Inlet on Feb. 7, 1978, and it appears in the British gazetteer of 1980, plotted in 78°45°S, 46°20' W. It appears in the British gazetteer of 1986, plotted in 78°45' S, 44°30' W. This is very different from the U.S. coordinates.

McCarthy Island. 67°16' S, 59°25' E. About 4 km long and 3 km wide, separated by a narrow strait from Fold Island, which lies just to the SW, off the Kemp Coast of Enderby Land. Photographed aerially by LCE 1936-37, and mapped by Norwegian cartographers from these photos in 1946, as part of Fold Island. In 1961, Dave Trail, who was carrying out ANARE geological investigations in the area, identified it as a separate island. Named by ANCA for W.R. McCarthy (now deceased), Australian petrologist with the Australian Mineral Development Laboratories (at Adelaide), who described several hundred specimens from Antarctica. US-ACAN accepted the name in 1970.

McCarthy Nunatak. 69°07' S, 64°45' E. A small nunatak, it just pokes above the surface of the surrounding ice plateau, about 8.5 km SSE of Depot Peak, in Mac. Robertson Land. Discovered aerially in 1970 by ANARE. Named by ANCA for Ian C. McCarthy, who wintered-over as senior weather observer at Mawson Station in 1970, and who was a member of the ANARE Prince Charles Mountains survey party of 1971. US-ACAN accepted the name in 1973. Mr. McCarthy was back in Antarctica in the 1987-88 summer field season, as meteorological technical officer. *See also* [1]**McCarthy Point**.

[1]**McCarthy Point**. 69°28' S, 76°03' E. A small, rocky cape projecting from the ice plateau into the S side of Wilcock Bay, in the Larsemann Hills. Named by ANCA for Ian McCarthy (*see* **McCarthy Nunatak**).

[2]**McCarthy Point**. 74°25' S, 130°59' W. An ice-covered point marking the NE extremity of Grant Island, on the seaward edge of the Getz Ice Shelf. Discovered and charted from the *Glacier* on Feb. 4, 1962. Named by US-ACAN in 1966, for Lt. (jg) J.F. McCarthy, USN, disbursing officer on the *Glacier* at the time.

McCarthy Ridge. 74°37' S, 163°03' E. A broad, steep-sided, mainly ice-covered ridge forming the E wall of Carnein Glacier, in the foothills of the SE part of the Eisenhower Range, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Peter C. McCarthy, who wintered-over as biolab manager at McMurdo in 1966.

McCarthy Valley. 85°18' S, 119°20' W. An ice-filled valley, 5 km long, between Peters Butte and Todd Ridge, in the NW part of the Long Hills, in the Horlick Mountains. Mapped by USGS from ground surveys, and from USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for James E. McCarthy, meteorological electronics technician who wintered-over at Byrd Station in 1960.

McCarty, Chester Earl. b. Dec. 31, 1905, Pendleton, Oregon, son of Albert Guy McCarty and his wife Nancy Elizabeth Odom. On July 27, 1926, in Portland, he married Julia Gromoff. Trained in law, he was assistant attorney general of Oregon from 1930 to 1936. He served in the Air Force during World War II, and resumed his law practice in Oregon after the war. He was active in the Air Force Reserve, and was called up again for Korea. In 1954, now a major general, he became commander of the 18th Air Force, and flew many times in the Arctic while helping create the DEW Line. On Oct. 26, 1956 he flew in the Globemaster (C-124) that made one of the first flights over the South Pole since Byrd's 1947 flight. From 1957 to 1959 he commanded the 12th Air Force, the first all-supersonic command. In 1963 he became chief of staff for air forces in Europe, and retired on March 1, 1966. His wife died in Sept. 1989, and he died on April 5, 1999, in Portland, Oreg.

McCarty Glacier. 72°06' S, 99°24' W. A broad glacier flowing into the head of Potaka Inlet, on the N side of Thurston island. Named by US-ACAN in 2003, for Owen "Mac" McCarty, of Sonoma, Calif., chief photographer's mate on the Martin Mariner that crashed on Thurston Island on Dec. 30, 1946, during OpHJ 1946-47. He survived. In the May 13, 1947 edition of the *Saturday Morning Post* appeared his account of OpHJ, called "Dead Man's Diary." He also appears in the 1948 documentary movie *The Secret Land*.

McCaslin Nunatak. 85°38' S, 140°57' W. An isolated nunatak, 8 km S of the W end of the Bender Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for James C. McCaslin, a member of the U.S. Army Aviation Unit which supported the USGS Topo East survey here in 1962-63.

Mount McCauley. 73°12' S, 63°15' E. A prominent rock outcrop just E of Mount Scherger, between that mountain and Mount Dummett, on the N side of the Fisher Glacier, in the S part of the Prince Charles Mountains. Discovered aerially by ANARE in 1956, and visited by an ANARE party in 1960. Named by ANCA for Air Marshal Sir John Patrick Joseph McCauley (1899-1989), chief of the Australian Air Staff, 1954-57, and plotted by them in 79°09' S, 63°09' E. US-ACAN accepted the name in 1962. The Russians call it Massif Slon.

McCauley Rock. 83°02' S, 48°53' W. Rising to 1020 m, just off the NE edge of the Lexington Table, 10 km N of Mount Zirzow, in the Forrestal Range of the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from USGS ground surveys conducted in 1965-66. Named by US-ACAN in 1968, for Clyde J. McCauley (b. April 27, 1936, Arlington, Va.), who joined the U.S. Navy in Oct. 1953, and wintered-over as a Seabee at Ellsworth Station, 1957. He had not been assigned to stay for the winter, but wound up replacing a man who had to go back home. He retired from the Navy in Feb. 1979. UK-APC accepted the name on Feb. 3, 1971, and it appears in the British gazetteer of 1974.

McCaw, Homer Wiley, Jr. b. March 15, 1924, son of Philadelphia dentist Homer McCaw and his wife Pearl. He joined the USN in 1952 and served in Korea. He was a lieutenant in the USNR when he led the helicopter division of the U.S. Navy Antarctic Expedition, 1954-55. He retired as a lieutenant commander in 1958, and died on June 10, 1998, in Carlisle, Pa.

McCaw Ridge. 75°21' S, 65°00' W. An isolated ridge, about 900 m above sea level, 6 km S of the central part of Ueda Glacier, WSW of Hansen Inlet, on the Orville Coast, near the base of the Antarctic Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Dale McCaw, construction electrician who wintered-over at Pole Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and the name was accepted by UK-APC on Dec. 20, 1974.

McClary, Nelson C. "Mac." b. Nov. 15, 1921, Illinois, son of civil engineer George B. McClary and his wife Adelaide. In the late 1920s they moved to Pasadena, Calif. A former naval officer, he was ship's mate on the *Port of Beaumont, Texas*, during RARE, 1947-48, and broke his hand on the way south. On May 17, 1947, he fell 50 feet off a cliff, crashed through the ice into the water, and survived. Later on the expedition he broke his collarbone when he was flung over the front of a sledge that stopped suddenly. Given all that, he was bound to die, and he did, on Oct. 21, 2001, in Middleburg, Va.

McClary Glacier. 68°04' S, 67°00' W. A glacier, 16 km long and 3 km wide, flowing SW along the N side of Butson Ridge into Marguerite Bay, between Cape Calmette and the Debenham Islands, off the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936-37 by BGLE 1934-37. Its upper part was surveyed more accurately by Fids from Base E in 1946-48 (they did the lower part in 1948-50). The glacier was plotted in 68°04' S, 66°56' W. Named by UK-APC on Aug. 31, 1962, for George B. McClary, the father of Nelson McClary (*see also* **McClary Ridge**). US-ACAN accepted the name later in 1962.

McClary Ridge. 66°55' S, 64°09' W. A small, crescent-shaped ridge, 380 m above sea level, 8 km SSE of Mount Hayes, on the S side of Cole Peninsula, Mill Inlet, on the Foyn Coast of Graham Land. In Dec. 1947 it was charted by Fids from Base E, and photographed aerially by RARE 1947-48. It was plotted in 66°55' S, 64°03' W. Named during that same period by Finn Ronne for George Brewer McClary, of Winnetka, Ill., father of Nelson McClary, and a contributor to RARE. US-ACAN accepted the name in 1953. It was re-surveyed by Fids from Base E in 1963-64. UK-APC accepted the name on July 21, 1976. *See also* **McClary Glacier**.

McCleary Glacier. 79°33' S, 156°50' E. About 16 km long, it flows S into Darwin Glacier, just W of Tentacle Ridge. Mapped by USGS from tellurometer surveys, and from USN air photos taken between 1960 and 1963. Named by US-ACAN in 1965, for geographer Lt. George McCleary, public information officer on the staff of the U.S. Antarctic Projects Officer, 1959-61, who helped create the bulletin put out by that office. That bulletin eventually became the *Antarctic Journal*.

McClelland Ridge. 77°27' S, 162°10' E. A high rock ridge between Sanford Valley and Thomas Valley, in the E part of the Olympus Range of Victoria Land. Named by US-ACAN in 1997, for Elias E. McClelland, topographic engineer, leader of the 1971-72 USGS field party that established a network of horizontal and vertical control over a 6000 sq km area of the McMurdo Dry Valleys to support the compilation of 8 topographic maps at a scale of 1:50,000. These maps, bounded by 77°15' S and 77°45' S, and 160°E and 164°E, were published by USGS in 1977.

Mount McClintock. 80°13' S, 157°26' E. Rising to 3490 m (the Australians say 3200 m) above sea level, the highest mountain in the Britannia Range, it surmounts the S end of Forbes Ridge, 10 km E of Mount Olympus. Discovered during BNAE 1901-04, and named by them for Admiral Sir Leopold McClintock (*see* **M'Clintock Bastion**), a member of the Ship Committee for the expedition. US-ACAN accepted the name in 1947.

M'Clintock Bastion. 80°28' S, 22°28' W. A mountain rising to about 1400 m (the British say about 1300 m), to the W of Mount Kelsey, in the Pioneers Escarpment, in the E portion of the Shackleton Range. Photographed from the air by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Admiral Sir Francis M'Clintock (1819-1907), RN, Arctic explorer and pioneer in using Eskimo methods of overland travel. The name appears in the 1974 British gazetteer. US-ACAN accepted the name.

McClintock Point. 77°33' S, 163°40' E. At the N side of the entrance to Explorers Cove, New Harbor, McMurdo Sound, on the Scott Coast of Victoria Land. Named by US-ACAN in 1997, for James B. McClintock, professor of biology at the University of Alabama, at Birmingham, who studied the benthos of McMurdo Sound west of Ross Island, and along the coast from Granite Harbor to Cape Chocolate, including extensive work in New Harbor close to this point. NZ-APC accepted the name.

McClintock Ridge. 82°03' S, 161°00' E. A prominent, ice-covered E-W ridge, the W portion of which, near Mansergh Wall, rising to an altitude of over 1400 m, 10 km N of Rubin Peak, in the Carnegie Range, in the Churchill Mountains. The ridge comprises several aligned summits that descend the E slope of the range for 10-15 km, ending at altitudes of about 400 m at Algie Glacier. Named by US-ACAN in 2003, for Barbara McClintock (1902-1992), of the department of genetics, Carnegie Institution, 1942-67, who won the Nobel Prize for physiology or medicine in 1983. NZ-APC accepted the name on Feb. 27, 2003.

McClinton Glacier. 74°40' S, 114°00' W. Between the base of Martin Peninsula and Jenkins Heights, it flows ENE into the Dotson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN for Racie A. McClinton, Jr., USN, VX-6 flight engineer on LC-130 Hercules aircraft, who was on 9 different OpDF deployments up to 1977.

Mount McClung. 77°11' S, 144°26' W. Between Asman Ridge and Mount Crow, 3 km SW of Mount Gonzalez, in the Sarnoff Mountains, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Lt. Herbert C. McClung (b. 1938), USN, officer-in-charge of Byrd Station for the winter of 1965.

McCollum Peak. 65°32' S, 64°02' W. Rising to 735 m, SW of Chiloé Point, Beascochea Bay, and 3 km SE of Mount Waugh, on the Graham Coast, on the W coast of Graham Land. Charted by FrAE 1908-10. Photographed aerially by FIDASE 1956, and surveyed from the ground by Fids from Base J in 1956-57. Named by UK-APC on July 7, 1959, for Elmer Verner McCollum (1879-1967), biochemist at the University of Wisconsin who, in 1913, with his colleague Marguerite Davis, identified a soluble nutrient in butterfat, which turned out to be Vitamin A. From 1917 to 1944, Mr. McCollum was professor of biochemistry at Johns Hopkins. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

McConchie Ridge. 78°10' S, 162°45' E. A prominent rock spur-like ridge, trending SE from Salient Peak into Walcott Glacier, in the Royal Society Range, in Victoria Land. Named in 1985, by NZ-APC, for John A. McConchie, field assistant with the NZARP geological party to this area in 1979-80, led by R.H. Findlay. McConchie joined the party as a replacement for Adrian Daly, who had suffered from frostbite.

Islotes McConnel *see* **McConnel Islands**

McConnel Islands. 66°29' S, 65°51' W. A group of islands off Erskine Glacier, opposite the N side of Darbel Bay, SE of the Kidd Islands, off the Loubet Coast, on the W coast of Graham Land. The group was photographed from the air by FIDASE in 1956, and surveyed from the ground by Fids from Base W in 1956-57. Named by UK-APC on Sept. 23, 1960 for James Cannan McConnel (1860-1890), British physicist specializing in the plastic deformation of ice (he worked partly with D.A. Kidd). It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call the group Islotes McConnel. One of these islands was mapped in 1947 by the Chileans, as Islote Trumao (q.v.), and occasionally the name Islotes Trumao has been applied to the whole group.

McCormack, David Rockley "Dave." He wintered-over at Casey Station in 1972, and as plant inspector (mechanical) at Mawson Station in 1974, 1978, 1983, 1986, and 1988. In the mid-1990s he was working for the Australian Antarctic Division, restoring historical equipment and vehicles for the ANARE Jubilee project of 1997.

Cape McCormick. 71°50' S, 170°58' E. A conspicuous cliff marking the E extremity of Adare Peninsula, 20 km southward of Cape Downshire, and northwestward of the Possession Islands, on the NW coast of the Ross Sea, in Victoria Land. Discovered by Ross in 1841, and

named by him for Robert McCormick. Originally thought to be an island, and called McCormick Island, or McCormick's Island. US-ACAN accepted the name Cape McCormick in 1947, and it appears in the 1958 NZ gazetteer.

Mount McCormick. 77°00' S, 144°26' W. A mountain, 3 km SE of Mount Ralph, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Bill McCormick.

McCormick, James *see* **USEE 1838-42**

McCormick, Patrick Duane "Rediron." b. Feb. 25, 1935, Flint, Mich. He grew up on a farm in northern Michigan, son of meat cutter James Francis McCormick and his wife Maddie Lucile Olmstead. He joined the Navy on Dec. 1, 1953, and after boot camp at Great Lakes Naval Station was sent to Port Hueneme, Calif., to train as a Seabee. Then to Davisville, RI, then on to Bermuda Naval Air Station where, although he didn't know it at the time, he helped construct a satellite tracking station. He was in Davisville when he saw the notice for "volunteers for the South Pole," and he shipped south on the *Wyandot* (q.v. for itinerary). Charlie Bevilacqua was his crew boss as they helped build McMurdo. On Feb. 21, 1956, his 21st birthday, he was baptized at McMurdo. Dick Prescott was his godfather. After wintering-over there he was one of the 3rd party of Seabees to fly to the Pole, on Dec. 1, 1956, to build South Pole Station (q.v.), and, on Dec. 29, 1956, he was among the 2nd party to fly back to McMurdo. On Feb. 10, 1957 he shipped out of McMurdo on the *Curtiss* (q.v. for itinerary). Back at Davisville, he was written up for being out of uniform, and Dave Canham (q.v.) helped him get to Barbados, where he helped build another satellite tracking station. He was discharged from the Navy on Nov. 30, 1957, 3 weeks after he had married Elizabeth Anne Gibbons on Nov. 9, 1957. In Sept. 1958 he went to Michigan College of Mining & Technology, leaving in 1960 to work for the state of Michigan as a surveyor for the new Interstate Highway system. Then on to Ohio, and finally Rhode Island, as a surveyor. He retired in 1997.

McCormick, Robert. b. July 22, 1800, Runham, near Great Yarmouth, son of a naval surgeon Robert McCormick and his wife Mary Smith. In 1821 he entered the RN, and trained under the greatest surgeon of his (or any other) day, Sir Astley Paston Cooper. He was assistant surgeon on the *Hecla* during Parry's North Pole expedition of 1827, and in 1831 surgeon on the *Beagle*. It was on this expedition that his role of naturalist was usurped by a young Charles Darwin, and McCormick quit the expedition in Brazil. He was surgeon on the *Erebus* during RossAE 1839-43, but most of his time was spent geologizing and bird collecting. The South Polar skua was named for him (*Catharacta mccormicki*). He was one of the main proponents of the rescue drive for the missing Sir John Franklin, and in 1852, in the forlorn *Hope*, went to the Arctic to look for him. He was promoted to deputy inspector general in 1859, and placed on the retired list in 1865. In 1884 he wrote his autobiography, *Voyages of Discovery in the Arctic and Antarctic Seas and Around the World*. He died on Oct. 28, 1890, in Wimbledon. He was brought to life in John Darnton's book *The Darwin Conspiracy*.

McCormick, William S. "Bill." b. Jan. 3, 1913, Lansdowne, Pa., son of Clara H. McCormick. Flying since he was 15, he was the airplane and autogiro pilot on the shore party of ByrdAE 1933-35. On Jan. 29, 1934 he made Antarctica's first ever autogiro flight, from the ship to Little America. His brother Joe was killed in 1934 while flying an autogiro in Pa., while Bill was in Antarctica. Ironically, on Sept. 30, 1934, at Little America, Bill crashed in his autogiro, breaking his left arm. On Oct. 3, 1934 he spoke to his mother. He was F.S. Dane's best man in 1937. He died in Scottsdale, Ariz., on Oct. 23, 2001.

McCormick('s) Island *see* **Cape McCormick**

McCormick's skua *see* **Skuas**

Mount McCoy. 75°52' S, 141°10' W. A high, table-topped massif, with dark, snow-free vertical walls, at the E side of Land Glacier, in Marie Byrd Land. Discovered by personnel from West Base during USAS 1939-41, and named Mount Alma McCoy for James C. McCoy's wife, Alma (1905-1983; *see next entry*, **McCoy James Charles**). US-ACAN accepted the name in 1947. The name was later shortened.

McCoy, James Charles "Jim." Also known as "Mac." b. May 9, 1905, Bountiful, Utah, as Charles James McCoy, son of Arthur Luzerne McCoy and his wife Sarah May Long. He later changed his name to James Charles McCoy. In 1921 he enlisted in the U.S. Navy, as an apprentice seaman, and in 1929 completed flight training at Pensacola, and went on an aerial survey expedition to Puerto Rico and Nicaragua. On April 16, 1931, in Chadbourn, NC, he married Alma Vivien Gay. From 1934 to 1937 he was flying in the Pacific Islands. As an aviation chief machinist's mate, he volunteered to go on USAS 1939-41, as chief pilot and executive officer at Little America (West Base). He was promoted to lieutenant (jg) and served in World War II at Jacksonville, training flyers. He was back again during OpHJ 1946-47, as a lieutenant commander, and was the pilot who carried Byrd to the Pole on Feb. 16, 1947. After that, and now promoted to commander, he served in Greenland. He went to Little America during OpDF II (i.e., 1956-57), and was going to winter-over there in 1957 as Bert Crary's assistant, but developed a heart problem and had to leave early before the winter. He was replaced by Boy Scout Richard Chappell. He died on March 3, 1981, in Jacksonville, Fla.

McCraw Glacier. 80°07' S, 156°35' E. Flows N from the NW slopes of Mount Olympus, westward of Johnstone Ridge, to enter Hatherton Glacier, in the Britannia Range. Named by a team from University of Waikato (in Hamilton, NZ) in 1978-79, led by Mike Selby, for John Davidson McCraw (b. 1925), dean of science at the university, who himself had been part of a 1959-60 field party to the McMurdo Dry Valleys. US-ACAN accepted the name.

McCrillis, Harold George "Squirrely." b. Aug. 31, 1927, Grafton, NH. He was a geographer when he enlisted in the Navy on Nov. 2, 1945, and was a Seabee electrician 2nd class when he answered the notice for "volunteers for the South Pole," and went to Davisville, RI, for training. He shipped south to McMurdo Sound, where he helped build the base. He wintered-over there in 1956, and on Dec. 1, 1956 was a member of the 3rd (and last) party of Seabees to be flown to the Pole, to build South Pole Station (q.v.). When the job was done, he was among the 2nd party to fly back to McMurdo, on Dec. 29, 1956. He was construction electrician at Byrd Station in 1959, and was also back at Pole Station for the winter of 1964, as a construction electrician with the U.S. Navy support team. He died on March 26, 1990, in NH.

McCrillis Nunatak. 85°27' S, 128°55' W. Marks the N end of the Gierloff Nunataks, on the N side of the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Harold McCrillis. The name is occasionally seen (erroneously) as McCrilliss Nunatak.

McCrilliss Nunatak *see* **McCrillis Nunatak**

McCristell *see* **McCrystal**

Mount McCrory. 75°29' S, 139°26' W. A mountain, 3 km ESE of Mount Vance, in the E part of the Ickes Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Capt. Eugene E. McCrory (b. 1923), U.S. Coast Guard, captain of the *Glacier* during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70).

McCrystal, William A. b. NZ. Crewman on the *Bear of Oakland*, 1934-35, i.e., during the 2nd half of ByrdAE 1933-35. This gentleman's name is seen spelled in a variety of ways, but the correct way is most likely to be McCrystal.

McCuddin Mountains. 75°47' S, 128°42' W. A small cluster of mountains consisting mainly of 2 large mountains — Mount Flint and Mount Petras — along with several scattered peaks and nunataks, the group is located 60 km E of the Ames Range, in Marie Byrd Land. Discovered and photographed during a flight from West Base on Dec. 14, 1940, during USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Rear Admiral Leo Bob McCuddin (b. Feb. 2, 1917, Sioux City, Ia. d. Nov. 15, 1983, Reno), USN air ace who flew Hellcats during World War II, and who was commander of U.S. Naval Support Force, Antarctica, 1972, and commander of Guantánamo Bay, 1972-73.

Mount McCue. 84°45' S, 174°41' W. A peak rising to 1710 m (the New Zealanders say about 2500 m), about 9 km NW of Mount Wade, in the Prince Olav Mountains, in the Queen Maud Mountains. Discovered by USAS 1939–41 during the flight of Feb. 29-March 1, 1940, surveyed by

Bert Crary in 1957-58, and named by him for James A. McCue, USN, radio mechanic who was in charge of Beardmore Glacier Camp, in 1957-58. US-ACAN accepted the name in 1962.

McCue Bluff. 73°31' S, 68°23' E. A rock bluff near the S end of the Mawson Escarpment, between England Glacier and Tingey Glacier. Plotted from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Clarence Gordon "Clarrie" McCue (b. 1927. d. June 15, 1992), who was then acting assistant secretary of the ionospheric prediction service branch, of the Australian department of science. He was later (1979-84) acting director of the Antarctic Division. *See* **ANARE** for dates of Mr. McCue's appointments.

McCuistion Glacier. 84°49' S, 175°30' W. A tributary glacier, 6 km long, it flows W along the N side of Lubbock Ridge into Shackleton Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Joshua P. McCuistion (b. June 17, 1931. d. Dec. 23, 1996, Kirtland, NM), USN, construction driver 1st class, who was injured in an Otter airplane crash on Dec. 22, 1955, following take-off from the Cape Bird area.

MacCurrach, Peter, Jr. b. Aug. 3, 1910, Hamilton, Mass., son of Scottish immigrant farm superintendent Peter MacCurrach and his Irish wife Bridget. A merchant marine, he was 3rd assistant engineer on the *Jacob Ruppert*, 1933-34, and 2nd assistant engineer, 1934-35. He retired to Morgantown, W. Va., and died on April 23, 1997, in Sarasota, Fla.

McDaniel Nunatak. 75°48' S, 161°48' E. A ridge-like projection at the N side of the head of Davis Glacier, about 8 km N of Mount George Murray, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1968, for James C. McDaniel, satellite geodesist who wintered-over at McMurdo in 1966.

McDermott Glacier. 78°20' S, 162°04' E. Flows W from the Royal Society Range between Dot Cliff and Berry Spur, in Victoria Land. Named by US-ACAN in 1994, for USGS cartographer Cathleen McDermott, a member of the USGS satellite surveying team at Pole Station for the winter of 1993.

Cabo MacDonald *see* **Cape MacDonald**

Cape MacDonald. 71°32' S, 61°11' W. A headland, an almost vertical wall of bare rock, rising to between 427 m and 435 m, which forms the SE side of the entrance to Odom Inlet, 11 km S of Cape Howard, on the Black Coast, on the E coast of Palmer Land. Discovered and surveyed in Dec. 1940 by USAS, and named by them as Cape McDonald [sic], for J.E. MacDonald, field representative and assistant to Byrd, and who, at the end of the expedition, succeeded Bob English as executive secretary of USAS. The name appears correctly spelled on a 1943 U.S. Hydrographic Office chart, and US-ACAN accepted the name Cape MacDonald in 1947. In Nov. 1947 a joint team of RARE-FIDS re-surveyed it. It appears on a 1949 Argentine chart as Cabo McDonald [sic], and over the years has appeared on various other Argentine and Chilean charts with a variety of spellings (MacDonal, Mac Donald, etc), a variety not so much wide as comfortingly reciprocal, given a like confusion in the English-speaking world over, say, Spanish accent marks. UK-APC accepted the name Cape MacDonald, on Jan. 28, 1953, and it appears as such on a British chart of 1954, and in the British gazetteer of 1955. The Argentine gazetteer of 1970 has it right, with Cabo MacDonald. The Chilean gazetteer of 1974 has it wrong, with Cabo Mac Donald.

Glaciar McDonald *see* **McDonald Ice Rumples**

Mount Macdonald. 84°31' S, 173°10' E. A distinctive mountain, rising to 3630 m on the ice divide between, on the one hand Ludeman Glacier and the Beardmore Glacier, and on the other hand Pain Névé, about midway between Dudley Head and Mount Donaldson, in the Commonwealth Range. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Thomas Lachlan ("Sir Tom" from 1963) Macdonald (1898-1980), minister of foreign affairs, 1954-57, and of defence, 1949-57, when BCTAE 1955-58 was being planned, and who was a major factor in getting NZ involved in Antarctica. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount McDonald. 72°30' S, 166°36' E. Rising to 2470 m (the New Zealanders say about 2700 m), on the N side of, and at the head of, Trafalgar Glacier, 6 km NW of Mount Burton, and 24 km E of Mount Watt, in the Victory Mountains of Victoria Land. Named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for [2]William McDonald. US-ACAN accepted the name in 1964.

McDonald, Alexander *see* **USEE 1838-42**

McDonald, Angus. b. Aug. 27, 1871, 49 Burnhouses, Woodmuir, West Calder, Midlothian, Scotland, but grew up partly in Livingstone, West Lothian, son of Alexander James McDonald and his wife Agnes Kennedy. After a spell at laboring in Livingstone, he moved to Invercargill, NZ, joined the Merchant Navy, and worked on several Union Steamship Company ships. He was a fireman on the *Terra Nova* during BAE 1910-13.

Macdonald, David Iain Macpherson. b. May 31, 1953. BAS geologist who summered-over at South Georgia, 1975-76 and 1976-77. In 1984 he became senior sedimentologist at BAS, and summered at Palmer Land and Alexander Island in 1984-85. In 1993 he became chief geologist with the Cambridge Arctic Shelf Programme.

McDonald, Edwin Anderson. b. Nov. 23, 1907, Calif., son of Orion McDonald. A USN career officer, he graduated from the Naval Academy in 1931, served on destroyers during World War II, and was commander of the *Burton Island* during OpW 1947-48. In 1956 he was picked to be commander of Task Force 43.7, i.e., that force of 2 ships (the *Staten Island* and the *Wyandot*) which went south to establish Ellsworth Station in the summer of 1956-57 for IGY. He was on the *Glacier*, 1957-58, and in 1958-59 was deputy commander, U.S. Naval Support Force, Antarctica, in charge of ships, a post he held until he retired in 1962. Later that year he was back, as a consultant on the *Edisto*. On April 13, 1964, at Harvard, he married Jessie Bell MacKenzie, the librarian of the Agassiz Museum at Harvard. He was director of Polar Operations for Lindblad Travel from 1968 to 1972, and was 4 seasons as commander of the *Lindblad Explorer*, although he didn't travel south. He wrote *Polar Operations* in 1969. He died on March 19, 1988, in Williamsburg,V a.

MacDonald, Ewen. b. 1882, Balmaqueen, Kilmarnay, Isle of Skye. Able seaman on the *Aurora*, 1916-17, when that vessel went south to Cape Evans to relieve the Ross Sea Party of BITE 1914-17.

MacDonald, Joseph Elliot. Known as Elliot. He joined FIDS in 1959, as an ionosphere physicist, and wintered-over at Halley Bay Station in 1960.

Macdonald, John Alan. b. Auckland, NZ. He got his degree at Stanford, and his PhD in Texas. A lecturer in zoology at the University of Auckland, he made 11 visits to Antarctica with NZARP.

[1]**McDonald, William** *see* **USEE 1838-42**

[2]**McDonald, William**. b. 1892, NZ. Crew member of the *Terra Nova* during BAE 1910-13. After the expedition, he became a customs man in Lyttelton. When World War I broke out, he married a Scottish girl, and that very day set sail for Europe as a corporal in the Canterbury Infantry Battalion. He gave up his stripes to fight at Gallipoli, where he was wounded, but made them back in short order. With two others from Scott's expedition, he was a guest of the U.S. Navy in Antarctica in 1962-63. He was alive in NZ in the 1980s.

MacDonald, William R. b. 1925, Laurel, Md., but grew up in Washington, DC, son of carpenter William R. MacDonald and his wife Ella May, who was a a draftswoman with the Army Map Service. After George Washington University and the U.S. Department of Agriculture's graduate school, he joined USGS in 1942 as a cartographer, working with the Alaskan branch, served in the U.S. Marine Corps during World War II, and, in 1954, while working in the special maps branch, became involved in the production of Antarctic maps, using aerial photographs taken during OpHJ 1946-47 and OpW 1947-48. These maps were widely used by IGY scientists in 1957-58. In the 1960s he planned all USN aerial photographic flights, and supervised the more than one million square miles of such photography used in making maps of the continent, going down to Antarctica each austral summer between 1960 and 1967 and taking part in aerial photography missions. He married Beatrice. In 1972 he became chief of international activities for the USGS's topographic division, and died of cancer on Nov. 9, 1977, at Anne Arundel General Hospital, in Annapolis.

McDonald Bank. 75°30' S, 26°35' W. A sub-

marine feature in the Weddell Sea. Named by Heinrich Hinze, of the Alfred Wegener Institute, in Germany, in association with the McDonald Ice Rumples. The name was accepted internationally in June 1997.

McDonald Bay. 66°36' S, 92°44' E. An open bay, between 16 and 20 km wide at its entrance between Adams Island (to the W) and the Haswell Islands (to the E), immediately W of Mabus Point, near Mirnyy Station, on the coast of Queen Mary Land, in East Antarctica. Drygalski Island is in this bay. Charted by AAE 1911-14. Named by US-ACAN in 1955, for Edwin A. McDonald.

McDonald Beach. 77°15' S, 166°21' E. A large and extensive beach, lying W of Inclusion Hill, 10 km SW of Cape Bird (the New Zealanders say 5 km S of Cape Bird), on Ross Island. The beach consists of alternating prograded storm-wave beaches separated by shallow hollows with ponds in them. Toward the S end of the beach, the prograded section merges with a low-lying and extensive stream fan which, in part, had already been cut back to a low cliff-edge before the present period of progradation began. Behind the fan, toward the S end of the beach, another cliff rises to an undulating glaciated bench, 45 to 60 m high, on which is to be found the southernmost of the 3 Adélie penguin rookeries of the Cape Bird area. The fan and the beach would be of a big enough area to allow an airfield or some other large installation to be built. Named by NZGSAE 1958-59, for Capt. Edwin A. McDonald (q.v.), who supported the expedition in its exploration of the Cape Bird area. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Macdonald Bluffs. 83°15' S, 157°50' E. Also called Macdonald Cliffs, and the name is sometimes seen spelled (erroneously) as MacDonald Bluffs. Prominent and east-facing bluffs, falling to Marsh Glacier, between Argosy Glacier and Argo Glacier, in the Miller Range. Discovered and mapped on Dec. 26, 1957, by the NZ Southern Party of BCTAE 1957-58, and named by them for school teacher William James Peter Macdonald (known as Peter Macdonald) (b. 1925, Karori, Wellington, NZ), who wintered-over as geophysicist at Scott Base in 1957. US-ACAN accepted the name in 1966.

Macdonald Cliffs *see* **Macdonald Bluffs**

McDonald Glacier *see* **McDonald Ice Rumples**

McDonald Heights. 74°55' S, 136°00' W. Broad and mainly snow-covered, about 56 km long, and over 1000 m high, between Cape Burks and Morris Head, on the coast of Marie Byrd Land. The heights are bounded to the S by Hull Glacier, Kirkpatrick Glacier, and Johnson Glacier. Photographed aerially by USAS 1939-41. Observed and partially mapped from the *Glacier* in Feb. 1962, and then mapped in detail by USGS, in 1965. Named by US-ACAN in 1966, for Capt. Edwin A. McDonald (q.v.), who was in command of that expedition on the *Glacier*, in 1962.

MacDonald Hills. 77°33' S, 163°21' E. A compact group of exposed rock hills, including Mount Coleman (860 m), rising E of Commonwealth Glacier, on the N side of the lower Taylor Valley, in Victoria Land. Named by US-ACAN in 1997, for William R. MacDonald. NZ-APC accepted the name.

McDonald Ice Rumples. 75°28' S, 26°18' W. A severely disturbed and fissured area, 5 km by 3 km, ENE of Halley Bay Station, in the Brunt Ice Shelf, it is assumed to be aground and pushed upward in this vicinity. In Jan. 1915 Shackleton discovered it, and called it Allan McDonald Glacier, for Allan McDonald McDonald (sic), of the British Association of Magallanes, at Punta Arenas, Chile, who was the person most responsible, in July 1916, for raising the necessary £1500 (in 3 days) for sending the *Emma* out to rescue (unsuccessfully, as it happened) the 22 men left on Elephant Island. The ice rumples undoubtedly looked more like a glacier than they do today. It appears as such on the expedition's charts, and also on a 1943 U.S. Hydrographic Office chart. A 1942 USAAF chart gave it as Allen McDonald Glacier (sic), and a 1946 Argentine map gave it as Glaciar Allan MacDonald (sic). The name was later shortened to McDonald Glacier, and as such appears on a 1947 U.S. Hydrographic Office chart, but plotted in 75°30' S, 26°00' W, a situation that carried over onto the 1962 American Geographical Society's map of 1962, even though things had changed by then. It appears on a 1952 Argentine map as Glaciar McDonald. The feature was resurveyed in 1957 by the British Royal Society Expedition, based at Halley during IGY, and they were forced to re-define it. At that point of time, the maximum elevation above the general surface of the ice shelf was about 18 m, a few hundred meters from the ice front. On Sept. 23, 1960, UK-APC accepted the new name McDonald Ice Rumples, defining an "ice rumples" as "a locally grounded area of ice shelf which is overriden by an ice sheet." US-ACAN accepted the name in 1965.

MacDonald Nunataks. 85°27' S, 157°38' W. Two nunataks overlooking the head of the Ross Ice Shelf, just E of the terminus of Amundsen Glacier, 8 km W of O'Brien Peak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for John A. MacDonald, biologist who wintered-over at McMurdo in 1964.

MacDonald Peak. 77°40' S, 86°40' W. Rising to 1940 m, midway between Shockey Peak and Mount Crawford, near the N end of the main ridge of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1961, for William R. MacDonald (q.v.), who, in 1962 helped prepare the 1962 map of the Sentinel Range.

MacDonald Point. 79°52' S, 160°20' E. A coastal point with some rocky exposures, at the S side of the mouth of Darwin Glacier, where that glacier flows into the Ross Ice Shelf. Named by US-ACAN in 1966, for James H. "Scot" MacDonald, Jr., of New Bedford, Mass., VX-6 journalist at McMurdo in 1958-59 (he was injured in the plane crash of Jan. 4, 1959, for which, *see* **Deaths**, 1959), 1959-60, and 1960-61.

McDonald Point. 67°21' S, 59°40' E. Marks the W end of Islay, in the William Scoresby Archipelago, off the coast of Kemp Land. Probably named in Feb. 1936 by the personnel on the *William Scoreby*. The Australians say that this point was discovered by that *Scoresby* expedition, but they don't tell us who it was named for. US-ACAN accepted the name in 1953.

McDonald Ridge. 66°20' S, 52°15' E. A mostly ice-covered ridge, 9 km SE of Johnston Peak, between that peak and Douglas Peak, 35 km SE of Mount Biscoe, in Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA for Keith R. "Blue" McDonald, of Parkdale, Vic., radio officer who wintered-over at Mawson Station in 1961 and 1963, and at Casey Station in 1969. US-ACAN accepted the name in 1965.

MacDonald Spur. 76°47' S, 159°33' E. A long, low ridge extending eastward from Balance Peak, in the Allan Hills of Victoria Land. Discovered by the NZ Antarctic Research Program Allan Hills Expedition of 1964, and named by them for Ivan MacDonald, field assistant with the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

McDonough Nunataks. 85°08' S, 179°59' E. A small group of isolated rock nunataks, rising above the ice plateau, 8 km W of Mount Rosenwald, at the S edge of the Queen Maud Mountains. Named by US-ACAN in 1966, for John W. McDonough, who wintered-over as an ionosphere physicist at Pole Station in 1962.

Bahía Macdougal *see* **Macdougal Bay**

Macdougal, James. His name is almost invariably seen as MacDougall, or McDougall. He had been in the Arctic, when he became 3rd mate and bosun on the *Scotia* during ScotNAE 1902-4.

Macdougal Bay. 60°42' S, 44°33' W. A small bay between Ferguslie Peninsula and Watson Peninsula, or, put another way, between Cape Geddes and Cape Valavielle, on the N coast of Laurie Island, in the South Orkneys. Charted in Nov. 1903 by ScotNAE, and named by Bruce for James Macdougal (although some charts from this period list it — erroneously — as MacDougall Bay, including some of Bruce's own charts). The bay was re-charted by the Discovery Investigations in 1933, and is on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Bahía Macdougal, and that is how it appears in the 1970 Argentine gazetteer.

[1]**McDougall, Alexander**. b. 1852. A merchant of St. John's, Newfoundland, he was the secretary and second largest shareholder in the Newfoundland Steam Whaling Company, and was on the *Sobraon* in 1907-8, for the whaling season in the South Shetlands.

[2]**McDougall, Alexander**. b. 1875, Lochee, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

MacDougall, Eduardo. Cabo 1st class in the Argentine Navy, he was on the *Uruguay* in 1903.

Macdougall Bay *see* **Macdougal Bay**

MacDowall, Joseph. b. Aug. 14, 1926, Wallasey, Cheshire, son of Joseph MacDowall and his wife Nelly H. Smith. He spent 2 years in the Fleet Air Arm before going to St John's, Cambridge, after which he joined the Met Office, specializing in instrument research and development, spending part of the early 1950s at the observatory in Kew. He was on the 2nd and 3rd parts (i.e., 1956–58 and 1957–59) of the British Royal Society expedition, wintering-over in 1957 at Halley Bay as leader of the meteorology group (as well as being geomagnetician, seismologist and glaciologist). In Jan. 1958 he succeeded Robin Smart as base leader, and as such wintered-over again at Halley Bay in 1958. He was later a physicist with the British Aircraft Corporation, and later still with English Electric Aviation. In 1966 he moved to Canada, becoming a citizen there in 1971. He worked for the Public Service in Canada, traveled all the world, and retired in 1998. In 1999 his book, *On Floating Ice*, was published.

McDowell, David William "Dave." Also known as "Mac." b. Jersey. He joined FIDS in 1956, as a meteorologist, and wintered-over at Signy Island Station in 1957, and at Base Y in 1958. He moved to Australia, and lives just outside Sydney.

McDowell, William "Bill." He joined FIDS in 1954, as a meteorologist, and wintered-over at Base B in 1955, and at Base W in 1957. He was a Met man at RAF Wittering all his working life, and retired to the Peterborough area, in Cambridgeshire.

Roca MacDugall. 63°28' S, 56°57' W. A rock in Trepassey Bay, on the NE side of Tabarin Peninsula, SE of Hope Bay, Trinity Peninsula. Named by the Argentines, for (one suspects) Eduardo MacDougall. Name also seen as Roca Mac Dugall.

Mount Mace. 81°25' S, 155°53' E. A mountain, rising to 1960 m in the All-Blacks Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Chris Mace, chair of the Antarctica New Zealand Board from its establishment in 1966 until April 2003. US-ACAN accepted the name later in 2003.

Mace, Charles James "Jim." b. July 26, 1924, Mildenhall, Suffolk, son of Arthur William Mace and his wife Sarah Kear. He was in the Army, stationed at Aldershot, when he joined FIDS in 1958, as a cook, and wintered-over at Halley Bay Station in 1959. After the expedition he made his way back to Cape Town, and from there caught the *Athlone Castle* back to Southampton, arriving on March 18, 1960.

McEacharn-Summerlees, Herbert Oliver Peter "Bullet." b. 1903, Tasmania. Australian whaling laborer on the *Sir James Clark Ross* on its Antarctic expedition of 1923–24. Formerly a navvy's mate. The identity, and even the existence, of this man, elude real confirmation (*see* **The *Sir James Clark Ross*** for more on this subject).

Monte McElroy *see* **Mount McElroy**

Mount McElroy. 74°09' S, 63°12' W. A prominent mountain, rising to 1670 m, at the W end of the Hutton Mountains, on the Lassiter Coast, in the SE part of Palmer Land. Discovered aerially on Dec. 21, 1947, by RARE 1947–48, and named by Finn Ronne for Theodore Roosevelt McElroy (1904–1963) of Boston, who contributed the radio and communication instruments for the expedition. "T.R.," as he called himself (others often called him Ted, or Mac), was Western Union's leading telegrapher at 15, was manufacturing telegraph keys from 1934 on, and set the record for speed telegraphing, at 75 words per minute, a record never broken. Tom French wrote a book on him, called *McElroy, World's Champion Radio Telegrapher*. Ronne mapped this mountain in 74°12' S, 63°04' W. As such, it appears on an American Geographical Society map of 1948. US-ACAN accepted the name in 1949, and it wasn't until Dec. 20, 1974 that UK-APC followed suit. It appears on a 1954 Argentine chart as Monte McElroy.

McElroy Glacier. 70°58' S, 166°58' E. A tributary glacier, just W of Matthews Ridge on Tapsell Foreland, and flowing S to join Barnett Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Clifford Turner "Cliff" McElroy (b. 1924. d. March 29, 2006), Australian geologist with USARP, at McMurdo, 1964–65 and 1966–67. He was back in Antarctica in 1980–81. *See also* **Black Face**.

McElroy Ridge. 72°37' S, 168°03' E. A high, mountainous ridge, 26 km long, in the Victory Mountains of Victoria Land, it is bounded by the following glaciers: Gruendler, Trainer, Trafalgar, and Rudolph. Mapped in part by NZGSAE 1957–58, and mapped in detail by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1973, for William David McElroy (1917–1999), director of the National Science Foundation, 1969–72.

Mount Macelwane. 81°54' S, 89°30' W. The highest peak in the E part of the Nash Hills. Positioned on Dec. 14, 1958, by the U.S. Ellsworth-Byrd Traverse Party, and named by them for the Rev. James B. Macelwane (1883–1956), a Jesuit priest and first chairman of the technical panel for seismology and gravity of the U.S. national committee for IGY. US-ACAN accepted the name in 1964.

Caleta Macera *see* **Caleta Acosta**

Rocas Macera *see* **Monument Rocks**

Mount Macey. 69°52' S, 65°18' E. Also called The Castle. An isolated peak, rising to 1960 m (the Australians say about 2080 m), about 24 km SE of the Stinear Nunataks, in Mac. Robertson Land. Discovered in 1954 by an ANARE party led by Bob Dovers, and named for Lem Macey. US-ACAN accepted the name in 1961.

Macey, Louis Edward "Lem." b. Dec. 3, 1911, Burrinjuck, NSW, son of Lewis [sic] Macey. He trained as a glass blower, but joined ANARE in 1948, and spent that winter at Heard Island, as senior radio officer with the group that set up that ANARE station. He was technical superintendent, senior radioman, and 2nd-in-command at Mawson Station in 1954, the year they set up that station. In 1956–57 he went south on the *Kista Dan*, as deputy leader of that summer voyage (he did not winter over in 1957), and was back at Mawson, as station leader, in 1971 and 1975. He made several other summer trips to Antarctica. He married Pat. He died on Feb. 12, 1986, in North Sydney.

Macey Islands. 67°26' S, 63°49' E. Two small islands, about 3 km S of the Auster Islands, in the E part of the Robinson Group, off the Mawson Coast of Mac. Robertson Land. A refuge caravan (i.e., a trailer) was established on one of the islands in 1971, and was occupied as an ANARE survey station in Feb. 1972. Named by ANCA for Lem Macey.

Macey Peninsula. 68°55' S, 77°56' E. In the Rauer Group. Named by ANCA for Lem Macey (q.v.), a member of the boat party which made a landing here on Jan. 11, 1957, from the *Kista Dan*.

Estrecho MacFarlane *see* **McFarlane Strait**

Macfarlane, Andrew. b. about 1780, Scotland. A sealer, he moved to Chile with his son Robert, entered the service of the Chilean Navy in Jan. 1820, and was captain of the brig *Dragon,* out of Valparaíso (but formerly of Liverpool). He was very intelligent, according to Capt. Robert Fildes. He arrived in the South Shetlands in the early part of Nov. 1820, and stayed through the austral summer. He may have made a landing on the Antarctic Peninsula prior to John Davis, but this is far from certain. However, considering the fact that the *Dragon* was then in the service of the Chilean Merchant Marine, and that Macfarlane was on a Chilean mission (as such), and also considering the probability that his crew was largely Chilean, the voyage is of importance in that it is an early instance of a Chilean presence in Antarctic waters, thus forming a nice (if somewhat specious) splinter in the platform of Chile's official claim to what they say is their wedge of the Antarctic continent. Macfarlane stayed on in Chile, and his descendants live there to this day. There is a plaque in Yankee Bay commemorating him. *See also* **Historic sites**. As for the spelling of this man's name, we choose Macfarlane here for a number of reasons, but the best one is that this is probably how he spelled it. On Nov. 27, 1821, on one of the South Shetland islands, a bottle was found on a rock by some American sealers on the brig *Charity*, and in that bottle was a note dated Nov. 20, 1820, and signed by "Capt. Andrew Macfarlane, of the brig *Dragon*, of Liverpool." The note warned the bottle opener "not to trouble the seal" as he (Macfarlane) claimed the "sealing ground by prior possession." The Chileans tend to call him Andrés MacFarlane.

McFarlane, James T. He joined the U.S. Navy, married Doris, lived at 2618 A Street, San Diego, and was electrician's mate 1st class on the *Bear* during the 1st half of USAS 1939–41.

Macfarlane, William. b. June 2, 1873, Inverarity, Forfarshire, but raised in Dunnichen (same

county), son of police constable Alexander Macfarlane and his wife Davina Webster. He was a petty officer 1st class, RN, on the *Discovery* during BNAE 1901-04, but was invalided out of the expedition on the *Morning* in 1903.

Macfarlane Bluff. 81°28' S, 155°36' E. A bluff at an elevation of over 1800 m, in the All-Blacks Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Malcolm Macfarlane, a biologist with the Ministry of Agriculture and Fisheries, who, in 1983-84, was seconded to NZ's Antarctic Division as summer leader at Vanda Station. He led the 1988 scientific wintering-over party at Scott Base, and, for 5 half-summers was senior NZ representative at Scott Base. In 1993 he was elected president of the NZ Antarctic Society. He later became operations data manager for the Fire Service, in Wellington, and since 1995 (when he left the Antarctic Division) has worked as a national representative on tour ships visiting Antarctica (*World Discoverer*, *Frontier Spirit*, *Kapitan Khlebnikov*, and *Marco Polo*). He has also been a tour guide and lecturer on the *World Discoverer*, the *Marco Polo*, and the *Crystal Symphony* (2002-03). US-ACAN accepted the name later in 2003, but as MacFarlane Bluff. It seems incredible that, with a gentleman who is as well-documented as Mr. Macfarlane, that US-ACAN would make a big "F" when it came to his name.

McFarlane Sound *see* **McFarlane Strait**

McFarlane Strait. 62°30' S, 59°59' W. It runs in a NW-SE direction between Greenwich Island and Livingston Island, in the South Shetlands, and is 8 km at its widest point, and 6 at its narrowest. It is entered between Williams Point and Duff Point to the NW, and between Renier Point and Ephraim Bluff to the SE. It was first explored by early British and American sealers in the area, including Palmer (on Nov. 20, 1820). In the early sealing days in Antarctica, it was called Yankee Sound (Capt. Davis refers to it as such in his log of Jan. 27, 1821). Palmer's log of Dec. 1, 1820 refers to it as Yankey Sound. On Dec. 8, 1820, Capt. Chris Burdick entered Yanky Sound in his log. The current name, which appears on Powell's 1822 chart, is almost certainly for Capt. Andrew McFarlane. This chart was published by R.H. Laurie, chartseller to the Admiralty (*see* **Mapping of Antarctica**), and the name was actually seen as Mc. Farlane's Strait. Consequently, it has been seen over the years since then as McFarlane's Strait (or Straits), Macfarlane's Strait (or Straits), and variations of these spellings. In 1825, Weddell called it Duff's Straits on his chart, named after Capt. Norwich Duff, RN (*see* **Duff Point**). A Spanish chart of 1861 gives the first instance of it being called Estrecho Macfarlane (actually seen on the chart as Estrecho Mac Farlane). In 1894 Larsen called it Norske Sund (i.e., "Norway sound"), but that name didn't catch on for long (a few years at the most), even in Norway. It appears on a British map of 1901, as McFarlane Strait (which is how we know it today). On Gunnar Andersson's map of 1904 (from SwedAE 1901-04), it appears as Mc Farlane Sound (sic), and on other maps and in references from that expedition as, variously, Mac Farlane-Sund and even Mr. Farlane-Sund (which is almost amusing). Charcot's 1912 map of his FrAE 1908-10 has it as Détroit de MacFerlane (which is not at all amusing, just wrong). However, Bongrain, from the same expedition, has it more correct (but, of course, not quite correct), as Détroit de Mac Farlane. David Ferguson recorded it as Macfarlane Strait, in 1921. In 1935 the strait was re-surveyed by the Discovery Investigations team. A 1937 British map has it as McFarlane Strait, and that was the spelling accepted by US-ACAN in 1947. As such it appears on a British map of 1948, and UK-APC accepted that name on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1962. In 1956-57 it was photographed aerially by FIDASE, and was surveyed from the ground in 1957-59 by FIDS. The Argentines call it Estrecho MacFarlane (with or without a space betwen the Mac and the Farlane), and the Chileans tend to call it Estrecho McFarlane. Originally plotted in 62°32' S, 59°55' W, it was re-plotted by the UK in late 2008.

MacFee, Peter *see* **USEE 1838-42**

Détroit de MacFerlane *see* **McFarlane Strait**

Macfie, Archibald Frederick. b. May 21, 1905, Scotland. He was a sub lieutenant, RNR, promoted to lieutenant on March 26, 1933, and prepared the charts for the *William Scoresby*'s 1935-36 expedition. He was senior 2nd officer on the *Scoresby*, 1935-37, and 1st officer on the *Discovery II*, 1937-39. He was promoted to lieutenant commander, RNR, and as such commanded the *Derby*, as part of the 2nd Minesweeper Flotilla during World War II. He was later promoted to captain, RNR, and was skipper of the *John Biscoe*, 1947-48, and of the *William Scoresby* in 1950. He later lived in Inverness.

Macfie Sound. 67°22' S, 59°43' E. Also called Homesrund. A marine sound, or passage, 1.5 km wide at its narrowest point, extending in an E-W direction between Islay and Bertha Island, in the William Scoresby Archipelago. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them for Lt. A.F. Macfie (q.v.), who prepared the charts of the expedition. US-ACAN accepted the name in 1947.

McGaw Peak. 75°52' S, 140°59' W. A prominent peak rising to over 800 m, on the ridge between Land Glacier and Paschal Glacier, and midway between Mount McCoy and Pearson Peak, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Major Hugh Roth Lee McGaw (b. Nov. 5, 1935), U.S. Army, logistics research officer on the staff of the commander, U.S. Naval Support Force, Antarctica, during OpDF 71 (i.e., 1970-71) and OpDF 72 (i.e., 1971-72).

Mount McGee. 74°03' S, 164°33' E. Rising to 1410 m from a ridge at the N side of Clausnitzer Glacier, in the Random Hills of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Lawrence E. McGee, geologist at McMurdo, 1965-66.

McGee Rock. 75°54' S, 142°59' W. An isolated rock at the S side of Parker Pass, about 8 km S of Zuncich Hill, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Wayne R. McGee, USN, equipment operator who wintered-over at Byrd Station in 1966.

McGeever, Paddy. A young Irish-Australian whaling laborer on the *Sir James Clark Ross* expeditions of 1923-24 and 1924-25. In between expeditions he went to Norway on the ship, thence to Amsterdam, where he lost all his money, and so had been unable to visit his parents in old Erin. It is possible that he may have used the pseudonym Gregory Archibald McGogger (q.v.).

McGeown, Hugh. b. 1875, Armagh, Ireland. He came to Glasgow as an engineer's craneman, and married Felix Rooney's mother. On July 26, 1907, he signed on to the *Nimrod*, at Poplar (in London), as 3rd engineer, for BAE 1907-09. On March 21, 1908, he was promoted to 2nd engineer, and was discharged on Oct. 28, 1908. He and his wife subsequently immigrated to Canterbury, NZ. For more on McGeown, *see* **Rooney, Felix**.

Mount McGhee. 66°56' S, 52°39' E. About 7 km S of Mount Smethurst, in Enderby Land. Plotted from ANARE aerial photos taken in 1957. Named by ANCA for John "Jock" McGhee (b. Aug. 26, 1935), mechanic and driver who wintered-over at Wilkes Station in 1961, and as assistant diesel mechanic at Mawson Station in 1965. US-ACAN accepted the name in 1965.

McGill, Arthur *see* **USEE 1838-42**

McGill, Laurence *see* **USEE 1838-42**

McGillion, Michael Thomas "Tom." Last name seen spelled (erroneously) as McGillon and McGillan (which is how Aeneas Mackintosh refers to him in his diary of BAE 1907-08). Mackintosh refers to him as a New Zealander, and, he was indeed, born (1888) and raised in Christchurch, son of Irishman Michael Conway McGillion. He joined the Merchant Navy as a boy sailor, and was on the Norwegian ship *Rona*, plying the Tasman Sea, when he heard of the proposed Antarctic expedition on the *Nimrod*. On Nov. 30, 1908, at Lyttelton, he signed onto the *Nimrod* as one of the two new trimmers aboard, and on Dec. 1, 1908 left NZ for the 2nd half of BAE 1907-09. During the expedition, he fell down a chasm, but was rescued by Mackintosh. He was discharged at Lyttelton on April 3, 1909. He was back in Antarctic waters, as a fireman on the *Terra Nova*, during BAE 1910-13. He served with the New Zealand Defence Force during World War I. He married Mabel, and they moved to Bondi, in Sydney, where he became a railway porter. Except for a brief transfer in the 1930s, to Punchbowl, they lived in Bondi for the rest of their lives, with McGillion working as a porter. Mabel died in 1958, and Tom died in 1962, in Sydney.

McGinnis Peak. 84°32' S, 177°52' W. A

prominent peak, rising to 1270 m (the New Zealanders say 1100 m), with a large bare cirque in the N slope, it stands on the SE side of the terminus of (i.e., just E of the lower part of) Kosco Glacier, 5.5 km SW of Oppegaard Spur, in the Bush Mountains of the Queen Maud Mountains, near the edge of the Ross Ice Shelf. Discovered and photographed by USAS 1939-41, during Flight C, Feb. 29-March 1, 1940. Surveyed by Bert Crary in 1957-58, and named by him for Northern Illinois University geologist Lyle David McGinnis (b. March 5, 1931, Appleton, Wisc.), seismologist on the U.S. Victoria Land Traverse Party of 1958-59, and a leading authority on Antarctica. US-ACAN accepted the name in 1962.

MacGogger, Gregory Archibald. Tasmanian whaling laborer on the *Sir James Clark Ross* expedition of 1923-24. However, this may be a pseudonym for Paddy McGeever (q.v.). Certainly it is an alias for something. No one has a name like Gregory Archibald MacGogger. On the surface, that may sound like a facile comment, but it is the result of much research (*see* [1]**The *Sir James Clark Ross***).

McGomey, Joseph *see* **USEE 1838-42**

McGovarin-Hügel. 70°30' S, 161°12' E. A hill in the area of Rennick Glacier, in the Usarp Mountains of Oates Land, in Victoria Land. Named by the Germans for Stephen McGovarin, of Halifax, Nova Scotia, helo pilot on GANOVEX III (1982-83).

McGowan, Ernest Raymond "Ray." Some called him "Paddy." He joined FIDS in 1956, as a radio operator, and wintered-over at Base O in 1957 (doubling as a general assistant), and in 1958 at Base Y.

McGowan, Hugh *see* **McGeown**

McGrady Cove. 66°16' S, 110°34' E. At the head of (i.e., in the SE part of) Newcomb Bay, in the Windmill Islands, on the Budd Coast. First mapped from air photos taken during OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1963, for Chief Photographer's Mate Edsell Dean McGrady (b. May 30, 1916. d. Oct. 16, 2002, Satellite Beach, Fla.), USN, veteran of World War II, who participated in flights over the Windmill Islands during OpHJ. He was later in Korea.

Mount McGrath. 70°53' S, 65°28' E. A mountain, 1.5 km NE of Mount Bewsher, in the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted from ANARE air photos, and named by ANCA for Ted McGrath, of Colac, Vic., who wintered-over as assistant diesel mechanic at Mawson Station in 1963. US-ACAN accepted the name in 1971.

McGrath, B.L. b. 1890, Australia. On Nov. 18, 1911, at Hobart, he signed on to the *Aurora* as an able seaman, at £5 per month, for the first part of AAE 1911-14. On April 1, 1912, two days after the *Aurora* arrived in Sydney, he injured himself on board, and for a payment of £111 10s, signed a waiver of claim. He finally left the *Aurora*, and the expedition, on Nov. 12, 1912.

McGrath Nunatak. 68°03' S, 63°01' E. A ridge-like nunatak at the W end of the Blånabbane Nunataks, extending about 1.5 km in a N-S direction, and 11 km SE of Van Hulssen Nunatak, it is the most westerly of the Anniversary Nunataks, in Mac. Robertson Land. Photographed by LCE 1936-37, and mapped from these photos (but not named) by Norwegian cartographers in 1946. It was used as a trigonometrical station by the ANARE Framnes Mountains-Depot Peak trigonometrical survey of 1965, led by Max Corry, surveyor at Mawson Station during the winter of 1965. Peter James McGrath (b. Oct. 13, 1939), radio officer at Mawson Station in 1965, assisted with this survey, and it was for him that ANCA named this feature. Mr. McGrath was back in Antarctica, as radio officer and 2nd-in-command at Wilkes Station, for the winter of 1967. US-ACAN accepted the name in 1970.

Mount McGregor. 70°37' S, 66°39' E. A conical peak rising to 1676 m above sea level from the ridge which runs WSW from Mount Sundberg, and which surmounts the SW end of the Thomson Massif, in the N part of the Aramis Range, in the Prince Charles Mountains. Discovered in Dec. 1956 by Bill Bewsher's ANARE Southern Party, and named for Peter Malcolm McGregor (b. July 27, 1928), geophysicist at Macquarie Station in 1952, and at Mawson Station in 1956. US-ACAN accepted the name in 1965. The Russians call it Gora Krenkelja.

MacGregor, Christopher. Captain of the London sealer *Minstrel*, in the South Shetlands for the 1820-21 season. After the expedition, back in London, he was replaced as skipper by Thomas Hodges.

MacGregor, Colin. b. July 9, 1855, Perth, son of iron hammerman Alexander MacGregor and his first wife Jean MacDonald. When Jean died, Alex took the family to Dundee, and married again, to Elizabeth Mitchell. Colin became a blacksmith, married Isabella, a girl from Peterhead, Aberdeenshire, and worked his way down to Rotherhithe, London, where he was living as a smith when he became 3rd enginer and blacksmith on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

McGregor Glacier. 85°08' S, 174°50' W. A tributary glacier, 22 km long and 6 km wide, it flows from the SW slopes of the Prince Olav Mountains into Shackleton Glacier just N of the Cumulus Hills. Named by the Southern Party of NZGSAE 1961-62 for Victor Raymond McGregor (1940-2000), geologist with that party. NZ-APC accepted the name, and US-ACAN followed suit in 1966. The Americans built a field hut here, McGregor Glacier Hut, in 1982-83.

McGregor Nunatak. 85°00' S, 173°00' W. A nunatak, NE of Red Raider Rampart, and almost due W of Mount Sellery, in the Prince Olav Mountains, in the Queen Maud Mountains. Named by NZ-APC, in association with nearby McGregor Glacier.

MacGregor Peaks. 62°42' S, 60°23' W. Rising to about 340 m, ENE of Sally Rocks, midway between Binn Peak and Moores Peak, on Hurd Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on May 13, 1991, for Christopher MacGregor. US-ACAN accepted the name. Plotted by the UK in late 2008.

McGregor Range. 71°58' S, 167°51' E. A range, 21 km long, in the S central part of the Admiralty Mountains, overlooking the NE side of Tucker Glacier, between Leander Glacier and Fitch Glacier, the flow of all of which, as well as that of Man-o-War Glacier, bounds it. Partially mapped by NZGSAE 1957-58, and mapped in detail by USGS, from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Cdr. Ronald Kenneth McGregor (b. Sept. 19, 1917, Spooner, Minn., d. 2011), USN, leader of Antarctic Support Activities at McMurdo during the winter of 1962. He retired in 1968, as a commander, after 27 years in the Navy.

McGuinness, Charles John "Nomad." b. March 6, 1893, Derry, Northern Ireland, son of seaman John McGuinness and his wife Maggie Hernand. One of the true characters of Antarctic exploration, he ran away to sea in 1908, at the age of 15, and over the next 20 years, surviving shipwrecks, mutinies, imprisonments in exotic locales, and a few marriages, he was a pearl fisherman in the South Seas, a gold miner in Australia, a railroad hobo in North America, a Canadian militiaman, a British soldier in Africa during World War I, a German soldier in the African jungle during World War I, a pirate captain of a junk in the South Seas, where he indulged oriental princesses, then a lumberjack in Canada, an IRA battalion commander and leader of a flying column in Donegal during the Irish troubles (with the rank of brigadier general), a Bulgarian revolutionary, a monk in Germany, and an authority on old sea shanties and ballads. He was recruited by Chiang Kai Shek but turned him down to become a builder in New York. He was first mate on the *Eleanor Bolling* during ByrdAE 1928-30. Then he was a bootlegger in New York as well as a newspaper columnist. The mid-30s saw him as harbor master in Murmansk, Russia, and in 1934 his book *Nomad* came out in London. He then fought on the Communist side during the Spanish Civil War. He was interned by the British for most of World War II, and drowned under mysterious circumstances in the Irish Sea on Dec. 5, 1947.

McGuire Island. 64°46' S, 64°24' W. In the NE part of the Joubin Islands, off the SW coast of Anvers Island. Named by US-ACAN in 1974, for Thomas J. McGuire (b. April 4, 1935, Castine, Me. d. Feb. 8, 2010), oiler on the *Hero* during that vessel's first trip to Antarctica and to Palmer Station, in 1968. UK-APC accepted the name on Dec. 20, 1974. After the expedition, he worked in Maine as a crane operator and electrician.

Monte Machatschek *see* **Mount Machatschek**

Mount Machatschek. 66°52' S, 68°04' W. A prominent, mainly snow-covered mountain, rising to about 500 m, E of the Fuchs Ice Piedmont, 22 km SW of Mount Vélain, in the NW part of Adelaide Island. Mapped from aerial photos taken by RARE 1947-48, it was incor-

rectly identified as Mount Vélain on Sept. 8, 1953, by UK-APC, and as such appears in the 1955 British gazetteer. It was photographed aerially again by FIDASE in 1956-57, surveyed from the ground by Fids from Base W in 1958, and the situation was corrected by UK-APC on Sept. 23, 1960, and the feature named for Fritz Machatschek (1876-1957), Austrian geomorphologist who (with Erich von Drygalski) wrote *Gletscherkunde* in 1942 (*see* the Bibliography). It appears as such on a British chart of 1961. US-ACAN accepted the new (i.e., the real) name in 1965. The Argentines call it Monte Machatschek.

Machin Nunatak. 72°48' S, 64°53' E. A small, domed nunatak, 11 km E of Mount Cresswell, and about 51 km NNE of Mount Dummett, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Mapped by Australian cartographers from ANARE air photos taken in 1956. First visited in 1960 by an ANARE party led by Ric Ruker. Named by ANCA for Douglas Keith "Doug" Machin (b. Jan. 7, 1927, South Yarra, Vic.), radio officer who wintered-over at Mawson Station in 1960. US-ACAN accepted the name in 1967.

Machu Picchu Station. 62°05' S, 58°28' W. Peruvian research station on Crespin Point, Mackellar Inlet, Admiralty Bay, King George Island, in the South Shetlands, 10 m above sea level, and 50 m from the coast, not far from Comandante Ferraz Station (the Brazilian base). Built in Feb. 1989, but not opened until Jan.-Feb. 1991, it is also known as Machu Picchu Base, or Machu Picchu Scientific Base. A small base, with 4 buildings, it is used intermittently for summer parties studying climatology, geology, and biology. It is usually supplied by the ship *Humboldt*.

McHugo Peak. 69°51' S, 68°05' W. A prominent peak rising to 1250 m, it is the most northwesterly peak in the Traverse Mountains, on the Rymill Coast, at George VI Sound, on the W side of the Antarctic Peninsula. Photographed aerially by USN in 1966, and in 1971-72 it was surveyed from the ground by BAS personnel from Base E. Named by UK-APC on Dec. 8, 1977, for Miss Mary Barbara McHugo (b. 1925, Suffolk; known as Barbara), senior map officer with the DOS (Directorate of Overseas Surveys), 1958-86, who had responsibility (from 1960 to 1984) for the mapping of the British Antarctic Territory as surveyed by FIDS and (later) BAS. She wrote a book about it. The feature appears in the British gazetteer of 1980. US-ACAN accepted the name.

Caleta Maciel. 66°50' S, 67°51' W. A cove, 16 km SSW of Mount Vélain, in the extreme NE of Adelaide Island. In the cove are Steinemann Island and the group of rocks the Argentines call Rocas Cosme Maciel. Named by the Argentines for Cosme Maciel (1784-1850), a politician in the early days of Argentina.

McIlroy, James Archibald "Mickey." b. Nov. 3, 1879, Ulster, Ireland, but raised in Kings Norton, Birmingham, son of Irish shopkeeper James McIlroy and his wife Maggie. He was a doctor in several exotic countries, and ship's surgeon in different parts of the world. He was suffering from malaria when he was taken on as 2nd surgeon on BITE 1914-17, during which expedition he was one of the 22 men left on Elephant Island. During World War I he was in the Army, and badly wounded at Ypres in 1917 while attending an injured soldier under shell fire at the front. After the war he became surgeon with the P & O Line. Back again with Shackleton, on the *Quest*, in 1921-22, this time he was surgeon and meteorologist. His intention was to go only as far as Madeira, but he pressed on. After the expedition he went back to sea. He was torpedoed in 1942, during World War II, and was adrift in an open boat for 5 days. He never married, remained at sea until he was 80, and died of cancer on July 27, 1968, at Cuddington Hospital, Surrey.

Mount McIntosh. 77°31' S, 168°41' E. Rising to about 2600 m, at the NW end of Lofty Promenade, 2.5 km E of the summit of Mount Terror, in the W part of the Kyle Hills, on Ross Island. The mountain is conspicuous because of diagonal bands of rock and ice on the N face. Named by Phil Kyle for William C. McIntosh, geologist with the department of geoscience at the New Mexico Institute of Mines and Technology, at Socorro, who worked extensively in Antarctica under USAP auspices and in support of Kyle's investigations on Mount Erebus. He made his first trip to Erebus in 1977-78, and at least 15 trips through 1999. He was a member of the 1982 NNIVAT field party that carried out the first geological mapping of Minna Bluff. In 1983-84 he was at Mount Discovery and Mason Spur. In 1984-85 he was back at Erebus, and was at Mount Murphy in 1985. In 1989-90 he was in the Executive Committee Range, and in 1992-93 in the Crary Mountains. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

McIntosh, Frank. b. 1871, Dundee. Able seaman on the *Polar Star*, during DWE 1892-93.

McIntosh, Ian Lawrence. b. May 19, 1948. Ionosphere physicist at Casey Station in 1973, and at Mawson Station in 1975 and 1977.

McIntosh Cliffs. 78°32' S, 166°24' E. A line of steep, uneven volcanic bluffs or cliffs, about 26 km long, forming the SW side of the Minna Bluff peninsula, at the S end of the Scott Coast, in Victoria Land. The height of the cliffs increases from W to E, ranging from 400 to 600 m above the Ross Ice Shelf. Named by US-ACAN in 1999, for William C. McIntosh (*see* **Mount McIntosh**). NZ-APC accepted the name on Nov. 4, 1999.

McIntosh Cove *see* **Mackintosh Cove**

Caleta McIntyre *see* **Alvaro Cove**

Mount McIntyre. 87°17' S, 153°00' W. A rocky, flat, projecting-type mountain (actually a group of low connecting ridges, extending in an E-W direction) with rock walls facing generally N protruding above the ice of the Polar Plateau to a height of about 2965 m above sea level, and which forms the NE extremity of D'Angelo Bluff, at the W side of, and near the head of, Scott Glacier, directly opposite Mount Howe, and about 14 km S of Mount Weaver. This is one of the most southerly mountains in the world. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for Marvin Hunter McIntyre (1878-1943), a member of President Roosevelt's presidential secretariat, and, from 1937 until his death, the president's actual secretary. US-ACAN and NZ-APC both accepted the name.

McIntyre, Neal *see* **Kristensen, Monica**

McIntyre Bluffs. 73°16' S, 68°18' E. Rock bluffs between Greenall Glacier and Turk Glacier, on the Mawson Escarpment. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Sir Laurence Rupert McIntyre (1912-1981), deputy secretary of the Department of External Affairs, 1965-70.

[1]McIntyre Island. 66°14' S, 110°34' E. A small island, just W of Blakeney Point, Clark Peninsula, in the Windmill Islands, on the Budd Coast. Photographed aerially during OpHJ 1946-47, and included in a 1957 ground survey by Carl Eklund, who named it for Robert "Bob" McIntyre, USN, construction mechanic at Wilkes Station that year. US-ACAN accepted the name in 1960.

[2]McIntyre Island. 67°22' S, 49°05' E. The most easterly of the Hydrographer Islands, just S of Sakellari Peninsula, Casey Bay, in Enderby Land. Plotted by Australian cartographers from 1957 ANARE aerial photographs, and visited in 1959 by an ANARE party led by Bruce Stinear. Named by ANCA for Sgt. Hedley L. "Mac" McIntyre, RAAF, engine fitter at Mawson Station for the winter of 1959. US-ACAN accepted the name in 1965.

McIntyre Promontory. 84°57' S, 179°40' W. A promontorial escarpment, rising to an elevation of about 2800 m above sea level, with the ground plan of a sharp V pointing toward the N, and with steep cliffs on either flank, in the Bush Mountains, between Mount Rosenwald on the SE and the head of Ramsey Glacier on the W, in the Queen Maud Mountains. Discovered and photographed on Feb. 16, 1947, on Flight 8A to the Pole, during OpHJ 1946-47. Named by US-ACAN in 1962, for Lt. Cdr. Eugene C. McIntyre, USN, co-pilot of Flight 8A, the second R4D aircraft during Byrd's flight to the Pole on Feb. 16, 1947, during OpHJ 1946-47.

McInvale, William Thomas "Tom." b. Sept. 1, 1927, Jones Co., Miss., son of fiber mill pulp grinder John William McInvale and his wife Ethel. He joined the U.S. Navy, and was chief commissaryman at Little America in 1955-56, and for the winter of 1956. He later lived in Orlando, and died in Vero Beach, Fla., on July 17, 2006.

Mack, George. b. 1806. He was of New Haven, Conn. He went to sea at the age of 12, and at 14 was a crewman on the *Huron*, in the South Shetlands, 1820-22.

McKaskle, Harvey Alonzo. b. Nov. 16, 1921, Seligman, Arizona, son of Louisiana-born railroad switchman Rubin Alonzo McKaskle and his English wife Sarah. Air crewman on OpHJ

1946-47. On Sept. 5, 1981, in San Diego, he married Marlene M. Costa, and died on Jan. 24, 1998, in San Diego.

McKaskle Hills. 70°01' S, 73°00' E. A group of moderately low, rocky coastal hills, between Rogers Glacier and the Mistichelli Hills, on the E edge of the Ross Ice Shelf. Photographed by OpHJ 1946-47 flights, and mapped from these photos in 1952 by U.S. cartographer John H. Roscoe, who named these hills for Harvey McKaskle (q.v.), air crewman on the flights over this area. US-ACAN accepted the name in 1956.

Cape MacKay. 77°42' S, 168°31' E. Name also seen as Cape Mackay. An ice-covered cape forming the SE extremity of Ross Island. Discovered by BNAE 1901-04, and named by Scott for Capt. Harry MacKay. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Mackay, Alister Forbes. b. 1878, Carskey, Argyllshire, son of Col. Alexander Forbes MacKay, of the 92nd Gordon Highlanders, and his first wife Margaret Isabella Innes. Educated in Edinburgh, he then went to Dundee for zoological work under Professors Geddes and D'Arcy Thompson. He served as a trooper in the South African War, and was with Baden Powell's police there. He went back to Britain to qualify as a surgeon, and as such went back into the war. He joined the RN as a surgeon, served on several ships, and as biologist and 2nd surgeon went on BAE 1907-09. He was, with Mawson and David, one of the first men to reach the South Magnetic Pole. In July 1913, he sailed with the Stefansson expedition from Nome, Alaska, heading north, and, after their ship was crushed by the ice, he was last seen walking with his party toward Wrangel Island, on Feb. 16, 1914. On Nov. 26, 1921 he was presumed dead by the courts.

McKay, Donald. Name also seen as MacKay (notably in the feature MacKay Peak). New York seaman, probably a captain, he took part in the New York Sealing Expedition of 1820-22, sailing on the *Aurora* as 1st mate under Capt. Robert Macy. For a time he commanded the *Sarah*, during the 1820-21 period in the South Shetlands, and was pilot of the *Cecilia* during that vessel's 2-day exploratory cruise from Feb. 22-24, 1821. He sent minerals and some kelp to New York, via B. Astor, on the *Jane Maria*. *See* **Astor, B.**, for more details of this collection. On Feb. 28, 1821 he transferred from the *Aurora* to the *Charity*, after a feud with Macy.

MacKay, Henry Duncan "Harry." Name often seen as McKay, and sometimes as McKie, or other corruptions thereof. b. 1854, at 59 Blackscroft Street, Dundee, son of gas worker James Boyd MacKay and his wife Margaret Elizabeth Brown, who worked in the local jute mill. Harry went to sea, in 1879 he married Betsy Pitcairn (by whom he had five children), and they moved into his in-laws' house, at 36 Patterson Street. In 1882 he got his master's ticket, the youngest whaling skipper out of Dundee. He moved the family to 73 Strathmartine Road, and served as a mate on the *Resolute* and the *Terra Nova*. In 1892 he took up his first actual command, the *Aurora*, and in 1893 became captain of the *Terra Nova*, taking her to Baffin Bay. In 1898 he and the family moved to Albert Street, Coral Bank, in Ferry Port on Craig, Fife. Harry was still in command of the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. After he returned to Dundee, he became skipper of the *Diana*, working for the Tay Whale Fishing Company until 1909, when he retired. He died on Nov. 9, 1925, and was buried in Tayport Cemetery on Nov. 12, 1925. Betsy was buried next to him on April 10, 1943. A.G.E. Jones wrote a 21-page article called "Harry MacKay: Master of the *Terra Nova*."

Mackay, Robert Wood. b. 1908. An electrician, he was lab assistant on the *Discovery II*, 1929-32. After the second cruise returned to London in early 1931, he married Agnes Helen Crossman, in Uxbridge, and they moved to Paddington Green. After the 1931-32 cruise, he arrived back in Southampton on June 13, 1932, from Cape Town on the *Balmoral Castle*, with his wife, who had sailed from Southampton to meet him in South Africa. They moved to Romford, Essex, then to East Bedfont, Middlesex, then to Cockermouth, Cumberland, where they stayed during World War II (Mackay became a pilot), and then back to London, along the way having four children. Mackay started work with the International Nickel Company of Canada, and moved to that country in 1951, and died in Victoria, British Columbia on July 31, 1977.

Mackay, William. NZ physician who joined the *Bear of Oakland* at Dunedin for the first half of ByrdAE 1933-35.

McKay Cliffs. 82°19' S, 156°00' E. A prominent line of cliffs, or escarpment, about 30 km long, they form the N wall of the Geologists Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them as Alexander McKay Cliffs, for Alexander McKay (1841-1917), pioneer NZ geologist. NZ-APC accepted the shortened name, and US-ACAN followed suit in 1966.

McKay Creek. 77°39' S, 162°45' E. A meltwater stream, 250 m long, at an elevation of about 100 m, and heading on Suess Glacier, it flows ENE into the W end of Chad Lake, in Taylor Valley, Victoria Land. Named by US-ACAN in 1996, for NASA Ames Research Center planetary scientist Christopher P. "Chris" McKay (b. 1955), who, immediately after getting his PhD in astrogeophysics from the University of Colorado, conducted limnological research on Lake Hoare and in neighboring areas of the McMurdo Dry Valleys, for 15 summers from 1982 onwards, and who pioneered the use of year-round environmental data collection dry valley ecosystems.

Mackay Glacier. 76°58' S, 162°00' E. One of the major glaciers in Victoria Land, it flows E from the Polar Plateau, between Mount Marston and Mount England, or, put another way, between the Convoy Range and the Clare Range, into the S part of Granite Harbor, between Evans Piedmont Glacier and Wilson Piedmont Glacier, and into the Ross Sea as the Mackay Glacier Tongue. Discovered in 1908-09 by the South Magnetic Pole party of BAE 1907-09, and named for Alister Forbes Mackay. US-ACAN accepted the name in 1947.

Mackay Glacier Tongue. 76°58' S, 162°20' E. About 10 km long and about 3 km wide, it is the seaward extension of Mackay Glacier, jutting out into the Ross Sea at Granite Harbor, along the E coast of Victoria Land. Charted by BAE 1910-13, and named by them in association with the glacier. US-ACAN accepted the name.

Mackay Mountains. 77°30' S, 143°20' W. A prominent group of peaks, 16 km S of the Allegheny Mountains, in the Ford Ranges of Marie Byrd Land. Discovered in 1934 by ByrdAE 1933-35. One of the peaks was named Mount Clarence Mackay, after Clarence Hungerford Mackay (1874-1938), the head of the Postal Telegraph and Mackay Radio Companies, who was a patron of the expedition. He had supervised the completion of the first Transpacific cable between the USA and the Far East, in 1904. In 1947, US-ACAN shortened the name, but extended it to the whole range.

MacKay Peak. 62°43' S, 60°18' W. A snow-covered pyramidal peak, rising to about 700 m, between Brunow Bay and False Bay, or, put another way, between False Bay (to the W) and Charity Glacier, on Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 ane 1959. Following geological work here by BAS personnel in 1975-76, it was named by UK-APC on Feb. 7, 1978, for Donald McKay [sic and q.v.]. US-ACAN accepted the name, misspelling and all.

Mackay Point. 67°32' S, 68°05' W. A point, 3 km NE of Rothera Point, on the SE coast of Adelaide Island. Surveyed from the ground by Fids from Base T, in 1961-62, and by an RN Hydrographic Survey unit on the *Endurance* in 1976-77. Named by UK-APC on Dec. 8, 1977, for Donald Campbell "Don" Mackay (b. 1953), BAS builder who wintered-over at Halley Bay Station in 1973, at Signy Island Station in 1975, and at Rothera Station in 1977. The name appears on a British chart of 1977, and also in the British gazetteer of that year. US-ACAN accepted the name.

Mackay Tongue *see* **Mackay Glacier Tongue**

McKay Valley. 79°53' S, 156°40' E. The central of 3 largely ice-free valleys that trend E from the Midnight Plateau, in the Darwin Mountains. Named by US-ACAN in 2001, for Chris McKay (*see* **McKay Creek**).

M'Kean, John. b. 1781, Kirkmabreck, Kirkcudbrightshire, son of Samuel M'Kean and Elizabeth Lewars. He was an experienced skipper when, in 1816, he took command of the new East Indiaman, *Princess Charlotte*, for her first run to Bengal, for Brocklebank's, of Liverpool. He commanded the *Princess Charlotte* in the South Shetlands for the 1821-22 season. After the expedition, he continued to skipper the *Princess Charlotte* on the Liverpool-Bengal run, until 1828, when the vessel was replaced by a new one of the same name. He continued to skipper that one until 1836. He died in 1851.

MacKean (McKean), John *see* **M'Kean, John**

M'Kean Point. 62°42' S, 60°01' W. About 5.5 km E of Brunow Bay, between that bay and Renier Point, on the SE coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on Aug. 31, 1962, for Capt. John M'Kean. US-ACAN accepted the name in 1965. It is seen, rather mysteriously, on a 1962 British chart as Mc.Kean Point.

MacKean (McKean) Point *see* **M'Kean Point**

M'Keen, John *see* **USEE 1838-42**

MacKeen, John *see* **USEE 1838-42**

Fiord Mac Kellar *see* **Mackellar Inlet**

Ensenada Mackellar *see* **Mackellar Inlet**

Estrecho Mackellar *see* **Mackellar Inlet**

Mount Mackellar. 83°59' S, 166°39' E. A massive mountain, rising to 4295 m (the New Zealanders say 3032 m), at the head of Mackellar Glacier, 5 km S of Pagoda Peak, and about 28 km N of The Cloudmaker, at the W side of the Beardmore Glacier, in the Queen Alexandra Range. Discovered by Shackleton during his push toward the Pole in 1908-09, and named by him for C.D. Mackellar (*see* **Mackellar Islands**). US-ACAN accepted the name in 1952.

Mackellar Glacier. 83°47' S, 167°15' E. Also called Bell Glacier. A large tributary glacier flowing N along the E side of Hampton Ridge, from Mount Mackellar into Lennox-King Glacier, in the Queen Alexandra Range. Named by NZGSAE 1961-62, in association with the nearby mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

McKellar Glacier. 72°12' S, 167°07' E. Between 28 and 32 km, and 2.5 km wide, flowing S along the E side of Evans Ridge to form the lower tributary on the N flank of Pearl Harbor Glacier, in the Victory Mountains of Victoria Land. Named by the Northern Party of the NZ Federated Mountain Clubs Expedition of 1962-63, for Ian Charles McKellar (b. Aug. 21, 1919, Dunedin. d. Jan. 2, 1986, Dunedin), geologist and glaciologist with NZGSAE 1957-58, who worked in the area of nearby Tucker Glacier that season. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mackellar Inlet. 62°05' S, 58°27' W. Also spelled Mackeller Inlet. Forms the NW head of Admiralty Bay, just to the W of Keller Peninsula, on the coast of King George Island, in the South Shetlands. It divides into two coves. Charted in Dec. 1909 by FrAE 1909, and named by Charcot as Fiord Mac Kellar, quite possibly for C.D. Mackellar (*see* **Mackellar Islands**). The name Mackellar Inlet appears on a 1929 British chart, and that is the name that was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1962. It appears on a 1947 Chilean chart as Estrecho Mackellar, and on a 1949 Argentine chart as Ensenada Mackellar. It appears in the 1970 Argentine gazetteer as Ensenada Mackellar, and also, as such, in the 1974 Chilean gazetteer. There is also some indication that the Argentines also call it Caleta Tarragona, apparently after Juan Francisco Tarragona (1769-1843), the representative of Santa Fé before the First Junta. Last plotted by the UK, in late 2008.

Mackellar Islands. 66°58' S, 142°40' E. A group of about 30 small islands and rocks, 2.5 km N of Cape Denison, in the middle of Commonwealth Bay, on the coast of East Antarctica. Discovered by AAE 1911-14, and named by Mawson for Campbell Duncan Mackellar of Lerags, Argyllshire, and of London, traveler, author, and a patron of the expedition, as well of BAE 1907-09. US-ACAN accepted the name in 1963.

Mackeller Inlet *see* **Mackellar Inlet**

Mount McKelvey. 85°21' S, 87°18' W. A rocky, mostly ice-free peak, rising to 2090 m, less than 1.5 km E of Mount Walcott, in the E part of the Thiel Mountains. Surveyed in 1960-61 by the USGS Thiel Mountains party. Named by US-ACAN in 1978, for geologist Vincent Ellis "Vince" McKelvey (1916-1987), 9th director of USGS, 1971-78.

McKelvey Valley. 77°26' S, 161°33' E. A dry valley, between the W end of the Olympus Range and the Insel Range, in Victoria Land. Named by VUWAE 1958-59 for Barrie Cooper McKelvey (b. Oct. 4, 1937), NZ geologist, who, with Peter Webb, formed VUWAE 1957-58 (the first VUWAE), and conducted the first geological exploration of this area. He was back again (with Webb) for VUWAE 1958-59, in Wright Valley, and again in 1968-69. He was in the lower Taylor Valley in Nov. and Dec. 1974, and in the Dry Valleys area in 1977-78. In Nov. and Dec. 1979 he was at Scott Base, and in 1981-82 in northern Victoria Land. In 1985-86 he was at the Beardmore Glacier, and from 1987 was professor of geology and geophysics at the University of New England, in Armidale, NSW. NZ-APC accepted the name, and US-ACAN followed suit in 1960.

Mackemer Point. 66°27' S, 110°29' E. The NW point of Peterson Island, in the Windmill Islands. First mapped from air photos taken during OpHj 1946-47, and OpW 1947-48. Named by US-ACAN in 1963, for Frederick Walter Mackemer (b. Sept. 14, 1936. d. May 1, 1986, Orlando, Fla.), USN, aerographer's mate at Wilkes Station in 1958.

Mount McKenny. 71°40' S, 160°22' E. Rising to 1890 m, immediately N of Gressitt Glacier, at the S end of the Daniels Range, 6 km SE of Mount Toogood, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Clarence Daniel McKenny (b. 1915), meteorologist who wintered-over at Pole Station in 1959 and 1961, and at Eights Station in 1963.

Glaciar Mackenzie *see* **Mackenzie Glacier**

Mount McKenzie. 70°40' S, 67°01' E. A prominent, low, pyramidal peak rising to 2255 m, 5.5 km SE of Saxton Ridge, S of a row of peaks along the E section of Nemesis Glacier, in the Amery Peaks of the Aramis Range, in the Prince Charles Mountains. Discovered in Jan. 1957 by Bill Bewsher's ANARE Southern Party, and named by ANCA for Jock McKenzie (*see* **McKenzie, John Alexander**). US-ACAN accepted the name in 1962.

Península Mackenzie *see* **Mackenzie Peninsula**

McKenzie, Edward Archibald. b. April 20, 1888, Winterton, Norfolk, son of engine driver Edward McKenzie and his wife Rose Amelia Clark. He joined the RN in 1903, and was leading stoker on the *Terra Nova* during BAE 1910-13. He built a working model of the ship, which was (later) displayed at London's Science Museum. On his return to England he joined the Metropolitan Police in London, a career broken up by Army and Navy service in World War I. He was invalided out of the police in 1942, and lectured on Scott until he was over 80. He died on June 21, 1973, in Minster, near Sheerness, Kent.

[1]**Mackenzie, James** *see* **USEE 1838-42**

[2]**Mackenzie, James**. b. 1878, Dundee. Able seaman on the *Scotia*, during ScotNAE 1902-04. He lived at 59 Wellgate, Dundee. After the expedition, he left the *Scotia* at Buenos Aires, and, with Andrew Greig, made his way back to Southampton that month on the *Clyde*.

McKenzie, John Alexander "Jock." b. Dec. 12, 1907, Edinburgh. He went to sea in 1922, and at the outbreak of World War II joined the army as a cooking instructor, reaching staff sergeant before he transferred to the Merchant Navy, seeing service in many different parts of the world. He was torpedoed three times during World War II. In 1952 he moved with his wife and four grown children to Australia, to Canberra, and was the ANARE cook who wintered-over at Mawson Station in 1956. He died on Dec. 18, 1972.

MacKenzie, John Donald. Able seaman on the *Discovery II*, 1935-39.

MacKenzie, Kenneth Norman. b. Nov. 26, 1897, Oban, Argyllshire, son of sheriff clerk depute Duncan MacKenzie and his wife Catherine. A merchant seaman with the City Line, he was 1st officer on the *Discovery* during the first half of BANZARE, and took over from John King Davis as captain for the 2nd half (i.e., 1930-31). He died on Sept. 29, 1951, in London.

Mackenzie, Robert. b. 1878, Dundee. Able seaman on the *Scotia*, during ScotNAE 1902-04. He lived at 29 Wellgate, Dundee.

Mackenzie, Thomas. b. 1863, NZ. Chief steward on the *Scotia*, during ScotNAE 1902-04. His address was 20 Princess St., Rothesay, Bute.

MacKenzie Bay. 68°38' S, 70°35' E. Name also seen as Mackenzie Bay. At the W extremity of the Amery Ice Shelf, about 30 km NE of Foley Promontory. The Norwegian whale catcher *Seksern* was here on Jan. 10, 1931, but it was BANZARE, on Feb. 10, 1931, who discovered the dimensions of this huge embayment here, making a flight over to sketch its limits, and naming it the MacKenzie Sea, for Kenneth N. MacKenzie, and setting the sea's limits between the W end of the Amery Ice Shelf and Cape Darnley. Three days later, on Feb. 13, 1931, the *Torlyn* arrived in the bay. US-ACAN accepted the name MacKenzie Sea in 1947. However, in 1964, the Amery

Ice Shelf changed its shape by partly breaking away into the sea, and the embayment was greatly reduced in size. In 1968 it was only 24 km wide. It was plotted by radar, by ANARE on the *Nella Dan* in 1975 and 1968. The name (and the definition) was, of course, changed, from "sea" to "bay."

Mackenzie Glacier. 64°17' S, 62°16' W. A glacier, 6 km long, flowing E from Mount Parry, it is joined by Malpighi Glacier, and both then flow into Pampa Passage, on the E coast of Brabant Island, in the Palmer Archipelago. Roughly charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers in 1959. Named by UK-APC on Sept. 23, 1960, for Sir James Mackenzie (1853-1925), Scottish heart specialist. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Glaciar Mackenzie.

McKenzie Nunatak. 71°14' S, 163°25' E. A very prominent nunatak, rising above the ice to a height of 1620 m above sea level, between McLin Glacier and Graveson Glacier, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Garry Donald McKenzie (b. June 8, 1941), glaciologist studying Meserve Glacier in 1966-67.

McKenzie Peak. 70°18' S, 65°38' E. Just S of Mount Albion, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1965, and named by ANCA for John Francis McKenzie, radio technician who wintered-over at Wilkes Station in 1963 and 1965. US-ACAN accepted the name in 1971.

Mackenzie Peninsula. 60°45' S, 44°48' W. A steep, rocky peninsula, forming the W end of Laurie Island, W of Uruguay Cove, and terminating in Route Point, in the South Orkneys. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Surveyed in 1903 by ScotNAE 1902-04, mapped in large part in May 1903, and named by Bruce for his wife, Jessie Mackenzie (*see* **Jessie Bay**). The whole peninsula was charted by the Discovery Investigations in 1933, and it appears on their 1934 chart. It appears on a 1933 Argentine chart as Península Mackenzie and on a 1945 one as Península MacKenzie. This last is how it was listed in the 1970 Argentine gazetteer. The Argentines are not the only ones prone to spelling mistakes, however — it appears on a 1943 U.S. Hydrographic Office chart as MacKenzie Peninsula. US-ACAN accepted the name Mackenzie Peninsula in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955.

MacKenzie Sea *see* **MacKenzie Bay**

McKenzie-Scharte. 71°15' S, 163°14' E. A hill, immediately SW of McLin Glacier, in the Bowers Mountains. Named by the Germans.

Mount McKeown. 77°56' S, 85°31' W. Rising to 1880 m, on the N side of Embree Glacier, 5 km NE of Mount Schmid, in the N part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for 1st Lt. (later Major) Donald Francis McKeown (b. Aug. 29, 1934. d. July 2, 1997), USAF, who helped build South Pole Station in the 1956-57 season.

Mount McKercher. 86°09' S, 150°02' W. Rising to 2230 m, on the E side of Scott Glacier, just N of the mouth of Griffith Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for Hazel F. "Kerch" McKercher (1889-1972), his secretary during the period of this expedition. US-ACAN accepted the name in 1947.

Mackerel Island. 66°01' S, 65°26' W. Immediately W of Flounder Island, in the Fish Islands, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed from the ground by Fids from Base J in 1957. Named by UK-APC on July 7, 1959, in keeping with the fish motif. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

Mount McKerrow. 81°45' S, 159°48' E. A prominent mountain on the E side of Starshot Glacier, 6 km SW of Mount Hotine, and 8 km N of Thompson Mountain, in the Surveyors Range. Discovered by NZGSAE 1960-61, and named by them for James McKerrow (1834-1919), a former surveyor general of NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mackey, Frank *see* **USEE 1838-42**

Mackey Rock. 76°36' S, 146°22' W. An isolated rock on the E side of the Sulzberger Ice Shelf, 13 km SW of Mount Iphigene, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Steven Mackey, field assistant with the USARP Marie Byrd Land Survey, 1967-68.

Mount McKibben. 75°23' S, 64°42' W. Rising to 880 m, 8 km SW of Hansen Inlet, and 5 km SE of McCaw Ridge, on the Lassiter Coast, near the base of the Antarctic Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for L.D. "Mac" McKibben, power plant shopfitter who wintered-over at Pole Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mackie, Robert. Baptized Aug. 14, 1754, Airth, Stirlingshire, son of Robert Mackie and his wife Mary Duncanson. After 3 years as captain's servant on the *Liverpool*, he sailed on the *Adventure* as astronomer William Bayly's servant, for Cook's 2nd voyage, 1772-75. After the expedition, he served as midshipman on a couple of ships, and transferred from the *Nonsuch* in 1776 to the *Resolution* for Cook's 3rd voyage, 1776-80. In 1777 he became an able seaman, and a lieutenant in 1780. He died in 1789.

Mackin Table. 84°57' S, 64°00' W. An ice-topped, wedge-shaped summit plateau, running NW-SE for about 30 km, and at an elevation of about 2135 m above sea level, just N of the Patuxent Ice Stream, in the S part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. The name was suggested by geologists who investigated the Pensacola Mountains, several of these scientists having been students of Joseph Hoover Mackin (known as Hoover Mackin) (1905-1968), professor of geology at the University of Washington at Seattle. US-ACAN accepted the name in 1969, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

McKinley, Ashley Chadbourne. Known as Mac. b. June 23, 1896, Marshall, Texas, but raised in St. Louis and Oklahoma City, son of coal and building supplies merchant John S. McKinley and his wife Lucy Farris. After a spell as a private in the field artillery of the Missouri National Guard, he went to Canada in July 1917 to join up as an aviator in the Army Air Corps during World War I. On April 1, 1922, he married Grace Leavenworth Houser, of Henderson, Ky. He was surveyor and official photographer on ByrdAE 1928-30, and, on that expedition, was one of the 4 to make the South Polar flight in the *Floyd Bennett* in 1929. Captain McKinley was at the controls of a plane over Babylon, Long Island, in 1937, when he stalled at 800 feet. Zeki Dervend, the actual pilot, grabbed the controls, but the wing hit the bog surrounding the local yacht club, and the plane began to sink. They almost suffocated before being rescued. McKinley sustained a broken arm. A year later, also off Long Island, a cub seaplane he was flying crashed into the sea when a wing hit the water. He died on Feb. 11, 1970, in Clearwater, Fla.

McKinley, William A. b. Scotland. Meteorologist, who wintered-over at Órcadas Station in 1905. In 1913 he was head of the Cipoletti Meteorological Station at Río Negro, in Argentina.

McKinley Nunatak. 85°18' S, 170°03' W. The most southerly of 3 large nunataks in the upper part of Liv Glacier, 8 km NNE of Barnum Peak. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Ashley C. McKinley. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

McKinley Peak. 77°54' S, 148°18' W. A peak, 24 km W of Hershey Ridge, at the S end of the Ford Ranges of Marie Byrd Land. Discovered on the Dec. 5, 1929, flight by Byrd, during ByrdAE 1928-30, and named by Byrd as Mount Grace McKinley, for the wife of Ashley C. McKinley. The name has since been shortened, and US-ACAN accepted this shortened form in 1966.

McKinnis Peak. 69°34' S, 159°21' E. Rising to 510 m, 3 km SE of Holladay Nunataks, and 15 km E of Parkinson Peak, in the Wilson Hills, it surmounts the peninsula that is bounded by Tomilin Glacier and Noll Glacier on the W and the Gillett Ice Shelf on the E, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Joe D. McKinnis, VX-6 aviation electronics technician and air crewman on LC-130F aircraft, in

Antarctica five times with OpDF until 1969. He was on the April 9, 1961 flight that rescued Leonid Kuperov (q.v. for details).

MacKinnon, Alasdair. From the Isle of Skye. Able seaman on the *Aurora*, 1916–17, when that vessel went to Cape Evans to relieve the Ross Sea Party of BITE 1914–17. He wrote a very useful, if bare-bones, diary of that trip.

MacKinnon Glacier. 71°32' S, 161°13' E. Flows N along the W side of Reilly Ridge into Sledgers Glacier, in the Lanterman Range of the Bowers Mountains. Named by NZ-APC in 1982, for University of Canterbury geologist David Ironside MacKinnon, a member of Roger Cooper's NZARP geological party in the area in 1974–75. US-ACAN accepted the name.

McKinnon Glacier. 70°38' S, 67°45' E. Flows SE from Nemesis Glacier to Beaver Lake, in the E part of the Aramis Range of the Prince Charles Mountains. First visited by an ANARE party in 1956, and mapped by Australian cartographers from ANARE aerial photos taken that year. Named by ANCA for Graeme William McKinnon (b. 1921), geographical officer with the Antarctic Division, Melbourne, and officer-in-charge of the ANARE Prince Charles Mountains survey party in 1960. He was also secretary of ANCA. US-ACAN accepted the name in 1973.

McKinnon Island. 67°36' S, 47°35' E. A large island, mostly ice-covered, in the Hannan Ice Shelf, along the coast of Enderby Land. Plotted in 67°39' S, 47°35' E, by Australian cartographers from air photos taken by ANARE in 1956. Named by ANCA for Graeme W. McKinnon (*see* **McKinnon Glacier**). US-ACAN accepted the name in 1965. It has since been replotted.

Cabo Mackintosh *see* **Cape Mackintosh**

Caleta Mackintosh *see* **Mackintosh Cove**

Cape Mackintosh. 72°50' S, 59°54' W. A low, ice-covered cape forming the N extremity of Kemp Peninsula and the E entrance point to Mason Inlet, and which divides the E coast of Palmer Land between the Lassiter Coast and the Black Coast, 40 km SE of Pullen Island. Probably first seen aerially by USAS in Dec. 1940, as they photographed a portion of Kemp Peninsula. In Nov. 1947, the cape was photographed aerially by RARE 1947–48, and surveyed from the ground by a joint team of RARE and Fids from Base E. Named by FIDS for Neil Mackintosh. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and is seen on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1957 Argentine chart as Cabo Mackintosh, and that is the name that appears in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer (Chile had toyed with the idea of naming it Cabo Poindexter, but wisely refrained). Originally plotted in 72°53' S, 60°03' W, it has since been replotted.

Mount Mackintosh. 74°22' S, 161°49' E. A peak with a dark appearance, rising to 2300 m on Skinner Ridge, 3 km SW of Mount Fenton, and westward of Mount Baxter, on the E side of Reeves Glacier, on the W margin of the Eisenhower Range of Victoria Land. Charted by BAE 1907–09, and named by them for Aeneas Mackintosh. US-ACAN accepted the name.

Mackintosh, Aeneas Lionel Acton "Mack." b. July 1, 1879, Tirhut, India, son of Alistair Mackintosh and his wife Annie Lavinia Jane Berkeley. He was chief of Clan Chattan (or, at least, heir to the chiefdom when he died). He joined the Merchant Navy in 1894 and worked his way up through the ranks, in 1899 becoming an officer on a P & O liner. He served as 2nd officer and navigator on the *Nimrod*, during Shackleton's BAE 1907–09, during which he had to have his right eye removed by Dr. Marshall on Jan. 31, 1908, after an accident unloading stores at McMurdo Sound, and was forced to go back to NZ on the *Nimrod*. After the expedition he went looking for gold in the Carpathians, and for Spanish treasure in the Cocos Islands (the famous Captain Kidd's treasure—*see also* **Berry, Victor**). In 1912 he married Gladys Campbell. He was captain of the *Aurora* during the abortive BITE 1914–17. The *Aurora* brought the Ross Island party into McMurdo Sound for that part of the expedition, and Mackintosh was responsible for laying down depots from Ross Island to the Beardmore Glacier, down which Shackleton was to traverse on his trip across the Antarctic continent from the other side. Beginning in Sept. 1915 Mackintosh and his party of 5, in terrible conditions, succeeded in laying depots for the man who would never arrive. On the way back, 3 of the men died, including Mackintosh, on May 8, 1916, when he and Hayward tried to get back on the last leg from the Discovery Hut to Cape Evans. His daughter had been born on Nov. 25, 1914, in Bedford, while he was away. He never saw her. In 1923 his widow married J.R. Stenhouse (q.v.).

Mackintosh, D.R. b. NZ. Crewman on the *Jacob Ruppert*, 1934–35.

MacKintosh, Malcolm Paul. b. 1901, Boston, Mass., as Paul Malcolm Mackintosh (the names were switched early on), son of telephone company bookkeeper and treasurer Joseph P. Mackintosh and his wife Emma C. Amrhein. He was a winchman on both the *Bear of Oakland* and the *Jacob Ruppert*, 1933–34, and became 3rd mate on the *Ruppert* during the trip. He left Dunedin and arrived in California in June 1934, making his way back to New York on a Greyhound.

Mackintosh, Neil Alison. b. Aug. 19, 1900, Hampstead, London, son of surgeon John Stewart Mackintosh and his wife Alice Emmeline Ballard. A sprinter of note while at Imperial College, London, he became a marine biologist, oceanographer, and zoologist, authority on the ecology and populations of whales, and was one of the most important figures on the Discovery Committee. In 1924–25 he set up a scientific station on South Georgia (54°S), and was back there again in 1926–27, as zoologist on the *William Scoresby*. In 1927–28 he was on a whale-marking expedition on the *William Scoresby*, and was chief scientific officer on the *Discovery II*'s first cruise south, 1929–31, and again the leader of the 1933–35 cruise. In 1936 he succeeded Stanley Kemp as Director of Research of the DI, and from Oct. 1937 to Jan. 1938 he led another expedition on the *Discovery II* (but only as far as Dunedin, so he did not go to Antarctica that cruise). He edited the extensive *Discovery Reports*. He was one of the advisory board for Operation Tabarin (1943–45). He was on the first part of *Discovery II*'s 1950–51 cruise, but, again, got off before Antarctica. He retired in 1968, and died in London on April 9, 1974.

Mackintosh Cove. 60°42' S, 44°30' W. Immediately SE of Fraser Point, along the N coast of Laurie Island, in the South Orkneys. Charted by ScotNAE 1902–04, and named Kerr Cove, for Gilbert Kerr. It appears as such on the expedition charts. Re-charted by the Discovery Expeditions in 1933, who re-named it Mackintosh Cove, for Neil Mackintosh. As such, it appears on the expedition's chart of 1934. It appears (erroneously) as McIntosh Cove on a 1943 U.S. Hydrographic Chart. It appears on a 1947 Argentine chart as Caleta Mackintosh (which means the same thing), and that is the name listed in the 1970 Argentine gazetteer. US-ACAN accepted the name Mackintosh Cove in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

McKinzie Islands. 74°03' S, 101°50' W. A group of small islands in the NE extremity of Cranton Bay, S of Canisteo Peninsula, at the E end of the Amundsen Sea. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Richard H. McKinzie, USN, who wintered-over as hospital corpsman at Byrd Station in 1967.

Mount Macklin. 69°57' S, 64°36' E. A ridge with ice- and snow-covered slopes and an exposed summit consisting of brown rock, rising to 2005 m (the Australians say 1960 m), and trending N-S, just E of Mount Shaw, in the Anare Nunataks of Mac. Robertson Land. First visited on Nov. 30, 1955, by an ANARE party led by John Béchervaise. Named by ANCA for Eric Macklin (*see* **Macklin Island**). US-ACAN accepted the name in 1961.

Macklin, Alexander Hepburne "Mack." b. Sept. 1, 1889, India, son of Dr. Thomas Thornton Macklin and his wife Janet H. Borthwick. Not long after his birth, his family returned to his mother's home at Ladieside Lodge, in Melrose, Roxburghshire, and then, in 1891 down to St Mary's, in the Scilly Isles, where his father set up a practice. Young Mack, after boarding school in Bodmin, and a brief time as a deck hand on a boat in the Mediterranean, went to Manchester, to study medicine. After he became a surgeon he was employed as such on BITE 1914–17, and was one of the 22 men left on Elephant Island. 10 days after returning to Britain, after the expedition, he was posted to France as a doctor with a tank regiment, and fought in Italy and northern Russia in World War I. He was back in Antarctica in 1921 on the *Quest*, again with Shackleton, this time in charge of stores and equipment, as well as being medical officer. It

was Macklin who did the autopsy on Shackleton. In 1925 he moved to Dundee, where he practiced as a chloroformist at the Royal Infirmary. From 1939 to 1945 he was president of the Antarctic Club, and also, during that exact time, served with the Medical Corps in East Africa. After the war he married Jean, a nursing sister, and moved to Aberdeen, where he worked in hospitals until he retired in 1960. He died on March 21, 1967, in Aberdeen.

Macklin Island. 67°29' S, 63°39' E. A small island, the northern of 2 islands rising to an elevation of about 30 m above sea level, in the E part of the Robinson Group, between 5 and 7 km NW of Cape Daly, in Mac. Robertson Land. Photographed by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Later named by ANCA for Eric Leslie Macklin (b. April 1, 1925. d. Jan. 1997), radio officer at Mawson Station in 1955 and 1959. He had also been at Macquarie Island Station in 1952. He was later supply and administration officer with the Australian Antarctic Division. US-ACAN accepted the name in 1965.

McKnight Creek. 77°36' S, 163°16' E. A glacial meltwater stream, 1.5 km long, flowing SW from the snout of Commonwealth Glacier and entering the E end of Lake Fryxell between Lost Seal Stream and Aiken Creek, in Taylor Valley, Victoria Land. Named by US-ACAN in 1992, for Diane Marie McKnight (b. 1953), USGS research hydrologist, leader of USGS field teams over several years between 1987 and 1994, that made extensive studies of the hydrology and geochemistry of streams flowing into Lake Fryxell.

Rocas Mackworth *see* **Mackworth Rock**

Mackworth Rock. 66°02' S, 66°34' W. A rock in water, in the SW side of Pendleton Strait, 3 km N of Cape Leblond, Lavoisier Island, in the Biscoe Islands. Mapped from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Norman Humphrey Mackworth (1917-2005), British experimental psychologist, long in the USA, who, in 1953, first demonstrated beyond doubt that man acclimatizes to cold. The name appears on a 1961 British chart. US-ACAN accepted the name in 1965. The Argentines have pluralized it, as Rocas Mackworth.

Maclaren Monolith. 80°20' S, 25°23' W. A peak rising to about 1000 m (the British say about 1400 m), with a notable monolith forming its summit, on the central ridge of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station bteween 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Charles Maclaren (1782-1866), Scottish naturalist who, in 1842, was the first to recognize the glacial control of sea level. US-ACAN accepted the name.

McLaren Ridge. 70°52' S, 67°38' E. A rocky ridge at the head of Battye Glacier, about 8.5 km W of Radok Lake, in the Aramis Range of the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for William Allen (known as Allen) McLaren (b. April 27, 1938), glaciologist who wintered-over at Wilkes Station in 1965. US-ACAN accepted the name in 1967.

McLaughlin Cliffs. 71°35' S, 67°32' W. The abrupt rock cliffs that overlook George VI Sound between Armstrong Glacier and Conchie Glacier, in the W part of Palmer Land. Surveyed by BAS between 1962 and 1972. Named by US-ACAN in 1976, for Lt. Donald J. McLaughlin, USNR, officer-in-charge of Palmer Station, 1970. A colony of snow petrels lives here. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

McLaughlin Peak. 74°35' S, 64°18' W. Rising to about 1650 m, 14 km ESE of Mount Aaron, in the N part of the Latady Mountains, on the Lassiter Coast of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Robert Harold McLaughlin, USN, engineman at Pole Station for the winter of 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974, but with the wrong co-ordinates (73°35' S, 64°18' W). By the time of the 1986 British gazetteer, these co-ordinates had been corrected.

McLay Glacier. 81°02' S, 158°49' E. Flows SE into Nursery Glacier, in the Churchill Mountains. It is flanked on the N by Mount Durnford, Mount Stewart, and Mount Liard, and on the S by Turk Peak and Bradshaw Peak. Named by NZ-APC on Feb. 27, 2003, for James Kenneth "Jim" McLay (b. 1945), minister of justice and attorney general (1978), deputy prime minister (1984), and, from 1994 to 2000, NZ's whaling commissioner, a friend of the whales. US-ACAN accepted the name later in 2003.

McLea Nunatak. 75°59' S, 159°30' E. Between Richards Nunatak and Sharks Tooth, about 26 km SSE of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1962-63 for Quentin McLea, radio operator at Scott Base, who was responsible for the field party radio communications. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

McLean, Archibald Lang "Archie." b. March 27, 1885, Abbotsville, NSW, but grew up in Balmain, Sydney, son of Robert McLean and his wife Janet Dickson. In 1906 he graduated from the University of Sydney, and joined the Department of Medicine there. In 1908 he was commissioned a lieutenant in the Signal Corps in the Australian Army, and worked as a doctor at Lewisham Hospital. Medical officer and bacteriologist on AAE 1911-14, he was chief medical officer at Main Base, and edited the *Adélie Blizzard*. Contracted to stay only a year, he stayed on at John King Davis's request when the *Aurora* pulled in to relieve the party at the end of the first winter, and nursed Mawson back to health when the leader staggered in from his nightmare trip. He accompanied Mawson to England, helped write the account of the expedition, served with the RAMC in France in World War I, but was invalided back to Australia with appendicitis. He returned to France, as a captain in the 17th Battalion, but was gassed, on two separate occasions. He died in 1922, in Newtown, Sydney.

McLean, Donald "Don." b. Aug. 6, 1922, Buffalo, NY. An intern in pediatrics at New Rochelle Hospital, in NY, 3 months short of his final MD, when he was interviewed by Finn and Jackie Ronne, and became medical officer and deckhand on RARE 1947-48, joining the *Port of Beaumont, Texas*, in Dec. 1946. During the expediton, Doc McLean made many friends at the FIDS Base E, especially Dr. Dick Butson and Kevin Walton, and would often go over to their base for scones and tea. He was later attached to the USAF, and served in Greenland, becoming a specialist in micro-surgery. After Greenland he left the Navy, went into private practice in Alaska, and then moved back to NYC. Doc McLean finally moved to Carmel, Calif., where he died on April 28, 2004.

McLean, Robert Andrew. b. 1920, Holyoke, Mass., son of Scottish immigrants from Paisley, millwright (in a woolen mill) Adam McLean and his wife Bella. He joined the U.S. Navy, and served as a seaman 1st class on the *Bear*, during both halves of USAS 1939-41. During the 2nd half of the expedition, he was promoted to torpedoman 3rd, class, and, after the expedition, worked his way up to torpedoman 1st class during World War II. Apparently he was dead by 1948.

McLean, William. b. 1871, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

McLean Buttress. 77°19' S, 160°58' E. A buttress-like mountain or promontory at the N side of Webb Lake and Barwick Valley, in Victoria Land, it rises abruptly from the valley and marks the S limit of the cliffs known as The Fortress. Named by US-ACAN in 1976, for Capt. Frank E. McLean, of the U.S. Coast Guard, captain of the *Burton Island* in the Ross Sea during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71).

McLean Glacier. 70°59' S, 164°45' E. A tributary glacier, N of Mount Hemphill, in the SW part of the Anare Mountains, it flows W into the lower part of Ebbe Glacier, just S of Beaman Glacier. Named by US-ACAN in 1964, for Kenneth S. McLean, USGS topographic engineer here in 1962-63, with the Topo East-West party that surveyed this area. NZ-APC accepted the name.

McLean Island. 66°01' S, 110°08' E. One of the Balaena Islands, about 200 m S of Thompson Island, off the Budd Coast of Wilkes Land. OpHJ 1946-47 photographed the Balaena Islands from the air on Feb. 2, 1947, and they were first delineated from these photos. However, 10 days after this flight, flying personnel on the British whaler *Balaena* sketched maps of the islands from their aircraft, and thought they were peaks. Named by ANCA on Aug. 27, 1975, for Flight Lieutenant Nigel "Mac" McLean (b. Feb. 19, 1922, Inverness. d. July 2001, Surrey), flight captain on the *Balaena*, 1946-47. McLean had

learned to fly in 1940, with the Fleet Air Arm, and during the war piloted aircraft catapulted off armed merchant ships. After the *Balaena* expedition, he joined the City of Aberdeen Auxiliary Squadron, and in 1952 became its CO, being promoted to squadron leader.

McLean Nunataks. 67°50' S, 143°57' E. A group of 3 nunataks in the W part of, and near the head of, Mertz Glacier, George V Land. Discovered by AAE 1911-14, and named by Mawson for Dr. Archie McLean. US-ACAN accepted the name in 1952.

McLean Peak. 85°51' S, 141°35' W. Rising to 2290 m, it surmounts a spur descending from the NW end of Stanford Plateau, along the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. William E. McLean, USN, medical officer and officer-in-charge of Pole Station in the winter of 1964.

McLean Point. 68°37' S, 77°57' E. At the N end of Mule Peninsula, in the Vestfold Hills, near the entrance to Ellis Fjord. It affords an excellent campsite, and was the site of a depot during 1972 field operations. Named by ANCA for Ronald W. "Ron" McLean, radio supervisor who wintered-over at Davis Station in 1969.

McLean Ridge. 70°44' S, 66°51' E. A small, partly ice-covered ridge, about 6 km SE of Mount Butterworth, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA in 1966, for Cyril Victor "Vic" Morgan (sic and q.v.). US-ACAN accepted the name in 1967. This is one of the strangest of all the errors committed by the naming organizations, and is one of the most glaring pieces of evidence in the case of US-ACAN not running its own individual checks on a name submitted from a foreign country.

Maclear, John Fiot Lee Pearse. b. June 27, 1838, Cape of Good Hope, son of astronomer royal of the Cape, Sir Thomas Maclear and his wife Mary Pearse. He joined the *Castor* as a naval cadet in Sept. 1851, and from 1854 to 1856, during the Crimean War, was a midshipman on the *Algiers*, in the Baltic and the Black Sea. In 1858 he was on the *Cyclops*, in the Red Sea, when trouble broke out in Jiddah. He was promoted to lieutenant in 1859, and was on the *Sphinx* during the China War, 1860-62, and was 1st lieutenant on the *Octavia* during the Abyssinian campaign. He was promoted to commander on Aug. 14, 1868, and was in Antarctic waters as 2nd in command of the *Challenger*, during that vessel's expedition of 1872-76. He was promoted to captain on Oct. 13, 1876, and, on June 4, 1878, married Julia, daughter of Sir John Herschel, Bart. He was commander of the *Alert* from 1879 to 1882, and from 1883 to 1887 of the *Flying Fish*. In June 1891 he became a rear admiral, and retired later that year. He dropped dead on July 17, 1907, of heart failure, on a hotel veranda in Niagara, and his body was brought back to London.

[1]**Mount McLennan**. 67°12' S, 51°05' E. On the S side of Beaver Glacier, 6 km S of the Howard Hills, in the NE part of the Scott Mountains of Enderby Land. Plotted from air photos taken by ANARE in 1956, and named by ANCA for Kenneth McLennan. US-ACAN accepted the name in 1965.

[2]**Mount McLennan**. 77°35' S, 162°56' E. A prominent mountain, rising to over 1600 m (the New Zealanders say about 1770 m), at the N side of Taylor Valley, it surmounts the area at the heads of Canada Glacier, Loftus Glacier, and Commonwealth Glacier, in Victoria Land. Named by Charles S. Wright during BAE 1910-13, for Prof. John McLennan (1876-1935), physicist at Toronto University. US-ACAN accepted the name in 1952.

McLennan, Kenneth. b. 1900, Aultbee, Rossshire. Able seaman on the *Discovery* during the 1st half of BANZARE 1929-31.

McLennon, T. Crewman on the *Jacob Ruppert*, 1933-34.

Punta Macleod *see* **Macleod Point**

McLeod, George Kennedy "Wee Georgie." b. Dec. 12, 1927, Scotland. He was 5 foot 2 inches, hence his nickname. He was working at Glenmore, the famous ski lodge in Aviemore, as an oddjob man, when he joined FIDS in 1956, as a general assistant and mountain climber, and wintered-over at Base N in 1957, and at Base J in 1958, the second year also as base leader. In 1959 he returned to Aviemore, but was back at Base D in 1962, and at Base E in 1963, both times as general assistant. On one memorable occasion he fell into a crevasse. In 1966-67 he was bound for Base E when he came down with acute appendicitis, and had to be rushed to the nearest hospital. But, he made it for his last gig, a winter-over at Base E in 1967. He later alternated between working at Aviemore and living in Denver, Colorado, but developed Alzheimer's and retired to Denver.

McLeod, Ian Roderick. b. July 26, 1931. Geologist who, during the 1957-58 season, landed at the Larsemann Hills in Feb. 1958, and then wintered-over at Mawson Station in 1958. He was back in Antarctica, on the *Magga Dan*, in 1960-61, as part of the team setting up the automatic weather station on Chick Island, and summered-over at Davis Station. He was also geologist in charge of field operations during the Prince Charles Mountains surveys of 1969 and 1970. He later became the chief mineral economist with the Bureau of Mineral Resources, and won the MBE. He has four Antarctic features named after him.

McLeod, Kenneth Alexander "Kenny." b. 1926, Darwin, East Falkland, son of shepherd Donald McLeod and his wife Barbara McKenzie. He joined FIDS in 1945 as handyman and meteorological observer, and wintered-over at Port Lockroy Station in 1946. On Jan. 27, 1947, at the end of the season, the *Fitzroy* arrived at Port Lockroy, bearing John Huckle. Mike Hardy, Gordon Stock, and Frank White, all left in the *Fitzroy*, and Huckle and McLeod stayed on to see to the affairs of Port Lockroy (q.v.). He then wintered-over at Base E in 1947. On Feb. 2, 1956, in Stanley, he married Lily Ann Stewart (née McCallum), and died on Jan. 29, 1962, at his home in Goose Green.

McLeod, Michael. b. Leith, Scotland. Sealing captain who commanded the *Beaufoy of London*, Weddell's consort vessel, from 1819 to 1822. On Dec. 12, 1821, he landed in the South Orkneys, thus independently discovering the group six days after Powell and Palmer had sone so.

McLeod, Thomas Frank "Tom." b. April 3, 1873, Glasgow, illegitimate son of Barbara McLeod, who came from Stornoway, which is where Tom was raised by his grandparents. He joined the Merchant Navy at 13, and fought in the South African War. He was an able seaman when he was taken on as a fireman on the *Terra Nova* during BAE 1910-13, and on the *Endurance* during Shackleton's ill-fated BITE 1914-17. McLeod was one of the 22 men left on Elephant Island. He was back on the *Quest*, Shackleton's last expedition, 1921-22. In 1923 he moved to Ontario and was a fisherman for two years. He never married, and died on Dec. 16, 1960, in a rest home in Kingston, Ontario.

[1]**McLeod Glacier**. 60°44' S, 45°38' W. A glacier, 1.5 km long, flowing SSE into Clowes Bay, on the S side of Signy Island, in the South Orkneys. Surveyed by FIDS between 1947 and 1950, and named by UK-APC on March 31, 1955, for Michael McLeod. US-ACAN accepted the name in 1970.

[2]**McLeod Glacier**. 69°22' S, 158°22' E. Flows N from the Wilson Hills, between Stanwix Ridge and Arthurson Ridge, into Davies Bay, Oates Land, in Victoria Land. Plotted by Australian cartographers from air photos taken during OpHJ 1946-47, and named by ANCA for Ian McLeod (q.v.), geologist with an airborne ANARE party off the *Magga Dan*, led by Phil Law, that landed here in 1961. US-ACAN accepted the name in 1966.

McLeod Hill. 68°05' S, 66°30' W. A rounded, ice-covered hill, rising to 1790 m, and forming a prominent landmark 1.5 km E of the head of Northeast Glacier, on the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37, and more accurately surveyed by USAS 1939-41. Re-surveyed by Fids from Base E in 1946, and named by them for Kenny McLeod (q.v.), who was here during the last 6 months of 1947, with a member of RARE 1947-48, both of them occupying the plateau met station at an altitude of 1700 m, 1.5 km east of this hill. UK-APC accepted the name McLeod Hill on March 31, 1955, and (after rejecting the names Glacier Dome and The Dome), US-ACAN followed suit that year.

McLeod Island. 69°22' S, 76°08' E. A large island, about 2 km N of Stornes Peninsula, off the shore of Prydz Bay, just W of the Larsemann Hills, on the Ingrid Christensen Coast. Plotted by Norwegian cartographers in 1946, from air photos taken by LCE 1936-37, and named by them as Kollen (i.e., "the knoll"). ANCA renamed it on Sept. 29, 1988, for Ian McLeod (q.v.), a member of the ANARE party who landed in the Larsemann Hills in Feb. 1958. The

Chinese call it Xiaoxianggang Dao. The Norwegians reapplied their name to Kollen Island (q.v.).

McLeod Massif. 70°46' S, 68°00' E. A large rock massif, just S of the Manning Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos, and first visited in 1969 by the Prince Charles Mountains Survey Party, which included geologist-in-charge Ian McLeod (q.v.). US-ACAN accepted the name in 1973.

McLeod Nunataks. 67°29' S, 52°42' E. An isolated group of nunataks, 55 km SE of the Tula Mountains, and about 114 km ESE of Amundsen Bay, in Enderby Land. First photographed aerially, by ANARE in 1956, and first visited in Dec. 1958 by an ANARE dog-sledge party from Mawson Station, led by Graham Knuckey, who fixed their position. The party included Ian McLeod (q.v.), for whom the feature is named. US-ACAN accepted the name in 1961.

Macleod Point. 64°06' S, 61°58' W. Forms the SE tip of Liège Island, in the Palmer Archipelago. It appears on a 1957 Argentine government chart, but is not named. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers, from these photos, in 1959. Named by UK-APC on Sept. 23, 1960, for Scottish physiologist Prof. John James Rickart Macleod (1876-1935), 1923 Nobel Prize winner in medicine for being one of the trio who discovered insulin in 1922. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961.

McLin Glacier. 71°12' S, 163°27' E. A tributary glacier fed partly by Edlin Névé, and which shares a common saddle with Carryer Glacier to the W, it flows N of McKenzie Nunatak into Graveson Glacier, in the Bowers Mountains. Named by NZGSAE 1967-68, for Lt. Cdr. Robert D. McLin, USN, Hercules aircraft pilot here that year. US-ACAN accepted the name in 1969.

Mount McMahon. 70°52' S, 65°09' E. A mountain, 8.5 km W of Mount Bewsher, in the Prince Charles Mountains. Plotted from ANARE air photos. Named for Ray McMahon (b. Dec. 23, 1934; of Box Hill, Vic.), who wintered-over as officer-in-charge at Mawson Station in 1963. US-ACAN accepted the name in 1967.

McMahon, Terence "Terry." b. 1875, Dundee, son of night watchman Hughie McMahon and his wife Mary. He and Bill Brannan were working in a jute mill in Dundee when they decided to stow away on the *Balaena* during DWE 1892-94. At Port Stanley they became regular expeditioners.

McMahon, Thomas Percival. b. May 1, 1889, Armley, near Leeds, but raised in Mill Hill, Leeds, son of Irish Catholic parents, Army musician Thomas McMahon and his wife Mary Elizabeth (known as Elizabeth). His father was posted to Malplaquet Barracks, Holloway, in Belfast, and from there Thomas Percival joined the Royal Engineers, as a volunteer bugler. Then into the Merchant Navy, as a steward, which is where he picked up the harp on his left arm and the anchor on his right. On Nov. 22, 1911, at Hobart, he signed on to the *Aurora* as a steward, at £9 per month, for the first part of AAE 1911-14. He left the expedition at Sydney, on April 16, 1912. On Aug. 17, 1914, he was living in Melbourne, and working as a musician at the Café Français on Lonsdale Street, when he joined the 63rd Infantry, of the Australian Expeditionary Force, as a private, leaving Melbourne on Oct. 21, on the *Hororata*, and on April 15, 1915, joined his unit at Gallipoli. He was in Egypt and England for 3 years, and during that time had his share of arrests for being drunk on duty and being AWOL. They couldn't arrest a man for contracting venereal disease, but with that and various other ailments, he was medically discharged in London on Aug. 29, 1919. He was now 30, single, and intended to live in Bristol. In 1929 he was living at Kings Heath, Birmingham, which is where he died in 1956.

McMahon Glacier. 70°45' S, 165°45' E. Anywhere between 16 and 29 km long, in the Anare Mountains, it flows N between Buskirk Cliffs and Gregory Bluffs into Nielsen Fjord, in Victoria Land. Originally named Nielsen Glacier, it was renamed by ANCA for Francis Patrick ("F.P." or "Frank") McMahon, logistics officer with the Australian Antarctic Division, many times in Antarctica and the sub-Antarctic islands. US-ACAN accepted the name in 1964.

McMahon Islands. 67°38' S, 45°58' E. Two low, peaked, rocky islands, rising to an elevation of 60 m above sea level, and separated by a narrow channel, 0.8 km N of the Thala Hills, and 5.5 km E of Molodezhnaya Station, in Enderby Land. Plotted from ANARE air photos taken in 1956, and first visited by a party led by Don Styles, off the *Thala Dan*, in Feb. 1961. Named by ANCA for F.P. McMahon (*see* **McMahon Glacier**). US-ACAN accepted the name in 1965.

McManus, Alan James. b. July 8, 1949. BAS cook who wintered-over at South Georgia in 1971, at Base F in 1972, at South Georgia again in 1974, at Base T in 1975, and at Rothera Station in 1977. He was base commander and cook at Rothera for the winters of 1980 and 1982.

McManus, Thomas *see* **USEE 1838-42**

McManus Glacier. 69°28' S, 71°27' W. Flows N into Palestrina Glacier, in the NW part of Alexander Island. Members of BAS, from Fossil Bluff Station, surveyed it in 1975-76, and UK-APC named it on June 11, 1980, for Alan McManus. US-ACAN accepted the name in 1995.

Mount McMaster. 66°37' S, 51°12' E. An outcrop, 2830 m above sea level, about 74 km NE of Mount Pardoe, in Enderby Land. Named by ANCA for A. McMaster, surveyor with the ANARE Enderby Land Survey Party of 1976, who established a survey station on the summit of this mountain.

McMillan, John. b. 1884, Glasgow. On May 7, 1909, he signed on to the *Nimrod*, at Sydney, as an able seaman, at the tail end of BAE 1907-09, and thus never got to see Antarctica. He was discharged at Poplar (in London) on Aug. 31, 1909.

MacMillan Point. 77°55' S, 164°34' E. An ice-free point, 1.5 km N of Cape Chocolate, it forms the N side of the entrance to Salmon Bay, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992, for Mark T. MacMillan (*see* **Deaths**, Nov. 14, 1987).

McMorrin, Ian. b. Aug. 11, 1938, South Africa, and raised in Salisbury, Rhodesia, son of Scottish parents. He arrived in England on Aug. 12, 1960, from Cape Town, and in 1961 joined FIDS, just as FIDS was becoming BAS, and was BAS general assistant and acting surveyor at Base E for the winters of 1962 and 1963. He was a member of the Larsen Ice Shelf Party of 1962-63. He was later warden of a field center in Powys, in Wales, and retired to Tremarchog (St Nicholas), near Fishguard, in Pembrokeshire.

McMorrin Glacier. 67°59' S, 67°10' W. Flows SSW from Mount Metcalfe to Marguerite Bay, on the Fallières Coast, SW of Camp Point, on the W coast of Graham Land. Surveyed by BAS in 1962, and named by UK-APC on Feb. 12, 1964, for Ian McMorrin (q.v.), who helped survey this area in 1962. US-ACAN accepted the name later in 1964. It appears in the British gazetteer of 1974.

McMullin Island. 66°17' S, 110°31' E. A rocky island, 0.5 km long, between Shirley Island and Kilby Island, in the S part of the entrance to Newcomb Bay, in the Windmill Islands. First mapped by air photos taken in 1947 by OpHJ 1946-47 and in 1948 by OpW 1947-48. Named by US-ACAN in 1956, for John P. McMullin, air crewman on OpW 1947-48, who helped establish an astronomical control in the area in Jan. 1948.

MacMurchie, John. b. 1874, Dundee. Able seaman on the *Scotia*, during ScotNAE 1902-04. He continued to ply the merchant seas as an able seaman, often going to the Antipodes and the Americas.

McMurdo. 77°51' S, 166°40' E. This is the famous station. It may seem surprising to have just McMurdo as the name of this entry, but there is no real choice in the matter. The station has gone by five different names over the years — Air Operating Facility at McMurdo Sound (or AirOpFac McMurdo), Air Operating Facility McMurdo (still AirOpFac McMurdo), Williams Air Operating Facilty, Naval Air Facility McMurdo (NAF McMurdo), and McMurdo Station. Yet, it is all one and the same station, and, in actual pracice, has always been called just McMurdo, or McM, or some other abbreviated form. To separate McMurdo into four separate entries scattered throughout this book would be defeating for the reader. So, throughout this book the station (regardless of what period of time is being talked about) is almost always referred to as McMurdo (unless to do otherwise would cause confusion). **Dec. 17, 1955**: When the *Glacier* pulled into McMurdo Sound, on the Ross Ice Shelf, at the start of OpDF I (i.e., 1955-56), there was nothing there, except Scott's old hut at Hut Point. **Dec. 18, 1955**: Construction began on the the world's most isolated runway, in zero temperature and 30 mph winds. The first tents went up, to house the Seabees. These were

McMurdo's first modern-day living quarters. **Dec. 20, 1955**: Four American planes flew in (*see* **Williams Field** and **Operation Deep Freeze I** for more details). On that day a group of Seabees traveled the 35 miles across the Ross Ice Shelf from their ship to Hut Point, to begin work on the base. They pitched their tents on the rocky soil, and waited for 2500 tons of equipment to arrive. It was slow in coming, due to the bad terrain, and the *Glacier* then bulldozed to within 10 miles of Hut Point to make communication easier. This was an uncomfortable time for the Seabees, with no baths, no hot meals. Lt. Dave Canham, USN, was officer in charge of the new base. Admiral Ketchum declared the Hut Point site too icy, so they relocated a short distance away on Cape Evans. **Early Jan. 1956**: Construction began. **Jan. 6, 1956**: Richard Williams fell to his death when his tractor plunged through the ice. Ketchum immediately relocated the site back to Hut Point, near his originally-planned one. This new one was in 77°50' S, 166°36' E, and 102 feet above sea level. This would be a semi-permanent base of about 30 buildings, and was rapidly put up by the Seabees, in the shade of Mount Erebus. At this point it was still called the Air Operating Facility at McMurdo Sound, or AirOpFac McMurdo, named after the runaway facility itself. **Jan. 17, 1956**: The first buildings went up. **Jan. 18, 1956**: When the ice started to crack up, the planes all left hurriedly for NZ. **Jan. 20, 1956**: The first shell of a building was finished. **Jan. 23, 1956**: A party was held to celebrate the completion of the first permament building. **Jan. 25, 1956**: The second storage building was completed. **Feb. 2, 1956**: By this time 10 prefabricated huts had been erected on the 12-acre site, and on that day Byrd, Paul Siple, and Major Murray A. Wiener, USAF, all made a tour of the site. **Feb. 3, 1956**: Byrd, Siple, Wiener, and Stuart Mandarich (Byrd's chief of staff) all left for NZ on the *Arneb*. The *Edisto* left the same day to escort the *Arneb* though the pack-ice, and from there to survey Cape Adare, the site of a possible joint weather station with NZ (*see* **Hallett Station**). **Feb. 5, 1956**: 13 completed building shells had heat. **Feb. 9, 1956**: The first heated "head" and the permanent mess hall were completed. **Feb. 15, 1956**: The Navy issued a call for volunteers to winter-over again in 1957. They got no takers. **Mid-Feb. 1956**: The *Wyandot* left Antarctica, bound for NZ and then Norfolk, Va. 93 men were left at McMurdo, to winter-over. 4192 tons of cargo had been unloaded at McMurdo. **Feb. 19, 1956:** The base was unofficially re-named Williams Air Operating Facility, a name that became official during OpDFII (i.e., 1956-57), thanks to Chaplain Leon Darkowski suggesting it to Admiral Dufek. **Feb. 19, 1956**: 28 buildings dotted the McMurdo landscape. **1956 winter**: Dave Canham led the first wintering party, of 93 men (13 officers, 78 enlisted men, and 2 civilians). There was an infirmary, a medical officer, two hospital corpsmen, and a dentist (Lt. David Knoedler, USN). The Search and Rescue Operations team of 1956 was: John Tuck, Dave Baker, Dutch Dolleman, Mike Clay, and Dick Prescott. Bill Hartigan was NBC-TV cameraman. Father Condit was the chaplain. *Ye Olde Sack Inn* was officers quarters; *New Wellington* for chief petty officers; and the *Beverly-Hilton Hotel Temporary* and *Suite Sixteen* (for enlisted men). Also present that first winter were John Dore (aviation chief), John Tallon and Jim Rooney (aviation machinist's mates), and Harold Lundy (machinist). The 24 Seabees who would go to the Pole in 1956-57 were there too (*see* **Seabees**). **May 1, 1956**: The first radio contact between McMurdo and the US, by ham radio. **Mid-May 1956**: The admin building and sick bay were called Dufek Hall; the library and office building was named Nimitz Hall. The main streets were named (see **Roads**). **1957 winter**: Lt. Cdr. Scott Marshall (leader). **Nov. 28, 1957**: Lt. Cdr. E.E. Ludeman relieved Marshall as leader. **1957-58 summer**: During OpDF III, McMurdo was upgraded from an air operating facility to a naval air facility — Naval Air Facility McMurdo (NAF McMurdo). **1958 winter**: E.E. Ludeman and Willie M. Dickey (leaders). **1958-59**: McMurdo took over from Little America V as "the largest city in Antarctica." It was, indeed, the largest of the U.S. stations in Antarctica, and indeed, of all the stations, regardless of nationality. It was known as the New York of Antarctica. The oldest part of the base is now called Downtown McMurdo. The main street is called Burke Avenue (after Admiral Arleigh Burke), and (for a sampler) one of the living quarters buildings is called *Mammoth Mountain Inn*. About 80 people winter-over every year, and in the summer this number swells to about 800, maybe even 1000. It has an ice runway (*see* **Williams Field**), the world's most southerly radio station (*see* **AFAN McMurdo**), many of the conveniences of home, and it even had a nuclear power plant. **1959 winter**: Cdr. Bill Lewiston (senior naval officer), Madison Pryor (senior scientist). **1960 win**ter: Cdr. Lloyd Bertoglio (senior naval officer), Hugo Neuburg (senior scientist). **1961**: It became a permanent station. **Feb. 1, 1961**: The electronics building burned. **1961 winter**: Cdr. James Brosnahan (senior naval officer), George H. Meyer (senior scientist). **1962 winter**: Cdr. Ed Donnally (senior naval officer), James Bettle (meteorologist and senior scientist). **July 12, 1962**: The power plant (*see* **Nuclear power**) delivered its first useful power to the station. **1963 winter**: Cdr. Robert Marvel (senior naval officer), Raymond Briggs (meteorologist and senior scientist), Lt. D.L. Windle (chaplain). **1964 winter**: Curly Olds (senior naval officer), Willard I. Simmonds (biologist and senior scientist). **1965 winter**: Cdr. Dusty Blades (senior naval officer), Arthur L. DeVries (senior scientist). **1966 winter**: Cdr. Justin Ballou (senior naval officer), Raymond Johnstone (senior scientist). **1967 winter**: Cdr. Norman Mills (senior naval officer). **1968 winter**: Joseph S. McNelly (senior naval officer), Richard F. Przywitowski (senior scientist; *see* **Mount Przywitowski**). **1969 winter**: Lt. Cdr. Bill Hunter (senior naval officer), Henry R. Heuerman (senior scientist). **1970 winter**: Cdr. William Frost (senior naval officer), James R. Webb (senior scientist). **1971 winter**: Cdr. Benjamin G. "Ben" Mattox (senior naval officer), K. Russell Peterman (senior scientist). **1972 winter**: R.L. Mantino (senior naval officer), Ervon R. Koenig (senior scientist). **1973 winter**: Cdr. George Blessing (senior naval officer), Fred E. Dotterer (senior scientist). **1973-74 summer**: Ervon Koenig (station manager). **1974 winter**: Cdr. Bill Sutherland (senior naval officer). Mary Alice McWhinnie was the first woman to lead the scientists for a wintering-over party at McMurdo. **1974-75 summer**: Ervon Koenig (station manager). **1975 winter**: Lt. Bob Schultz (senior naval officer), Larry Wiggington (senior scientist). **1976 winter**: Lt. Eric R. Goepfert (senior naval officer), Douglas W. Hall (senior scientist). **1977 winter**: Lt. Cdr. Barnes (senior naval officer), John S. Oliver (senior scientist). **1978 winter**: E.F. Weyrauch (senior naval officer). **1979 winter**: R. Mello (senior naval officer). **1980 winter**: Andrew M. Suter (senior naval officer). **1981 winter**: A.D. Bernhart (senior naval officer). **1982 winter**: William C. Asmussen (senior naval officer). **1983 winter**: Timothy J. Bond (senior naval officer). **1984 winter**: William J. Beary (senior naval officer). **1985 winter**: Roger L. Orndorff (senior naval officer). **1986 winter**: Ken Rachko (senior naval officer). **1987 winter**: John Rand (senior naval officer). **1988 winter**: James P. Dell (senior naval officer). **1989 winter**: Timothy Smith. **1990 winter**: Darryl B. Sisk. **1991 winter**: Lt. Cdr. M.K. "Tina" Baldwin. **1992 winter**: Cory J. Crebbin. **1993 winter**: Michael G. Morrow. **1994 winter**: John Sheve. **1995 winter**: Albert G. Martin. **1996 winter**: Edward M. Finn. **1997 winter**: Albert G. Martin. **1998 winter**: John S. Sherre. **1999 winter**: Terry L. Melton. **2000 winter**: William A. "Bill" Coughran. McMurdo remains alive and well, and is now in 77°51' S, 166°40' E. The station manager for 2006, 2007, and 2008 was Bill Henriksen.

McMurdo, Archibald William. b. Sept. 24, 1812, Dalkeith, near Edinburgh, Scotland, son of Lt. Col. Archibald McMurdo and his wife Catharine Martha Wilson. He entered the RN on Oct. 6, 1824, and became a lieutenant on Nov. 15, 1836. He was on the *Terror*, under George Black, in the Arctic, in 1837; in 1838 on the *Volage*, under Henry Smith, until he was invalided; and was again on the *Terror*, during Ross' 1839-43 expedition to Antarctica. Ross named McMurdo Bay (later called McMurdo Sound) after him. On Oct. 4, 1843 he became a commander, and in 1846 skippered the *Contest*, in African waters. He was promoted captain on Sept. 18, 1851. On Dec. 30, 1851, at St Cuthberts, Edinburgh, he married Marion Jessie Corrie, and they lived until his death at Cargenholm House, in Kirkcudbrightshire. He was promoted to rear admiral on May 24, 1867, and retired as a vice admiral on May 29, 1873. He died on Dec. 11, 1875, at Cargenholm. His brother, William, later a general, married Sir Charles Napier's daughter. His widow spent her last many years at the Crichton Royal Institution, in Dumfries.

McMurdo Base *see* **McMurdo**

McMurdo Bay *see* **McMurdo Sound**

McMurdo Dry Valleys. 77°30' S, 162°00' E. A convenient name for a geographic area 200 km long by 80 km wide, taking in the largest group of ice-free features in Antarctica. It occupies the S part of the Scott Coast, in Victoria Land, and actually extends from 76°30' S to 78°30' S, and between 160°00' E and 164°30' E. There are not just dry valleys here (also called ice-free valleys), but mountains, glaciers, ranges, and lakes. There are basically three major concentrations of ice-free areas within these coordinates. Working from N to S they are: (1) Alatna Valley, and other ice-free valleys associated with the Convoy Range; (2) the main central sector bounded by the Saint Johns Range, the Quartermain Mountains, and the Kukri Hills, and which include Victoria Valley, Barwick Valley, Balham Valley, McKelvey Valley, Wright Valley, the elevated valleys of the Olympus Range and the Asgard Range, then Pearse Valley, Taylor Valley, and the valleys in the Quartermain Mountains; and (3) in the extreme SE, lying near the coast between the Royal Society Range and the Koettlitz Glacier, are Garwood Valley, Marshall Valley, Miers Valley, Hidden Valley, Pyramid Trough, and Roaring Valley. Scientists have been very interested in this area because extensive sections are exposed, and therefore easy to get at and study. The first to visit these valleys was Scott during his two expeditions (BNAE 1901-04 and BAE 1910-13), and he called Taylor Valley, Beacon Valley, and Pyramid Trough "dry valleys," although the last-named was not named until later. In 1986, US-ACAN named this area as McMurdo Dry Valleys, in association with nearby McMurdo Sound.

McMurdo Ice Shelf. 78°00' S, 166°30' E. Strictly speaking, this is part of the Ross Ice Shelf, the much-traveled part between McMurdo Sound and Ross Island to the N, and Minna Bluff to the S. The characteristics of this part of the Ross Ice Shelf differ from those of the main shelf itself, and in 1962-63, after careful study, scientist A.J. Heine suggested the newly independent ice shelf have as its borders Ross Island, Brown Peninsula, Black Island, and White Island. In 1972, US-ACAN enlarged the meaning of the name to cover also the area southward to Minna Bluff. Named in association with McMurdo Sound.

The *McMurdo News*. Newspaper produced at McMurdo Base during IGY. Replaced by the *McMurdo Sometimez*.

The *McMurdo Sometimez*. Originally a weekly (actually, it was a spasmodic — hence the name), this was a newspaper produced at McMurdo Base as a successor to the *McMurdo News* of the IGY period. It carried American, international (radio-carried) and local news (i.e., station scuttlebutt). In 1962 it became a daily, the Navy's first daily newspaper in Antarctica. Over the years the name changed to the *McMurdo Sometimes*, and, later still to the *Antarctic Sun Times*, and finally the *Antarctic Times*. The last edition was put out on Feb. 9, 1997.

McMurdo Sound. 77°30' S, 165°00' E. Also called McMurdo Strait. 56 km long and wide, in the SW corner of the Ross Sea, at the junction of that sea and the Ross Ice Shelf, between Ross Island and Victoria Land. Its W boundary is from Brown Peninsula (in 78°02' S, 165°32' E, on the Hillary Coast of the Antarctic mainland) northwards along the Antarctic coast to Cape Roberts (in 77°00' S, 163°09' E). Its N boundary is from Cape Roberts eastward, a line to the N extremity of Ross Island (77°11' S, 166°50' E). Its E boundary is from that N extremity of Ross Island southward along the W coast of Ross Island, as far as Scott Base (in 77°52' S, 166°40' E), on the S end of the island. Its S boundary is from Scott Base southeastward, a line to the N extremity of White Island (in 78°00' S, 167°30' E), and thence from this position westward, along the N coasts of White Island and Black Island, and continuing northwesterly to Brown Peninsula, where it began. Discovered by Ross in Jan. 1841 and named by him as McMurdo Bay, for Archibald McMurdo. The next person to visit was Scott again, in the *Discovery*, in 1902, during BNAE 1901-04. He re-defined it as a sound. US-ACAN accepted the name McMurdo Sound in 1947. People were back and forth here between then and 1948, when Gerald Kethcum led a 2-ship exploration of the sound during OpW 1947-48, and then no American went back until the *Glacier* and several other ships pulled in here in Dec. 1955 to kick off OpDF I, by using McMurdo as their base. It is one of the main access routes to the interior of the continent, and thus has been the base for many expeditions. The sound is kept free of ice by icebreakers, so that supplies can get into McMurdo Station. NZ-APC finally accepted the name on Aug. 14, 2002.

McMurdo Station *see* **McMurdo**

McMurdo Strait *see* **McMurdo Sound**

McMurdo Volcanics. A line of dormant and extinct volcanoes running along the coast of Victoria Land. They include Mount Melbourne.

McMurdo-Pole Traverse. 1960-61. A traverse from McMurdo Station to the Pole. Eight men, three Sno-cats and trailers, led by Bert Crary, left McMurdo on Dec. 10, 1960, and arrived, ahead of schedule, at the South Pole, on Feb. 12, 1961, after 1230 miles. Crary was the 7th expedition leader to arrive at the Pole by land. The others in the party were: Edwin S. Robinson (geophysicist), Mario Giovinetto and Jack Zahn (glaciologists), Ardo Meyer (geomagnetician with the U.S. Coast and Geodetic Survey), Jack Long and Ralph Ash (traverse engineers), and Sven Evteev (Russian exchange glaciologist). Much scientific study was done along the way.

Cape McNab. 66°56' S, 163°14' E. Rising to an elevation of 350 m above sea level, it forms the S end of Buckle Island, in the Balleny Islands. Named for John McNab. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

McNab, Donald "Don." b. Aug. 30, 1928, Kirkcaldy, Fife. A professional meteorologist, he worked on Atlantic ships and at shore stations, and joined FIDS in 1955, as a meteorologist, wintering-over as senior met man at Base F in 1956. On his return to the UK, he went to Schefferville, PQ, Canada, where he managed an outpost of McGill University for some years, before returning to Glasgow on the *Lismoria*, on Sept. 17, 1959, with his new wife Jean, and their son John, born that February in Canada. He went to the Met Office in Jersey, in the Channel Islands.

McNab, John. Second mate on the *Eliza Scott* during the Balleny Expedition, 1838-39. Also an artist, he sketched the Balleny Islands when they were discovered in 1839.

McNab, Peter. b. 1866, Dundee. Able seaman and skier on the *Polar Star*, during DWE 1892-93.

McNair Nunatak. 67°52' S, 63°23' E. A small, clearly defined rock exposure, 20 km E of the central part of the Masson Range, 8 km SSE of Russell Nunatak. 44 km SE of Mawson Station, and close to the route taken by the ANARE southern parties in 1954, 1955, and 1956, it was discovered by Bob Dovers and his ANARE Southern Party of 1954. Named by ANCA for Richard George "Dick" McNair, cook who wintered-over at Mawson Station in 1955. He had also been at Heard Island for the winter of 1953, and would be at Macquarie Island for the winter of 1962. US-ACAN accepted the name in 1961.

McNally Peak. 86°35' S, 153°24' W. Rising to 2570 m, 5.5 km W of Mount Farley, near the SE side of Holdsworth Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1967, for Cdr. Joseph J. McNally, USN, supply officer at McMurdo in the winter of 1959. During OpDF 67 (i.e., 1966-67) he was on the staff of the commander, U.S. Naval Support Force, Antarctica.

McNamara, John B. b. 1891, Boston. Bosun on the *Jacob Ruppert* for both halves of ByrdAE 1933-35.

MacNamara Glacier. 84°20' S, 63°40' W. In the Patuxent Range of the Pensacola Mountains, it flows NW between the Thomas Hills and the Anderson Hills into the Foundation Ice Stream. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped from these efforts by USGS. Named by US-ACAN in 1968, as Macnamara Glacier [sic], for pedologist Edlen Everett MacNamara (b. 1937), who wintered-over as U.S. exchange scientist at Molodezhnaya Station in 1967. UK-APC accepted the name (complete with misspelling) on Nov. 3, 1971. The corrected name appears in the 1974 British gazetteer, and in the 1980 American gazetteer.

McNamara Island. 72°36' S, 93°14' W. An island, 10 km long and mainly ice-covered, it lies partly within the N edge of the Abbot Ice Shelf, 30 km E of Dustin Island. Discovered on Feb. 27, 1940, on flights from the *Bear*, during USAS 1939-41, and named by Byrd for John McNamara. US-ACAN accepted the name in 1947. Originally plotted in 72°34' S, 93°12' W, it has since been replotted.

Mount McNaughton. 85°58' S, 128°12' W. A large mountain rising to over 3000 m, 3 km S of Haworth Mesa, in the W part of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for John Theodore McNaughton (1921-1967), assistant secretary of defense for international security affairs, a member of the Antarctic policy group from 1965 until he died.

McNaughton Ridges. 67°32' S, 50°27' E. A group of ridges about 21 km NE of Simpson Peak, in the Scott Mountains of Enderby Land. Plotted from ANARE air photos taken in 1956 and 1957, and named by ANCA for Ian L.K. McNaughton, physicist at Mawson Station in 1961. US-ACAN accepted the name in 1965.

McNeice, Oswald William. b. May 31, 1892, Belfast. His mother was Mrs W. McNeice, of Easton Crescent. He apprenticed in sail with the Bank Line, on their vessel the *Glasgow*, acquired a tattoo of an American sailor on his left forearm, and on Nov. 27, 1911, at Hobart, he signed on to the *Aurora*, as an able seaman, at £5 per month, for AAE 1911-14. He left the ship at Lyttelton, NZ, on March 18, 1913, but, on Sept. 1 was rehired, finally leaving the expedition on March 19, 1914, with a bonus of £6 12s, and returning to his wife Ruby Dorothy, in Hobart. He became a traveling salesman, and then World War I happened. On April 3, 1915, he enlisted at Hobart, his wife moving to St Kilda for the duration. He arrived at Lemnos, on July 21, 1915, as part of the Royal Australian Naval Bridging Train. On Feb. 16, 1916, he was hospitalized in Egypt, and on March 4, rejoined his unit, four days later being sent to Cairo as a baggage guard. He rejoined his unit on June 18. His unit was demobbed, and he left Suez on May 29, 1917, on the *Bulla*, bound for Melbourne, where he arrived on June 17. However, on March 6, 1918, he re-enlisted at Melbourne in the Australian Flying Corps, as a 2nd mechanic, and on May 8, left Melbourne on the *Osterley*, arriving in Liverpool on July 10, and from there making his way to Halefield Barracks, in Bucks. On Sept. 6, 1918, he became an air cadet. After the war he returned to St Kilda, but in 1929 moved to Batchelor, in Northern Territory, as a Commonwealth Railways fettler and ganger, a job he held until he resigned on Aug. 17, 1934. He died on March 10, 1946, and is buried in Adelaide.

McNeil, Alexander. Able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

McNeil, Malcolm. Last name also seen (erroneously) as MacNeill. b. March 15, 1893, Balnabadoch, Barra, in the Western Isles of Scotland, son of fisherman Patrick MacNeil and his wife Catherine. He was an able seaman on the *Aurora*, 1916-17, when that vessel went to Cape Evans to relieve the Ross Sea Party during BITE 1914-17. In the 1930s he left NZ for Canada, and for 22 years worked for the Canadian Steamship Company. On May 25, 1959, he and his wife Morag arrived in Greenock, on the *Empress of England*, from Montreal, heading for Airdrie. What became of them after that date this author has been unable to determine.

McNeil, Robert. On Dec. 1, 1908, he left NZ as a new fireman aboard the *Nimrod*, for the 2nd half of BAE 1907-09.

Glaciar McNeile *see* **McNeile Glacier**

McNeile, Stephen St Clair. b. 1925, Dublin, son of the Rev. Alan Hugh McNeile, professor of divinity at Trinity College, Dublin, and later dean of Sidney Sussex College, Cambridge, and his wife Wilda St Clair. During World War II he was an officer in submarines, and was a temporary lieutenant in the RNVR when he joined FIDS in 1947 as surveyor. He left Tilbury on the *John Biscoe*, on Dec. 19, 1947, bound for Port Stanley, and wintered-over at Base D in 1948. He returned to the UK in 1949, and in 1953 married Jill Longworth, in London. They lived for years (1959-83, anyway) in Chelsea.

McNeile Glacier. 63°54' S, 59°26' W. Flows N to the SE side of Almond Point, where it enters Charcot Bay, at the Davis Coast, on the W side of Graham Land. Charted in 1948 by FIDS, and named by them for Stephen McNeile (q.v.), a member of the Nov. 1948 surveying group from Base D. They plotted it in 63°57' S, 59°22' W. It has since been re-plotted. It appears on a British chart of 1952 as McNeile's Glacier. UK-APC accepted the name McNeile Glacier on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955, and on a British chart of 1962. The Argentines call it Glaciar McNeile or even Glaciar Mc Neile.

Lake McNeill. 68°32' S, 78°22' E. It trends E-W, about 500 m W of Lake Cowan, and is an important feature on the overland route from Davis Station to the Platcha Huts, in the E part of the Vestfold Hills. Named by ANCA for Alan R.B. McNeill, physicist who wintered-over at Davis Station in 1969.

McNish, Henry "Harry." Known as "Chips" or "Chippy." Name also spelled McNeish. b. Sept. 29, 1874, Port Glasgow, Renfrewshire, son of cobbler John McNish and his wife Mary Jane Wade. In 1895 he married Jessie Smith, and joined the Merchant Navy. His wife died in 1898, and he married again to Ellen Timothy, who died in 1904. In 1907 he married Lizzie Littlejohn. He was suffering from chronic hemmorhoids and rheumatism when, at 40, he left New York on the *Danube*, and arrived in Southampton on Feb. 2, 1914, and volunteered to go south as carpenter on BITE 1914-17. He was the owner of the cat Mrs. Chippy, and never forgave Shackleton for killing him [sic]. He was one of the team who went with Shackleton on the *James Caird* to South Georgia. He returned to the Merch, divorced his wife in 1918, and in 1925 moved to NZ, where he worked on the docks in Wellington until he was injured. He had been living destitute at the Ohiro Benevolent Home for two years, when he died at Wellington Hospital on Sept. 24, 1930. What is odd is that in his obituary in the New Zealand papers, it not only tells of his part in the Shackleton adventure, but also describes in detail his participation in BNAE 1901-04 (which he had nothing to do with).

Mount Macnowski. 74°59' S, 64°57' W. The most northerly of the Scaife Mountains, it rises to 1490 m on the S side of Ketchum Glacier, about 8 km WSW of Schmitt Mesa, on the Orville Coast, near the base of the Antarctic Peninsula. Discovered aerially by RARE 1947-48. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Francis Bernard Macnowski (b. 1945, Michigan), construction mechanic at Pole Station in the winter of 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

McPhail Turrets. 77°28' S, 162°42' E. Distinctive rock formations extending over the NE end of Nichols Ridge, S of Lake Brownworth, in the NE part of the Asgard Range, in Victoria Land. Named by NZ-APC on June 17, 2010, for Rob McPhail, NZ helo pilot in Antarctica for over 20 field seasons.

Mount Macpherson. 82°29' S, 155°50' E. A prominent peak, rising to 2360 m, and forming the highest point of the escarpment of the Wellman Cliffs, 2.5 km N of Mount Csejtey, on the S edge of Boucot Plateau, in the Geologists Range. Discovered by NZGSAE 1961-62, and named by them for Eric Ogilvy Macpherson (1893-1948), formerly chief geologist of the NZ Geological Survey. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

McPherson, Frank. b. Oct. 3, 1888, on a farm in Camden Co., NC. He joined the Merchant Marine as a teenager, and was chief engineer on the *Eleanor Bolling* during ByrdAE 1928-30. It was Frank who adopted the bulldog Bum (*see* **Dogs**). He ran a tavern at 14 West 23rd, in Bayonne, NJ, a bad choice of occupation for an alcoholic, and died there on Feb. 18, 1936.

Macpherson, Malcolm. b. 1816, St John's, Labrador. On Dec. 15, 1839, at Hobart, he joined the *Zélée* as an ordinary seaman, for the 2nd Antarctic voyage of FrAE 1837-40.

MacPherson Peak. 70°33' S, 159°43' E. A prominent rock peak, rising to 2290 m, at the NW end of Pomerantz Tableland, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Specialist 5th Class Frank L. MacPherson, U.S. Army helicopter mechanic in the field here in 1961-62 and 1962-63, supporting, respectively, the USGS Topo North-South and Topo East-West surveys. ANCA accepted the name, but as Macpherson Peak (which is wrong).

McPherson Peak. 78°32' S, 84°42' W. Rising to 2200 m, at the W side of the head of Remington Glacier, in the Sentinel Range of the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for William C. McPherson, Jr., USN, from Rhode Island, radioman who wintered-over at Pole Station in 1957.

Macquarie Island. 54°37' S, 158°58' E, or

between 54°30' S and 54°45' S, and between 158°45' E and 159°00' E. Not in Antarctica, but definitely a sub-Antarctic island, SE of Australia, and halfway to Antarctica. It is about 34 km long, N-S, and almost uniformly 4 km wide, like a long stick in the Southern Ocean. The highest peak is 430 m. The island was discovered on July 11, 1810, by Frederick Hasselburg on the *Perseverance*, and it was named after Lachlan Macquarie, governor of NSW. Von Bellingshausen visited it in 1820. George Dixon took the first ANARE crew there in 1948, and on March 7, 1948, his ship, the *LST 3501*, arrived to establish the second Australian sub-Antarctic scientific station (cf Heard Island), which stands on the N tip of the island. It was opened on March 21, 1948, and Alan Martin was the first officer in charge, that winter. There were 21 winterers, and Charles Du Toit was the chef. It has been a major destination for ANARE since then.

MacQuarrie Edge. 80°32' S, 30°03' W. A rock scarp rising to about 760 m, in the N part of the Otter Highlands, at the E edge of the Filchner Ice Shelf, dominated by the W part of the Shackleton Range. Named by UK-APC on Jan. 5, 1972, for Alastair Stuart MacQuarrie (b. Nov. 10, 1935, Sheffield. d. 1970, Cheltenham, Glos), BAS tractor mechanic who wintered-over at Halley Bay Station in 1968, and who worked in the Shackleton Range. US-ACAN accepted the name.

Macrae, Malcom Donald "Malky." He joined BAS in 1968, as a general assistant and tractorman, and wintered-over at Halley Bay Station in 1969, and at Fossil Bluff Station in 1970. In Dec. 1971, at Base T, he was working with a hacksaw when it snapped, and a piece flew off into his eyeball, deflating it. Dr. Mike Holmes, fortunately, was still there, about to leave for home. Macrae was due to have wintered-over at Base T in 1972, but was shipped home instead. He spent the winter of 1973 at Base E, as a diesel electric mechanic.

McRae, Murdoch. b. 1867. Second steward on the *Nimrod*, during the first half of BAE 1907-09. Aeneas Mackintosh refers to him as M.M. Rae, aged 40.

Mac. Robertson Land. 70°00' S, 65°00' E. Also called the Mac. Robertson Coast. The name has variously been seen as Mac Robertson Land, Mac-Robertson Land, and MacRobertson Land. Finally the definitive form of this unusual name was accepted as Mac. Robertson Land. It is the stretch of the East Antarctica coastline between Enderby Land and the American Highland, or, more specifically, that which lies southward of the coast between William Scoresby Bay and Cape Darnley. In the E it includes the Prince Charles Mountains. Discovered by BANZARE on Dec. 29, 1929, on a flight from the *Discovery*, and named by Mawson for confectionery magnate Macpherson Robertson (1859-1945), an Australian patron who, incidentally, introduced chewing gum to that country. It was surveyed in greater detail during the second half of BANZARE, 1930-31, when they made landings at Scullin Monolith and Cape Bruce. US-ACAN accepted the name in 1947.

McSaveney, Eileen R. b. 1945. American geologist from Ohio State University. In 1968-69 she was in Antarctica with her husband, Maurice McSaveney (*see* **McSaveney Spur**), and the following season, 1969-70, was one of Lois Jones's all-women team to Antarctica, and one of the first 6 women to stand at the Pole. With her husband, she was back in Antarctica in 1972-73, investigating glaciers.

McSaveney Spur. 77°17' S, 160°35' E. A prominent rock spur, 3 km NE of Mount Bastion, in the Willett Range of Victoria Land, it descends NE from the plateau level toward the NW flank of Webb Glacier. Named by US-ACAN in 1976, for Maurice James McSaveney (b. 1945), NZ geologist in Antarctica in 1968-69, 1972-73, and 1973-74, and his wife Eileen R. McSaveney (q.v.).

McSweeney Point. 82°49' S, 166°40' E. A sharp rock point, 5 km E of the terminus of Davidson Glacier, it overlooks the Ross Ice Shelf. Mapped by USGS from USN air photos taken in 1960, and from tellurometer surveys conducted in 1961 and 1962. Named by US-ACAN in 1966, for Lt. Robert H. McSweeney (b. Detroit), USN, commander of the *Tombigbee* during OpDF 63 (i.e., 1962-63).

Cape McVitie *see* **Cape Hartree**

McWhinnie, Mary Alice. b. Aug. 10, 1922, Elmshurst, Ill., daughter of laundry-truck driver David A. McWhinnie and his wife Ruth. A DePaul University biologist, the first American woman to do Antarctic field work (the "first woman usarp"). She made 11 research trips to Antarctica between 1962 and 1979. Between 1962 and 1972 she worked the Antarctic continent from the *Eltanin* during 5 summers, mostly studying marine invertebrates, mainly krill (on which she was a world authority), without setting foot on land, because the U.S. government forbade women to do so. In fact, in 1962 she only made her way there because by the time the U.S. government found out that the "M.A." stood for Mary Alice, she was there. That tour, on the *Eltanin*, lasted from Nov. 24, 1962 to Jan. 23, 1963, and she studied the relation of water temperature to the physiology of molting crustaceans. Finally, in 1972, she set foot on the continent. It must be said that she was not the first woman to do scientific work in Antarctica. Several Russian women and others had already done that. In 1974 she wintered-over as chief scientist at McMurdo, the first woman ever to head a scientific station in Antarctica. In 1975-76 she was at Palmer Station with her pupil Charlene Denys, and again every summer from 1976 to 1979. She wrote *Polar Research* in 1979, and while preparing for another trip to Antarctica in 1979-80 she developed lung cancer, and died on March 17, 1980, at Downers Grove, near Elmhurst. The Mary Alice McWhinnie Biology Center at Palmer Station was re-named for her in 1980-81.

McWhinnie Peak. 77°16' S, 162°14' E. A peak, 3 km NE of Mount Harker, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1976, for Mary Alice McWhinnie.

Macy, Richard. b. Oct. 27, 1797, Nantucket, Mass., son of Zaccheus Macy and his wife Judith Starbuck. On June 8, 1817, he married Catherine Alley, in Nantucket. A whaling captain, from 1822 to 1825 he commanded the *Maro*, and in 1825 left Nantucket for the South Seas, as commander of the *Harvest*. On this trip, in the austral season of 1825-26, he claimed to have discovered an island, 4 or 5 miles in extent, in 59°S, 91°W, his ship "passing near enough to see the breakers." The "island abounded with seadogs, or seals, and the water was much colored, and thick with seaweed." This sounds very much like the island sighted by Capt. Swain, on the *Alliance*, in 1824. It is possible that Macy journeyed south of 60°S during this voyage. After this they remained in the South Pacific islands for a couple of years. On his way back to Nantucket in 1828, he took the *Harvest* as far south as 55°S. In 1834 Macy was in command of the *Wiscasset* (not in Antarctic waters). He and Catherine later lived in Vassalboro, Maine, which is where he died on Aug. 12, 1850.

Macy, Robert R. Captain of the *Aurora*, 1820-21. He joined the *Huron* in 1821-22.

Macy Glacier. 62°42' S, 60°08' W. Flows S into Brunow Bay, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE 1956-57, and surveyed from the ground by FIDS, 1957-58. Named by UK-APC on July 7, 1959, for Robert Macy. US-ACAN accepted the name in 1960. Last plotted by the UK, in late 2008.

Madan Saddle. 63°02' S, 62°36' W. At an elevation of 1110 m, overlooking Gramada Glacier to the SE, and bounded by Neofit Peak to the NE and Riggs Peak to the SSW, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Madan, in the Rhodope Mountains of Bulgaria.

Madara Peak. 62°32' S, 60°07' W. A peak rising to 430 m in the Vidin Heights, 1.3 km NE of Samuel Peak, 2.6 km E of Miziya Peak, and 2.5 km SW of Sharp Peak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the historic town of Madara, in northeastern Bulgaria.

Islote Madariaga *see* **Diamonen Island**

Madden Island. 77°27' S, 149°03' W. An ice-covered island, 6 km long, in the Marshall Archipelago, between Moody Island and Grinder Island, in the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Michael C. Madden, USN, electrician's mate at Byrd Station for the winter of 1966.

Cabo Madder *see* **Madder Cliffs**

Madder Cliffs. 63°18' S, 56°29' W. Reddish rock cliffs rising steeply from the sea to about 305 m (the British say 135 m), they form the N side of the entrance to Suspiros Bay, at the W end of Joinville Island. Surveyed by Fids from Base D in 1953-54. Named by UK-APC on

Sept. 4, 1957. Madder is a red vegetable dye, and seems to describe the color of the cliffs. US-ACAN accepted the name in 1963. The Argentines call it Cabo Madder (i.e., "Cape Madder").

Maddox Peak. 65°09' S, 62°50' W. Rising to about 1200 m, at the S side of the mouth of Carbutt Glacier, just E of the head of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. It appeared on a 1954 Argentine government chart, but was unnamed. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Richard Leach Maddox (1816-1902), British photography pioneer. US-ACAN accepted the name in 1965.

Punta Madell *see* **Madell Point**

Madell, James Stuart "Jim." b. July 18, 1932, Holborn, London, son of Navy man turned London County Council employee Henry Madell and his wife Ethel Charlotte Ryan. The name Madell was originally McDill (but long ago, in Ireland). Jim saw the Crystal Palace burn down in 1937. He also worked for the LCC, doing clerical work, then in 1951 went to work at the Admiralty Hydrographic Office at Cricklewood, as a draftsman. From 1951 to 1953 he did his national service in the Artillery, mostly in Germany, where he also qualified in parachuting, but, more to the point, trained as, and emerged as, a surveyor. Back to the Admiralty, and in 1955 he answered an ad in the *Daily Telegraph* for FIDS surveyors. He left Southampton on the *Shackleton* just after Christmas 1955, and, going via Cape Verde and Montevideo, he arrived at the Falklands. There he left Port Stanley on the *John Biscoe*, in company with Ken Hill and John Noble, arriving in March 1956 at Hope Bay, where he was surveyor at Base D for the winter of 1956. Actually most of his time (7 months or so) was spent helping put the finishing touches on the hut at View Point (*see* **Base V**), with Wally Herbert, Bill Nicholls, and George Larmour. In fact, they spent Midwinter there. He then transferred to Base W for the winter of 1957. In March 1958 the new *John Biscoe* took him back to the Falklands, and from there he returned to Southampton. He worked for various companies, or freelanced, from then until he retired in April 1992, traveling, living, and working in Africa, Switzerland, Iraq, the British Isles, Syria, and finally settled in Cumbria in 1980. He married twice, to Jill Howells in 1968, in Pembroke, and to Deborah Frances Owen in 1973.

Madell Point. 66°35' S, 66°22' W. A point, 3 km NE of Cape Rey, Darbel Bay, on the Loubet Coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. Named by UK-APC on July 7, 1959, for Jim Madell (q.v.). He was responsible for the triangulation of this area while at Base W in 1957. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Punta Madell.

Playa Maderas. 62°27' S, 60°46' W. A beach, SE of the cliff the Chileans call Acantilado Lobos, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because they found old wood from shipwrecked vessels here ("maderas" means "pieces of wood").

Madey Ridge. 83°28' S, 55°50' W. Trends NW-SE from Mount Moffatt, at an elevation of about 1115 m, along the N side of Berquist Ridge, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from all these efforts. Named by US-ACAN in 1968, for Julius Michael John "Jules" Madey (b. June 9, 1940, Newark, NJ), of Clark, NJ, ham radio operator who, while at high school and junior college (between 1957 and 1963, when he went to study electronics at CalTech, with a minor in biological systems engineering), acted as a major link between Antarctica and the USA. His younger brother John Michael Julius Madey (sic; b. Feb. 28, 1943; later a professor at Duke, and now the manager of the Free Electron Laser Laboratory, in Hawaii), helped him a lot on these ventures. Jules, who, in the mid 1960s, was particularly helpful with USGS's Pensacola Mountains Project, worked in California for 10 years, and in 1977 moved back East, and now works for the New York State Thruway Authority. UK-APC accepted the name on Nov. 3, 1971. *See also* **Gillies Rock**, for a somewhat comparable story.

Madigan, Cecil Thomas. b. Oct. 15, 1889, Renmark, South Australia, son of fruitgrower Thomas Madigan and his wife, Mary Dixie Finey. He was the meteorologist on AAE 1911-14, and led the Eastern Coastal Party in late 1912 to Horn Bluff and back to Main Base. While a Rhodes scholar in geology, he married Wynnis Knight Wollaston in London, on Aug. 20, 1915, and served with distinction as an engineer captain in World War I in France. After two years (1920-22) as a geologist in the Sudan, he went back to Adelaide University as a lecturer, at Mawson's request, and until 1940 worked closely with his old leader in the geology department there. In the 1920s and 1930s he explored Australia's Simpson Desert, became the man most associated with that wasteland, and, in fact, named it. A reserve officer in World War II, he commanded the School of Military Engineering in NSW. He died, one of the most important men in his field internationally, on Jan. 14, 1947, in Adelaide.

Madigan Nunatak. 67°09' S, 143°21' E. An isolated rocky nunatak, rising to a height of 732 m above sea level, above the continental ice, 19 km WSW of the head of Watt Bay, and 27 km S of Cape Gray, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Cecil T. Madigan. US-ACAN has accepted the name.

Mount Madison. 80°26' S, 160°10' E. A prominent, largely ice-covered mountain, rising to 1385 m, 11 km W of Cape Selborne, on the S side of Byrd Glacier, on the Shackleton Coast. Named by US-ACAN in 1966, for Lt. Cdr. Douglas W. Madison, aide to the commander, U.S. Naval Support Force, Antarctica, 1961-62, and public information officer, 1963-64.

Madison Terrace. 80°32' S, 160°18' E. A rectangular terrace, 10 km long and 5 km wide, abutting the S part of Mount Madison, on the Shackleton Coast. Ice draining from Mount Madison covers the terrace, which terminates in a line of icefalls within Couzens Bay. Named by US-ACAN in 2003, in association with the mountain. NZ-APC accepted the name on Feb. 27, 2003.

Cerro Madre *see* **Cerro Pardo**

Madsensåta. 71°21' S, 12°36' E. A mountain in the N part of the Östliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Jan P.H. Madsen, who wintered-over as a meterological assistant at Norway Station in 1959, during NorAE 1956-60. Name means "Madsen seat." The Germans call it Schneide, and the Russians call it Gora Kontaktnaja. *See also* **Per Spur**.

Madzharovo Point. 64°34' S, 63°17' W. A point separating the termini of Thamyris Glacier to the NW and Kleptuza Glacier to the SE, on the SW coast of Fournier Bay, on Anvers Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the town of Madzharovo, in southeastern Bulgaria.

Mae-hyoga Rock. 70°00' S, 38°54' E. An exposed rock, 3 km S of the Instekleppane Hills, and 5 km NW of Oku-hyoga Rock, on the E side of Shirase Glacier, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962. Named Mae-hyoga-iwa (i.e., "outer glacier rock") by the Japanese on Oct. 1, 1962, in association with nearby Oku-hyoga Rock. US-ACAN accepted the name Mae-hyoga Rock in 1968. The Norwegians call it Ytre Brenabben, which means the same thing. *See also* **Brenabbane**. Originally plotted in 70°04' S, 38°54' E, it has since been replotted.

Mae-hyoga-iwa *see* **Mae-hyoga Rock**

Mount Maere. 72°32' S, 31°17' E. Rising to 2300 m, on the W side of Norsk Polarinstitutt Glacier, immediately SW of Mount Bastin, in the Belgica Mountains. Discovered by BelgAE 1957-58, under Gaston de Gerlache, who named it Mont de Maere, for Xavier de Maere d'Aertrijcke, 2nd-in-command and chief meteorologist of the expedition. US-ACAN accepted the name Mount Maere in 1966.

Fondeadero Magallanes. 64°53' S, 62°56' W. An anchorage E of what the Chileans call Islotes Inútil, off the E coast of Bryde Island, S of Paradise Harbour, on the W coast of the Antarctic Peninsula. Named by the Chileans for the 140-ton Chilean steamer *Magallanes* owned by Braun & Blanchard, which, on Sept. 18, 1903, left for an exploratory whaling run into the South Pacific, under the command of Capt. Adolfus Andresen. This was a signal event, and led to Antarctic whaling.

Magda Nunatak. 62°07' S, 58°14' W. A small nunatak, W of Lions Rump, King George Bay, King George Island, in the South Shetlands.

Named by the Poles in 1981, for Magdalena "Magda" Swierszcz, member of the technical staff of PolAE 77-79 and PolAE 1979-81.

The *Magdalena Oldendorff*. A 10,661-ton, 517 foot-8 inch German-owned bulk-carrier, built in 1983, and flying a Liberian flag. Beginning in 2000, she took down several of the Indian Antarctic expeditions, from Cape Town. On her first such trip, she left Cape Town on Dec. 31, 2000, with the Indian contingent aboard. Ewald Brune was the ice pilot aboard. The vessel, and Brune, were back in 2001-02. At the end of that season, the vessel was also chartered to supply other stations, and in June 2002, after supplying Novolazarevskaya Station, she became stuck in the ice. The rescue ship *Agulhas* left Cape Town on June 16, with two helos aboard. It took 5 days to airlift the crew off, with the help of the Argentine icebreaker *Almirante Irízar*. 17 men stayed aboard, to winter her over in Muskeg Bay. In Nov. 2002, she freed herself from the ice, and was back in Cape Town for Christmas. She was back for the 2002-03 season, again with the Indians.

Magee Rock. 66°13' S, 110°37' E. A small rock in water, 0.3 km (the Australians say 0.5 km) NE of Cameron Island, in the Swain Islands, in the Windmill Islands. This area was photographed aerially during OpHJ 1946-47, and again by ANARE in 1956, SovAE 1956, and ANARE again in 1962. Carl Eklund led a ground survey in this area in 1957, and he named it for George E. Magee, USN, carpenter who wintered-over at Wilkes Station in 1957. US-ACAN accepted the name in 1960.

Magellan Whaling Company *see* **Sociedad Ballenera de Magallanes**

The *Magga Dan*. A 1956.6-ton Danish ship owned by the J. Lauritzen Lines of Copenhagen. She was the second ship used by Fuchs during BCTAE 1955-57. The captain during 1956-57 was Hans C. Petersen, when the vessel helped relieve the British Royal Society Expedition at Halley Bay, as well as bringing supplies for BCTAE 1955-58. Vilhelm "Bill" Pedersen was 1st officer. She arrived back in London on March 13, 1957. Captain in 1958-59 and 1959-60 was Harald Møller Pedersen, and in 1960-61 it was Bill Pedersen, all three seasons being an ANARE ship (*see* **ANARE** for her schedules). She took down the French Antarctic Expeditions of 1961-62 and 1962-63 (her skipper was still Pedersen), the Belgian and Netherlands Antarctic Expedition of 1963-64 (her skipper that season was Harald Mortensen), and the Belgian and Netherlands Antarctic Expeditions of 1964-65, 1965-66, and 1966-67 (her skipper for those three seasons was Hans A.J. Nielsen). She was later used as a tour ship, making the first two tourist cruises to the Ross Sea in Jan.-March, 1968, organized by Lindblad Travel. Finn Bang was her skipper that year. Among other places she visited were Cape Hallett, Cape Royds, McMurdo Sound, and the Balleny Islands. She was the first tourist ship south of the Antarctic Circle. On Jan. 22, 1968 she ran aground, off Hut Point, but was freed 37 hours later by the U.S. Coast Guard.

Magga Peak. 69°10' S, 157°11' E. A triangular, flatiron-shaped wall of sheer rock, with a sharp point as the summit, it forms the end of the most northerly of the Burnside Ridges. Photographed aerially during OpHJ 1946-47. A first landing from a ship was made, and an astrofix obtained, on Feb. 20, 1959, from the *Magga Dan*, by an ANARE party led by Phil Law. They raised a cairn on its summit. Named by ANCA for the *Magga Dan*. US-ACAN accepted the name in 1961.

Maggy's Cove *see* **Moon Bay**

Mount Maglione. 77°18' S, 141°47' W. A low mountain, 1.5 km NE of Mount Ekblaw, in the Clark Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. (jg) Charles R. Maglione, USNR, navigator on LC130-F Hercules aircraft during OpDF 1968 (i.e., 1967-68).

Maglizh Rocks. 63°01' S, 62°38' W. A group of rocks off the NW coast of Smith Island, in the South Shetlands. The two adjacent principal rocks extend for 400 m in an E-W direction, are about 100 m wide, and are located 250 m N of Lista Point, with the third major rock situated 400 m NW of them. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town of Maglizh, in southern Bulgaria.

Plan Magne. 66°40' S, 140°01' E. A rocky plateau in the central-west part of Pétrel Island, in the Géologie Archipelago. Named by the French in 1963 in reference to a term then in vogue in mountainous regions, and given to such a rocky plateau, and meaning level due to a meadow-type surface being there.

The *Magnet*. A 148-ton, 72 foor 7 inch, 2-masted brig purchased in 1831 by Daniel Bennett & Sons out of Rotherhithe, London, commanded in 1833-34 by Peter Kemp. She left London on July 15, 1833, bound for the Kerguélen Islands, which she left on Nov. 26, 1833. On the morning of Nov. 27, 1833, she was in 52°30' S, 69°15' E, and in early Dec. 1833, the ship got caught in the ice for 10 days. On the morning of Dec. 28, 1833, Kemp saw Antarctic land from about 40 miles away, and on Jan. 3, 1834, they were in 68°00' S, 46°00' W. On March 24, 1834, the *Magnet* left the Kerguélens, bound for South Africa, and on April 21, 1834, Kemp fell overboard and was lost. Under the command of 1st mate, David Rankin, the *Magnet* arrived at Simons Bay on May 16, 1834, with 320 barrels of oil, remaining there until August. She went fishing, and finally left Simons Bay on Oct. 16, 1834, reaching Gravesend on Jan. 14, 1835. The log book was lost in a London cabriolet.

Magnet Bay. 66°22' S, 56°20' E. A shallow embayment, 11 km wide, it indents the coast of Kemp Land for only 3 km, 14 km W of Cape Davis, at the NW side of Edward VIII Plateau, in East Antarctica. Charted by BANZARE 1929-31 as a wide embayment extending between Cape Borley and Cape Davis. Mawson named it for the *Magnet*. When LCE 1936-37 photographed it aerially they found it to be much smaller than had been charted. Either BANZARE had been inaccurate, or the coast had changed its shape in the intervening 5 years. US-ACAN accepted the name in 1947.

Magnet Hill. 63°22' S, 57°22' W. A small, distinctive, snow-covered hill, the highest point (570 m) rising from the Mott Snowfield, 6 km NE of Camel Nunataks, Trinity Peninsula. Named by the FIDS geophysical and survey party from Base D, which worked here in 1959, and which set up magnetometer and topographical survey stations here. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Magnetic Island. 68°33' S, 77°54' E. A small island, 0.4 km NE of Turner Island, off Breidnes Peninsula, in the NE part of Prydz Bay, about 5 km from the coast of the Vestfold Hills. Photographed by LCE 1936-37, and mapped 10 years later from these photos by Norwegian cartographers, but not named by them. Visited on March 3, 1954 by an ANARE party led by Phil Law, who named it for the magnetic observations taken here by geophysicist Jim Brooks.

Magnetic South Pole *see* **South Magnetic Pole**

Magnetite Bluff. 83°22' S, 51°15' W. Rising to about 1700 m, 3 km NE of Mount Stephens, on the W side of the Saratoga Table, in the Forrestal Range, at the W edge of the Pensacola Mountains. Photographed aerially by USN in 1964, it was surveyed from the ground from 1965 onwards by USGS, and mapped by them from these efforts. Art Ford suggested the name because of the extensive occurrence of magnetite in the gabbro in this area, which causes large magnetic anomalies over the Forrestals. US-ACAN accepted the name in 1979, and UK-APC followed suit on May 21, 1979.

Magnetograph House. 52 m north of the Absolute Magnetic Hut, and 310 m north of the Main Hut, at Mawson's site at Cape Denison, during AAE 1911-14.

Península Magnier. 65°40' S, 64°20' W. The narrow peninsula between Leroux Bay and Bigo Bay, and surmounted by Magnier Peaks, opposite Chavez Island, on the W coast of Graham Land. Named by the Chileans in association with the peaks.

Pic(s) Magnier *see* **Magnier Peaks**

Picos Magnier *see* **Magnier Peaks**

Magnier Peak *see* **Magnier Peaks**

Magnier Peaks. 65°40' S, 64°18' W. Twin peaks, the higher being 1346 m, which surmount Península Maglione (the narrow peninsula between Leroux Bay and Bigo Bay), on the Graham Coast, on the W coast of Graham Land. FrAE 1908-10 discovered and charted them, and, thinking them to be one peak, Charcot named it Pic Magnier. He quickly amended the name to Pics Magnier. In 1935-36 the peaks were identified and further surveyed by BGLE 1934-37. The feature appears as Magnier Peak on a 1943 U.S. Hydrographic Office chart, but in 1950, US-ACAN accepted the name Magnier Peaks, and it appears as such in the 1951 American gazetteer. UK-APC accepted the new name

on Sept. 22, 1954. In 1957-58 Fids from Base J re-surveyed these twin peaks. They appear on a Chilean chart of 1962 as Picos Magnier, and that is the name listed in the 1974 Chilean gazetteer.

Magnis Ridge. 80°05' S, 156°12' E. A rock ridge, 2.5 km W of Derrick Peak, forming the divide between Magnis Valley and Metaris Valley, in the Britannia Range. Named by Mike Selby's 1978-79 University of Waikato geological party here, in association with the valley. NZ-APC and US-ACAN both accepted the name.

Magnis Valley. 80°05' S, 156°05' E. A broad, ice-filled valley, 8 km long, 5 km W of Derrick Peak, in the Britannia Range. Named by Mike Selby's 1978-79 University of Waikato geological party here. Magnis was a name used in Roman Britain (cf Britannia). NZ-APC and US-ACAN both accepted the name.

Ostrov Magnit *see* **Magnit Island**

Magnit Island. 66°12' S, 100°50' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Magnit (i.e., "magnet island"). ANCA accepted the name Magnit Island.

Proliv Magnitologov *see* **Magnitologov Strait**

Magnitologov Strait. 66°12' S, 101°02' E. A strait running between Fuller Island and Aviatorov Peninsula, in the Bunger Hills. Charted by SovAE 1956, and named by them as Proliv Magnitologov. ANCA translated the name on March 12, 1992.

Magnüssen, Franz Johan. Able seaman on the *Southern Cross* during BAE 1898-1900.

Magnussonknausen. 74°25' S, 9°57' W. A crag between Rieber-Mohnberget and Hanssonhorna, in the ice in the SW part of Milorgfjella, in the N portion of the Heimefront Range, in the S part of Maudeheimvidda, in Queen Maud Land. Named by the Norwegians for Oscar Magnusson (b. 1911), a house porter, a central figure in the anti-Nazi Resistance movement in Bergen during World War II. Captured by the Gestapo in 1941, he survived the war and wrote *Jeg vil leve* (*I Will Live*).

Magoke Point. 69°40' S, 39°29' E. A rock point that juts out into the inlet between the the SE part of the Skallen Hills and Skallen Glacier, in Queen Maud Land, and which effectively marks the SE extremity of the Skallen Hills. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1969. Named by the Japanese on June 22, 1972, as Magoke-misaki. Magoke is Bryum moss. US-ACAN accepted the translated name Magoke Point in 1975.

Magoke-misaki *see* **Magoke Point**

Magsig Rampart. 85°54' S, 142°00' W. An oucropping of rock rising to an elevation of about 400 m above the E side of Leverett Glacier, near the head of that glacier, and which forms a buttress or rampart on the W flank of the Stanford Plateau, along the Watson Escarpment. Named by US-ACAN in 2006, for Russell "Russ" Magsig, a mechanic who wintered-over at Siple Station in 1983, and who worked for 16 summer seasons at Williams Field, at McMurdo, and at Pole Station, and who took part in the South Pole Traverse Project of 2002-05.

Mount Maguire. 74°01' S, 66°55' E. A large, flat-topped mountain with a distinctive pointed nunatak on its E side, 35 km S of the Cumpston Massif, in the S part of, and near the head of, the Lambert Glacier. Photographed aerially by ANARE in Nov. 1956, and surveyed from the ground by Graham Knuckey in Oct. 1958. Mapped from these efforts by Australian cartographers, and named by ANCA for Sgt. Ossie Maguire (b. March 3, 1925), RAAF, who wintered-over as radio technician at Mawson Station in 1958. US-ACAN accepted the name in 1961.

Magura Glacier. 62°40' S, 60°00' W. A glacier, 1.5 km NE of M'Kean Point, it is bounded to the W by Great Needle Peak, to the N by Helmet Peak (it drains the S slopes of that peak) and Plovdiv Peak, and to the NE by Ruse Peak, it flows southeastward into Bransfield Strait, in the S part of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, after Magura Cave in Bulgaria. UK-APC accepted the name on July 8, 2003. Plotted by the UK in late 2008.

Mahaffey Glacier. 72°18' S, 96°26' W. Flows into the head of Morgan Inlet, at the E end of Thurston Island. Named by US-ACAN in 2003, for J.S. Mahaffey, photographer's mate with the Eastern Group of OpHJ 1946-47.

Mahaka Ponds. 77°18' S, 160°52' E. Two ponds close together at the S end of Conrad Ledge, in The Fortress, in the Cruzen Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005 as Greenfield Ponds, for Laurence G. "Laurie" Greenfield, a soil microbiologist at the University of Canterbury, who had worked in the area. US-ACAN accepted the name in 2006. However, Dr. Greenfield strongly objected to having a feature named after him, so, on May 15, 2006, NZ-APC re-named this feature Mahaka Ponds (the word "mahaka" means "twin" in the Ngai Tahu dialect of Maori). US-ACAN went along with the re-naming.

Mahalak Bluffs. 68°17' S, 65°23' W. A discontinuous line of bluffs, rising to about 500 m, on the NW side of Solberg Inlet, E of Robillard Glacier, and which form part of the SW coast of Joerg Peninsula, on the Bowman Coast, on the E coast of the Antarctic Peninsula, overlooking the Larsen Ice Shelf. Photographed by Ellsworth during his flight of Nov. 21, 1935, and mapped from these photos the following year by U.S. cartographer W.L.G. Joerg. Surveyed by Fids from Base E in 1946-48, and photographed aerially by USN, 1966-69. Named by US-ACAN in 1978, for Lt. Lawrence W. Mahalak, Jr. (b. 1945), USN, medical officer who wintered-over at Palmer Station in 1971. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

Mount Mahan. 85°32' S, 140°04' W. Rising to 1260 m, 5 km E of Mount Fiedler, in the Bender Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Shirley Frank Mahan (b. 1930), radioman who wintered-over at Byrd Station in 1960. He was on the Byrd-South Pole tractor traverse of 1960-61.

Maher, Eugene Hugh "Pat." b. May 2, 1908, Ogden, Utah, son of fruit farmer Patrick Maher and his wife Marie Josephine Dixon. His mother was widowed in 1918, and young Pat went to Annapolis, and was skipper of the *Burton Island* in 1952 in the Arctic, and commander of the *Glacier*, 1955-56 during OpDF I. On Nov. 28, 1957 he took over from Mills Dickey as commander of Naval Support Units, Antarctica. In 1958 he married Laverne Sims Turner in Currituck Co., NC, and died in San Diego on Jan. 9, 1981.

Maher, J.P. b. 1890, Southampton (or so he said). In 1912 and 1913 he was an able seaman on the *South Africa*, for the runs between Cape Town and Sydney. On Nov. 5, 1913, he signed on to the *Aurora* as an able seaman, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on March 19, 1914, with a £5 bonus. Unfortunately, one cannot find a J.P. Maher being born (or even living) in Southampton.

Maher Island. 72°58' S, 126°22' W. A small, horseshoe-shaped island with numerous areas of exposed rock, 11 km N of the NW end of Siple Island, off the coast of Marie Byrd Land. Discovered and photographed aerially during OpHJ 1946-47, and named by US-ACAN in 1962, for Pat Maher.

The *Mahine Tiare*. American yacht that visited the South Shetlands and the Antarctic Peninsula in 1995-96, under the command of John Neal.

Mahler Spur. 69°56' S, 70°44' W. A rock spur, 10 km long, and rising to about 1000 m above sea level, it extends W into Mozart Ice Piedmont, E of Gilbert Glacier, and 11 km E of the S end of Debussy Heights, in the N part of Alexander Island. Discovered aerially and roughly mapped on Feb. 1, 1937, by BGLE 1934-37. Photographed aerially in Nov. 1947 by RARE 1947-48, and mapped in 1960 by Searle of the FIDS, from the RARE photos. He plotted it in 69°48' S, 70°52' W. Named by UK-APC on March 2, 1961, for Austrian composer Gustav Mahler (1860-1911). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. It appears in the 1977 British gazetteer, with the corrected coordinates.

Mahogany Bluff. 63°53' S, 57°14' W. A rocky bluff, rising to 590 m, 8 km SW of Cape Gordon, it rises on the peninsula which forms the extreme SE of Vega Island, and marks the E side of Pastorizo Bay, in the Weddell Sea. Surveyed by Fids from Base D, 1958-61. Named by UK-APC on Feb. 12, 1964, for its color. US-ACAN accepted the name later in 1964. The Argentines call it Cerro Pampa (i.e., "Pampa bluff"), after the *Pampa*. The Chileans call it Cerro Dubos, for Iván Dubos N., of the Chilean Army, who participated in ChilAE 1963.

Mount Mahony. 77°12' S, 161°35' E. A massive mountain, rising to 1870 m (the New Zealanders say 1615 m), just E of the head of Victoria Upper Glacier, it forms a buttress between

Cotton Glacier and Miller Glacier, in the Saint Johns Range and at the W end of the Gonville and Caius Range, in Victoria Land. Mapped by Grif Taylor's Western Geological Party during BAE 1910-13. Named for Daniel James Mahony (1878-1944), who stood in for Mawson at the University of Adelaide when that explorer went to Antarctica with AAE 1911-14. US-ACAN accepted the name in 1952.

Mai *see* **Omai**

Maiden Castle. 76°39' S, 159°50' E. A prominent rock feature E of Halle Flat, in the Allan Hills of Victoria Land. Discovered by the NZARP Allan Hills Expedition of 1964, and named by them for its resemblance to the ancient British earthwork of the same name in Dorset. US-ACAN accepted the name in 1965.

Maigetter Peak. 76°27' S, 146°29' W. A rock peak, the most northerly of the Birchall Peaks, on the S shore of Block Bay, in Marie Byrd Land. Discovered and photographed aerially on Dec. 5, 1929, during ByrdAE 1928-30, and plotted from these photos. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Robert Zenn Maigetter (b. 1945, Youngstown, Ohio), biologist with the USARP Marie Byrd Land Survey II, 1967-68.

Cape Maignan *see* **Maignan Point**

Maignan Point. 65°03' S, 64°02' W. Also called Cape Maignan. Marks the NE end of Cholet Island, and the W side of the entrance to Port Charcot, close off the NW part of Booth Island, in the Wilhelm Archipelago. Charted by FrAE 1903-05, and named by Charcot for F. Maignan, a seaman on the *Français*, who was killed two minutes after the ship was leaving Le Havre on Aug. 15, 1903, when the stern rope he was handling broke loose and hit him. Because of this tragedy, Charcot postponed the departure for 2 weeks, in order to take Maignan home to his widow in Brittany. US-ACAN accepted the name in 1952.

Maigo Peak. 68°08' S, 42°42' E. A small, rocky, round-topped hill with a large erratic boulder, rising to 122.1 m above sea level, 2.5 km ESE of Cape Hinode, and just W of Bohyo Heights, on the coast of Queen Maud Land. Mapped by Japanese cartographers from 1962 JARE air photos, and from JARE ground surveys conducted in 1972 and 1973. Named Maigo-yama (i.e., "stray child peak") by the Japanese on Nov. 22, 1973. US-ACAN accepted the name Maigo Peak in 1975.

Maigo-yama *see* **Maigo Peak**

Maigo-zawa. 69°00' S, 39°37' E. A shallow valley at the W side of Miharashi Peak, on East Ongul Island. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962. So named by the Japanese on May 1, 1963, because four members of JARE lost their way and bivouacked here in a blizzard in 1960 (name means "stray child valley").

Cape Main. 73°33' S, 169°54' E. A small cape, 8 km N of Cape Anne, along the E side of Coulman Island, Victoria Land. Named by NZ-APC on May 19, 1966, for Brian J.L. Main, scientific technician at Hallett Station in 1962-63. US-ACAN accepted the name later in 1966.

Main Base. A term often used for an expedition's principal base when other, outlying, bases are also set up. Mawson seems to have been the first to use the term, for his base at Cape Denison during AAE 1911-14. The Main Base of RARE 1947-48 was on Stonington Island.

Main Crater. 77°32' S, 167°10' E. At an elevation of about 3750 m above sea level, it forms the primary summit crater of Mount Erebus, on Ross Island. Inner Crater (q.v.), which lies within Main Crater, contains an active anorthoclase-phonolite lava lake. Named by US-ACAN in 2000. NZ-APC accepted the name on Feb. 20, 2001.

Main Glacier *see* **Bailey Ice Stream**

Main Hut. Mawson's main hut at Main Base, during AAE 1911-14.

Main Sail Rock *see* **Mainsail Rock**

Main South Range *see* **Prince Charles Mountains**

Maine Ridge. 78°04' S, 162°06' E. A ridge extending NW-SE between Marchant Glacier and Tedrow Glacier, in the Royal Society Range. Named by US-ACAN in 1994, for the University of Maine, at Orono, in keeping with the practice of naming certain other features in this area after famous universities that have sent researchers to Antarctica.

Mount Maines. 66°39' S, 53°54' E. Rising to 2190 m, 13 km SE of Stor Hånakken Mountain, and 24 km SE of Mount Bennett, in the Napier Mountains of Enderby Land. Photographed by LCE 1936-37, photographed 10 years later from these photos by Norwegian cartographers, and named by them as Stornuten (i.e., "the big peak"). Re-photographed aerially by ANARE in 1956, and renamed by ANCA for Ronald L. Maines (also known as "Lofty"), cook who wintered-over at Wilkes Station in 1961. US-ACAN accepted the Australian naming in 1965.

Mainland *see* **Coronation Island**

Mainsail Rock. 60°37' S, 46°03' W. Rising to 17 m above sea level, 0.9 km SW of Spine Island, in Sandefjord Bay, it is the largest and most easterly of a chain of 3 rocks trending in a NW-SE direction off the SE side of Monroe Island, near Coronation Island, in the South Orkneys. Surveyed and charted by the Discovery Committee in 1933, and named by them. UK-APC accepted the name on Sept. 8, 1953, and UK-APC followed suit in 1956. It appears on a 1945 Argentine chart as Roca Mainsail, on a 1953 chart of theirs as just Mainsail, and on one of their 1957 charts as Roca Vela Mayor (which is a translation). Roca Vela Mayor is how it appears in the 1970 Argentine gazetteer.

The *Maipo*. Chilean oil tanker which took part in several Antarctic expeditions undertaken by that country: 1947-48 (Capt. Raúl Koegel M.); 1948-49 (Capt. Carlos Bonafós); 1949-50 (Capt. Mario Espinoza Gazitúa); 1952-53 (Capt. Ramón Barros González); 1954-55 (Capt. Ramón Pinochet); 1958-59 (Capt. Luis Gauche Délano); and 1983-84 (Capt. Alex Waghorn Jarpa).

Bajo Maipo *see* **Maipó Shoal**

Banco Maipo *see* **Maipó Shoal**

Grupo Maipo *see* **Rhyolite Islands**

Isla Maipo *see* **Maipo Island**

Maipo Island. 64°25' S, 62°17' W. A low, snow-covered island at the entrance to Buls Bay, opposite and to the E of D'Ursel Point, in the SE part of Brabant Island, in the Palmer Archipelago. First roughly charted by BelgAE 1897-99. Charted by ChilAE 1947-48, and named by them as Isla Maipo, for the *Maipo*. That is the name that appears in the 1974 Chilean gazetteer. The Argentines could not possibly go along with that name, so they called it Isla Buls, after the bay. It appears as such on a 1949 Argentine chart, and in the 1970 Argentine gazetteer. Fids from the *Norsel* surveyed it in April 1955, and UK-APC named it Buls Islet on Sept. 4, 1957. UK-APC redefined it as Buls Island, on July 7, 1959. US-ACAN accepted the name Maipo Island in 1965.

Maipó Shoal. 62°29' S, 59°41' W. A deep, rocky shoal, 8 m deep, 440 m SW of González Island, in Discovery Bay, Greenwich Island, in the South Shetlands. Charted by ChilAE 1947-48, and named by them as Banco Maipo (i.e., "Maipo bank"), for the *Maipo*. It appears as such on a Chilean chart of 1951, but on a Chilean chart of 1962 as Bajo Maipo (which means "Maipo shoal"). However, in the 1974 Chilean gazetteer, it appears as Banco Maipo. UK-APC accepted the name Maipo Shoal, on March 31, 2004. Plotted by the UK, in late 2008.

Punta Maipú *see* **Punta Gutiérrez**

Maipú Refugio. 68°06' S, 65°58' E. Argentine refuge hut built by the Army on the shelf ice at Bills Gulch, on the E coast of the Antarctic Peninsula, in 1956-57, and opened on Dec. 14, 1956.

Mairs, John. b. 1868, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

Maish Nunatak. 74°36' S, 99°28' W. A nunatak, 8 km WSW of Mount Moses, in the central part of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for F. Michael Maish, ionosphere physicist who wintered-over at Byrd Station in 1967, and who was U.S. exchange scientist at Vostok Station in the winter of 1969.

Glaciar Maitland *see* **Maitland Glacier**

Maitland Glacier. 68°43' S, 65°00' W. Flows NE along the W flank of Hitchcock Heights into Mobiloil Inlet, to the E of Yates Spur, on the Bowman Coast, on the E coast of the Antarctic Peninsula. It may be one of the features appearing indistinctly in an air photo taken by Sir Hubert Wilkins during his flight of Dec. 20, 1928, but it was certainly seen in aerial photos taken by Ellsworth on Nov. 23, 1935. W.L.G. Joerg, the American cartographer, plotted it from Ellsworth's photos. It was photographed aerially again in 1940, by USAS 1939-41, and in Nov. 1947, by RARE 1947-48. Named by US-ACAN in 1953, for Osborn Maitland Miller

(1897-1979) of the American Geographical Society, who, using the photos taken by Wilkins and Ellsworth, constructed the first reconnaissance map of this area. Fids from Base E surveyed the ground in the lower reaches of this glacier, in Dec. 1958, and surveyed the entire glacier in 1960. UK-APC accepted the name on Aug. 31, 1962. The Argentines call it Glaciar Maitland.

Maitland-Somerville *see* **Somerville**

Maitri Station. 70°46' S, 11°44' E. India's second scientific station in Antarctica, opened on ice-free rock in the Schirmacher Oasis, 132 m above sea level, in East Antarctica, on March 9, 1989, to replace Dakshin Gangotri Station, which had been closed earlier that season. A modern station, built on adjustable telescopic legs, it lies 5 km from Novolazarevskaya Station. The main complex houses the living quarters, which has 25 single rooms, and there are summer huts too, which can accommodate up to 65 persons. There is a research building, and buildings for supply, power, and general purpose. In summer there are 4 doctors and in winter 2. There is also a permanent team of Indian Army engineers to service the equipment. **1989 winter**: J.P. Khaldikar (leader). **1990 winter**: Rasik Ravindra (leader), Amitabha Dey, B.L. Sharma, Sarabjit Singh, E. Kulandaivelu, D. Mazumdar, V.R. Biswas, R.C. Pathak, R.S. Gangadhara, Maj. Balraj Singh, HAV Raghunathan, HAV N. Selvaraj, NB Sub O.K. Kutty, HMT Anil Kumar, Sub D.T. Raju. **1991 winter**: A.K. Hanjura (leader). **1992 winter**: S. Mukerji (leader). **1993 winter**: K. Dhargalkar (leader). **1994 winter**: G. Sudhakar Rao (leader). **1995 winter**: S.D. Sharma (leader). **1996 winter**: Arun Chaturvedi (leader). **1997 winter**: A.L. Koppar (leader). **1998 winter**: K.R. Sivan (leader). **1999 winter**: Ajay Dhar (leader). **2000 winter**: Arun Chaturvedi (leader). It has continued as a winter station.

Bukhta Majachnaja *see* **Majachnaja Bay**

Majachnaja Bay. 66°09' S, 101°14' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Bukhta Majachnaja. ANCA anglicized the name somewhat.

Nunatak Majak. 81°35' S, 21°50' W. One of a somewhat scattered cluster of nunataks in the Shackleton Range. Named by the Russians.

Gora Majakovskogo *see* **Skavlhø Mountain**

Mount Majerus. 77°16' S, 161°39' E. Rising to 1635 m at the S end of Kuivinen Ridge, 2 km SW of Lanton Peak, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 2005, for 4 members of the Majerus family of Rochester, Minn., who engaged in various science support activities in many field seasons between 1980 and 2005, predominantly at McMurdo. Nicholas Delbert "Nick" Majerus (b. Jan. 2, 1943), 13 seasons; he first went to Antarctica as a metal foreman in 1980; his brother, Gregory John Majerus (b. July 11, 1939; known as John), 15 seasons from 1991, as a welder; Nick's daughter, Michelle Renee Majerus (b. Jan. 8, 1975), 10 seasons, from 1994; and Gregory's daughter, Nicole Renee Majerus (b. Dec. 5, 1976), 4 seasons, from 1996. NZ-APC accepted the name on Sept. 12, 2005. Incidentally, and not related to this family (or to this feature), there was Mandie Majerus (b. 1975), a physical therapist from Bozeman, Mont., who spent 2009-10 at McMurdo, on the medical team there.

Obryv Majkova. 80°30' S, 28°30' W. A bluff on the E side of Stratton Glacier, in the Shackleton Range. Named by the Russians.

Majoren. 72°17' S, 26°31' E. A peak in the middle of Isachsen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians. "The Major," refers to Gunnar Isachsen (q.v.).

Gora Makara Mazaja. 84°04' S, 56°39' W. A mountain, almost due S of Mount Kaschak, in the S part of the Neptune Range, in the Pensacola Mountains. Named by the Russians.

Gora Makarova. 70°38' S, 66°50' E. A mountain, due E of Mount McGregor on the Thomson Massif, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Makresh Rocks. 62°21' S, 59°23' W. A group of rocks, extending 600 m in a WSW-ENE direction, and 270 m in a NW-SE direction, 1.8 km NE of Treklyano Island, of the NE coast of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the settlement of Makresh, in northwestern Bulgaria.

Cape Maksimov. 65°59' S, 88°00' E. The northernmost cape on the NE part of the West Ice Shelf. Plotted by SovAE 1956, and named by the Russians as Mys Maksimova, for hydrographer Georgiy S. Maksimov. ANCA accepted the name Cape Maksimov.

Lednik Maksimova. 72°50' S, 66°15' E. A glacier in the Prince Charles Mountains. Named by the Russians.

Mys Maksimova *see* **Cape Maksimov**

Maku-iwa. 71°31' S, 35°39' E. A nunatak, rising to 2121.2 m above sea level, with a conspicuous cliff, 2 km NNE of Tyo-ga-take, in the central part of the Queen Fabiola Mountains. Surveyed by JARE 1960, and named by the Japanese on March 22, 1979 (name means "curtain rock").

Gora Makushka. 72°59' S, 69°04' E. A mountain, E of the Hay Hills, on the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

Malachite Lake. 69°26' S, 76°04' E. An oval lake in a dry valley on Stornes Peninsula, about 1.2 km W of Blundell Peak, in the Larsemann Hills, on the shore of Prydz Bay, on the Ingrid Christensen Coast. Named by ANCA on Sept. 29, 1988 (its green color resembles that of malachite). The Chinese call it Zhunu Hu.

Malamir Knoll. 62°30' S, 59°48' W. A knoll, rising to 200 m, and with precipitous and ice-free SW slopes, in the SE extremity of Dryanovo Heights, 2.3 km E of Tile Ridge, and 2.8 km NE of Triangle Point, on Greenwich Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the Bulgarian ruler, Khan Malamir (831-836).

Malaysia. The Malaysian Antarctic Research Program (MARP) is assisted by NZ. It began in 1999, when Dr. Azizan Haj Abu Samah, of the University of Malaya, at Kuala Lumpur, visited Antarctica. In 2001 he was back, at Scott Base, leading a team of four Indonesian scientists studying the role played by gravity waves in the dynamics of the Antarctic boundary layer in the area of the Ross Ice Shelf. They arrived at McMurdo from Christchurch, aboard a Hercules, on Jan. 29, 2001.

Malcolm, William. b. 1869, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

Malczewski Point. 62°10' S, 58°13' W. A promontory in front of Matejko Icefall, Legru Bay, in the Bransfield Strait. Named by the Poles in 1980, for painter Jacek Malczewski (1855-1929).

Malden, James Fletcher "Jim." b. 1932, Steyning, Sussex, son of Charles Fletcher Malden and his wife Daisy Kate Awcock. He joined FIDS in 1956, as a diesel electric mechanic, and wintered-over at Base O in 1957 and at Base Y in 1958. In 1966 he married Pearl E.R. Lines, in Surrey, and they lived in Sussex.

Bajo Maldifassi *see* **Maldifassi Shoal**

Banco Maldifassi *see* **Maldifassi Shoal**

Maldifassi Shoal. 62°30' S, 59°42' W. A shoal, 7 m deep, consisting of stones and submerged rocks which are completely exposed at low water, situated 320 m W of Skarmeta Rocks, and N of Ferrer Point, in Discovery Bay, Greenwich Island, in the South Shetlands. Charted by ChilAE 1947-48, and named by them as Banco Maldifassi (i.e., "Maldifassi bank"), after Subteniente Oreste Maldifassi T., a torpedo officer with the expedition. It appears as such on a 1951 Chilean chart. On a 1961 Chilean chart it appears as Banco Sub-teniente Maldifassi, and on one of their 1962 charts as Bajo Maldifassi. Bajo Subteniente Maldifassi was considered for the 1974 Chilean gazettter, but lost out to Bajo Maldifassi. UK-APC accepted the name Maldifassi Shoal on March 31, 2004. Plotted by the UK in late 2008.

Bahía Maldita *see* **Brialmont Cove**

Maldonado Station *see* **Pedro Vicente Maldonado Station**

Mount Malfait. 73°05' S, 168°09' E. A peak rising to 2080 m on the extremity of the ridge extending eastward from the Malta Plateau, and forming a rugged salient between the converging Mariner Glacier and Borchgrevink Glacier where they enter the Ross Sea, 5.5 km NW of Cape Crossfire, on the Borchgrevink Coast of Victoria Land. Named by US-ACAN in 2006, for Bruce T. Malfait, head of the marine geosciences section within the NSF's division of ocean sciences, 2001-06. He was program director for the Ocean Drilling Project, 1987-2001.

Seno Malfanti. 64°37' S, 62°06' W. An inlet which opens immediately to the NE of the extreme S point of Nansen Island, off the W coast of the Antarctic Peninsula. Named by the Chileans for 2nd Lt. Enrique Malfanti Pérez, an officer on the *Baquedano* during ChilAE 1955-

56, a member of a shore party that landed on Peter I Island.

Malin Valley. 77°26' S, 161°47' E. An upland valley, opening N to Victoria Valley, on the W side of Mount Cerberus, in the E part of the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Michael C. Malin, of the department of geology at Arizona State University. With USAP, he made observations of abrasion rate in the dry valleys between the 1983-84 season and the 1993-94 season.

Malina Cove. 63°18' S, 62°15' W. A cove, 1.65 km wide, indenting the W coast of Low Island for 1.25 km, next S of Teshel Cove, 8.2. km S of Cape Wallace, and 6.6 km N of Cape Garry, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlements of Gorna Malina and Dolna Malina (i.e., Upper Malina and Lower Malina), in western Bulgaria.

Maling, Derek Hylton. b. May 8, 1923, Temperley Grange, Cambridge-on-Tyne, near Hexham, Northumberland, as Derick Hylton Maling, son of manufacturer Frederick T. Maling and his (much younger) wife Elsie M. Harper. He started traveling young — he wasn't even one when he visited Jamaica with his parents. During World War II he bailed out of an exploding bomber over Yugoslavia, and escaped with the Partisans. He joined FIDS in 1947, as a meteorologist, and on Dec. 19, 1947 left Tilbury on the *John Biscoe*, bound for Port Stanley. He wintered-over at Signy Island Station in 1948 and 1949, and made a survey triangulation of Signy Island, and the southern coast of Coronation Island. In 1952, in Darlington, he married Rosemary Dearden. He was lecturer and (from 1964) senior lecturer at the University College of Swansea. He died on Sept. 22, 1998, at Brecknock, Wales.

Maling Peak. 60°39' S, 45°40' W. Rising to 430 m, the more southerly of 2 conspicuous peaks 0.8 km NW of Cape Vik, on the W side of Marshall Bay, on the S coast of Coronation Island, in the South Orkneys. Roughly surveyed by the Discovery Investigations in 1933, and surveyed more accurately by Fids from Signy Island Station in 1948-49. Named by UK-APC for Derek Maling. US-ACAN accepted the name in 1956.

Skaly Maljutki *see* **Malyutki Nunataks**

Bahía Malle. 67°16' S, 67°57' W. A bay which opens on the E coast of Adelaide Island, about 60 km S of Cape Mascart, off the SW coast of Day Island, off the W coast of the Antarctic Peninsula. Named by the Chileans for 2nd Lt. Miguel Malle Gómez, here with a Chilean hydrographic survey unit in 1974. The Argentines, who plotted it erroneously in 67°11' S, 67°57' W, call it Bahía Bandera.

Grupo Malleco *see* **Pauling Islands**

Mallinson, Gordon David. b. Oct. 21, 1928, Port Elizabeth, South Africa, son of Eric Mallinson and his wife Natalie. He joined FIDS in 1957, as a radio operator, and wintered-over at Signy Island Station in 1958, and at Base Y in 1959. He was back again for two more consecutive winters at Halley Bay Station, in 1963 and 1964. He was with Neville Mann when the latter disappeared, on Aug. 15, 1963. After Antarctica, he lived in England for a while, and then returned to South Africa, where he became a technician in a printing firm. In 1979 he married teacher Vanessa Fowler, and they lived just outside Johannesburg. They retired to Pietermaritzburg.

Mount Mallis. 75°40' S, 160°48' E. Rising to 1360 m, midway between Mount Joyce and Mount Billing, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Robert R. "Bob" Mallis, U.S. Coast and Geodetic Survey geomagnetist and seismologist who wintered-over at Pole Station in 1966.

Mallon, Brian. b. May 12, 1958. BAS electrician who wintered-over at Signy Island Station in 1991 and 1992, the second year as base commander, and again, as base commander at Halley Station in 1994.

Mallors, John Tobias. His last name is often seen misprinted as Mallows. b. Dec. 18, 1794, Chelsea, London, but raised in Darlaston, Staffs, son of Tobias Mallors and his wife Mary Sansom. At 14 he entered the Royal Navy, as a midshipman, and on June 7, 1814, in Portsmouth, he married Mary Ann Shirley. They lived in High Wycombe, Bucks, and Mr. Mallors went to work for Enderby Brothers, the famous London whaling company, and was in Antarctic waters as captain of the *Rose*, 1833-34. He and his wife and daughter moved to Uitenhage, Cape Province, South Africa, where Mary Ann died. Capt. Mallors married again, to Elizabeth Coltman. He died in South Africa on Dec. 26, 1872, and many of his descendants are alive today.

Mallory Bluff. 84°02' S, 165°50' E. A prominent bluff on the NW slope of Grindley Plateau, just NE of the head of Wahl Glacier. Named by US-ACAN in 1966, for Roger P. "Rod" Mallory, Jr. (b. June 10, 1930), USARP supervising meteorological technician who wintered-over at Pole Station in 1962, and at Wilkes Station in 1963. He is also a poet.

Mallory Point. 66°49' S, 108°39' E. A steep rocky point close northward of Blunt Cove, it projects seaward from the coastal ice cliffs along the W side of Vincennes Bay. First mapped in 1955 by American cartographer Gard Blodgett, from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Ensign (later Cdr.) Charles William Mallory (b. Sept. 17, 1925, West Hale, Kans. d. July 6, 2002, Md.), who joined the U.S. Navy on May 13, 1944, served in World War II, and who was construction officer on OpW 1947-48, giving close support to shore parties that established astronomical control stations from the Wilhelm II Coast to the Budd Coast. He later served in Korea and Vietnam. He is buried in Arlington National Cemetery.

Mallows, John Tobias *see under* **Mallors**

Bahía Malmgren *see* **Malmgren Bay**

Malmgren Bay. 65°45' S, 66°07' W. Indentation in the W side of Renaud Island, with Speerschneider Point forming its S entrance point and Maurstad Point forming its N entrance point, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Swedish physicist Dr. Finn Adolf Erik Johan Malmgren (1895-1928), specialist in sea ice, who had been with Amundsen on the *Fram*, in the Arctic, and who died there on Nobile's expedition. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Bahía Malmgren. One of the Chilean Antarctic expeditions named it Bahía Sobenes, after the tugboat *Sobenes* (never in Antarctic waters), and it appears as such on a Chilean chart of 1962, and in the Chilean gazetteer of 1974.

Malmrusta. 74°44' S, 11°26' W. A mountain ridge between Brunvollbotnen and Morsetbreen, on the NW side of Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Ole Jacob Worm-Müller Malm (1910-2005), one of the great Norwegian resistance leaders during World War II.

Ozero Maloe. 67°41' S, 45°53' E. A lake in Enderby Land, one of the many near Molodezhnaya Station named by the Russians.

Ozero Maloe Dolinnoe. 70°31' S, 68°40' E. One of the several lakes in the area of Jetty Peninsula, in Mac. Robertson Land that were named by the Russians.

Mount Malone. 77°52' S, 85°36' W. Rising to 2460 m, 13 km E of Mount Barden, in the N part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Capt. Wallace R. Malone (b. Jan. 31, 1922, McKinney, Tex. d. Aug. 9, 2001, McKinney), USAF, who helped build Pole Station in 1956-57. It was Malone who flew the first Globemaster in from Christchurch, on Oct. 21, 1956. Two copies of *Naval Aviation News*, the first Sept. 1961 (pp. 10-11), and the second, Jan. 1975 (pp. 22-23), say that this feature was name for VX-6's AT1 Donald Van Malone (b. Sept. 27, 1935, Sweetwater, Tex. d. Nov. 25, 2005, Windthorst, Tex.), for his part in obtaining aerial photos of the Sentinel Range.

Malone, James. b. 1870, Dundee. Ordinary seaman on the *Polar Star*, during DWE 1892-93.

Mount Maloney. 85°41' S, 163°35' W. Rising to 1990 m, 6 km N of Mount Alice Gade, at the SE side of Bowman Glacier, in the Queen Maud Mountains. Discovered and mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for John H. Maloney, Jr., meteorologist who wintered-over at Pole Station in 1960.

Maloney, Leonard "Len." b. Ireland. Described by fellow Fids as a "tall, thin young man, a real character." FIDS meteorologist at Base B in 1956, Base Y in 1957, and Base D in 1959.

Malorad Glacier. 63°34' S, 58°43' W. A glacier, 14 km long and 10.5 km wide, NE of Hanson Hill, N of Srednogorie Heights, NW of the

Louis Philippe Plateau, and SW of Marescot Ridge, it flows northwestward to enter Bransfield Strait E of Cape Roquemaurel, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Malorad, in northwestern Bulgaria.

Glaciar Malpighi *see* **Malpighi Glacier**

Malpighi Glacier. 64°16' S, 62°15' W. A glacier, 8 km long and 1.5 km wide, flowing SE from Harvey Heights into Mackenzie Glacier, and then both glaciers flow SW into Pampa Passage, at the E coast of Brabant Island, in the Palmer Archipelago. First roughly charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these photos, in 1959. Named by UK-APC on Sept. 23, 1960, for Marcello Malpighi (1628-1694), Italian founder of microscopic anatomy, who first demonstrated the existence of the blood capillaries. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Glaciar Malpighi.

Malta Plateau. 72°58' S, 167°18' E. An ice-covered plateau, irregular in shape, and 40 km in extent, in the Victory Mountains of Victoria land, it is bounded on the S and W by Mariner Glacier, on the N by tributaries to Trafalgar Glacier, and on the E by tributaries to Borchgrevink Glacier. Named by NZ-APC, for the Mediterranean island of Malta, in a wartime reference following the Victory motif. US-ACAN accepted the name in 1966.

Islote Malus *see* **Malus Island**

Malus Island. 66°14' S, 65°45' W. An island, 7 km S of Cape Evensen, in Auvert Bay, off the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960 for Étienne-Louis Malus (1775-1812), French physicist whose studies in reflective light played a part in the design of snow goggles. US-ACAN accepted the name in 1965. The Argentines do call this island Islote Malus, but in 1978 they also came up with a collective name for the island and its offlying rocks — Islotes Charrúa, named for the *Charrúa*.

Malusieux, Auguste-Constant. b. March 26, 1817, Dunkirk. Junior seaman on the *Astrolabe* during FrAE 1837-40. On the way way home he was left in hospital at Bourbon, in July 1840.

Malva Bluff. 71°55' S, 62°21' W. A steep, south-facing rock bluff, rising to about 850 m, at the base of Condor Peninsula, it looks S over the NW extremity of Hilton Inlet, on the Black Coast, on the E side of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Antonio I. Malva-Gomes, topographic engineer with the USGS Lassiter Coast geologic amd mapping party in 1970-71. He was also a member of the Pine Island Bay Reconnaissance, on the *Burton Island*, in 1974-75. UK-APC accepted the name on July 21, 1976.

Malver, Aksel Nicolaj Erling. Known as Erling Malver. b. 1886, Copenhagen. In 1903 he went to the University of Copenhagen, graduating in 1906, went on to become a doctor, and was medical officer on the *Gobernador Bories*, 1908-10. Charcot describes him as "a very intelligent young man." He was making his first trip, and was "much astonished" at the life he was leading, "and all he sees about him." He spoke French and English fluently. He was in and out of Canada and the USA over the ensuing years, and in 1919 was in Java for a while.

Mount Malville. 82°44' S, 48°10' W. Rising to 1030 m, 8 km SW of Ackerman Nunatak, in the N part of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for astronomer John McKim "Kim" Malville (b. 1934), aurora scientist who was among the first wintering-over group at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971.

Malville Peninsula *see* **Henry Ice Rise**

Malvinas Refugio *see* **Islas Malvinas Refugio**

Ostrova Malye Skalistye. 69°10' S, 77°20' E. A group of islands SW of Ranvik Glacier, on the Ingrid Christensen Coast. Named by the Russians.

Nunataki Malygina. 71°02' S, 64°45' E. A group of nunataks pretty much due N of Mount Hicks and due E of Mount Thomas, in the Prince Charles Mountains. Named by the Russians.

Bukhta Malygincev. 65°35' S, 99°00' E. A bay in the extreme N part of the Shackleton Ice Shelf, off Queen Mary Land. Named by the Russians.

Kar Malyj. 71°35' S, 67°24' E. A pass in the S part of Mount Johnston, in the Fisher Massif, just W of the Lambert Glacier, in the Prince Charles Mountains. Named by the Russians.

Nunatak Malyj. 81°35' S, 26°26' W. A somewhat isolated nunatak, due E of the ice slope the Russians call Sklon Okrytij, and due W of Massif Karpenko, in the Shackleton Range. Named by the Russians.

Otrog Malyj. 73°35' S, 66°40' E. A spur on the W side of the Compton Massif, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Malyovitsa Crag. 62°37' S, 59°49' W. A rocky peak rising to 290 m, 500 m WSW of Bansko Peak, and 250 m NNE of Karlovo Peak, in the E extremity of Delchev Ridge, in the Tangra Mountains of Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2001 for Malyovitsa Peak in Rila Mountain, in western Bulgaria.

Gora Malysh *see* **Malysh Mountain**

Malysh Mountain. 72°09' S, 11°24' E. A small mountain, rising to 2640 m, just SW of Skeidshovden Mountain, it is the most southwesterly nunatak in the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39, and first plotted from these photos. Remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during same long expedition. Remapped again by SovAE 1960-61, and named Gora Malysh (i.e., "small child mountain") by the Russians in 1966. US-ACAN accepted the name Malysh Mountain in 1970. The Norwegians call it Malyshknattten.

Malyshknatten *see* **Malysh Mountain**

Skaly Malyutki *see* **Malyutki Nunataks**

Malyutki Nunataks. 72°04' S, 10°46' E. A group of nunataks that trend N-S for 6 km, at the SE extremity of the Orvin Mountains, about 21 km WNW of Skeidsberget Hill, in Queen Maud Land. Mapped by the Norsk Polarinstitutt from ground surveys and air photos taken during NorAE 1956-60. Re-mapped by SovAE 1960-61, and named Skaly Maljutki (i.e., "baby nunataks") by the Russians in 1961. US-ACAN accepted the name Malyutki Nunataks in 1970.

Malyy Kupol *see* **Bellingshausen Dome**

Mame Island. 69°01' S, 39°29' E. Also called Mame-zima Island. A small island about 150 m W of Ongul Island, in the E part of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962. Named by the Japanese on May 1, 1963, as Mame-jima, or Mame-zima (i.e., "bean island"). US-ACAN accepted the name Mame Island in 1968.

Mame-jima *see* **Mame Island**

Mame-zima Island *see* **Mame Island**

Islote Mamelón *see* **Mamelon Point**

Ostrov Mamelon *see* **Mamelon Point**

Punta Mamelón *see* **Mamelon Point**

Mamelon Island *see* **Mamelon Point**

Mamelon Islet *see* **Mamelon Point**

Mamelon Point. 67°19' S, 64°49' W. The S entrance point of Hess Inlet, 17.5 km ENE of Cape Northrop, between that cape and Monnier Point, on the Foyn Coast, on the E coast of Graham Land. Roughly charted as an islet in Dec. 1947 by Fids from Base D, and named by them as Mamelon Islet, for its resemblance in shape to a mamelon (a small rounded hillock or fort). UK-APC accepted that name on Jan. 22, 1951. It appears as such on a British chart of 1952, and in the 1955 British gazetteer. US-ACAN also accepted this name. It correspondingly appears on a 1953 Argentine chart as Islote Mamelón, and that was the name that went into the 1970 Argentine gazetteer. On July 7, 1959, UK-APC redefined it, as Mamelon Island, and that is the name that was listed in the 1974 British gazetteer. US-ACAN accepted the change. The Russians mapped it in 1961, as Ostrov Mamelon (i.e., "mamelon island"). The Chileans, always under remorseless self-imposed pressure to be different in every way from the Argentines, named it Islote Escudero, after Julio Escudero Guzmán (b. 1903), professor of international law at the University of Chile, who (ironically) represented Chile on the joint Chilean-Argentine Commission. SCAR's gazetteer, presumably reflecting the Chilean gazetteer in an accurate manner, says

that this name first appears on a Chilean chart of 1947. It certainly appears as such on a Chilean chart of 1962 and in the 1974 Chilean gazetteer. In 1963-64 BAS personnel re-surveyed this feature, and found it to be not an island at all, but the end of an ice-covered promontory. The name was changed accordingly, by UK-APC on Nov. 21, 1974, to Mamelon Point. US-ACAN accepted this new name in 1975. The Argentines call it Punta Mamelón.

Mammals *see* **Fauna**

Man, Ivan Aleksandrovich. b. Sept. 23, 1903, Gorki, Belarus, son of an agronomist. Commander of the *Ob'*, 1955-58, in other words he took down the the first three Soviet Antarctic expeditions. From 1959 to 1960 he was skipper of the *Danube*, on the Black Sea, and from 1960 to 1964 commanded a variety of vessels. From 1964 to 1971 he was based at the Ministry of Merchant Shipping, in Moscow. In that time, in 1966, he delivered supplies to the Soviet stations Mirnyy and Molodezhnaya, in the tanker *Friedrich Engels*, and skippered the *Professor Vize* as part of the Soviet Antarctic Expedition of 1967-69. He died in 1982, and was buried on Haswell Island (in Antarctica).

Man-o-War Glacier. 72°04' S, 168°03' E. A tributary glacier flowing S from the area S of Mount Black Prince and Mount Royalist, to the N side of Tucker Glacier between the McGregor Range and Novasio Ridge, in the Admiralty Mountains. Named by NZGSAE 1957-58, in association with the Admiralty Mountains. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Man Pack Glacier *see* **Rubble Glacier**

Man Pack Hill *see* **Elephant Ridge**

Mana *see* **Mana Mountain**

Mount Mana *see* **Mana Mountain**

Mana Mountain. 72°51' S, 3°22' W. Also called Mount Mana. A small, but prominent, ice-free mountain bordering the SE side of Frostlendet Valley, about 8 km SW of Møteplassen Peak, on the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Mana (i.e., "the mane"). US-ACAN accepted the name Mana Mountain in 1966.

Manahan Peak. 77°29' S, 168°26' E. A prominent peak, rising to over 2000 m, 1.5 km E of Giggenbach Ridge, about 4 km NW of the summit of Mount Terror, in the NE part of Ross Island. Named by US-ACAN in 2000, for biologist Donal T. Manahan, who worked 8 seasons in Antarctica from 1983. He was the USAP principal investigator in the study of the early stages (embryo larvae) of marine animals, and he was also chairman of the Polar Research Board, at the National Academy of Sciences, in 2000. NZ-APC accepted the name on Feb. 20, 2001.

Manao Tan. 62°13' S, 58°59' W. A beach in the Larsemann Hills. Named by the Chinese.

Punta Manchada *see* **Hobbs Point**

Mancho Buttress. 63°55' S, 58°51' W. An ice-covered butrress with precipitous and partly ice-free SW slopes, it rises to 1250 m, on the NE side of the Detroit Plateau, 4.61 km NW of Baley Nunatak, 10.53 km S of Golesh Bluff, and 8.24 km SW of Senokos Nunatak, and surmounts Aitkenhead Glacier to the SW and S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Mancho Peak, in Rila Mountain, in southwestern Bulgaria.

Peñasco Manchón Austral. 60°45' S, 44°43' W. A pinnacle rising from the area of land called Manchón Austral (*see under* **A**), on the W coast of Uruguay Cove, on Laurie Island, in the South Orkneys. Named by the Argentines.

Manchot Island. 66°49' S, 141°24' E. An island formed by two rocky massifs, in the NNE entrance to Port-Martin, about 320 m W of Bizeux Rock, and about 320 m N of Cape Margerie. This area was photographed aerially by OpHJ 1946-47, but this particular island was charted by the French in 1949-51, and named by them as Île des Manchots, for the large Adélie penguin rookery on the island. Manchot is a French word meaning "penguin." US-ACAN accepted the name Manchot Island in 1956.

Île(s) des Manchots *see* **Manchot Island**

Manchurian ponies *see* **Ponies**

Punta Mancilla *see* **Mancilla Point**

Mancilla Point. 69°29' S, 59°40' W. On the E side of Discovery Bay, Greenwich Island, S of González Island, in the South Shetlands. Named by ChilAE 1947, as Punta Mancilla, for Cabo 2nd Class Julio Mancilla Gallardo, on the *Iquique* during the expedition, and who participated in the hydrographic survey of the area. It appears on a 1951 Chilean chart. UK-APC accepted the name Mancilla Point on May 11, 2005. Plotted by the UK in late 2008.

Manciple Island. 64°56' S, 63°56' W. Between Reeve Island and Host Island, in the Wauwermans Islands, in the Wilhelm Archipelago. Shown on a 1952 Argentine chart, but not named. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1956-57. Named by UK-APC on July 7, 1959, for one of the *Canterbury Tales* characters. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

El Manco Refugio *see under* **E**

Manczarski Point. 62°09' S, 58°20' W. A low promontory in front of Viéville Glacier, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Professor Stefan Manczarski (1899-1979), secretary of the Polish IGY committee (1957-59).

Manczarski Valley. 66°16' S, 100°44' E. A valley with a small lake in it, near Dobrowolski Station, in the Bunger Hills. Named by the Poles in 1985, for Stefan Manczarski (*see* **Manczarski Point**).

Mandarich Massif. 80°41' S, 157°40' E. A rugged Y-shaped massif rising to 1860 m on S side of Byrd Glacier, between Brecher Glacier and Twombley Glacier (2 southern tributaries to the Byrd). Named by US-ACAN in 2003, for Capt. (later Rear Adm.) Stevan "Steve" Mandarich (b. March 4, 1911, Arizona. d. Dec. 6, 2001, Niagara-on-the-Lake, Ontario; the name is from Zagreb), USN, who graduated from the Naval Academy in 1933, and who transferred from the *Greenville Victory* to the *Glacier* during OpDF I (i.e., 1955-56) to join Admiral Byrd as his chief of staff. NZ-APC accepted the name on Feb. 27, 2003. Admiral Mandarich is buried in Arlington National Cemetery.

Mandelkliff. 71°27' S, 162°05' E. A cliff just SE of the Litell Rocks, within the lower Rennick Glacier, E of the N end of the Morozumi Range. Named by the Germans.

Mander, Philip William "Phil." Known as "Wink." b. 1930, near Newton Abbot, Devon, son of David Richard R. Mander and his wife Florence Beer. After national service in the RAF, he joined FIDS in 1950, as a meteorologist, and wintered-over at Base G in 1951 and at Signy Island Station in 1952. In 1953 he returned to England, and in 1954 shipped out again, from Dover, on a chartered vessel from Sweden, bound for the Falklands, and from there to winter-over again at Base D in 1955, and in 1956 at Signy again, and finally in 1960 at Signy. Along the way he and Derek Clarke bought a cafe in Yorkshire, and ran it for a year. In 1961, in Dover, he married Anne Lewis. He was later in Abu Dhabi, and retired to Paignton, Devon. He did not wish to be interviewed for this book.

Mandible Bay *see* **Mandible Cirque**

Mandible Cirque. 73°07' S, 169°15' E. Also called Mandible Bay. A spectacular cirque indenting the coast of Daniell Peninsula, 8 km WSW of Cape Phillips, in Victoria Land. Named in 1966 by NZ-APC for its appearance in plan and oblique views. US-ACAN accepted the name in 1966.

Bahía Mandisovi *see* **Ryder Bay**

Caleta Mandisovi *see* **Ryder Bay**

Mandolin Hills. 69°55' S, 67°20' W. An isolated group of nunataks, rising to 300 m above the surrounding ice, and about 1200 m above sea level, at George VI Sound, 14 km E of Mount Noel, and E of the Traverse Mountains, in the NW part of Palmer Land. Surveyed by BAS personnel from Base E, 1971-72. Named by UK-APC on Dec. 8, 1977, for its shape when viewed in plan. US-ACAN accepted the name.

Mandon, Justin *see* **USEE 1838-42**

Mane Skerry. 67°50' S, 67°18' W. A little island, rising to 10 m above sea level, in the central part of Lystad Bay, the most northwesterly island in the bay, off Horseshoe Island. Roughly charted by ArgAE 1952-53, and named by them as Islote Norte (i.e., "north island"). That is the name used in the 1970 Argentine gazetteer. Surveyed by Fids from Base Y (Horseshoe Island Station) in 1955-57, and named by them in association with nearby Mite Skerry (a deliberate FIDS misspelling of "might and main"). UK-APC accepted the name on July 7, 1959, and it appears on a 1960 British chart. US-ACAN accepted the name in 1965.

Månesigden. 74°51' S, 12°18' W. A curved mountain area in the NW part of the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the

Norwegians for its shape (the word "måne" means crescent, or moon).

Manfull Ridge. 75°05' S, 114°39' W. A broad, snow-covered ridge that descends from the N side of the Kohler Range, 8 km W of Morrison Bluff, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1971. Named by US-ACAN in 1976, for Byron Preston Manfull (b. Feb. 24, 1923, Utah. d. Feb. 18, 2007, Pa.), of the U.S. Department of State, chairman of the Interagency Committee on Antarctica, 1967-69.

The *Mangen*. Swedish cargo ship, chartered for 4 months to take down the second Pakistani Antarctic Expedition, in 1992-93. Her skipper was Capt. A.A.M. Samual.

Mount Manger. 77°29' S, 153°15' W. A snow-covered mountain, 5 km NW of Mount Josephine, in the Alexandra Mountains, on Edward VII Peninsula. Photographed aerially and roughly mapped during ByrdAE 1928-30. Named by Byrd for former Missouri farmer William Manger (1865-1928), head of the Manger hotel chain, who gave free room (in the USA) for office space and for expedition personnel in the early stages of ByrdAE 1928-30. US-ACAN accepted the name in 1970.

Massif Mangin *see* **Mount Mangin**

Monte Mangin *see* **Mount Mangin**

Mount Mangin. 67°25' S, 68°26' W. Rising to 2040 m, 8 km NE of Mount Barré, NNW of Ryder Bay, and 22 km SSW of Mount Bouvier, in the E part of Adelaide Island. Discovered by FrAE 1908-10, roughly mapped by them in Jan. 1909, and named by Charcot as Massif Mangin, for Louis-Alexandre Mangin (1852-1937), the French botanist. Its first appearance as Mount Mangin is on a 1914 British chart. In Oct. 1948, Fids from Base E surveyed it. US-ACAN accepted the name Mount Mangin in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. All other interested countries use their own translations of this name, and Monte Mangin is a name the Argentines and Chileans agree on, it appearing as such in the Argentine gazetteer of 1970, and the Chilean gazetteer of 1974. Fids from Base T resurveyed it in 1961-62.

Punta Mango. 64°39' S, 62°02' W. A point due S of Hobbs Point (the NE end of Brooklyn Island) and due N of Sadler Point, on the S side of Plata Passage, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Manhaul Glacier. 72°24' S, 169°45' E. Flows from the E slopes (the New Zealanders say the W slopes) of Mount Humphrey Lloyd into Edisto Inlet, where its terminal face meets the terminal face of Arneb Glacier, just S of Luther Peak, in Victoria Land. The lower parts of the Manhaul and the Arneb are afloat, and part of Edisto Inlet is enclosed between them and the terminal face of Edisto Glacier. Many seals appear on the bay ice within the enclosed part of the inlet, after swimming beneath the floating ice tongues. The tongue of Manhaul Glacier was crossed many times by parties of NZGSAE 1957-58, who so named it because they manhauled their equipment across the floating tongue of this glacier. NZ-APC accepted the name, followed by US-ACAN in 1962.

Manhaul Rock. 60°43' S, 45°37' W. A prominent rock that emerged from the ice sheet in the 1970s, S of Garnet Hill, on Signy Island, in the South Orkneys. Named by BAS personnel who manhauled supplies in this area. The name was accepted by UK-APC on Sept. 29, 2004.

Manhauling *see* **Sledges**

Cape Manhue. 78°30' S, 164°00' W. A high promontory of the Ross Ice Shelf, the W point of an inlet in the Bay of Whales, 4 km S of Little America I, it is the S cape of the Sulzberger Peninsula. It was discovered on Jan. 15, 1911 by NorAE 1910-12, and named by Amundsen as Kap Manhue (i.e., "cape man's head") for its shape. Due to the changing shape of the Bay of Whales, it disappeared in later years. It appears in the 1958 NZ gazetteer.

Manju Rock. 68°45' S, 40°25' E. Also called Manzyu Rock. A small rock exposure, midway between Tama Glacier (which is 6 km to the SW) and Tama Point, at the W side of the Prince Olav Coast, on the coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken between 1957 and 1962, and named by them on Oct. 1, 1962, as Manzyu-iwa, or Manju-iwa (i.e., "bun-shaped rock"). US-ACAN accepted the name Manju Rock in 1968. The Norwegians call it Bollen (i.e., "the bun").

Manju-iwa *see* **Manju Rock**

Mount Manke. 85°28' S, 144°42' W. Rising to 900 m, it marks the E limit of the Harold Byrd Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Robert M. Manke (b. 1940), who joined the U.S. Navy in Sept. 1957, and served as a Seabee utilitiesman at Byrd Station for the winter of 1960.

Mount Mankinen. 73°54' S, 163°06' E. Rising to 2910 m, it stands 3 km NE of Mount Adamson, in the Deep Freeze Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Edward Alvin Mankinen (b. 1939, California), geologist at McMurdo in 1965-66.

Islote Mann. 68°12' S, 66°58' W. A small island, about 180 m long in a N-S direction, about 530 m SE of Fitzroy Island, in Neny Fjord, on the W coast of the Antarctic Peninsula. Named by ChilAE 1946-47, for Guillermo Mann Fischer (*see* **Punta Spring Refugio**, under **P**), who was on this expedition.

Mount Mann. 83°12' S, 49°20' W. Rising to about 1680 m, on the SE edge of the Lexington Table, 6 km S of Mount Zirzow, in the Forrestal Range of the Pensacola Mountains. Photographed from the air by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Capt. Edward K. Mann, USAF, an assistant in the Research Division of U.S. Naval Support Force, Antarctica, 1966-68. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Punta Mann. 62°28' S, 60°47' W. A point separating Playa del Lobero to the N from Playa Paulina to the S, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Guillermo Mann Fischer, the Chilean veterinary surgeon and whale expert on ChilAE 1946-47 (*see* **Punta Spring Refugio**, under **P**).

Manna Glacier. 69°45' S, 159°40' E. A broad depression glacier, N of Stevenson Bluff and Mount Steele, in the Wilson Hills, it flows NE into the E part of the Gillett Ice Shelf, N of Mount Gorton, on the coast of Oates Land, in Victoria Land. Named by the Northern Party of NZGSAE 1963-64 for the airdrop of goodies from an aircraft which carried the governor general of NZ over this area. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mannbreen. 74°56' S, 12°18' W. Between Bowrakammen and Johnsonhøgna, in the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Neville Mann (*see* **Deaths**, Aug. 15, 1963).

Mannefallknausane. 74°35' S, 14°30' W. A group of nunataks between the Heimefront Range and the Kraul Mountains, in Maudheimvidda, the westernmost part of Queen Maud Land. There are three rows of ridges here — east, central, and west. The E one is called Wildskorvene, the central one Wilsonberga, and the W one Baileyranten, after the 3 FIDS men who fell into a crevasse here in 1965 (name means "men fall nunataks," in Norwegian).

Mount Mannering. 71°48' S, 164°57' E. A mountain, 6 km SSE of Toilers Mountain, in the King Range of the Concord Mountains. Named by the Northern Party of NZGSAE 1963-64 for Guy M. Mannering (b. Christchurch, NZ), a photographer who could not have picked a more appropriately named base to be at — Scott Base — in 1962-63 (i.e., the previous season), during which he made valuable photographic contributions during 2 missions over the area. US-ACAN accepted the name in 1964. Mr. Mannering, son of famous NZ mountain climber George Edward Mannering, was back in Antarctica in 1964. He died on Aug. 7, 2003, aged 78.

Massif Manning *see* **Manning Massif**

Manning, Russell "Russ." Former Royal Marine who joined BAS in 1990, and introduced small boats to Faraday Station in 1990-91, for the new biology program at that base. He wintered-over as boatman and base commander at Signy Island Station in 1992, 1993, and 1995. Later a naturalist, he gave lectures aboard the Antarctic cruise ship *Minerva*.

Manning Automatic Weather Station. 78°48' S, 166°54' E. An American AWS, installed in Nov. 1979. However, it never worked, and a second Manning was installed, on Nov. 25, 1980, at an elevation of 66 m, just S of Minna Bluff, on the Ross Ice Shelf. Named for a helo pilot named Manning. It began operating

on Dec. 1, 1980, and ceased on Jan. 15, 1986, whereupon it was removed, and replaced with Minna Bluff AWS.

Manning Glacier. 73°09' S, 68°17' E. Just S of Harbour Bluff, on the Mawson Escarpment, flowing into the Lambert Glacier. Photographed aerially by ANARE in 1956 and 1960. Named by ANCA for John Manning (b. Oct. 5, 1937), who wintered-over at Mawson Station as surveyor in 1967, and who was surveyor in charge of field survey operations during the ANARE Prince Charles Mountains surveys of 1968-69, during which season he carried out a survey traverse from Sandefjord Bay to Davis Station. He was back, same role, in 1970-71, 1971-72, 1972-73, and 1973-74. The Russians call it Lednik Kalesnika, for Stanislav Vikentievich Kalesnik (1901-1977), Soviet geographer.

Manning Island. 69°21' S, 76°20' E. About 1.9 km N of Broknes Peninsula, in the Larsemann Hills. Plotted in 1946 by Norwegian cartographers from air photos taken during LCE 1936-37, and named by them as Vikøy ("bay island"). ANCA renamed it (for themselves) as Manning Island, for John Manning (*see* **Manning Glacier**).

Manning Massif. 70°42' S, 67°50' E. Also seen as Massif Manning. A large rock masssif, between Loewe Massif and McLeod Massif, in the E part of the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos, and first visited in 1969 by a team from the ANARE Prince Charles Mountains Survey of 1968-69. Named by ANCA for John Manning (*see* **Manning Glacier**).

Manning Nunataks. 71°00' S, 71°12' E. A group of nunataks on the E side of the S part of the Amery Ice Shelf, about 30 km NNE of Pickering Nunatak. Photographed aerially by ANARE in 1957, and plotted by the Australians in 71°00' S, 71°30' E. Named by ANCA for Sgt. Stuart Aubrey "Sam" Manning (b. Nov. 7, 1923), RAAF, airframe fitter at Mawson Station for the winter of 1958. US-ACAN accepted the name in 1961.

Îlot Manoury *see* **Manoury Island**

Islote Manoury *see* **Manoury Island**

Manoury Island. 64°27' S, 62°50' W. An island, 2.5 km S of Gand Island, in Dallmann Bay, at the N end of Schollaert Channel, in the Palmer Archipelago. Discovered by FrAE 1903-05, roughly charted by them, and named by Charcot as Îlot Manoury, for Georges Manoury, secretary of the expedition. It appears on a 1949 Argentine chart as Islote Manoury, and that was the name listed in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. UK-APC had an obvious problem with the name Manoury, so named it Snipe Island on Jan. 28, 1953. However, on Sept. 8, 1953, having overcome their problems with the name, they renamed it Manowry Islet [sic] (but they also put in the reminder that it was also known as Snipe). It appears in the 1955 British gazetteer as Manoury Islet, but, after aerial photography by FIDASE in 1956-57, it was redefined by UK-APC on July 7, 1959, as Manoury Island, and it appears as such on a British chart of that year. US-ACAN, who had basically been going along with these changes of name and definition, accepted the name Manoury Island in 1963.

Punta Manquilef. 61°11' S, 53°59' W. A point in the central part of the E coast of Clarence Island, in the South Shetlands. Named by the Chileans for Julio Manquilef, of the Chilean Navy, a cabo on ChilAE 1951-52.

Bahía Mansa. 62°27' S, 60°47' W. A small bay, about 180 m wide, indenting the E coast of Cape Shirreff for about 450 m between Punta Delfin and Punta Lobos, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1984-85, because of the stillness of the water here ("mansa" is the feminine form of "manso," which means "gentle").

Mansergh Snowfield. 82°01' S, 159°50' E. Feeds the central portion of Starshot Glacier, separating the Surveyors Range from the Holyoake Range. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges party of NZGSAE 1964-65, and named by them for Graham Dennis Mansergh, of Auckland, geologist with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mansergh Wall. 82°06' S, 160°18' E. An ice-covered cliff, 6 km long, running E-W between the Mansergh Snowfield and the head of Errant Glacier, in the Churchill Mountains. Rising to over 1600 m above sea level, the cliff forms part of the divide between the north-flowing Starshot Glacier system and the Nimrod Glacier system, including the south-flowing Errant. Named by US-ACAN in 2003, in association with the snowfield. NZ-APC accepted the name on Feb. 27, 2003.

Punta Mansfield *see* **Mansfield Point**

Mansfield, Arthur Walter. b. March 29, 1926, London, son of Frederick Mansfield and his wife Beatrice Field. He was at Cambridge, 1944-47, studying natural sciences, and did 3 years in the instruction branch of the Navy, 1947-50. He joined FIDS in 1950, and was meteorologist and biologist at Grytviken, South Georgia, in 1951. While there, Dick Laws interested him in seals, and he would eventually become an authority on Antarctic seals and walruses. He summered, 1951-52, in the Falklands, and in Feb. 1952 went down to Hope Bay (Base D) on the *Burghead Bay*, arriving at a rather tense moment (*see* **Wars**). The *Burghead Bay* then took him to Signy Island Station, where he wintered-over as base leader in 1952. In 1953 the *John Biscoe* took him back to Southampton, arriving there on June 11, 1953. Almost immediately upon his arrival back in England in 1953, he turned around and went with Peter Scott to Iceland. He then worked with Dick Laws for a while, then was off to Estoril, Portugal, for Mr. Laws' wedding, and then to the Met Office at Harrow. In Sept. 1954, he left for Canada, affiliated with McGill University, and spent two successive summers in the Arctic, working for the Arctic Unit of the Fisheries Research Board of Canada (later the Department of Fisheries and Oceans). He became director in 1970, and retired at the end of March 1991 to spend years gliding and flying. He married Joan Clarke.

Mansfield Point. 60°39' S, 45°44' W. Between Cleft Point and Stene Point, it marks the E side of the entrance to Norway Bight, on the S coast of Coronation Island, in the South Orkneys. Surveyed by the Discovery Investigations in 1933, and again by Fids from Signy Island Station in 1948-49. Named by UK-APC on March 31, 1955, for Arthur Mansfield. US-ACAN accepted the name in 1956. The Argentines call it Punta Mansfield.

Caleta Mansilla. 66°23' S, 67°10' W. A bay in the SW coast of Watkins Island, N of Matha Strait, in the Biscoe Islands. Named by ChilAE 1948-49, for 1st Lt. Luis Mansilla Yevens, navigating officer on the *Covadonga* during that expedition.

Islote Mansilla *see* **Islote Figueroa**

Manson, William M. b. March 28, 1893, Sandwich, Mass., but grew up partly in Bourne, Mass., son of Finnish immigrants, ironworker Emmanuel Manson and his wife Lydia (who was really Swedish, but born in Finland). After a brief spell as a laborer doing odd jobs, he went to sea in 1910, as an oiler, and was 2nd assistant engineer on the *Jacob Ruppert* during ByrdAE 1933-35. He was working for the Alcoa Steamship Company in 1942, when he was drafted by the U.S. government onto merchant ships, as a 2nd assistant engineer plying between the USA and North Africa.

Gora Mansurova *see* **Hauglandtoppen**

The *Manta*. Polish trawler involved in fishing surveys in Antarctic waters in 1976-77, skippered by Kazimierz "Kaz" Augustyniak. She was back, off Enderby Land, in 1977-78, doing the same thing, with the same skipper.

Nunatak Manteiro. 66°04' S, 61°25' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Mantell Screes. 80°38' S, 24°26' W. A rock spur rising to about 1400 m, and bounded by screes (taluses), NW of Arkell Cirque, on the N side of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station, 1968-71. Named by UK-APC on Jan. 5, 1972, for Sussex surgeon, geologist, and paleontologist Gideon Algernon Mantell (1790-1852; name pronounced "mantle"). Mantell, Sir Richard Owen, and Dr. Fred Dixon (great great uncle of George Manley Dixon — q.v.) were the first three "dinosaur hunters" in England. Originally plotted in 80°38' S, 24°34' W, its coordinates were corrected by the British by 1978, and, with the new coordinates, the feature appears in the 1982 British gazetteer. US-ACAN accepted the name.

Caleta Manterola. 65°55' S, 66°03' W. A cove, 200 m wide, ice-free in summer, and with stony coasts, it indents for 500 m the extreme SW coast of Rabot Island, immediately N of Monflier Point, in the Biscoe Islands. The name first appears on a Chilean chart of 1962, probably

named for Dionisio Manterola, chief engineer on the *Esmeralda* during the battle of Iquique in 1879.

Mount Manthe. 74°47' S, 99°21' W. Rising to 575 m, 8 km NNE of Shepherd Dome, in the S part of the Hudson Mountains. Mapped from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1968, for Lawrence L. Manthe (b. 1931. d. Dec. 10, 2007, Bismarck, ND), meteorologist at Byrd Station for the winter of 1967.

Isla Manuel Bulnes Sanfuentes *see* **Bulnes Island**

Manuela Automatic Weather Station. 74°55' S, 163°36' E. American AWS at an elevation of 78 m, on Inexpressible Island, in Terra Nova Bay, which began operating on Feb. 6, 1984 as Inexpressible Island AWS. Its name was changed, for Manuela Sievers, who worked at the University of Wisconsin at Madison. It stopped operating on June 27, 1987.

Many Glaciers Pond. 77°36' S, 163°19' E. A pond, 500 m long, 0.8 km S of the snout of Commonwealth Glacier, in the Taylor Valley, in Victoria Land. Part of the Aiken Creek system, it receives drainage from several glaciers, including Commonwealth Glacier, Wales Glacier, and Weatherwax Glacier. The name was suggested by Diane McKnight (*see* **McKnight Creek**), and accepted by US-ACAN in 1992.

Manzyu-iwa *see* **Manju Rock**

Manzyu Rock *see* **Manju Rock**

Maotai Shan. 73°45' S, 75°47' E. An isolated hill, inland from Davis Staton. Named by the Chinese.

Mapping of Antarctica. The Ancient Greeks featured Antarctica on their maps without even seeing it. They just figured it was there, to balance out the Arctic. They guessed at its shape. The Piri Re'is map (*see* **Mysteries**), which came to light in 1929, and which was said to have been drawn in 1513, not only shows Antarctica, but also the islands and indentations in the coast of what is today known as Queen Maud Land. More, that map showed Antarctica as it had been in the ancient days, before the ice covered it. Other, later, maps show Tierra del Fuego as the northern tip of a huge continent centering on the South Pole. Drake's discovery in 1578 of the Drake Passage disproved the Tierra del Fuego part at least, and Cook's epic voyage of 1772–75 certainly narrowed the boundaries of the proposed continent when he circumnavigated Antarctica at high latitudes — without ever seeing land. This discovery negated the many inventive theories about Terra Australis Incognita, but, even at that stage, the existence of a solid continent was debated. Some thought the South Pole was located in water, but Cook rightly supposed that the mass of icebergs that he saw must have come from land, or at least a frozen mass of considerable size. The first maps of Antarctica proper (i.e., south of 60°S) were prepared by the early sealers in the South Shetlands, and some of them published charts. The first chart of the South Shetlands was prepared in 1820–21, by John Miers, based on the voyages of William Smith. The first manuscript maps of these islands were compiled by Hampton Stewart, also in 1820–21. Richard Sherratt made an inaccurate map of these islands in the early part of 1821, and on Nov. 1, 1822, R.H. Laurie, chartseller to the British Admiralty, published a map of the South Shetlands, the South Orkneys, and the SE tip of the Antarctic Peninsula, based on the explorations of George Powell. Inaccuracies abounded, of course, but gradually the maps got better. As more and more of the continent was sighted, by such navigators as von Bellingshausen, Palmer, Bransfield, Biscoe, Kemp, Balleny, Dumont d'Urville, Wilkes, and Ross, there appeared in the 19th century the probability of a roughly circular body of land of enormous size. Chartings were done of the coast, especially by USEE 1838–42 (Wilkes). Wilkes was fooled by a lot of looming, or mirages, and although it has now been proved that he reported honestly that which he thought he saw, his reputation suffered considerably for decades as a result of his unwitting inaccuracies, and Ross did his best to damage Wilkes. In 1886 John Murray drew a map of Antarctica which turned out to be surprisingly accurate, even though on the *Challenger* the previous decade he had not even sighted land. In 1895 Ludwig Friederichsen (*see* **The *Jason***), the German cartographer, made the then definitive map of Antarctica, and in 1905 J.G. Bartholomew of London brought it up to date, at a scale of 1:14 million. The vast expanse of the continent was still a white circle with nothing in it except the Pole marked at 90°S. But the coasts and islands were now well charted. In fact, doubt still existed as to the actual continental properties of Antarctica, and speculation now arose as to the possibility of the Ross–Weddell Graben (q.v.), which would split the continent in two. (This was partly disproved by Byrd in 1928–30, and totally by Ronne in 1947–48). Scott and Amundsen, Shackleton and Mawson, opened up long, narrow chunks of the interior, as they made the first traverses on the continent, but it was the airplane that really opened up Antarctica, from the late 1920s. In 1929 the American Geographical Survey published its 1:12.5 million map of Antarctica, and, after that, with aerial photography, ground control checks, and more and more land traverses, the Antarctic nothingness was gradually filled in. In 1936, U.S. cartographer W.L.G. Joerg, using air photos taken by Wilikins and Ellsworth, made significant new maps of parts of Antarctica. In 1946, the Norwegian cartographer H.E. Hansen produced an *Atlas of Parts of the Antarctic Coastal Lands*, compiled from air photos taken during LCE 1936–37. In the 1950s, U.S. cartographers John Roscoe and Gard Blodgett worked from air photos taken during OpHJ 1946–47, to produce up-to-date maps of Antarctica. In 1959–60, FIDS cartographers (notably Derek Searle) produced new maps of parts of Antarctica, using air photos taken during RARE 1947–48. There was much important work done in the 1960s and 1970s by Japanese and Russian cartographers, and even later by the Bulgarians and the Chinese. The French mapped considerable portions of Adélie Land, especially around the Géologie Archipelago. As late as the 1960s some maps were still showing ice shelves as part of the land mass, but since then shelves have been clearly defined as such. Many details remain uncertain, many parts of Antarctica have yet to be explored (*see* **Unexplored areas**), and whole regions and mountain ranges can disappear. Moreover, the coastline is constantly changing its appearance, as ice calves off from the continental shelf (see **Bay of Whales**, for a good example of this). Since the 1940s ever-increasingly sophisticated sounding techniques have been producing better and better maps of the bedrock, in other words, what the continent might look like without the ice. Name changes play havoc with the interested reader. Several features have more than one name, or spelling. Different countries use different names sometimes, for the same feature. The names used in this encyclopedia are generally the ones accepted by US-ACAN (Advisory Committee on Antarctic Place Names), although this practice falls short of slavishness when their errors have to be corrected, or the judgment of ACAN is weak. Great Britain, NZ, and Australia all have their own place names committes (UK-APC, NZ-APC, and ANCA), and usually these all work with the Americans to produce an order of things in the naming of Antarctic geographic features. Chile, Argentina, Norway, Japan, USSR/Russia, France, Belgium, Spain, Germany, Bulgaria, and others, all have a tendency to go their own way, but it is the purpose and intention of this encyclopedia to clarify this confusion as much as possible, aware even then that names are being added and amended all the time. Sometimes hundreds of new names are doled out each year. The USSR produced a 4-volume atlas of Antarctica. The U.S. Geological Survey (USGS) produced a whole batch of maps which could be ordered from Map Distribution, USGS, Denver. These maps sell well, and are often out of stock. A comprehensive catalog of maps and charts issued by the USA and other countries has been published by SCAR: Catalog of Antarctic Maps and Charts, 4th edition, 1974 (revised 1976). It was available from the Division of National Mapping, Department of Minerals and Energy, Canberra. For up to date information, contact the Division of Polar Programs, National Science Foundation, Washington, DC, or, in Britain, the Scott Polar Research Institute. In Australia contact the Canberra department listed above. In other countries contact your local polar institute or related government department.

Mapple Glacier. 65°25' S, 62°15' W. A narrow glacier, 24 km long, flowing E into the S arm of Exasperation Inlet, S of Delusion Point, on the Oscar II Coast, on the E coast of Graham Land, 3 km N of Melville Glacier, from which it is separated by a line of small peaks. Surveyed by Fids from Base D in 1961. Named by UK-APC on Feb. 12, 1964, for Father Mapple, the priest in *Moby Dick*. US-ACAN accepted the name later in 1964.

Maquetknausane. 72°17' S, 22°38' E. A mountain in the E part of the upper portion of

Hansenbreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians.

Islote Mar. 64°09' S, 60°59' W. A little island 1.5 km NW of Tisné Point, off Cierva Cove, on the Danco Coast, on the W coast of Graham Land. The name appears for the first time on Chilean charts of 1947, and has been in use ever since. The Argentines call it the same thing.

Isla(s) Mara *see* **Wednesday Island**

Le Marais *see under* **L**

Isla Marambio *see* **Seymour Island**

Marambio Station *see* **Vicecomodoro Marambio Station**

Maranga, César. b. Argentina. Teniente de navío in the Argentine Navy, he was skipper of the *Uruguay* from Dec. 7, 1909 to Oct. 2, 1910.

Maranga Island. 65°12' S, 64°22' W. The most northwesterly of the Anagram Islands, it lies on the S side of French Passage, in the Wilhelm Archipelago, off the Graham Coast of Graham Land. Surveyed by Fids from Argentine Islands Station in 1960. Named anagramatically by UK-APC on Aug. 31, 1962, in association with the Anagram Islands. US-ACAN accepted the name later in 1962. It appears on a British chart of 1974.

Glaciar Marangunic. 63°27' S, 56°05' W. A glacier in the NW quadrant of Dundee Island, S of Joinville Island, off the NE extremity of Trinity Peninsula. Named by the Chileans for Cedomir Marangunic D. (*see* **Florence Nunatak**).

Marble. Covers the ground all around the Marble Point-Arnold Cove area of Victoria Land. Marble has also been found in the Skallevikhalsen Hills (*see* **Dairi-ike**).

Marble Cape *see* **Marble Point**

Marble Hills. 80°17' S, 82°05' W. A group of mainly ice-free hills on the W side of Horseshoe Valley, between the Liberty Hills and the Independence Hills, in the S part of the Heritage Range, in the Ellsworth Mountains. So named by the University of Minnesota Ellsworth Mountains Party of 1962-63 because the rocks in these hills are composed of marble. US-ACAN accepted the name in 1964.

Marble Knolls. 60°42' S, 45°37' W. Low marble knolls lying near the shore of Borge Bay, just SW of Waterpipe Beach, between Elephant Flats and Pumphouse Lake, in the E part of Signy Island, in the South Orkneys. It has distinctive flora, and biological work was done by BAS here up to 1973. Named descriptively by UK-APC on Dec. 20, 1974. US-ACAN accepted the name in 1975.

Marble Peak. 85°29' S, 156°28' W. A coastal peak, 3 km NW of its twin, O'Brien Peak, and almost the same height, it overlooks the head of the Ross Ice Shelf, about midway between Amundsen Glacier and Scott Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZGSAE 1969-70, for the light-colored, whitish bands of marble crossing straight over its summit. NZ-APC accepted the name, and US-ACAN followed suit in 1971.

Marble Point. 77°26' S, 163°50' E. Also called Marble Cape. A rocky promontory of red marble on soil, due E of Cape Royds, Ross Island, it juts out from the Scott Coast of Victoria Land, in front of the S end of the Wilson Piedmont Glacier, about 5.5 km N of Cape Bernacchi and 8 km N of New Harbor. Charted by BAE 1907-09, and named by them for the marble here. US-ACAN and NZ-APC both accepted the name. On March 12, 1957 a 2-year feasibility study was begun to see if it could be a permanent land runway. Apparently it couldn't. On Oct. 16, 1989, the Americans built Marble Point Camp here, in 77°25' S, 163°40' E. It was dismantled on Jan. 30, 1990.

Marble Point Automatic Weather Station. 77°24' S, 163° 48' E. An American AWS at an elevation of 108 m, which began operating on Feb. 5, 1980, at Marble Point.

Marble Rock. 67°36' S, 62°50' E. A rock outcrop, about 60 m long and between 15 and 30 m wide, with a rounded top caused by glaciation, it is situated at the edge of the ice cliff about 1.4 km WSW of West Arm and about 2.5 km WSW of Mawson Station, on the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and first plotted from these photos by Norwegian cartographers in 1946. Named by ANCA for the marble beds described there by Dave Trail (*see* **Mount Trail**), the geologist who wintered-over at Mawson in 1961. US-ACAN accepted the name in 1971.

The *Marburg* *see* **The *Caledonian Star***

March, John C. *see* **USEE 1838-42**

March of the Penguins. *La marche de l'empereur*. 2005 French doco about the emperor penguin, very informative, and quite touching in a Gallic sort of way, if a trifle long. Directed and co-written by Luc Jacquet. Shot by two cinematographers, Laurent Chalet and Jérôme Maison. Morgan Freeman narrated the American version.

Marchant, Ian Thomas. b. Sept. 19, 1948, Sutton Coldfield, near Birmingham. He moved to Australia, and was weather observer-in-charge at Mawson Station in 1973.

Marchant Glacier. 78°06' S, 162°03' E. A glacier, 11 km long, flowing NW from the slopes of Rampart Ridge between Mount Bishop and Mount Potter to the vicinity of Mount Bockheim, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994, for David R. Marchant, glacial geologist from the University of Maine, who, since 1985, used volcanic ashes to determine changes in climate and geology over the eons. He was later at Boston University.

Cape Marchesi. 72°24' S, 77°37' W. A cape forming the E boundary of the Trathan Coast, at the NE extremity of Smyley Island, at the mouth of the Ronne Entrance, at the SW side of Alexander Island. Named by UK-APC on March 17, 2010, for Victor Marchesi.

Marchesi, Victor Aloysius John Baptist. b. Jan. 25, 1914, London, as Luigi John Marchesi, son of one of the members of the wine merchant family and his wife Miss De Marki. He was raised in Belgravia by his eccentric godmother, Lady Caillard, the medium (Zoe Dudgeon, the widow of Sir John Oakley Maund and also of industrialist Sir Vincent Caillard). In the RN, he served as 4th officer on the *Discovery II* in 1935-36, helping Ellsworth and Hollick-Kenyon, and was promoted to sub lieutenant in 1938, and to lieutenant in 1939. In 1943 he was 1st lieutenant on a surveying ship, the *Franklin*, off the east coast of England, when he was requested by Jimmy Marr to be captain of the *Bransfield* for Operation Tabarin, 1943-45. He did, indeed, take the *Bransfield* out of London, but then the ship sprang a leak, and the team left the ship at Falmouth, taking the *Highland Monarch* to the Falklands, where Marchesi became skipper of the *William Scoresby* for the duration of the operation — and after. He and the 1st mate (Paddy Fleck) and 2nd mate (Ian Graham) were actually, officially, part of Tabarin. He married Nancy Hobsbawn in 1946, and served on the *Unicorn* during the Korean War. He died on Dec. 27, 2006.

Marchetti Glacier. 77°11' S, 161°33' E. Flows from the N slope of Mount Mahony, in the Saint Johns Range, into Cotton Glacier, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Peter Anthony Marchetti, who made 20 deployments to McMurdo between 1987 and 2007, including 7 winters. He was camp manager for USAP's telecommunications facility on Black Island, for 11 austral summers between 1996 and 2007. NZ-APC accepted the name on April 7, 2008.

Bahía Marcial Mora *see* **Zubov Bay**

Marck Glacier. 72°16' S, 97°02' W. Flows into the SW extremity of Cadwalader Inlet, on the N side of Thurston Island. Named by US-ACAN in 2003 for Aviation Machinist's Mate George H. Marck (b. May 22, 1923, Binghamton, NY. d. Sept. 2, 2002, North Babylon, NY; it is a Slovak name), who joined the U.S. Navy on Dec. 2, 1942, and was an air crewman in the Eastern Group of OpHj 1946-47, which obtained air photos of Thurston Island and adjacent areas.

The *Marco Polo*. A 22,000-ton tourist ship, built in East Germany in 1965 as the *Alexander Pushkin*, a Baltic Sea Shipping Company ship based out of Leningrad, and doubling as a transatlantic vessel and cruise ship. By the 1970s, she was cruising more and more, her dour Russian-style budget-style accommodations reflected in the price of a cabin. In the 1980s, she was transferred to the Far Eastern Shipping Company, of Vladivostok, and began cruising out of Australia. In 1990, she was laid up in Singapore, doomed to the scrapyard. However, in 1991, the *Pushkin* was bought by the US-based Orient Lines, taken to Athens for a mammoth two-year overhaul, and registered in the Bahamas. She had an 800-passenger capacity. She was in Antarctic waters for the first time in 1993-94, under the command of captains Eric Bjurstedt (formerly skipper of the *Seabourn Spirit*, not in Antarctic waters) and Peter Letzen. That season she sailed from the Antarctic Peninsula to the Ross Sea. She was back, under Capt. Bjurst-

edt, in 1995-96, 1997-98 (with Jackie Ronne aboard as one of the passengers), 1998-99, and 1999-2000. Roland Andersson was her skipper in 2000-01. In 2003-04 she made 5 trips to Antarctica, taking a total of 2629 passengers, and averaging 524 passengers per trip. In 2008 she was acquired by Transocean Cruises, who kept her name.

Marco Polo High. 76°39' S, 164°00' W. An undersea mountain chain, 160 km long, by 80 km wide, running NNW-SSE in the Ross Sea, off Marie Byrd Land. It actually covers the coordinates 76°18' S to 77°00' S, and 166°W to 162°W. Discovered in March-June 1993 by Anna Del Ben, Icilio R. Finetti, and Michele Pipan. Named by the Italians on July 17, 1997, for Marco Polo (1254-1324), the great Venetian explorer.

Caleta Marcos *see* **Caleta Weber**

Marcoux Nunatak. 69°55' S, 159°04' E. Rising to 1530 m, about midway between Schmidt Nunataks and Poorman Peak, and about 33 km SE of Pope Mountain, in the Wilson Hills, it stands above the ice near the head of Manna Glacier, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for John S. Marcoux (b. 1931, Florida), USN, who wintered-over as VX-6 aviation structural mechanic at McMurdo in 1967.

Mareck, Reinhold. b. March 9, 1871, Rhinow im Mark, Germany. Assistant engineer on the *Gauss* during GermAE 1901-03.

Île du Marégraphe *see* **Marégraphe Island**

Marégraphe Island. 66°40' S, 140°00' E. A small, rocky island, about 0.8 km W of the N end of Carrel Island, and at the SW extremity of Chenal Pedersen, in the Géologie Archipelago. Charted in 1951 by the French and named by them as Île du Marégraphe, for the marigraph, or tide recording gauge, placed here that year over a period of 10 days, by Bertrand Imbert, and which obtained data through 1952. US-ACAN accepted the name Marégraphe Island in 1962.

Cabo Marescot *see* **Marescot Point**

Cap Marescot *see* **Marescot Point**

Cape Marescot *see* **Marescot Point**

Marescot du Thilleul, Jacques-Marie-Eugène. Name also spelled Marescot-Duthilleul. b. Oct. 26, 1810, Boulogne. In 1820 he entered Henri IV College, was a brilliant and precocious student, and graduated on May 11, 1826, going on from there to further study at Angoulême. 10 months later he was an élève on the school-ship *Orion*. For 10 years he served on several ships in the Mediterranean, taking on Barbary pirates, and exploring. He was ensign on the *Astrolabe* during FrAE 1837-40, and died on board, Nov. 23, 1839. His last words were, "Mon père! Mon pauvre vieux père!"

Marescot Point. 63°29' S, 58°35' W. A small but distinctive low rocky point, projecting N from Trinity Peninsula, N of Crown Peak, 4 km E of Thanaron Point, 13 km WSW of Cape Ducorps, and 20 km E of Cape Roquemaurel. This is the Cap Marescot discovered and charted in Feb. 1838, by FrAE 1837-40, and named by Dumont d'Urville for Jacques-Marie-Eugène Marescot du Thilleul (see above). It appears as Cabo Marescot on an 1861 Spanish chart, and as Cape Marescot on British charts of 1901 and 1936. Surveyed by Fids from Base D in Sept. 1946, and photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Marescot Point on Feb. 12, 1964, and US-ACAN followed suit that year. It appears on a 1954 Argentine chart as Cabo Negrita, but on a 1957 Argentine chart as Cabo Marescot. This last mentioned Cabo Marescot, however, refers erroneously to a point to the ESE, south of the Jacquinot Rocks, and this error seems to have been perpetuated in the Argentine gazetteer of 1970 and also in the 1974 Chilean gazetteer. So, there seem to be two separate and distinct points (or capes) in close proximity called Marescot.

Marescot Ridge. 63°32' S, 58°32' W. A ridge consisting of numerous ice-covered hills, running inland in a southerly direction for 3 km from Marescot Point to Crown Peak (i.e., this peak is at the S end of the ridge, and, at 1185 m, is the highest point on the ridge), along the NW coast of Trinity Peninsula. Probably first seen on Feb. 27, 1838, by FrAE 1837-40, it was surveyed by Fids from Base D in Sept. 1946, and so named by them because they thought this was the Cap Marescot discovered by FrAE 1837-40. It wasn't, as it turned out — that was Marescot Point. UK-APC accepted the name Marescot Ridge on Nov. 21, 1949, and US-ACAN followed suit in 1952. *See also* **Puntilla Ejército de Chile** (under **E**).

Islote Margalot *see* **Alaggia Rock**

Pico Margalot *see* **Janssen Peak**

The *Margaret*. Bob Headland, in the 2nd edition of his Chronology (see the Bibliography) says that the *Margaret* was a New London whaler in at the South Shetlands for the 1907-08 season, captain Erastus Nash. He cites Barnard L. Colby's book, *For Oil and Buggy Whips* (1990: Mystic Seaport Museum). This author can find no independent verification that the *Margaret* or Capt. Nash ever existed.

Margaret Automatic Weather Station. 80°00' S, 165°00' W. An American AWS, installed on Roosevelt Island, in the Ross Ice Shelf, and known originally as Roosevelt Island AWS. The name was changed to honor two Margarets — Margaret Lanyon (former NSF representative in NZ) and Margaret Lazzara Cookman (1958-2004).

Margaret Bay *see* **Marguerite Bay**

Margaret Goodenough Glacier *see* **Goodenough Glacier**

Margaret Hill. 78°12' S, 162°55' E. A peak rising to 1874 m on Rucker Ridge, 8 km E of Mount Rucker, in the Royal Society Range of Victoria Land. Named by NZ-APC on Nov. 4, 1999, for Margaret Clark, geologist with the 1977-78 NZGSAE field party in this area. Her first name was used because there are too many features with the name Clark. US-ACAN accepted the name later in 1999.

Mount Margaret Wade *see* **Mount Fitzimmons**

Bahía Margarita *see* **Marguerite Bay**

Isla Margarita *see* **Alexander Island**

Cape Margerie. 66°49' S, 141°23' E. A low, ice-covered cape, marked by prominent rock outcrops at its N end, about midway between Cape Mousse and Lacroix Nunatak, it is bounded on the N by several rocky islands. Charted by AAE 1911-14, and named by Mawson for Emmanuel de Margerie (1862-1953), French geographer and geologist. The French were based here in the 1950s. US-ACAN accepted the name in 1955.

Lake Marginal. 74°36' S, 163°30' E. Due W of Cape Sastrugi, on the W side of the Deep Freeze Range, in Victoria Land. Named by NZ-APC.

Baie Marguerite *see* **Marguerite Bay**

Île Marguerite *see* **Marguerite Island**

Marguerite Bay. 68°30' S, 68°30' W. A great bay on the W side of the Antarctic Peninsula, it is bounded on the N by Adelaide Island and Pourquoi Pas Island, on the S by the Wordie Ice Shelf, George VI Sound, and Alexander Island, and on the E by the Fallières Coast. Discovered and roughly charted in late Jan. 1909 by FrAE 1908-10, and named by Charcot as Baie Marguerite, for his 2nd wife, Marguerite Cléry. It has appeared on various charts (some from South America, some not) as Bahía Margarita (and various minor spelling variations of this name), since 1910, and that was the name used in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. It appeared on British charts of 1914 and 1940, as Marguerite Bay, and on a 1922 British map as Margaret Bay. In Feb. 1924 there were two whale catchers in this bay, one (skippered by Søren Beckmann) from the *Sevilla*, and the other (commanded by Gustav Mathiesen) from the *Roald Amundsen*. The bay was re-surveyed in 1936 by BGLE 1934-37, and by Fids from Base E in 1948-49. The name Marguerite Bay was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Marguerite Island. 66°47' S, 141°23' E. A rocky island, 1.1 km NW of Empereur Island, 2.6 km NNW of Cape Margerie, and N of Port-Martin, on the coast of East Antarctica. Charted in 1951 by the French, and named by them as Île Marguerite, for the wife of René Dova (*see* **Dumont d'Urville Station**). Interestingly, the Americans say it was named for a character in Goethe's *Faust*. Either way, US-ACAN accepted the name in 1962.

Islote Mari *see* **Mariholm**

Nunatak Mari. 66°07' S, 61°02' W. The nunatak next N of Nunatak Castro, immediately E of Nunatak Arizaga, almost in the middle of Jason Peninsula. Named by the Argentines.

Isla María *see* **James Ross Island**, **Marie Island**

Punta María *see* **Conesa Point**

Maria Automatic Weather Station. 74°38' S, 164°01' E. An Italian AWS on Mount Browning, on the W side of Terra Nova Bay, installed in Nov. 1998, at an elevation of 354.96 m.

Maria Creek. 77°37' S, 163°03' E. Pronounced

"ma-rye-uh," rather than the way the name is normally pronounced. A glacial meltwater stream, 0.8 km long, flowing NE from the snout of Canada Glacier, and close to the glacier, in the Taylor Valley of Victoria Land, to enter the W end of Lake Fryxell to the W of Bowles Creek and Green Creek. The name was suggested by Diane McKnight (*see* **McKnight Creek**), for the many aeolian deposits of fine sands along the creek, indicative of strong winds blowing around the S end of Canada Glacier during the winter. From Lerner & Loewe's classic song "They Call the Wind Maria," from *Paint Your Wagon*. US-ACAN accepted this amazing name.

Punta María (del) Pilar *see* **Conesa Point**

Cabo María Josefa *see* **Punta Jaraquemada**

The *Maria Yermolova*. Small, 3941-ton, 332-foot Russian cruise ship, built in 1974, sister to the *Lyubov Orlova*. She was in at the South Shetlands, the South Orkneys, and the Antarctic Peninsula, in 2000-01, under the command of Capt. Sergei Sviridov. She could carry up to 128 passengers.

Mount Mariacki. 62°10' S, 58°16' W. An ice-covered mountain, rising to between 300 and 400 m, between Admiralty Bay and Legru Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Mariacki Church, the famous medieval Krakow cathedral.

Caleta Marian *see* **Marian Cove**

Marian Cove. 62°13' S, 58°46' W. It indents the SW part of King George Island, in the South Shetlands, between Collins Harbor and Potter Cove, or, put another way, between North Spit and South Spit, in Maxwell Bay. Used by whalers, and probably named by them in the period between 1906 and 1913 (no one seems to know who Marian was), it was roughly charted by David Ferguson in 1913-14, and appears on his 1921 map of that survey. It was re-charted in 1934, by the Discovery Investigations, and appears on their 1935 chart, and on a British chart of 1948. It also appears as Marion Cove, on a 1937 British chart. Marian Cove was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year, and it appears as such in the British gazetteer of 1955. It appears on a 1949 Argentine chart as Caleta Marian, but on a 1953 chart of theirs as Caleta Mariana, and that last is the name listed in the 1970 Argentine gazetteer. King Sejong Station is on the S side of this cove. Last plotted by the UK in late 2008.

Caleta Mariana *see* **Marian Cove**

Mariani Refugio *see* **Sargento Mariani Refugio**

Cape Marie *see* **Marie Island**

Isla Marie *see* **Marie Island**

Pointe Marie *see* **Marie Island**

Marie Byrd Canyon. 75°00'S, 152°50' W. An undersea feature in the Ross Sea, off the coast of Marie Byrd Land. Named after Admiral Byrd's wife. It does not exist.

Marie Byrd Land. 80°00' S, 120°00' W. A huge tract of land, unclaimed by any country but usually regarded as an American domain, which borders the southernmost part of the Pacific Ocean. It lies between the Rockefeller Plateau and the Eights Coast, and to the E of the Ross Ice Shelf and the Ross Sea. It also overlooks the Amundsen Sea, and large glaciers run from here into the Ross Ice Shelf. Geologically, it is an island, covered with ice to connect it to the main bedrock continent. Discovered on Dec. 5, 1929, by Byrd in a flight over it, and named by him for his wife, Marie Ames Byrd, or at least the NW portion of what we know today as Marie Byrd was so named. It was first surveyed and mapped by Paul Siple, in 1935. Later, the cartographic extent of Marie Byrd Land was enlarged. US-ACAN accepted the name in 1947. It has resisted the obvious abbreviation so common in Antarctic place naming — Byrd Land.

Marie Byrd Land Camp. 75°45' S, 135°00' W. An American camp in Marie Byrd Land, consisting of 5 Jamesway huts, opened between October and December 1977.

Marie Byrd Land Survey. USARP's largest scientific field undertaking in the period 1966-68. Led by Alton Wade, it was conducted in two phases, in successive summers, 1966-67 and 1967-68, and these phases were known as Phase I and Phase II. There were various reasons for it: 1. to provide a ground control network for mapping; 2. to produce a general geological map; 3. to select areas for future geological study; 4. to do whatever geological study it could right then; 5. to collect biological specimens; 6. to produce a species-distribution map; and 7. to find and study geological anomalies. There were 4 topographical engineers, 5 geologists, 3 biologists, and a paleomagnetician. There were also 13 officers and men of the U.S. Army Aviation Detachment, a Navy aerographer, 2 Navy cooks, and a USARP field assistant. Avaliable were three UH-1D turbine-powered helicopters.

Marie Byrd Land Traverse. 1957-58. During OpDF III. Led by Charles R. Bentley. Also on the party: Jack B. Long (surveyor and mechanic), Ned Ostenso (seismologist), Vern Anderson (glaciologist; replaced by Bill Long), and Leonard A. LeSchack. This was the first scientific traverse to leave Byrd Station during IGY. They left in Nov. 1957 and returned to Byrd in Feb. 1958. The second such traverse, the following season (1958-59), is better known as the Horlick Mountains Traverse. There were also Marie Byrd Land traverses in 1959-60, 1966-67 and 1967-68.

Marie Byrd Seamount. 70°00' S, 118°00' W. An undersea feature off Marie Byrd Land, in association with which it was named by international agreement, in 1988.

Marie Island. 66°07' S, 65°45' W. An island, 3 km long, immediately N of Cape Evensen, on the Graham Coast of Graham Land. During FrAE 1903-05 Charcot named a point on the coast close N of Cape Evensen as Pointe Marie, for his elder sister. It appears on a 1908 British chart as Marie Point. However, during FrAE 1908-10, Charcot re-applied the name Pointe Marie to the S tip of what he thought was an island, Île Waldeck-Rousseau, a few miles to the SE. On a 1911 British copy of Charcot's chart, this new Pointe Marie was given as Cape Marie, and on a 1914 British chart appears as Mary Point. The Discovery Investigations surveyed this area in 1930-31, but found nothing amiss, but in 1935-36, BGLE 1934-37 found that Charcot's "Île Waldeck-Rousseau" was in fact a peak on the mainland, and they named it Waldeck-Rousseau Peak, in order to preserve Charcot's naming and the spirit behind it. The island near the peak had been unnamed, yet was the most prominent feature in the vicinity of the peak still lacking a name, and so it was named Marie Island, by UK-APC, on Sept. 22, 1954. US-ACAN accepted this name in 1956. It was photographed aerially by FIDASE in 1956-57, and appears on a British chart of 1961. It appears on a 1962 Chilean chart as Isla Marie, and that is the name found in the 1974 Chilean gazetteer. The Argentines call it Isla María.

Marie Point *see* **Marie Island**

Mariholm. 60°45' S, 45°42' W. The highest, largest, and most easterly island in a small group that lies 0.5km S of Moe Island, off Signy Island, in the South Orkneys. The name appears on Petter Sørlle's chart that was based on his famous "running survey" of the South Orkneys, in 1912-13, and apparently named by him for his daughter Mari (later Mrs. Winge) ("holm" means a small island). On a 1913 chart by Sørlle and Hans Borge, it appears erroneously as Hariholm. Re-charted by the Discovery Investigations in 1933, it appears as Mariholm on their 1934 chart, and the whole group was charted by them as Mariholm Islets. Mariholm was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. The individual island appears on a 1953 Argentine chart as Roca Mariholm, but the group appears as Rocas Mariholm on a 1954 Argentine chart, and that (i.e., the group) is the name listed in the 1970 Argentine gazetteer (for that gazetteer, the Argentines rejected the name Islote Mari for the island itself). In 1982 the group is referred to (in a British source) as the Mariholm Islands. *See also* **Gerd Island**, **Reid Island**, and **Signy Island**.

Roca(s) Mariholm *see* **Mariholm**

Mariholm Islands *see* **Mariholm**

Mariholm Islets *see* **Mariholm**

Marilyn Automatic Weather Station. 80°00' S, 165°00' E. An American AWS on Byrd Glacier, at an elevation of 64 m. It began operating (as Byrd Glacier AWS, and at an elevation of 75 m then) on Jan. 16, 1984. Its name was changed to Marilyn. It was visited on Jan. 23, 2009.

Islotes Marin. 65°54' S, 66°38' W. A group of small islands, NW of Mackworth Rock, in the Biscoe Islands. Named by the Argentines.

Punta Marín *see* **Punta Azcuénaga**

Marin, François-Joseph. b. March 8, 1808, Saint-Chamas, France. Able seaman on the *Astrolabe* during FrAE 1837-40. On May 4, 1840 he transferred to the *Zélée* as a pilot.

Marin Bluff. 69°25' S, 68°36' W. A small rock bluff, rising to 425 m (the Chileans say about 800 m), about 9 km ESE of Cape Jeremy, and about 9 km ENE of Mount Edgell, on the E coast of the N entrance to George VI Sound, on the Fallières Coast, on the W coast of Graham Land. Surveyed by BAS personnel in 1971-72. In

keeping with the naming of several features in this area for winds, this one was named by UK-APC on Dec. 8, 1977, for the marin, a warm southerly or southeasterly wind in the Gulf of Lion, in Provence. US-ACAN accepted the name. In 1978 the Argentines named it Cerro Santa Micaela, for the *Santa Micaela*. The Chileans call it Cerro Moyano, for Hugo Iván Moyano González, biology professor at the Instituto Antártico Chileno and at the University of Concepción, who conducted benthic investigations here during ChilAE 1970-71.

Bahía Marín Darbel *see* **Darbel Bay**

Marin Darbel Bay *see* **Darbel Bay**

Marin-Darbel Fjord *see* **Darbel Bay**

Marin Darbel Islands *see* **Darbel Islands**

Marin Glacier. 76°04' S, 162°22' E. Just W of Cape Hickey, flowing SE into Charcot Cove, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1964, for Bonifacio Marin, engineman who wintered-over at McMurdo in 1962. NZ-APC accepted the name.

Punta Marina *see* **Marina Point, Navy Point**

Marina, Martín M. *see* **Órcadas Station**, 1948

Marina Ledge *see* **Marina Point**

Marina Point. 65°15' S, 64°16' W. A low, rocky point forming the NW tip of Galíndez Island, in the Argentine Islands of the Wilhelm Archipelago. On Feb. 4, 1935, the *Penola* ran aground on the reef off this point, during BGLE 1934-37, and the expedition named this reef Marina Ledge, for Princess Marina (1906-1968) of Greece, who had married George, Duke of Kent (son of George V), on Nov. 29, 1934, while the *Penola* was on her way to the Argentine Islands. The point was surveyed by BGLE in 1935-36, but the point itself was not named. In 1953 FIDS moved their Argentine Islands Station from Winter Island to this point, and on Sept. 2, 1954 UK-APC named the point as Marina Point, and dropped the name Marina Ledge. US-ACAN accepted this in 1956. It appears as such on a British chart of 1956. The Argentines call it Punta Marina. In 1961 this particular Duchess of Kent became Princess Marina again.

Marine Plain. 68°38' S, 78°08' E. A flat plain, 3 km by 1 km, with its long axis trending NNW, it has an elevation ranging from sea level to 20 m, and lies on the S side of Mule Peninsula, between Krok Fjord and Ellis Fjord, or, to put it another way, between Amundsen Bay and the head of Krok Fjord, in the Vestfold Hills. A boulder-covering protects powdery diatomaceous sediments, and a few small lakes and depressions occur on its surface. It was designated SSSI #25, a site that included Burton Island. It is 9.14 sq miles in area, and is of interest because of the vertebrate fossil finds, and because of the limnological research at nearby Burton Lake. It comprises raised marine sediments rich in diatoms, molluscan and whale and dolphin fossils. The Australians established a field camp here, and named the feature.

Marine worms *see* **Worms**

Islotes Marinelli. 64°16' S, 62°54' W. A group of small islands immediately E of the Sigma Islands and immediately N of the Tau Islands, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines.

Mariner Glacier. 73°15' S, 167°30' E. A major valley glacier, over 100 km long, on the N side of Mount Murchison, it flows SE from the plateau of Victoria Land, between the Malta Plateau and the Mountaineer Range, forms the S boundary of the Victory Mountains, and terminates at the NW corner of Lady Newnes Bay (it is one the two large contributors of piedmont ice to this bay), in the Ross Sea, immediately to the S of the Mount Phillips massif, where it forms Mariner Glacier Tongue. A few miles upstream from its debouchure into the bay, it is joined at right angles from the S by a large, unnamed tributary which drains the E and N fall of the Mount Murchison massif. Its lower floating reaches and the entrance to its valley were reconnoitered in Dec. 1958, by Capt. John Cadwalader and 2 members of NZGSAE 1958-59, on a helo flight from the *Glacier* and the *Staten Island*, which were lying close off the S end of Coulman Island, in an attempt to land expeditioners on the mainland. Named by NZGSAE 1958-59, for all mariners in Antarctic waters. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mariner Glacier Tongue. 73°27' S, 168°20' E. The broad floating seaward extension of Mariner Glacier, in Victoria Land, it is just W of, and abuts, Borchgrevink Glacier Tongue where that glacier flows into Lady Newnes Bay, in the Ross Sea. Named by US-ACAN in 1969, in association with the glacier.

Mariner Hill. 71°51' S, 68°17' W. A prominent, snow-free, conical hill, rising to about 500 m, midway between Syrtis Hill and Two Steps Cliffs, in the S part of Alexander Island. Named by UK-APC on Dec. 2, 1993, for Mariner-9, the NASA probe which was the first to orbit Mars, in 1971. US-ACAN accepted the name in 1994, with the coordinates 71°51' S, 68°20' W.

Mariner Islands. 66°01' S, 101°09' E. A group of rocky islands and rocks in the NE part of the Bunger Hills, just N of Booth Peninsula, they form the N central group of the Highjump Archipelago. Bounded by Edisto Channel on the W, Glossard Channel on the S, and Remenchus Glacier on the E. Miles Island is part of this group. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for David Bunger's Martin Mariner airplane which flew over this area during OpHJ.

Puerto Marinero Lagarrigue *see* **Lagarrigue Cove**

Cabo Marinero Paredes *see* **Charles Point**

Marinerplateau. 73°01' S, 166°20' E. A plateau in the area of Mariner Glacier (hence the name given by the GANOVEX VI field party there), S of Gair Glacier, in the Mountaineer Range of Victoria Land. The rest of the world call it Mariner Plateau.

Marinovic Beach. 77°35' S, 163°34' E. A gently-sloping beach on the S shore of Explorers Cove, New Harbor, on the Scott Coast of Victoria Land. During the 1984-85 season, the sea off this beach was correctly identified by Baldo Branimir Marinovic (b. 1962), a graduate student at the University of California, Santa Cruz, as a site for the study of reproductive biology and larval ecology of shallow-water echinoderms. Mr. Marinovic and other marine biologists from the university proceeded to develop the site during that summer and the following (1985) winter, and they all named it accordingly. US-ACAN accepted the name. Marinovic got his PhD from the University of Western Australia.

Mario Zucchelli Station *see* **Baia Terra Nova Station**

Monte Marión *see* **Marion Nunataks**

Mount Marion *see* **Marion Nunataks**

Pico Marion *see* **Marion Nunataks**

Sommet Marion *see* **Marion Nunataks, Mount Martine**

Marion Cove *see* **Marian Cove**

Marion Mount *see* **Marion Nunataks**

Marion Mountain *see* **Marion Nunataks**

Marion Nunataks. 69°33' S, 75°06' W. A small group of nunataks, rising to about 600 m, on the N shore of Charcot Island, between Mount Monique (30 km to the W) and Mount Martine (11 km to the E). Discovered and roughly mapped on Jan. 11, 1910, by FrAE 1908-10, and named by Charcot as Sommet Marion, for another one of his daughters, Marion (1895-1927) (Monique and Martine were two others). It appears on a British chart of 1914 as Marion Mount, and Bongrain, also in 1914, incorrectly applies the name Sommet Marion to Mount Martine. Wilkins charted it as Marion Peak, in 1929, and it appears as such on a 1939 U.S. Hydrographic Office chart. It appears as Mount Marion on a 1930 British chart, and as Marion Mountain on a 1940 British chart. US-ACAN accepted the name Mount Marion in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1946 Argentine map as Monte Marion, and on a 1947 Chilean map as Pico Marión. Photographed aerially on Feb. 9, 1947, by OpHJ 1946-47, it was mapped from these photos in 1960 by Searle of the FIDS. Following this mapping, UK-APC, in 1960, renamed the feature Marion Nunataks, but with the coordinates 69°33' S, 75°06' W, and it appears as such on a U.S. Hydrographic Office chart of 1962, and on various other references over the next several years. The Chilean gazetteer of

1974 lists it as Monte Marión. It appears on a 1953 Argentine chart as Monte Mariana, and that is the name the Argentines chose for their 1970 gazetteer. Based on Feb. 1975 U.S. Landsat images, UK-APC corrected the coordinates in 1977. US-ACAN followed suit with all these changes.

Marion Peak *see* **Marion Nunataks**

Maris Nunatak. 69°59' S, 73°09' E. A small coastal nunatak, 3 km ENE of Whisnant Nunatak, at the junction of Rogers Glacier and the E side of the Amery Ice Shelf, on the coast of East Antarctica. Delineated in 1952 by U.S. cartographer John H. Roscoe, and named by him for Roscoe Lewis Maris (b. Dec. 31, 1918, Brazoria, Tex. d. in a plane crash on Oct. 27, 1942, 2 miles N of Ingram, Tex.), air crewman on OpHJ 1946-47 flights which provided the aerial photos from which Mr. Roscoe worked. US-ACAN accepted the name in 1956.

The *Mari-Stella*. French yacht, skippered by Christine Darde, which visited the South Shetlands and the Antarctic Peninsula in 1992-93.

Maritime Polar Air Mass. Fairly mild and wet air mass which forms over the sea round Antarctica.

Maritsa Peak. 62°37' S, 60°08' W. Rising to 560 m, on Bowles Ridge, it surmounts Huron Glacier to the S, 3.1 km E of Mount Bowles, 1.1 km WSW of Atanasoff Nunatak, 5.7 km ENE of the summit of Pliska Ridge, 6.45 km NNE of Mount Friesland, and 2.5 km NE of Kuzman Knoll, on Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Vrah Maritsa, after their great river. Translated into English as Maritsa Peak.

Mount Mark *see* **Mount Hawthorne**

Mark II Automatic Weather Station. An American AWS installed on Iceberg C-16, in Sept. 2001, and also known as C-16 AWS. In Nov. 2004 the tower was raised.

Mount Markab. 70°56' S, 67°02' W. A striking mountain with a pointed peak, rising to 1350 m, and providing a notable landmark, on the N side of the Pegasus Mountains, about 16 km NE of Gurney Point, at the George VI Sound, on the W coast of Palmer Land Named by UK-APC on July 21, 1976, for the star of that name in the constellation of Pegasus. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Markeli Point. 62°55' S, 62°32' W. The point on the NW coast of Smith Island, in the South Shetlands, 12.8 km SW of Cape Smith, and 2 km N of Gregory Point. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the medieval fortress of Markeli, in southeastern Bulgaria.

Marker Rock. 66°05' S, 65°47' W. A rock, 2.5 km NNW of Turnabout Island, in the Saffery Islands, off the W coast of Graham Land. Charted by BGLE 1934-37. So named by UK-APC on July 7, 1959, because it acts as a marker for vessels through the Saffery Islands. US-ACAN did not accept the name until 1971.

Bahía Markham *see* **Markham Bay**

Isla Markham *see* **Clements Island**

Mount Markham. 82°51' S, 161°21' E. Also called the Markham Mountains. A majestic mountain, one of the major ones in Antarctica, standing prominently above the surrounding lesser peaks, it has a twin summit, one peak rising to 4350 m, and the other to 4280 m. The New Zealanders say it is triple-peaked, with summits of 4602 m, 3368 m, and 3749 m, resp. It surmounts the N end of the Markham Plateau, in the Queen Elizabeth Range, southward of Shackleton Inlet, along the W edge of the Ross Ice Shelf. Discovered by Scott, Wilson, and Shackleton, on Dec. 27, 1902, during BNAE 1901-04, and named by Scott for Sir Clements Robert Markham (1830-1916), president of the Royal Geographical Society and patron of BNAE 1901-04. Markham, a seminal figure in Antarctic exploration, even though he never went there, was the person who plucked Scott from obscurity to lead the expedition. US-ACAN accepted the name in 1947.

Markham Bay. 64°17' S, 57°18' W. A bay, 13 km wide, between Ekelöf Point and Hamilton Point, on the SE side of James Ross Island, off the E coast of Trinity Peninsula. Possibly first seen in 1842-43 by RossAE 1839-43. First surveyed and charted by SwedAE 1901-04, and named by Nordenskjöld as Clements Markhams Bukt, for Sir Clements Markham (*see* **Mount Markham**). It first appears in English as Clements Markham Bay (but from a Nordenskjöld map), and appears as such again on a 1948 British chart. In 1947 it appeared on an Argentine chart as Bahía Clements Markham. Named Markham Bay by US-ACAN in 1952, and surveyed by Fids from Base D in 1953, its new, shortened, name was accepted by UK-APC on Jan. 28, 1953, and it appears as such on a British chart of 1954, and also in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Bahía Markham, and that is the name accepted by the 1970 Argentine gazetteer and also by the 1974 Chilean gazetteer.

[1]**Markham Island** *see* **Clements Island, Scott Island**

[2]**Markham Island**. 74°36' S, 164°55' E. A small but high and conspicuous island, about 1.5 km in diameter, with vertical sides, just off Oscar Point, and about 30 km W of Cape Washington, in the N part of Terra Nova Bay, along the coast of Victoria Land. Discovered in Feb. 1900 by BAE 1898-1900, and named by Borchgrevink for Sir Clements Markham (*see* **Mount Markham**). US-ACAN and NZ-APC both accepted the name.

Markham Mountains *see* **Mount Markham**

Markham Plateau. 82°56' S, 161°10' E. A small but prominent high plateau, extending S from Mount Markham for 16 km, and forming the divide between east- and west-flowing glaciers in the N part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, in association with the mountain.

Markham Spur. 77°39' S, 162°21' E. A spur projecting from the SE side of Roa Ridge, on the W side of Webb Peak, in the Asgard Range of Victoria Land. Named by NZ-APC on Oct. 7, 1998. US-ACAN accepted the name later that year.

Markinsenis Peak. 71°35' S, 164°29' E. Rising to 1790 m, on the S side of McCann Glacier, at the junction of that glacier with Lillie Glacier, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. In yet another US-ACAN foul up, it was named in 1970, for Ronald "Ron" Markisenis [sic] (b. July 31, 1942, Albany, NY; Markisenis is a Greek name), who joined the USN in 1960, and wintered-over as radioman 2nd class at Pole Station in 1965. During his stay there he was promoted to radioman Ist class, and retired from the Navy in 1968, to New York state. At the time of writing (Jan. 2011), US-ACAN has steadfastly refused to correct the name, even though they know it is wrong.

Markisenis, Ronald *see* **Markinsenis Peak**

Playa Marko. 62°28' S, 60°45' W. A beach, immediately S of Punta Haydée, it extends from Punta Del Medio, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Marko Gajardo Guzmán, professor at the Instituto Antártico Chileno, who supported and took part in ChilAE 1984-85.

Cape Markov. 66°46' S, 50°16' E. An ice cape on the E side of Amundsen Bay, 11 km W of Mount Riiser-Larsen, in Enderby Land. Named by the USSR in 1961-62 as Mys Markova, for Konstantin Konstantinovich "K.K." Markov (1912-1990), professor of geography at Moscow University and author of several reports on Antarctica. US-ACAN accepted the translated name Cape Markov in 1971.

[1]**Gora Markova**. 72°57' S, 68°27' E. A nunatak, E of the Hay Hills, at the N end of the Mawson Escarpment, in Mac. Robertson Land. Named by the Russians.

[2]**Gora Markova** *see* **Clayton Ramparts**

Mys Markova *see* **Cape Markov**

Markovskijknausen *see* **Gora Markovskogo**

Gora Markovskogo. 71°27' S, 13°14' E. The southernmost nunatak in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians. The Norwegians call it Markovskijknausen (which means the same thing).

Mount Marks. 78°47' S, 160°35' E. A broad, ice-covered mountain, rising to 2600 m, 8 km NNW of Mount Speyer, in the Worcester Range, in Victoria Land. Named by US-ACAN in 2001, for Rodney Marks.

Marks, Rodney. b. 1968, Geelong, Vic., son of Paul Marks. An astrophysicist with CARA (Center for Astrophysical Research in Antarctica), based out of Chicago, he spent the winter of 1998 at Pole Station for the SPIREX/Abu (near infrared) project, and returned there for the winter of 2000 for ASTRO (Antarctic Submillimeter Telescope and Remote Observatory).

His fiancée, Sonja Walter, was there too, to be with him as a maintenance specialist. On May 11, 2000 he became quite sick, and his condition worsened over the next 36 hours, until he died on May 12, 2000, of unknown causes. However, 6 months later, at the autopsy in Christchurch, NZ, his death was revealed to have been by methanol poisoning. Detective Grant Wormald of the NZ Police investigated the case, which some said might be murder. "Murder at the South Pole." Although alcoholism and Tourette's Syndrome afflicted Dr. Marks, Sgt. Wormald felt that suicide was unlikely, but he was stymied, he said, by the refusal of the NSF and their contractor Raytheon Polar Services (both of whom operated Pole Station) to co-operate in his investigation. In 2007 it was being rumored that the U.S. State Department might have been applying pressure to the NZ authorities to drop the case.

Marks Peak. 76°30' S, 125°45' W. A rocky peak, rising to 3325 m, on the S side of the crater rim of Mount Hampton, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground sueveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Keith E. Marks, electronics engineer from the (US) National Bureau of Standards, a member of the Marie Byrd Land Traverse Party of 1959-60.

Marks Point. 85°29' S, 155°40' W. A rock point extending E from the N end of Medina Peaks, at the S edge of the Ross Ice Shelf. Discovered during ByrdAE 1928-30. Named by US-ACAN in 1967, for George R. Marks, logistics worker who wintered-over at McMurdo in 1962.

Marks Summit. 82°28' S, 50°50' W. A peak rising to 801 m above sea level, halfway along Wujek Ridge in Dufek Valley (ASPA #119), in the Pensacola Mountains. Named by UK-APC on Sept. 14, 2006, for Gregory Paul Marks (1972-2004), BAS pilot, 2002-04, who pioneered new practices which improved the efficiency of BAS logistical support in Antarctica. The Russians call it Gora Pavlovskogo.

Marø, Harald Landmark. b. 1917, Norway. At the age of 15 he went to sea, joining his father. During World War II he served on two Norwegian merchant ships, the *Atesbull* and the *Prominence*, both of which sank. After the second one sank, he was washed ashore on Indonesia, falling into Japanese hands. It wasn't for another year, when Norway declared war against Japan, that the Japanese officially took him prisoner. For over 3 years they moved him from camp to camp, including the infamous Changi in Singapore, and at war's end he was freed, making his way to Colombo, where he caught the *Highland Monarch* back to Southampton, and from there on to Norway. After the war, he and and his wife moved to Nova Scotia, and eventually became Canadian citizens. Mr. Marø worked as a mate on the *Theron* for years, eventually becoming her skipper, 1955-58, in Antarctic waters. He retired from the sea in 1976.

Marø Cliffs. 79°04' S, 28°30' W. Prominent rock cliffs, rising to about 900 m, SW of Jeffries Glacier, on the NW side of the Theron Mountains, in Coats Land. First surveyed and mapped by BCTAE in 1956-57, and named by them for Harald Marø. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Mount Marquis. 72°29' S, 62°30' W. Rising to about 1700 m, in the S part of the Du Toit Mountains, 6 km N of Maury Glacier, 42 km SSW of Dietz Bluff, and 41 km due W of the N end of Pullen Island, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by UK-APC on May 13, 1991, for Peter Marquis (q.v.), who was a member of the joint BAS-USGS team that surveyed this area in 1986-87. US-ACAN accepted the name.

Marquis, Peter Timothy. b. Oct. 16, 1956. BAS polar guide and general assistant who wintered-over at Rothera Station in 1987 and 1988. He spent some summers after that as base commander at the same station.

Bahía Marr *see* **Marr Bay**

Mount Marr. 66°24' S, 52°07' E. A rock peak rising above the surrounding ice surface, 13 km S of Johnston Peak, and 13 km W of Douglas Peak, in Enderby Land. Discovered in Jan. 1930 by BANZARE and named by Mawson for Jimmy Marr. US-ACAN accepted the name in 1947.

Marr, James William Slesser "Jimmy." b. Dec. 9, 1902, Aberdeen, son of John George Marr and his wife Ann Diack Slesser. Much-decorated boy scout hero (he had saved people from drowning), while reading classics at Aberdeen he was picked by Shackleton to go on his last voyage, 1921-22, on the *Quest*. He was awarded his MA in 1924, and his BSc in zoology in 1925, and was with Worsley in the Arctic in 1925. He was an important member of the Discovery Committee, as zoologist on the *William Scoresby*, 1927-29, and chief scientist on that ship from April to June 1929. After a trip to Kenya, he was oceanographer during the 1st season of BANZARE, 1929-31. From 1931 to 1933 he was on the *Discovery II*, and again in 1935-37, conducting an oceanographic survey of the Ross Sea. In 1937 he married Dorothea Helene Plutte. He was whaling inspector in Antarctica, on the *Terje Viken*, from 1939 to 1940, investigating (along with his assistant, Gwion Davies), the possibilities of whale meat for food. He was in the Navy during World War II, and was serving on the minesweeper *Jay* in the Far East when he was picked to be the leader of Operation Tabarin, 1943-44, during which he commanded Port Lockroy Station in the winter of 1944, and has thus been called the first FIDS leader. In the most real of all possible ways he was, even though the Falkland Islands Dependencies Survey was not created until after the War, albeit as a continuation of Tabarin. He became increasingly ill during his winter there, and asked to be relieved for Phase II (1944-45) of the operation (Capt. Andy Taylor succeeded him in that role). He returned to Port Stanley, and then on to Montevideo, where he caught the *Empire Welfare* back to Avonmouth, in England, where he arrived on May 17, 1945. He later became an authority on krill (*see also* the Bibliography), and from 1949 was Principal Scientific Officer at the National Institute of Oceanography. Scout Marr died on April 29, 1965.

Marr Bay. 60°42' S, 44°31' W. Between Cape Valavielle and Fraser Point, along the N coast of Laurie Island, in the South Orkneys. Mapped in 1903 by ScotNAE 1902-04, and named by them as McCredie Bay, for Alexander McCreadie [sic], former ironworks manager, who, with Peter Wallace and the Marquis of Ailsa, owned the Ailsa Shipyard at Troon, where the *Scotia* was fitted out in 1902. Re-charted in 1933 by the personnel on the *Discovery II*, and named by them for Jimmy Marr. It appears as such on their 1934 chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Bahía Marr, and that is the name listed in their 1970 gazetteer.

Marr Bluff. 69°47' S, 69°20' W. A rock bluff, rising to 1065 m, on the N side of Wager Glacier, on the E coast of Alexander Island, at George VI Sound. Surveyed by Fids from Base E in 1948, and named by them for John Edward "Johnny" Marr (1857-1933), Woodwardian professor of geology at Cambridge, 1917-30. The name was accepted by UK-APC on March 31, 1955, and US-ACAN followed suit that year. *See also* **Marr Glacier**.

Marr Glacier. 77°43' S, 162°44' E. A small glacier, 3 km W of Goldman Glacier, flowing N from the Kukri Hills into Taylor Valley, between that valley and the lower Ferrar Glacier, in Victoria Land. Charted in 1911-12 by BAE 1910-13, and named by Grif Taylor for Johnny Marr (*see* **Marr Bluff**), the man who talked him into going to Antarctica with Scott. US-ACAN accepted the name in 1964. NZ-APC also accepted the name.

Marr Ice Piedmont. 64°33' S, 63°40' W. A large ice piedmont covering the NW half of Anvers Island, it extends from Cape Bayle in the N to Arthur Harbor in the S, in the Palmer Archipelago. Presumably first seen by Dallmann, in 1873-74. First roughly surveyed by FrAE 1903-05 and by FrAE 1908-10. Named by UK-APC on Sept. 22, 1954, for Jimmy Marr. Surveyed in part in 1955, by Fids from Base N, and photographed aerially by FIDASE in 1956-57. US-ACAN accepted the name in 1956. It appears on a 1961 British chart.

Marr Point. 62°06' S, 57°56' W. The SW tip of Penguin Island, off the S coast of King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for Jimmy Marr (q.v.), who gave the very first accurate description of the island.

Marra, John. b. ca. 1745, Cork, Ireland. Gunner's mate who joined the Dutch ship *Schoonzigt* on April 10, 1770, at Rotterdam. Owing to the Dutch embargo on taking on British sailors, he posed as Jan Mara, a Dane from Elsinore. He deserted at Batavia, and on

Oct. 17, 1770, as an able seaman, joined Cook's ship the *Endeavour*, which then sailed back to England, leaving a rather annoyed Dutch skipper in its wake. He joined Cook on the *Scorpion*, and then on Dec. 17, 1771 joined the *Resolution* for Cook's 2nd voyage, 1772-75. In Sept. 1775 he published (anonymously) a book called *Journal of the Resolution's Voyage in 1772, 1773, 1774, and 1775*, which preceded in publication Cook's official narrative of the voyage. He later served on the *Centaur*, and died in 1783.

Marret. 66°40' S, 140°00' E. An important and well-defined little valley opening in the direction of Anse du Pré, in the central part of the Géologie Archipelago. Named by the French for Mario Marret. The term is no longer used (it couldn't have been that important).

Base Marret. Winter camp at Pointe Géologie, established by Mario Marret during the French Polar Expedition 1951-53 (*see* **Marret, Mario**). The camp was used later, during IGY, as a refugio.

Marret, Ferdinand. b. Jan. 6, 1799, Romans, France. Baker on the *Astrolabe* during FrAE 1837-40. He ran at Talcahuano, Chile, on May 15, 1838.

Marret, Mario. French photographer. He wintered-over at Port-Martin Station in 1950, as an ionosphere physicist, and was back in Antarctica as a member of the French Polar Expedition of 1951-53. The *Tottan* took him and 6 men from the main base at Port-Martin to establish a winter camp at Pointe Géologie. When a fire destroyed main base, it was agreed that the expedition should end, as such, but that Marret would lead his men through the winter at their camp, which he did, studying emperor penguins. This camp came to be known as Base Marret. The *Tottan* picked him up in Jan. 1953. He wrote *Antarctic Adeventure* (*see* the Bibliography).

Marret Glacier. 66°26' S, 137°44' E. A channel glacier, 6 km long and 6 km wide, it flows NE from the continental ice to the coast close E of Cape Robert, in the W part of Adélie Land. Delineated from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Mario Marret.

Mount Marriner. 68°10' S, 49°03' E. A mountain, 3 km WSW of Mount Flett, and about 15 km SE of Amphitheatre Lake, in the central part of the Nye Mountains, in Enderby Land. Plotted from 1956 and 1957 ANARE air photos. Named by ANCA for Alan Claude Marriner, radio officer who wintered-over at Wilkes Station in 1959. US-ACAN accepted the name in 1965.

Ostrov Mars *see* **Mars Island**

Mars Col. 63°59' S, 57°34' W. A col, about 1 km wide, at an elevation of about 200 m above sea level, and extending southward from the gentle slopes of Terrapin Hill to the steep scree slopes below Förster Cliffs, on James Ross Island. Wind erosion of the soft volcanic substrate has resulted in a stark, yellowish surface covered in hundreds of angular, dark-colored basalt cobbles, closely resembling images of the planet Mars as obtained by Lander spacecraft. Named by UK-APC on Nov. 15, 2006.

Mars Glacier. 71°54' S, 68°23' W. A glacier, 10 km long and 3 km wide, in the SE corner of Alexander Island, it flows S into Saturn Glacier and the ice shelf of George VI Sound between Two Step Cliffs and Phobos Ridge. Discovered aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936, by U.S. cartographer W.L.G. Joerg. Surveyed in 1949 by Fids from Base E, and named by UK-APC on March 31, 1955, for the planet. US-ACAN accepted the name later that year. Originally plotted in 71°50' S, 68°26' W, it has since been replotted.

Mars Hills. 76°40' S, 162°00' E. A small group of low rounded hills, of a distinct red color, 4 km N of Mount Davidson, in the Convoy Range, in Victoria Land. The name was suggested by NZ geologist Christopher J. Burgess, in association with the Viking Hills (named for the spacecraft), and because Mars is red too. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Mars Island. 66°03' S, 101°08' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Mars, for the planet. ANCA translated the name.

Mars Oasis. 71°53' S, 68°15' W. An area of ponds and moist ground supporting a significant biota for such a southerly, relatively dry region. Located at the junction of Mars Glacier and George VI Sound, at the foot of Two Step Cliffs, in the SE corner of Alexander Island. Named by UK-APC on Dec. 7, 1994, in association with the glacier.

Mount Marsden. 67°52' S, 66°03' E. A bare rock mountain, rising to about 600 m, about 6 km SW of Mount Rivett, in the Gustav Bull Mountains, on the Mawson Coast of Mac. Robertson Land. Named in Feb. 1931 by BANZARE, for English-born physicist Ernest Marsden (1889-1970), director of the Department of Scientific and Industrial Research in NZ, except that what Mawson charted as Mount Marsden was, in fact, what later became known as Mount Rivett. US-ACAN accepted Mawson's concept in 1947, but later changed after the position of the real Mount Marsden was fixed by Dave Carstens, surveyor at Mawson Station in 1962. Mr. Marsden also worked with Rutherford on splitting the atom.

Marsden, John Stuart. Known as Stuart. He joined FIDS in 1960, as a geophysicist, and wintered-over at Halley Bay Station in 1961 and 1962.

Cabo Marsh *see* **Cape Marsh**

Cape Marsh. 65°15' S, 59°28' W. A prominent cape, consisting of a rock cliff rising to over 235 m above sea level, it marks the SE extremity of Robertson Island, on the Nordensköld Coast, on the edge of the Larsen Ice Shelf, in the N part of the Antarctic Peninsula. Robertson Island was discovered and roughly charted by Larsen on Dec. 10, 1893, and the S part of the island was re-surveyed by Fids from Base D in July 1953. Named by UK-APC on Sept. 4, 1957, for Dr. George Marsh. US-ACAN accepted the name in 1963. It appears on an Argentine chart of 1963 as Cabo Marsh. The Chileans (rather cleverly) named it Cabo Nemesio, for Chilean infantryman Cabo de primera clase Nemesio Zamora Cabrera, a member of the team who built General Bernardo O'Higgins Station in 1947-48.

Marsh, Anthony Frank "Tony." b. Sept. 11, 1941, Leicester, son of Frank A. Marsh and his wife Aileen M. Briscoe. After Manchester University he joined BAS on July 30, 1962, and sailed south in Oct. 1962, on the *John Biscoe*, as geologist at Base E for the winter of 1963, and at Fossil Bluff Station for the summer of 1963-64, that season being one of the Larsen Ice Shelf Party. He was at Base E again for the winter of 1964, and finally at Base D for the summer of 1964-65. He returned to the UK in May 1965, and worked at BAS's geology unit at Birmingham University, from where he got his PhD. He left FIDS on the last day of 1968. He later worked for an oil company.

Marsh, George Walter. b. Aug. 19, 1925, Atcham, near Shrewsbury, Salop, son of Joseph W. Marsh and his wife Gladys M. Marsh [sic]. He qualified as a surgeon at Barts in 1950, became a house physician there, and joined FIDS as a medical officer in Oct. 1951, doing a tour of FIDS bases in the *John Biscoe*, and in Feb. 1952 leading a team of 10 men to rebuild Base D, which had been burned in the fire of 1948. His was the party that was fired on by the Argentines. He wintered-over at Base D as medical officer and base leader, in 1952 and 1953. During his time there he was bitten by a leopard seal, and had to stitch up his own arm. After his tour he returned to Port Stanley, then to Montevideo, where he caught the *Highland Princess* bound for London, arriving there on Feb. 5, 1954. During IGY (winter of 1957 and the summer of 1957-58) he was surgeon at Scott Base, and took part in BCTAE, as one of the two British expeditioners in the NZ party, taking part with Bob Miller in one of the longest sledge journeys on record. He was in charge of the NZ huskies, and wintered-over in 1957. After the expedition, he returned to Wellington, where he took the *Rangitoto* to Southampton, arriving there on May 12, 1958. He later became a consultant at Hertford Hospital, and died on June 6, 1988, in Enfield, London.

Marsh, Walter John. b. Timaru, NZ. Joined the *Morning* on Oct. 19, 1903 as 2nd engineer, during the 1903-04 relief voyage for BNAE 1901-04. He left the ship on Oct. 18, 1904.

Marsh Cirque. 77°30' S, 161°26' E. A cirque, 1.5 km wide, and partly occupied by a glacier, in the S part of Mount Hercules, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Bruce D. Marsh, geologist with the department of earth and planetary sciences at Johns Hopkins, USAP investigator of Basement Sill in dry valleys sites for 7 seasons between 1995 and 2005. NZ-APC accepted the name on Nov. 30, 2004.

Marsh Glacier. 82°52' S, 158°30' E. Between 110 and 133 km long, it flows northward from

the Polar Plateau, between the Miller Range and the Queen Elizabeth Range, into Nimrod Glacier. Discovered by one of the NZ parties during BCTAE 1956-58, and named by them for Dr. George Marsh, a member of the party (*see* **Marsh, George Walter**, and also **British Commonwealth Transantarctic Expedition**). US-ACAN accepted the name in 1966.

Marsh Nunatak. 73°01' S, 61°26' E. A rock outcrop with snow on the N slope, in the Goodspeed Nunataks, about 17 km ESE of Skinner Nunatak, in the S part of the Prince Charles Mountains. Discovered by an ANARE seismic traverse party of 1957, and photographed aerially by ANARE in 1958 and 1960. Named by ANCA for James H. "Jim" Marsh, helicopter engineer with the ANARE Prince Charles Mountains survey party of 1972. The Russians call it Gora Seryj Bok.

Marsh Ridge. 85°46' S, 146°10' W. A rocky ridge, 5 km long, midway along the S side of Leverett Glacier, and 17.5 km ENE of Mount Gould. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Robert D. Marsh, cook during the first wintering-over at Byrd Station in 1957.

Marsh Spur. 65°53' S, 62°38' W. Rising to about 500 m above sea level, on the N side of Leppard Glacier, 7 km S of Bildad Peak and 7 km W of Scar Inlet, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1964-65. Important geologically for the contact between Basement Complex gneisses and volcanics of probably Upper Jurassic age. Named by UK-APC on July 21, 1976, for Tony Marsh. US-ACAN accepted the name later in 1976.

Bahía Marshall *see* **Marshall Bay**

Mount Marshall. 84°41' S, 164°39' E. Rising to 3160 m (the New Zealanders say 3048 m), 6 km SE of Blizzard Peak, in the Marshall Mountains, on the W side of the upper Beardmore Glacier, in the Queen Alexandra Range. Named by US-ACAN in 1966, in association with the Marshall Mountains. NZ-APC accepted the name.

Pico Marshall *see* **Marshall Peak**

Marshall, Edward Hillis. b. March 31, 1885, Hampstead, London, son of solicitor John Thomas Marshall and his second wife Alice Gardner, and brother of Eric Marshall (see below). After distinguished service with the Army in World War I, he became a surgeon. Actually, he was already a surgeon, but wanted to fight, so he didn't tell the Army. He became a member of the Marine Executive staff of the Discovery Committee, and was surgeon commander and bacteriologist on the *Discovery*, 1925-27, and in 1928-29, as administrator of the Ross Dependency, accompanied the Norwegian whaling expedition on the *C.A. Larsen*, and made observations on whales. He was surgeon and bacteriologist on the *Discovery II*, 1929-31, during that ship's first cruise south. He retired to Wargrave, Berks, and died on Feb. 28, 1975, in Reading. There was another Marshall brother (*see* **Mount Stanley**) who did not go to Antarctica.

Marshall, Eric Stewart. b. May 23, 1879, Hampstead, London, son of solicitor John Thomas Marshall and his wife Alice Gardner, and older brother of Edward Hillis Marshall. Instead of entering the church, as had been his intention, he entered Barts Hospital in 1899, becoming a promising rugby player, and qualified as a surgeon in 1906. He was medical officer and cartographer on BAE 1907-09, and was one of the 4 men to reach within 97 miles of the South Pole in 1909. From 1909 to 1911 he was on the British expedition to Dutch New Guinea, and served with distinction as an RAMC officer in France during World War I. In 1915 he married Elspeth Douglas-Reid, of Henley Hall, Ipswich. In 1919 he was in Archangel, Russia, as a scurvy expert. From 1930 he farmed in Kenya, and retired to the Isle of Wight, where he died on Feb. 26, 1963.

Marshall, James *see* **USEE 1838-42**

Marshall, Leonard George. Fireman on the *William Scoresby*, 1927-30.

Marshall, Norman Bertram "Freddy." b. Feb. 5, 1915, Great Shelford, Cambridge, as Bertram Norman Marshall [sic], son of builder Arthur H. Marshall and his wife Ruby Eva E. Cambridge. An avid natural science student as a child, he was also a bit of a devil. At Sunday school his teacher, Percy Reed, once delivered an impassioned theological order to a malevolent force he felt might be intimidating the small congregation, "I command the Devil to leave this place." The subject of our entry got up and walked out. After Cambridge (i.e., the university), he joined Alister Hardy in the department of oceanography, at University College, Hull. During World War II he became a captain in the REME, attached to operations research. While working for Prof. Jacob Bronowski (who gave him the name "Freddy"), he volunteered for Operation Tabarin, married Olga Stonehouse, and went to Labrador to pick up some huskies. On Nov. 15, 1944 he and E.W. Bingham arrived in Liverpool on the *Indochinois*, from Montreal, with the dogs, and then took them down to Antarctica, for the 2nd phase of Tabarin, 1944-45. He was zoologist at Base D in the winter of 1945. In 1950, while at the Natural History Museum, he went on an expedition to the Red Sea. He died on Feb. 13, 1996, at Cambridge, where he had been a professor.

Marshall, Scott William. b. Sept. 8, 1918, Duluth, Minn., son of Standard Oil Company purchasing agent Scott Waldo Marshall and his wife Gillie A. Bergstrom. In the early 1920s his father became a manager for a refrigeration company in Sioux City, Iowa, and finally Scott Wm. wound up in Wichita, Kans. He was a lieutenant commander in the U.S. Navy when he became military leader at McMurdo for the winter-over of 1957. On Nov. 28, 1957 he handed over to E.E. Ludeman. He died on June 21, 2003, in La Mesa, Calif.

Marshall, Walter. Able seaman on the *William Scoresby*, 1930-32, and leading seaman on the same vessel, 1934-36.

Marshall Archipelago. 77°00' S, 148°30' W. An extensive group of large, ice-covered islands within the Sulzberger Ice Shelf, several of which were discovered during Byrd's first 3 expeditions. The group includes Beaton Island, Cronenwett Island, Gould Island, Grinder Island, Nolan Island, Przybyszewski Island, Radford Island, Steventon Island, Vollmer Island, Hannah Island, Hutchinson Island, Kramer Island, Madden Island, Orr Island, Spencer Island, and Thode Island. The archipelago was named by Byrd for General George Catlett Marshall (1880-1959), adviser to and (private) patron of ByrdAE 1933-35. At various times Gen. Marshall would hold the positions of Army Chief of Staff, Secretary of State, and Secretary of Defense. His name was given to the Marshall Plan (designed to help a ravaged Europe after the war), and he won the Nobel Peace Prize in 1953. The full extent of the archipelago was mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1970.

Marshall Bay. 60°39' S, 45°38' W. A bay, 3 km wide, between Cape Vik and Cape Hansen, on the S side of Coronation Island, in the South Orkneys. Roughly charted (but not named, apparently) in 1912-13 by Petter Sørlle. Re-charted in 1933 by personnel on the *Discovery II*, it appears on their 1934 chart. They named it for Dr. Edward H. Marshall. The name was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and appears as such in the 1955 British gazetteer. The name Bahía Marshall appears on a 1952 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. The feature was re-surveyed by Fids from Signy Island Station between 1956 and 1958.

Marshall Cirque. 78°05' S, 167°16' E. An ice-filled cirque, 1.5 km wide, 1.5 km SW of Kienle Cirque, on the W side of White Island, in the Ross Archipelago. Named by US-ACAN in 1999, for Dianne L. Marshall, of the Geophysical Institute at the University of Alaska, at Fairbanks, who investigated the volcanic activity and seismicity of nearby Mount Erebus in 1981-82 and 1982-83. NZ-APC accepted the name on Nov. 4, 1999.

Marshall Mountains. 84°37' S, 164°30' E. A group of mountains, rising to 3048 m, on the W side of, and overlooking, the Beardmore Glacier, in the Queen Alexandra Range, and bounded on the N by Berwick Glacier and on the S by Swinford Glacier. Discovered in Dec. 1908 by Shackleton's party as they trekked toward the Pole, during BAE 1907-09, and named by Shackleton for Dr. Eric Marshall, one of his companions. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Marshall Nunatak. 74°10' S, 75°41' W. A somewhat isolated rock nunatak, rising to about 1000 m, SE of Carroll Inlet, it is the most easterly in a chain of small summits 38 km ESE of FitzGerald Bluffs, and 14 km E of Schwartz Peak, on the English Coast of Ellsworth Land. Mapped by USGS from 1961-64 ground surveys, and from 1965-66 USN air photos. Named by US-ACAN in 1968, for William F. Marshall, USGS

topographic engineer at Byrd Station, 1967-68. UK-APC accepted the name on Dec. 20, 1974.

Marshall Peak. 71°09' S, 61°32' W. Rising to 1205 m, and ice-covered except for its rocky NE side, at the base of Kvinge Peninsula, 10 km NW of the head of Palmer Inlet, on the Black Coast, on the E coast of Palmer Land. This area was first explored in Dec. 1940, by USAS 1939-41, and they may have seen this feature. However, it was first charted by a joint sledging party of personnel from RARE 1947-48 and Fids from Base E, in Nov. 1947. Named by FIDS for Norman B. Marshall. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Pico Marshall, and that is what the Argentines (and the Chileans) call it today. It was further surveyed by BAS personnel from Base E in 1972-73.

Marshall Ridge. 78°03' S, 164°05' E. To the E of Blue Glacier, running E-W, and rising to about 1175 m, between Garwood Valley and Marshall Valley, on the Scott Coast of Victoria Land. It must have been seen by Armitage's Koettlitz Glacier party in 1903, during BNAE 1901-04, but is was first clearly mapped by BAE 1910-13. Named by NZ-APC in 1982, in association with the valley. US-ACAN accepted the name.

Marshall Stream. 78°04' S, 164°18' E. Also called Rivard Creek. A meltwater stream, or creek, about 10 km long, flowing through Marshall Valley from Rivard Glacier to Koettlitz Glacier, in Victoria Land. Observed by geologist Troy Péwé in 1957-58. Named by NZ and the USA together, in 1962, in association with the valley.

Marshall Valley. 78°04' S, 164°10' E. A small valley, ice-free except for Rivard Glacier at its head, it lies between Garwood Valley and Miers Valley, on the Scott Coast of Victoria Land. A stream channel, cut by summer meltwater flowing from a small ice slab at the head of the valley, reaches the coast about 16 km S of Cape Chocolate. Named by the NZ Blue Glacier Party of BCTAE in 1956-57, for Dr. Eric Marshall. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Mount Marsland. 67°11' S, 51°14' E. About 3 km E of Mount McLennan, and 10 km S of the E part of Beaver Glacier, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA in 1962 for Frank Marsland. US-ACAN accepted the name in 1965.

Marsland, Frederick Leonard. In Antarctic circles he was known as Frank, but everywhere else as Fred. b. 1907, Whinstanes, Brisbane, son of Lancashire-born railway clerk Luke Wagstaff Marsland, Jr. (son of a barrister) and his wife Ethel Alice. The family moved several times within Queensland, to Ascot, to Roma, and finally to Hamilton, where Luke died, of heart trouble, still in his 40s, and in 1919 Ethel married again, to James Bright Manuell. When he was 15, Fred became a merchant seaman, and, in addition to this, on July 1, 1923, he became a midshipman in the RANR, and did 28 days training aboard the *Platypus*, in Oct. and Nov. 1923. He was an able seaman on the *Discovery* during the 1st half of BANZARE 1929-31. After his part in the expedition, he caught the *Bendigo* at Melbourne, and arrived in London on June 25, 1930. From there, he went on to Nova Scotia, looking for farm work, married a local girl Jennie G. Pulsifer, in 1933, and they had a son born in 1934. However, the sea was certain employment during the Depression, and he went back to plying the Atlantic. In 1935 he was back in England, and found work with Sir Alan Cobham's Air Circus. On Sept. 4, 1935, while the circus was performing at Kingston, near London, Fred got onto a special platform on the wing of a plane carrying 15 passengers, and then Flight Lt. H.C. Johnson took off. When they were 1000 feet over Kingston Bypass, Fred jumped off the wing. Everyone saw him tugging violently at the ripcord on the way down, but the chute didn't open properly, and he hit the ground at tremendous speed, breaking his right leg and arm, and suffering serious head injuries. He died in Kingston Hospital early in the morning on Oct. 23, 1935. The inquest was held on Oct. 28, and a verdict of accidental death was brought in. What's more, the chute was found to be in perfect working order. Ironically, three days after Fred had his fall, Cobham's was in Blackpool, and two of the circus planes crashed, killing 2 women passengers and a pilot.

Marsteinen *see* **Marsteinen Nunatak**

Marsteinen Nunatak. 71°26' S, 1°42' W. A small coastal nunatak, 10 km NE of Valken Hill, at the northernmost end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Marsteinen (i.e., "the sea stone"). US-ACAN accepted the name Marsteinen Nunatak in 1966.

Mount Marston. 76°54' S, 162°12' E. Also called Whaleback. A whaleback-shaped mountain rising to 1245 m (the New Zealanders say 1188 m), at the N side of Kar Plateau, 5 km N of the terminus of Mackay Glacier, and overlooking Granite Harbor on the E, and Cleveland Glacier on the W, in Victoria Land. First charted by Shackleton during BAE 1907-09, and named by him for George Marston. US-ACAN and NZ-APC both accepted the name.

Marston, George Edward "Putty." b. March 19, 1882, Southsea, Portsmouth, son of coachbuilder William Charles Marston, by his wife Elizabeth Peyton. He trained as an artist, and became an art teacher. He was artist and general handyman on BAE 1907-09, and also on BITE 1914-17. He and Jim Murray wrote a book called *Antarctic Days*. From 1922 he was handicrafts adviser with the Rural Industries Bureau, and became director in 1934. He died on Nov. 22, 1940, at Taunton Hospital, Somerset.

Marston Glacier. 76°54' S, 162°30' E. Flows ENE from Mount Marston and Doublefinger Peak, and enters Granite Harbor (where it forms a small tongue extending into that harbor) between Dreikanter Head and the Kar Plateau. The NZ Northern Survey Party of BCTAE traveled up this glacier on their way to Mount Marston on Oct. 18, 1957, and they named it in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Islote Marta. 64°51' S, 63°07' W. A little island between San Eladio Point and Rudolphy Point, on the NW coast of Bryde Island, off the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950-51, almost certainly for the wife of one of the personnel.

Ensenada Martel *see* **Martel Inlet**

Estrecho Martel *see* **Martel Inlet**

Fjord Martel *see* **Martel Inlet**

Martel Inlet. 62°05' S, 58°22' W. Forms the NE arm of Admiralty Bay, between Plaza Point and Point Hennequin, King George Island, in the South Shetlands. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Fjord Martel, supposedly for French politician J.L. Martel. It appears as such on Charcot's 1912 map. On a 1929 British chart it appears as Martel Inlet, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a 1962 British chart. Base G (Admiralty Bay Station) was established on the W shore of the inlet in 1947, and Ensenada Martel Refugio was here. It appears on a 1947 Chilean chart as Estrecho Martel, but on a 1949 Argentine chart as Ensenada Martel; the latter name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Martel Refugio *see* **Ensenada Martel Refugio**

Martello Rock *see* **Martello Tower**

Martello Tower. 62°06' S, 58°09' W. A notable offshore rock, rising to 9 m above sea level, on the W side of King George Bay, 3 km NNW of Lions Rump, in the South Shetlands. Charted in 1937 by personnel on the *Discovery II*, who named it for the European coastal defense towers of that name. It appears on a British chart of 1938. It appears on a 1943 U.S. Hydrographic Office chart as Martello Rock (they did not know what a Martello Tower was). US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a 1962 British chart. It appears on a 1949 Argentine chart as Roca Torre Martello, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Marten Crag. 63°34' S, 57°53' W. A rocky peak rising to over 700 m between Stepup Col and the E foothills of the chain the Chileans call Cordón Lobell, 8.2 km NW of McCalman Peak, 7.88 km N by E of Kribul Hill, 4.53 km ESE of Yarlovo Nunatak, 9.58 km SW of Kanitz Nunatak, and 3.08 km W of Kumata Hill, it surmounts Broad Valley to the N and Cugnot Ice

Piedmont to the SE, in the central part of Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the town of Marten, in northeastern Bulgaria.

Martens Peak. 85°34' S, 131°02' W. A rock peak in the NE part of the Ford Nunataks, in the Wisconsin Range of the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Edward A. Martens, radioman at Byrd Station in 1960, and at McMurdo in 1965. He also took part in the Byrd-South Pole Traverse of 1960-61.

The *Martha*. A 183-ton sealing brig, built at Harwich in 1804, and based out of London. She was bought on July 7, 1821, by Blyth & Co. (Thomas & H.D. Blyth), of Limehouse, and re-decked for her next voyage. On July 20, 1821, Capt. Ralph Bond was appointed skipper, and in company with the *Pomona*, she was in the South Shetlands in 1821-22 (she moored in New Plymouth and Clothier Harbor) and 1822-23 (*see* **The *Pomona*** for the schedule of this long and unsuccessful voyage). The *Martha* made it back to London on Dec. 25, 1823 (6 months after the *Pomona*), with 546 sealskins and 270 casks of oil.

Mount Martha *see* **Mount Martine**

Martha Automatic Weather Station. 78°18' S, 172°30' W. American AWS on the Ross Ice Shelf, at an elevation of 40 m, which began operating on Feb. 1, 1984. Named for the wife of Mike Savage, former AWS project scientist. It was removed in Dec. 1987. In retrospect, it was known as Martha I.

Martha Bay *see* **Matha Bay**

Martha II Automatic Weather Station. 73°23' S, 173°25' W. An American AWS, installed on Feb. 11, 1987, at an elevation of 18 m, on the Ross Ice Shelf. It stopped operating in Feb. 1997.

Cabo Martillo *see* **Cape Wollaston**

Monte Martín *see* **Mount Martin**

Morro Martín *see* **Martins Head**

Mount Martin. 69°40' S, 62°59' W. A mountain, rising to 1360 m, with conspicuous rock exposures on its SE side, immediately N of the head of Anthony Glacier, on the Wilkins Coast, on the E coast of Palmer Land. It lies on the fringe of the area explored and surveyed from the ground in Dec. 1936 by BGLE 1934-37, and appears on Stephenson's 1940 map of that expedition. It was photographed aerially in Sept. 1940, during USAS 1939-41. In Nov. 1947 it was photographed aerially by RARE 1947-48, and in Jan. 1948 was surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by Finn Ronne in 1948 as Mount Briesemeister, for W.A. Briesemeister (*see* **Briesemeister Peak**). It appears as such on Ronne's 1949 map. On Jan. 28, 1953, UK-APC renamed it Martin Glacier, for electronics engineer Orville Martin, BUSHIPS, Navy Department, who helped obtain radio equipment in the USA for Ronne's expedition, RARE 1947-48. US-ACAN accepted the name that year. It appears as such in the 1955 British gazetteer. On an Argentine chart of 1978, it appears as Monte Martín. The Chileans call it Monte Mathei, for Lt. Rodolfo Mathei Aubel, of the Chilean Air Force, who took part in the relief of Presidente Pedro Aguirre Cerda Station, during ChilAE 1955-56. *See also* **Gould Glacier**.

Paso Martín. 68°08' S, 67°06' W. A marine passage, about 2.8 km wide, separating Millerand Island from the W coast of the Antarctic Peninsula. Named by the Chileans for Capitán de navío Alfredo Martín Díaz, commodore of ChilAE 1955-56.

Point Martin. 60°47' S, 44°41' W. On the E side of Mossman Peninsula, about 1.3 km NW of Cape Murdoch, on the W side of Scotia Bay, on the S coast of Laurie Island, in the South Orkneys. Charted in Oct. 1903, by ScotNAE 1902-04, and named by Bruce for William Martin (q.v.), who took part in the survey. It appears on Bruce's charts of 1903 and 1905, and also on the Discovery Investigations chart of 1934 (they re-surveyed it the year before). US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. Munita refers to it in 1951 as Punta Martín, and that is what the Argentines call it today.

Port Martin. 66°49' S, 141°24' E. Anchorage lying immediately off Cape Margerie. Discovered in 1950 by the French, and named by Liotard for Port-Martin Station, which was here, and which in turn was named for André-Paul Martin, 2nd-in-command of the expedition who had died on his way to Antarctica. US-ACAN accepted the name in 1954. In Jan. 1990 the Americans installed an automatic weather station here, at an elevation of 39 m. It stopped transmitting in 2000.

[1]**Punta Martín** *see* **Point Martin**

[2]**Punta Martín**. 65°05' S, 63°30' W. A rocky coastal point 11 km W of Rahir Point, in Flandres Bay, off the W coast of the Antarctic Peninsula. The name seems to have been in use by Chile since 1947. The Argentines call it Punta Sommers.

Martin, Arthur Harry. b. Dec. 4, 1925, Bedford, son of Arthur Harry Martin and his wife Evelyn Beatrice Brown. His father, a driver, died 4 months before Arthur was born, and his mother died when the boy was 9. He was raised by foster parents in Bedford until he was 11, when he went to live with an uncle in Cambridge. He left school at 14, became a greengrocer's assistant, and then a head table waiter at Pembroke College, Cambridge. In 1944 he joined the Royal Navy, and served on the carrier *Victorious* in the Far East. He was at Okinawa, and was in Tokyo Bay when the surrender took place. Arriving back in Cambridge in late 1946, he got a job in the library at FitzWilliam Museum, then went into accountacy, working at the County Treasurer's office. In 1950 he got into scouting, and joined the *Discovery* (then owned by the Scout Association), as a purser, and worked from there on the Festival Of Britain. The governor of the Falkland Islands had requested 2 members of the Scout Association to go to Antarctica as FIDS, so Martin and Ian Clarke (who was also on the *Discovery*) applied, and left Southampton on the *John Biscoe*. Martin wintered-over at Port Lockroy Station, as met assistant, in 1953, and then returned to Port Stanley in 1954, from where he traveled back to Southampton, arriving there on Feb. 12, 1954. On his return, he found that the Scout Association had got rid of the *Discovery*, and he was out of a job. So he joined the Met Office, and late that year shipped out to Port Stanley, to work at the Met Office there. His childhood sweetheart, Beryl Butcher, came out in early 1955, and later that year they were married in the Falklands. Frank Elliott was best man. He then moved to the FIDS Treasury, accounting, and in May 1957 returned to Britain. From 1957 until he retired in late 1990 he worked as an employee of the Scout Association, mostly as field commissioner and administrator. In 1990 he returned to the Falklands to train the Port Stanley Scout group. He finally retired to Eastleigh, Hants.

Martin, John Frank S. He joined FIDS in 1957, as a surveyor, and wintered-over at Base J in 1958.

Martin, James Hamilton "Lofty." b. June 25, 1899, Ledbury Hall, Worcs., only son of famous huntsman Hugo Hamilton Martin, of West Malvern, Worcs., of the banking family, and his wife Mary Cecilia Coventry (great granddaughter of the 7th Earl of Coventry). After Harrow he was a Grenadier Guardsman from 1917 to 1919. In the 1920s he tried business, but it didn't suit him, so he shipped before the mast on the *Garthpool*, the last of the British four-masted windjammers in the Australian trade. He was an ordinary seaman on the *Discovery* during the first half of BANZARE 1929-31, and bosun on the 2nd half, and is famous for diving overboard to save the cat. In early 1932 he was in the Arctic, on a Norwegian whaler, and after two more years there, was first mate on the *Penola* during BGLE 1934-37. He had just been married (Sept. 25, 1939) to Lynda Lucie Baron (née Loftus Tottenham) when he was one of the 15 who went down when his ship, the *Willamette Valley*, was struck by a torpedo from U-51, on June 29, 1940. His widow re-married, 7 years later.

Martin, Stephen John. b. Dec. 14, 1955. He joined BAS as a greaser on the *John Biscoe*, 1979-80. He was in South Georgia as boatman and paramedic, for the winter of 1981, being base commander toward the end of his stint. In 1982 he was in the Arctic, and back in Antarctica, at Halley Bay Station in 1982-83, as a builder. In 1990 he qualified as a doctor, and went into para-

winging, crossing the Greenland ice-cap using that method. In 1994 and 1997 he unsuccessfully tried, with David Mitchell (q.v.) to do the same thing, but from Siberia to Canada via the North Pole.

Martin, William. b. 1875, Dundee. Able seaman on the *Scotia* during ScotNAE 1902-04. His address was 42 Step Road.

Martin Cirque. 77°28' S, 162°40' E. A prominent cirque, 1.5 km wide, just under 3 km NW of Mount Newall, in the Asgard Range, it occupies the S wall of Wright Valley, between Denton Glacier and the Nichols Range, in Victoria Land. Its floor, at an elevation of 850 m, is nearly ice-free. Named by US-ACAN in 1997, for Craig J. Martin, who, from 1977 on, had 10 years involvement in Antarctic construction and engineering projects at Siple Station, Pole Station, and McMurdo, as well as at various field camps in the McMurdo Dry Valleys. From 1989, he was director of engineering with ASA (Antarctic Support Associates), with responsibility for the management of engineering, construction, and facilities maintenance efforts that directly support U.S. scientific research in Antarctica. NZ-APC accepted the name.

Martin Cove *see* **Mutton Cove**

Martin Dome. 83°18' S, 157°12' E. Also called Martins Dome. An elevated snow-covered prominence between Argosy Glacier and Argo Glacier, in the Miller Range. Discovered on Dec. 26, 1957 by the NZ Southern Party of BCTAE, and named by them for Lin H. Martin, leader at Scott Base in the winter of 1958. NZ-APC accepted the name, and US-ACAN followed suit.

Cordón Martín Fierro *see* **Guettard Range**

Nunatak Martín Fierro. 74°35' S, 62°15' W. A nunatak, SE of Kelsey Cliff, on the Lassiter Coast, on the E coast of Palmer Land. Named by the Argentines.

[1]**Martin Glacier** *see* **Balch Glacier**, **Gould Glacier**

[2]**Martin Glacier**. 68°29' S, 66°53' W. A glacier, 14 km long and 5 km wide, it drains the area to the S side of Mount Lupa, flows W then NW to the SE corner of Rymill Bay, where it joins Bertrand Ice Piedmont, on the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Resurveyed in 1948-49 by FIDS, who named it for James H. Martin. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. The Argentines call it Glaciar Martín.

Martín Güemes Refugio. 63°29' S, 57°10' W. Argentine refuge hut built by the Army on a rock surface 2 m above sea level, on Duse Bay, on the S side of Trinity Peninsula. Inaugurated on Oct. 23, 1953, as Refugio Bahía Duse, its name was soon changed to Refugio Martín Güemes. Known popularly as Güemes, it functioned until 1955. By 1960 it had been destroyed by the ice. Another Güemes was built in 1959-60 (see below). The old one became Güemes I, in retrospect. For the origin of the name, *see* **Rockpepper Bay**.

Martín Güemes 2 Refugio. 63°30' S, 57°03' W. Argentine refuge hut, built at Fivemile Rock, on Tabarin Peninsula, between Sept. 15, 1959 and Oct. 11, 1959 (and opened on that latter date), to replace the old Güemes (see the entry immediately above), which had fallen into disrepair over the years.

Martin Hill. 72°48' S, 169°14' E. A conspicuous ice-free hill at the W side of Whitehall Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Peter J. Martin, senior NZ scientist at Hallett Station in 1961. In 1964 he was officer-in-charge at the Australians' Mawson Station. NZ-APC accepted the name. *See also* **Martin Massif**.

Martin Hills. 82°04' S, 88°01' W. An isolated range of hills, or peaks, about 6 km long, about 80km S of the Pirrit Hills. Positioned by the U.S. Ellsworth-Byrd Traverse Party, on Dec. 10, 1958. Named by US-ACAN in 1964, for Larry R. Martin, scientific leader at Byrd Station in 1962.

Martin Ice Rise. 72°26' S, 69°01' W. An ice rise, 10 km long and 5 km wide, in the George VI Ice Shelf, 16 km SW of Kirwan Inlet, Alexander Island. Fids from Base E, between 1948 and 1950, roughly charted it as a promonotory. Delineated as an ice rise from U.S. Landsat images taken in Jan. 1973. Named by UK-APC on Dec. 8, 1977, for Sir David Martin (1914-1976), executive secretary of the Royal Society, 1947-76, who played a leading tole in organizing the British Royal Society Expedition, during IGY, in the 1950s. US-ACAN accepted the name.

Martin Island. 66°44' S, 57°00' E. A small island, reaching an elevation of about 65 m above sea level (the Australians say 127 m), in the N part of Edward VIII Bay, just off the S shore of the Edward VIII Plateau, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, and named by them as Kleppen (i.e., "the lump"). However, they thought that this island was bigger than it actually is, and its true condition was proved by ANARE field parties in the 1950s, the condition being that there are, in fact, two islands, not one. On Feb. 18, 1958, ANCA renamed these islands as Martin Island and Kleppen Island (the Norwegians call them, respectively, Utvikgalten and Kleppen; Utvikgalten meaning "the outer bay boar"). Alan R. Martin was officer-in-charge of the ANARE party at Macquarie Island (not in Antarctica) in the winter of 1948. US-ACAN accepted the Australian naming in 1965 (for Martin Island anyway).

Martin Islands. 65°37' S, 65°22' W. A group of islands and rocks, 8 km in extent, 8 km E of the N part of Renaud Island, and 1.5 km W of Vieugué Island, between that island and the Karelin Islands, in Grandidier Channel, in the Biscoe Islands. FrAE 1903-05 discovered and roughly charted a group of small islands to the N of Pitt Island (Pitt Island is now known to be a group of small islands, and is called the Pitt Islands), and Charcot named them Îles Martin (i.e., Martin Islands), for Capt. Juan Alejandro Martín (1865-1966), Minister of the Navy, 1904-06. On Bongrain's 1914 chart, the Pitt Islands and Vieugué Island appear collectively as Îles Martin. ChilAE 1946-47 named the 3 southeasternmost islands in this group as Islas Mataquito, after a district in Chile. In 1956-57, ArgAE did some shaking up in this area. They applied the name Islas Martín to the NW islands of the group, and the southeasternmost island of the group became Isla Vieugué. After aerial surveys by FIDASE in 1956-57 and ground surveys conducted by Fids from Base J had made clearer the arrangement of the mass of islands in the area, the islands N of Renaud Island were considered to be one group, and called the Pitt Islands. Charcot's group, the Martin Islands, fell into that. His naming was then transferred to the group with the above co-ordinates. That was done by UK-APC on July 7, 1959, and appears as such on a British chart of 1960. US-ACAN accepted this situation later that year. Rather astonishingly, it appears as Islas Martín on a Chilean chart of 1962, and, even more astonishing, the name appears in the 1974 Chilean gazetteer. It also appears in the 1970 Argentine gazetteer.

The *Martin Karlsen* *see* **The *Kista Dan***

Martin Massif. 70°28' S, 65°40' E. In the Porthos Range of the Prince Charles Mountains, just E of Mount Lied, to which it is connected by a low col. Plotted from ANARE air photos, and named by ANCA for Peter J. Martin, officer-in-charge at Mawson Station in 1964. US-ACAN accepted the name in 1967. *See also* **Martin Hill**.

Martin Mountain *see* **Mount Martine**

Martin Nunataks. 74°57' S, 158°46' E. Two isolated nunataks, along the N margin of David Glacier, 14 km SE of Mount Wood, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Robert D. Martin, USGS topographic engineer at McMurdo in 1961-62. ANCA accepted the name.

Martin Peak. 84°22' S, 65°21' W. Rising to 1045 m, 3 km NE of Nance Ridge, it is the highest point in the Thomas Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Christopher Martin, USARP biologist at Palmer Station, 1965-66 and 1966-67. UK-APC accepted the name on Nov. 3, 1971, and it is in the 1974 British gazetteer.

Martin Peninsula. 74°30' S, 114°30' W. About 100 km long and 30 km wide, ice-covered except for a few rock outcrops along its margins, between the Getz Ice Shelf and the Dotson Ice Shelf, it forms the E edge of the Bakutis Coast, on the coast of Marie Byrd Land. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Col. Lawrence Martin, U.S. Army (retired), geographer with the Library of Congress, an authority on the history of Antarctic exploration. He was one

of the founding members of US-ACAN in the 1940s. Originally plotted in 74°25' S, 114°10' W, it has since been replotted.

Martin Reef. 67°34' S, 65°31' E. Also called Martinskjeret. A reef awash, about 11 km N of the coast, and slightly W of Cape Fletcher, off the Mawson Coast of Mac. Robertson Land, in East Antarctica. Apparently this reef was encountered by Capt. Carl Sjövold, in the Norwegian whale catcher *Bouvet III*, catching for the *New Sevilla*, in Jan. 1931, and then again on Feb. 13, 1931, by Mawson, during BANZARE 1929-31. Named by Mawson at that time, for James H. Martin. US-ACAN accepted the name in 1947, and ANCA has followed suit.

[1]**Martin Ridge**. 70°42' S, 67°22' E. A rock ridge on the S side of the Amery Peaks, in the Prince Charles Mountains. It has a narrow connection to the main rock outcrop of the Amery Peaks. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Gregory T. "Greg" Martin, electronics engineer who wintered-over at Mawson Station in 1965.

[2]**Martin Ridge**. 84°25' S, 165°30' E. A broad, ice-covered ridge, bordering the W side of the upper part of Moody Glacier, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Maj. Wilbur E. Martin, U.S. Army, in charge of trail operations during OpDF 1963.

Monte Martina *see* **Mount Martine**

Pico Martina *see* **Mount Martine**

Monte Martine *see* **Mount Martine**

Mount Martine. 69°45' S, 75°05' W. A prominent, massive mountain, rising to about 800 m (the Chileans say 609 m), with a prominent rocky N face, and ice-covered S slopes, it overlooks the NE shore of Charcot Island, close S of Cheesman Island, in Marguerite Bay, off the W coast of Graham Land. Discovered and roughly mapped on Jan. 11, 1910, by FrAE 1908-10, and named by Charcot as Sommet Martine, for his 3rd daughter, Martine (b. 1911) (*see also* **Mount Monique** and **Marion Nunataks**). It appears as such on Charcot's 1912 map, but, on Bongrain's 1914 map, it appears by error as Sommet Marion, with Sommet Martine erroneously positioned as well (he probably had it as one of the Colbert Mountains). On a British chart of 1914 it appears as Mount Martin (sic). It appears as Sommet Martine on a British photo of 1916, on Wilkins' map of 1929 as Martine Peak, and on a British chart of 1930 as Mount Martini. U.S. cartographer W.L.G. Joerg, on his 1937 map reflecting Ellsworth's 1935 aerial photographic flights, shows it as Mount Martha. All the other countries with a vested interest in Antarctica translated it (with or without spelling mistakes). On a British chart of 1940 it appears as Martine Mountain, but on a USAAF chart of 1942 it appears as Martin Mountain, on a 1943 U.S. Hydrographic Office photo as Mount Martine, on a 1946 Argentine chart as Monte Martine, on a Chilean chart of 1947 as Pico Martina, and on a 1949 Argentine chart as Pico Martine. Photographed aerially on Feb. 9, 1947, by OpHJ 1946-47. US-ACAN accepted the name Mount Martine in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, plotted in 69°56' S, 73°56' W. It was mapped from the OpHJ photos in 1960 by Searle of the FIDS. He plotted it in 69°33' S, 74°58' W, and, with his coordinates, it appears in the British gazetteer of 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer. On an Argentine chart of 1953 it appears as Monte Martina, and that was the name accepted by the 1970 Argentine gazetteer. The Chilean gazetteer of 1974 accepted the name Monte Martine.

Pico Martine *see* **Mount Martine**

Sommet Martine *see* **Mount Martine**

Martine Mountain *see* **Mount Martine**

Martine Peak *see* **Mount Martine**

Cabo Martínez *see* **Cabo Landeros**

Caleta Martínez *see* **Rum Cove**

Martínez, Melchor B. *see* **Órcadas Station**, 1938

Mount Martini *see* **Mount Martine**

Martini, Victor. b. Oct, 12, 1821, Toulon. Cabin boy on the *Zélée* during FrAE 1837-40. On Oct. 12, 1837 he became an apprentice seaman, and on Oct, 12, 1839 was promoted to junior seaman.

Martinigletscher. 71°02' S, 163°18' E. A glacier, due W of Van Loon Glacier, in the Bowers Mountains. Named by the Germans.

Morro Martíns *see* **Martins Head**

Punta Martins *see* **Martins Head**

Martins Dome *see* **Martin Dome**

Martins Head. 62°11' S, 58°14' W. A very conspicuous rocky headland rising to 277 m, and forming the S side of the entrance to Legru Bay, and also the E entrance point of Admiralty Bay, 1.5 km E of the Syrezol Rocks, on the S coast of King George Island, in the South Shetlands. Roughly charted by Bransfield on Jan. 27, 1820, and he seems to have been the one who named it Martins Head, or Martin's Head. Without the apostrophe it appears on his chart of 1820, and with the apostrophe it appears on Capt. Fildes' chart of 1821. It appears on a British chart of 1901. FrAE 1908-10 further surveyed it, and mapped it as both Cap Legru and Cap Martin (thinking it was a cape). It turned out not to be a cape at all, so Charcot's naming was reapplied to Cape Legru (q.v.). It appears as Martin's Head on a British chart of 1916, and as Martins Head on the Discovery Investigations chart of 1938 (they had re-surveyed it in Jan. 1937). It appears on a 1946 Argentine chart as Cabo Martín, on a 1947 Chilean chart as Morro Martíns, and on a 1949 Argentine chart as Punta Martíns. The name Martins Head was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1962 British chart. It appears on a 1953 Argentine chart as Morro Martín. The 1970 Argentine gazetteer accepted the name Punta Martíns, and the 1974 Chilean gazetteer accepted the name Morro Martíns.

Martinsenbrekka. 74°25' S, 10°13' W. An ice slope at the SW side of Milorgfjella, W of the nunatak the Norwegians call Steenstruphorten, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Axel Martinsen (b. 1895), fisherman, who relayed incoming weapons from England with which to fight the Nazis. He took all the Gestapo could give him.

Martinskjeret *see* **Martin Reef**

Marts Peak. 78°32' S, 85°24' W. A small, sharp peak, rising to 4551 m above sea level, at the SE extremity of the summit plateau of the Vinson Massif, 2.7 km ESE of Mount Vinson itself, in the Sentinel Range of the Ellsworth Mountains. Named by US-ACAN in 2006, for Brian Marts (*see* **Mount Vinson**).

Marty, Jerry William. b. Aug. 6, 1946, Monroe, Wisc., son of farmer John J. Marty and his wife Betty Golaxon. In 1969, just out of (what is now called) the University of Wisconsin, Platteville, he joined Holmes & Narver as a general field assistant, and was at Byrd Station in the summer of 1969-70. In 1970 he joined the U.S. Army, and served in Korea (sic), after which, in 1972, he returned to Holmes & Narver. He was back in Antarctica in 1974-75, with his wife Elena Buoncristiani (b. 1949; *see* **Women in Antarctica**, 1974-75), who, along with Jan Boyd, had been picked by Holmes & Narver to be their first women on the ice. When Holmes & Narver lost the support contract for Antarctica, Jerry stayed with them on the West Coast. In 1994 NSF offered him the job of building the new Pole Station, and he became facilities, maintenance, and construction manager at the South Pole, going to Antarctica pretty much every summer from that time, and retiring in 2009.

Marty Nunataks. 80°07' S, 155°13' E. A group comprising about 6 nunataks, rising to over 2000 m above sea level (or about 200 m above ths surrounding relief), and extending in an E-W direction for about 12 km, about midway between Haven Mountain and Vantage Hill, in the W part of the Britannia Range. Named by US-ACAN in 2001, for Jerry Marty.

Mount Martyn. 69°24' S, 157°10' E. A cluster of bare rock faces, with one peak, 5 km S of Eld Peak, in the Lazarev Mountains, in Oates Land. It is probably the most prominent rock outcrop on the W side of Matusevich Glacier. Photographed aerially by OpHJ 1946-47. On Feb. 20, 1959, it was photographed by an an ANARE party led by Phil Law on the *Magga Dan*. Named by ANCA on July 22, 1959, for physicist David Forbes Martyn (b. June 27, 1906, Cambuslang, Scotland. On March 5, 1970 he was found shot to death at his home in Camden, NSW), senior research scientist of the Radio Research Board, 1944-58, and a member of the ANARE Executive Planning Committee. US-ACAN accepted the name in 1961.

Passage des Martyrs *see under* **D**

Maruff Peaks *see* **Billingane Peaks**

Maruhana. 67°56' S, 44°29' E. One of 2 westwardly-projecting promontories of Shinnan Rock, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE air photos taken in 1962, and from 1974

JARE ground surveys, and named by them on March 12, 1977 ("round nose promontory").

Punta Maruja. 64°49' S, 62°51' W. A point in the extreme S of Waterboat Point, on the E coast of Aguirre Passage, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950-51, for Maruja (a form of María), wife of the hydrographic officer on the *Angamos* during that expedition, Lt. Fernando Ferrer Fougá (*see* **Ferrer Point**).

Mount Marujupu *see* **Marujupu Peak**

Marujupu Peak. 76°31' S, 145°37' W. Also called Mount Marujupu. A conspicuous nunatak standing above the main flow of Ochs Glacier, between Mount Iphigene and Mount Ferranto, in the Ford Ranges of Marie Byrd Land. Discovered on a flyover by Byrd on Dec. 5, 1929, during ByrdAE 1928-30, and named by him for Marian (b. 1919; later Mrs. Heiskell), Ruth Rachel (b. 1921; later Mrs. Holmberg), Judy (b. 1924; later Dr. Judith Sulzberger), and Arthur Ochs "Punch" Sulzberger (b. 1926), the four children of Arthur Hays Sulzberger (publisher of the *New York Times*, and a patron of the expedition), by his wife Iphigene Ochs. US-ACAN accepted the name in 1947.

Maruwan-oike. 69°54' S, 39°02' E. A small lake on Rundvågs Head, in the SE part of Lützow-Holm Bay, on the Prince Olav Coast. Mapped by JARE from ground surveys and air photos taken between 1971 and 1975, and named by the Japanese on Feb. 26, 1988 ("round bay big pond), in association with Rundvågs Head (which means "round bay"), which had been named by the Norwegians (as Rundvågshetta). The Norwegians, in turn, call this pond Hettevatnet (i.e., "cap lake").

Maru-yama. 69°28' S, 39°45' E. A round-topped hill, rising to 273 m, in the E part of Skarvsnes Foreland, in the E part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Mapped more accurately by Japanese cartographers from JARE ground surveys and air photos taken between 1959 and 1973, and named by them on Nov. 22, 1973 (name means "round peak").

Mount Marvel. 78°45' S, 159°22' E. Rising to 1540 m, 11 km S of Escalade Peak, near the head of Mulock Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Cdr. Robert Marvel (b. May 23, 1917, Mass., but raised in NH. d. Feb. 15, 1997, San Antonio, Tex.), USN, the tough and eccentric officer-in-charge of Detachment Alpha at McMurdo for the winter of 1963.

Marvin Nunatak. 77°46' S, 160°03' E. A prominent nunatak, rising to 2090 m, on the W side of Cassidy Glacier, to the W of the Quartermain Mountains of Victoria Land. Presumably first seen by BNAE 1901-04, from Depot Nunatak, which lies 1.5 km to the north. Named by US-ACAN in 1992, for planetary geologist Ursula Bailey Marvin (b. Aug. 20, 1921, Bradford, Vt.), of the Smithsonian Astrophysical Laboratory, at Cambridge, Mass., who was in Antarctica in 1978-79 and 1981-82, looking for meteorites. In 1984-85 she was doing field work on Seymour Island, and from 1983 was a member of the advisory committee to the NSF's Division of Polar Programs.

Mount Marwick. 71°02' S, 162°48' E. A high peak, rising to 2590 m, in the Explorers Range, at the head of Morley Glacier, 4 km W of Mount Sturm, in the Bowers Mountains. Named by NZ-APC in 1982, for John Marwick (1891-1971), chief paleontologist of the NZGS. US-ACAN accepted the name.

Punta Mary. 63°19' S, 57°55' W. A point in the extreme E of Kopaitic Island, in Covadonga Harbor, on the W side of Trinity Peninsula. Charted by ChilAE 1947-48, and named by them for the wife of Capt. Jorge Gándara Bofill (q.v. under G), skipper of the *Covadonga* that season.

Mary Automatic Weather Station. 79°18' S, 162°58' E. An American AWS on the Ross Ice Shelf, at an elevation of 58 m. The AWS was installed on Jan. 31, 2005, but did not begin operating until Oct. 2006. It was named for a friend of Dr. Charles Stearns, founder of the AWS project.

The *Mary Chilton*. New London schooner, which left home port on Sept. 11, 1876, bound for the South Shetlands, and under the command of Capt. Samuel Norie. Charles Jerry Slate (q.v.) was 1st mate, and Henry Denham was 2nd mate. The rest of the crew were: Samuel Norie, Jr., Edwin C. Haskell, Edwin C. Smith, Eugene McCabe, James A. King (q.v.), James Madden, Charles Linge, Anton Hopp, and Solomon Setigelsory (an impossible name).

Mary Cove *see* **Sheila Cove**

The *Mary E. Higgins*. Sealing schooner, owned by Lawrence & Co., of New London, which left her home port on June 10, 1879, for the 1879-80 season in the Kerguélen Islands and the South Shetlands. Ben Rogers was skipper.

Mount Mary Louise Ulmer *see* **Mount Ulmer**

Mary Point *see* **Marie Island**

Mount Mary Ulmer *see* **Mount Ulmer**

Marze Peak. 78°52' S, 84°30' W. A rock peak with twin summits, near the S end of the ridge between Wessbecher Glacier and Hudman Glacier, at the S end of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Aviation Machinist's Mate 1st Class Marion O. Marze, of Waxhaw, NC (*see* **Deaths**, 1956).

Mount Marzolf. 70°28' S, 159°41' E. An elongated, partially ice-free mountain, at the head of Svendsen Glacier, 3 km W of Mount Gillmor, in the Usarp Mountains of Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for John Edward Marzolf (b. 1938), USARP biologist at McMurdo, 1967-68. He was later at the University of Nevada, at Las Vegas.

Nunatak Mascardi. 66°12' S, 61°43' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Cabo Mascart *see* **Cape Mascart**

Cap Mascart *see* **Cape Mascart**

Cape Mascart. 66°37' S, 67°41' W. Forms the NE extremity of Adelaide Island. Icebergs run aground here. Discovered and charted in Jan. 1905, by FrAE 1903-05, and named by Charcot as Cap Mascart, for French physicist Eleuthère-Élie-Nicolas Mascart (1837-1908), director of the Bureau Central Météorologique, and a member of the organizing committees of FrAE 1903-05 and FrAE 1908-10. It appears on a 1908 British chart as Cape Mascart, on an Argentine chart of 1946 as as Cabo Mascart, and on a Chilean chart of 1947 as Punta Longavi (presumably named for the Chilean province). It was photographed aerially by RARE 1947-48, and in 1948 the British plotted it in 66°42' S, 67°50' W. US-ACAN accepted the name Cape Mascart in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, but plotted in 66°42' S, 67°45' W. That year, FIDS corrected it to 66°43' S, 67°43' W. It was re-photographed aerially, by FIDASE in 1956-57. Cabo Mascart was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On a British chart of 1976 it appears in 66°38' S, 67°38' W, but in the 1977 British gazetteer it appears in 66°37' S, 67°41' W.

Caleta Mascías *see* **Mascías Cove**

Mascías Cove. 64°54' S, 63°01' W. On the S side of Ferguson Channel, it indents the Danco Coast immediately E of Mount Banck, on the W coast of Graham Land. First roughly charted by BelgAE 1897-99, and again by David Ferguson in 1913-14. It appears on Ferguson's 1921 chart. Further surveyed by ArgAE 1949-50, and named by them as Caleta Mascías, for Lt. Eladio Mascías of the *Chiriguano*, here during ArgAE 1949-50. It appears on their 1950 chart, as well as on Argentine charts of 1953 and 1954, and was the name accepted by the Argentine gazetteer of 1970. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. On Sept. 23, 1960, UK-APC accepted the name Sturm Cove, named for German mathematician Johann Christoph Sturm (1635-1703), a photographic pioneer. It appears as such on a 1961 British chart. US-ACAN accepted the name Mascías Cove in 1965. Conscripto Ortiz Refugio was here in the 1950s.

Masily, Blaise-Germain. b. March 31, 1806, La Seyne, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. On Oct. 1, 1840 he became a pilot.

Paso Maskelyne *see* **Maskelyne Passage**

Maskelyne Passage. 65°50' S, 65°24' W. Between (to the E) Larrouy Island and Tadpole Island and (to the W) Cat Island, Runnelstone Rock, and Hummock Island, in Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from a 1957-58 survey conducted by FIDS in conjunction with an RN Hydrographic Survey unit. Named by UK-APC on July 7, 1959, for Nevil Maskeleyne (1732-1811), As-

tronomer Royal from 1757 until he died. He started the *Nautical Almanac* in 1767. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Chilean gazetteer of 1974 accepted the name Paso Maskelyne.

Mount Maslen. 67°42' S, 49°07' E. Rising to 1200 m, 1.5 km W of Mount Currie, and about 13 km W of Mount Humble, in the Raggatt Mountains of Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos, and named by ANCA for A.W. Graham Maslen, officer-in-charge at Mawson Station in 1961. US-ACAN accepted the name in 1965.

Mount Masley. 72°59' S, 162°54' E. A prominent, flat-topped summit, rising to 2605 m, in the narrow N part of Pain Mesa, about 18 km E of Silva Ridge, in the Mesa Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Andrew Jerome Masley (b. April 1933), ionosphere physicist at McMurdo, 1962-63.

Caleta Mason *see* **Mason Inlet**

Ensenada Mason *see* **Mason Inlet**

Mount Mason. 84°43' S, 169°48' W. Surmounting the N extremity of the Lillie Range, it rises to 815 m (the New Zealanders say 640 m) at the NE extremity of a wide spur extending into the edge of the Ross Ice Shelf from the foothills of the Prince Olav Mountains. Discovered and photographed aerially in Nov. 1929, by ByrdAE 1928-30, and named by Byrd for Howard F. Mason. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Mason, Douglas Percy "Dougie." b. June 4, 1920, Gravesend, Kent, son of William P. Mason and his wife Elsie Izod. After Oxford (mathematics), he spent most of World War II in the Middle East, engaged on an aerial survey as captain of engineers. He joined FIDS in 1945, and wintered over in 1946 and 1947 as a surveyor at Base E, being part of the Weddell Coast Sledging Party in the latter year. In 1948 he returned to Port Stanley, and there caught the *Lafonia* back to London, where he arrived on April 21, 1948. He was later with the Sudan Survey Department, and with Shell International. In 1962 he was appointed lecturer in the department of surveying and photogrammetry, at University College, London, and retired in 1985. He died on Oct. 29, 1986, in Slough, Bucks.

Mason, Howard F. b. Oct. 29, 1901, Marion, Ind. His mother, Margaret, married again, to ship's engineer Andrew L. Brightman, and Howard was raised in Seattle, as Howard Brightman. However, on his 21st birthday he reverted to Howard F. Mason. He became a radio engineer, and was with Byrd in the Arctic. He was the 100-yard champion of the Atlantic Fleet. He was radio engineer on the shore party of ByrdAE 1928-30. He died in Seattle on June 26, 1996.

Mason Glacier. 78°53' S, 161°41' E. A tributary glacier flowing E from the SE slopes of the Worcester Range, immediately S of Bareface Bluff, into Skelton Glacier. Named by US-ACAN in 1965, for David T. Mason, biologist at McMurdo, 1961-62 and 1962-63. NZ-APC accepted the name.

Mason Inlet. 72°57' S, 60°25' W. An ice-filled inlet indenting the Black Coast for 24 km in a SW direction between Cape Mackintosh and the coastline S of Cape Herdman, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940, by USAS 1939-41. Re-photographed aerially in Nov. 1947 by RARE 1947-48, and surveyed that same month from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by FIDS for Dougie Mason (q.v.), the surveyor at Base E who, between Oct. 1947 and Jan. 1948 surveyed the E coast of the Antarctic Peninsula between Trail Inlet and Bowman Peninsula. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the 1955 British gazetteer, as well as on the 1979 USGS sketch map of the N part of Palmer Land. It appears on an Argentine chart of 1957, as Ensenada Mason, but the name used today by the Argentines tends to be Caleta Mason.

Mason Nunatak. 79°39' S, 155°15' E. A nunatak, 1.5 km long, at the NW end of the Meteorite Hills and the Darwin Mountains. Named by US-ACAN in 2001, for Brian Mason, of the department of mineral sciences, at the Smithsonian, who examined and classified Antarctic meteorites collected by USAP field parties led by William Cassidy (*see* **Cassidy Glacier**) in 7 summer seasons from 1977-78 to 1983-84.

Mason Peaks. 72°46' S, 74°44' E. A prominent serrated ridge with several peaks, 13 km NW of Mount Harding, in the Grove Mountains. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960. Named by ANCA on July 29, 1965, for A.C. Mason, topographic draftsman with the Division of National Mapping at the Australian Department of National Development, who contributed greatly to Antarctic mapping. US-ACAN accepted the name in 1967.

Mason Spur. 78°33' S, 164°25' E. An elevated spur, partially ice-covered, and rising to over 1300 m, it projects ESE from Mount Morning for 20 km into Moore Bay, in Victoria Land. Named by US-ACAN in 1963, for Robert Mason, USARP representative at McMurdo, 1962-63. NZ-APC accepted the name.

Masquerade Ridge. 83°04' S, 164°40' E. A prominent rock ridge, 8 km long, 26 km N of Clark Peak, on the E side of Robb Glacier. Named in 1970 by U.S. geologist John Gunner, who, with John Splettstoesser, collected rocks here in Dec. 1969. The ridge was shown on the cover of the Feb. 7, 1970 issue of the *Saturday Review*, in which there was an article about the 1969-70 Ohio State University Geological expedition here. The ridge on the photo was confounded with Coalsack Bluff, and the man in the foreground is not David H. Elliot (*see* **Elliot Peak**), as the caption says. Hence the name, which US-ACAN accepted in 1972.

Mount Massam. 81°44' S, 158°12' E. A high, broad, ice-covered mountain, N of the upper part of Starshot Glacier, and about 13 km W of Mount Lindley, in the Churchill Mountains. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, and named by them for geologist David Graham "Dave" Massam (b. Sydney. d. 2005), a member of the party that worked with Malcolm Laird around Nimrod Glacier. The season before, Massam had been a member of the Southern Party of NZGSAE 1963-64, and had wintered-over as a field assistant and dog handler in 1964, at Scott Base. He was back in 1967-68, working as field leader on Rennick Glacier. He was the first to climb Mount Hunt.

Massam Glacier. 84°33' S, 175°12' W. A small glacier, about 18.5 km long, it flows N between Waldron Spurs and Longhorn Spurs, to enter the Ross Ice Shelf immediately E of the mouth of Shackleton Glacier. Named for Dave Massam (*see* **Mount Massam**) by the Southern Party of NZGSAE 1963-64 that he was a member of. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Massé, Jean-Léopold. b. Sept. 12, 1818, Paris. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Mount Massell. 72°29' S, 163°21' E. Rising to 1880 m, 10 km SE of Mount Jackman, in the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for geophysicist Wulf Friedrich Massell (b. June 2, 1943, Germany), biolab manager at McMurdo in 1967.

Massey, Eric Bernard. b. Nov. 25, 1917, Leek, Staffs, son of Joseph B. Massey and his wife Florence May Burgwin. He was with the Met Office in Stanley, in the Falkland Islands, when he volunteered for FIDS in 1946, as meteorologist. He was interviewed by John Huckle, and wintered-over at Base B in 1947. In 1948 he returned to the UK, and in 1952 left England for Kenya. He died in Sept. 1986, in Newcastle-under-Lyme, Staffs.

Massey, Paul Mackintosh Orgill. The name Orgill is pronounced with a hard "g." b. March 12, 1929, Rushendean, near Brighton, son of Dr. Stanley Orgill Massey and Winifred Bertha Mackintosh. After Oundle, he went to St John's, Cambridge, joined the Lady Margaret Boat Club ("Maggie"), and became famous as an Olympic silver medallist in the 1948 Olympics, as a member of the men's eights. In 1954 he joined FIDS, as medical officer, and wintered-over as 2nd-in-command at Base D in 1955. His time in Antarctica gained him his M.D. On his return to England he took over his father's practice in Birmingham, and married Fay Waldron in 1956. He was medical officer to the British Olympic team in 1964 and 1968. He died on Oct. 21, 2009.

Massey Glacier. 71°53' S, 168°24' E. A tributary glacier, 10 km long, it flows W from the W slopes of Meier Peak in the Admiralty Mountains, along the S side of Wylie Ridge, into Man-o-War Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960

and 1963. Named by US-ACAN in 1970, for C. Stanton Massey, meteorologist at Pole Station in 1968.

Massey Heights. 63°58' S, 57°58' W. Prominent, flat-topped rock heights, with steeply cliffed sides, rising to 580 m (the Chileans say 844 m), on the W coast of Croft Bay, 10 km SW of Andreassen Point, on the NE coast of James Ross Island. Surveyed by Fids from Base D in 1945 and again in 1955. Named by UK-APC on Sept. 4, 1957, for Dr. Paul Massey. They appear on a British chart of 1962. US-ACAN accepted the name in 1963. The Chileans named the N end of this feature as Cerro Ortega (q.v.), and the Argentines named it Cerro Padre.

Massingham, Samuel. b. 1786, Holt, Norfolk. Skipper of the Cape Town-Bengal sealer *Frances Charlotte*, in South Shetlands waters in the 1820-21 season. He arrived back in Calcutta in Jan. 1822, and transferred to the *Victory*. He died on April 29, 1824, in Bengal, and was buried there.

Masson Island. 66°08' S, 96°35' E. Also called Mission Island. An ice-covered island, about 28 km (the Australians say 33 km) long, 22 km wide, and rising to 471 m above sea level, it lies 14 km NW of Henderson Island, within the Shackleton Ice Shelf, off the coast of Queen Mary Land. Discovered in Feb. 1912 by AAE 1911-14, and named by Mawson for Professor Sir David Orme Masson (1858-1937), of Melbourne, a member of the AAE Advisory Committee, as well as of BANZARE 1929-31. US-ACAN accepted the name in 1947, and ANCA followed suit.

Masson Range. 67°51' S, 62°50' E. A high, broken chain of mountains, forming part of the Framnes Mountains, in Mac. Robertson Land. The range, about 13 km E of (and parallel to) the David Range, extends 24 km in a N-S direction, and comprises the North Masson Range, the Central Masson Range, and the South Masson Range. It has several peaks rising to over 1000 m. The peaks of this range were first seen miraged on the horizon during the early hours of Jan. 4, 1930, during BANZARE 1929-31, and were seen again, the following day, from the airplane. The range was mapped by the same expedition, on Feb. 14, 1931, and named by Mawson for David O. Masson (*see* **Masson Island**). US-ACAN accepted the name in 1947. First visited by an ANARE party led by John Béchervaise. ANCA also accepted the name.

Mast Hill. 68°11' S, 67°00' W. Rising to 14 m, at the W end of Stonington Island, on the Fallières Coast at Marguerite Bay, on the W coast of Graham Land. Surveyed by members of USAS from East Base, 1939-41. They built a flagstaff on this hill, and built their base close northeastward. Fids from Base E did extensive geological work here in 1961-62, and named it for the mast. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Mast Point. 66°22' S, 110°26' E. The most westerly point on Ardery Island, in the Windmill Islands. First delineated from air photos taken in Jan. 1947, during OpHj 1946-47, and from those taken in Jan. 1948, during OpW 1947-48. Named by US-ACAN in 1963, for Clarence W. Mast (b. 1937, Ohio), USN, construction man at Wilkes Station in 1958. ANCA accepted the name.

Pasaje Mastelero *see* **Pasaje Roepke**

The *Mata Hiva*. French yacht, skippered by Patrick Leclerq, which visited the South Shetlands and the Antarctic Peninsula in 1986-87.

Mata Taua Peak. 78°07' S, 161°57' E. A hill, rising to 3013 m, SW of an array of rocky peaks, and NE of Rampart Ridge and the Upper Staircase, in Victoria Land. Apparently "mata taua" is a Maori word, meaning "a scout before the troops," and, with this in mind, it was named by NZ-APC in 1994, with reference to the view from this hill. US-ACAN accepted the name later that year.

Matador Mountain. 85°10' S, 176°50' W. A prominent, ice-free, sandstone mountain, capped by dolerite sills, and rising to 1950 m at the S side of the mouth of Gallup Glacier, where that glacier enters Shackleton Glacier. It is an outlier to the Bennett Platform. Matador is the general name for the student body at Texas Tech. Alton Wade, leader of the Texas Tech Shackleton Glacier Expedition of 1962-63 named it thus because all three members of the expedition were affiliated with that institution. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Caleta Matamala. 62°35' S, 59°53' W. A cove indenting the NW coast of Half Moon Island, on the S side of McFarlane Strait, in the South Shetlands. Named by the Chileans for 1st Lt. Carlos Matamala Simmonds, helo pilot on the *Piloto Pardo* which rescued the crew of the *Lindblad Explorer* when that vessel came to grief in Admiralty Bay in 1972.

Lake Matangi. 70°46' S, 11°42' E. In the Schirmacher Hills of Queen Maud Land. Named by the Indians.

Islas Mataquito *see* **Martin Islands**

Matchless Mountain. 76°38' S, 161°35' E. Rising to 1140 m on the S margin of Fry Glacier, at the junction of that glacier with Atka Glacier, in the Convoy Range of Victoria Land. Named by NZ geologist Christopher J. Burgess, leader of a VUWAE 1976-77 field party in this area, and refers to the matchless view of the surrounding area obtained from the summit of this mountain. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Nunatak Mate. 66°02' S, 61°05' W. One of several nunataks on Jason Peninsula named by the Argentines.

Mount Mateer. 66°59' S, 51°08' E. A mountain, 1.5 km (the Australians say about 3 km) E of Mount Degerfeldt, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA for Norman Mateer. US-ACAN accepted the name in 1965.

Mateer, Norman Cooper. b. Oct. 14, 1885, Belfast, son of Presbyterian parents. He went to sea as a teenager, became an able seaman on Merchant ships, and during World War I was a private in the Royal Irish Rifles, attached to the Service Corps, serving in France. He emerged from the war as a 2nd lieutenant in the Royal Irish Fusiliers, and then went back to sea. In between all this, in 1915, he managed to be a customs officer in Ceylon. He was an able seaman on the *Discovery* during the 2nd half of BANZARE 1929-31. He continued in the Merchant Marine as a bosun on British merchant ships, serving in World War II, and later lived in Corringham, Essex, where he died in 1979.

Mateev Cove. 62°39' S, 60°36' W. A cove, 650 m wide, indenting the S coast of Livingston Island for 290 m E of Yasen Point. It is actually part of South Bay. Mapped by the British in 1968, by the Chileans in 1971, by the Argentines in 1980, and by the Bulgarians in 2005 and 2009. Named by the Bulgarians on Sept. 14, 2010, for Bulgarian physicist Matey Mateev (1940-2010), a supporter of the Bulgarian Antarctic program. The British had a mobile camp here in the 1950s (*see* [2]**Base P**).

Matejko Icefall. 62°11' S, 58°14' W. An outlet of the Krakow Icefield, between Stanczyk Hill and Martins Head, at Legru Bay, Bransfield Strait, King George Island, in the South Shetlands. Named by the Poles in 1980, for the painter Jan Matejko (1838-1893).

Isla Mateo de Toro Zembrano *see* **Tonkin Island**

Baie Matha *see* **Matha Strait**

Estrecho Matha *see* **Matha Strait**

Matha, André. b. Feb. 27, 1873, Brest. French naval hydrographer lieutenant, 2nd-in-command of the *Français* during FrAE 1903-05. He conducted astronomical and topographical observations. He contracted myocarditis.

Matha Bay *see* **Matha Strait**

Matha Strait. 66°34' S, 67°30' W. Runs NW-SE between Adelaide Island to the SW and the S end of the Biscoe Islands to the NE. In Jan.-Feb. 1909, FrAE 1908-10 roughly charted it as a bay, and Charcot applied the name Baie Matha to this strait, plus parts of Darbel Bay and Crystal Sound, naming it for André Matha. It appears on a British chart of 1914, as Matha Bay, and over the years has occasionally been seen (erroneously) as Martha Bay. BGLE 1934-37 redefined it, and it appears as Matha Strait on a British chart of 1940, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1961. It appears on a 1947 Chilean chart, translated as Estrecho Matha, and that was the name accepted by the Chilean gazetteer of 1974, as well as by the Argentine gazetteer of 1970. It was photographed aerially by FIDASE in 1956-57.

Monte Mathei *see* **Mount Martin**

Mount Mather. 73°34' S, 61°00' E. A mountain, 5.5 km W of the W extremity of Mount Menzies, in the Prince Charles Mountains. Discovered aerially by Flying Officer John Seaton during an ANARE flyover in 1956. Named by ANCA for Keith Benson Mather (b. Jan. 6, 1922. d. Jan. 10, 2003), who led the ANARE seismic party which mapped this feature in 1957-58.

Mather was also wintering-over leader of Mawson Station in 1957. In 1961, after being a lecturer in physics at the University of Melbourne, he moved to the Geophysical Institute of the University of Alaska, at Fairbanks, and was the director there from 1963 to 1976, and was vice chancellor for research and advanced study for the entire university, 1976–85. He retired in 1986 to Oregon. US-ACAN accepted the name in 1961.

Mather, John Hugh. b. 1887, Stroud Green, Hornsey, London, son of ad man Ebenezer Joseph Mather (who was also the director a mission to deep sea fishermen) and his wife Caroline Eliza Lough, and baptized on June 7, 1887 at St Mary's, Hornsey Rise. While a seaman, he was helping load the *Terra Nova* in London, for Scott's last expedition, and volunteered, thus becoming a member of BAE 1910-13, on which he served as a petty officer, RNVR. He also became adept at taxidermy, preserving many of the specimens collected by the expedition. He served as an officer in World War I, and in 1919 was an Army major fighting the Bolsheviks in Murmansk. He retired as a naval commander in 1937, but came out of retirement to fight in World War II. He founded the Antarctic Club in 1929, and died on April 11, 1957, in Farnborough, Kent.

Mather Peninsula. 68°51' S, 77°55' E. In the Rauer Islands, in the SE part of Prydz Bay. Named by ANCA, for Keith Mather (*see* **Mount Mather**).

[1]**Mount Matheson**. 66°57' S, 50°56' E. Between Mount Harvey and Mount Degerfeldt, about 9 km S of Mount Storer, in the W part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1957. Named by ANCA on Dec. 7, 1976, for Jock Matheson. US-ACAN accepted the name (the American gazetteer says in 1966; something is wrong here).

[2]**Mount Matheson**. 75°05' S, 72°10' W. Rising to about 1400 m, 3 km NW of Mount Boyer, in the Merrick Mountains of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1966, for Lorne D. Matheson, USARP ionosphere physicist at Eights Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Matheson, James Russell. Ordinary seaman on the *Discovery II*, 1936-37, and fireman on the same vessel, 1937-39.

Matheson, John "Jock." b. 1893, Strathcarron, Ross-shire, son of crofter and fisherman Donald Matheson and his wife Christy. He served in the Merchant Navy during World War I, worked with the Hudson Bay Company, and was a leading seaman on the *Discovery* during both halves of BANZARE 1929-31. From 1931 to 1935 he was a leading seaman on the *Discovery II*, and bosun's mate on the same vessel, 1935-37, going several times to Antarctic waters in that period, during the Discovery Investigations. He was later a member of Operation Tabarin, at Base B for the winter of 1944, and at Base D in 1945, both times as bosun and handyman. He and Flett had an accident while out collecting geological specimens in 1944 (*see under* **Flett, William R.**). He was the first to raise the Union Jack at Hope Bay (Base D). He died in 1970.

Matheson Glacier. 70°47' S, 62°05' W. A glacier, 17.5 km long, 3 km S of Ashton Glacier (which it parallels), flowing in an easterly direction to the W side of Lehrke Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered in Dec. 1940 by members of USAS 1939-41, as they explored this coastline both from the air and from the ground. First charted in Nov. 1947, by the Weddell Coast Sledge Party in 1947. Named by FIDs for Jock Matheson. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. Re-photographed aerially by USN in 1966, and further surveyed from the ground by BAS personnel from Base E in 1972-73.

Caleta Matheu *see* **Caleta Beeche**

Mount Mathew. 81°41' S, 159°57' E. Also called (erroneously) Mount Mathews. Rising to 2030 m, at the E side of Starshot Glacier, 3 km N of Mount Hotine, in the Surveyors Range. Discovered by NZGSAE 1960-61, and named by them for Felton Mathew (1801-1847), the first surveyor general of NZ, in 1840. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Mount Mathews *see* **Mount Mathew**

Mathewson Point. 74°23' S, 132°33' W. A steep, rocky point at the N tip of Shepard Island, which lies on the seaward edge of the Getz Ice Shelf, off the coast of Marie Byrd Land. It is the site of an Adélie penguin rookery. Algae, lichens, mosses, and petrels are also found here. Charted on Feb. 4, 1962, by personnel from the *Glacier*. Named by US-ACAN in 1962, for Lt. (jg) David S. Mathewson, USN, supply officer on the *Glacier* at that time.

Mathias, John Victor. b. 1903, Tauranga, NZ. He joined the Merchant Navy in 1920, came to live in Troy, NY, became a sheet metal worker, married Gladys in 1929, and then moved to Albany and then went to sea again. He left the USA on Sept. 1, 1934, on the mail ship *Mariposa*, bound for NZ, to pick up the *Bear of Oakland* as a fireman/wiper for her 1935 relief trip to Little America during ByrdAE 1933-35. He came back to the USA on the *Jacob Ruppert*. He was still sailing, as a motorman, for a Norwegian line, during World War II.

Mathieson, William. Fireman on the *William Scoresby*, 1930-31, and 1934-35.

Rocher Mathieu *see* **Mathieu Rock**

Mathieu Rock. 66°20' S, 136°49' E. An ice-free rock, between Cape Bickerton and Rock X, at the E side of the entrance to Victor Bay, on Comandant Charcot Glacier Tongue. This area was photographed aerially during OpHJ 1946-47, but this particular feature was charted by the French under Marret in 1952-53, and named by them as Rocher Mathieu, upon learning of the birth of Dr. Jean Rivolier's son, Mathieu. Oddly, the American gazetteer says it was named for Claude-Louis Mathieu (1783-1875), French astronomer. Either way, US-ACAN accepted the name Mathieu Rock in 1955.

Mathis Nunataks. 77°08' S, 143°27' W. An isolated cluster of nunataks relatively near the head of Arthur Glacier, 13 km ESE of Mount Warner, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Terry R. Mathis, traverse engineer with the Byrd Station glaciological strain network, 1967-68, and station engineer at Byrd for the winter of 1968.

Mathis Spur. 83°20' S, 51°17' W. A rock spur, rising to about 1800 m, along the W side of the Saratoga Table, 5 km N of Mount Stephens, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Melvin Mathis, hospital corpsman at Ellsworth Station in 1957. A Southern boy, he was very good at his job. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Mathisen, Einar. b. Sept. 7, 1887, Norway. Whaler in the South Shetlands, on the *Svend Foyn I*, who died on board of septicemia, on April 4, 1925, and was buried at the Whalers Bay Cemetery on Deception Island. His tomb, accessed through a tunnel of black marble, and then a porthole, contained a pillow that signified that his only home before this one was the ship's cabin.

Mathisen, Gustav. Whaler on the *Roald Amundsen* in 1924. In Feb. 1924, he was skippering a whale catcher in Marguerite Bay. On Jan. 23, 1928 he drowned while skippering the catcher *Scapa* when she capsized off Laurie Island, in the South Orkneys.

Mathisenskaget. 74°52' S, 11°35' W. The most southwesterly mountain in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Norwegian fishermen and Resistance workers during World War II, Franz Edvin Mathisen (b. 1903), and his brother Alfred (b. 1907). Alf was caught and executed in 1941, and Franz died while under arrest, in 1943.

Mathys Bank. 80°19' S, 28°30' W. A rock ridge rising to about 750 m, 4 km SW of Mount Etchells, in the La Grange Nunataks of the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. An odd name, it was given by UK-APC on Jan. 5, 1972, for Nicholas "Nick" Mathys (b. 1942), BAS general assistant who wintered-over at Halley in 1967 and 1968, and who worked in the Shackleton Range in the summer of 1968-69. In March 1969 he broke his leg while 400 miles from base, and, with the aid of his friend Tony True, set his own leg. It was 6 weeks before

they got back to Halley. US-ACAN accepted the name.

Matienzo Station *see* **Teniente Matienzo Station**

Matikonis Peak. 75°21' S, 138°14' W. A small, rather isolated rock peak that protrudes through the snow mantle of the central part of Coulter Heights, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for William P. Matikonis (1939-1998), USN, damage controlman 2nd class on the *Glacier*, 1961-62.

Mont (du) Matin *see* **Mount Matin**

Mount Matin. 65°08' S, 63°40' W. A massive, mainly snow-covered mountain, rising to 2385 m, which surmounts the mountainous divide N of Hotine Glacier, S of Azure Cove, at Flandres Bay, on the Danco Coast, on the W coast of Graham Land. First charted by FrAE 1903-05, and named by Charcot variously as Sommet du Matin, Sommet Le Matin, and Mont du Matin, for *Le Matin*, the famous French newspaper, which was a contributor to the expedition, but, more to the point, founded by Alfred Edwards (1856-1914), who had married Charcot's sister Jeanne (*see* **Jeanne Hill**). It appears all three ways on Charcot's maps. It appears as Mount Matin on a 1908 British chart, and on another British chart, from 1916, as Mont Matin. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Mount Matin on July 7, 1959, US-ACAN followed suit in 1965, and it appears as such on a British chart of 1974. It has been confused with Mount Peary in the past.

Sommet du Matin *see* **Mount Matin**

Nunataki Matjushkina. 70°52' S, 66°35' E. A group of nunataks, SW of the Hall Nunataks, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Punta Matkah *see* **Matkah Point**

Matkah Point. 63°58' S, 58°19' W. The N entrance point of Holluschickie Bay, on the W coast of James Ross Island. Probably discovered in Oct. 1903, by SwedAE 1901-04, as evidenced from their maps of the expedition. Surveyed by Fids from Base D in Dec. 1945, and named by them for Kipling's *Jungle Book* character. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. The Argentines call it Punta Matkah.

Matkin, Joseph. b. Nov. 12, 1853, Uppingham, Rutland, but raised in Oakham, son of bookseller Charles Matkin and his wife Sarah Craxford. He left school at 12, joined the Merchant Navy in 1867, and sailed for Australia on the *Sussex* in Dec. 1867, returning the next summer on the *Agamemnon*. That winter he headed to Australia again, on the *Essex*, and stayed in Melbourne for a year, working in furniture and upholstery shops. In 1870 he worked his passage back to England, and on Aug. 12, 1870 joined the Royal Navy, and was a steward's boy on the *Invincible* and the *Audacious*. He then served in the same capacity on the *Challenger* Expedition, 1872-76, which he joined on Nov. 12, 1872. On Dec. 2, 1873 he was promoted to steward's assistant. He wrote 69 letters home, and these letters only surfaced in 1985, when they were published in a book called *At Sea with the Scientifics* (edited by Philip F. Rehbock). In 1876 Matkin returned to Oakham, then went to London, where he became a clerk in the Civil Service (Local Government Board), married Mary "Pollie" Swift, in Oakham, in 1880, had several children, and lived in Romford, Essex, in Pimlico, then in Croydon, Surrey. In 1894 he retired from the Civil Service and took the family back to Oakham. In 1914 he and Pollie split up, and he moved alone to Holborn, in London, where he died on Oct. 27, 1927, after being hit by a motorcycle. Pollie died in 1939.

Matney Peak. 79°10' S, 86°14' W. A mostly ice-free peak, rising to 1810 m, near the middle of the line of peaks at the E side of Webster Glacier, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for William R. Matney, USN, chief aviation bosun's mate and fuel officer in Antarctica, during OpDF 66 (i.e., 1965-66).

Matochina Peak. 62°53' S, 62°22' W. Rising to 750 m in the N extremity of the Imeon Range, on Smith Island, in the South Shetlands, 3.4 km WSW of Cape Smith, and 3.2 km NE of Mount Christi. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the settlement and medieval fortress of Matochina, in southeastern Bulgaria.

Matos, Bernardino *see* **Órcadas Station, 1930**

Matsch Ridge. 77°34' S, 86°20' W. A prominent ridge, at an elevation of about 1830 m, extending 2.5 km in a WNW direction from Mount Ulmer, in the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 1982, for Charles Matsch, professor of geology at the University of Minnesota, at Duluth, who, as a member of the USARP Ellsworth Mountains, 1979-80, worked on this ridge.

Matsumoto, Mitsuji. Captain of the *Soya* from 1955 to 1959. In 1955-56 he, the chief engineer, and the navigator, took a ride down to Antarctica, accompanying the Japanese whaling fleet to Antarctica, to scout out a base for IGY. Subsequently, he took down the first 3 JARE expeditions to Antarctica.

Matsumoto Pond. 77°34' S, 161°04' E. A pond, S of Dais Col, and about 2.2 km W of Don Juan Pond, in South Fork, in the Wright Valley, in Victoria Land. Named by US-ACAN in 1997, for Genki I. Matsumoto, Japanese chemist, a member of the JARE field parties of 1976-77, 1981-82, 1983-84, and 1985-86, that made geophysical and geochemical studies of ponds in the McMurdo Dry Valleys, including this one. NZ-APC accepted the name.

Islotes Matsuyama *see* **Matsuyama Rocks**

Matsuyama Rocks. 66°40' S, 66°35' W. A small group of rocks close off the W side of Stefan Ice Piedmont, on the Loubet Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Base W between 1957 and 1959, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Motonori Matsuyama (1884-1958), professor of geology and geophysics at Kyoto University, who made laboratory studies of the crystal forms of ice in 1920, and who was also an authority on paleomagnetism. It appears in the British gazetteer of 1961. US-ACAN accepted the name in 1965. The Argentines call them Islotes Matsuyama.

[1]**Matterhorn** *see* **Ulvetanna Peak**

[2]**Matterhorn**. 77°40' S, 162°27' E. Rising to 1600 m, it surmounts the N wall of Taylor Valley, between Lacroix Glacier and Matterhorn Glacier, in Victoria Land. Named by Grif Taylor, during BAE 1910-13, for the Swiss mountain of that name. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Matterhorn Glacier. 77°41' S, 167°27' E. A small alpine glacier, on the edge of the N wall of Taylor Valley, just W of Matterhorn, in Victoria Land. Named in Dec. 1957 by visitor Troy L. Péwé (*see* **Lake Péwé**), in association with Matterhorn. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Matterhorn Valley. A dry valley in the Asgard Range of Victoria Land. There have been several references to this feature from at least 1970, but the name is not official.

Matterson Inlet. 80°50' S, 160°30' E. A large, ice-filled inlet on the W side of the Ross Ice Shelf, between, to the N, Penny Point (on the S side of Nicholson Peninsula, i.e., Nicholson Peninsula marks the N side of the entrance to Matterson Inlet) and Cape Goldschmidt (the E tip of Nicholson Peninsula), and, to the S, Cape Douglas. Surveyed by the Northern Party of NZGSAE 1960-61, and named by them for Garth John Matterson (b. Rotorua, NZ), leader of the party. He had also been part of the NZGSAE Southern Party to Victoria Land in 1959-60, and had wintered-over at Scott Base in 1960. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Glaciar Matthes *see* **Matthes Glacier**

Matthes Glacier. 67°30' S, 65°40' W. A glacier, 14 km long, flowing E into Whirlwind Inlet between Demorest Glacier and Chamberlin Glacier, on the Bowman Coast, on the E coast of Graham Land. Discovered aerially by Wilkins on Dec. 20, 1928. Photographed aerially in 1940 during USAS 1939-41. Surveyed and charted by Fids from Base E and Base D in 1947, and named for François Emile Matthes (1874-1948), Dutch-born American geomorphologist and glaciologist, geologist with USGS, 1896-1947. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Matthes, and that name was accepted by the 1970 Argentine gazetteer. The Chileans also call it Glaciar Matthes.

Isla Matthews *see* **Matthews Island**

Matthews, Drummond Hoyle "Drum." b.

Feb. 5, 1931, in London, son of Capt. Charles Bertram Matthews (known as C. Bertram Matthews) and his wife Enid Mary Hoyle. After national service in the Navy, he studied geology and petrology at Cambridge, then joined FIDS, and on Oct. 12, 1955 left Southampton on the *John Biscoe*, heading south as geologist who wintered-over at Signy Island Station in 1956. In June 1957 he returned to the UK on the *Shackleton*, and wrote up his report while at the FIDS geology unit at Birmingham University. He left FIDS on Dec. 31, 1957, married Rachel McMullen in 1963, and from 1971 was reader in marine geology at Cambridge, where he was a major contributor to the theory of plate tectonics. He died on July 20, 1997, in Taunton, Somerset.

Matthews, Roger Philip. He joined FIDS in 1959, as a meteorologist, and wintered-over at Base B in 1960, and at Base E in 1961.

Matthews Glacier. 75°45' S, 65°30' W. On the E side of the Wilkins Mountains, it flows SE into the Ronne Ice Shelf, just SW of Dodson Peninsula, on the Orville Coast. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for J.D. "Matty" Matthews, engineman at Pole Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. The British plot it in 75°38' S, 66°07' W.

Matthews Island. 60°45' S, 45°09' W. The largest of the Robertson Islands, immediately SE of Coronation Island, from which it is narrowly separated by The Divide, in the South Orkneys. From the early 1820s it was mapped as part of Coronation Island (it is still that way on a British chart of 1956, for example) until Jan. 1957, when a survey conducted by Fids from Signy Island Station determined it to be an actual island. Named by UK-APC on July 7, 1959, for Drummond Matthews. US-ACAN accepted the name in 1964. It appears as such on a British chart of 1967. The Argentines call it Isla Matthews.

Matthews Peak. 67°40' S, 67°47' W. A prominent peak, rising to 1100 m, NW of Statham Peak, in the SW part of Perplex Ridge, on Pourquoi Pas Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula. BAS did geological work here between 1965 and 1970. Named by UK-APC on June 11, 1980, for David William "Dave" Matthews (b. 1939), BAS geologist who wintered-over Base E in 1965 and 1966, and who worked in this area. US-ACAN accepted the name. It appears in the 1982 British gazetteer.

Matthews Ridge. 70°57' S, 167°03' E. A high, mostly snow-covered ridge, 10 km long, on the S side of Tapsell Foreland, it forms the E wall of McElroy Glacier, and terminates to the S at Barnett Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Jerry L. Matthews, geologist who worked in the Horlick Mountains, 1965-66, and the McMurdo Sound area in 1966-67.

Mount Matthias. 71°13' S, 164°41' E. Rising to 1610 m, 3 km ENE of Mount Dockery, in the Everett Range of the Concord Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. Cdr. Jack M. Matthias, USN, maintenance officer and aircraft commander with VX-6 during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69).

Mattox, John *see* **USEE 1838-42**

Mattox Bastion. 77°38' S, 160°56' E. One of the peaks of the Inland Forts, surmounting the NE part of Flory Cirque, in the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Cdr. Benjamin G. Mattox, USN, officer in charge of the Naval Support Force winter-over detachment at McMurdo in 1971.

Matusevich Glacier. 69°20' S, 157°27' E. A broad glacier, about 80 km long (the Australians say it is at least 115 km long), it flows northward to the coast of Oates Land, between the Lazarev Mountains and the NW end of the Wilson Hills, terminating in the well developed Matusevich Glacier Tongue. The region was photographed aerially by OpHJ 1946-47, by SovAE 1957-58, and by ANARE in 1959 and 1962. Named by the Russian expedition as Glacier Matusevicha (that is what we are told they named it, rather than, say Lednik Matusevicha), for Nikolay Nikolaevich Matusevich (1879-1950), hydrographer and geodesist, vice president of the Geographical Society of the USSR. In 1959 Phil Law (*see* **Matusevich Glacier Tongue**, below) named it Pennell Glacier, for Harry Pennell. ANCA accepted the Russian name (but translated) on June 9, 1964, and US-ACAN followed suit in 1966.

Matusevich Glacier Tongue. 69°05' S, 157°15' E. The broad, massive seaward extension of Matusevich Glacier, it is about 28 km long. On Feb. 21, 1959, when Phil Law's ANARE party sailed around it in the *Magga Dan*, it was floating in 300 fathoms of water. He named it Pennell Glacier Tongue, for Harry Pennell. US-ACAN accepted the name Matusevich Glacier Tongue in 1970.

Glacier Matusevicha *see* **Matusevich Glacier**

Gora Matvejchuka. 73°26' S, 62°43' E. A nunatak, due W of Mount Bayliss, E of Mount Menzies, in Mac. Robertson Land. Named by the Russians.

Podlëdnaja Dolina Matvejchuka. 68°30' S, 48°30' E. A valley, SW of Amphitheatre Peaks, in Enderby Land. Named by the Russians.

Ghiacciaio Matz. 74°40' S, 162°20' E. A glacier in the Eisenhower Range, in the Prince Albert Mountains, about 55 km E of Mario Zucchelli Station. It belongs to the Anderton Glacier basin, in the Reeves Glacier system, and is a typical fed glacier on the E slope of Munt Matz. First seen in Dec. 1977, and named by the Italians on Feb. 22, 2002, in association with the mountain.

Mount Matz. 74°42' S, 162°17' E. Rising to 1300 m, at the W side of the terminus of Anderton Glacier, it forms the end of a ridge descending S from the Eisenhower Range to Reeves Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for David B. Matz, geologist at McMurdo in 1965-66.

Maud Bank *see* **Maud Seamount**

Maud Rise. 66°00' S, 3°00' E. An undersea feature immediately S of Maud Seamount. Named by international agreement in 1987.

Maud Seamount. 65°00' S, 3°00' E. Also called Maud Bank. Subsurface feature N of the Antarctic Circle, 170 km NNE of Trolltunga, on the coast of New Schwabenland. The name was approved by international agreement in 1964. The Norwegians call it Maudbanken. It was named after Queen Maud of Norway (*see* **Queen Maud Land**).

Maud Subglacial Basin. 81°00' S, 15°00' E. A large subglacial basin southward of the Wohlthat Mountains, in the S part of Queen Maud Land. Seismic soundings in the area were made by several USARP field parties between 1964 and 1968. Named by US-ACAN in 1975, for its position in Queen Maud Land.

Maudbanken *see* **Maud Seamount**

Cape Maude. 83°09' S, 168°25' E. The Americans say it is a high, ice-covered cape forming the E end of Vaughan Promontory, in the Holland Range, and overlooking the Ross Ice Shelf. The New Zealanders say it is a conspicuous dark bluff, lying northwestward of the Beardmore Glacier, at the head of the Ross Ice Shelf. Both countries agree that it was discovered in Dec. 1908, by BAE 1907-09, and named for Col. I.A. Maude, who donated the "maudgee" pony ration for the expedition. However, there never was a Col. I.A. Maude. The man they mean is Col. Edward Addison Maude (1863-1932). US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Maudheim Base. 71°03' S, 10°56' W. On the Quar Ice Shelf, 1.5 km S of Norsel Iceport, on the Princess Martha Coast of Queen Maud Land, in association with which it was named. This was the base for NBSAE 1949-52.

Maudheimvidda. Centers on 73°30' S, 10°00' W. The westernmost part of Queen Maud Land, from 20°W to Jutulstraumen (0°30' W). Named by the Norwegians in association with Maudheim. This is a term used only by the Norwegians (and in this book).

The *Maudie*. A 4818-ton Norwegian whale cookery ship, bought by the Hvalen Company in 1922. She was in the South Shetlands in 1922-23, and every season from then until 1930-31. She was also in the South Orkneys in 1927-28, and also did pelagic whaling. Between those dates she was sold to the Pioner Company, and by 1929 was owned by the Polhavet Company. In 1934-35 she was leased to the Pioner Company as a help-cookery for the *Pioner*, and, in 1935, was laid up.

Mauger, Clarence Charles "C.C." The name is pronounced "major." b. Dec. 30, 1892, Cleggan Station, County Galway, Ireland. Moved to Otago, NZ. Carpenter and shipwright on the *Aurora*, 1914-16, known as "Chippie." He

fought at, and was severely wounded at, Passchendaele, in 1917. After World War I he plied back and forth between NZ and San Francisco with the Union Steam Ship Company, then in the 1930s was a foreman carpenter with the NZ Railways Workshop. During World War II he helped build minesweepers, and after the war worked as a shipwright with the Otago Harbour Board until he retired in Dunedin, where he died on Oct. 13, 1963.

Mauger Nunatak. 85°44' S, 176°44' E. Rising to 2780 m, about 5 km NE of Mount Block, it is one of the Aurora Nunataks, in the Grosvenor Mountains. Named by the Southern Party of NZGSAE 1961-62 for C.C. Mauger. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Île Le Mauguen *see* **Carrel Island**

The *Maumee*. T-AO-149. U.S. Naval T-5 tanker, 620 feet long, and sister ship to the *Yukon*. Many times in at McMurdo delivering fuel. In 1969-70 she supplied 7 million gallons of petroleum to McMurdo — in one trip (12 times more efficient than any previous delivery made here). Laurent O. Hess was her captain that season, and again in 1970-71, 1971-72, and 1972-73. Henry H. Church became skipper for the 1973-74 season, and remained so until 1984-85. The ship missed Antarctica only in the 1981-82 season.

Maumee Bight. 77°29' S, 166°21' E. A bight, indenting the W side of Ross Island for 10 km between Rocky Point and Micou Point, and forming the S part of Wohlschlag Bay. Named by US-ACAN in 1999, for the *Maumee*. NZ-APC accepted the name on Nov. 4, 1999.

Maumee Ice Piedmont. 74°44' S, 113°25' W. At the terminus of Kohler Glacier, E of Jenkins Heights, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from air photos taken by USN between 1965 and 1967. Named by US-ACAN for the *Maumee*.

Bahía Maurice *see* **Rockpepper Bay**

Maurice, Luis Óscar *see* **Órcadas Station, 1949**

The *Maurice Ewing*. A Lamont-Doherty Geological Observatory (Columbia University) vessel, in Antarctic waters in 1990-91, under the command of Capt. James E. O'Loughlin. John Mutter was scientific leader of the voyage. She cruised around the W side of the Antarctic Peninsula, and to the South Shetlands.

Îles Maurice Faure *see* **Faure Islands**

Îlots Maurice Faure *see* **Faure Islands**

Islotes Maurice Faure *see* **Faure Islands**

Maurice Faure Island(s) *see* **Faure Islands**

Islas Mauricio Faure *see* **Faure Islands**

Islotes Mauricio Faure *see* **Faure Islands**

Punta Maurstad *see* **Maurstad Point**

Maurstad Point. 65°39' S, 66°05' W. A point, 11 km NNE of Speerschneider Point, midway along the W side of Renaud Island, N of Malmgren Bay, in the Biscoe Islands. ChilAE 1946-47 surveyed it, mapped it roughly, and named it Punta Micalvi, for the Argentine tug *Micalvi* (not in Antarctic waters). It appears as such on their chart of 1947, and on a 1962 chart, and was also the name accepted by the Chilean gazetteer of 1974. It was photographed aerially by FIDASE in 1956-57. First accurately shown (but not named) on a 1957 Argentine chart. Named by UK-APC on July 7, 1959, for Alf Maurstad (b. 1901), author of *Atlas of Sea Ice* in 1935. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Punta Maurstad.

Maury, William Lewis. b. 1813, Virginia. Cousin of Matthew Fontaine Maury (*see* **Maury Glacier**). U.S. naval lieutenant on the *Porpoise* during USEE 1838-42. On April 3, 1856 he married a relative Anne Fontaine Maury. During the Civil War he was promoted to commander in the Confederate Navy. He died in 1878.

Maury Bay. 66°33' S, 124°42' E. An ice-filled indentation in the Banzare Coast, facing the Voyeykov Ice Shelf, just E of Cape Lewis, in Wilkes Land. Mapped by U.S. cartographer Gard Blodgett from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for William L. Maury. ANCA accepted the name.

Maury Glacier. 72°42' S, 61°40' W. A glacier, 6 km wide, flowing in an ENE direction to the SW corner of Violante Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by USAS 1939-41, but confused with Gruening Glacier. Re-photographed aerially in Nov. 1947, by RARE 1947-48, and surveyed from the ground that same month by a joint sledging party of RARE personnel and Fids from Base E. Named by FIDS in 1947 for famous hydrographer Matthew Fontaine Maury (1806-1873), a U.S. Navy commander who, in 1860, tried to get several nations to study Antarctica together. The Civil War put an end to that. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a U.S. Hydrographic Office chart of that year. It appears on a Chilean chart of 1966, as Glaciar Maury. It was re-photographed aerially by USN between 1966 and 1969, mapped by USGS from these photos, and appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mautino Peak. 77°21' S, 162°03' E. At the W side of Packard Glacier, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1976, for Cdr. Robert L. Mautino, officer-in-charge of the Naval Support Force wintering-over detachment at McMurdo in 1972.

Mauvoisin, Paulin-Justin. b. Oct. 10, 1816, Saint-Denis, Charente-Inférieure, France. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Isla Maveroff *see* **Pickwick Island**

Cabo Mawson *see* **Cape Mawson**

Cape Mawson. 70°12' S, 74°55' W. A low, ice-covered cape forming the SE extremity of Charcot Island, near the Wilkins Ice Front. Discovered aerially and charted by Wilkins on Dec. 29, 1929 (during the flight that proved Charcot Land to be an island), and named by him for Sir Douglas Mawson. It appears on his 1930 map, in 69°58' S, 74°37' W, which is actually on the E part of the island. It appears as such on a 1933 British chart. US-ACAN accepted that in 1947, UK-APC accepted it on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. On a 1946 Argentine chart the name Cabo Mawson is applied to a cape in the Mozart Ice Piedmont. However, this cape does not exist. On a USAF chart of 1959, the name Cape Mawson appears in the Wilkins Ice Front, near the NE corner of Charcot Island. However, again, this cape does not exist. On a Chilean chart of 1947, the name Cabo Mawson is applied to the E cape of Charcot Island (pretty much as Wilkins had it in 1929), and that was accepted by the Chilean gazetteer of 1974, and also by the Argentine gazetteer of 1970. In 1960, Searle of the FIDS remapped it from air photos taken in late 1947 during RARE 1947-48, and UK-APC re-applied the name Cape Mawson to the SE point of the island. However, they plotted it in 69°59' S, 74°40' W. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and the correct position was accepted by the 1977 British gazetteer. The Chileans and Argentines have also altered their view of Cabo Mawson, to correspond more closely with that of the British and the Americans.

Mawson, Douglas. b. May 5, 1882, Frizinghall, near Bradford, Yorks, son of cloth merchant Robert Ellis Mawson and his wife Margaret Ann Moore (who was from the Isle of Man). In Sydney since he was 2, he studied geology under Edgeworth David, graduated from Sydney University in 1901, and became a member of the faculty. In 1903 he was a geologist in the New Hebrides, and in 1905 became a lecturer at Adelaide University. With David he went on BAE 1907-09. The two of them were among the first group to reach the South Magnetic Pole. Mawson was also one of the first 6 men to climb Mount Erebus, in 1908. He turned down a place on BAE 1910-13 in order to lead his own AAE 1911-14. He barely survived an epic traverse after the death of Mertz and Ninnis. This expedition, and his BANZARE 1929-31, proved a continuous 2500-mile coastline between Cape Freshfield in George V Land, and Enderby Land. In 1914 he married Francisca Adriana "Paquita" Delprat. He was knighted by the British, and his discoveries formed the basis of the Australian Antarctic territorial claim. In 1920 he became professor of geology at Adelaide University, a post he held until 1952. He died on Oct. 14, 1958, in Adelaide.

Mawson Bank. 73°30' S, 173°30' E. Submarine feature of the Ross Sea. Named by international agreement in 1988, for Sir Douglas Mawson.

Mawson Canyon. 63°30' S, 60°30' E. Submarine feature off the Kemp Coast of Enderby Land. Named for Sir Douglas Mawson.

Mawson Coast. 67°40' S, 63°30' E. That portion of the coast of Mac. Robertson Land between William Scoresby Bay (59°34' E) and Murray Monolith (66°54' E). Discovered by BANZARE, under Mawson, during their first

season, 1929-31. During the second half, further explorations were made of this coast, and landings were effected at Cape Bruce and Scullin Monolith. On July 4, 1961, ANCA named this coast for Mawson, and US-ACAN accepted the name in 1966.

Mawson Corridor. 67°00' S, 63°00' E. A sea passage, about 35 km (the Australians say about 41 km) long and between 6 and 9 km wide, between grounded icebergs on the way into Mawson Station, at Holme Bay, it opens out at the S end to give the feature a funnel shape. The N end, in 66°45' S, 63°20' E, is sharply defined, and coincides with the edge of the continental shelf. Discovered by ANARE in 1954, and used regularly by ANARE relief ships in their approach to Mawson Station. Named by ANCA for Sir Douglas Mawson. US-ACAN accepted the name in 1967.

Mawson Escarpment. 73°05' S, 68°10' E. Flat-topped and west-facing, it extends in a N-S direction for 110 km (the Australians say 130 km) along the E side of the Lambert Glacier. Plateau ice overrides the escarpment from the E. Discovered by Flying Officer John Seaton of the RAAF during an ANARE reconnaissance flight in Nov. 1956 (the Australians say Nov. 1957; they are wrong). Named by ANCA for Sir Douglas Mawson. US-ACAN accepted the name in 1961.

Mawson Flat. 76°10' S, 161°55' E. A large, dry area in Victoria Land, to the S and E of Mount Murray, and adjacent to the Mawson Glacier, in association with which it was named by the Southern Party of NZGSAE 1962-63.

Mawson Glacier. 76°13' S, 162°05' E. A large glacier, about 8 km wide, on the E coast of Victoria Land, it flows eastward from the Polar Plateau to the N of Trinity Nunatak and the Kirkwood Range, and enters the Ross Sea at the N end of the Scott Coast, where the glacier then forms Nordenskjöld Ice Tongue. First mapped by BAE 1907-09, and named by Shackleton for Douglas Mawson. US-ACAN accepted the name, and NZ-APC followed suit.

Mawson Oasis. 76°09' S, 161°55' E. An area that is ice-free in summer, near Mount Murray, N of Mawson Glacier, in the Prince Albert Mountains, on the coast of Victoria Land. It has lakes in it, including Basin Lake. There is a year-round Australian base here. This is a term that has been used since the early 1960s, but it has never been official.

Mawson Peninsula. 68°35' S, 154°11' E. A high, narrow, ice-covered peninsula, rising to 457 m above sea level, on the W side of the Slava Ice Shelf, and the E side of the Cook Ice Shelf, it extends in a NW (the Australians say a north-easterly) direction for more than 57 km, terminating in Cape Hudson, on the E part of the coast of George V Land. It is flanked on its W edge by nunataks over 600 m high. Photographed aerially by OpHJ 1946-47. Sketched and photographed by Phil Law on a flight from the *Magga Dan* along the peninsula to its N end, on Feb. 21, 1959, and named by him for Sir Douglas Mawson. ANCA accepted the name on July 22, 1959, and US-ACAN followed suit in 1961.

Mawson Sea. 65°00' S, 105°00' E. Off the Knox Coast of Wilkes Land. Named by the Russians (so we are told).

Mawson Station. 67°36' S, 62°52' E. At Horseshoe Harbor, Holme Bay, on the Mawson Coast of Mac. Robertson Land. For details relating to the establishment of this premier Australian scientific station in 1954, *see* **ANARE 1953-54**. **1954 winter**: Bob Dovers (q.v.) (geologist, surveyor, and officer-in-charge), Lem Macey (q.v.) (2nd-in-command, technical superintendent and senior radio officer), Bob Dingle (q.v.) (meteorologist and photographer), Bruce Stinear (q.v.) (geophysicist), Bob Summers (medical officer and biologist; *see* **Summers Peak**), John Russell (engineer; *see* **Russell Nunatak**), Bill Harvey (carpenter; *see* **Mount Harvey**), Georges Schwartz (q.v.) (observer and dog handler), Bill Storer (radio operator; *see* **Mount Storer**), and Jeff Gleadell (cook; *see* **Mount Gleadell**). **1955 winter**: John Béchervaise (q.v.) (officer-in-charge), Peter Shaw (meteorologist; *see* **Mount Shaw**), Leon Jennings-Fox (q.v.) (meteorological observer and dog trainer), Fred Elliott (q.v.) (meteorological observer), Peter Crohn (geologist; *see* **Crohn Island** and **Mount Peter**), Hugh Oldham (biologist; *see* **Oldham Island**), Nod Parsons (physicist, there to construct the cosmic ray lab; *see* **Mount Parsons**), Rob Lacey (surveyor; *see* **Mount Lacey**), Bob Allison (medical officer; *see* **Allison Bay**), Frits Van Hulsssen (radio station supervisor; *see* **Van Hulssen Island**), Eric Macklin (radio officer; *see* **Macklin Island**), Jack Ward (q.v.) (radio telegraphist), Alfie Riddell (carpenter; *see* **Riddell Nunataks**), Alan Gowlett (engineer; *see* **Gowlett Peaks**), and Dick McMair (cook; *see* **McNair Nunatak**). Two giant telescopes were set up. In Aug. 1955 Béchervaise and 5 others visited the emperor penguins at Taylor Rookery. By the end of 1955 there were 19 buildings in use. **Nov. 14, 1955**: Béchervaise and 6 others set out for the Prince Charles Mountains, with 2 Weasels (both of which malfunctioned). **Feb. 17, 1956**: The *Kista Dan* reached Mawson. The first job was building the hangar for the planes, the first ever hangar in Antarctica. This job was supervised by incoming doctor, Don Dowie. **1956 winter**: Bill Bewsher (q.v.) (officer-in-charge), Jim McCarthy (senior meteorologist and 2nd-in-command; *see* **[1]Mount McCarthy**), Merv Christensen (weather observer; *see* **Mount Mervyn**), Peter McGregor (geophysicist; *see* **Mount McGregor**), Bob Jacklyn (cosmic ray physicist; *see* **Mount Jacklyn**), John Bunt (biologist; *see* **Mount Bunt**), Peter Crohn (geologist; *see* **Crohn Island** and **Mount Peter**), Syd Kirkby (q.v.) (surveyor), Don Dowie (medical officer; *see* **Mount Dowie**), John Hollingshead (radio supervisor; *see* **Mount Hollingshead**), Gordon Abbs (radio operator; *see* **Mount Abbs**), Pat Albion (radio operator; *see* **Mount Albion** and **Patrick Point**), Nils Lied (q.v.) (weather observer and assistant radio officer), Lin Gardner (q.v.) (senior diesel mechanic), Doug Leckie (commander of the Antarctic Flight; *see* **Mount Leckie**), John Seaton (2nd pilot with the Antarctic Flight; *see* **Mount Seaton**), Gerry Sundberg (engine fitter; *see* **Mount Sundberg**), Geoff Johansen (air frame fitter and official photographer; *see* **Mount Johansen**), Toby Cooper (q.v.) (diesel mechanic), and Jock MacKenzie (q.v.) (cook). **April 20, 1956**: The Beaver began flying operations. **May 25, 1956**: End of the flying. **Nov. 19, 1956**: Bewsher, Kirkby, Crohn, Hollingshead, and Gardner, all left Mawson with 2 Weasels, 2 cargo sledges, one man-hauling sledge, and a wooden Nansen sledge pulled by Mac (the lead dog), Oscar, Horace, Streaky, Brownie, and Dee. **Nov. 28, 1956**: The last major Beaver flight by Seaton, and he discovered the Lambert Glacier. **Feb. 2, 1957**: The *Kista Dan* arrived. **Feb. 4, 1957**: Dee died after eating a cloth with oil on it. Brownie fell down a crevasse, and was never the same after that. He kept falling over, and couldn't keep up. So, they let him go, and Syd Kirkby shot him. **Feb. 10, 1957**: The sledging party got back to base. **1957 winter**: Keith Mather (officer-in-charge and physicist; *see* **Mount Mather**), Frank T. Hannan (meteorologist; *see* **Hannan Ice Shelf**), John Pinn (geophysicist; *see* **Pinn Island**), Malcolm Mellor (glaciologist; *see* **Mellor Glacier**), Jim Goodspeed (seismic geophysicist; *see* **Goodspeed Nunataks**), Carl Nilsson (radio physicist; *see* **Nilsson Rocks**), David R.L. "Dave" Callow (aurora physicist), David Johns (q.v.) (cosmic ray physicist), John Shaw (radio physicist; *see* **Shaw Islands**), Bernie Izabelle (weather observer; *see* **Mount Izabelle**), Graeme Wheeler (weather observer; *see* **Wheeler Bay**), Morris Fisher (surveyor; *see* **Fisher Massif**), Dick Willing (medical officer; *see* **Mount Willing**), Bernie Shaw (radio supervisor; *see* **Shaw Massif**), Alex Sandilands (radio operator; *see* **Sandilands Nunatak**), radio operators Roy Arnel (radio operator; *see* **Arnel Bluffs**) and Pete King (q.v.), Nev Collins (q.v.) (senior diesel mechanic), Pat Lee (diesel mechanic; *see* **Lee Island**), Peter Clemence (RAAF officer commanding Antarctic Flight; *see* **Clemence Massif**), Doug Johnston (RAAF pilot; *see* **[2]Mount Johnston**), Ron Pickering (RAAF airframe fitter; *see* **Pickering Nunatak**), Nev Meredith (RAAF engine fitter; *see* **Mount Meredith**), and Jack Field (cook; *see* **Field Rock**). **1958 winter**: Ian Adams (officer-in-charge; *see* **Adams Fjord**), Grey Channon (q.v.) (medical officer, and also 3 months as officer-in-charge), Ray Borland (meteorologist; *see* **Mount Borland**), Helmut Tschaffert [meteorologist; *see* **Tschuffert Peak** (sic)], Fred Elliott (q.v.) (meteorological observer), Alf Bolza (q.v.) (weather observer), Bruce Cook (geophysicist; *see* **Mount Cook**), Eric Jesson (q.v.) (seismic geophysicist), Roger Blake (aurora physicist; *see* **Blake Nunataks**), Phil Chapman (aurora physicist; *see* **Chapman Ridge**), Eric Burnett (radio physicist; *see* **Mount Burnett**), Peter Trost (physicist; *see* **Trost Peak**), Roy Arnel (geophysical assistant; *see* **Arnel Bluffs**), Graham Knuckey (q.v.) (surveyor), Doug Twigg (radio supervisor; *see* **Mount Twigg**), Bob Oldfield (radio officer; *see*

Mount Oldfield), Alex Brown (q.v.) (radio operator; *see also* **Sørtindane Peaks**), Pete King (q.v.) (radio operator), Ossie Maguire (radio technician; *see* **Mount Maguire**), Jim Blair (senior diesel mechanic; *see* **Blair Peak**), Frank Smith (diesel mechanic; *see* **Smith Peaks**), Desmond Evans (diesel mechanic; *see* **Evans Island**), Graham Downer (electrical and instrument fitter; *see* **Downer Glacier**), Ivan Grove (RAAF pilot; *see* **Grove Mountains**), Bill Wilson (pilot; *see* **Wilson Bluff**), Ian McLeod (q.v.) (geologist), Sam Manning (airframe fitter; *see* **Manning Nunataks**), Alan Richardson (engine fitter; *see* **Richardson Bluff**), and Henri Fischer (cook; *see* **Fischer Nunatak**). **April 3, 1959**: The power house burned. **1959 winter**: John Béchervaise (q.v.) (officer-in-charge), Ian Widdows (meteorologist; *see* **Point Widdows**), Les Onley (weather observer; *see* **Onley Hill**), Ken Peake-Jones (weather observer; *see* **Peake-Jones Rocks**), Bruce Stinear (q.v.) (geophysicist), Malcolm Kirton (geophysicist; *see* **Kirton Island**), Ross Dunlop (cosmic ray physicist; *see* **Dunlop Peak**), Frits Van Hulssen [technical officer (ionosphere); *see* **Van Hulssen Island**], Chris Armstrong (surveyor; *see* **Armstrong Peak**), Grahame Budd (q.v.) (medical officer), Mike Cosgrove (radio supervisor; *see* **Cosgrove Glacier**), Alan Sawert (radio officer; *see* **Sawert Rocks**), Eric Macklin (radio officer; *see* **Macklin Island**), Stewart Bell (wireless fitter; *see* **Bell Bay**), Harry Price (senior diesel mechanic; *see* **Price Nunatak**), Joe Lawrence (diesel mechanic; *see* [1]**Mount Lawrence**), Jim Sandercock (officer commanding the Antarctic Flight; *see* **Sandercock Nunataks**), Geoff Banfield (pilot; *see* **Mount Gjeita**), Ralph Rippon (airframe fitter; *see* **Rippon Glacier**), Hedley McIntyre (engine fitter; *see* [2]**McIntyre Island**), Hubert J. "Bert" Evans, Dave Norris (auroral physicist; *see* **Teksla Island**), and Paul Teyssier (cook; *see* **Teyssier Island**). **1960 winter**: Henk Geysen (officer-in-charge; *see* **Geysen Glacier**), Neil Streten (meteorologist; *see* **Cape Streten**), Bill Dick (weather observer; *see* **Dick Peaks**), Bill Kellas (weather observer; *see* **Kellas Islands**), George Cresswell (aurora physicist; *see* **Mount Cresswell**), John Humble (cosmic ray physicist; *see* **Mount Humble**), Rob Merrick (geophysicist; *see* **Mount Merrick**), Ric Ruker (geologist; *see* **Mount Ruker**), Terry Elkins (ionosphere physicist; *see* **Mount Elkins**), Syd Kirkby (q.v.) (surveyor), Geoff Newton (medical officer; *see* **Mount Newton**), Ian Bird (electronics engineer; *see* [1]**Mount Bird**), Graeme Currie (q.v.) (radio supervisor), Oleg Zakharoff (radio officer; *see* **Zakharoff Ridge**), Doug Machin (radio officer; *see* **Machin Nunatak**), Ken Bennett (q.v.) (radio operator), Nev Collins (q.v.) (senior diesel mechanic), John Arthur (electrical fitter; *see* **Mount Arthur**), Jim Kichenside (commander of the Antarctic Flight; *see* **Kichenside Glacier**), Ken Assender (pilot; *see* **Assender Glacier**), Ted Bloomfield (part of the Antarctic Flight; *see* **Mount Bloomfield**), Graham Dyke (pilot; *see* **Mount Dyke**), Noel Jennings (mechanic; *see* **Jennings Bluff**), Kev Felton (engine fitter; *see* **Felton Head**), Bert Carne, Bill Hanson, Bruce Harris, Viv Hill, Don Monks, Horst Munstermann, Mick Murphy, Basil Rutter, and Ralph Dyer (cook; *see* **Dyer Island**). **1961 winter**: Graham Maslen (officer-in-charge; *see* **Mount Maslen**), Gunter Weller [meteorologist; *see* [1]**Mount Weller**], Eddie von Renouard (weather observer; *see* **Mount Renouard**), Bill Denham (weather observer; *see* **Mount Denham**), Ian Tod (weather observer; *see* **Mount Tod**), Bob Francis (physicist; *see* **Francis Peaks**), Ian McNaughton (physicist; *see* **McNaughton Ridges**), Rod Hollingsworth (geophysicist; *see* **Mount Hollingsworth**), Dave Trail (geologist; *see* **Mount Trail**), Keith Brockelsby (ionosphere physicist; *see* **Mount Brockelsby**), Bob Wyers (glaciologist; *see* **Wyers Ice Shelf**), Russell "Russ" Pardoe (medical officer; *see* **Mount Pardoe**), Dave Harvey (electronics engineer; *see* **Harvey Nunataks**), Garry Bird (senior electronics technician; *see* **Bird Ridge**), Dave Keyser (radio oficer; *see* **Keyser Ridge**), Keith McDonald (radio officer; *see* **McDonald Ridge**), Brian Ryder (radio officer; *see* **Mount Ryder**), Bob Bergin (radio officer; *see* **Mount Bergin**), Alan Newman (senior diesel mechanic; *see* **Newman Shoal**), Geoff Wilkinson (assistant diesel mechanic; *see* **Wilkinson Peaks**), Geoff Smith (q.v.) (carpenter; *also see* **Carpenter Nunatak**, **Geoffrey Hills**, and **Geoffrey Bay**), Bill Young (electrical fitter; *see* **Young Nunataks**), Charlie Harris, Ted Giddings (cook; *see* **Mount Giddings**), and Jim Seavers (assistant cook; *see* **Seavers Nunataks**). **Nov. 2, 1961**: Alan Newman had a brain hemorrhage. Russ Pardoe operated, assisted by Ted Giddings and Rod Hollingsworth. **Nov. 29, 1961**: Newman was operated on again, to relieve the pressure. **Dec. 3, 1961**: A third operation. **Dec. 16, 1961**: Newman collapsed again. **Dec. 30, 1961**: A Russian airplane landed and took Pardoe and Newman to Mirnyy Station, then to NZ and Australia, where, on Jan. 9, 1962, Newman was admitted to St. Vincent's Hospital, Sydney. He recovered. Pardoe was awarded the MBE for his performance. **1962 winter**: F. Michael "Mike" Lucas (officer-in-charge; *see* **Lucas Nunatak**), Noel Foley (weather observer; *see* **Foley Promontory**), Bob Nelson (weather observer; *see* **Nelson Rock**), Kev Miller (weather observer; *see* **Miller Nunataks**), Ortwin Bode (weather observer; *see* **Bode Nunataks**), John Branson (geophysicist; *see* **Branson Nunatak**), Peter Trost (physicist; *see* **Trost Peak**), John Phillips (physicist; *see* **Phillips Ridge**), Barry Woodberry (ionosphere physicist; *see* **Woodberry Nunataks**), Dave Carstens (surveyor; *see* **Carstens Shoal**), Dave Wigg (medical officer; *see* **Wigg Islands**), Rex Filson (carpenter; *see* **Filson Nunatak**), Ross Harvey (radio officer; *see* **Harvey Islands**), Ian Landon-Smith (glaciologist; *see* **Landon Promontory**), Clarry Melvold (radio officer; *see* **Melvold Nunataks**), Ken Tate (radio officer; *see* **Tate Rocks**), John Watts [supervising technician (radio); *see* **Watts Nunatak**], Mark Single (senior diesel mechanic; *see* **Single Island**), John Williams (assistant diesel mechanic; *see* **Mount Williams**), Ken McDonald, Oscar Ferguson, M. John Freeman, Reg Wakeford (cook; *see* **Wakeford Nunatak**), and George Walker (assistant cook, handyman, dog handler, and field equipment officer; *see* **Walker Nunatak**). **1963 winter**: Ray McMahon (officer-in-charge; *see* **Mount McMahon**), Ken Shennan (2nd-in-command and diesel mechanic; *see* **Mount Shennan**), Bob Watson (weather observer; *see* **Watson Ridge**), John Vukovich (weather observer; *see* **Vukovich Peaks**), Peter Paish (weather observer; *see* **Mount Paish**), Ian Black (geophysicist; *see* **Black Nunataks**), David Cooke (cosmic ray physicist; *see* **Cooke Peak**), Bob Eather (aurora physicist; *see* **Mount Eather**), Ted Wishart [technical officer (glaciology); *see* **Mount Wishart**], Don Creighton (electronics engineer and medical assistant; *see* **Mount Creighton**), Bob White [senior technician (elecronics); he died on Oct. 18, 1963; *see* **Deaths**, 1963; and **White Massif**], Joe Gavaghan (radio operator; *see* **Mount Gavaghan**), Keith McDonald (radio officer; *see* **McDonald Ridge**), Bill Edward (q.v.) (senior diesel mechanic), Ted McGrath (assistant diesel mechanic; *see* **Mount McGrath**), Tony Warriner (q.v.) (radio operator), Allan Moore (radio operator; *see* **Moore Pyramid**), Lex Paterson [supervisory technician (radio); *see* **Paterson Islands**], Bob Schaeffer, Ron Grafton, Sid Howard, Geoff Merrill (from Moorabbin, Vic.), John Davidson, Robert "Dick" Lippett, William T.J. "Bill" Taylor, and Jim Seavers (assistant cook; *see* **Seavers Nunataks**). **1964 winter**: Peter Martin (officer-in-charge; *see* **Martin Massif**), John Stalker (weather observer-in-charge; *see* **Mount Stalker**), Frank Trajer (weather observer; *see* **Trajer Ridge**), Garry Bradley (weather observer; *see* **Bradley Ridge**), Bill Budd (q.v.) (glaciologist), Roger Francey (cosmic ray physicist; *see* **Francey Hill**), Jock Taylor (ionosphere physicist; *see* **Taylor Platform**), Bob Francis (physicist; *see* **Francis Peaks**), John Farley (surveyor; *see* **Farley Massif**), Don Seedsman (electronics engineer; *see* **Mount Seedsman**), Norm Cardell (senior electronics technician; *see* **Mount Cardell**), Bruce Allport (radio officer; *see* **Mount Allport**), Vic Dwyer (radio operator; *see* [1]**Mount Dwyer**), Les Miller (radio operator; *see* **Leslie Peak**, and **Miller Ridge**), Frank Brocklehurst (electrical fitter; *see* **Brocklehurst Ridge**), Strawb Dawson (senior diesel mechanic; *see* **Dawson Nunatak**), Eddie Lawson (diesel mechanic; *see* **Lawson Aiguilles**), Alan O'Shea (assistant diesel mechanic; *see* **Mount O'Shea**), Marc Stapleton, Naham "Jack" Warhaft, Gordon Whitehouse, Rodger Williams, Phil Jacquemin, Robin Cooke, John O'Keefe (cook; *see* **O'Keefe Hill**), and John Beck (assistant cook; *see* [1]**Mount Beck**). **1965 winter**: Brian Casimir Zichy-Woinarski (q.v.) (known as Brian Woinarski) (officer-in-charge), Gordon Afflick (weather observer-in-charge; *see* **Mount Afflick**), Noel Foley (weather observer; *see* **Foley Promontory**), Mike Poulton (weather observer; *see* **Poulton Peak**), John Baldwin (weather observer — radio; *see* **Baldwin Nunatak**), John Haigh (geophysicist; *see* **Haigh Nunatak**), Gunther Weller (glaciologist; *see* [1]**Mount Weller**), John Bennett (aurora physicist; *see* **Ben-**

nett Escarpment), Attila Vrana (q.v.) (cosmic ray physicist), Gil Webster (ionosphere physicist; *see* [2]**Webster Peaks**), Max Corry (q.v.) (surveyor), Scott Cameron (medical officer; *see* **Mount Cameron**), Gregory Theodore "Greg" Martin (electronics engineer), Bruce Carter (senior electronics technician; *see* **Carter Peak**), Don Allison (electrical engineer; *see* **Allison Ridge**), Allan Moore (radio operator-in-charge; *see* **Moore Pyramid**), Peter Baggott (radio officer; *see* **Baggott Ridge**), Joe Gavaghan (radio operator; *see* **Mount Gavaghan**), Peter McGrath (radio operator; *see* **McGrath Nunatak**), Laurie Turnbull (supervising technician — radio; *see* **Mount Turnbull**), Patrick John Gordon (known as John) (radio technician), Bill Edward (q.v.) (senior diesel mechanic), Keith Watson (diesel mechanic; *see* **Watson Nunatak**), Jock McGhee (assistant diesel mechanic; *see* **Mount McGhee**), Pat Bensley (carpenter; *see* **Mount Bensley**), Dick Ritchie (cook; *see* **Ritchie Point**), Bob Lachal (assistant cook and geological field assistant; *see* **Lachal Bluffs**). **1966 winter**: Kenneth W. "Ken" Morrison (officer-in-charge), Koshiro Kizaki (glaciologist; *see* **Mount Kizaki**), Brian Kilfoyle (physicist; *see* **Kilfoyle Nunataks**), Dave Ellyard (physicist; *see* **Ellyard Nunatak**), John Hudson (medical officer; *see* **Hudson Nunatak**), Geoff Butterworth (radio officer-in-charge; *see* **Mount Butterworth**), Pat Lee (diesel mechanic; *see* **Lee Island**), Bill Cartledge (q.v.) (carpenter), Max Cutcliffe (senior electrical fitter; *see* **Cutcliffe Peak**), Neven Korlaet, Keith Martin, Ron Murray, John Quinert, John Rankins, Graham Taylor, Peter Towson, Gordon Whitehouse, Allan Williams. Max Jones, George Cook, Peter Cronly, Tom Crothers, James Dalgety, Alan Duke, Ralph Dyer, Bill Edgar. **1967 winter**: John C. Erskine (officer-in-charge), Ken Bennett (q.v.) (2nd-in-command and radio operator-in-charge), Tony Jaques (weather observer; *see* **Jaques Nunatak**), Tony Kerr (physicist; *see* **Mount Kerr**), John Manning (surveyor; *see* **Manning Massif**), John Gillies (q.v.) (radio technician), Chris Simpson (electronics engineer; *see* **Simpson Ridge**), Bill Butler (senior diesel mechanic; *see* **Butler Nunataks**), Eddie Lawson (diesel mechanic; *see* **Lawson Aiguilles**), Syd Little (q.v.) (electrical fitter-mechanic), Pat Moonie (q.v.) (radio officer-in-charge), Ian Thomas, Ian Wood, John Bishop, James Carnegie, Barry Cheney, Peter Lockhart, Vic Dent, Kevine Reiffel, John Reilly, Ray Sharrock, Mark Forecast, John Illingworth, Brian Jackson, Peter C. King, Ken Bode, and Bill Cowell (cook; *see* **Cowell Island**). **1968 winter**: George Francis Hamm (officer-in-charge; *see* **Hamm Peak**), Bill Ware (weather observer; *see* **Mount Ware**), Ron Smith (geophysicist; *see* [1]**Smith Ridge**), Attila Vrana (q.v.) (cosmic ray physicist), Max Rubeli (surveyor; *see* **Rubeli Bluff**), Frank Johnson (q.v.) (radio officer-in-charge), Tony Blundell (radio officer-in-charge; *see* **Blundell Peak**), Dave Bond (senior diesel mechanic-in-charge; *see* **Bond Ridge**), Vic Kitney (supervising radio technician; *see* **Kitney Island**), Jim Bennett, Roger Biggs, Dave Blake, John Cornwall, Chas Davis, Geoff Hulme, Norm Jew, Don McKenzie, Stan Murcutt, Charlie Penny, Ric Springlo, Keith D. Watson, and Alan Wiltshire (cook; *see* **Wiltshire Rocks**). **1969 winter**: Timothy Neary "Tim" Cassidy (officer-in-charge), Chris Bain (weather observer; *see* **Bain Nunatak**), Geoff Bool (weather observer; *see* **Mount Bool**), Ian Allison (glaciologist; *see* **Allison Dome**), John Hogg (medical officer; *see* **Hogg Islands**), Pat Mooonie (q.v.) (radio operator-in-charge), Ken Smith (radio officer; *see* **Kenneth Ridge**), Jack Dart (q.v.) (radio operator), Darrell Edwards (radio technician; *see* **Edwards Nunatak**), Ray Mitchell (senior diesel mechanic; *see* **Mitchell Nunatak**), Peter Gibson (plumber; *see* **Mount Gibson**), Roy Anderson, Keith Beman, Gary Cooper, Horrie Down, Michael Glenny, Peter Griffiths, Larry Hothem, Evan Lee, John Major, Bernie Mandelkern, Keith Martin, Don Plumb, Rowan Webb, Ken Withers, Harold Woods, and Bill Cowell (cook; *see* **Cowell Island**). **1970 winter**: William Bruce Roy (known as Bruce) Smith (officer-in-charge), Bob Nicholson (senior carpenter and 2nd-in-command; *see* **Nicholson Island**), Ian McCarthy (senior weather observer; *see* **McCarthy Nunatak**), Mal Robertson (geophysicist; *see* **Robertson Nunatak**), David Parer (q.v.) (cosmic ray physicist and movie photographer), Frank Johnson (q.v.) (radio officer-in-charge), Terry Weatherson (q.v.) (radio technical officer), Trevor Luff (senior diesel mechanic; *see* **Luff Nunatak**), Steve Harbour (q.v.) (diesel mechanic and plant inspector), Jeff Callaghan, Neville Dippell, Harry Eastoe, Paul Siddall, Peter Fawcett, Allan Foster, Ken Frith, John Garth, Keith D. Watson, Dave Robertson, Bob Tomkins, Phil Tuckett, Janusz Paszowski. **1971 winter**: Lem Macey (q.v.) (officer-in-charge), Marty Betts (q.v.) (meteorological observer), Pat Moonie (q.v.) (radio operator-in-charge), Jack Dart (q.v.) (radio operator), Ray Mitchell (senior diesel mechanic; *see* **Mitchell Nunatak**), Peter Gallagher (senior diesel mechanic; *see* **Gallagher Knob**), Steve Harbour (q.v.) (diesel mechanic and plant inspector), Bill Cartledge (q.v.) (senior carpenter), Clem Cruise (miner; *see* **Cruise Nunatak**), John "Jock" Leckie, Rod Buckland, Garth Palmer, Col Christiansen, Josko Petkovic, Roger Noble, Bob Reynolds, Keith Gooley, Horst Rosler, Tony Graff, Christopher "Kit" Scally, Blair Hamilton, Neil Smith, Ken Hanson (q.v.), John Windolf. **1972 winter**: Neil Roberts (q.v.) (officer-in-charge), Attila Vrana (q.v.) (cosmic ray physicist), David Parer (q.v.) (cosmic ray physicist and movie photographer), Brian Clifford (q.v.) (ionosphere physicist), Des Parker (medical officer; *see* **Parker Hill**), Ted Giles (q.v.) (radio officer), Robin Regester (q.v.) (senior diesel mechanic), Max Cutcliffe (senior electrical fitter; *see* **Cutcliffe Peak**), Bob Devitt, Dave Robertson, Lou Ekstrom, Jovan Silich, Peter Spruzen, Evan Jones, Stewart Swords, Lawry Koger, Bill Thomas, Mark McGinley, Cornelius "Keith Meerbach, Graham Mills (q.v.), Ken W. Wilson, Ole Olesen, Ken Withers, John Young, Mike Phillips. **1973 winter**: Basil Rachinger (q.v.) (officer-in-charge), Ian Marchant (q.v.) (weather observer-in-charge), John Zmood (q.v.) (upper atmosphere physicist), Pat Moonie (q.v.) (radio operator-in-charge), Jack Dart (q.v.) (radio operator), Steve Harbour (q.v.) (diesel mechanic and plant inspector), Bill Cartledge (q.v.) (carpenter), Dick Almond, John "Jock" Leckie, Dave Bennett, Brian Brophy, Geoff Robinson, Ian Campbell, Dieter Schmidt, Merv Schneider, Seager "Sid" Owen, Chris Frisby, John R. Smith, Ken Hanson (q.v.), Tony Shirley, Ian Taylor, Geoff Kirby, Harry Zimmerman. **1974 winter**: Dave Luders (q.v.) (officer-in-charge), Tony Ashford (meteorological observer; *see* **Mount Ashford**), Frank Johnson (q.v.) (radio officer-in-charge), Terry Weatherson (q.v.) (senior radio technical officer), Mike Knox-Little (q.v.) (radio operator), Dave Armstrong, Ted Giles (q.v.) (radio officer), Dave McCormack (q.v.) [plant inspector (mechanical)], Jack Turner, Mike Heap, Wade Butler, Graham Henstridge, Geoff Cameron, Peter Cameron, Gary Clark, Graham Hinch, Don Loades (*see* **Loades Peak**), Graham Dadswell (q.v.), John Dare, Jerry Walter, Brendan Godwin, Mark Oliver, Ron Gomez, Bill Griffiths, Adrian Stone, Werner Haymann. **1975 winter**: Lem Macey (q.v.) (officer-in-charge), Fulvio Bagliani (geophysicist; *see* **Bagliani Point**), Ian McIntosh (q.v.) (ionosphere physicist), Jack Dart (q.v.) (radio operator), Paul Watts (senior diesel mechanic and plant inspector; *see* **Watts Lake**), Bob Bandy (senior diesel mechanic; *see* **Bandy Nunataks**), Willie Kulikowski (carpenter), Peter Hill, John Barker, Graeme W. Taylor, Paul Brammer, Brian Carter, Rob Nash, Russ Marnock, Kevin Dodds, Horst Rosler, Ephraim "Jack" Field, John Peiniger, Keith Gate, Ted Read, Werner Gaugler, Mike Phillips, Peter Guy, Henry Nissink, Ken Hanson (q.v.), Dave Urquhart, Patrick Moonie. **1976 winter**: Ian C. Teague (officer-in-charge), Mike Knox-Little (q.v.) (radio operator), Geoff Holbery-Morgan (q.v. under **Morgan, Geoff**) (plant inspector), Murray Price (q.v.) (senior plumber and official photographer), Greg Hoffmann (q.v.) (senior carpenter), Graeme Akerman, Alex Papij, Bill Pritchard, Gil Barton, Richard Cody, Don Retallack, Peter Davies, Dave Scarborough, Erwin Erb (q.v.), Grant Reid, John Squibb, Bruce Flint, Colin Graham, John Tibbits, John Tretheway, Dave Grant (q.v.), Ole Werner, Phil Wolter, Greg Howarth, Mike Wyld, George Jenkins, Lars Larsen, Neil MacDonald, Guy John Macklan. **1977 winter**: Peter J. Wohlers (officer-in-charge), Fulvio Bagliani (geophysicist; *see* **Bagliani Point**), Ian McIntosh (q.v.) (ionosphere physicist), Brian Harvey (q.v.) (senior diesel mechanic), Gil Riley, John Best, Rob Nash, Ray O'Brien, Peter N. Bourke, John Sisson, John Tann, Russell Brand (q.v.), Graeme Currie (q.v.), Tony Verbruggen, Keith Frearson, Ian Vivash, Peter Gormly, Kevon Wake-Dyster, Chris Gornall, Des Williams, Michael Hinchey, Ray Hinchey (q.v.), Peter Hunter, Bob Jackson, Colin King, Tom Maggs, Ted Mitchener. **1978 winter**: Kenneth I. Chester (officer-in-charge), Dave McCormack (q.v.) [plant inspector (mechanical)], Gary Allen, Josko Petkovic, Barry

Armstrong, Ray Proudlock, David Barrett (q.v.), Julian Randall, Bert Berzins, Arie Schellaars, John Birss, Neil Brandie, Graeme Sephton, Alex Coca, Rob Wills, Len Harwood, Reg Hopley, Ian Reid, Ian Johnston, Gunter Manderla, Jim Milne, Mark Murphy, Roy Patch, Andy Porter, and Rick Schmitter (cook; *see* **Schmitter Peak**). **1979 winter**: Richard "Rex" Burchell (officer-in-charge), Mike Knox-Little (q.v.) (radio operator), Warren Adams, Adrian Blake, Peter Magill, Rob Perry, Keith Blundell, Alan Reynolds, Shane Rollins, Wayne Schocker, John Caswell, Lindsay Stubbs, Jim Cooper, Mike Sexton, Ron Sherwood, Peter W. Dawson, Nikolay Voloshinov, Paul Delaney (q.v.), John Wignall, John Forrester, Lionel McCombe, Peter Goulding, Dave Hardy, Andrew Lark, Dave Varvel, Stuart Higgins, Mick Holmes, Russ Willey, Bernie Keogh, Barry Vince. **1980 winter**: Syd Kirkby (q.v.) (officer-in-charge), Dagur Vilhjalmsson, Brian Ball, Rob Petrini, David Blaby, Yevgen Poltev, Kavin Campbell, Graham Pryde, Warren Cannon, Ivan Reid, Andrew Crook, George Seidl, Tony Everett (q.v.), David Robinson, Lloyd Fletcher, Jeff Sigston, Brian Gaull, Kevin Shepherd, Garry Hardie, David Steele, Steve Harris, Peter Stickland, Alf Humphries, Bob Taylor, Sjoerd Jongens, Jim Vallance, Charles Tivendale, Tom Maggs, Robert Schahinger, Colin McIntosh, Bob Yost. **1981 winter**: Paul Butler (officer-in-charge; *see* [1]**Butler Island**), Don Dettmann (q.v.) (senior diesel mechanic), George Hedanek (q.v.) (plant inspector), Gordon Ashcroft, Ron Kennedy, Peter Longden, Rowan Butler, Peter J. McLennan, Derry Craig, Steven Musgrove, Richard Crowle, John Peiniger, Graham Dadswell (q.v.), Terry Rose, Henry Weiss, Heinz Dittloff, George Thomson, Wal Elliott, Andrew Murray, Rich Fleming, Allan Winter, Geoffrey Fulton, Mark Meyer, John Gough, Ross McShane, Mark Haste, Rod McLeod, Bob Yeoman, Peter Jacob, Alan Marks, Norman P. Jones, Stuart Wolfe. **1982 winter**: Geoffrey R. "Geoff" Copson (officer-in-charge), Julie Campbell (medical officer), Mike Knox-Little (q.v.) (radio operator), Brian Lin-Gen, Dave Grant (q.v.), Ian Hill, Ken Butler, Russ Henry, Keith Irving, Bob Jackson, Brian Jarvis, Warren Cerchi, Jim Cooper, Brian Jones, Fred Kreidl, Ian Knowd, Peter Mentha, Chas Cosgrove, Richie Silberstein, Bill Couch, Ben Hamelink, David Phillips, Jerry Curchin, Bernie Sorensen, John Dare, Dave Pottage (q.v.), Geoff Wells, Steve Douglas, Garry Wilson, Dave Fraser, Ole Werner, Charles Willock, Mark Gallagher. **1983 winter**: Thomas H. "Tom" Arrowsmith (officer-in-charge), Vic Kitney (supervising radio technician; *see* **Kitney Island**), Dave McCormack (q.v.) [plant inspector (mechanical)], Peter Yates, Ivan Wilson, Michael Willis, Gary Anderson, Peter Magill, Bob Cechet, Leon Douglas, John McCormack, Wayne Eastley, Robyn McDermott (medical officer), Richard Endacott, Zain Rahmat, Arthur Giese, Alan Silson, John Gilmour, Dale Smith, Graham Haw, Dale Uren, Alan Jeffrey (q.v.), Graeme Walsh, Bob Johnston, Paul Wardhill, Trevor Johnstone, Garry Watson (q.v.), Albert Jongbloed, Ron Webb. **1984 winter**: Brian R. Turnbull (officer-in-charge), Lynn Williams (medical officer), Warwick Williams (electrical engineer), David G. Young, Alistair Urie, Leighton Ford, Mick Armstrong, Mark Bedson, Gerry Hamilton, Paul Chesworth, Michael Hartnett, Kevin Christensen, Brendan Jones, Neil Christie, Ted Meadowcroft, Mark Conde, Paul Kelly, Wayne Miller, Julian Randall, Peter Crosthwaite, Peter Dalgleish, Bruce Lees, Ray Mitchell, Gavin Don, Grant Lamont, Dave Paulin, Mark Dreimann, Horst Sykorra, Peter Ellis, Leo Oliver, Kevin Sheridan, Ozcan Ertok, Peter Foran, Andre Phillips, Robin Thomas. **1985 winter**: Edward J. "Ted" Upton (officer-in-charge), Enid Borschmann, Allen Rooke (q.v.), Peter J. Bourke, Neil Miller, Grant Morrison, Paul Chesworth, Bill Singleton, Jim Cooper, Alan O'Neill, Dave Pottage (q.v.), Dennis Day, Gavin Day, Danny O'Reilly, Gina Price, Robyn Downey, John Stanborough, Tony Everett (q.v.), Mark Spooner, Roger Gauthier, Alan Holmes, Kevin Pritchard, David Jewell, Peta Kelsey, Judy Turner, Mark Loveridge, Paul Lytwyn, John McIlwham. **1986 winter**: James "Jim" Hasick (q.v.) (officer-in-charge), Denise Allen (q.v.) (weather observer), Peter Kearton, Gary Anderson, Michael Knight, Alan Aves, Glen McAuliffe, Brian Baxter, Dave McCormack (q.v.) [plant inspector (mechanical)], Mark Conde, Colin Mercier, Jim Milne, Ken Dalgleish, Max Dietrich, Roy Primm, Kevin Donovan, Matthew Sherlock, David Gillies, Bernie Sorensen, Peter Yates, Doug Green, Daryl Grove, Rod A. Hutchinson, Mark Tapp, Shane Jeppson, Ross Jongejans, Ian Stone. **1987 winter**: Edward J. "Ted" Upton (officer-in-charge), Mike Knox-Little (q.v.) (radio operator), James Butcher, Peter Naughton, Roy Butterworth, Ricarda Ortner, Andrew Cramond, Gary Poole, Maria de Deuge, David Raisin, Stewart Dennis, Paul Seymour, Graeme Germein, Mark Spooner, Phil Giese, Val Lishman, Greg Harley, Mike Hennessy, Charlie Weir (q.v.) (plant inspector), Alan Jeffrey (q.v.), Noel Wilkinson, Nigel Johnston, Denise Jones (q.v.), Michael Willdin, Ulla Knox-Little. **1988 winter**: Phil Barnaart (q.v.) (station leader), Eric Szworak (q.v.) (radio technical officer), Dave McCormack (q.v.) [plant inspector (mechanical)], Arthur Alexander, Steve Hughes, Rod A. Hutchinson, Kay Baron, Jeff Mackereth, Chris Corbett, Chris Eavis, Stephen Rayner, Tony Everett (q.v.), Graham Robertson, Joe Gardner, Ed Garnett, John Young, John Gill, Fausto Mino, Ed Piket, Kim Hill, Eddie Logan, Paul Williams, Shane Hill, Scott Penney, Alan White, Alex Hindle (q.v.), Mick Whittle. **1989 winter**: Diana Patterson (q.v.) (station leader), Bruce Alcorn, Murray Hotchin, John Armistead, Dave J. Grant, Alan Aves, Kym Frost, Bryan Hodge, Joe Brennan, Mike Hennessy, Randall Bridgefor, Kerrie Hindle, Doug Cameron, Peter Newman, Ian Clifton, Bill Lennox, Bob Orchard (q.v.), Neil Conrick, Petr Crosthwaite, Peter Sutcliffe, Michael Dymond, Brendan Fahey, John French, Arthur Wilkinson, Trevor Lloyd. **1990 winter**: Bob Packer (station leader), Albert Bruehwiler (*see* **Lake Bruehwiler**), Grant Brightman, Alex Hindle (q.v.), Craig Hunter, Patrick Butler, Malcolm Campbell, Dave Shaw, John Colley, Shane Spriggins, Bill Collins, Scott Nichols, Ray Pike, Lloyd Fletcher, Lionel Whitehorn, Leighton Ford, Paul Myers, Ian Palmer, Dave Freeman, Graham Whiteside (q.v.), Andrew Lewis, Pene Greet, Bob Libbiter, Dave Harrison, Paul Gigg. **1991 winter**: Louise Crossley (station leader), Charlie Weir (q.v.) (plant inspector), Dale Washington, Roy Butterworth, Tony Johnston, Richard Cane, Stuart Hodges (q.v.), Brian Chilmaid, Peter Lauricella, Mike Craven (q.v.), Chris Underwood, Garry Sugrue, Ken Dalgleish, Christopher "Kit" Scally, Maria de Deuge, Alan Osborne, Erwin Erb (q.v.), Damian Murphy, Charles Hammond, Tony Oetterli, Chris Harrison, Richard Teece. **1992 winter**: Jim Hasick (q.v.) (station leader), Allen Rooke (q.v.), Dave Pottage (q.v.), Ray Pike, Paul Munro, Richard Roy, Jurgen Mosmann, Brett Backhouse, David Barrett (q.v.), Tim Gibson, Arthur Gillard, Paul Gleeson, Randall Bridgeford, Paul Gray, Kevin Sheridan, John Hoelscher, John Jamieson, Mark Maumill, Christine McConnell, Trevor Menadue, Graham Mills (q.v.), Paul Fenton, Mal Ellson (q.v.), Steve de Vere, Andrew Cramond, Philip Cook, Mark Cone, John Toms, Dave Cesar, Chris Stevenson. **1993 winter**: Alan Grant (station leader), Albert Bruehwiler (*see* **Lake Bruehwiler**), Andrew Crook, Matt Dahlberg, Rudi Esman, Nick Frew, Henry Galli, Chris "Harry" Harrison, Andrew "Kermit" Hines, Dave Hunt, John Innis, Tim Ireland, Steve Jourdain, Roger Kirkwood, Eddy Kretowicz, Graeme "Kiwoos" McKenzie, Chris Morrison, Rob Nash, Peter Orbansen (q.v.), Frank O'Rourke, Anton Rada, Ian "Rags" Raymond, Mark Reynolds, Glenn Scherell, Phu Thuong Si, Martin Tait, Len Trace, Geoffrey Ullman, Joseph Vella, Rod Williams, Graeme Wills, Peter Wilson. **1994 winter**: Bob T. Jones (station leader), Des Addicoat, Bob Dubow, James Francis, Chris Frisby, Adrian Giffen, Nic Jones, Kieran Lawton, Dave Lindsay, Michael Manion, Paul Massey, Joe Ooyendyk, Dail Opulskis, Bob Orchard (q.v.), Leigh Reardon (q.v.), Barbara Wienecke, Graham Whiteside (q.v.), Calum "Cal" Young, Ted Young, Meredy Zwar (q.v.). **1995 winter**: Jim Hasick (q.v.) (station leader), Suzanne Barr, Keith Brierly, Alan Crossman, Adam Drinkell, Simon Edwards, Tony Johnston, Ian John McLean, Ray Paul, Bruce Thorpe, Michael Tomkins, Jeff Treloar, John Trengrove, John Tully, Robin Winter, Norm Williams, Ashleigh Wilson, David Wilson. **1996 winter**: Ross Rynehart (station leader), John Armstrong, Geoff Barclay, Stephen Cook, Kerri Darby, Paul Delaney (q.v.), Kevin Donovan, Geoffrey Fulton, Adrian Giffen, Scott Hanson, Rodney Mills, Alan Ng, Chris Price, Eric Reece, Christine Spry, Michael Stone, Trevor Taylor, Denis Wiltshire. **1997 winter**: Bob T. Jones (station leader), Peter Attard, Warren Blyth, Chris Boucher, Matt Brading, Gary Burton, Jane Goddard, Ross Hearfield, Stuart Hodges (q.v.), Jarrod Janson, Alan Jeffrey (q.v.),

Amanda Kay, Graham Kelly, Rob Mackie, Dale Main, Geoff McDonough, Cameron McHale, Ian James McLean, Perry Roberts, Ken J. Smith. **1998 winter**: Glenn Cassim (station leader), Kim Barnsley, Andrew Brooks, Maria de Deuge, Peter Deith, Adam Drinkell, Scott Harris, Martin Harvey, Rick Howells, Michael Keam, Ron Kennedy, Darrell Knight, Ingrid McGaughey, Jo Neyens, Graham O'Hearn, Mike Pache, Greg Ross, Russell Steicke, Ashleigh Wilson. **1999 winter**: Ross Belcher (leader), Greg Adnum, Malcolm Blewett, Colin Blobel, Bryndon Booth, David Davies, Paul Gleeson, Stuart Higgins, Shane Kettle, Nick Mortimer, Noel Paten, Jason Reinke, Greg Rocke, Madeline Roe, Graham K. Smith, Mario Springolo, Bob Sutton, Andrew Tink, Dave Vinycomb, Garry Watson, Chris Wilcock. **2000 winter**: Michael Carr (leader), Patrick Abgrall, Ruth Baldwin, Michael Carr, Garry Clothier, Barry Copley, Mike Damon, Jim Dragisic (plant inspector), Christian Gallagher, Rob Gregor, Dave Hunter, Grant "Buzz" Hutchins, Phil Jefferson, Peter Johnson, Kym Newbery, Craig Perham, Rhonda Pike, Janet Reynolds, Trevor Williamson, Denis Wiltshire. **2001 winter**: Nick Ashworth, Arthur Beggs, Phil Berry, Keith Brierley, Alex Brooks, Tony Campbell, Ray Clark, Mark Clear, Meg Dugdale, Dan Humphries, Lyn Irvine, Michael Lunney, Ian John McLean, Scott Noblet, Martin Purvins, Steve Rendell, Paul A. Smith, Max Walsh, Sean Wicks. **2002 winter**: Marilyn Boydell (station leader), Malcolm Arnold, Bruce Ayers, Wally Baldock, Matthew Blacker, Andrew Cassells, Brian Congues, Dennis Cooper, Peter Crane, Fiona Dennis, Jim Dragisic (plant inspector), Peter Field, Grant Goodall, Brendan Hill, Paul Hogarth, Andrew Jenner, Damian Love, Lionel McCombe, Lindsay Mcleay, Wayne Paul, Selwyn Peacock, Philippe Rouget, Andrew Smith, Richard Unwin, Jeremy Wills, Justin Wallace. **2003 winter**: Sarah Bolt, Glenn Duncan, Dave Glazebrook, Shaun Griffiths, Colin Heaslip, Greg Hemsworth, Wayne Heron, Mark Lagemann, Greg Liddle, Colin Patterson, David Pollington, Nick Smailes, John W. Smith, Michele Smith, Kerry Steinberner, Andrew Thomas, Nyree Thorpe, Chris Tickner, Megan Tierney, Lionel Whitehorn. It has continued as a winter station.

Archipel Max Douguet. 66°48' S, 141°23' E. A group of islands, including Phoque Island, Manchot Island, Bizeux Rock, the Rescapé Islands, Empereur Island, and Marguerite Island, in front of the old French base at Port-Martin, in the Géologie Archipelago. Named by the French in 1998, for Max Douguet.

Maxfield, Arthur. b. 1886, Burley, Leeds, son of Post Office counter clerk Bernard Maxfield and his wife Teresa. At 14, he apprenticed as a mechanic, but then apprenticed in sail, as a Merchant Navy engineer. On March 26, 1904, he sailed from Liverpool on the *Lucania*, bound for New York, where he arrived on April 2, to pick up his ship, the *Queen Elizabeth*. He arrived in Australian waters in 1908, aboard the *Marathon*, and on Oct. 16, 1912 signed on to the *Aurora* as 2nd engineer, at £10 per month, for the 2nd voyage south during AAE 1911-14. He left the expedition at Hobart, on March 15, 1913, and went back as 3rd or 4th engineer on various vessels, for several years plying Antipodean waters, and occasionally (after the war) making the run across across the Pacific, to the northwest coast of North America. He was finally promoted to 2nd engineer in 1920. He died in Sheffield in 1953.

Maximov *see* **Maksimov**

Maxwell Bay. 62°13' S, 58°52' W. A bay, 16 km long, between Stranger Point (which is on King George Island) and Duthoit Point (which is on Nelson Island), in the South Shetlands, at the foot of Fildes Peninsula. The main entrance to the bay is on the SE side, and is wide open. Fildes Strait, on the NW side, is encumbered by rocks, and only navigable by boats (nothing bigger). The name Maxwell's Straits was applied by Weddell in 1822-24, collectively to this bay and Fildes Strait, for Lt. (later Cdr.) Francis Maxwell (1789-1863), RN, who had served with Weddell a decade before on the *Avon* (not in Antarctica, however). It appears as such on Weddell's chart of 1825. On Bongrain's map of 1914, it appears as Détroit de Field, but this is almost certainly a misspelling of Fildes, and also a misapplication of that name. Re-charted by the Discovery Investigations in 1934-35. On a 1954 Argentine chart it appears as Bahía Guardia Nacional, named for the *Guardia Nacional* (Capt. Ricardo Vago), which was meant to relieve Órcadas Station in 1923, but couldn't get through (the *Rosita* did). This name was accepted by the Argentine gazetteer of 1970. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. It appears on a 1960 U.S. Hydrographic Office chart as Fildes Strait. On Sept. 23, 1960, UK-APC altered the name of this feature to Maxwell Bay, and limited the name to the bay in question. US-ACAN accepted that situation later that year. It appears as such on a British chart of 1962. It appears on a Chilean chart of 1961 as Bahía Fildes, and that was the name accepted by the 1974 Chilean gazetteer. A commemorative historic site plaque is now mounted on the shore cliffs which says, "In memory of the landing of members of the First Polish Antarctic Marine Research Expedition on the vessels *Professor Siedlecki* and *Tazar* in Feb. 1976." The plaque bears the Polish eagle and the dates 1975 and 1976. Last plotted by the UK, in late 2008.

Maxwell's Straits *see* **Maxwell Bay**

Cape May. 81°50' S, 162°50' E. Also called May Point. A high, conspicuous rocky point, marked by sheer red granite cliffs, lying below Mount Christmas, along the W side of the Ross Ice Shelf, 13 km SE of Cape Laird. Discovered in Dec. 1902, by BNAE 1901-04, and named by Scott as Cape William Henry May, for Admiral of the Fleet Sir William Henry May (1849-1930), 3rd Naval Lord and controller of the Navy, 1901-05; 2nd Sea Lord, 1907-09; and commander-in-chief at Plymouth, 1911-13. He had been in the Arctic in 1875-76. However, the feature appears on Scott's charts as Cape May. The name Cape William Henry May was accepted by US-ACAN in 1947, but in 1965 the name was shortened. It appears in the 1958 NZ gazetteer, as Cape May.

May, William. b. 1814, Washington, DC, son of Dr. Frederick May. He joined the U.S. Navy, becoming a midshipman on May 2, 1831, and joining the *Potomac*. He was promoted to passed midshipman (what would later be called an ensign) on June 28, 1838, and, as such, went on USEE 1838-42. He was William Reynolds' cabinmate on the *Vincennes*, and when Reynolds was transferred to the *Peacock*, May asked to be transferred with him, but, instead was transferred to the *Flying Fish*. He was promoted to lieutenant on Sept. 8, 1841, and in 1842, in NYC, on the return of the expedition, he was court-martialed for insubordination. He served for long periods of time overseas, and in the Mexican War, and on Feb. 1, 1853 married Clintonia Gustavia Wright, and they went to live in Maryland. On June 6, 1861, he was promoted to commander, and died on Oct. 10, 1861. Clintonia married again, to Philip Thomas, the former governor of Maryland, and died in 1902.

May Glacier. 66°13' S, 130°30' E. A channel glacier, 10 km long and 8 km wide, it flows to the coast about 7 km W of Cape Carr, between that cape and Cape Morse, on the coast of Wilkes Land. Delineated from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for William May. ANCA accepted the name.

May Glacier Tongue. 66°08' S, 130°35' E. A term no longer used, it was the seaward extension of May Glacier, in East Antarctica.

May Iceberg Tongue. 66°00' S, 130°00' E. Named, apparently, by the Russians. Whether they named it or not, it does seem to signify either the May Glacier Tongue, or its seaward extension.

May Peak. 85°57' S, 132°23' W. A pyramidal peak rising to over 2200 m, at the W side of Reedy Glacier, 1.5 km W of Stich Peak, in the Quartz Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Robert L. May, USN, helicopter pilot at McMurdo, 1962-63.

May Point *see* **Cape May**

May Valley. 83°18' S, 51°10' W. A nearly flat, snow-and ice-filled depression, along the W flank of the Forrestal Range, between Mount Lechner and the NW side of the Saratoga Table, at the junction of that table and the Lexington Table, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Walter H. May, aerographer at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Maya Mountain. 77°47' S, 160°33' E. A small pyramidal mountain rising to about 2000 m, formed similarly to Altar Mountain, and projecting about 150 m above a prominent bench

at the head of a small, westerly-directed dry valley extending from the dry valley that is aligned N-S on the West Beacon western side, between Aztec Mountain and Pyramid Mountain, just S of Taylor Glacier, in Victoria Land. So named by NZGSAE 1958-59 because, along with Aztec Mountain, it resembles the ceremonial platforms used by the Mayas of Mexico and Central America. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Mayakovskogo Mountain *see* **Skavlhø Mountain**

Mount Maybelle Horlick Sidley *see* **Mount Sidley**

Mount Maybelle Sidley *see* **Mount Sidley**

Mayeda Peak. 84°36' S, 164°41' E. Rising to 2890 m, in the Marshall Mountains of the Queen Alexandra Range, 7 km N of Mount Marshall. Named by US-ACAN in 1966, for Fred H. Mayeda (1919-1964), U.S. Weather Bureau meteorologist in Seattle, who was at Pole Station in 1959, the first Japanese-American to winter-over at the Pole.

Mayer Crags. 84°53' S, 168°45' W. A rugged V-shaped massif, 16 km long, surmounted by several sharp peaks, at the W side of the mouth of Liv Glacier, where that glacier enters the Ross Ice Shelf. Named by US-ACAN in 1966, for Lt. Robert V. Mayer, USN, Hercules aircraft pilot for 4 Antarctic summers, and plane commander for a mid-winter evacuation flight on June 26, 1964.

Mayer Hills. 69°33' S, 67°12' W. Low, mainly ice-covered hills with steep north-facing slopes, but rather featureless summits, rising to about 900 m, S of Forster Ice Piedmont, and E of Prospect Glacier, between that glacier and Mount Leo, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed from the ground by BGLE 1936-37, the feature appears on Stephenson's 1940 map of that expedition. It was re-surveyed by Fids from Base E in 1958. Named by UK-APC on Aug. 31, 1962, for Johann Tobias Mayer (1723-1762), German mathematician who worked out a series of lunar tables for determining longitude, published by the British Admiralty in 1775. US-ACAN accepted the name later in 1962.

Mayewski Lobe. Also called Mayewski Ice Lobe. A lobe of ice projecting from the main part of the Dominion Range, in the area of the Beardmore Glacier. Named for Paul Mayewski (*see* **Mayewski Peak**). It is not an official name.

Mayewski Peak. 77°18' S, 162°14' E. Midway down the ridge that bounds the N side of Baldwin Valley, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1976, for Paul Andrew Mayewski (b. July 5, 1946), USARP geologist and glaciologist at McMurdo in 1968-69, at the McGregor Glacier in 1970-71, at the Willett Range and Convoy Range in 1971-72, and at Rennick Glacier in 1974-75.

Mount Mayhew. 65°35' S, 62°26' W. Rising to about 1200 m, between Pequod Glacier and Starbuck Glacier, on the Oscar II Coast, on the E coast of Graham Land. The SW face of the peak is rocky and very steep, while the NE face is snow-covered. Surveyed by BAS personnel from Base E in 1963-64. Named by UK-APC on July 21, 1976, for the *Moby Dick* character. US-ACAN accepted the name later in 1976.

Mayman Nunatak. 71°05' S, 66°56' E. A low rock outcrop which has a domed appearance when seen from the NE, and which stands about 11 km SW of Taylor Platform, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Kenneth J. "Ken" Mayman, medical officer at Davis Station in 1964. US-ACAN accepted the name in 1967.

Mayne, Robert Blair "Paddy." Several SAS boys became legendary within the British Army as a result of their daring exploits in the North African desert during World War II. David Stirling, of course, the founder; Paddy Mayne, winner of four DSOs; John Tonkin; Mike Sadler; and others. Tonkin and Sadler wintered-over as Fids in Antarctica after the war, and Paddy Mayne was scheduled to do so before an old back injury threw him out, a spinal injury probably sustained as the result of a low-level parachute jump during the war. Paddy Mayne, son of William Mayne, was born on Jan. 11, 1915, in Newtownards, in Northern Ireland, into a well-off and well-connected family. An all-round sportsman, rugby, boxing, golf, rifle shooting, he became a solicitor after Queen's University, Belfast, and became most famous as a rugby player. He joined the Army at the beginning of the war, becoming a commando, and then Stirling recruited him as a founding member of the SAS. Paddy Mayne was a bad enough lad at the best of times, but when he was drunk he was a menace. The rumors abound about him walking in to bars and taking on all-comers, wrecking drinking-places, and even striking superior officers when (he judged that) they deserved a walloping. But then, David Stirling was not looking for casper milquetoasts, and Paddy wreaked havoc on Jerry. Yet, it was this quality of naughtiness that prevented Paddy from winning the Victoria Cross that Monty recommended him for (and that he actually won, just before war ended, but which was downgraded to yet another DSO). The establishment was simply (and justifiably) afraid to promote the volatile and unpredictable Lt. Col. Mayne to Olympus, a place where consistent grace counts for a lot. After the war, Antarctica was the natural destination for lads like Paddy, and he joined the FIDS on a 2-year contract. He flew to Montevideo on Dec. 8, 1945, leaving there on Dec. 30, 1945, with John Tonkin, bound for the Falklands, arriving in Port Stanley on Jan. 3, 1946 (Mike Sadler, the third SAS man, had left Montevideo four days before). On Jan. 9, he and Tonkin left Port Stanley, bound for Deception Island, where Mayne was due to winter-over for 2 years as 2nd-in-command at Base B in 1946 and 1947. They arrived on Jan. 13, 1946, and then on to Port Lockroy on Jan. 17, but on Jan. 23, Mayne was hospitalized in Stanley. It was his back that did him in, and in March 1946 he had to go back to Northern Ireland. But after what he had been through, the thought of being a solicitor was even scarier than facing the Germans, and he became a recluse as his back got worse. One night, Dec. 14, 1955, drunk as a skunk, he drove his sports car into a truck. He was 40. His home town built a statue to him. Several books have been written about Paddy Mayne, and, of course, he has a lot written about him in any book on the SAS. Some of the books are attempting to canonize him, to make us believe that Paddy was not as bad as legend would have it. In 2005 a massive and very weighty movement was begun to have his VC reinstated, but the government turned it down.

Cabo Mayo *see* **Cape Mayo**

Cape Mayo. 68°54' S, 63°23' W. A bare rock cliff forming the E end of a flat, ice-covered platform which rises to 500 m, between Cape Keeler and Miller Point, on the Wilkins Coast, on the E coast of Palmer Land. Discovered aerially by Wilkins on Dec. 20, 1928, and he applied the name to the NE point of what he called Scripps Island (*see* **Scripps Heights**), plotting it in 69°50' S, 64°40' W, and naming it for William Benson Mayo (1860-1944), chief power engineer of the Ford Motor Company. It appears as such on his 1929 map, and also on Wordie's 1929 map and on a 1933 British chart. U.S. cartographer W.L.G. Joerg, working in 1936 from Wilkins' map and also from air photos taken by Lincoln Ellsworth in Nov. 1935, could not match it up with other named features in this area, and so re-applied the name to the present feature. It appears as such on his 1937 map. It was surveyed from the ground and photographed aerially in Dec. 1940, by USAS 1939-41, and, from these efforts, appears on a 1943 U.S. Hydrographic Office chart plotted in 68°56' S, 63°17' W. US-ACAN accepted the name in 1947, but plotted in 68°54' S, 63°20' W. It appears on a Chilean chart of 1947, as Cabo Mayo. The feature was re-photographed aerially in Nov. 1947, by RARE 1947-48, and that same month was surveyed from the ground by a joint sledging party of RARE personnel and Fids from Base E. UK-APC accepted the name on Jan. 28, 1953, and it appears in the 1955 British gazetteer, plotted in 68°53' S, 63°25' W. The feature was further surveyed by Fids from Base Y and Base E between 1960 and 1962, and, from these surveys, the coordinates were corrected by 1963, and those were accepted by UK-APC on Nov. 13, 1986.

Mayo Peak. 74°49' S, 110°33' W. A flattish summit, rising to about 300 m, forming the S end of Jones Bluffs, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Named by US-ACAN in 1977, for Elbert A. Mayo, Jr., of VX-6, a flight engineer on LC-130 aircraft, who was in Antarctica 5 times with OpDF.

Cerro Mayor *see* **The Horn**

Mayor Arcondo Refugio. 66°09' S, 61°09' W. Argentine refuge hut built by Army personnel from Teniente Matienzo Station, in Sept. 1963, 80 m above sea level on the shelf ice, on Nunatak Arcondo, on the N coast of Jason Peninsula, on the E coast of the southern part of Graham

Land. It was opened on Oct. 12, 1963, and called Arcondo, for short. It has since been dismantled. *See* **Arcondo Nunatak**.

Isla Mayor Saavedra *see* **Saavedra Rock**

Mayr, Rudolf. b. May 1, 1910, Miesbach, Germany. He began flying in 1931, and in 1934 became a Lufthansa test pilot. On Oct. 2, 1938, he flew the new transatlantic mail plane *Nordstern* from the Azores to New York. His radioman was Erich Gruber. 4 days later he arrived in New York again, again from the Azores, after a record breaking 19 hours and 25 minutes. He was loaned by Lufthansa as pilot of the flying boat *Passat* during GermAE 1938-39. He was a captain in the Luftwaffe during World War II, and won the Knight's Cross. Between 1948 and 1950 he was a flying instructor in Syria and Lebanon, and after that a flight captain with Middle East Airways. In 1955 he returned to Lufthansa, and in 1960 flew Konrad Adenauer to New York in a Constellation.

Mayr Kette *see* **Mayr Ridge**

Mayr Range *see* **Mayr Ridge**

Mayr Ridge. 72°11' S, 2°22' E. A mountainous ridge which includes Nupskammen Ridge and Von Essen Mountain. It forms the SW extremity of the Gjelsvik Mountains, in Queen Maud Land. GermAE 1938-39 flew over here, photographed, and named a feature in this general area as Mayr-Kette (i.e., "Mayr ridge"), for Rudolf Mayr. This may or may not be the same feature, but the name has ben preserved thus. US-ACAN accepted the name in 1970. At times, this ridge has been confused with a similar ridge to the NE, Armlenet Ridge.

Mayrkette *see* **Jutulsessen Mountain**

Mayrsporn. 71°41' S, 170°08' E. A spur, just W of Newnes Glacier, in Victoria Land. Named by the Germans.

Maystora Peak. 62°33' S, 59°42' W. A rocky peak, rising to 350 m in Breznik Heights, 600 m E of Razgrad Peak, 1 km S of Ilinden Peak, 2.2 km W of Viskyar Ridge, and 1.2 km NE of the highest point of Ephraim Bluff, it overlooks Zheravna Glacier to the N, E, and S, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006 for Bulgarian artist Vladimir Dimitrov (1882-1960), known as Maystora.

The *Mazeppa*. French yacht, skippered by Yannick Trancart and Jo Adami, which visited the South Shetlands and the Antarctic Peninsula in 1983-84.

Mazurek Point. 62°08' S, 58°08' W. A small headland between Polonez Cove and Lions Cove, on King George Island, in the South Shetlands, on the Bransfield Strait. Named by the Poles in 1980, for the Polish folk dance.

Mazza Point. 71°19' S, 73°36' W. A snow-covered point between Brahms Inlet and Mendelssohn Inlet, it marks the NW end of Derocher Peninsula, on Beethoven Peninsula, on Alexander Island. Mapped by USGS from USN air photos taken in 1967-68, and also from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Cdr. Joseph D. Mazza, USN, commanding officer of VXE-6 from May 1986 to May 1987. UK-APC accepted the name on May 13, 1991.

Caleta Mazzei. 64°08' S, 61°45' W. A cove indenting the central part of the W coast of Two Hummock Island, about 3 km SSW of Cape Wauters, in the Palmer Archipelago. Named by the Chileans for 2nd Lt. Antonio Mazzei Fernández, officer on the *Maipo*, who took part in hydrographic work in this area during ChilAE 1958-59. The Argentines call it Caleta Drago. For more on Don Antonio, *see* **Punta Antonio**.

Punta Mazzei. 62°28' S, 60°48' W. A point separating Playa Yamana to the N from Playa Golondrina to the S, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Antonio Mazzei Fernández (*see* **Punta Antonio**, and **Caleta Mazzei**).

Mazzeo Island. 65°09' S, 65°00' W. An island, 0.8 km WNW of Quintana Island, NNW of the Betbeder Islands, in the Wilhelm Archipelago. Named by UK-APC on Nov. 3, 1971, for Lt. Peter Mazzeo (b. 1946), 2nd survey officer on the *Endurance*, which was in this area in Feb. 1969, with an RN Hydrographic Survey unit aboard. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer, and on a British chart of that year.

Gora Mcyri. 81°40' S, 31°01' W. An isolated nunatak in Coats Land. Named by the Russians.

Isla Meade *see* **Meade Island**

Islas Meade *see* **Meade Islands**

Meade Island. 62°27' S, 60°04' W. An island, snow-free in summer, measuring 1.2 km by 700 m, and with a surface area of 48 hectares, it is the larger of the two main islands in the Meade Islands, 2.4 km E of Williams Point, 2.1 km NE of Ficheto Point (on Livingston Island), and 1.9 km W of Duff Point (on Greenwich Island). The first time it appears individualized (as opposed to just an unnamed member of the group called the Meade Islands) is on a 1946 USAAF chart, but that may just have been an error. *See* **Meade Islands** for the naming. However, it does appear on an Argentine chart of 1954, again individualized, as Isla Meade. It appears on a Russian chart of 1961, as Ostrov Mid, and in the 1974 Chilean gazetteer as Isla Meade. This is all evidence in favor of accepting the individual name of this island, even though US-ACAN and UK-APC do not (they do, however, recognize the individuality of the smaller of the two main islands in the group, namely Cave Island, and leave the larger one unnamed). It was mapped by the British in 1968, by the Chileans in 1971, by the Argentines in 1980, and by the Bulgarians in 2005 and 2009. On Dec. 6, 2010, the Bulgarians gave it their own name, Zverino Island, after the settlement of Zverino, in western Bulgaria.

Meade Islands. 62°27' S, 60°04' W. A group of two tiny islands and attendant rocks in the middle of the N entrance to McFarlane Strait, between Greenwich Island and Livingston Island, in the South Shetlands. The main island, Isla Meade, rises to a height of about 80 m, and is ice-free in summer. The eastern and second largest, is Cave Island (q.v.). These islands, as well as the Zed Islands, were roughly charted by early sealers, in the 1820s, and were all given the collective name of The Dunbars, after Capt. Thomas Dunbar (q.v.). Personnel on the *Discovery II* in 1934-35 re-charted the two groups, separated them (as it were), and renamed this one for C.M. Meade, cartographer-in-charge at the Admiralty's hydrographic office. As such, they appear on a British chart of 1937. UK-APC accepted this situation on Sept. 8, 1953, and US-ACAN followed suit that year. They appear in the British gazetteer of 1955, and were photographed aerially by FIDASE 1956-57. In the meantime, in 1946, the group appeared on an Argentine chart, as Islas Meade, and that is what the Argentines continue to call this feature. A 1953 Chilean chart shows it as Islotes Meade, and the Chileans still refer to the group that way. Last plotted by the UK, in late 2008.

Meade Nunatak. 80°23' S, 21°58' W. Rising to 990 m, 5 km N of Blanchard Hill, on the Pioneers Escarpment, in the E part of the Shackleton Range. Photographed aerially by USN in 1967, and surveyed by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Charles Francis Meade (1881-1975), British mountain climber and designer of the Meade tent. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Meads Peak. 83°45' S, 57°08' W. Rising to 1165 m, 0.8 km off the NW end of Hudson Ridge, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from their own ground surveys conducted in 1963-64, and from USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Edward C. Meads, construction driver who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

The *Meander*. A 2-masted Dutch yacht, skippered by Eef Willems, which visited the Antarctic Peninsula in 1998-99 and 1999-2000. Miss Willems has been in South Georgia many times, studying animal populations. For 10 years, she also skippered the *Tooluka*.

Meander Glacier. 73°16' S, 166°55' E. A large glacier, about 55 km long, which emerges in the slopes of Mount Supernal, in the area of Hobbie Ridge, then flows in a meandering manner through the Mountaineer Range, at first in a southwestward direction, then in a generally southern direction, then it changes course to the E and finally the NE, to enter Mariner Glacier just E of Engberg Bluff, in Victoria Land. Named descriptively by NZGSAE 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Mear, Roger Paul. b. 1950, Birmingham. One of Britain's leading mountain climbers, he was with BAS in Antarctica in 1980-81, at Rothera Station, when he met Robert Swan. He joined Swan's In the Footsteps of Scott Expedition of 1985-86, and was one of the 3 men who skied to the Pole during the expedition.

Meares, Cecil Henry. b. 1877, Inistioge, County Kilkenny, Ireland, son of Scottish army

officer, Henry John Meares and his wife Martha Eleanor. From the age of 19 he was in Russia, as a fur trader, and observed the Russo-Japanese War, and he fought with the Scottish Horse in the South African War. After even more adventures in Russia, he was taken on by Scott for BAE 1910-13 because of his Russian and dog skills. He bought (and was the manager of) the dogs and Manchurian ponies for the expedition. After the expediton, he lived in Edinburgh, and on Feb. 6, 1915, in London, he married Annie Christina Spengler. During World War I he became a lieutenant colonel in the Royal Flying Corps, and later, with his wife, moved to Victoria, British Columbia, where he died on May 12, 1937.

Meares Cliff. 71°12' S, 168°25' E. A steep, angular coastal cliff, rising to 600 m (the New Zealanders say 268 m), about 3 km E of Ponting Cliff, and 9 km WNW of Nelson Cliff, along the N coast of Victoria Land. Charted by Campbell's Northern Party during BAE 1910-13, and named by Campbell for Cecil Meares. US-ACAN accepted the name in 1947.

Mechanics Bay. 68°52' S, 69°20' E. A deep reentrant of the ice shelf into the ice plateau, on the W side of the Amery Ice Shelf. Photographed by ANARE aircraft in 1956. First traversed in Nov. 1962 by an ANARE party led by Dave Carstens, in a Snocat while on a reconnaissance to determine a route to the Amery Ice Shelf for heavy transport. Named by ANCA for the men and vehicles of that party.

Mechnikov Peak. 71°37' S, 11°28' E. A prominent peak, rising to 2365 m, at the base of the spur separating Schüssel Cirque (in the N) from Grautskåla Cirque, in the N part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938-39, and plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Remapped again by SovAE 1960-61, and named by the USSR in 1966 as Gora Mechnikova, for geographer Lev Il'ich Mechnikov (1838-1888). US-ACAN accepted the name Mechnikov Peak in 1970. The Norwegians call it Mechnikovfjellet.

Gora Mechnikova *see* **Mechnikov Peak**

Nunataki Mechnikova *see* **Picciottoknausane**

Mechnikovfjellet *see* **Mechnikov Peak**

Medals. In 1857 the UK instituted an Arctic medal. BNAE 1901-04 forced the name change to the Polar Medal (also called the Imperial Polar Medal), and it was awarded to all those who had served on that expedition (i.e., Scott's first expedition). Silver to the regular expedition, and bronze to the relief ship members. Same thing for Shackleton's BAE 1907-09. In 1939 bronze was discontinued. Until 1954 anyone from any sort of Commonwealth expedition (i.e., government-sponsored or private), could win a Polar Medal, but that was changed to government only. Until 1968 anyone who participated in a government-backed expedition from anywhere in the Commonwealth, got a Polar medal, but since that date it has been awarded only to select British persons. As too many medals were being awarded, thus diluting their value, the criteria were revised in 1970 and 1998. At the time of writing this entry (2008), 880 silver and 245 bronze have been awarded to Antarctic expeditioners. The obverse of the current medal has the queen's image, and the reverse has an Antarctic scene, with men and dogs. The U.S. government has presented 4 different medals for Antarctic service, but now presents only one — the Antarctica Service Medal. On its obverse is a man standing in a determined manner, dressed in polar clothing, and to his left and right are the words, "Antarctica" and "Service." The reverse shows the words, "Courage," "Sacrifice," and "Devotion," one on top of the other, in that order, on an outline polar projection of the continent, all encircled by a border of penguins and marine life. This medal was awarded to all U.S. forces personnel who served in Antarctica from Jan. 1, 1946 onwards. It is only in bronze, but clasps attachable to the suspension ribbon distinguish people who have wintered-over in Antarctica. A bronze clasp means one winter, a silver clasp two winters, and a gold clasp three or more winters. The ribbon has outer bands of dark blue which represent five-twelfths of the Antarctic year, i.e., night. The center portion graduates inward until there is a very light band, representing increasing lightness leading to aurora australis. The first medal for Antarctica (exclusively) was the Byrd Antarctic Expedition Medal, designed in 1930 by Francis H. Packer, which was approved by Congress on May 23, 1930. The obverse shows Byrd in a parka, holding a ski pole, with ice formations to left and right. The reverse bears a sailing ship on top of the inscription, "presented to the officers and men of the Byrd Antarctic Expedition to express the high admiration in which the Congress and the American people hold their heroic and undaunted services in connection with the scientific investigations and extraordinary aerial explorations of the Antarctic continent." Below that is a tri-motored airplane. The ribbon has a saxe blue center vertical band on an eggshell field. 66 gold, 7 silver, and 9 bronze were issued by the secretary of the Navy. Gold was for full-time expedition members, silver for those who were not in at the start but were at the finish, and bronze for those who were in at the start but not at the finish. The Second Byrd Antarctic Expedition Medal was approved by Congress on June 2, 1936, was silver, and was presented to those who wintered-over, as well as tho the commanders of the *Bear of Oakland* and the *Jacob Ruppert*. Byrd recommended 57 recipients. The obverse portrays Byrd, and the reverse has an inscription similar to the 1930 medal, and is surrounded by an airplane on top, a sailing ship to the right, a dog team at bottom with a sledge, and radio towers on left. It was designed by Heinz Warneke. The ribbon is all-white grosgrain. The U.S. Antarctic Expedition Medal 1939-41 was authorized by Congress on Sept. 24, 1945. 60 gold medals were awarded to men who wintered-over, 50 silver medals to men who had spent the summers 1939-40 and 1940-41, and 50 bronze medals to those who had only one summer. The obverse shows Antarctica on a partial globe, with the words, "Science, Pioneering, Exploration," with the name of the expedition around the circumference of the medal. The reverse has an inscription similar to that of the two previous medals. The ribbon has wide bands of sistine blue at each edge, and a white center band, on which are thin stripes of Old Glory red. In 1970 the USSR Academy of Sciences struck a medal commemorating the 150th anniversary of von Bellingshausen's voyage. The obverse shows von Bellingshausen and Lazarev, and their two famous ships. On the reverse is a map of Antarctica with the cruise tracks of that 1819-21 expedition. In 1987 Australia instituted its own Australian Antarctic medal. On Sept. 1, 2006, the New Zealand Antarctic Medal came into being. For religious medals, *see* **Churches**. The subject of Antarctic medals is too vast to cover in an encyclopedia. One may recommend Col. Poulsom's book on the subject (see Bibliography), and anything written by Glenn Stein.

Medåsen. 71°51' S, 11°49' E. A hill in the S part of the Humboldt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "the landmark hill"). *See also* **Gora Berëzkinyh**.

Medea Dome. 66°11' S, 62°03' W. A snow and ice dome rising to 350 m, it marks the E end of Philippi Rise, near the base of Jason Peninsula, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by Fids from Base D in June 1953. In association with Jason Peninsula, it was named by UK-APC on Sept. 4, 1957, for the Greek mythological female involved with Jason. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Medhalsen *see* **Medhalsen Saddle**

Medhalsen Saddle. 72°09' S, 3°10' E. An ice saddle just S of Risemedet Mountain, and W of Tønnesenbreen, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Medhalsen (i.e., "the landmark neck"). US-ACAN accepted the name Medhalsen Saddle in 1966.

Medhovden *see* **Medhovden Bluff**

Medhovden Bluff. 72°01' S, 3°18' E. A high, ice-covered bluff, with a steep E rock face, it is the most easterly precipice of Risemedet Mountain, and forms the NE end of that feature, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Medhovden (i.e., "the landmark bluff"). US-ACAN accepted the name Medhovden Bluff in 1966.

Isla Media Luna *see* **Half Moon Island**

Playa Media Luna *see* **Half Moon Beach**

Median Ridge. 64°59' S, 62°50' W. A porphyrite ridge descending from the Forbidden Plateau, dividing into two the head part of Petzval Glacier, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named descriptively by the Poles on Sept. 1, 1999.

Median Snowfield. 83°30' S, 52°30' W. A large snowfield, rising to an elevation of about 1450 m above sea level, between the Torbert Escarpment (which is in the Neptune Range) and the S part of the Forrestal Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and from 1964 USN air photos. Named by US-ACAN in 1968, for its position between the Forrestal Range and the Neptune Range. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Mount Medina. 68°27' S, 66°15' W. A prominent ice-covered mountain, rising to 1845 m, in the NE corner of the Hadley Upland, it overlooks the head of Gibbs Glacier, on the Fallières Coast, on the W coast of Graham Land. Photographed (using trimetrogon aerial photography) on Nov. 27, 1947, by RARE 1947-48, and surveyed from the ground by Fids from Base E in 1958. Named by UK-APC on Aug. 31, 1962, for Pedro de Medina (1493-1567), Spanish cosmographer royal, who wrote *Arte de Navigar* in 1645, an important manual of navigation. US-ACAN accepted the name later in 1962.

Nunatak Medina. 66°11' S, 61°39' W. One of a group of several nunataks on Jason Peninsula, on the E coast of the Antarctic Peninsula. Named by the Argentines.

Medina, José F. *see* **Órcadas Station**, 1948

Medina Peaks. 85°36' S, 155°54' W. Rugged, mainly ice-free peaks surmounting a ridge 24 km long, and extending N along the E side of Goodale Glacier, to the edge of the Ross Ice Shelf. Parts of them were discovered and roughly mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Guillermo Medina, technical director of the U.S. Navy Hydrographic Office, 1954-60, and of the Naval Oceanographic Office, 1960-64.

Islote Medio *see* [1]**Middle Island**

Valle Medio *see* **San Martín Glacier**

Rocas Medley *see* **Medley Rocks**

Medley Ridge. 77°32' S, 160°11' E. A rock ridge extending NE from Mount Fleming to the S margin of Wright Upper Glacier, in Victoria Land. Named by US-ACAN in 2004, for David Medley, PHI (Petroleum Helicopters Inc.) helicopter mechanic with USAP in 8 consecutive field seasons from 1996-97.

Medley Rocks. 62°58' S, 56°01' W. A group close off the NE side of d'Urville Island, in the Joinville Island group. Roughly surveyed by Fids from Base D in 1953-54, and photographed aerially by FIDASE 1956-57. Named by UK-APC on Sept. 4, 1957, for the medley of reefs and rocks in this group. The feature appears on a British chart of 1962. US-ACAN accepted the name in 1963. The Argentines call them Rocas Medley or Islotes Mom. The largest of this group is Islote Mom.

Medmulen *see* **Medmulen Spurs**

Medmulen Spurs. 72°01' S, 3°08' E. A group of rock spurs extending from the N side of Risemedet Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Medmulen (i.e., "the landmark snout"). US-ACAN accepted the name Medmulen Spurs in 1966.

Medusa *see* **Medusa Peak**

Medusa Lake. 68°35' S, 78°15' E. A slightly brackish lake, occupying 16 hectares, and with a shoreline 3.5 km long, in the Vestfold Hills. It is the same height as the adjacent Ephyra Lake to which, in Dec. 1992 and in 1994 (anyway), it was joined by a shallow (about 0.5 m) and narrow (about 1 m) connection. Since then, it has been observed that the 2 lakes are most often separated, rather than connected, by the connection. First mapped on the original 1958 map of the Vestfold Hills, it was known for years as Medusa Lake before it was named by ANCA on May 1, 2006, for its rather brooding appearance, bringing to mind the Gorgon of greek mythology, and also because its shape does remind one of a Medusa jellyfish. Ephyrae are the juvenile forms of such Medusae. *See* **Ephyra Lake** for more information on this feature.

Medusa Peak. 79°38' S, 157°25' E. A dolerite intrusion with east-facing cliffs and a dark, somewhat menacing appearance, rising to 1700 m, SE of Perseus Peak, it is the highest peak on Tentacle Ridge, and has long debris ridges extending W to Darwin Glacier, in the Cook Mountains. Named by US-ACAN in 2000, for Medusa, the Gorgon of Greek mythology. NZ-APC accepted the name on Feb. 20, 2001. The Australians call it simply Medusa.

Medvecky Peaks. 70°34' S, 67°38' E. A group of peaks rising from the NW part of Loewe Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Plotted from ANARE aerial photographs. Named by ANCA for Alex Medvecky, geologist with the ANARE Prince Charles Mountains Survey in 1969. US-ACAN accepted the name in 1973. *See also* **Bainmedart Cove**, and **Pagodroma Gorge**.

Medven Glacier. 62°33' S, 60°43' W. The glacier bounded by the E slopes of Oryahovo Heights, and flowing for 2.5 km in an E-W direction, then 1.8 km in a N-S direction, to enter Hero Bay between Remetalk Point and Agüero Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, after the settlement of Medven, in the eastern Balkan Mountains of Bulgaria.

Meehan, William John "Bill." b. May 3, 1927, Belfast, son of newspaper art editor John Berryhill Meehan and his wife Dorothy. At the age of 8 he moved to London with his mother (who would remarry a gentleman by the name of John Stuart), and during World War II was evacuated to Towcester, Northants. He left school at 16, lied about his age, and in Jan. 1944 joined the Army for a 7-year term (which wound up being 8). He was in the Armored Corps, but an eye problem manifested itself during tank crew training, and he moved to Signals. Most of his 18 months in the wartime army was spent in training, and then in Aug. 1945 he was shipped out to the Far East to take part in Operation Zipper (in Malaya, Java, and surrounding locales), and then the atom bombs exploded over Japan, ending the war. He went to India, spending a year on the Northwest Frontier, then to Thessalonika, in Greece, for the winter of 1946-47, and then on to Palestine for 1947-48, being among the last British troops there before it became Israel. After a stint in the Canal Zone (Suez), he worked at the War Office in England for 3 years, and during that time applied for FIDS in 1950, but the Army wouldn't let him go. It took Frank Elliott to get him out (he came out of the army as a sergeant), in Oct. 1951, and he joined FIDS as a radio operator. On Jan. 1, 1952 he flew out to Montevideo, caught the *Fitzroy* from there to Port Stanley, and the *John Biscoe* from there to Base D. From Base D he went to Base G as base leader for the winter of 1952. In 1953 the *John Biscoe* came to pick him up, and took him to Port Lockroy Station for a month, where he helped erect the new ionosphere machine. Finally the *Biscoe* came back, and took him to Port Stanley, where he took over the job as the ship's radio officer from long-time radio operator Bill Bonner, who was quitting for a high-paying job on whale catchers. Meehan served as such until the *Biscoe* arrived back in Southampton on June 11, 1953, to take part in the Pithead review (it being Coronation year). He married Roberta "Robbie" Britton in Essex that year, and was then at Marconi for 39 years, until he retired in 1992. He became a consultant, and both before and after 1992 was in the USA many times, involved during some of that time with Voice of America. He retired to Essex.

Canal Meek *see* **Meek Channel**

Meek Channel. 65°15' S, 64°15' W. A narrow channel running NW-SE, and separating Galíndez Island (to the SW) from Grotto Island and Corner Island (both to the NE), in the Argentine Islands of the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named by them for yachtsman William McCarter Meek, marine architect and surveyor who helped ready the *Penola* for the expedition. It appears on a British chart of 1947. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears on an Argentine chart of 1958, as Canal Meek, and that is what the Argentines still call it, as do the Chileans (it appears as such in their 1974 gazetteer).

Mount Meeks. 86°13' S, 148°51' W. Rising to 2470 m, it surmounts the rocky divide between Griffith Glacier and Howe Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Harman Taylor Meeks (known as Taylor) (b. Feb. 9, 1936, Johnson City, Tenn.),

who entered the U.S. Navy in Jan. 1959, and who was a VX-6 aircraft navigator in Antarctica, during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). He retired from the Navy in April 1984.

Meeley Automatic Weather Station. 78°30' S, 170°12' E. On the Ross Ice Shelf, due E of Minna Bluff, at an elevation of 49 m. An American AWS, it operated from Dec. 4, 1980 until Dec. 31, 1985. It was removed on Jan. 26, 1986. Named for a helo pilot.

Mefford Knoll. 76°01' S, 136°16' W. A rocky knoll or ledge on the lower W slopes of the Mount Berlin massif, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Michael Mefford, a member of the USARP team which studied ice sheet dynamics in the area to the NE of Byrd Station in the summer season of 1971-72.

Mefjell *see* **Mount Griffiths, Mefjell Mountain**

Mount Mefjell *see* **Mefjell Mountain**

Mefjell Glacier. 71°58' S, 25°00' E. A glacier, 8 km long, flowing NW into Gjel Glacier, between Menipa Peak (to the N) and Mefjell Mountain (to the S), in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from aerial photos taken during OpHJ 1946-47, and named by them as Mefjellbreen. Although this name does, strictly speaking mean "the middle mountain glacier," that was not the Norwegian intention, being named by them in association with Mefjell Mountain. So, the name is best translated as "Mefjell Glacier," which was the name accepted by US-ACAN in 1966.

Mefjell Mountain. 72°05' S, 25°03' E. Also called Middle Mountain, and Mount Mefjell. A large mountain rising to 3080 m, 8 km W of Mount Bergersen, in the central part of the Sør Rondane Mountains. Photographed by LCE 1936-37, and mapped 10 years later by Norwegian cartographers, being named by them as Mefjell (i.e., "middle mountain"), because of its central location in the Sør Rondanes. It was mapped again in 1957 by the same country's cartographers, but this time from photos taken by the Americans during OpHJ 1946-47. US-ACAN accepted the name Mefjell Mountain in 1953.

Mefjellbreen *see* **Mefjell Glacier**

Mega A *see* **Megadunes A**

Mega B *see* **Megadunes B**

Megadunes A. 80°53' S, 124°31' E. Also called Zoe, and Mega A. An American automatic weather station, installed on the Polar Plateau, at an elevation of 2881 m. The name Zoe was after a graduate student.

Megadunes B. 80°47' S, 124°26' E. Also called Little Mac, and Mega B. An American automatic weather station, installed on the Polar Plateau, at an elevation of 2884 m.

Megalastris Hill *see* **Megalestris Hill**

Colina Megalestris *see* **Megalestris Hill**

Colline des (de) Mégalestris *see* **Megalestris Hill**

Megalestris Hill. 65°11' S, 64°10' W. A rocky hill, rising to 35 m, in the S part of Petermann Island, in the Wilhelm Archipelago, off the Graham Coast, on the the W side of Graham Land. First charted by FrAE 1908-10, and named by Charcot as Colline des Mégalestris, for the megalestris (an archaic name for the South Polar skua—*see* **Skuas**). A cairn with a plaque was erected there. It appears (spelled wrong) on a 1930 British chart, as Megalastris Hill, and on a 1937 French chart as Colline de Mégalestris. UK-APC accepted the name Megalestris Hill on Sept. 8, 1953, and US-ACAN followed suit that year. It appears on a 1953 Argentine chart as Colina Megalestris, and that is still the name the Argentines use today, as do the Chileans. Photographed aerially by FIDASE 1956-57, and surveyed from the ground by Fids from Base J in 1957-58.

Megaptera Island *see* **Huemul Island**

Islotes Megaw *see* **Megaw Island**

Megaw Island. 66°55' S, 67°36' W. The most northeasterly of the Bennett Islands, in Hanusse Bay, on the Loubet Coast, on the W coast of the Antarctic Peninsula. Mapped from air photos taken by RARE 1947-48 and by FIDASE in 1956-57. In keeping with the trend for naming certain features in this area after glaciologists, this island was named by UK-APC on Sept. 23, 1960, for Helen Dick Megaw (1907-2002), British physicist and crystallographer who, in 1934, made accurate measurements of the cell dimensions of ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call this feature Islotes Megaw.

Mehaugen *see* **Mehaugen Hill**

Mehaugen Hill. 71°44' S, 25°33' E. A mountain crag, it is the central hill in the group at the E side of Kamp Glacier, on the W side of Byrdbreen, in the N part of the Sør Rondane Mountains. Photographed by LCE 1936-37, and mapped 10 years later by Norwegian cartographers using these photos. Norwegians also mapped it again, in 1957, using photos taken by the Americans during OpHJ 1946-47, and they named it Mehaugen (i.e., "the middle hill"). US-ACAN accepted the name Mehaugen Hill in 1966.

Meholmane *see* **Jocelyn Islands**

Meholmen *see* **Meholmen Island**

Meholmen Island. 68°58' S, 39°32' E. An islet midway between Ongul Island and Utholmen Island, in the Flatvaer Islands, at the E side of the entrance to Lützow-Holm Bay, off the Prince Olav Coast. Photographed by LCE 1936-37, and mapped in 1947 from these photos by Norwegian cartographers, who named it Meholmen (i.e., "the middle island"). US-ACAN accepted the name Meholmen Island in 1968.

Cabo Meier *see* **Meier Point**

Cap Meier *see* **Meier Point**

Cape Meier *see* **Meier Point**

Meier Peak. 71°51' S, 168°40' E. Rising to 3450 m, at the S side of the head of Ironside Glacier, 6 km SSW of Mount Minto, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Cdr. Miron D. Meier, USNR, VX-6 helicopter pilot in Antarctica during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68).

Meier Point. 60°38' S, 45°54' W. Forms the W side of the entrance to Norway Bight, on the S side of Coronation Island, in the South Orkneys. Named before 1912-13, when Petter Sørlle listed it as Cape Meier on his chart of that year. The origin of the name Cape Meier is obscure, but may well have been called that for decades, perhaps even close to a century, and may possibly be a misspelling for John Miers (*see* **Miers Bluff**). Interestingly, it appears on Sørlle's 1930 chart as H. Hansenpynten ("H. Hansen's Point"), but this may be in error for Cape Hansen (q.v.). The feature appears on an Argentine chart of 1933 as Cabo Meier, and that is what the Argentines call it today (the Spanish language is less particular than the English language about the difference between a "cabo" and a "punta," even though there is a difference). The feature was re-charted by the Discovery Investigations in 1933, and appears as Cape Meier on their chart of 1934, and on a French chart of 1937, as Cap Meier. US-ACAN accepted the name Cape Meier in 1952, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the British gazetteer of 1955. Fids from Signy Island Station surveyed it between 1956 and 1958, and determined it to be a point, rather than a cape. UK-APC amended the name to Meier Point on July 7, 1959, and US-ACAN followed suit in 1963.

Meier Valley. 67°08' S, 67°24' W. A valley running NE-SW between Shumskiy Cove and Hinks Channel, close E of Mount St. Louis, on Arrowsmith Peninsula, on the Loubet Coast, on the W side of Graham Land. It was partly surveyed from the S by Fids from Base E, in 1948-50, and photographed from the air by FIDASE in 1956-57. From these combined efforts it was plotted by FIDS cartographers in 67°10' S, 67°24' W. In keeping with the practice of naming certain features in this area for glaciologists, this valley was named by UK-APC on Sept. 23, 1960, for Mark Frederick Meier (b. 1925), USGS geologist and glaciologist who, in 1952, made the first detailed study of strain all over the surface of a glacier (on Saskatchewan Glacier, in Alberta). US-ACAN accepted the name in 1965. It was later replotted.

Meihua Shandi. 69°24' S, 76°08' E. A hillock in the Larsemann Hills. Named by the Chinese.

Meiklejohn, Ian Forbes. b. July 16, 1907, Tendring, Essex, son of well-known ortnithologist Lt. Col. Ronald Forbes Meiklejohn and his wife Kathleen Stella Myberg. British Army signals lieutenant from 1927 (after Wellington and Woolwich), based at Catterick Camp, in Yorkshire, loaned by the Army Council to BGLE 1934-37 as their radioman. He also ran the camera during the aerial surveys. He married Ethel Spillane "Betty" Russell in 1937, in Kensington, lived in London, and was promoted to captain that year. He retired as a lieutenant colonel to

Deer Close, near Leyburn, Yorks, and died on Dec. 26, 1977.

Meiklejohn Glacier. 70°33' S, 67°44' W. A glacier, 20 km long and 6 km wide, flowing SW from the Dyer Plateau, in Palmer Land, into George VI Sound, immediately S of Moore Point. In its lower reaches, the S side of this glacier merges with Millett Glacier. First surveyed from the ground and photographed aerially in Oct. 1936, by BGLE 1934-37, and plotted by them in 70°26' S, 67°22' W. Further surveyed in Oct. 1949, by Fids from Base E. Named by UK-APC on March 31, 1955, for Ian Meiklejohn. US-ACAN accepted the name later in 1955. It has since been replotted. On March 1, 1968, a BAS Pilatus Porter airplane was abandoned near a nunatak at the head of this glacier.

Glaciar Meinardus *see* **Meinardus Glacier**

Meinardus Glacier. 73°22' S, 61°55' W. An extensive glacier flowing in an ENE direction to a point immediately E of Mount Barkow, where it is joined from the NW by Haines Glacier, and then it flows E to enter New Bedford Inlet close W of Court Nunatak, on the Lassister Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by USAS 1939-41. It appears on a 1943 U.S. Hydrographic Office chart. In Nov. 1947 it was photographed from the air by RARE 1947-48, and in Dec. 1947 was surveyed from the ground by, and charted by, a combined sledging team of RARE and Fids from Base E. Named by FIDS in 1947 for Wilhelm Meinardus (1867-1952), German geographer, meteorologist, and climatologist, who drew up the meteorological results of von Drygalski's expedition of 1901-03. In this report, he drew attention to what later became known as the Antarctic Convergence. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955, plotted in 73°23' S, 62°37' W. It was replotted by USGS from USN air photos taken between 1966 and 1969, and appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears on a 1966 Chilean map, as Glaciar Meinardus.

Meiney, John *see* **USEE 1838-42**

Meinhardtgipfel. 71°09' S, 164°35' E. A peak in the area of Mount Mulach, on the E side of the Posey Range, in the Bowers Mountains. Named by the Germans.

Mount Meister. 74°14' S, 162°47' E. Rising to 2520 m, on the W side of Priestley Glacier, it surmounts the N end of Nash Ridge, in the Eisenhower Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Laurent Justin Meister (b. 1936), geologist at McMurdo in 1965-66.

Mekammen *see* **Central Masson Range**

Mekammen Crest *see* **Central Masson Range**

Meknattane *see* **Meknattane Nunataks**

Meknattane Nunataks. 69°48' S, 75°12' E. A massive ridge with a cluster of broken rock outcrops to the S and E, on the E side of Polarforschung Glacier, where that glacier flows into Publications Ice Shelf, on the Ingrid Christensen Coast. Mapped by Norwegian cartographers in 1946, from aerial photos taken by LCE 1936-37, and named by them as Meknattane (i.e., "the middle crags"). Also photographed aerially by OpHJ 1946-47. The geology of this feature was investigated by Ian McLeod, during the Prince Charles Mountains Survey, in Jan. 1969. US-ACAN accepted the name Meknattane Nunataks in 1973.

Mel *see* **Mel Moraine**

Mel Moraine. 71°53' S, 9°18' E. At the N end of the Gagarin Mountains, in the Orvin Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Mel (i.e., "meal"). US-ACAN accepted the name Mel Moraine in 1970.

Melaerts, Jules L. b. June 21, 1876, Brussels. He had been in the Belgian Navy, but was a merchant seaman when he served in that capacity on the *Belgica*, during BelgAE 1897-99. He moved to Antwerp, stayed in the Merchant Navy, and became 3rd officer on the *Zeeland*, which left Antwerp, bound for NY, on Dec. 31, 1904. He arrived in New York on Jan. 8, 1905, and with the rest of the crew proceeded to Philadelphia to pick up the Red Star Line ship *Nederland*. He later commanded a training ship, and eventually commanded the port of Zeebrugge.

Mount Melania. 78°07' S, 166°08' E. A prominent rounded mountain (really a hill), rising to 330 m, near the N end of Black Island, in the Ross Archipelago. It was first climbed by Bernacchi and Ferrar during BNAE 1901-04. Ferrar examined the rocks, and recorded the height as 274 m. Named by NZGSAE 1958-59. Melania is a Greek word meaning an ink blob, an apt name for such a rounded hill on an island called Black Island. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Melania Ridge. 78°09' S, 166°17' E. A basalt ridge running SE for 5 km from Mount Melania, Black Island, in the Ross Archipelago. Named by US-ACAN in 1999, in association with Melania Mountain. NZ-APC accepted the name on Nov. 4, 1999.

Melba Peninsula. 66°31' S, 98°18' E. A broad, ice-covered peninsula, between Reid Glacier and the Bay of Winds, fronting on the Shackleton Ice Shelf, Queen Mary Land. Discovered by AAE 1911-14, and named by Mawson for Nellie Melba (1861-1931; right name Helen Porter Mitchell), the Australian opera soprano and a patron of the expedition. In 1918 Nellie and May Whitty became the first entertainers to be created Dames of the British Empire. US-ACAN accepted the name.

Melbert Rocks. 78°02' S, 155°07' W. Rock outcrops close NW of Mount Paterson, in the Rockefeller Mountains, on Edward VII Peninsula. Discovered during ByrdAE 1928-30. Named by US-ACAN in 1971, for George W. Melbert, USN, who wintered-over as utilitiesman at Byrd Station in 1966.

Mount Melbourne. 74°21' S, 164°42' E. A massive and conspicuous dormant volcanic cone, rising to 2730 m (the New Zealanders say 2590 m), at the back of Cape Washington, and surmounting the projection of the coast between Wood Bay and Terra Nova Bay, in Victoria Land. A beautiful sight, it is the most magnificent landmark on this part of the coast, and is part of the McMurdo Volcanics, and last exploded probably in 1837. The crater is 1100 yards across, and Cryptogam Ridge is on top of it. First sighted in Jan. 1841 by Ross, who first named it Mount Etna (because of its striking resemblance to the Sicilian volcano), but renamed by Ross for William Lamb, 2nd Viscount Melbourne (1779-1848), the very supportive British prime minister, 1835-41, when RossAE was being planned. Like everyone else, US-ACAN accepted the name. The mountain was first climbed in Jan. 1967, by a NZ party, and subsequently by NZ parties in Dec. 1972 and Nov. 1984. Several other parties have since gone up. The summit was designated SSSI #24, and is special for its microflora and microfauna.

Melchior Archipelago *see* **Melchior Islands**

Melchior Channel *see* [1]**Dallmann Bay**, **Schollaert Channel**

Melchior Harbor. 64°19' S, 62°59' W. A small harbor, W of The Sound, in Dallmann Bay, in the Melchior Islands, in the Palmer Archipelago, it is formed by the semicircular arrangement of Delta Iaand and Alpha Island (to the N), Beta Island and Kappa Island (to the W), and Gamma Island (to the S). Roughly surveyed by Discovery Investigations personnel in 1927, it appears on their chart of 1929. It may have been they who named it. It is certainly named in association with the island group. John Chaplin, a surveyor with the Discovery Investigations, referred to it in 1932 as Melchior Anchorage, and it appears on a French map of 1937 as Port Melchior. It was re-surveyed by the Argentines in 1942, 1943, and 1948, and it makes its first appearance as Puerto Melchior on an Argentine chart of 1946. The Argentines still call it Puerto Melchior, as do the Chileans (it appears as such in their 1974 gazetteer), despite a 1947 Chilean chart which shows it as Bahía Melchior. It appears (spelled wrong) on a U.S. Hydrographic Office chart of 1943, as Melchoir Harbor, but on one of their subsequent charts (1947) it appears correctly, as Melchior Harbor. UK-APC accepted the name Melchior Harbour, on Sept. 8, 1953, and it appears as such in the British gazetteer of 1955, and on a British chart of 1956. US-ACAN accepted the name Melchior Harbor in 1956.

Melchior Island *see* **Melchior Islands**

Melchior Islands. 64°19' S, 62°57' W. A group of many low, ice-covered islands and rocks, near the center of Dallmann Bay, in the Palmer Archipelago. Discovered (but not named) by Dallmann in Jan. 1874. The group was next sighted in 1904, by FrAE 1903-05, who roughly charted it. Charcot named what he thought was the large easternmost island in the group as Île Melchior, for Vice Admiral Jules-Bernard-François Melchior (1844-1908) of the French Navy, in command at Brest, who, in Aug. 1903, when FrAE left that port, provided a tug for the expedition ship *Français*. However, later surveys proved Charcot's Île Melchior to be two islands, now called Eta Island and Omega Island (a 1913 map shows these two islands as a combined island, Gerit Eiland, named after Dirck Gerritsz — a name that did not catch on). The group appears as Melchior Island (sic) on a British chart of 1908, and (spelled wrong), on a British chart of 1909, as Melchion Island. In 1909 the group was charted again, by FrAE 1908-10, and the name Îles Melchior was applied to the entire group. Roughly surveyed and sketched in 1927 by the Discovery Investigations team, the feature appears on their 1929 chart as Melchior Archipelago. Re-surveyed by Argentine expeditions in 1942, 1943, and 1948. The term Melchior Archipelago (seen, for example, on a 1937 French chart as Archipel Melchior, and on a 1946 Argentine chart as Archipiélago Melchior) was used for the group until at least 1947 (when it last appears as such on a British chart), and divided into 2 parts, the East Melchior Islands and the West Melchior Islands, the two groups being divided by The Sound, and Eta Island and Omega Island forming the nucleus of the E part. In the late 1940s, the feature was re-defined as the Melchior Islands — pure and simple, a group within the Palmer Archipelago, and as such, it appears on a British chart of 1951. In 1949 it appears on a Chilean chart as Grupo Melchior. US-ACAN accepted the name Melchior Islands in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1956. It appears in the Chilean gazetteer of 1974 as Archipiélago Melchior. Photographed aerially by USN in 1968-69. Other islands include Alpha Island, Beta Island, Gamma Island, Delta Island, Epsilon Island, Theta Island, Kappa Island, Lambda Island, Omicron Islands, Rho Islands, Sigma Islands, Tau Islands, and Psi Islands.

Melchior Station. 64°20' S, 62°59' W. Known officially as Destacamento Naval Melchior (Naval Detachment Melchior), it is more commonly known as Base Melchior. The second Argentine scientific station to be built in Antarctica (*see* **Órcadas Station**), it was situated 8 m above sea level on Gamma Island, in the Melchior Islands (or Melchior Archipelago, as it was called when the station was built). **Jan. 31, 1947**: Building began. **March 31, 1947**: The station was opened. Primarily a meteorological station, its first leader was Juan Alberto Nadaud, in the early months of 1947. Back then it had 6 buildings to accommodate 9 persons. **1947 winter**: Teniente de fragata Juan Alberto Nadaud (leader), Teniente de fragata Óscar Oliva Otero, Aldo H. Venaría and Juan Gesualdi (cabos principales), Carlos Sarachu (cabo primero), Rubén Ercole and Victor C. Flores (cabos segundos), Enrique Fernández (marinero de primera), and Osvaldo Gondra (civilian). **1948 winter**: Leonardo Roque de Costillas (leader). **1949 winter**: Pablo U. Marinelli (leader). **Jan.-April 1950**: Arturo Chichero (leader). **1950 winter**: José Ángel Alvárez (leader). **Jan.-April 1951**: José Ángel Álvarez (leader). **1951 winter**: Bernardino Mena (leader). **1952 winter**: Daniel L.A. Canova (leader). **1953 winter**: Jorge Anaya (leader). **1954 winter**: Heli Saint-Jean (leader). **1955 winter**: Luis J. Etcheves (leader). **1956 winter**: Eduardo Massoco (leader). **1957 winter**: Ariel A. Giuntini (leader during IGY, when the station studied meteorology, glaciology, and oceanography). **1958 winter**: Luis O. Ventimiglia (leader). **1959 winter**: Carlos Beis (leader), **1960 winter**: Pedro Sciumbre (leader). **1961 winter**: Eduardo A. Gómez (leader). **Nov. 30, 1961**: the station was closed. **1964-65 summer**: the base was re-opened. **1965 winter**: Eduardo Cueli (leader). The station was closed after the 1965 winter. **1968-69 summer**: the station was re-opened. **1969 winter**: Norberto E. Vigo (leader). The station was closed after the 1969 season. However, it was being used again in the 2000s.

Melchoir Archipelago *see* **Melchior Islands**

Melchoir Harbor *see* **Melchior Harbor**

Melcon Peak. 77°27' S, 160°25' E. An ice-covered, wedge-shaped peak rising to about 2500 m, with an exposed rock on its S side, 1.6 km S of Shapeless Mountain, in Victoria Land. Named by US-ACAN in 2004, for Mark Bernard "Commander" Melcon (b. Dec. 19, 1950, Sacramento, Calif.), a McMurdo carpenter who did a legendary 23 field seasons in Antarctica. NZ-APC accepted the name on Nov. 30, 2004. "The first time you come down [to Antarctica], it's for the adventure. The second time, it's for the money, and if you come after that, it's because the people here have become your family." He also did 8 seasons in Greenland, and one in Alaska.

Meldrum, John Charles. b. 1881, Mauritius, son of meteorologist Dr. Charles Meldrum and his wife Victoria FitzPatrick. Charles Meldrum was head of the Royal Alfred Observatory until 1896, when he retired and brought his family back to Edinburgh. John Meldrum also became a met man, and wintered-over at Órcadas Station in 1907.

Melfjellet. 68°21' S, 59°12' E. Also called Whiting Nunatak. A prominent rock outcrop, about 3 km SE of See Nunatak, and 39 km ESE of Mount Gjeita, in the E part of the Hansen Mountains. Photographed by LCE 1936-37, and mapped in 1946 from these photos by Norwegian cartographers, who named it (name means "the meal mountain"). US-ACAN accepted the name without modification in 1967. ANARE also photographed it aerially, and the Australians did their own plotting of this feature, calling it Mount Whiting, for John Whiting, Beaver pilot on the *Nella Dan* in 1964-65. Whiting was a private pilot, working for ANARE on this expedition, and flew 66 hours during the season, until Feb. 7, 1965, when, taxiing off the sea-ice NE of Cape Boothby, about 150 miles W of Mawson Station, the plane's skis broke through the ice. The three men got out, but the nose of the plane broke the ice still further, and the aircraft plunged into the water, its wings resting on the surrounding ice. The Beaver was rescued, and, indeed, went to Antarctica the following season, but, on the way south, its fuselage was damaged, and it never flew again on the ice.

Punta Melian. 66°44' S, 67°26' W. A point forming the extreme N of Liard Island, in the entrance to Hanusse Bay, on the NE coast of Adelaide Island, off the W coast of the Antarctic Peninsula. Named by the Chileans for Guardián de primera clase Andrés Melian Ulloa, a member of the crew on the *Yelcho* in 1916. The Argentines call it Punta Bajada.

Vpadina Melkaja. 74°18' S, 68°40' E. A depression in Mac. Robertson Land. Named by the Russians.

Ozero Melkoe. 70°25' S, 68°44' E. A lake, immediately SW of Else Platform, at the N end of Jetty Peninsula, in Mac. Robertson Land. Named by the Russians.

Isla Mellada *see* [2]**Jagged Island**

Mount Mellanby *see* **Mount Rouge**

Melleby, Peter. b. Jan. 11, 1917, Halden, Norway, son of weaver Ole Johansen Melleby and his wife Helma Marie Hansen. After graduating from the University of Oslo in 1938, he became a mechanical engineer, and worked as a coal miner in Svalbard from 1939 to 1941, before escaping to Scotland. In Britain he joined the Norwegian Army, and became a ski instructor. He was radio operator and in charge of sledge dogs on NBSAE 1949-52. A wiry man, of medium build, he smoked a pipe, and, according to Charles Swithinbank, "bore an expression of perpetual calm."

Melleby Peak. 73°16' S, 1°15' W. Marks the SE end of the Neumayer Cliffs, on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from air photos taken in 1958-59, during NorAE 1956-60, and named by them as Mellebynuten, for Peter Melleby. US-ACAN accepted the translated name in 1966.

Mellebynuten *see* **Melleby Peak**

Glaciar Mellizos *see* **Twin Pinnacles**

Islote Mellizos *see* **Twin Pinnacles**

Pináculos Mellizos *see* **Twin Pinnacles**

Mello Nunatak. 72°21' S, 165°03' E. An isolated nunatak, 11 km E of Mount Staley of the Freyberg Mountains, in the NE part of Evans Névé, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Gerald L. Mello, chief engineer, USN, petty officer in charge of Hallett Station for the summer of 1966-67, and a member of the wintering-over party at McMurdo in 1967.

Mellomfjellet. 72°14' S, 25°51' E. A mountain between Langbogfjellet and Breskilkampen, in the SE part of the Sør Rondane Mountains. Name means "the middle mountain" in Norwegian.

The *Mellona*. A 144-ton British single-deck sealing brig, built in Sunderland in 1815 for Gray & Co., of Newcastle, she traded between London, Elsinore, and St. Petersburg. She was in the South Shetlands for the 1821-22 season, under the command first of Capt. Johnson. She anchored at Desolation Island on March 25, 1822 (the day she just escaped being wrecked), and on March 27, 1822, was at Clothier Harbor, where she anchored for most of the season with the *Liberty*, in whose company she sailed. The *Mellona* also anchored in Shirreff Cove for a while. On April 21, 1822 she arrived at Rio, on her way back to Gravesend, where she arrived on Aug. 25, 1822, and then on to London on Aug. 28, 1822, with 1980 sealskins and 14 casks of oil for Green & Hartlow, 764 skins for J. Stephenson, and 467 skins for sale. Capt. James Laing brought her back home.

Mellona Rocks. 62°18' S, 59°30' W. A group of rocks, in the NW entrance of Nelson Strait, 3 km NNE of Newell Point, Robert Island, in the South Shetlands. Roughly charted by 19th-century sealers, these rocks were sometimes charted together with Heywood's Isles (*see* **Heywood Island**), or Powel's Islands (sic — this was really the early name for the South Orkneys). Photographed aerially by FIDASE in 1956-57, and defined as a separate group. Named by UK-APC on Aug. 31, 1962, for the *Mellona*, the feature appears as such on a British chart of that year. US-ACAN accepted the name in 1965. The feature shows on a 1961 Chilean chart as Islotes Heywood, but that is now an outdated name (although the Chileans have not yet called it Islotes Mellona, they will).

Mellor Glacier. 73°30' S, 66°30' E. A tributary glacier flowing NNE between Mount Newton and Mount Maguire, and coalescing with Collins Glacier just prior to its junction with Lambert Glacier at Patrick Point, in the Prince Charles Mountains. Mapped in 1957 by Australian cartographers from air photos taken by ANARE in 1956 (from a plane piloted by John Seaton), plotted by them in 73°42' S, 66°03' E, and named by ANCA for Malcolm M. Mellor (b. May 24, 1933), English-born glaciologist who wintered-over at Mawson Station in 1957. In 1961, he moved to the USA, as an engineer with the U.S. Army's CRREL, and died in Aug. 1991. US-ACAN accepted the name in 1961. It has since been replotted.

Melnik Peak. 62°36' S, 60°09' W. Rising to over 700 m, it is the summit of Melnik Ridge, 1.25 km W of Sliven Peak, 2.25 km NW of Atanasoff Nunatak, 3.05 km NE by E of Mount Bowles, 3.7 km E by N of Hemus Peak, and 5.1 km SE of the summit of Gleaner Heights, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, in association with the ridge.

Melnik Ridge. 62°36' S, 60°08' W. This ridge, overlooking Kaliakra Glacier to the N, is 1.9 km long in an E-W direction, and 500 m wide, and has a rather steep, partly ice-free slope. The highest point on the ridge rises to just over 700 m above sea level at the W extremity. The middle of this ridge is 4.16 km E of Hemus Peak, 3.5 km NE by S of Mount Bowles (the area between Melnik Ridge and Mount Bowles being drained by a tributary glacier to Huron Glacier), and 4.1 km N by E of Kuzman Knoll, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Aug. 19, 1997, for the town of Melnik, in Southwestern Bulgaria. UK-APC accepted the name on April 23, 1998. Plotted by the UK in late 2008.

Melrose, Cecil Herbert. b. June 19, 1912, Mangakewa, NZ, son of John Alison Melrose and his wife Grace Allen. He went to sea as a merchant seaman in 1932, and was an ordinary seaman on the *Jacob Ruppert*, 1934-35, during ByrdAE 1933-35. On June 22, 1935, he and Frank Smoothy, another New Zealander, having arrived in NY at the end of the expedition, left for a night in the big city without letting anyone know where they were. The expedition had a limit of 60 days during which they would look after and repatriate where necessary all crew members. The two lads overstayed their welcome, ran out of whatever funds they had (they had joined the expedition at a penny a month, in order to see the world, and now had the grand sum of $12), and, after Byrd put them up at the Y, were finally sent back on July 30 to NZ, the *Ashburton* finally steaming out of New York on Aug. 12, 1935, bound for Brisbane. He went back to live in Christchurch, to work for the Union Steamship Co., and on April 3, 1942 arrived in New York from Liverpool, on the *Hercules*, and on April 21, 1942 sailed out again on the *City of Canberra*. In 1944 he sailed into San Francisco, as assistant steward on the *Pamir*. There is a photo of him on deck with an albatross. He married Ethel May Sullivan, went into the prison service, and died on Sept. 6, 1974, in Christchurch.

Melrose Peak. 82°19' S, 160°14' E. A peak, 6 km S of Peters Peak, in the Holyoake Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Robert L. Melrose, USARP meteorologist at Hallett Station, 1963-64.

Rocas Melsom *see* **Melsom Rocks**

Melsom, Henrik Govenius. b. Dec. 4, 1870, Sandar, Vestfold, Norway, son of ship's mate Henrik Melsom and his wife Mathilde Christine Findine Mikkelsen. In 1897, at Stokke, he married Anne Marie Bjønnes (she was actually born with the last name Ellefsdatter, in the days before Norwegian surnames became fixed), and that year went to work whaling for Count Keyserling. He later worked for the Japanese. He was skipper of the *Thule*, in the South Shetlands in 1912-13 and 1913-14. One of the great whaling skippers of the 1920s, in both the Arctic and Antarctic, in command of factory ships, he not only helped develop pelagic whaling, but had a hand in inventing the stern slipway for hauling whales aboard. In the 1920s and 1930s he owned the Polaris Company, which ran the *Nielsen-Alonso* in Antarctic waters. In 1925-26 he was manager (but not skipper) on the *Lancing*, which operated out of the South Shetlands and South Orkneys. He died on Aug. 19, 1944, at Ørsnes, in Nøtterøy.

Melsom Island *see* **Melsom Rocks**

Melsom Rocks. 60°31' S, 46°10' W. A group of isolated rocks, rising to an elevation of 30 m above sea level, 3 km N of Despair Rocks, and 11 km W of Penguin Point (the NW end of Coronation Island), in the South Orkneys. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Charted by Petter Sørlle in 1912-13, and named by him for his boss, Capt. H.G. Melsom (see above). In Norwegian the name would be Melsomholmene, and that is how it appears on Sørlle's 1930 map. It appears on a 1930 Argentine chart as Rocas Melsom, and that is the name used by the Argentines to this day. The rocks were charted again by the Discovery Investigations, and appear on their chart of that year as Melsom Rocks, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953, and how it appears in the British gazetteer of 1955. In 1935, during the Discovery Investigations, Jimmy Marr had referred to the largest of these rocks as Melsom Island, but the name never caught on, and none of the individual rocks is named. Note: Beware of the misspelling Metsom Rocks (British chart of 1950).

Melsomholmene *see* **Melsom Rocks**

Melta Point. 62°33' S, 60°24' W. A rocky point on the coast of Hero Bay, formed by an offshoot of Teres Ridge (the summit of which stands 1.5 km to the S), 1.4 km ESE of Siddons Point, on the N coast of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for Melta, ancestor of the present-day town of Lovech, in northern Bulgaria.

Mount Melton. 77°31' S, 168°52' E. A roughly square-shaped mountain, rising to about 2000 m on the N side of Lofty Promenade, about 2 km W of Tent Peak, in the Kyle Hills of Ross Island. Named by US-ACAN in 2000, for Terry Melton, power plant mechanic and facilities engineer at Palmer Station from June 1981 to Jan. 1983. He worked 9 Winfly summer seasons at McMurdo as the Williams Field facilities engineer and site supervisor, McMurdo operations superintendent, and McMurdo area manager, 1984-93; and NSF McMurdo station manager, Oct. 1998 to Oct. 1999. NZ-APC accepted the name on Feb. 20, 2001.

[1]**The *Melville***. Tanker, owned by the Hektor Whaling Company, she was in the South Shetlands, 1929-30, servicing the *Hektoria* and the whaling station at Deception Island. She transported Wilkins' expedition part of the way during the 2nd half of the Wilkins-Hearst Expedition.

[2]**The *Melville***. American research ship of the 1970s and 1980s, named for George Melville, the

American admiral and Arctic explorer. Built for the U.S. Navy in 1967, by the Defoe Shipbuilding Company, of Bay City, Mich., launched on July 10, 1968, and delivered to the Navy on Aug. 1, 1969, as part of the Military Sea Transportation Service, on charter to the Scripps Institution of Oceanography out of San Diego. She weighed 2516 tons, and was 279 feet long, had wet and dry labs, and could accommodate up to 30 scientists and 20 crew. In 1974 she conducted hydrographic and geochemical measurements of ocean water as far south as 70°S, as part of the International Deep Sea Drilling Project. Skipper that year was John Borham. After being used in the 1976 remake of the movie *King Kong*, she was in Antarctic waters in 1976-77 (skipper unknown), 1977-78 (Capt. Alan Phinney), 1978-79 (Capt. Phinney), 1980-81 (Capt. Albert A. Arsenhault; replaced by Robert W. Haines; that year they were collecting sea-bed samples and conducting geophysical examinations of the Scotia Sea. They participated in BIOMASS), 1983-84 (Capt. Haines), 1985-86 (skipper unknown). She was refitted and lengthened to 279 feet, in 1992. She was in Antarctic waters in 2001-02 (Capt. Chris Curl), with the *Roger Revelle* and the *Polar Star*, as part of the SOFEX program. By 2009, still engaged on extensive missions around the world, she was the oldest vessel in the American academic research fleet.

Cabo Melville *see* **Cape Melville**

Cape Melville. 62°01' S, 57°35' W. Forming the tip of Melville Peninsula, it marks the E extremity of King George Island, in the South Shetlands. Charted by Bransfield on Jan. 22, 1820, and he named it for Lord Melville (*see* **Melville Highlands**). It appears on Fildes' chart of 1821, but on Powell's chart of 1822 it is shown as South Foreland, a name copied by other chartmakers for a few years afterwards. Some early charts show this name for the NE cape of the island (*see* **North Foreland**), but for the last 120 years the E cape has been the one with the name. It appears on a Spanish chart of 1861 as Cabo Melville, and that is the name that figures in the 1974 Chilean gazetteer. It was charted again in Dec. 1909, by FrAE 1908-10, and by the Discovery Investigations in Jan. 1937. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, and on a British chart of 1962. It was photographed aerially in Dec. 1956, by FIDASE. The Argentines also call it Cabo Melville (it has also appeared erroneously on some of their charts as Pico Melville). Last plotted by the UK, in late 2008.

Mont Melville *see* **Melville Peak**

Pic Melville *see* **Melville Peak**

Pico Melville *see* **Cape Melville**, **Melville Peak**

Melville, Frederick Charles "Fred." b. Aug. 16, 1884, Canada, 2nd cousin of the writer Herman Melville. He went to sea as an apprentice in sail in 1898, and before he was 20 had circumnavigated the earth 3 times. He was skipper of the fruit ship *Tivives* in the Caribbean and Panama, and later stationed at the submarine base and air station at Coco Solo, Panama. He was, later still, captain of the *City of New York* during ByrdAE 1928-30. He married a Canadian girl, Grace Groves, lived in Lynn, Mass., and had a family. On March 1, 1935, while 2nd mate on the freighter *Angeles*, he was coming in from South America, and had just finished his watch at midnight as they were headed toward the Delaware Breakwater, in the Atlantic Ocean, when he collapsed and died a short time later in the chartroom.

Melville Bay *see* **Bouquet Bay**

Melville Glacier. 65°28' S, 62°10' W. A glacier, 20 km long, between Mapple Glacier and Pequod Glacier, on the Oscar II Coast, on the E coast of Graham Land, it flows into Exasperation Inlet southward of Mount Ahab. Surveyed in its lower part by Fids from Base D in Nov. 1947, and over its whole length in Oct. 1955, by Fids from the same base. Named by UK-APC on Sept. 4, 1957, for Herman Melville (1819-1891), the author of *Moby Dick*. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Melville Highlands. 60°44' S, 44°36' W. An ice-covered upland rising to about 500 m above sea level, and forming the central part of Laurie Island, between Pirie Peninsula and the S coast of the island, in the South Orkneys. In 1825 Weddell had applied the name Melville's Island to what had already been named Laurie Island, so that left the name "Melville" available to be used, which it was, by UK-APC, on Feb. 15, 1988, for these highlands. In both cases, the "Melville" is Robert Saunders Dundas, 2nd Viscount Melville (1771-1851), First Lord of the Admiralty, 1812-27 and again during Wellington's term of office, 1828-30. US-ACAN accepted the name.

Melville Peak. 62°01' S, 57°40' W. A prominent peak rising to about 550 m, surmounting, and W of, Cape Melville (hence its name), the extreme SE cape of King George Island, in the South Shetlands. Probably known by early sealers, it was charted by FrAE 1908-10, and named by them as Mont Melville. It appears as Melville Peak on British charts of 1937 and 1938, and that is the name that was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on a Chilean chart of 1947, as Pico Melville, and as such in the Chilean gazetteer of 1974. It appears, wrongly defined, on a 1949 Argentine chart, as Punta Melville (i.e., Melville Point). A French map of 1954 has it as Pic Melville. Last plotted by the UK, in late 2008.

Melville Peninsula. 62°01' S, 57°36' W. A small, but long and narrow peninsula, made of rock, jutting out to sea for about 3 km, it has a rather level height of about 200 m, and is bordered by vertical cliffs, between Sherratt Bay and Destruction Bay, in the SE part of King George Island, in the South Shetlands. Named by the Poles in 1984, in association with Cape Melville, which forms the tip of this peninsula.

Melville Point. 74°35' S, 135°31' W. Marks the E side of the entrance to Siniff Bay, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Fred Melville.

Melville's Island *see* **Laurie Island**

Melvold Nunataks. 72°51' S, 74°09' E. A group of 5 nunataks, 3 of which are quite small, about 23 km W of Mount Harding, in the Grove Mountains, in Princess Elizabeth Land. Mapped from ANARE air photos taken between 1956 and 1960. Named by ANCA for Clarence D. "Clarry" Melvold, radio officer at Mawson Station during the winter-over of 1962. US-ACAN accepted the name in 1967.

Playa Memorable *see* **Memorable Beach**

Memorable Beach. 62°38' S, 60°33' W. An exposed, rocky, south-facing beach, E of Hannah Point and Aldan Rock, at South Bay, Livingston Island, in the South Shetlands. Named Playa Memorable by the Spanish about 1991. UK-APC accepted the translated name on Dec. 16, 2003. Plotted by the UK in late 2008.

Memorial Cross. 77°51' S, 166°40' E. The memorial cross made of jarrah wood, erected on Jan. 22, 1913, on Observation Hill, at Hut Point, Ross Island, to commemorate the death of Scott and his companions during BAE 1910-13.

Memorial Hill. 66°59' S, 142°39' E. Rising to about 35 m, at Cape Denison, to the W of the rocky ridge of which Azimuth Hill forms the NW end. Named by Mawson during AAE 1911-14, and it appears on maps of the expedition.

Menander, Johan Emil. b. Sept. 6, 1877, Arloef, Sweden, son of Helena Menander (who later married a Mr. Bundy). He joined the Swedish Navy, and was a sub lieutenant, and 3rd officer on the *Frithiof*, 1903-04. After the expedition, he moved to Göteborg, and on Jan. 22, 1911, arrived in Galveston, from Liverpool, on the *Hornby Castle*, as an immigrant, and moved to New York City. On June 8, 1916, he was naturalized an American, that year being skipper of the *Pennant*. In 1921 and 1923 he was still in NYC, and working for Sinclair Navigation, as skipper of the Albert E. Watts. In the late 1920s he moved to Detroit.

Mount Mende. 74°50' S, 71°36' W. Rising to about 1500 m, about 0.8 km SW of Mount Lanzerotti, in the Sky-Hi Nunataks, in Ellsworth Land, just S of Palmer Land. Named by US-ACAN in 1988, for physicist Stephen B. Mende (b. 1939), of the Lockheed Research Laboratory (1967-96), in Palo Alto, principal investigator in upper atmosphere reearch, including aurora studies, conducted at Siple and Pole Stations from 1973 onwards. UK-APC accepted the name on Feb. 15, 1988. Dr. Mende was later a fellow at the space sciences lab at Berkeley.

Mendel Station *see* **Johann Gregor Mendel Station**

Lednik Mendeleeva *see* **Mendeleyev Glacier**

Mount Mendeleeva. 73°28' S, 62°01' E. Just E of Trail Glacier and Mount Menzies, on the S side of the Fisher Massif, in Mac. Robertson Land. Named by the Russians, presumably for D.I. Mendeleyev (*see* **Mendeleyev Glacier**).

Mendeleevbreen *see* **Mendeleyev Glacier**

Mendeleyev Glacier. 71°55' S, 14°33' E. A glacier, 17 km long, flowing NE through the N outcrops of the Payer Mountains of Fimbulheimen, in Queen Maud Land. Mapped from aerial photos and ground surveys made by SovAE 1960-61, and named by the USSR as Lednik Mendeleeva, for chemist Dmitri Ivanovich Mendeleyev (1834-1907). US-ACAN accepted the name Mendeleyev Glacier in 1970. The Norwegians call it Mendeleevbreen.

Mendelssohn Ice Front. 71°15' S, 73°20' W. The seaward face of the Mendelssohn Ice Shelf, in the SW part of Alexander Island. Named by UK-APC on Dec. 8, 1977.

Mendelssohn Ice Shelf. 71°21' S, 72°49' W. The ice shelf in Mendelssohn Inlet, in the SW part of Alexander Island. Named by UK-APC on Dec. 8, 1977.

Mendelssohn Inlet. 71°17' S, 72°52' W. An ice-filled inlet, 40 km long, and 14 km wide, between Derocher Peninsula and Eroica Peninsula, it is the most northeasterly of the 3 inlets indenting the N side of Beethoven Peninsula, on the SW side of Alexander Island. Discovered aerially and roughly mapped by USAS 1939-41. It was plotted in 71°15' S, 73°00' W, by Searle of the FIDS in 1959-60, from aerial photos taken by RARE 1947-48, and named by UK-APC on March 2, 1961, for German composer Felix Mendelssohn (1809-1847). US-ACAN accepted the name later in 1961. From U.S. Landsat images of Jan. 1973, its coordinates were corrected by UK-APC in 1977, to 71°21' S, 72°49' W, which is different from the more recent US-ACAN coordinates.

Mendenhall Peak. 85°24' S, 87°19' W. Rising to 2130 m, 0.8 km W of Mount Wrather, in the E part of the Thiel Mountains. Named by Bermel and Ford, leaders of the USGS Thiel Mountains party here in 1960-61, for Walter Curran Mendenhall (1871-1957), 5th director of USGS, 1931-43. US-ACAN acepted the name in 1962.

Méndez, Horacio Augusto. b. April 1, 1932, Buenos Aires. His father died when he was young, and he and his mother moved to Patagonia. At 16 he entered the Naval Academy, and graduated in 1953, with honors. While he was at the Navy Post Graduate School, he wintered-over at Almirante Brown Station, as leader. He was teniente de corbeta (equivalent to a lieutenant junior grade), specializing in electronics, and he completed his studies in 1960. In 1961 he married Celia Las Heras, and in 1963 left the Navy to emigrate to the USA, joined IBM in 1964, and retired in 1993, to join the faculty of Marquette University, in Michigan. He died at his home at Willow Glen, Calif., on Oct. 10, 2008, after a two-year battle with cancer.

Mendori Island. 69°00' S, 39°32' E. The most northerly in a group of 3 small islands, 0.8 km NW of the strait separating Ongul Island from East Ongul Island. Roughly mapped (but apparently not named) by Norwegian cartographers in 1946, using air photos taken during LCE 1936-37. Re-mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962. Named by the Japanese on June 22, 1972, as Mendori-zima (i.e., "hen island"), in association with Ondori Island, which is about 320 m to the N. The name is also seen as Mendori-jima. US-ACAN accepted the name Mendori Island in 1975.

Mendori-jima *see* **Mendori Island**

Mendori-zima *see* **Mendori Island**

The *Mendoza*. A 2000-ton, 115-meter destroyer built on contract as one of three similar vessels for the Argentine government, in Cowes, Isle of Wight, England, by Samuel White & Co., at a cost of (for this ship) £308,333, and launched on July 13, 1928. Although technically she had a maximum speed of 36 knots, she actually broke the destroyer speed record (in Feb. 1929), with a phenomenal 40 knots. On Sept. 3, 1929 she was delivered to the Argentine government. She was on Argentine naval maneuvers in the South Shetlands in Feb. 1948, under the overall command of Contra almirante Harald Cappus (q.v. for details). Captain of the ship was Héctor Wilkinson Dirube. She was sold in 1962.

Nunatak Mendoza *see* **Arcondo Nunatak**

Península Mendoza *see* **Rasmussen Peninsula**

Cordón Menelao *see* **Menelaus Ridge**

Menelaus Ridge. 64°35' S, 63°40' W. Rising to 1370 m (the British say about 1250 m), it is snow-covered and has 4 small summits, and lies between Mount Agamemnon and Mount Helen, in the Achaean Range of central Anvers Island, in the Palmer Archipelago. Surveyed in 1955 by Fids from Base N, and named by UK-APC on Sept. 4, 1957, for the Homeric character. It appears on a British chart of 1959. US-ACAN accepted the name in 1963. The Argentines call it Cordón Menelao (which really means "Menelaus range"). There seems to be a 1974 British reference to it as Big Mountain, but this does not quite sound credible.

Cabo Meneses. 64°39' S, 62°10' W. A cape forming the extreme NE point of Pelseneer Island, in the central part of Wilhelmina Bay, off the W coast of Graham Land. Named by the Chileans for Carlos Meneses, of the Chilean Army, who helped build General Bernardo O'Higgins Station in 1947-48.

Meneses, Celso *see* **Órcadas Station**, 1944

Menglong Di. 74°38' S, 76°20' E. A land, inland from American Highland. Named by the Chinese.

The Menhir. 60°39' S, 45°12' W. An isolated pinnacle rock, rising to 395 m, overlooking the W side (i.e., the head) of Gibbon Bay, in eastern Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1956-58, and named by UK-APC on July 7, 1959. A menhir is a single standing monumental stone built in Ancient Europe. US-ACAN accepted the name in 1964.

Île(s) Ménier *see* **Ménier Island**

Isla Ménier *see* **Ménier Island**

Islotes Menier *see* **Screen Islands**

Ménier Group *see* **Ménier Island**

Ménier Island. 64°59' S, 63°37' W. About 1200 m long by about 880 m wide, high in elevation and almost completely covered in snow, it is the larger of a pair of small islands in the mouth of Flandres Bay, about 7 km NE of Cape Renard, off the Danco Coast, on the W coast of Graham Land. The group was discovered by FrAE 1903-05, and this island and (what became) Sucia Island (i.e., the island the British call Littlespace Island) were grouped together by Charcot as Îles Ménier. They are seen as such on French maps of 1906 and 1911. However, Gourdon's map of 1908 shows it as Île Guyou, and other countries' charts and maps reflect that misnaming occasionally in the following decades. A British chart of 1930 shows the two islands as the Guyou Isles. In 1935, BGLE 1934-37 surveyed this feature, and named it Guyou Island. It appears as such on a U.S. Hydrographic Office chart of 1943, and on a 1948 British chart. However, that 1943 U.S. map also has it as part of the Ménier Group, i.e., signifying the two islands. It appears on a 1947 Chilean chart as Isla Guyou. On Jan. 28, 1953 UK-APC accepted the name Ménier Island, for this one island, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955, and on a British chart of 1958. It appears as Isla Ménier on a 1953 Argentine chart, and that is what the Argentines still call it. It also appears as such in the Chilean gazetteer of 1974. It appears on a 1954 French chart as Île Ménier. The island was recharted by an RN Hydrographic Survey unit, in cooperation with FIDS, between 1956 and 1958. As for the other island, Sucia Island, the SCAR gazetteer has it as a different feature to Littlespace Island, but it is one and the same feature.

Menipa *see* **Menipa Peak**

Menipa Mountain *see* **Menipa Peak**

Menipa Peak. 71°56' S, 25°10' E. Rising to 2590 m, 8 km N of Mefjell Mountain, in the central part of the Sør Rondane Mountains. Photographed by LCE 1936-37, and mapped in 1946 from these photos by Norwegian cartographers, who remapped it in 1957 from air photos taken by OpHJ 1946-47. They named it Menipa (i.e., "the middle peak"), and in English this became first Menipa Mountain, and then Menipa Peak, which is the name US-ACAN accepted in 1965.

Mensa Bay *see* **[1]Table Bay**

Menster, William Joseph. b. Feb. 10, 1913, Cascade, Iowa, son of Luxemburger immigrant farmer Joseph Menster and his wife Frances. Ordained on June 11, 1938, he was posted to Waterloo, Iowa, as an associate pastor. He joined the U.S. Naval Reserve in 1942, became a lieutenant commander the following year, and in early Dec. 1946 was assigned as Catholic chaplain aboard the *Mount Olympus* during OpHJ 1946-47, the only chaplain with the fleet. He was the first clergyman to visit Antarctica (at least in an official capacity), the first to set foot on the continent, and the first to conduct a religious service there (mass; Jan. 26, 1947). During this service, which was held in a tent, he "consecrated Antarctica" (actually, "blessed" is the more correct term for what he did). A smoking, drinking, guitar-playing priest, he was nicknamed "The

South Pole Padre." He was posted to Corwith, Iowa, and became director of Catholic Charities, in 1949 wrote *Strong Men South*, and was also technical adviser on the movie *The Secret Land* (q.v.). In 1950 he and his father had a private audience with the Pope. Father Bill retired in 1967, as a commander, and died in Dubuque on April 14, 2007. His life in the ministry is recounted in his book (written with Stephen D. McMahon), *Called to Adventure, Called to Service* (Stroman Publishing, 2000).

Menster Ledge. 80°18' S, 156°23' E. A relatively level bench-like feature, 4 km wide, rising to about 1800 m, 10 km SW of Mount Olympus, in the Hughes Basin, in the Britannia Range. It is smoothly ice-covered in the central and N portions, while an abrupt ice and rock cliff forms the S end. Named by US-ACAN in 2001, for Father Menster.

Mount Mentzel. 71°22' S, 13°40' E. A large mountain, rising to 2330 m, 10 km E of Mount Zimmermann, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered during GermAE 1938-39, and named by Ritscher as Mentzelberg, for Nazi chemist Rudolf Mentzel (1900-1987), then president of the Deutsche Forschungsgemeinschaft (German Research Society). US-ACAN accepted the name Mount Mentzel in 1966. The Norwegians call it Mentzelfjellet and the Russians tend to call it Mentzel Berg.

Mentzel Berg *see* **Mount Mentzel**

Mentzelberg *see* **Mount Mentzel**

Mentzelfjellet *see* **Mount Mentzel**

Menucas Range *see* **Shackleton Range**

Cordón (Cordillera) Los Menucos *see* **Shackleton Range**

Menuten. 66°39' S, 55°29' E. The middle of 3 nunataks in a row, in the Nicholas Range of Kemp Land. *See* **Nedrenuten** for more details of this group.

Cape Menzel. 72°03' S, 95°46' W. Also called Craddock Nunatak. A bold rock cape, marking the N extremity of the otherwise ice-covered Lofgren Peninsula, in the NE part of Thurston Island. Discovered on helicopter flights from the *Glacier* and the *Burton Island* during the USN Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN in 1966, for Reinhard Wolfgang Menzel (b. March 1942, Breslau, Germany; in the USA since the age of 10), geomagnetist and seismologist who wintered-over at Eights Station in 1965. Originally plotted in 72°00' S, 95°43' W, it has since been replotted.

Menzersattel. 70°39' S, 164°30' E. A saddle, due W of Cooper Bluffs, in the Anare Mountains. Named by the Germans.

Mount Menzies. 73°30' S, 61°50' E. A prominent mountain, rising to 3355 m (the Australians say about 3315 m), it is the culminating peak on the massif between Mount Mather and Mount Bayliss, on the S side of Fisher Glacier, in the Prince Charles Mountains of Mac. Robertson Land. Discovered by Flying Officer John Seaton, RAAF, from an ANARE aircraft in 1956. Mapped by Keith Mather's 1957-58 ANARE southern seismic party, and named by ANCA for Robert Gordon Menzies (1894-1978), Australia's greatest prime minister, 1939-41 and 1949-66. US-ACAN accepted the name in 1961. It was once thought to be the highest point in the Australian Antarctic Territory.

Meoto Islands *see* **Meoto Rocks**

Meoto Rocks. 68°07' S, 42°36' E. Also called Myoto Islands. Two large rocks, just W of Cape Hinode, off the Prince Olav Coast of Queen Maud Land, about 60 km W of Carstensfjella. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962. Named by the Japanese on Oct. 1, 1962, as Meoto-iwa (i.e., "husband and wife rocks"). Originally translated into English as Meoto Islands, the feature was accepted by US-ACAN in 1968, as Meoto Rocks. The Norwegians call this feature Hjonsteinane (which means the same thing).

Meoto-iwa *see* **Meoto Rocks**

Meöya *see* **Alphard Island**

Caleta Mercado *see* **Caleta Thornton**

Mercanton Heights. 67°30' S, 67°26' W. Running NE from Cape Sáenz, at an elevation of about 1250 m, between Bigourdan Fjord and Nye Glacier, in the SW part of Arrowsmith Peninsula, on the Loubet Coast of Graham Land. Roughly surveyed by Fids from Base E in 1948, and mapped by FIDS cartographers from these efforts and from FIDASE air photos taken in 1956-57. Named by UK-APC on Sept. 23, 1960, for Paul-Louis Mercanton (1876-1963), Swiss glaciologist, who was, for many years, secretary of the International Commission on Snow and Ice. US-ACAN accepted the name in 1965. It appears on a British chart of 1982.

Mercator Ice Piedmont. 68°37' S, 67°26' W. A gently sloping ice piedmont at the head of Mobiloil Inlet, on the Bowman Coast of eastern Graham Land, it is formed by the confluence of Gibbs Glacier, Lammers Glacier, Cole Glacier, and Weyerhaeuser Glacier. First photographed aerially by Ellsworth during his flight of Nov. 23, 1935, it was plotted in 1936 from these photos by U.S. cartographer W.L.G. Joerg, as the lower end of a "major valley depression" along the coast, i.e., he thought it was part of what Wilkins had thought was Stefansson Strait. It was photographed again, aerially, by USAS 1939-41, and during that same expedition was also seen for the first time from the ground in Jan. 1941, by Finn Ronne and Carl Eklund. It was photographed aerially on Dec. 22, 1947, by RARE 1947-48. Surveyed by Fids from Base E in Dec. 1958, and plotted by them in 68°37' S, 65°30' W. Named by UK-APC on Aug. 31, 1962, for Flemish mathematician and geographer Gerardus Kremer Mercator (1512-1594), creator of the famous world map of 1568. US-ACAN accepted the name later in 1962. This feature has since been re-plotted.

Mercator Knoll. 68°45' S, 0°08' W. An undersea feature in the Weddell Sea. Named internationally in 1997, at the suggestion of Dr. H. Hinze, for Gerhard Mercator (*see* **Mercator Ice Piedmont**).

Ensenada Mercedes *see* **Crane Glacier**

Islote Mercedes. 65°30' S, 64°55' W. A small island on the W side of the Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Named by the Argentines. As this islet occupies the same coordinates as (or at least, lies within the area occupied by) the Lom Rocks, one must assume it is the main rock in that feature.

Mount Mercer. 70°13' S, 65°39' E. About 3.5 km W of Farley Massif, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted by Australian cartographers from 1965 ANARE air photos. Named by ANCA for Barry Mercer, who wintered-over as weather observer at Davis Station, in 1961. US-ACAN accepted the name in 1971.

Mercer, George Metcalfe. Known invariably as "G.M." b. Jan. 1, 1884, Burnley, Lancs, son of elementary schoolteacher William Young Mercer and his wife Margaret J. Metcalfe. When he was a year old, his father took up a new school in Baildon, Yorks, and when G.M. was about 5, they moved again, to Gainsborough, Lincs. At 16 he joined the Merchant Navy, and was in the Royal Naval Reserve, being a lieutenant when he was transferred to the *Indefatigable* in 1911, serving in World War I and winning the DSC. After the war, he returned to the Merchant Navy, with Cunard, as 1st officer on their ships *Aquitania*, *Vasconia*, *Lancastria*, and *Mauritania*, plying the Atlantic into the 1920s. As a lieutenant commander, he was skipper of the *William Scoresby*, 1926-27. He died in 1961, in Spilsby, Lincs.

Mercer Ice Stream. 84°50' S, 145°00' W. An ice stream to the S of Whillans Ice Stream, it flows W to the Gould Coast. It is the southernmost of several major ice streams flowing from Marie Byrd Land into the Ross Ice Shelf. Formerly called Ice Stream A. *See* **Macayeal Ice Stream** for further details. This one was named by US-ACAN in 2000, for John H. Mercer (*see* **Mercer Ridge**). NZ-APC accepted the name on May 15, 2003.

Mercer Lobe. Also called Mercer Ice Lobe. A lobe of ice, projecting from the main body of the Dominion Mountains, in the area of the Beardmore Glacier. Named for John H. Mercer (*see* **Mercer Ridge**).

Mercer Ridge. 84°50' S, 113°45' W. A prominent, partly ice-free ridge that forms the SW end of Mount Schopf, in the Ohio Range of the Horlick Mountains. Named by US-ACAN in 1962, for British glacial geologist, John H. Mercer (1922-1987), a member of the Ohio State University expedition to the Horlicks in 1960-61. He was back in the same area in 1964-65. It was Mercer who named the Sirius Formation (q.v.).

Mercik Peak. 85°05' S, 169°06' W. A conspicuous peak, rising to 1425 m, 11 km NE of Mount Wells, on the ridge descending from that mountain, in the Prince Olav Mountains. Named by US-ACAN in 1966, for James E. Mercik, aurora scientist with the Arctic Institute of North America, who wintered-over at Pole Station in 1965.

Mercola, Raymond "Ray." b. Sept. 2, 1911, Chicago, son of Italian immigrant tailor Michael Mercola and his wife Katherine. An extraordinary teenager, at the age of 14 Ray took a trip, by himself, to Havana. Immediately after finishing at Lane Technical High School, he went to sea as a waiter, on the *Mexico*, plying between Havana and New York for a couple of years on that ship and the *Havana*. In 1929 he left the sea, and returned to Chicago, where he took a job as a bellboy and elevator operator at Chicago's YMCA hotel, and was doing just that when he joined ByrdAE 1928-30 in Nov. 1929, as dishwasher, for the relief trip to Antarctica, the youngest man on the expedition. Apparently, a relative of Ray's had some pull with Byrd. On April 8, 1930, he left Auckland, NZ, on the *Niagara*, arriving in Honolulu on the 18th, leaving there the next day on the *City of Los Angeles*, and arriving in Los Angeles on April 25, 1930. He went back to the Y, in Chicago, but that job couldn't last long, and it didn't. He moved to Cape Girardeau, Mo., and went on the lecture circuit with his "The Adventures of an Ocean Vagabond." Although he was contemplating joining ByrdAE 1933-35, this did not happen. He married, became an insurance salesman in Tulsa, and there joined the Army on Aug. 27, 1942, serving as a technician 5th class during World War II. He moved to San Antonio, Tex., and, on Aug. 5, 1983, in Webb Co., Tex., he married Maria Paredes, 50 years his junior. It didn't work out, and they were divorced in San Antonio on March 27, 1985. He died there on Jan. 23, 1997.

Islote(s) Mercurio *see* **Puzzle Islands**

The *Mercury*. A 157-ton snow built in the USA in 1779, and, by 1819 was owned by her skipper, Robert Wetherall, of Deptford, and Richard Jones, merchant of London. She was in the South Seas in 1819, under Wetherall, and returned to London in Sept. 1819. On Aug. 29, 1820, she set sail from Deal, Kent, again under Wetherall, bound for the South Shetlands and the 1820-21 sealing season. He anchored in Shirreff Cove. She arrived back in England on July 9, 1821, and in London on July 12. After this she went back into whaling.

Mercury Bluff. 62°29' S, 60°49' W. A perpendicular bluff SW of Cape Shirreff and Scarborough Castle, and forming the SW entrance to Shirreff Cove, E of Barclay Bay, on the N coast of Livingston Island, in the South Shetlands. Roughly charted (but, apparently, not named) by Capt. Fildes in 1821. Following FIDASE air photos taken in 1956-57, it was named by UK-APC on July 7, 1959, for the *Mercury*. US-ACAN accepted the name in 1960. One of the Argentine Antarctic expeditions named it Cabo Brizuela, for Suboficial Alberto Brizuela, who was killed when a Neptune aircraft plunged into Mount Barnard on Sept. 15, 1976 (*see* **Deaths**).

[1]**Mercury Glacier**. 71°34' S, 68°14' W. A glacier, 8 km long and 3 km wide, flowing SE into George VI Sound, between Waitabit Cliffs and Keystone Cliffs, on the E coast of Alexander Island. Probably first seen by Lincoln Ellsworth on his flight over this area on Nov. 23, 1935, photographing as he went. Roughly surveyed from the ground in 1936, by BGLE 1934-37, it appears on their map of 1940 (but, apparently, not named). This area was roughly surveyed by Fids from Base E in 1948 and 1949, and this particular glacier was named by UK-APC on March 31, 1955, for the planet. US-ACAN accepted the name later in 1955. In 1960, Searle of the FIDS mapped it from air photos taken by RARE 1947-48, and plotted it in 71°32' S, 68°16' W. It has since been replotted.

[2]**Mercury Glacier**. 79°34' S, 157°17' E. A wide, well-marked glacier, with little debris, flowing S from the slopes of Mount Hughes, in the Cook Mountains, in the Transantarctic Mountains. It has snow on blue ice near the top, and extensive blue ice in the lower part. Named by NZ-APC for the mythological god Mercury. US-ACAN accepted the name in 2006.

Mount Meredith. 71°12' S, 67°45' E. A fairly massive, flat-topped mountain, 16 km N of the Fisher Massif, on the W side of the Lambert Glacier, in the Prince Charles Mountains of Mac. Robertson Land. Photographed aerially by ANARE in 1956 and 1957. Named by ANCA for Corp. (acting sergeant) Neville Windeyer "Nev" Meredith (b. Feb. 27, 1929. d. 2010), RAAF, engine fitter at Mawson Station for the winter-over of 1957. US-ACAN accepted the name in 1961. The Russians call it Gora Okrytaja.

Merger Island. 70°17' S, 70°42' W. An island, 5 km long, rising to an elevation of 275 m above sea level, and ice-covered except for 2 small rock outcrops, at the entrance to Haydn Inlet, E of Dorsey Island, off the W coast of Alexander Island. It was first mapped by Searle of the FIDS, in 1959-60, from air photos taken by RARE 1947-48. He plotted it in 70°06' S, 71°13' W. Named descriptively by UK-APC on March 2, 1961, for the way in which it merges with the surrounding Wilkins Ice Shelf. US-ACAN accepted the name later in 1961. It appears in the 1977 British gazetteer with the coordinates 70°17' S, 70°48' W. U.S. Landsat images of Feb. 1979 corrected the coordinates, and the new ones appear in the British gazetteer of 1986.

Mericle Rock. 73°39' S, 163°15' E. A nunatak in the middle of Campbell Glacier, 14.5 km from the head of that glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for David Lee Mericle (b. Oct. 1, 1929, Miami, Oklahoma), who joined the U.S. Navy in Aug. 1948, and was electronics technician at McMurdo, 1967. He retired from the Navy in Sept. 1978.

Meridian Glacier. 68°45' S, 66°37' W. A broad glacier, 14 km long, it flows S along the W side of Godfrey Upland, and joins Clarke Glacier between Behaim Peak and Elton Hill, on the Fallières Coast, on the W coast of Graham Land. Finn Ronne and Carl Eklund traversed this glacier in Jan. 1941, as part of USAS 1939-41. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed by Fids from Base E in Dec. 1958. So named by UK-APC on Aug. 31, 1962, because the glacier flows from N to S along the meridian. US-ACAN accepted the name later in 1962.

Ostrov Merkurij *see* **Merkurij Island**

Merkurij Island. 66°05' S, 101°08' E. In the Bunger Hills, on the coast of Queen Mary Land. Charted by SovAE 1956, and named by the Russians as Ostrov Merkurij (i.e., "Mercury island"). The Australians translated the name to Merkurij Island.

Récif du Merle *see under* **D**

Merle, René. b. Nov. 12, 1911. In 1957 he wintered-over as chief radio officer at Dumont d'Urville Station. He was leader of the French Polar Expedition 1958-60, and led the 1959 wintering party at Dumont d'Urville Station. He was back again as leader of the same station for the winters of 1962 and 1966.

Mount Merle Tuve *see* **Mount Tuve**

Mermaids. Undoubtedly the most famous mermaid spotted in Antarctic waters is the one glimpsed by one of Weddell's men on Oct. 15, 1823, or thereabouts, on Snow Island (what they then called Basil Hall's Island), in the South Shetlands, during the Scottish explorer's third and last voyage south. The sailor, who, rather conveniently, was by himself on one side of the island, looking after produce, went to bed at about 10 o'clock in the evening (it was still light), and then heard human cries, not once, but three times. He got up each time, and only on the third occasion did he make a concerted effort to find the source of what was now a musical strain, rather than what he had at first thought it to be, a distress call from a stranded sailor. He walked along the beach, and then saw, to his atonishment, lying on a rock in the sea a few yard away, a red mermaid with long green hair and a seal's tail. The creature continued to sing for a full two minutes until she saw him, whereupon she immediately disappeared. The man told the rest of the crew, and was doubted until he swore a good Catholic oath that what he had told was true. Those were the days.

Merrell Valley. 76°50' S, 160°50' E. A long, narrow, ice-free valley in the Convoy Range, it runs N from the head of the range immediately E of Mount Gunn, into Greenville Valley. Mapped by the NZ Northern Survey Party of BCTAE in 1957, and named by them for the *Private Joseph E. Merrell*. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Merrem Peak. 76°03' S, 136°03' W. A prominent peak rising to 3000 m, 3 km W of Berlin Crater, it is the secondary summit on the Mount Berlin massif, in Marie Byrd Land. Discovered and charted in Dec. 1940 by the Pacific Coast Survey Party, led by Leonard Berlin, during USAS 1939-41. Subsequently mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Frank H. Merrem, ionosphere physicist and scientific leader at Pole Station in 1970.

The *Merrick*. A 6761-ton, 459 foot 2-inch Andromeda-class attack cargo ship, capable of 16.5 knots, named for Merrick County, Ne-

braska, built by Federal Shipbuilding and Drydock Co., of Kearny, NJ, and launched on Jan. 28, 1945. She saw service in the Pacific during the closing days of World War II, and in Oct. 1946, left Norfolk, as part of Task Force 68.1's Central Group, bound for Port Hueneme, Calif., to load on supplies for OpHJ 1946-47. Captain John J. Hourihan. On Dec. 5, 1946, she left California, and on Dec. 18, 1946 transferred mail to the *Cacapon*, and refueled from that ship. She rendezvoused with the other ships of Central Group on Dec. 30, 1946, and entered the open waters of the Ross Sea on Jan. 14, 1947. The following day, she pulled into the Bay of Whales, and on Jan. 19 moored port side to the shelf ice, beginning unloading operations on Jan. 22, 1947, and, until Feb. 6, helping to establish Little America IV. Due to bad ice conditions, the Central Group (the other two ships were the *Northwind* and the *Burton Island*) had to withdraw, and on Feb. 8 they entered the southern edge of the pack-ice. On Feb. 11 the *Merrick*'s rudder was damaged, and the *Northwind* had to take her in tow. However, before she could clear the ice the rudder was completely sheared away, and, still under tow, she left the vicinity of Scott Island, bound for NZ. The two vessels staggered in to Port Chalmers, NZ, on Feb. 22, 1947, and 3 days later repairs began to the rudder, being finished on March 21. A day later the ship left NZ, and again staggered back to California, arriving in San Diego on April 12, 1947. She was decommissioned in San Francisco, on June 25, 1947, and entered the National Defense Reserve Fleet. She was recommissioned for the Korean War, and served in the Arctic and later in Vietnam. In 1969 she was re-designated an amphibious cargo ship, and was struck from the naval register in 1976, being scrapped in 1980.

Mount Merrick. 67°42' S, 49°18' E. Rising to 1120 m, it stands 5 km W of Mount Humble, in the Raggatt Mountains. Plotted from ANARE air photos of 1956 and 1957, and named by ANCA for W. Robert "Rob" Merrick, geophysicist who wintered-over at Mawson Station in 1960. US-ACAN accepted the name in 1965.

Merrick Glacier. 80°13' S, 158°52' E. A steep tributary glacier flowing southwestward into Byrd Glacier, at the W end of Horney Bluff, just E of Sennett Glacier, in the Britannia Range. Named in association with Byrd Glacier by US-ACAN in 1965, for the *Merrick*. Admiral Byrd was titular head of OpHJ 1946-47, and the *Merrick* was a ship on that expedition.

Merrick Mountains. 75°06' S, 72°04' W. A cluster of mountains, 13 km in extent, and rising to an elevation of 1540 m, 11 km NE of the Behrendt Mountains, between the English Coast and the Orville Coast, in eastern Ellsworth Land, about 210 km W of Cape Schlossbach. They include (from N to S): Mount Berger, Mount Matheson, Mount Becker, Mount Boyer, and Eaton Nunatak. Discovered aerially by, and photographed by, RARE 1947-48, and again photographed aerially by USN in 1965-66. Named by US-ACAN in 1966, for Conrad G. "Con" Merrick, USGS topographic engineer with the Antarctic Peninsula Traverse of 1961-62 (q.v.), who took part in the survey of these mountains. These mountains appear on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. The Chileans call these mountains Montes Fornet, after Group Captain Eduardo Fornet Fernández, of the Chilean Air Force, who, during ChilAE 1957-58, made flights over the Chilean Antarctic Territory in Beaver aircraft and in Bell helicopters.

Merrick Point. 74°28' S, 110°09' W. An ice-covered point on the E side of the Hamilton Ice Piedmont, at Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1977, for Dale Merrick, of Stanford University, upper atmosphere researcher and station leader at Siple Station for the winter of 1975.

Merritt, Everett LaVerne. Photogrammetrist with the Navy Hydrographic Office, who was a surveyor on OpW 1947-48. He landed in the Bunger Hills on Jan. 12, 1948. He was back as an observer with ArgAE 1958-59. *See also* **Windscoop Nunataks**.

Merritt Island. 66°28' S, 107°12' E. A small, rocky island on the Knox Coast of Wilkes Land, 21 km WNW of Cape Nutt, just off the coast of East Antarctica. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47, and its position fixed more definitely from photos taken by OpW 1947-48. Named by US-ACAN in 1963, for Everett L. Merritt.

Merry-go-round Island *see* **Racovitza Islands**

Lengua Mersey *see* **Mersey Spit**

Punta Mersey *see* **Mersey Spit**

Mersey Spit. 62°05' S, 57°56' W. On the S coast of King George Island, E of Turret Point, and close N of Penguin Island, in the South Shetlands. Charted and named in 1937 by the personnel on the *Discovery II*, presumably after the River Mersey, in England. It appears on a 1949 Argentine chart, as Lengua Mersey (which means the same thing). US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a British chart of 1962. It appears in the 1974 Chilean gazetteer, as Punta Mersey. Last plotted by the UK, in late 2008.

Mertz, Xavier Guillaume. b. 1883, Basle, Switzerland. A law graduate, he was his nation's ski-running champion, and was skiing expert on AAE 1911-14, dying of Vitamin A poisoning on Jan. 7, 1913, while on his way back to base, as part of the Far Eastern Party under Mawson. His death on the trail left Mawson alone to face one of the most harrowing adventures in Antarctic annals. In 1914, after the expedition, Mawson visited Mertz's family in Europe.

Mertz Basin. 66°45' S, 147°00' E. A submarine feature 160 km out to sea from George V Land.

Mertz Canyon. 65°00' S, 148°00' E. Submarine feature in the southern Indian Ocean, out beyond the coast of Wilkes Land.

Mertz Glacier. 67°30' S, 144°45' E. Heavily-crevassed, between 72 and 80 km long, and over 32 km wide on average, occupying a deep depression, and flowing into the sea on the coast of East Antarctica, at Buchanan Bay, between Adélie Land and George V Land, or, more specifically, between Cape de la Motte and Cape Hurley, where it forms Mertz Glacier Tongue. Discovered by AAE 1911-14, and named by Mawson for Xavier Mertz. US-ACAN accepted the name in 1947.

Mertz Glacier Tongue. 67°10' S, 145°30' E. About 72 km long and 40 km wide, it is the seaward extension of Mertz Glacier, between Cape de la Motte and Cape Hurley, on the coast of East Antarctica. Discovered by AAE 1911-14, and named by Mawson in association with the glacier. US-ACAN accepted the name in 1947. In Feb. 2010, a huge iceberg calved off it, considerably reducing the length of the tongue.

Mertz-Ninnis Trough *see* **Mertz-Ninnis Valley**

Mertz-Ninnis Valley. 67°25' S, 146°00' E. Also called Mertz-Ninnis Trough, and Adélie Depression. A submarine valley off George V Land. Named by US-ACAN in 1971, in association with Mertz Glacier and Ninnis Glacier.

Mount Mervyn. 70°31' S, 65°13' E. A very sharp spire-like peak, about 2286 m above sea level, 10 km S (the Australians say almost 7 km due S) of Mount Kirkby, and S of the main part of the Porthos Range, in the Prince Charles Mountains. Spotted by Bill Bewsher's ANARE Southern Party in Dec. 1956, and plotted in 70°34' S, 65°18' E. Originally named Mount Christensen, after Mervyn Valdemar "Merv" Christensen (b. Aug. 21, 1923), Australian weather observer at Mawson Station in 1956, but the name was re-considered as it would be assumed it was named for the already substantially-commemorated Lars Christensen. It has since been re-plotted. Merv had also wintered at Macquarie Island in 1953. US-ACAN accepted the name in 1962. In June 1985 Merv's Polar Medal was stolen.

Península Merz *see* **Merz Peninsula**

Merz Peninsula. 72°15' S, 61°05' W. An irregular, ice-covered peninsula, 24 km long in an E-W direction, and an average of 40 km in width, with Cape Darlington as its N point, it lies between Hilton Inlet and Violante Inlet, on the Black Coast, projecting from the E coast of Palmer Land. Its S extremity is called Punta Almonacid. Discovered aerially and photographed on Dec. 30, 1940 by USAS 1939-41, it appears on a 1943 U.S. Hydrographic Office chart. On Nov. 27, 1947, it was photographed aerially by RARE 1947-48, who also, that month, in conjunction with Fids from Base E, surveyed its E and S sides from the ground during a sledging trip. Named by FIDS in 1947 for Alfred Merz (1880-1925), German oceanographer and original leader of the *Meteor* expedition of 1925-26. He died before he reached Antarctica (*see* **The *Meteor***). UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears on a British chart of 1954, and in the

British gazetteer of 1955. It appears on a 1957 Argentine chart as Península Merz, and that is also what the Chileans call it. It was photographed again from the air, by USN, and mapped from these photos by USGS.

Bahía Mesa *see* **Table Bay**

Isla Mesa *see* **Table Island**

Mesa Range. 73°11' S, 162°55' E. A range of remarkable flat-topped mesas — Pain Mesa, Sheehan Mesa, Tobin Mesa, and Gair Mesa — at the head of Rennick Glacier, and stretching along the E margin of that glacier, then along the divide between Campbell Glacier and Aviator Glacier, and from there down the middle of Rennick Glacier, in Victoria Land. Named descriptively by NZGSAE 1962-63. US-ACAN accepted the name in 1967.

Meserve Glacier. 77°31' S, 162°17' E. One of 5 hanging glaciers on the S wall of Wright Valley, between Bartley Glacier and Hart Glacier, in Victoria Land. Named by Bob Nichols (*see* **Nichols Snowfield**) for mountain climber William "Bill" Meserve (b. Waltham, Mass.), geological assistant to Nichols at nearby Marble Point, in 1959-60. US-ACAN accepted the name in 1962.

Gora Meshcherina. 73°29' S, 62°23' E. A hill in the area of Mount Menzies, in the Prince Charles Mountains. Named by the Russians.

Dolina Meshok. 73°34' S, 64°30' E. A valley just NW of Mount Ruker, in the S part of the Prince Charles Mountains. Named by the Russians.

Gora Mesjaceva *see* **Gårenevkalven Nunatak**

Message Island. 69°23' S, 76°04' E. One of a group of 3 small islands (Knuckey Island being the largest), about 1.1 km NW of the W end of Stornes Peninsula, in the Larsemann Hills.

Messent Peak. 69°24' S, 66°13' W. Rising to about 1100 m, it is one of the Bristly Peaks, just W of Brodie Peak, and 8 km SW of Mount Castro, on the Fallières Coast, on the W coast of Graham Land. Named by US-ACAN in 1977, for David R. Messent, of the U.S. Army Topographic Command (later Defense Mapping Agency, Topographic/Hydrographic Center), who wintered-over as a USARP geodesist at Palmer Station in 1969. UK-APC accepted the name on May 21, 1979.

Messer, Frank Benjamin, Jr. He was actually Frank Benjamin Messer III. b. Feb. 7, 1913, Bellingham, Wash., but raised partly in San Diego, Calif., son of Frank Benjamin Messer and his wife Zella Elmina Belleisle. He joined the U.S. Navy. He married Agnes, and they lived in Mission Beach, Calif. He was chief machinist 1st class on the *Bear*, during both halves of USAS 1939-41. He died in San Diego on June 9, 1979.

Mys Messera. 66°21' S, 114°20' E. A cape on the E side of Colvocoresses Bay, on the Budd Coast. Named by the Russians.

Messina, Carmelo *see* **Órcadas Station, 1943**

Mesta Peak. 62°37' S, 59°50' W. A steep, sharp peak with ice-free slopes, rising to about 400 m in Delchev Ridge, 1.6 km E by N of Kaloyan Nunatak, 1.05 km NE by E of Shabla Knoll, and 1.95 km SW by W of Renier Point, it surmounts the E extremity of the Sopot Ice Piedmont to the N, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Mesta River, in Bulgaria.

Mesteinene *see* **Wigg Islands**

Mesyatseva Mountain *see* **Gårenevkalven**

The *Métapassion*. French yacht, skippered by Georges Meffre, which visited the South Shetlands and the Antarctic Peninsula in 1993-94 and 1994-95. Of that first trip, Georges and Michèle Meffre wrote *Les Meffre: Destination Antarctique*.

Metaris Valley. 80°05' S, 156°17' E. A small, rounded cirque valley with steep sides and residual névé, W of Derrick Peak, in the Britannia Range. In association with Britannia, it was named by a University of Waikato (NZ) geological party, 1978-79, led by Mike Selby. Metaris is what the Romans called The Wash, the large bay on the E coast of England. US-ACAN accepted the name.

Metavolcanic Mountain. 86°13' S, 126°15' W. A large, flat-topped mountain, rising to 2480 m, 8 km N of Hatcher Bluffs, on the E side of Reedy Glacier, it is made up of dark, metavolcanic rock, and contrasts sharply with the lighter-colored granites everywhere else along the glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by John H. Mercer (*see* **Mercer Ridge**). US-ACAN accepted the name in 1967.

Metcalf Spur. 77°25' S, 160°24' E. A rock spur, 2.5 km long, extending NW from Shapeless Mountain to Pakira Nunatak, on the plateau of the Willett Range, in Victoria Land. Named by US-ACAN in 2005, for Altie Metcalf, budget and planning officer of the NSF's Office of Polar Programs, 1995-2005. NZ-APC accepted the name on Sept. 12, 2005.

Mount Metcalfe. 67°59' S, 66°57' W. Rising to about 1505 m, S of Square Bay, and at the S side of the head of McMorrin Glacier, 2.5 km S of Mount Wilcox, on the Fallières Coast, on the W coast of Graham Land. Named by UK-APC on Feb. 12, 1964, for Bob Metcalfe (q.v.), who surveyed the area in 1962. US-ACAN accepted the name later in 1962. It was re-surveyed by BAS personnel from Base E in 1967-69.

Metcalfe, Robert John "Bob." b. March 28, 1938, Weobley, Herefordshire, into a Plymouth Brethren family. He joined FIDS in 1960, and later that year took the *Shackleton* out of Southampton, bound for Tristan da Cunha, Montevideo, Port Stanley, and Antarctica. He wintered-over as surveyor at Base E in 1961 and 1962. He died of lung disease, in the Lake District, in June 1993.

Cape Metchnikoff *see* **Metchnikoff Point**

Point Metchnikoff *see* **Metchnikoff Point**

Punta Metchnikoff *see* **Metchnikoff Point**

Metchnikoff Point. 64°03' S, 62°34' W. A low point, completely covered with snow, the N entrance point to Guyou Bay, which forms the W extremity of Pasteur Peninsula, and the extreme NW point of Brabant Island, in the Palmer Archipelago. Charted by FrAE 1903-05, and named by Charcot as Pointe Metchnikoff, for Élie (Ilya) Metchnikoff (1845-1916), Russian-born French microbiologist who succeeded Louis Pasteur as director of the Pasteur Institute in Paris, and who won the Nobel Prize for medicine, in 1908. De Gerlache, Amundsen, Frederick Cook, Arctowski, and Danco all camped here from Jan. 30 to Feb. 6, 1898. It appears as Point Metchnikoff on a 1943 U.S. Hydrographic Office chart, and as Cape Metchnikoff on a 1946 USAAF chart. It appears as Punta Metchnikoff on an Argentine chart of 1949, but as Cabo Metchnikoff on one of their charts of 1956, and they named it (in error) as Cabo Roux (*see* **Cape Roux**) on a 1954 chart. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Metchnikoff Point on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such on a British chart of 1961. The name appears in the Chilean gazetteer of 1974, as Punta Metchnikoff, and that is also what the Argentines call it today. On July 21, 1984, the British Joint Services Expedition erected a plaque here, to commemorate the first landing on Brabant Island, by BelgAE 1897-99.

[1]**The *Meteor***. The 1200-ton ship of the German Atlantic Expedition, 1925-27. 72 m long, and 10 m wide, a steamship with auxiliary sails, she could do 9 knots.

[2]**The *Meteor***. West German research ship in the Scotia Sea in 1980-81, accompanied by the *Walther Herwig*. Skipper was Kapt. Feldmann. She was back in 1989-90 (Capt. Henning Papenhagen).

Meteorite Hills. 79°40' S, 155°36' E. A group of hills, 21 km long, between the heads of Darwin Glacier and Hatherton Glacier, and which form the W portion of the Darwin Mountains of Victoria Land. The name was proposed by John Annexstad (*see* **Annexstad Peak**), at that point in his career with the Meteorite Working Group, at the Johnson Space Center, in Houston, in association with field work carried out in this vicinity by ANSMET (Antarctic Search for Meteorites), led by William A. Cassidy, of the University of Pittsburgh, during the 1978-79 season.

Meteorite Valley. 72°59' S, 160°25' E. A valley, 2.5 km long, and between 1 and 1.8 km wide, crossing the S part of Frontier Mountain in a SW-NE direction. It ranges in height between 1900 and 2300 m above sea level, while the lateral rocky slopes have a height of about 2600 m. Named by German geologists in 1984, for the large number of meteorites found here. Italy accepted the name on Feb. 22, 2002.

Meteorites. There are 4 kinds of meteorites. 1. Chondrites. These are stony meteorites containing chondrules (rounded aggregates of silicate minerals). These are by far the most common. 2. Achondrites. These are stony meteorites without chondrules. 3. Stony irons. These are meteorites consisting of sub-equal amounts of silicate minerals and nickel-iron. 4. Irons. These are meteorites consiting of a nickel-iron alloy. A

rare achondrite, called a shegottite, was found in 1979, at Elephant Moraine. Polymict eucrites are also rare finds in Antarctica. Some of these come from the Moon. Frank Bickerton discovered the first meteorite in Antarctica, in 1912, during AAE 1911-14. Between then and 1969 only 4 meteorite fragments were found in Antarctica. On the night of July 12, 1934, at Little America, the greatest display since 1833 of meteor showers anywhere on Earth was seen. In 1969 Japanese scientists discovered 9 fragments in the Queen Fabiola Mountains. Since then over 4000 fragments have been discovered in that area. In the Allan Hills, another profitable area for Antarctic meteorite hunters, scientists discovered 364 (one was between 4 and 6 billion years old). Steven Kite found a 43-pound meteorite iron in the Victoria Valley in 1978 (*see* **Kite Stream**). Meteorites come from the Moon, Mars, or the asteroid belt, and the trick is to find out if they are single (and different) meteorites, or fragments of the same one. *See also* **Asuka Station** and **Meteorite Hills**.

Otrog Meteorologov. 73°05' S, 68°29' E. A slope, in the area of Mawson Escarpment, E of Lambert Glacier. Named by the Russians.

Meteorology. A major scientific study in Antarctica, meteorology consists of temperatures, atmospheric pressures, precipitation, wind velocity and direction, and forecasting of the weather, the last being very difficult until recently due to the few reporting stations. Photography is aiding it tremendously. Órcadas Station has been a constantly manned weather observatory since 1903.

Caleta Methuen *see* **Methuen Cove**

Methuen Cove. 60°46' S, 44°33' W. Between Cape Anderson and Cape Whitson, on the S coast of Laurie Island, in the South Orkneys. Surveyed and charted on Sept. 22, 1903, by ScotNAE 1902-04, and named by Bruce for Scottish accountant Harry Methuen, who, with T.B. Whitson, managed the financial affairs of Bruce's expedition. The cove was re-charted by the Discovery Investigations in 1933, and appears on their chart of 1934. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1945 Argentine chart as Caleta Methuen, and that is the name the Argentines still use. *See also* **Aitken Cove**.

The *Metolius*. American yacht, skippered by Kim Lundgren, which visited the South Shetlands and the Antarctic Peninsula in 1994-95.

Metoppen *see* **Gap Nunatak**

Mount Metschel. 78°17' S, 159°00' E. A prominent, ice-free mountain, rising to 1843 m, about 6.5 km SE of Angino Buttress and the Skelton Icefalls. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for Cdr. John J. Metschel, USN, commander of the *Staten Island* in 1962 and 1963, who was killed in the Arctic on Oct. 15, 1963, while in a helicopter, doing ice reconnaissance from his ship.

Metsom Rocks *see* **Melsom Rocks**

Metzgar Nunatak. 74°28' S, 75°25' W. Rising to about 1700 m (the British say about 1650 m), 5 km S of Tollefsen Nunatak, on the English Coast of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1968, and also from U.S. Landsat imagery taken in 1973-74. Named by US-ACAN in 1988, for John M. Metzgar, Jr., USGS cartographer, a member of the USGS satellite surveying team at Pole Station in the winter of 1978. UK-APC accepted the name on Feb. 15, 1988.

Mount Meunier. 74°58' S, 113°19' W. Rising to 665 m, and with partly ice-free N slopes overlooking the Dotson Ice Shelf, 5 km E of Mount Strange, near the NE end of the Kohler Range, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN in 1978, for Tony Kenneth Meunier, cartographer and physical scientist with USGS from 1972. He was a member of the USGS satellite surveying team who wintered-over at Pole Station in 1974. In 1982-83 he was in the Allan Hills area, as a member of ANSMET (Antarctic Search for Meteorites), originating a plan for positioning, by satellite surveying methods, the location of meteorites discovered during field operations. From 1991 he was in the Polar Programs section of the USGS's Office of International Activities.

Meunier, Joseph. b. May 11, 1815, Villeneuve, France. Steward on the *Zélée* during FrAE 1837-40.

Punta Meusnier *see* **Meusnier Point**

Meusnier Point. 64°33' S, 61°38' W. A point, 6 km SE of Portal Point, within (and on the E side of), Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-59. Named by UK-APC on Sept. 23, 1960, for Jean-Baptiste-Marie Meusnier (1754-1793), French military enginer and aeronautics pioneer, who, in 1785, predicted the design of a dirigible airship. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Meusnier.

Meyer, Charles Lytton. b. 1905, Brookport, Ill., Fla., son of railroad man William Frederick Meyer and his wife Ella Lytton. When Charles was a little lad, the family moved to Dunedin, Fla., where the father got a job as a machinist, and then on to Clearwater, where he was a grocery man. Charles joined the U.S. Navy, and was married to May. He was a chief machinist's mate on the *Bear*, during the 1st half of USAS 1939-41, and coxswain on the 2nd half. He was also engineer on the Snow Cruiser.

Meyer Desert. 85°08' S, 166°45' E. A remarkable triangular ice- and snow-free shelf of about 50 sq miles, it is a cold desert swept continually by high winds, and covered by dolerite pebbles eroded and glazed by wind-blown dust, at the N extremity of the Dominion Range, near the confluence of the Beardmore Glacier and Mill Glacier. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Dr. George H. Meyer, from the University of Texas at Austin, who was USARP scientific leader at McMurdo in the winter of 1961. He led a field party into this area in 1961-62. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Meyer Hills. 79°47' S, 81°06' W. A small group of hills between the Enterprise Hills and the head of Constellation Inlet, in the Heritage Range of the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63 for Harvey John Meyer (b. July 16, 1935, St. Paul, Minn.), geologist with that party. US-ACAN accepted the name in 1964.

Meyers Nunatak. 74°54' S, 98°46' W. A nunatak, 16 km ESE of Mount Manthe, at the SE end of the Hudson Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Herbert Meyers, USARP geomagnetist at Byrd Station, 1960-61.

Meyrick, William Richard "Tom." b. 1885, Lyttelton, NZ. On Aug. 7, 1908, at Lyttelton, he signed onto the *Nimrod*, as a trimmer, and on Dec. 1, 1908, left NZ for the 2nd half of BAE 1907-09. He was discharged at Lyttelton on April 3, 1909. This was his first sea voyage. For several years after this, he plied the seas between Wellington and Sydney, as a fireman or greaser on Dunedin steamers.

Mezdra Point. 62°43' S, 61°21' W. An ice-free point on the NW coast of Snow Island, 1.5 km SW of Cape Timblón, and 2 km NE of Irnik Point, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the town of Mezdra, in northwestern Bulgaria.

Mezek Peak. 62°56' S, 62°27' W. The sharp peak rising to 1650 m, and overlooking Dalgopol Glacier to the NW, 1.2 km E of Pisgah Peak, and 3.9 km SW by S of Mount Christi, in the Imeon Range, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the medieval fortress of Mezek, in southeastern Bulgaria.

Vpadina Mezhgornaja. 71°13' S, 67°29' E. A trench on the SE side of Massif Geodezistov, NE of Mount Lanyon, and due W of Mount Meredith, in the Prince Charles Mountains. Named by the Russians.

Ozero Mezhgornoe. 73°38' S, 68°30' E. A lake at the N end of the valley the Russians call Dolina Snezhnaja, at the S end of the Mawson Escarpment. Named by the Russians.

Nunatak Mezhgornyj. 78°48' S, 26°40' W. Immediately SE of Skaly Saljut-6, in Coats Land. Named by the Russians.

Reka Mezhozëernaja. 70°49' S, 68°06' E. A stream at the E foot of the nunatak the Russians call Gora Storozhevaja, in Pagodroma Gorge, at the E end of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Mezzo Buttress. 66°03' S, 64°31' W. A rocky buttress, rising to about 1000 m above sea level, at the head of Barilari Bay, just E of Lawrie Glacier, on the Graham Coast, on the W coast of

Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE 1956-57. So named by UK-APC on July 7, 1959, because the face of this buttress is conspicuously divided diagonally, half of it being of black rock, the other half of red rock. US-ACAN accepted the name in 1971.

Mhire Spur. 79°33' S, 83°50' W. Descends W from the heights around Mount Sporli, to form the S limit of Larson Valley, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for chief equipment operator Clifford J. Mhire, USN, responsible for supervising the movement of jet fuel from McMurdo Station to Williams Field during OpDF 66 (i.e., 1965-66).

Islotes Mica *see* **Mica Islands**

Mica Islands. 69°20' S, 68°36' W. A group of about 4 mainly ice-covered islands, 11 km W of Mount Guernsey, and about 10.5 km ENE of Cape Jeremy, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Oliver Island is the largest of the group. Discovered and photographed aerially on Aug. 16, 1936 by BGLE 1934-37, and later roughly mapped from these photos. Visited and surveyed from the ground in 1948 by FIDS, who named them for the mica in the schists which form them. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. The Chileans and Argentines call them Islotes Mica.

The *Micalvi*. More correctly the *Contramaestre Micalvi*. Chilean tug, used off the coast of Patagonia. She was in Antarctic waters for ChilAE 1994-95 (captains Mario Rebolledo and Raúl Merino) and ChilAE 1998-99 (Captain Pedro Muller).

Ensenada Micalvi. 62°28' S, 59°30' W. A inlet opening immediately W of Edwards Point, in the extreme S part of Robert Island, in the South Shetlands. Its coasts are formed of ice-covered cliffs, and its bottom is of rock. Named by one of the Chilean Antarctic expeditions, for the Patagonian tug *Micalvi*. The Argentines call it Caleta Beltrán.

Isla Micalvi *see* **Dion Islands**

Punta Micalvi *see* **Maurstad Point**

Michael, Curtis Henry. b. Dec. 9, 1913, Big Rock, Ill., son of farmer George Michael and his wife Ida Greer. He joined the U.S. Navy and was coxswain on the *Bear* during the 2nd half of USAS 1939-41. In 1968 he married Teresa J. Hohstadt, but the marriage lasted 2 years. He died on July 3, 1993, in San Jose, Calif.

Michael, Reinhold. b. April 3, 1876, Berlin. He joined the *Gauss* as an able seaman at Cape Town for GermAE 1901-03. He was an amateur violinist.

Michaelson, George *see* **Órcadas Station**, 1912

Michailoff's Island *see* **Cornwallis Island**

Michailow Hukk. 68°52' S, 90°26' W. A small cape at the the most southerly point on the Von Bellingshausen Coast, on the E side of Peter I Island. Named by the Russians. The Norwegians call it Michajlovodden.

Michajlovodden *see* **Michailow Hukk**

Michel, Joseph. b. April 1, 1804, Solliès, France. Cook on the *Astrolabe* during FrAE 1837-40. He ran at Talcahuano, Chile, on April 22, 1838.

Michel, Lazare. b. Sept. 10, 1805, Ubaye, France. Able seaman on the *Zélée* during FrAE 1837-40.

Michell, William Arthur Rupert. Known as Rupert. b. 1880, Perth, Ontario, son of public inspector Francis Michell and his wife Margaret. After medical school, he went to England in 1904. Prompted by his friend Capt. Rupert England, he signed on as surgeon on the *Nimrod* during BAE 1907-09, sailed from London to NZ, then to Antarctica, where he helped the explorers unload, and also assisted in the operation to remove Aeneas Mackintosh's eye. He then returned to NZ with Mackintosh, and helped him get a glass eye, and so did not winter-over. He toured Australia, spent a month on a walking tour of South Island, NZ, with Arthur Harbord, and then was back again on the *Nimrod* the following year to pick the expedition up. He became a provincial doctor in Canada, joined the Canadian Medical Corps for World War I, was invalided out in 1915, and in 1918 married Violet Dowdell. He practised in Toronto, then joined the Ontario Ministry of Health, from which he retired in 1949. He died in Ottawa on July 20, 1966.

Isla Michelsen *see* **Michelsen Island**

Michelsen Harbor *see* **Mikkelsen Harbor**

Michelsen Island. 60°44' S, 45°02' W. A small island in the South Orkneys, joined to the S end of Powell Island by a narrow isthmus of boulders, partially covered at high water. Discovered by Powell and Palmer in Dec. 1821, and roughly mapped by them. Named before 1912-13, when Petter Sørlle listed it as such on his chart. It appears on a British chart of 1916, as Michelsen's Island, and erroneously on an Argentine chart of 1930, as Isla Milkensen. It was re-surveyed in 1933, by the Discovery Investigations, and appears on their chart of 1934 as Michelsen Island. US-ACAN accepted this name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on a 1945 Argentine chart, as Isla Michelsen, and that is the name the Argentines use today. In 1967 it was designated part of Specially Protected Area #15. *See* **Mikkelsen Harbor** for a possible explanation of this name.

Michelsen Point *see* **Skottsberg Point**

Michelsen's Island *see* **Michelsen Island**

Camp Michigan. 78°34' S, 163°57' W. A base at the edge of the Ross Ice Shelf, used for the Ross Ice Shelf Deformation Project, during IGY. **Nov. 1957**: The camp was established. It comprised a sledge-mounted wanigan and a prefabricated hut about 8 feet high. A couple of Weasels were part of the equipment. **Feb. 1958**: It was vacated. **1958-59 summer**: It was occupied again, and then re-vacated. **Dec. 1959**: It was visited and photographed. Heavy snow then buried it. **Jan. 1963**: It was visited again by the Ross Ice Shelf Survey Party. **Feb. 1972**: The crew of the *Eltanin* saw something from their ship which they listed as X-72 (X the unknown). This was almost certainly the remains of Camp Michigan.

Michigan Plateau. 86°08' S, 133°30' W. An undulating, ice-covered plateau, 50 km long, and rising to 3000 m above sea level, at the W side of Reedy Glacier. The N and E sides of the plateau are marked by the steep Watson Escarpment. The W and S sides grade gently to the level of the interior ice. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for the University of Michigan, at Ann Arbor, which had sent several parties to Antarctica.

Islotes Michimalongo *see* **Quintana Island**

Michotte, Louis. b. Nov. 6, 1868, Brussels. A former Foreign legionnaire in Algeria, he joined BelgAE 1897-99 as "maitre d'hotel," and, from Punta Arenas on, in spite of himself, became cook as well, in which capacity he excelled. He died in 1926.

Mick Peak. 77°11' S, 161°23' E. Rising to about 1500 m, about 2.5 km WNW of Mount James, in the Helicopter Mountains, in the Saint Johns Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Robert Franz Mick, helo mechanic who supported USAP at McMurdo Sound and in the McMurdo Dry Valleys for 8 austral summers between 2000-01 and 2007-08. NZ-APC accepted the name on April 7, 2008.

Mickle Island. 77°34' S, 166°13' E. An island, 1.5 km SE of Flagstaff Point, close off the W side of Ross Island. Charted and named by BAE 1907-09. Mickle means "great," and a joke is intended in the naming because the island is very small. US-ACAN accepted the name in 1952.

Mickler Spur. 85°49' S, 130°45' W. A narrow spur, 6 km long, forming the S wall of Hueneme Glacier, in the W part of the Wisconsin Range, and terminating at Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Raymond R. Mickler, equipment operator who wintered-over at Byrd Station in 1961, and at McMurdo in 1964.

Micou Point. 77°27' S, 166°26' E. A point, marking the N end of Maumee Bight, in Wohlschlag Bay, 11 km NE of Cape Royds, on the W side of Ross Island. Named by US-ACAN in 1993, for Benjamin Micou (*see* **Deaths**, 1992). NZ-APC accepted the name. *See also* **Dufek Head**.

Mid Barrier Depot. Scott's depot at 81°30' S, 170°04' E, during his last expedition.

Midas Island. 64°10' S, 61°07' W. An island, NW of Apéndice Island, in Hughes Bay, off the Danco Coast, on the W coast of Graham Land. Discovered in Jan. 1898 by BelgAE 1897-99, and described (but not named) by them as an island with two summits like the ears of an ass. Roughly charted (but, again, not named) by SwedAE 1901-04. Sketched by Lester and Bagshawe on March 24, 1922, during their British Imperial

Antarctic Expedition, and they incorrectly showed it as Cape Spring (q.v.). It appears on a 1953 Argentine chart as Islote Fisher, on a 1954 Argentine chart as Isla Coy ("coy" is an Argentine word for a "hammock," which this island does resemble in shape), and finally, ArgAE 1956-57 named it Isla José Hernández, for poet José Hernández (1834-1886), and it appears on two separate 1957 Argentine charts, on one of them as Isla José Hernández and on the other as Islote José Hernández. Isla José Hernández is the name the Argentines listed in their 1970 gazetteer. The feature was photographed aerially in 1956-57, by FIDASE, and surveyed from the ground in 1957-59, by Fids from Portal Point. In 1959, it appears as Oliver Island on an American map. It was named by UK-APC on Sept. 23, 1960, as Midas Island, for Midas, the mythical Phrygian king portrayed in Greek satyrical drama as having the ears of an ass. It appears as such on a British chart of 1961. US-ACAN accepted that name in 1965. ChilAE 1960-61 named it Isla Bofill, for 1st Lt. Luis Bofill de Caso, engineer officer on the *Yelcho*, which conducted a hydrographic survey of this area that season. It appears on their chart of 1962, and also in the 1974 Chilean gazetteer.

Midbresrabben *see* **Midbresrabben Hill**

Midbresrabben Hill. 72°44' S, 2°06' W. An isolated rock hill protruding above the ice between Penck Trough and Jutulstraumen Glacier, E of the Borg Massif, in the easternmost part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Midbresrabben (i.e., "the mid glacier ridge"). US-ACAN accepted the name Midbresrabben Hill in 1966.

Mid-C Camp *see* **Mid-Point Station**

Middle Crater. 77°51' S, 166°37' E. Between Ski Slope and Crater Hill, at Hut Point, Ross Island. Named by Frank Debenham in 1912, during BAE 1910-13.

Middle Crest *see* **Central Masson Range**

Middle Glacier *see* **Wiggins Glacier**

[1]**Middle Island**. 61°58' S, 57°36' W. In the entrance to Destruction Bay, 2.5 km S of Foreland Island, and midway along the E coast of King George Island, in the South Shetlands. Used by the *Nor* in 1906-07, as a harbor. Charted in 1937 by personnel on the *Discovery II*, and named by them as Middle Islet, for its position. It appears as such on a British chart of 1940, and on an Argentine chart with the translated name of Islote Medio. UK-APC accepted the name Middle Islet on Sept. 20, 1955, and US-ACAN followed suit in 1956, but, subsequent to its being photographed aerially by FIDASE in 1956, UK-APC redefined it on July 7, 1959, as Middle Island, and that was the name accepted by US-ACAN in 1963. It appears in the 1974 Chilean gazetteer as Islote Medio, but in the 1970 Argentine gazetteer as Islote del Medio. However, today, the Argentines, like the Chileans, call it Islote Medio. Last plotted by the UK, in late 2008.

[2]**Middle Island** *see* **Day Island**

[3]**Middle Island**. Legendary island in the Bransfield Strait, reported by sealers in the 19th century. Refuted by Dr. Gunnar Andersson in the *Antarctic* in 1902-03, during SwedAE 1901-04. It was probably an iceberg. Named for its position between the South Shetlands and the mainland.

Middle Islet *see* [1]**Middle Island**

Middle Mount *see* **Mount Shackleton**

Middle Mountain *see* **Mefjell Mountain, Mount Shackleton**

Middle Nunatak *see* **Sanctuary Cliffs**

Middle Stork. 67°31' S, 68°12' W. The middle part of Stork Ridge, near Rothera Station, on Adelaide Island, it rises to about 511 m above sea level, and has a narrow ridge. Named by UK-APC on Sept. 29, 2004.

Middle Walls. 62°01' S, 58°08' W. Huge crags in the middle part (hence the name) of the W face of the Mount Hopeful massif, above Poznan Glacier, in the Arctowski Mountains. Named by the Poles in 1981, as Posrednie Sciany, it appears on Tokarski's map of 1981. The name has been translated.

Middleton, Frederick George. Student surgeon on the *Aurora*, 1916-17, when that vessel went to Cape Evans to relieve the Ross Sea Party, during BITE 1914-17. After the expedition, he finished his medical studies, became a doctor in Melbourne, working as resident in a hospital there, and died in 1972.

Middleton Harbor *see* **Bruce Bay**

Midge Lake. 62°38' S, 61°05' W. A small, arcuate lake, at the NW side of Chester Cove, on Byers Peninsula, Livingston Island, in the South Shetlands. BAS geologists worked here in 1975-76. Named by UK-APC on Feb. 7, 1978, not only for its size, but for the fact that during the short summer, imagos of the chironomid midge *Belgica antarctica* are found beneath the rock debris surrounding the lake. It appears in the British gazetteer of 1980. US-ACAN accepted the name. Last plotted by the UK, in late 2008.

Midges. Order: Diptera. There are 2 species in Antarctica (*see* **Fauna**). They are parasitic on seals and birds. *Belgica antarctica* is to be found at Midge Lake (see the entry above).

Midgley Island. 66°20' S, 110°24' E. A rocky island, 1.3 km long, immediately S of Hollin Island, in the Windmill Islands, off the Budd Coast, about 4 km W of Mitchell Peninsula. First mapped from air photos taken by OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1956, for Lt. Elwin Wilmer "E.W." Midgley (b. Oct. 21, 1921, Endicott, NY. d. Nov. 29, 1984, Mt. Clemens, Mich.), orthopedic surgeon and Army Medical Corps observer on Operation Windmill 1947-48. He helped establish astronomical control stations between the Budd Coast and the Wilhelm II Coast. *See also* **Ostrov Serp** (under **S**).

Midgley Reefs. 66°20' S, 110°22' E. Several tidal and submerged rocks among the islands off the W side of Midgley Island, in the Windmill Islands, off the Budd Coast. Discovered from small craft from Wilkes Station in 1961. Named by ANCA in association with Midgley Island. US-ACAN accepted the name in 1963.

Midkiff Rock. 77°28' S, 145°06' W. A rock outcrop on the broad, ice-covered ridge between Hammond Glacier and Swope Glacier, 10 km ESE of Mount West, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Frank Tyler Midkiff, Jr. (b. Sept. 4, 1942, Norfolk, Va. d. July 20, 1997, Oak Harbor, Whidbey Island, Wash.), aviation machinist's mate, USN, helicopter flight crewman in Antarctica during OpDF 68 (i.e., 1967-68).

Mount Midnight. 71°56' S, 167°28' E. Rising to nearly 2000 m, between Tucker Glacier to the S and the névé of Leander Glacier to the N, 5.5 km W of Shadow Bluff, and 3 km W of Mount Shadow, in the Admiralty Mountains. Climbed in Jan. 1958 by a geological team of NZGSAE 1957-58, and named by them in association with Mount Shadow and Shadow Bluff. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Midnight Plateau. 79°53' S, 156°15' E. A prominent, extensive, ice-covered plateau, rising to an elevation of about 2200 m above sea level, it is the central feature of the Darwin Mountains, and the only area of snow accumulation in those mountains. Discovered by VUWAE 1962-63, and so named by them because this plateau was visited by members of the expedition at midnight on Dec. 27, 1962. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Lake Midori. 69°01' S, 39°36' E. A small lake just NE of Lake Kamome, and about 0.6 km SE of Hachinosu Peak, on East Ongul Island. Mapped by the Japanese from ground surveys and air photos taken by JARE in 1957. Named Midori-ike (i.e., "green pond") by the Japanese, on May 1, 1963. US-ACAN accepted the name Lake Midori in 1968.

Midori-ike *see* **Lake Midori**

Mid-Point Station. 75°32' S, 145°49' E. A station operated by the Italians in 2006. Also known as Mid-C Camp, it was in Victoria Land. Giulia Automatic Weather Station was here.

Midship Glacier. 76°52' S, 161°30' E. A broad, flat glacier flowing N from the slopes of Mount Morrison to fill the greater part of Alatna Valley, in the Convoy Range of Victoria Land. From 1957 onwards, this glacier was thought to be part of Benson Glacier. However, Trevor Chinn's 1989-90 NZARP field party determined that, although it abuts against Benson Glacier at Jetsam Moraine, it does not in any way act as a tributary to Benson Glacier, as its dominant ice flow is northward and cuts across Benson Glacier. With the identification of Midship Glacier as a separate feature, NZ-APC redefined Benson Glacier (q.v.) in 1992, and US-ACAN followed suit in 1993.

Midtryggen. 68°51' S, 80°31' W. A ridge, completely covered in ice and snow, SW of Austryggen, in the E part of the steep slope the

Norwegians call Storfallet, in the NE part of Peter I Island. Named by the Norwegians ("the middle ridge").

Midway Glacier. 72°10' S, 166°50' E. A tributary glacier, 24 km long and 5 km wide, flowing S along the W side of Evans Ridge into Pearl Harbor Glacier, in the Victory Mountains of Victoria Land. At the head it shares a common snow saddle with Jutland Glacier, which flows N. Named by the Southern Party of the NZ Federated Mountain Clubs Expedition of 1962-63, as Midway Island Glacier, following the motif in this area of famous naval battles. US-ACAN accepted the name Midway Glacier in 1964, and NZ-APC followed suit.

Midway Island Glacier *see* **Midway Glacier**

Îlot de la Midwinter *see under* **D**

Midwinters Day Message. Sent by the president of the USA to winterers in Antarctica. This has been going on since Eisenhower did it in 1959, and the message, normally sent on June 21 or June 22, is now received by all stations operated by all countries. It is designed to boost morale, and demonstrate the interest of the American people in Antarctica.

Isla(s) Miércoles *see* **Wednesday Island**

Lake Miers. 78°06' S, 163°51' E. A small lake in Miers Valley, about 2 km SE of the snouts of Miers Glacier and Adams Glacier, and filled by meltwater from these glaciers. A stream from the lake flows down the valley during the "hot" summers to reach the coast of Victoria Land, about 22 km S of Cape Chocolate. Photographed and plotted in Sept. 1957 by the NZ Blue Glacier Party of BCTAE, who named it in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Miers Bluff. 62°43' S, 60°26' W. Rising to about 400 m above sea level, it marks the NW entrance point of False Bay, and the S end of Hurd Peninsula (which separates False Bay from South Bay), on the S coast of Livingston Island, in the South Shetlands. Roughly charted by sealers in the 19th century, this feature was, for many years, erroneously called Elephant Point. Robert Fildes had named another feature in the area as Elephant Point, and somehow the name was given to this bluff. It appears as Elephant Point on a British chart of 1930, and it was further charted in 1934-35 by the Discovery Investigations. It appears on a French chart of 1937, as Pointe Éléphant; on a 1949 Argentine chart, as Punta Elephant; and on a 1953 Argentine chart, as Punta Elefante. It was listed as Elephant Point in the British gazetteer of 1955. It appears as Puntilla Elefantes on a South American chart of 1956. It was photographed aerially in 1956-57 by FIDASE, and surveyed from the ground by FIDS in the same time period. On July 7, 1959, UK-APC applied the name Miers Point to this feature, named for John Miers (1789-1879), British engineer and botanist who was responsible for the first published chart of the South Shetlands, one based on the work of William Smith (q.v.). The original Elephant Point (i.e., Fildes' Elephant Point) is now called that again. However, UK-APC determined Miers Point to be a bluff, and it appears as Miers Bluff in the 1962 British gazetteer, and on a British chart of that year. That is the name that was accepted by UK-APC, and also, in 1963, by US-ACAN. The name Punta Elefante appears in the 1970 Argentine gazetteer, and in the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Miers Glacier. 78°05' S, 163°40' E. A small glacier flowing eastward from the Royal Society Range, N of Terminus Mountain, in Victoria Land, it occupies the upper (western) portion of Miers Valley, between Hobbs Glacier and Koettlitz Glacier. Mapped and named by BAE 1910-13. US-ACAN accepted the name in 1960.

Miers Lake *see* **Lake Miers**

Miers Point *see* **Miers Bluff**

Miers Stream. 78°07' S, 164°09' E. A melt stream flowing E into Lake Miers, in Victoria Land. Named in association with Miers Valley. US-ACAN accepted the name in 1995.

Miers Valley. 78°06' S, 164°00' E. Just S of Marshall Valley, and W of Koettlitz Glacier, on the coast of Victoria Land. It is ice-free, except for Miers Glacier in its upper (western) part, and Lake Miers (near its center). Mapped and named by BAE 1910-13. US-ACAN accepted the name in 1960.

Glaciar Miethe *see* **Miethe Glacier**

Miethe Glacier. 64°56' S, 63°06' W. A glacier, 5 km long, it flows NW into Thomson Cove, at the Gerlache Strait, to the S of Mount Banck and Bryde Island, on the Danco Coast, on the W coast of Graham Land. It appears (unnamed) on an Argentine government chart of 1952, and was photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960 for Adolf Miethe (1862-1927), German chemist and photography pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Miethe. Originally plotted in 64°58' S, 63°02' W, it has since been replotted.

Mifeng Yu. 62°12' S, 59°02' W. An island off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Migi-zima. 69°07' S, 39°28' E. A tiny island just off East Ongul Island, on the E fringe of Lützow-Holm Bay, off the Prince Olav Coast. Mapped from ground surveys and air photos taken by JARE, and so named by the Japanese on June 22, 1972 (name means "right island") because it lies at the right side of the sea route of a JARE icebreaker approaching Showa Station.

Migley, William *see* **USEE 1838-42**

Bahía Migliardo *see* **Bahía Román**

Skala Migmatitovaja *see* **Migmatitovaya Rock**

Migmatitovaya Rock. 71°47' S, 10°38' E. At the E end of a spur, 5 km NE of Terletskiy Peak, in the Shcherbakov Range, in the easternmost part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Roughly plotted from air photos taken by GermAE 1938-39. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Mapped yet again by SovAE 1960-61, and named by the Russians in 1966, as Skala Migmatitovaja (i.e., "migmatite rock"). US-ACAN accepted the name Migmatitovaya Rock in 1970. The Norwegians call it Migmatittknausen.

Migmatittknausen *see* **Migmatitovaya Rock**

Migmatitwand. 73°29' S, 165°04' E. A wall in the Southern Cross Mountains of Victoria Land. Named by the Germans ("migmatite wall").

Mount Mignone. 77°52' S, 162°31' E. A peak, rising to 2025 m, in the Cathedral Rocks, between Darkowski Glacier and Bol Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for Lt. John C. Mignone, USN, chaplain who wintered-over at McMurdo in 1966.

Islote Miguel Cané. 64°51' S, 62°54' W. A small island in Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines, presumably for Miguel Cané (1851-1905), the Buenos Aires writer and politician.

Skaly Mihaila Belova *see* **Sønstebynuten**

Kupol Mihaila Ravicha. 74°37' S, 121°40' W. A dome on the coast of Marie Byrd Land. Named by the Russians, for geologist Mikhail Grigoryevich Ravich (1912-1978), Soviet geologist in Antarctica.

Kupol Mihajlova *see* **Mikhaylov Island**

Mys Mihajlova *see* **Cape Mikhaylov**

Ostrov Mihajlova *see* **Cornwallis Island**

Miharashi Peak. 69°00' S, 39°37' E. Also spelled Miharasi Peak. A conspicuously projecting hill rising to 41.2 m, it is the highest peak in the NE extremity of East Ongul Island. Mapped by the Japanese from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on Oct. 1, 1962, as Miharasi-iwa (i.e., "extensive view peak"). US-ACAN accepted the name Miharashi Peak in 1968.

Miharashi-iwa *see* **Miharashi Peak**

Miharasi-iwa *see* **Miharashi Peak**

Gory Miheeva *see* **Skeidshovden Mountain**

Cape Miho *see* **Cape Akarui**

Mihun Dao. 69°23' S, 76°10' E. An island in the Larsemann Hills. Named by the Chinese.

Miisho, Seizo. b. 1878, Fukuoka, Japan. Pharmacist who became surgeon and physician on Shirase's Japanese South Polar Expedition, 1910-12. He took part in the Dash Patrol (q.v.). He died in 1947.

Mikado Glacier. 69°53' S, 70°37' W. A glacier, on the N side of Mahler Spur, and flowing WNW into Sullivan Glacier near the junction of that glacier with Gilbert Glacier, in the N part of Alexander Island. BAS had been surveying it since 1968, and it is their plotting that is used here. Named by UK-APC on Dec. 8, 1977, in association with Gilbert & Sullivan. It appears in the 1980 British gazetteer, and US-ACAN accepted the name.

Mikaeridai. 69°02' S, 40°01' E. A flat snowfield lying on a marginal shoulder of the East Antarctica ice sheet. A base for over-snow traverses has been maintained here by the Japanese

since 1966, and the snowfield was named by them thus on June 22, 1972 ("looking back terrace").

Mikalsen Point *see* **Spaull Point**

Mikazuki-iwa. 71°43' S, 35°54' E. A rock exposure forming the E extremity of Mount Gaston de Gerlache (the most southerly massif in the Queen Fabiola Mountains). Surveyed by JARE in 1969, and named descriptively by the Japanese on March 22, 1979 ("crescent rock").

The *Mikhail Kalinin*. A 5243-ton Russian diesel-run steam supply ship, built in 1958, by Mathias Thiesse Werft, in Wismar, East Germany, for the Russian-owned Baltic Shipping Company, the first of the Kalinin-class of 19 similar ships thus built. Her first assignment was the Leningrad to London run, and then she took part in SovAE 1958-60 (Captain Aleksandr Dmitriyevich Borodin). She also brought in the first Polish Antarctic Expedition that season. She was back for SovAE 1975-77, skippered by Vladimir Vladimirovich Kovalev. In 1994 she was laid up in Murmansk, and later scrapped in India.

The *Mikhail Somov*. A 7400-ton Soviet research and supply ship, 40 feet long, sister ship of the *Kapitan Bondarenko*. Named for Mikhail Somov (q.v.). She took part in the following Soviet Antarctic expeditions: 1975-77 (Capt. Mikhail Yermolayevich Mikhaylov); 1976-78 (Captain Mikhaylov; in 1976-77 the *Somov* was trapped in the ice off Oates land, for 57 days); 1977-79 (Capt. Mikhaylov); 1978-80 (Capt. Vladimir Ivanovich Uzolin); 1979-81 (Capt. Mikhaylov); 1980-82 (Capt. Mikhaylov); 1981-83 (Capt. Feliks Aleksandrovich Pes'yakov; the vessel was used on WEPOLEX 81, i.e., the Weddell Polynya Expedition, and was in the Weddell Sea in Oct. and Nov. 1981); 1982-84 (Capt. Anatoliy Viktorovich Sukhorukov); 1983-85 (Capt. Mikhaylov); 1984-86 (Capt. Valentin Fedorovich Rodchenko; in March 1985 the *Somov* got trapped in the pack-ice while conducting the annual re-supplying of Russkaya Station. On July 26 the 53 men were freed by the *Vladivostok*, after 133 days of captivity); 1985-87 (Capt. Pes'yakov); 1986-88 (Capt. Pes'yakov; in 1986-87 she freed the *Nella Dan* from the ice); 1987-89 (Capt. Pes'yakov); 1988-90 (Capt. M.S. Kaloshin); 1989-91 (Capt. Kaloshin); 1990-91 (Capt. Pes'yakov); 1991-93 (Capt. Rodchenko). She took part in RussAE 1993-95 (Capt. Kaloshin); RussAE 1994-96 (Capt. S.A. Maslenikov).

Mikhailov Canyon. 64°52' S, 86°10' E. A submarine feature off the coast of Mac. Robertson Land. Named by international agreement for Pavel Mikhaylov (q.v.).

Cape Mikhaylov. 66°54' S, 118°32' E. An ice-covered point on the Moscow University Ice Shelf, on the Sabrina Coast, 67 km E of Totten Glacier, and about 114 km W of the Henry Islands, in Wilkes Land. Photographed aerially by OpHJ 1946-47. In 1955, it was plotted on base compilation map sheets by Gard Blodgett (*see* **Blodgett Iceberg Tongue**). Re-photographed aerially by SovAE 1956, and named by the USSR as Mys Mihajlova, for Pavel Mikhaylov. US-ACAN accepted the translated name Cape Mikhaylov in 1961.

Mikhaylov, Pavel Nikolayevich. b. 1786. An academician at the Imperial Academy of Fine Arts, he was the artist on von Bellingshausen's expedition of 1819-21. He was also official artist on the *Moller*'s round-the-world trip between 1826 and 1829. He died in 1840. His excellent detailed illustrations of the Antarctic coastlines were used by the Russians until 1930. There was a piece written about him by L.A. Shur and Richard A. Pierce, in the *Alaska Journal* of 1958 (vol. 8; No. 4).

Mikhaylov Dome *see* **Mikhaylov Island**

Mikhaylov Island. 66°48' S, 85°30' E. An ice-covered island (actually it is an ice dome, as it is an elevation in the surface of the West Ice Shelf) rising to 238 m above sea level, 10 km SE of Leskov Island. Discovered by SovAE 1956, and named by them as Ostrov Mikhaylova, for Pavel Mikhaylov. US-ACAN accepted the name Mikhaylov Island in 1965. The Russians now tend to call it Kupol Mihajlova (i.e., "Mikhaylov dome") (the spellings of this vary, as the Russians, of course, use the Cyrillic alphabet).

Ostrov Mikhaylova *see* **Mikhaylov Island**

Mikheyeva Mountain *see* **Skeidshovden Mountain**

Bahía Mikkelsen *see* **Mikkelsen Bay**

Îles Mikkelsen *see* **Mikkelsen Islands**

Islotes Mikkelsen *see* **Mikkelsen Islands**

Puerto Mikkelsen *see* **Mikkelsen Harbor**

Mikkelsen, Caroline. b. May 4, 1904, Nøterøy, Norway, as Caroline Mandel (named after her grandmother), but raised in Tønsberg, daughter of head gardener Heinrich Eduard Mandel (who was born in Tønsberg, of a German father) and his wife Margit. Second wife of Klarius Mikkelsen, she became the first woman on record to set foot on the Antarctic Continent when, on Feb. 20, 1935, she stepped ashore at the Vestfold Hills, spent a short time on land, then went back to the Thorshavn. It is reported that she died in 1999.

Mikkelsen, Hans M. A naturalized U.S. citizen of Norwegian ancestry. Skipper of the whaler *Ulysses*, in 1937-38.

Mikkelsen, Klarius. b. 1887, Sandar, Norway, son of seaman Mikkel Julius Mikkelsen and his wife Nora. He went to sea at 14. His first wife, Anna Helena, accompanied him on some of his (non-Antarctic) trips, as a stewardess. As a whaling captain, in 1930-31 he commanded the *Torlyn* in Antarctic waters, and in 1933-34 was in command of the *Thorshavn*. In 1934-35 he took a fleet directed by Lars Christensen (the owner) to Antarctica, he himself commanding the *Thorshavn* again. That year he discovered the Ingrid Christensen Coast, and named it for his boss's wife. He and his wife Caroline stepped ashore on Feb. 20, 1935, near today's Davis Station. He commanded the *Thorshavn* during LCE 1936-37.

Mikkelsen, Otto H. Norwegian diver who, on Dec. 8, 1909, inspected the hull of the damaged *Pourquoi Pas?* when that ship pulled into the Norwegian whaling depot on Deception Island during FrAE 1908-10.

Mikkelsen, Peder. Name also seen as Michelsen. Norwegian whaling manager, who died at Deception Island in Dec. 1910.

[1]**Mikkelsen Bay** *see* **Mikkelsen Harbor**

[2]**Mikkelsen Bay**. 68°43' S, 67°10' W. A large bay, 24 km wide at its mouth, that indents the Fallières Coast for 16 km between Bertrand Ice Piedmont and Cape Berteaux, 28 km SW of Rymill Bay, on the W coast of Graham Land. First seen from a distance in Jan. 1909, by FrAE 1908-10, but not recognized by them for what it was. Surveyed in 1936 by BGLE 1934-37, and named by them for Ejnar Mikkelsen (1880-1971), Danish Arctic explorer. It was surveyed again in 1948, by Fids from Base E. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a Chilean chart of 1962, as Bahía Mikkelsen, and that is the name that appears in the 1974 Chilean gazetteer. The Argentines also call it Bahía Mikkelsen.

Mikkelsen Harbor. 63°54' S, 60°47' W. Also seen (erroneously) as Michelsen Harbor. A small bay indenting the S side of Trinity Island, between Skottsberg Point and Borge Point, in the Palmer Archipelago. It was roughly charted by 19th-century sealers, and named by them as Hoseason Harbor (*see* **Hoseason Island**), and appears as such on a British chart of 1839, and also on an 1867 map (as Hoseason Hafen). In fact, the name Hoseason Harbor would linger well into the post World War II period. It was charted during SwedAE 1901-04, and also by the early Norwegian whalers, who docked here between 1910 and 1917, and who tended to call it South Sandefjord Anchorage (it appears as such on Hans Borge's chart of 1915; the name Sandefjord Harbor would also appear several times on charts). However, it was named Mikkelsen Harbor before 1913 (when it was charted as such by David Ferguson, it showing on his chart which was produced in 1918), definitely not for Klarius Mikkelsen (as the usage of the name predates his first Antarctic trip by at least a couple of decades), perhaps (but not probably) for Ejnar Mikkelsen (*see* **Mikkelsen Bay**) or Peder Mikkelsen (as Hart claims), but most likely for Otto Mikkelsen. It also appears as Mikkelsen Bay on several charts from 1916 to 1922. It appears as Mikkelsen Harbour on a British chart of 1949, and that is the name accepted by US-ACAN in 1952 (without the "u" in "Harbor," of course), and also by UK-APC on Sept. 8, 1953. It was photographed aerially by FIDASE in 1956, and appears as Mikkelsen Harbor in the U.S. gazetteer of that year, and (with the "u") on British charts of 1957 and 1961. It appears on a 1947 Argentine chart, as Bahía Hoseason, and on one of their 1948 charts as Puerto Hoseason (they also bill it as Puerto Mikkelsen). By the time of a 1953 chart, the Argentines had settled on Puerto Mikkelsen, and that is the name that appears in their 1970 gazetteer. It appears on a Chilean chart of 1961, as Bahía Mikkelsen, and that is the name that appears in the 1974 Chilean gazetteer.

Mikkelsen Island *see* **Watkins Island**

Mikkelsen Islands. 67°38' S, 68°11' W. A small group of islands and rocks, in the entrance to Ryder Bay, and 3 km ESE of the Léonie Islands, off the SE coast of Adelaide Island. Discovered and roughly charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Îles Mikkelsen, for Otto Mikkelsen. The group appears on a British chart of 1948, as Mikkelsen Islets. Fids from Base E surveyed the feature between 1948 and 1950, and UK-APC accepted the name Mikkelsen Islets on Sept. 20, 1955. Following air photos taken by FIDASE in 1956, UK-APC redefined the group on July 7, 1959, as Mikkelsen Islands. They appear as such on a British chart of 1961, and US-ACAN accepted this name in 1963. The group also appears as such in the 1980 British gazetteer. The islands appear on a Chilean chart of 1962, as Islotes Mikkelsen; that is the name that appears in the 1974 Chilean gazetteer, and is the name also accepted by the Argentines.

Mikkelsen Islets *see* **Mikkelsen Islands**

Mikkelsen Peak. 67°47' S, 66°44' E. Rising to 420 m, it is the highest peak of Scullin Monolith, in Mac. Robertson Land. Named by the Norwegian whalers here in Jan. and Feb. 1931, as Klarius Mikkelsenfjell, for Klarius Mikkelsen. US-ACAN accepted the translated name of Mikkelsen Peak in 1947. The Australians were the latest to replot this feature, in late 2008.

Zaliv Mikluho-Maklaja. 66°45' S, 118°00' E. A gulf. The coordinates, as given by the Russians, would put it at N of Cape Mikhaylov, on the coast of Wilkes Land. Named by the Russians for Nikolay Nikolayevich Mikluho-Maklaja (1846-1888), Russian naturalist who went by the name Nicholas Maclay.

Mikre Beach. 62°50' S, 61°24' W. A beach, snow-free in summer, extending 2.2 km on the SE coast of Snow Island, it is bounded by Cape Conway to the SW, by the island's ice-cap to the NW, and by Pazardzhik Point to the NE, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Dec. 6, 2010, for the settlement of Mikre, in northern Bulgaria.

Mikuro-iwa. 69°00' S, 39°36' E. A visible reef in Kitano-ura Cove, on the N side of East Ongul Island. Mapped by the Japanese from ground surveys and air photos taken by JARE, and named by them on March 22, 1994 ("micro-rock"; the Japanese render the word "micro" as "mikuro").

Mikus Hill. 70°27' S, 63°50' W. A hill with a number of bare rock exposures, rising to about 1700 m, and surmounting the SW wall of Richardson Glacier, between that glacier and the Dyer Plateau, in central Palmer Land. Mapped by USGS in 1974 from ground surveys, and USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Edward J. Mikus, USN, photographer on the cartographic aerial mapping crew in VX-6 Hercules aircraft in 1968-69. UK-APC accepted the name on July 21 1976. It appears on the 1979 USGS sketch map of the northern part of Palmer Land.

Miladinovi Islets. 62°28' S, 60°21' W. A group of 2 small islands, measuring respectively 500 m by 370 m, and 350 m by 200 m, lying 300 m S of Iratais Point (on Desolation Island), and separated from Desolation Island by Neck or Nothing Passage, off the N coast of Livingston Island, in the South Shetlands. Named by the Bulgarians on Dec. 15, 2006, for the Bratya Miladinovi (i.e., the Miladinov Brothers), Macedonian (but self-proclaimed Bulgarian) poets and folklorists, Dimitar Miladinov (1810-1862) and Konstantin Miladinov (1830-1862).

Milan Ridge. 83°15' S, 156°08' E. Mostly ice-free, and 8 km long, it extends N-S along the W side of Ascent Glacier, in the Miller Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Frederick Arthur "Fred" Milan (b. March 10, 1924, Waltham, Mass. d. Jan. 28, 1995), physiologist who wintered-over at Little America in 1957.

Milan Rock. 76°01' S, 140°41' W. A rock along the E margin of Land Glacier, 3 km SE of Mount Hartkopf, in Marie Byrd Land, it is the most southerly outcrop near the head of the glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Frederick T. Milan, USN, aviation structural mechanic on VX-6 Hercules aircraft for several seasons in Antarctica. He was a crew member on the first midwinter flight to Antarctica, on June 25, 1964. *See also* **Gora Kastaneva**.

Bahía Milburn *see* **Milburn Bay**

Milburn Bay. 63°44' S, 60°44' W. Indents the NW side of Trinity Island, in the Palmer Archipelago. Its coasts, consisting of ice cliffs, are inaccessible from the sea. Roughly charted by Capt. Johannessen, in 1919-20, it was shown (but not named) on an Argentine government chart of 1952. Following aerial photography of the bay by FIDASE in 1956, the feature was named by UK-APC on Sept. 23, 1960 for Matthew Ridley Milburn (b. April 30, 1913, Rothbury, Northumberland; Ridley was his mother's name), radio engineer and air traffic controller of FIDASE. Mr. Ridley had been a warrant officer on Malta, during World War II, and for his radio work won the MBE. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. It appears as Bahía Milburn (for the first time) on a 1962 Chilean chart, and that is the name used in the 1974 Chilean gazetteer. It is also the name used by the Argentines.

Mile High Plateau. Between Stonington Island and Cape Keeler, on the Antarctic Peninsula. This was where, in 1940, Richard Black's party set up Mile High Camp, during USAS 1939-41.

Miles Island. 66°04' S, 101°15' E. A rocky island, 5 km long, just N of Booth Peninsula, in the Mariner Islands, off the Bunger Hills. Mapped from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1956, for Richard A. Miles, USN, specialist 1st class, air crewman on OpHJ 1946-47 photographic flights. Charted by SovAE 1956, and named by the Russians as Ostrov Tumannyj. ANCA accepted the name Miles Island on May 18, 1971, but seem to have had misgivings, and, following the Russian lead, renamed it Tumannyj Island on Jan. 19, 1989.

Milestone Bluff. 67°38' S, 68°45' W. A rock-faced, snow-backed bluff, rising to about 830 m, just WSW of Mount Liotard, on the E side of the Fuchs Ice Piedmont, NNE of Adelaide Station, in the S part of Adelaide Island. Surveyed by Fids from Base T in 1961-62, and so named by them because it is an important landmark on the inland route N of Base T. US-ACAN accepted the name in 1965, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer.

Miletich Point. 62°26' S, 59°58' W. A rocky point forming the W side of the entrance to Haskovo Cove, 800 m N of the summit of the Crutch Peaks, 200 m SE of Kabile Island, 1.55 km E of Pavlikeni Point, and 2.1 km W of Aprilov Point, on Greenwich Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for Bulgarian linguist, ethnographer, and historian Lyubomir Miletich (1863-1937).

Milev Rocks. 62°19' S, 59°33' W. A group of rocks, extending for 1.5 km in an E-W direction and 600 m in a N-S direction, off the N coast of Robert Island, E of Henfield Rock, SSW of Orsoya Rocks, and SW of Mellona Rocks, the center of the group is 3.06 km NW of Newall Point, in the South Shetlands. Mapped by the British in 1968 and by the Bulgarians in 2009. Named by the Bulgarians on Sept. 14, 2010, for the Bulgarian poet Geo Milev (1895-1925; real name Georgi Milyov Kasabov).

Milford, Daniel. Ordinary seaman on the *Discovery II*, 1929-31, an able seaman on the same vessel, 1931-33, a fireman, 1935-37, and an able seaman again, 1937-39.

Glacier du Milieu *see* **Wiggins Glacier**

Mont du Milieu *see* **Mount Shackleton**

Milkov Point. 63°55' S, 59°59' W. A conspicuous rocky point on the E side of Lanchester Bay, formed by an offshoot of Chanute Peak, 11.5 km E of Havilland Point, and 8.5 km SSW of Wennersgaard Point, on the Davis Coast, on the W coast of the Antarctic Peninsula. Named by the Bulgarians on Nov. 23, 2009, for Bulgarian aviation pioneer Radul Milkov (1883-1962), who, while on a joint combat air mission with Prodan Tarakchiev (*see* **Tarakchiev Point**) during the First Balkan War, used the first air-dropped bombs, on Oct. 16, 1912.

Milky Way. 71°11' S, 68°55' W. An ice-covered col between the S part of the LeMay Range and Planet Heights, running NNW from the vicinity of Mount Ariel to the vicinity of Nonplus Crag, it is the highest point on a possible sledging route between Uranus Glacier and Jupiter Glacier, in the E part of Alexander Island. Photographed aerially in Nov. 1947, by RARE 1947-48, and mapped from these photos in 1959-60, by Searle of the FIDS. He plotted it in 71°13' S, 68°47' W. Named by UK-APC on March 2, 1961, in association with the plethora of astronomical names in the area. US-ACAN accepted the name later in 1961. It has since been replotted.

Caleta Mill *see* **Mill Cove**

Ensenada Mill *see* **Mill Inlet**

Monte Mill *see* [2]**Mount Mill**

[1]**Mount Mill** *see* **Mill Mountain**

[2]**Mount Mill**. 65°15' S, 64°03' W. Rising to 735 m, 3 km W of Mount Balch, on the NE shore of Waddington Bay, on the Graham Coast, on the W coast of Graham Land. First roughly charted in Feb. 1898, by BelgAE 1897-99. Further charted in 1909, by FrAE 1908-10, and named by Charcot as Pic Mill, for Hugh Robert Mill (*see* **Mill Cove**). It appears on a 1943 U.S. Hydrographic Office chart as Mill Peak, and on a 1953 Argentine chart as Pico Mill. US-ACAN accepted the name Mount Mill in 1950. It was photographed aerially in 1956-57, by FIDASE, and in 1957-58 an RN Hydrographic Survey unit surveyed it with the assistance of FIDS. UK-APC accepted the name Mount Mill, on July 7, 1959, and it appears as such on a British chart of 1960. It appears as Monte Mill on a 1962 Chilean chart, and that is the name seen in the 1974 Chilean gazetteer. The mountain was first climbed by BAS personnel from Faraday Station in March 1985.

Pic Mill *see* [2]**Mount Mill**

Pico Mill *see* [2]**Mount Mill**

Mill Cove. 60°46' S, 44°35' W. A cove entered between Cape Anderson and Valette Island, on the S coast of Laurie Island, in the South Orkneys. Charted in Sept. 1903 by ScotNAE 1902-04, and named by Bruce for Hugh Robert Mill (1861-1950), Scottish geographer and Antarctic historian, librarian of the Royal Geographical Society, the eminence grise of his time in that subject, and possibly the most respected of all the Antarctic historians (*see* the Bibliography). He never went to Antarctica. The cove was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1953 Argentine chart with the translated name Caleta Mill, and that was the name chosen for the 1970 Argentine gazetteer.

Mill Glacier. 85°10' S, 168°30' E. A tributary glacier, 16 km wide (the British say 24 km), flowing NW along the N side of the Dominion Range, between that range and the Supporters Range into the E side of the Beardmore Glacier. Discovered in Dec. 1908 by Shackleton as he trekked toward the Pole during BAE 1907-09, and named by him for Hugh Robert Mill (*see* **Mill Cove**), Shackleton's biographer, who also wrote the introduction to Shackleton's book, *The Heart of the Antarctic*. US-ACAN accepted the name in 1947.

Mill Inlet. 67°00' S, 64°20' W. Ice-filled, and receding 13 km in a NW direction, it is about 30 km wide at its entrance between Cape Robinson and Monnier Point, along the Foyn Coast, on the E coast of Graham Land. Charted by Fids from Base D in 1947, photographed aerially in 1947 by RARE 1947-48, and named by Finn Ronne as Sullivan Inlet, for Col. H.R. Sullivan (*see* **Mount Sullivan**). It appears as Seno Sullivan on an Argentine chart of 1952. However, on Jan. 22, 1951, UK-APC renamed it Mill Inlet, for Hugh Robert Mill (*see* **Mill Cove**), and US-ACAN accepted this new name in 1952. It is not at all clear why the name Sullivan was dropped in favor of Mill. It appears as such in the British gazetteer of 1955. It appears on a 1953 Argentine chart as Caleta Moyano (it is not clear after whom the Argentines applied this name, but it certainly isn't the reason given in the SCAR gazetteer), and on another chart of theirs in 1954 as Caleta Mill. It appears on a 1957 Argentine chart as Ensenada Mill, and that is the name used in the 1970 Argentine gazaetteer and the 1974 Chilean gazetteer, an "ensenada" being more apt than a "caleta."

Mill Island. 65°30' S, 100°40' E. An ice-domed island, 40 km long and 26 km wide (the Australians say 48 by 30), about 38 km N of the Bunger Hills, on the Knox Coast, and partly on the Shackleton Ice Shelf. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them for Hugh Robert Mill (*see* **Mill Cove**). US-ACAN accepted the name in 1947.

Mill Mountain. 79°26' S, 157°52' E. A large, flat-topped mountain, rising to 2730 m, which forms the E end of Festive Plateau, in the Cook Mountains, about 12 km E of Mount Longhurst. During BNAE 1901-04 Scott named a peak in nearby Reeves Bluffs as Mount Mill, for Hugh Robert Mill (*see* **Mill Cove**). Later surveys show no feature that could possibly be this Mount Mill, so, in 1965, US-ACAN arbitrarily named this one (which stands near to where Scott's supposed mountain was) as Mill Mountain, doing away with the name Mount Mill.

[1]**Mill Peak** *see* [2]**Mount Mill**

[2]**Mill Peak**. 67°58' S, 61°08' E. A prominent, isolated peak, rising to 1760 m, 16 km S of Pearce Peak, and 50 km (the Australians say 59 km) S of Cape Simpson. Discovered on Feb. 18, 1931 by BANZARE, and named by Mawson for Hugh Robert Mill (*see* **Mill Cove**). US-ACAN accepted the name in 1947.

Mill Stream Glacier. 85°20' S, 171°00' E. A tributary glacier, about 16 km wide (the New Zealanders say 20 km), flowing very slowly W from the Polar Plateau for about 30 km between the Supporters Range and the Otway Massif, into Mill Glacier. Surveyed by NZGSAE 1961-62, and named (rather cleverly) by them in association with Mill Glacier. They sledged up and down this glacier, and had a baseline in the center of it. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Millar, Alexander "Alex." He joined FIDS in 1959, as a meteorologist, and wintered-over at Halley Bay Station in 1960, as met man and cook.

Millen Range. 72°20' S, 166°15' E. A prominent mountain range, trending NW-SE, bordering the Polar Plateau, and lying W of the Cartographers Range, in the Victory Mountains of Victoria Land. 60 km long, and overlooking the tributary glaciers of the Trafalgar Glacier and Pearl Harbor Glacier system, it culminates in Mount Aorangi (which rises to 3200 m above sea level). Other peaks in the range include Crosscut Peak, Turret Peak, Cirque Peak, Gless Peak, Le Couteur Peak, Inferno Peak, Head Peak, and Omega Peak. Named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, for John M. Millen, leader of the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Millennium Peak. 77°30' S, 167°27' E. A peak rising to about 1800 m on the NE slope of Mount Erebus, on Ross Island, 6 km ENE of the summit of that volcano. Named appropriately by US-ACAN in 2000. NZ-APC accepted the name (even more appropriately) on Feb. 20, 2001.

Alturas Miller *see* **Miller Heights**

[1]**Mount Miller**. 66°57' S, 51°16' E. About 1.8 km NW of Pythagoras Peak, in the Tula Mountains of Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for John J. Miller. US-ACAN accepted the name in 1965.

[2]**Mount Miller**. 83°20' S, 165°48' E. A prominent mountain, rising to 4160 m (the New Zealanders say 3527 m), at the S end of the Holland Range (the New Zealanders say it is in the Queen Alexandra Range, which it really isn't), 11 km S of Mount Lloyd, and 17.5 km SW of Mount Tripp, midway between Shackleton Inlet and the Beardmore Glacier, on the W side of the Ross Ice Shelf. Discovered by BAE 1907-09, and named by Shackleton. The gazetteers do not explain why Shackleton named it Mount Miller, who Miller was, and very limited research (given the time factor) by this author has failed to reveal anyone by the name of Miller to whom it could pertain.

Punta Miller *see* **Miller Point**

Miller, David *see* **USEE 1838-42**

Miller, Ernest Alexander "Sandy." b. 1883, Perth, Scotland, but raised mainly in Edinburgh, and later, Forgan, Fife, son of draper Alexander Miller (later manager of an India rubber shop), and his wife Eleanor Kinnell. He trained as an electrical engineer, and went out to Argentina. He was one of the 4 winterers at Órcadas Station in 1908. Afterwards, he relocated to Santa Cruz Province, in Argentina, and in 1917 married Mabel Halliday. Mabel died in 1975, aged 87, but Sandy's date of death remains undiscovered at this point of time.

Miller, Jack *see* **USEE 1838-42**

Miller, John Joseph. b. 1876, East Ham, Essex. At 14, he became a shipwright's apprentice, and was sailmaker on the *Discovery* during both halves of BANZARE 1929-31. He died on Oct. 10, 1955, in Poplar, London.

Miller, Joseph Holmes "Bob." Known as Holmes Miller as a child. b. Feb. 12, 1919, Waimate, NZ, son of Irish parents, farmer Samuel Hunter Miller and his wife Annie Mary Campbell. A surveyor from the late 1930s, he was with the 4th Field Regiment, NZ Infantry, in North Africa, and was wounded in Tunisia in 1943. On Oct. 18, 1947 he married Marjorie Florence Tomlinson in Wellington. He went on a couple of expeditions (to non-Antarctic places) in 1949 and 1950, and entered private practice in 1952 in Masterton, NZ. He was surveyor on BCTAE

1955-58, and later 2nd-in-command to Sir Edmund Hillary. He wintered-over at Scott Base in 1957, and from Oct. 1957 to Jan. 1958 he and George Marsh undertook the longest dog-sledging journey in Antarctic history. Heavily involved in Antarctic affairs in NZ. Three examples: He was president of the NZ Antarctic Society, 1960-63; in 1963-64 he led the Northern Party of NZGSAE to map and to study the geology of Oates Land and Victoria Land, and sledged over 3000 miles; he was chairman of the Ross Dependency Research Committee, 1971-83. In Jan. 1966 he conducted the official 10-year celebration of the opening of Scott Base. He was knighted in 1979, as Sir Holmes Miller. He died suddenly on Feb. 6, 1986, in Los Angeles.

Miller, Leslie John. b. July 1905, Wallasey, Cheshire, as Leslie Jonas Miller. He went to sea on June 23, 1922, at 16, as a steward's boy on the *Orduna*, and then spent the rest of 1922 and 1923 on the Royal Mail Line ship *Essequibo*, plying between New York and Valparaíso. He was assistant steward on the *Discovery II*, 1931-35.

Miller, Linwood Thomas. b. July 29, 1893, Amsterdam, NY, son of laborer John Miller and his wife Margaret. For years he was employed as a sailmaker at various navy yards around the country, and was sailmaker in the shore party of ByrdAE 1933-35, and wintered-over at little America in 1934. He married Nola Garrett Moore, and they lived in Newport News, Va. He died on March 8, 1961, and is buried in York Co., Va.

Miller, Michael *see* **USEE 1838-42**

Miller, Ronald "Ron." b. April 15, 1928, Barrow-in-Furness, Cumberland, son of fish and chip shop owners Charles Miller and his wife Janet Melville. He trained and worked as a carpenter and joiner, and would climb and ski with his friend John Thompson. In 1955 they heard from a Fid friend, Don Atkinson, that Antarctica was the place to be. He and Thompson applied, were accepted as general assistants and mountain climbers, and on Dec. 29, 1955 left Southampton on the *Shackleton*, bound for Montevideo and Port Stanley, where they caught the old *John Biscoe* for Antarctica. Miller arrived at Detaille Island on Feb. 21, 1956, the site of the new Base W, where he wintered-over in 1956. He was fundamental in the rescue of John Thorne and Hedley Wright from Roux Island. On Jan. 14, 1957, he was appointed base leader of a new base, Base J, and on Feb. 8, 1957 was on the new *John Biscoe* heading for his new position, at Prospect Point, where he wintered-over in 1957. On March 14, 1958, the new *John Biscoe* came to pick him up, and he headed back to Port Stanley, where he caught the *Shackleton* to take him to Montevideo, where, as was typical of FIDS, he was offered £50 in lieu of passage if he made his own way home, so he and John Thompson took an 11-week trip through South America, then they boarded a liner which took them on a cruise through the Caribbean and then back to Liverpool. He went back into the building trade, with some reluctance. When he met his future wife (a student teacher), Margaret Mitchell, he had already applied to go back with FIDS, and in Dec. 1959 he set sail on the *Kista Dan* from England, through Montevideo and Port Stanley, to Deception Island. His mission this season was to be base leader at yet another new station — Base T, on Adelaide Island. From Deception they went on to Marguerite Bay, where the ship was beset by ice for two weeks. The *Glacier* got them out, and took them to Base F. Vivien Fuchs canceled plans for Base T for that season, and Miller wintered-over at Hope Bay (Base D) in 1960. On Feb. 8, 1961, the *Shackleton* picked him up, he joined the *Kista Dan* at Port Stanley, and arrived back in Southampton on March 19, 1961. He again returned to the building trade, married in Oct. 1961, in Broughton-in-Furness, and worked for 25 years as a building technician for the Barrow Borough Architect's Office. He and his wife have been on Antarctic cruises. He lives near Barrow-in-Furness.

Miller, Vernon I. Wesley. b. May 16, 1904, Seattle, son of barber John Wesley Miller, and his Canadian wife Ellen Alexander. After studying to be a marine engineer, he was just that on the *North Star* for the 2nd half of USAS 1939-41. He later lived in Sequim, Wash., and died in Port Angeles, Wash., on Feb. 26, 1974.

Miller, Walfred R., Jr. b. Nov. 8, 1911, Highland Park, Ill., son of Swedish immigrant parents, Walfred Miller (a gardener) and his wife Freda. He was a seaman on the *Bear of Oakland* as that vessel sailed south for ByrdAE 1933-35. He did not winter-over, but he served both halves of the expedition. After the expedition, he went to the University of Alaska, at Fairbanks, and, on graduation, moved to Boston. He died on Oct. 12, 1996, in Needham, Mass.

Miller, William *see* **USEE 1838-42**

Miller Bluffs. 77°35' S, 85°45' W. Steep, east-facing bluffs, they extend WNW in a line 24 km long, from the mouth of Newcomer Glacier, in the Sentinel Range of the Ellsworth Mountains. The N end was photographed aerially by Lincoln Ellsworth on Nov. 23, 1935. Mapped by USGS in 1961 from air photos taken by VX-6 in 1959. Named by US-ACAN in 1972, for George Paul Miller (1891-1982), Democratic congressman from California, 1945-73, former chairman of the House Science and Astronautics Committee, who was a great friend of U.S. involvement in Antarctica from 1958 to 1972.

Miller Butte. 72°42' S, 160°15' E. A large rock butte, 3 km SE of Roberts Butte, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Carl D. Miller, geophysicist at McMurdo, 1967-68.

Miller Crag. 73°40' S, 94°42' W. A bold and conspicuous outcropping of bare rock, rising to 1450 m, 5 km WSW of Sutley Peak, in the W extremity of the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for Thomas Patrick Miller (b. Aug. 30, 1936, Minneapolis), geologist with the party. US-ACAN accepted the name in 1963.

Miller Glacier. 77°12' S, 162°00' E. A glacier, 1.5 km wide. Grif Taylor described it as a transection glacier. It lies in a transverse trough and connects Cotton Glacier with Debenham Glacier, in Victoria Land. Discovered in Jan. 1912 by Taylor's Western Geological Party, during BAE 1910-13, and named by him for Malcolm James "Jimmy" Miller (b. 1838, Scotland), mayor of Lyttelton, NZ, 1910-13, and the shipwright who repaired the *Terra Nova* before the expedition left NZ.

Miller Heights. 66°01' S, 65°14' W. A series of elevations, rising to about 600 m, extending ENE from Sharp Peak, W of Simler Snowfield, on the Graham Coast, on the W coast of Graham Land. Sighted by FrAE 1908-10, and erroneously named by Charcot as Île Ferin (*see* **Ferin Head**). Roughly charted by BGLE 1934-37. Photographed by FIDASE 1956-57, and named by UK-APC on July 7, 1959, for Ron Miller. It appears on a British chart of 1960. US-ACAN accepted the name in 1972. The Argentines call this feature Alturas Miller.

Miller Ice Rise. 69°05' S, 67°37' W. Almost 3 km long, and 1.5 km wide, at the ice front of the Wordie Ice Shelf, 26 km WNW of Triune Peaks, at the S end of Marguerite Bay, at the Fallières Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in 1948-49, and photographed aerially by USN in 1966, and finally named by US-ACAN in 1977, for Richard Miller, chief radio operator at Palmer Station in the winter of 1968. It features as such on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979. In 1998 it was found to have disappeared, as the Wordie Ice Shelf had retreated.

Miller Island. 64°54' S, 63°59' W. An island, 1.5 km NE of Knight Island, in the NW sector of the Wauwermans Islands, in the Wilhelm Archipelago. Shown (but not named) on an Argentine government chart of 1950. Charted by an RN Hydrographic Survey unit on the *Protector*, 1956-57. Named by UK-APC on July 7, 1959, for the *Canterbury Tales* character. US-ACAN accepted the name in 1960. It is shown on a British chart of 1960.

Miller Nunatak. 74°26' S, 164°15' E. A sharp, pointed nunatak rising above the ice at the lower end of Campbell Glacier, 8 km ESE of Mount Dickason, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Herman Thomas Miller (b. Feb. 28, 1931, Syracuse, Mo.), biologist at McMurdo, 1965-66.

Miller Nunataks. 67°02' S, 55°11' E. Two nunataks, 18 km SW of Mount Storegutt, and about 30 km ESE of Mount Pascoe, on the Kemp Coast of Enderby Land. First visited by Dave Trail's ANARE party, on Feb. 22, 1965. Mapped from ANARE air photos taken between 1954 and 1966, and named by ANCA for Kevin R. "Kev" Miller, who wintered-over as weather observer at Mawson Station, in 1962. US-ACAN accepted the name in 1970.

[1]**Miller Peak**. 70°59' S, 162°53' E. Rising to

2420 m, 3 km S of Mount Ford, in the Explorers Range of the Bowers Mountains. Explored by the Northern Party of NZGSAE 1963-64, and named by them for Joseph Holmes "Bob" Miller (q.v.), leader of the party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

[2]**Miller Peak**. 78°49' S, 84°14' W. A peak with twin summits, on the central part of the ridge between Hudman Glacier and Carey Glacier, at the S end of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Charles S. Miller, of Providence, RI (*see* **Deaths**, 1956), USN, aviation electronics technician, who was killed in the P2V crash at McMurdo on Oct. 18, 1956 (see that date under **Operation Deep Freeze II**).

Miller Point. 68°57' S, 63°21' W. A black, rock cape, rising to 250 m above sea level, it forms the N side of the entrance to Casey Inlet, on the Wilkins Coast, on the E coast of Palmer Land. Probably first seen aerially, on Dec. 20, 1928, by Wilkins. Based on radio dispatches from Wilkins, the name Miller Point was applied to the W point of what Wilkins called Scripps Island, naming it for George E. Miller (1864-1934), editor-in-chief (and former correspondent) of the *Detroit News*, 1918-33, president of the NANA (North American Newspaper Alliance), and a close personal friend of the late president Theodore Roosevelt. It appears as such on his map of 1929. However, upon his return to the USA, Wilkins applied the name to a point on the NE side of Scripps Island, and it is shown thus on another map of that year. The Discovery Investigations showed it thus on their chart of 1933. After Lincoln Ellsworth flew over the area on Nov. 23, 1935, photographing as he went, U.S. cartographer W.L.G. Joerg was able to form a much better picture of the terrain, and using these photos, and Wilkins's photos, applied the name Miller Point to the feature we know today, but plotted it in 68°56' S, 63°20' W. The position was further clarified during USAS 1939-41, on flights and on the sledge journey along this coast in 1940. US-ACAN accepted the name in 1947, and UK-APC followed suit on Jan. 28, 1953. A combined sledging team of RARE and Fids from Base E further surveyed it in Nov. 1947. It appears in the 1955 British gazetteer. In those days it was plotted in 68°56' S, 63°23' W. Fids from Base Y and Base E further surveyed it between 1960 and 1962, and corrected the coordinates. It appears with these corrected coordinates in the 1977 British gazetteer. It appears on a 1947 Argentine chart as Punta Miller, and that is the name listed in the 1970 Argentine gazetteer.

Miller Range. 83°15' S, 157°00' E. Rising to 3000 m above sea level, this range extends S from Nimrod Glacier for 80 km (the Australians say about 130 km) along the W edge of Marsh Glacier. Named by NZ-APC for Joseph Holmes "Bob" Miller (q.v.), who mapped this area with George Marsh, in 1958, while on a sledging journey during BCTAE. US-ACAN accepted the name in 1966.

Miller Ridge. 70°08' S, 65°30' E. A rock ridge, 1.5 km E of Mount Seedsman, on the N side of the Athos Range, 14.5 km NW of Mount Jacklyn, in the Prince Charles Mountains. Plotted from ANARE aerial photos, and named by ANCA for Leslie D. "Les" Miller, radio operator who wintered-over at Mawson Station in 1964. US-ACAN accepted the name in 1967. *See also* **Leslie Peak**.

Miller Spur. 75°07' S, 137°29' W. An ice-covered spur descending NE from Mount Giles, near the coast of Marie Byrd Land, and terminating in a small rock bluff 1.5 km W of the lower part of Hull Glacier. Discovered and photographed aerially on Dec. 18, 1940, by USAS 1939-41. Named by US-ACAN in 1974, for Linwood Miller.

Miller Valley. 83°39' S, 55°14' W. An ice-free valley running NW from Nelson Peak, between Drury Ridge and Brown Ridge, on the Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1965, for Lt. Donald R. "Don" Miller (b. Dec. 13, 1921, Cintronelle, Ala. d. Feb. 12, 2003, Wakefield, RI), VX-6 pilot flying C-47s and C-117s, supporting topographical and geological surveys in Antarctica, 1963-64, most notably (in this instance) for the Neptune Range field party. In the Navy from 1940, he was commissioned in 1955, and retired as a lieutenant commander in 1970. UK-APC accepted the name on Nov. 3, 1971.

Cap Millerand *see* **Millerand Island**
Cape Millerand *see* **Millerand Island**
Isla Millerand *see* **Millerand Island**

Millerand Island. 68°09' S, 67°13' W. A high (rising to 969 m above sea level), rugged, mountainous and cliffed island, 5 km wide by 5 m long, 6 km S of Cape Calmette, NW of Neny Fjord, in Marguerite Bay, it is separated from the Debenham Islands and the Fallières Coast by the Powell Channel, off the W coast of Graham Land. Seen from the NW it looks like a dark-colored pyramid with bare rock sides. Discovered by FrAE 1908-10, roughly charted as a cape, and named by Charcot as Cap Millerand, for statesman Étienne-Alexandre Millerand (1859-1943; known as Alexandre Millerand; he would be president of France, 1920-24). It appears as Cape Millerand on a British chart of 1914, and also on Wilkins' map of 1929. In 1936 it was surveyed from the ground by BGLE 1934-37, who proved it to be an island, and it appears as Millerand Island on a British chart of 1940. It was re-surveyed by Fids from Base E, between 1946 and 1950. UK-APC accepted the name Millerand Island on Sept. 8, 1953, and it appears as such in the British gazetteer of 1955. US-ACAN also accepted that name. It appears on a Chilean chart of 1947 as Isla Millerand, and that was the name accepted by the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. In 1957, 17 de Agosto Refugio was established on the N part of the island (*see under* Diecisiete).

Milles Nunatak. 70°55' S, 160°06' E. A nunatak, 5 km NE of Howell Peak, at the N end of the Daniels Range, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for David B. Milles, USARP biolab technician at McMurdo, 1967-68.

Millet, Théophile-François-Flavien. b. March 4, 1819, Port-Louis, Brittany. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Millett, Hugh Mainwaring. b. 1903. He graduated from Dartmouth in April 1921, with a first in engineering, and entered the RN in 1922, as an engineer. On Nov. 30, 1926 he was promoted to lieutenant, and served in Hong Kong. He returned to England at the beginning of 1931, to take up a posting at HMS *Dolphin*, in Gosport, and on Aug. 25, 1931 was transferred to the *Adventure*. On Nov. 30, 1934 he was promoted to lieutenant commander, and was chief engineer on the *Penola* during BGLE 1934-37. In 1938, in Hendon, he married Betty May, on Dec. 31, 1938 he was promoted to commander, and on April 18, 1939 was transferred to the *Drake*. During World War II he served on the *Argus*, and was part of Force G during the Normandy landings in 1944. He served on various ships after the war, and retired in 1953. He died on Nov. 11, 1968, at Plympton, Devon.

Millett Glacier. 70°37' S, 67°40' W. Heavily crevassed, 21.5 km long and 11 km wide, it flows WSW from the Dyer Plateau of Palmer Land into George VI Sound, immediately N of Wade Point. In its lower reaches, the N side of this glacier merges with Meiklejohn Glacier. First surveyed from the ground in Oct. 1936 by BGLE 1934-37, who also photographed it aerially. Resurveyed in part by Fids from Base E in 1949. Named by UK-APC on March 31, 1955, for Hugh Millett. US-ACAN accepted the name later in 1955. BAS surveyed it again, between 1962 and 1972.

Millington Glacier. 84°32' S, 178°00' E. A narrow tributary glacier, 16 km long, it flows from the E slopes of the Hughes Range, into Ramsey Glacier, northward of Mount Valinski. Named by US-ACAN in 1966, for Lt. Cdr. Richard E. Millington, USN, medical officer during OpDF 63 (i.e., 1962-63) and OpDF 64 (i.e., 1963-64).

The *Mills*. U.S. ship, 306 feet long, laid down on March 26, 1943, as an Edsell-class destroyer escort, by Brown Shipbuilding Company, Houston, Texas, and launched May 26, 1943. She was commissioned on Oct. 12, 1943, being named for World War II aviator Lloyd Jones Mills. In 1957 she became DER-383, radar picket destroyer escort, weather reporting on ocean stations duty in the Arctic. **Feb. 17, 1964**: She became part of OpDF. **Aug. 17, 1964**: She left Newport, RI, under the command of Lt. Cdr. Robert D. Hoffman, bound for the Panama Canal, and from there, via Callao and Tahiti, to Lyttelton, NZ. **Sept. 20, 1964**: She arrived at

Lyttelton. **Nov. 11, 1964**: Cdr. Henry C. Morris, Jr. took over as skipper. Over the course of the next few months she was back and forth between Dunedin and Campbell Island. **Jan. 29, 1965**: She finally headed for the Antarctic Circle. **Jan. 31, 1965**: She crossed the Antarctic Circle, in 163°27' E. She was stationed in 60°S, as a picket. **March 7, 1965**: Her tour was up. She was back in the same place for OpDF 1967 (i.e., 1966-67), again under skipper Morris. H. King Triplett was an ensign on board. **Sept. 2, 1966**: She left her home port of Key West, bound for the Panama Canal. **Oct. 3, 1966**: She arrived in Dunedin. **Oct. 5, 1966**: She began ocean picket duty in 60°S. **Oct. 21, 1967**: She finished ocean picket duty. **Oct. 23, 1966**: She was back in Dunedin. **Oct. 25, 1966**: Lt. Cdr Joseph A. Felt became the new skipper (until 1968). **Sept. 3, 1968**: The vessel became an operational training ship for the USNR. **Oct. 27, 1970**: She was decommissioned. **Aug. 1, 1974**: She was struck from the Navy register. **March 12, 1975**: The *Mills* was sold for scrap.

Mount Mills. 85°12' S, 165°17' E. Rising to 2955 m (the New Zealanders say about 2865 m), it forms part of the N escarpment of the Dominion Range, overlooking the Beardmore Glacier, 13 km N of Mount Saunders. Discovered during BAE 1907-09, and named by Shackleton for Sir James Mills (1847-1936), chairman of the Union Steamship Company, who, with the NZ government, paid for the towing of the *Nimrod* to Antarctica by the *Koonya*. US-ACAN accepted the name in 1952.

Mills, Graham John. He wintered-over at Mawson Station in 1972, at Casey Station in 1987, at Davis Station in 1990, at Mawson again in 1992, and at Macquarie Island in 1995. He was the Antarctic Division plant inspector responsible for the traverse equipment on the 1990 traverse to the Larsemann Hills.

Mills, J. Temporary Falkland Islands government customs officer on the *Sobraon*, 1907-08.

Mills Cliff. 72°10' S, 95°53' W. An isolated rock cliff in the north-central part of Lofgren Peninsula, on Thurston Island. Named by US-ACAN in 2003, for Aviation Machinist's Mate William H. Mills, air crewman with the Eastern Group during OpHJ 1946-47, which obtained aerial photos of Thurston Island and adjacent areas.

Mills Glacier. 77°23' S, 75°37' W. A glacier flowing N from Fowler Peninsula into the SW side of Evans Ice Stream, on the Zumberge Coast, in Ellsworth Land. Named by UK-APC on March 31, 2004, for polar historian William James Mills (1951-2004), librarian of the Scott Polar Research Institute, 1988-2004.

Mills Island. 69°25' S, 75°57' E. A small island, about 3 km SW of Cook Island, at the N end of Webster Bay, in the Larsemann Hills. Named by ANCA on March 12, 1992, for Graham Mills.

Mills Peak. 74°14' S, 163°54' E. A sharp peak, rising to 1420 m, in the Deep Freeze Range, along the W side of Campbell Glacier, between Mount Queensland and the terminus of Bates Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN for Peter J. Mills, geologist at McMurdo, 1965-66.

Mills Valley. 73°06' S, 163°12' E. An ice-filled vlley indenting the E side of Pain Mesa between Biretta Peak and the Diversion Hills, in the Mesa Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Cdr. Norman J. Mills, USNR, officer-in-charge of the detachment A winter party at McMurdo, 1967.

Milne, Alan Henry. He became a doctor after Aberdeen University, in 1967, joined BAS in 1969, as a medical officer, and wintered-over at Base T in 1970. Also a commander in the Royal Navy, he lived at Stonehaven, in Kincardineshire. In 1976-77 he was medical officer on the British Joint Services Expedition to Elephant Island, in the South Shetlands. In 1989 and 1992 he was back for 3 months apiece in the summer at BAS stations, as senior medical officer with BAS's Medical Unit.

Milne, David T. Fireman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Isla Milnes *see* **Milnes Island**

Milnes Island. 65°35' S, 65°02' W. An island, 3 km N of Woolpack Island, in the NW side of Grandidier Channel, NE of Vieugué Island, in the Biscoe Islands, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed in 1956-57 and 1957-58, both times by an RN Hydrographic Survey unit (the second year with the assistance of FIDS). Named by UK-APC on July 7, 1959 for Leading Seaman Arthur R. Milnes, RN, survey recorder both years. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Milorgfjella. 74°21' S, 9°45' W. The northernmost of the three divisions of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the Milorg (military organization) of Norwegian Resistance fighters during World War II. These mountains are probably those seen by Ritscher during GermAE 1938-39, and named by him as Kottasberge (Kottas Mountains), for the captain of his ship, the *Schwabenland*. The Russians still call them Kottas Berge.

Milorgknausane. 74°05' S, 14°00' W. A group of peaks in the Heimefront Range of Queen Maud Land. Named by the Norwegians for Milorg, the Resistance group during World War II.

Milosz Point. 61°55' S, 57°46' W. The W promontory of Brimstone Peak, at Venus Bay, on the N side of King George Island, in the South Shetlands. Named by the Poles in 1984, for Czeslaw Milosz (1911-2004), 1980 Nobel Prize-winning Polish poet. *See also* **Czeslaw Point**.

Bukhta Milovzorova. 65°30' S, 102°00' E. A bay indenting the ice that fringes the Knox Coast, NE of Cape Elliott, off Wilkes Land. Named by the Russians.

Milroy, H. "Jock." b. 1923. Flight navigation officer on the *Balaena* expedition of 1946-47. Ex-Fleet Air Arm.

Mount Milton. 78°48' S, 84°48' W. Rising to 3000 m, 17.5 km SSE of Mount Craddock, and 2.5 km SE of Mount Southwick, in the S part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Patrick G. Milton, USN, aviation machinist's mate, and plane captain on a reconnaissance flight to these mountains on Jan. 28, 1958.

Milward, Charles Allarton "Bill." b. Oct. 18, 1903, Upton upon Severn, Worcs, son of Lawrence Sydney Milward and his wife Charlotte Mabel Harrison. He joined the Merchant Navy, and in the mid-1920s was a 4th mate working for the Royal Mail Steam Packet Company, plying the Atlantic. In the second half of the 1920s he was doing the Vancouver to Seattle run for the same line, as 3rd mate. He was chief officer on the *William Scoresby*, 1930-32. On Sept. 15, 1933 he was placed on the RNR retired list, at his own request, and on Aug. 9, 1934, in London, he married Alice Frances Fleming "Margot" MacKenzie. On July 30, 1936, he was promoted to lieutenant commander on the RNR retired list. During World War II he was with the Sudan Civil Service, and was a harbor master at Port Sudan. He died of cancer on July 20, 1963, at his home, Sandwood, in West Charleton, Kingsbridge, Devon. Margot died in 2007, aged 96.

Mimas Peak. 71°53' S, 69°32' W. A sharp, conspicuous peak, rising to 1000 m (the British say 695 m), W of the head of Saturn Glacier, and 14 km W of Dione Nunataks, in the SE part of Alexander Island. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and mapped from these photos by U.S. cartographer W.L.G. Joerg. Seen from a distance by Fids from Base E in 1949, and roughly positioned by them. In association with Saturn Glacier, it was named by UK-APC on March 31, 1955, for one of the satellites of the planet Saturn. US-ACAN accepted the name in 1956, although the name Mimas Peaks, for this peak and surrounding ones, appears on a 1956 U.S. Hydrographic Office chart (this name was never used again). The peak and surrounding area were first mapped in detail in 1959-60, by Searle of the FIDS, using aerial photos taken during RARE 1947-48. At that stage, the peak's coordinates were believed to be 71°56' S, 69°23' W, and as such it appears on a British chart of 1960. The Americans were plotting it in 71°56' S, 69°36' W. However, it was replotted from U.S. Landsat images taken in Jan. 1973, and the new coordinates appear in the 1977 British gazetteer.

Mimas Peaks *see* **Mimas Peak**

Mime Glacier. 77°37' S, 161°45' E. A small glacier in the S (upper) end of Tiw Valley, in the Asgard Range of Victoria Land. Named by NZ-APC for the smith in Norse mythology. US-ACAN accepted the name in 1976.

Mimebrønnen. 72°00' S. 2°33' E. A feature (type unknown), immediately to the E of Troll

Station, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, for the well of knowledge in old Norse mythology. The well was guarded by the god Mime.

Mimelia. 72°00' S, 2°35' E. A hillside S of Mimebrønnen, in association with which it was named by the Norwegians on Oct. 12, 2007.

Mimeneset. 71°59' S, 2°35' E. A headland in the W part of Trollkammen, near Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Mimebrønnen.

Mimi-iwa. 71°32' S, 35°32' E. A rock, rising to an elevation of 1955.7 m, in a moraine field extending northwestward from Tyo-ga-take, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979 (the name means "ear rock").

Mims Spur. 86°02' S, 125°35' W. A prominent rock spur protruding from the S extremity of the Wisconsin Plateau, just SE of Polygon Spur, on the N side of McCarthy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Julius E. Mims, Jr., radioman at Byrd Station in 1962.

Caleta Mina de Cobre *see* **Coppermine Cove**

Lake Minami. 69°01' S, 39°35' E. Just S of Lake Tarachine, it is one the small lakes in the S part of East Ongul Island. Mapped by Japanese cartographers from 1957 JARE ground surveys and air photos, and named by the Japanese on May 1, 1963, as Minami-ike (i.e., "south pond"), for its small size. US-ACAN accepted the name Minami Lake in 1968.

Minami-Belgica-nunatak-gun. 72°42' S, 31°05' E. A group of nunataks about 8 km S of the Belgica Mountains, between the Sør Rondane Mountains and the Queen Fabiola Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1976, and from JARE ground surveys conducted in 1979-80, and named by them on Nov. 24, 1981 (name means "south Belgica nunataks"). The name is too difficult for anyone except the Japanese, and, if accepted by, say, US-ACAN, will have to be modified.

Mount Minami-heito. 69°17' S, 39°48' E. A flat-topped mountain, rising to 482 m, it surmounts the SE extremity of the Langhovde Hills, on the coast of Queen Maud Land. Roughly mapped (but not named) in 1946 by Norwegian cartographers using the air photos taken by LCE 1936-37. Accurately mapped by Japanese cartographers from JARE 1957-62 ground surveys and air photos, and named by the Japanese on Nov. 22, 1973, as Minami-heito-zan (i.e., "south flat-top mountain"), in association with Mount Heito, just to the northward.

Minami-heito-zan *see* **Mount Minami-heito**

Minami-ike *see* **Lake Minami**

Minami-karamete-iwa *see* **Minami-karamete Rock**

Minami-karamete Rock. 69°13' S, 35°26' E. A small rock exposure, 13 km S of Kita-karamete Rock, in the E part of Riiser-Larsen Peninsula, in Queen Maud Land. Photographed aerially by JARE in 1970-71, and mapped from these photos by Japanese cartographers, who named it Minami-karamete-iwa (i.e., "south back gate rock") on June 22, 1972. They plotted it in 69°12' S, 35°36' E. US-ACAN accepted the name Minami-karamete Rock in 1975, but with different coordinates.

Minami-nagaone. 72°35' S, 31°14' E. The most southerly of 3 ridges running parallel to each other, in the N part of the Belgica Mountains, between the Queen Fabiola Mountains and the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1976, and from JARE ground surveys conducted in 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "southern long ridge"). *See also* **Naka-nagaone** and **Kita-nagaone**.

Minami-no-seto *see* **Minamino-seto Strait**

Minamino-seto *see* **Minamino-seto Strait**

Minamino-seto Strait. 69°02' S, 39°33' E. A narrow strait between Ongul Island and the Te Islands, in the Flatvaer Islands, off the Prince Olav Coast. First mapped (but not named) by Norwegian cartographers in 1946, from air photos taken by LCE 1936-37. Accurately mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on May 1, 1963, as Minamino-seto (i.e., "southern strait"). US-ACAN accepted the name Minamino-seto Strait in 1968. The Norwegians call it Sørsundet, which is a direct translation of the Japanese.

Minami-Yamato-nunatak-gun. 72°00' S, 35°18' E. An isolated group of nunataks, about 40 km SW of the Queen Fabiola Mountains. Surveyed by JARE 1973, and named by the Japanese on Nov. 22, 1975 (name means "south Yamato nunataks," the name Yamato being what the Japanese call the Queen Fabiolas). *See* **Minami-Belgica-nunatak-gun**, for a comment on the naming.

Minamo Island. 69°39' S, 39°37' E. The largest of several small islands in the narrow inlet between Skallen Glacier and the Skallen Hills, along the coast of Queen Maud Land. Mapped by Japanese cartographers from 1969 JARE ground surveys and air photos, and named by the Japanese on June 22, 1972, as Minamo-zima (i.e., "water surface island"). US-ACAN accepted the name Minamo Island in 1975.

Minamo-zima *see* **Minamo Island**

The Minaret. 64°46' S, 63°39' W. A steep rock pinnacle, rising to 1065 m, on the ridge extending NE from Mount William, in the S part of Anvers Island, in the Palmer Archipelago. Surveyed by Operation Tabarin personnel from Port Lockroy Station in 1944, and again by Fids from Base N in 1955. ArgAE 1952-53 named it Pico Chupete (i.e., "nipple peak"), and that is how it appears on their 1953 chart. This name was, of course, impossible for the British to contemplate, and so it was renamed by UK-APC on Sept. 4, 1957, for the shape of its summit. It appears as such on a British chart of 1958. US-ACAN followed the British lead in 1963.

Nunatak Minaret. 71°18' S, 64°48' E. A nunatak, SE of Mount Lugg, in the Prince Charles Mountains. Named by the Russians.

Minaret Nunatak. 72°42' S, 162°10' E. Rising to 2115 m, 1.5 km W of Burkett Nunatak, in the Monument Nunataks, at the N extremity of the Mesa Range, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for its shape. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Minaret Peak. 80°15' S, 82°22' W. A distinctive rock peak at the NW end of the Marble Hills, in the Heritage Range of the Ellsworth Mountains. So named by the University of Minnesota Ellsworth Mountains Party of 1962-63 for its shape. US-ACAN accepted the name in 1964.

Mincer Glacier. 72°10' S, 97°55' W. A broad glacier flowing from Zuhn Bluff into the SE arm of Murphy Inlet, on the N side of Thurston Island. Named by US-ACAN in 2003, for Dale F. Mincer (b. March 23, 1918, Sugar Creek, Ia. d. Sept. 10, 2001, Milford, Pa.), co-pilot of PBM Mariner aircraft in the Eastern Group of OpHJ 1946-47, which obtained aerial photos of Thurston Island and adjacent coastal areas.

Mincey, Andrew Van. b. Oct. 2, 1921, Rome, Ga., but raised in Waycross, son of railroad shop repairman Onnie Madison Mincey and his wife Millie Miller. He enlisted in the Marines on Sept. 13, 1939, and, after boot camp at Parris Island, was transferred as a private to Base Air Detachment One, at the Marine Barracks, at Quantico, Va. In the 1940s he lived in Florida, and married Sarah Elizabeth (they were divorced in 1945). He served in World War II, in the Pacific theatre, and was master sergeant and radio operator on Flight 8A during Byrd's Feb. 16, 1947 flight to the South Pole during OpHJ 1946-47 (*see* **South Pole**). When Byrd flung out his time capsule, Mincey threw one of his own out as well. On July 31, 1948, he married again, in Nangking, China, to "quote State Department typist" Lavon McDougall. They honeymooned in Shangai. From there it was to Taiwan, Hawaii, California, North Carolina, and finally Washington, DC, where he retired as a major in 1962. He tried real estate, but then went to work for AID (Agency for International Development), spending two years in Indonesia, then to Vietnam for a few months, as a "quote State Department adviser" working under Jack Ryan, while his family lived in Bangkok. He had to leave Asia in a hurry. From 1967 to 1969 he was in Japan, but his cover was blown and he had to leave. He tried insurance, and in 1970 moved to Rockford, Ga., near Atlanta. He wrote for the *Rockdale Citizen* from 1974 to 1977, was, very briefly editorial page editor of the *Macon News*, and then, later in 1977, after a slight stroke, moved (alone) to Rota, Spain, as a freelance writer and photographer, and in 1982 to Salamanca, where he died, at the Residencia de la Virgen de la Vega, of a heart attack on May 12, 1983. His wife, who was

on her way to join him despite enormous stress within the family, died in Sept. 2007.

Mincey Glacier. 84°57' S, 177°30' W. A wide, forked glacier about 15 km long in its longest branch, it flows SE from the escarpment at the SE end of the Anderson Heights in the Bush Mountains, then E into the W side of Shackleton Glacier at Thanksgiving Point. Discovered and photographed aerially during Byrd's flights to the Pole on Feb. 16, 1947. Named for A.V. Mincey. US-ACAN accepted the name in 1962.

Minderman, Jean-Jules. b. May 20, 1818, Bordeaux. Ordinary seaman on the *Zélée* during FrAE 1837–40. He left sick at Valparaíso, on May 28, 1838.

Mindya Cove. 63°33' S, 59°51' W. A cove, 2.4 km wide, indenting the NW coast of Tower Island for 1.5 km, it is entered between Cape Leguillou and Kranevo Point, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Mindya, in northern Bulgaria.

Miner, Sanford Stoddard. b. Jan. 21, 1835, Ledyard, Conn., son of John Woodward Miner and his wife Emelia Avery Stoddard. He married Georgianna Buddington, on Sept. 3, 1860, in Groton (which is where they would live for the rest of their lives), and on Sept. 8, 1862, enlisted as a private in the Union Forces, in order to fight in the Civil War, on Nov. 10 joining Company K of the 26th Connecticut Infantry. He was mustered out on Aug. 17, 1863, at Norwich, Conn. He took the *Florence* out of New London in 1876, bound for the South Shetlands. On July 22, 1876 he switched commands with James Buddington, and went to the *Lizzie P. Simmons*, while Buddington took command of the ill-fated *Florence*. Although the *Florence* was in the South Shetlands for the 1876-77 sealing season, there is no evidence that the *L.P. Simmons* was. However, she was definitely in South Georgia. In 1883-84 he was captain of the *Sarah W. Hunt*, but not in Antarctic waters. He died on March 30, 1896.

Cerro Mineral *see* **Mineral Hill**

Mineral exploitation. The search for minerals was an incentive of the early explorers, the first samples being brought back to the USA by B. Astor. These were quartz, amethyst, porphyry, Rouen onyx, flint, zealite, pumice stone, and pyrites. However, as Donald McKay wrote, in 1821, while part of the New York Sealing Expedition, "I think the land abounds in minerals, but of what kind I am too ignorant in mineralogy to determine. But, however valuable the mines may be, they must remain useless to the world, from their being buried under mountains of ice." Over the years other minerals have been found — coal, chromium, copper, zinc, lead, tin, molybdenum, gold, titanium, antimony, but none of these have yet been found in economically feasible quantities. There are indications of high concentrations of ferro-manganese nodules on the floor of the South Eastern Pacific, and the Scotia Sea, particularly beneath the Antarctic Convergence, and it looks as if sedimentary phosphate exists in Antarctica. If the minerals discovered in the future warrant mining, and it becomes economically viable, it could prove ecologically disastrous for Antarctica. Because of this frightening prospect, an international regime for the exploration and exploitation of mineral resources became a pressing demand in the 1980s, and, under the terms of the Madrid Protocol of 1993, mining was forbidden until the year 2048, unless the 28 countries which signed it agree to dissolve it, in the search for oil, which, by 2006, had become a pressing problem for the Earth.

Mineral Hill. 63°29' S, 57°03' W. A round-topped hill, rising to 445 m, with ice-free, talus-covered slopes, 2.5 km W of Trepassey Bay, between that bay and Duse Bay, on Tabarin Peninsula. Probably first seen by SwedAE 1901-04. Surveyed and charted by Fids from Base D in March 1946, and named by them for the small quantities of reddish-colored mineral in the rock. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Fids from Base D surveyed it again in Feb. 1956. ArgAE conducted geological studies here in 1976, and referred to it as Cerro Mineral (which means the same thing).

Minerals *see* **Mineral exploitation**

[1]**The *Minerva***. A 160-ton London sealing brig, owned by Messrs Buckle & Co., of London. On Sept. 14, 1820, she left Gravesend, arrived in Deal (in Kent) on Sept. 14, and left there on Sept. 27, bound for the South Shetlands and the 1820-21 season. Captain Thomas Bunn commanding. On March 23, 1821, she put into Rio, and then, via Saint Helena, arrived back at Gravesend on Jan. 30, 1822.

[2]**The *Minerva***. Norwegian whale catcher, built in 1912, and owned by Lars Christensen, who leased her to the Hvalen Company. She was one of the whale catchers from the British whaling factory ship *Pythia*, and under the command of Capt. A.M. Belgau, she went aground on Minerva Rocks, off Chionis Island, in the Palmer Archipelago, on March 13, 1922, was holed, abandoned, and, because of the heavy swell, became a total wreck. The *Solstreif*'s catcher *Eik* rescued the crew after they had spent 6 hours on a rock.

[3]**The *Minerva*** *see* **The *Explorer II***

Minerva Glacier. 79°34' S, 157°15' E. A well-marked, tongue-shaped glacier, mainly blue-ice, but with some crevassing, flowing NW into the valley between Tentacle Ridge and Gorgons Head, in the Cook Mountains of Victoria Land. In keeping with the practice of naming other features in this area after Greek mythological personages, this one was named by NZ-APC for the goddess Minerva. US-ACAN accepted the name in 2006.

Minerva Rocks. 63°53' S, 60°37' W. A small group of rocks off the E end of Chionis Island, near Trinity Island, in the Palmer Archipelago. Charted by whalers before 1920, and named by them for the *Minerva*, the whale catcher of the 1920s. It appears on Lester's map of 1922 (British Imperial Antarctic Expedition, 1920-22). UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year.

Mingyue Shan. 62°12' S, 58°59' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Nunatak Minina. 69°39' S, 64°26' E. One of the Stinear Nunataks, about 26 km N of the Anare Nunataks, in Mac. Robertson Land. Named by the Russians.

The *Ministro Ezcurra*. A 1988-ton, 80.49-meter coastal tanker, more popularly known as the *Ezcurra*, built in 1914, in Greenock. She took part in ArgAE 1946-47 (Captain C.A. Esteverena); ArgAE 1947-48 (Captain Carlos A. Viñuales); and ArgAE 1948 (Captain Luis E. Raynaud).

Rocas Ministro Ezcurra *see* **Sewing-Machine Needles**

Isla Ministro Fidel Estay Cortéz *see* **Estay Rock**

Islote Ministro General Barrios Tirado *see* **Barrios Rocks**

Mink Peak. 86°14' S, 129°56' W. A prominent peak, 3 km N of Cleveland Mesa, at the E end of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Harold D. Mink, utilitiesman at Byrd Station for the winters of 1962 and 1966.

Minke whales. Order: Cetacea (whales); suborder: Mysticeti (baleen whales); family: Balaenopteridae. There are two species of minkes, *Balaenoptera acutorostrata*, and *Balaenoptera bonaerensis*. They are also called the lesser rorqual, piked whale, and pikehead. Named for the Norwegian whaler, *Miencke*. At 13 tons and 33 feet, they are the smallest of the rorquals. They feed on krill, as well as fish and mollusks, and they have a sleek, sharp-pointed head. They are attracted to ships, but have a low boredom threshold. Due to their relatively small size, they were the last of the Antarctic rorquals to be hunted by humans, but they have now become the prey of Japanese "scientists," and are an endangered species, partly because of this, but also because their chief food source, krill, is now being harvested by humans as fertilizer. Some Minkes winter in Antarctica (most whales go north). In 1964-65 only 6 were taken in the Antarctic. In 1972-73, 5745 were killed.

Minna Bluff. 78°31' S, 166°25' E. A long, narrow, bold peninsula, 40 km long and 5 km wide (the New Zealanders say 8 km wide), projecting SE from the SE foot of Mount Discovery, into the NW portion of the Ross Ice Shelf, 74 km S of McMurdo Station. Like Brown Island, it is connected with Mount Discovery only by a low isthmus, but itself rises in many peaks over 900 m above sea level, with a highest point of 1071 m. On its N face it is very free from snow, but its S side, which receives the full force of all the southerly weather and the pressure of the Ross Ice Shelf, is ice-covered, except where the cliffs are too steep to hold the snow. Discovered in Sept. 1902, during BNAE 1901-04, and named by Scott as The Bluff. Before the expe-

dition went home, however, the name had been changed to Minna Bluff, for Minna Chichester (b. 1837), wife of Sir Clements Markham (*see* **Mount Markham**). They had married on April 23, 1857. She was a linguist, and Markham's lifelong companion, often accompanying him on travels. She was the great-great-great-great niece of James Bruce, who discovered the source of the Blue Nile, in 1770. US-ACAN accepted the name in 1947.

Minna Bluff Automatic Weather Station. 78°31' S, 166°25' E. There were two separate and distinct AWSs at Minna Bluff, both American. The first was nuclear-powered, and was installed on Feb. 6, 1962. It closed in 1972. The second was the one that replaced Manning AWS, and was installed (at an elevation of 895 m) on Jan. 22, 1991. A flyover was made in Nov. 2004, and everything looked okay. It was visited on Oct. 30, 2008, and one battery cable was replaced. It continued to operate in 2009.

Minna Hook. 78°36' S, 167°06' E. A massive, hook-shaped volcanic feature, 14 km long and rising to 1115 m, which forms the SE termination of the peninsula named Minna Bluff at the S end of the Scott Coast. The name was first used in a geologic sketch map and report by Anne Wright-Grassham, in 1987. Whether she actually named it or not is not known, but it was named in association with Minna Bluff. NZ-APC accepted the name on Nov. 4, 1999, and US-ACAN followed suit in 2000.

Minna Saddle. 78°26' S, 165°33' E. A sweeping snow saddle, several km long and wide, and between 300 and 550 m high, at the junction of Minna Bluff and the E slopes of Mount Discovery. Named in Dec. 1958, by NZGSAE 1958-59, in association with Minna Bluff. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Minnehaha Icefalls. 77°02' S, 162°24' E. A small, heavily crevassed icefall which flows from the steep W slopes of Mount England and forms a southern tributary to New Glacier, close W of its terminus at Granite Harbor, in Victoria Land. Charted by Grif Taylor's Granite Harbour Geological Party, during BAE 1910-13, and named by Frank Debenham, a member of that party. US-ACAN accepted the name in 1952.

Camp Minnesota. 73°30' S, 94°30' W. At Basecamp Valley, 558 m above sea level, on the NW side of the Jones Mountains. This camp consisted of a Jamesway hut installed in Nov. 1961 for USARP use by the University of Minnesota Jones Mountains Party of 1961-62. It was used periodically after that until 1965.

Minnesota Glacier. 79°00' S, 83°00' W. A broad glacier, about 60 km long and 8 km wide, it flows E through the Ellsworth Mountains, and separates the Sentinel Range from the Heritage Range. It is fed by ice from the plateau W of the mountains and by Nimitz Glacier and Splettstoesser Glacier, and merges into the larger Rutford Ice Stream at the E margin of the Ellsworth Mountains. Named by US-ACAN in 1964, for the University of Minnesota, at Minneapolis, which sent major research parties to the Ellsworth Mountains in 1961-62, 1962-63, and 1963-64.

Minnesteinen. 74°36' S, 14°26' W. The southernmost nunatak in Wildskorvene, in the Mannefallknausane, between the Heimefront Range and the Vestfold Hills, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the monumental stone").

Minni Automatic Weather Station. 74°39' S, 163°51' E. An Italian AWS, installed in Jan. 2002 at Browning Pass, at the N end of Terra Nova Bay, in northern Victoria Land, at an elevation of 166 m. It was a seasonal AWS, to be mounted every November and dismantled at the end of each season, in the February.

The Minnows. 66°01' S, 65°23' W. A group of small islands and rocks, the easternmost group in the Fish Islands, they lie E of Flounder Island, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed by Fids from Base J in 1957. So named by UK-APC on July 7, 1959, not only because of their size, but also in keeping with the fish motif. They appear on a British chart of 1960. US-ACAN accepted the name in 1965.

Punta Minot *see* **Minot Point**

Minot Point. 64°16' S, 62°31' W. A rock point midway along the W coast of Brabant Island, in the Palmer Archipelago, 5 km W of the summit of Mount Parry. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57. That season ArgAE 1956-57 descriptively named it Cabo Pirámide, and that is one of the names they still use for this feature (they also use Punta Minot). Named by UK-APC on Sept. 23, 1960, for George Richards Minot (1885-1950), U.S. physicist and 1934 Nobel Prize winner for his work on liver therapy in pernicious anemia. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Minotaur Pass. 77°30' S, 160°50' E. A pass, or saddle, at an elevation of about 1600 m above sea level, running between Apollo Peak and Mount Electra, in the Olympus Range of Victoria Land. The pass permits walking access from the McKelvey Valley to the Wright Valley. In keeping with the practice of naming certain features in this area after Greek mythological characters, NZ-APC named this one in 1984, after the Cretan monster. US-ACAN accepted the name.

Mount Minshew. 85°43' S, 129°22' W. A prominent, mainly ice-covered mountain with a small, exposed summit peak, rising to 3895 m, and mostly ice-covered, 5.5 km W of Faure Peak, at the NW extremity of the elevated plateau portion of the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1966, for Velon Haywood Minshew (b. Jan. 11, 1939, Miss. d. March 1, 2003, Carthage, Miss.), geologist with the Ohio State University geological party here in 1964-65.

Minster Mountain. 70°28' S, 159°54' E. A mountain with a jagged and pinnacled outline, N of the Pomerantz Tableland, and just W of Mount Gillmor, in the Usarp Mountains of Oates Land. So named by NZGSAE because of its resemblance to Gothic architecture.

The *Minstrel*. A 146-ton London sealing snow, built at South Shields in 1817, and bought in 1818 by London merchants Hutchinson Bell, Michael Anderson, and Magnus Tait. From Sept. to Nov. 1819, she was in Buenos Aires, and in Dec. 1819 at Rio. She was back in Buenos Aires from May to June 1820, then made her way around the Horn to Valparaíso, where she remained in June and July. She arrived in the South Shetlands on Jan. 4, 1821, for the 1820-21 season, Captain Christopher MacGregor commanding. She was reported in the South Shetlands on Feb. 16, 1821, and left there on March 12, 1821, bound for Rio, leaving there on April 14, 1821, and arriving at St. Helena on April 26, 1821. On July 11, 1821, she finally arrived back at Dover, and on July 16, 1821, arrived in London, with 15,700 sealskins. MacGregor was succeeded as skipper by Thomas Hodges, who, in 1824, bought a quarter share of the vessel.

Punta Minstrel *see* **Minstrel Point**

Minstrel Point. 61°05' S, 55°24' W. Between Cape Lindsey and Cape Yelcho, on the NW coast of Elephant Island, in the South Shetlands. Surveyed by the British Joint Services Expedition of 1970-71, and named by them for the *Minstrel*, which, in Feb. 1821, anchored N of this feature. UK-APC accepted the name on Nov. 3, 1971, and US-ACAN followed suit in 1972. It appears on a 1977 Argentine chart as Punta Minstrel. Last plotted by the UK, in late 2008.

Mount Minto. 71°47' S, 168°45' E. A lofty, mostly ice-free mountain, rising to 4165 m (the New Zealanders say 3048 m), 4 km E of Mount Adam, at the SW side of Robertson Bay, in the central part of the Admiralty Mountains, it is the most northeasterly peak in those mountains, in northern Victoria Land. Discovered on Jan. 11, 1841 by Ross, who named it for Gilbert Elliot-Murray-Kynynmound, 2nd Earl of Minto (1782-1859), first lord of the Admiralty, 1835-41. US-ACAN accepted the name in 1950.

Mintz Peak. 76°53' S, 126°03' W. A small peak rising above the SE corner of Mount Hartigan, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN trimetrogon air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Jerome Mintz, meteorological electronics technician at Byrd Station in 1959.

Mir Station. 65°45' S, 96°26' E. A temporary Soviet weather station opened from May to Aug. 1960, 327 m above sea level, on the coast of Queen Mary Land.

Islote Mira. 61°17' S, 55°13' W. A little island off Rowett Island, SW of Cape Lookout, Elephant Island, in the South Shetlands. Named by the Argentines. *See also* **Islote Guión**.

Kupol Mira. 70°25' S, 10°30' E. A dome in the ice shelf the Norwegians call Nivlisen, on the Princess Astrid Coast, N of the Schirmacher Hills. Named by the Russians.

Mirabilite Pond. 78°11' S, 163°56' E. An alkali pond at a high elevation in the S part of

Hidden Valley, W of Koettlitz Glacier, it is on the N side of the ridge which bounds the SE part of the valley. In 1957-58, geologist Troy L. Péwé found a thin film of white salt mirabilite (Glauber's salt) around the edge of the pond. US-ACAN accepted the name in 1960.

Mirabito Range. 71°40' S, 165°27' E. A long, narrow range, 60 km long and 6 km wide, trending NW, between the upper part of Lillie Glacier and Greenwell Glacier, in northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Lt. Cdr. John A. Mirabito, USN, once an aspiring pro baseball player, and later staff aerologist and meteorological officer in Antarctica for OpDF I (i.e., 1955-56), OpDF II (i.e., 1956-57), OpDF III (i.e., 1957-58), and OpDF IV (i.e., 1958-59).

[1]**Cerro Mirador**. 62°41' S, 60°20' W. A hill, rising to 307 m. Named by the Spanish for its excellent view over False Bay, on the S coast of Livingston Island, in the South Shetlands.

[2]**Cerro Mirador** *see* **The Saddlestone**

Mirage Island. 66°48' S, 141°27' E. An island, 0.4 km long, formed by two rocky massifs, and lying between Port-Martin Station and Cape Découverte, 0.5 km W of Cape Mousse, at the NW extremity of the Curzon Islands, along the coast of Adélie Land. Charted by the French in 1950, and named by them as Île des Mirages, for the mirages often seen (or rather, not seen) here. US-ACAN accepted the name Mirage Island in 1962.

Mirages. Phenomena produced by rays of light refracted on superimposed layers of hot and cold air. They are images of things, those things being in a place different from the place of the images. They can be well-defined and very clear, or they can be blurd and elongated (this is called looming). They have led to many errors in navigation and exploration (notably by Wilkes, Scott, and Amundsen). Shackleton, when returning from his failed attempt to reach the Pole, during BAE 1907-09, lost his way, but saw a mirage of Joyce's flag raised on the depot. *See also* **Phenomena**.

Île des Mirages *see* **Mirage Island**

Miranda Nunataks *see* **Miranda Peaks**

Miranda Peaks. 71°28' S, 68°36' W. Also called Miranda Nunataks. A line of half a dozen peaks, rising to about 500 m, and trending N-S on the S side of Uranus Glacier, between that glacier and the head of Venus Glacier, in the E part of Alexander Island. Photographed aerially by Ellsworth on Nov. 23, 1935, and roughly indicated on a map made in 1936-37 from these photos by U.S. cartographer W.L.G. Joerg. Surveyed by BAS personnel from Base E in 1963-64. In association with Uranus Glacier, these peaks were named by UK-APC on Dec. 20, 1974, for one of the moons of the planet Uranus. US-ACAN accepted the name in 1975.

Gora Mirazh *see* **Mirazh Mountain**

Mirazh Mountain. 71°18' S, 13°25' E. Rising to 1485 m, on the N central part of Steinmulen Shoulder, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39, and first plotted from these photos. Surveyed from the ground by NorAE 1956-60, and photographed aerially in 1958-59 by flights during the same long expedition, and mapped from these efforts by Norwegian cartographers (who did not name the mountain). Named Gora Mirazh (i.e., "mirage mountain") by the USSR in 1966. US-ACAN accepted the name Mirazh Mountain in 1970. The Norwegians also translated the name from the Russian, as Mirazhtoppen (which means roughly the same thing).

Mirazhtoppen *see* **Mirazh Mountain**

The *Mirfak*. A 266-foot USN ice-strengthened supply ship, built in 1956-57 in Avondale, La., and launched on Aug. 5, 1957. Principally used as a supply ship to South America, she was also in the Arctic. She was in at McMurdo during OpDF 63 (i.e., 1962-63), commanded by Ben Senia (*see* **Senia Point**), and again during OpDF 73 (i.e., 1972-73), with skipper L. Couch. She was in at Palmer Station.

Mirfak Nunatak. 81°58' S, 156°05' E. A rocky nunatak about 17 km SW of Vance Bluff, near the Polar Plateau. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for the *Mirfak*.

Mirnij Küste. 68°42' S, 90°33' W. A stretch of coast about 5 km long, on the N shore of Peter I Island. Named by the Russians for the *Mirnyy*. The Norwegians call it Mirnyjkysten. The English-speaking world informally call it the Mirnyy Coast, but is has not yet been recognized as such by any of the gazetteers, a coast of only 5 km being seen as a bit of a stretch.

Poluostrov Mirnyj. 66°33' S, 93°01' E. The peninsula on which stands Mirnyy Station, on the coast of Queen Mary Land. Named by the Russians. The English-speaking world all call it Mirnyy Peninsula, but so far the gazetteers have not accepted that name.

Mirnyjkuppelen. 68°47' S, 90°36' W. An ice rise in the N part of Peter I Island. Named by the Norwegians ("the Mirnyy ice rise"), after the *Mirnyy*. This name is not only unofficial, as yet, but seems to appear in drastically few places.

Mirnyjkysten *see* **Mirnij Küste**

The *Mirnyy*. A 528-ton Russian corvette, designed by Kolodkin, built of pinewood, and commanded by Lazarev during the von Bellingshausen expedition of 1819-21. Older and slower than the flagship *Vostok*, she somewhat hindered the progress of the expedition (the name means "peaceful"). She had 72 men on board. On Jan. 20, 1820, 7 days before the expedition sighted the Antarctic continent (or the shelf ice, at least), the *Mirnyy* collided with an iceberg, and only on her return to Sydney was there found a 3-foot hole in the hull. The interior canvas lining was the only thing keeping the water out.

Pik Mirnyy *see* **Mirnyy Peak**

Mirnyy Coast *see* **Mirnij Küste**

Mirnyy Peak. 69°31' S, 72°28' W. A prominent peak rising to 750 m (the British say about 800 m), 6 km NE of Enigma Peak, in the N part of Rothschild Island. It seems to have first been seen from a distance in Jan. 1821, by von Bellingshausen's Russian expedition. Photographed aerially by USAS 1939-41, and roughly mapped from these photos. Photographed aerially on Feb. 9, 1947, during OpHJ 1946-47. In 1959-60, Searle of the FIDS mapped this feature in detail from air photos taken in late 1947 by RARE 1947-48. He plotted it in 69°20' S, 72°34' W. Named by UK-APC on March 2, 1961, for the *Mirnyy*. It appears on a British chart of 1961. US-ACAN accepted the name later in 1961. U.S. Landsat images taken in Feb. 1975 showed the correct coordinates to be 69°31' S, 72°28' W, and it appears with the new coordinates in the 1986 British gazetteer. The Russians tend to call it Pik Mirnyy.

Mirnyy Peninsula *see* **Poluostrov Mirnyj**

Mirnyy Station. 66°33' S, 93°01' E. The USSR's first station in Antarctica, on Mirnyy Peninsula, on the coast of Queen Mary Land coast, opposite Haswell Island. **Jan. 5, 1956**: The party landed at the site. **Jan. 15, 1956**: Expedition leader Mikhail Somov declared Haswell Island a nature reserve. **Jan. 19, 1956**: Construction began on the base, by SovAE 1955-56 (also known as SovAE I), to the design of A.M. Afnasyev. **Feb. 13, 1956**: The station opened. **1956 winter**: Mikhail Somov (leader). **1957 winter**: Aleksey Fedorovich Treshnikov (leader). Gordon Cartwright wintered-over, as exchange scientist. **1958 winter**: Yevgeniy Ivanovich Tolstikov (leader). Mort Rubin wintered-over as exchange scientist. **1959 winter**: Aleksandr Gavrilovich Dralkin (leader). **1960 winter**: Yevgeniy Sergeyevich Korotkevich (leader). Gilbert Dewart wintered-over as exchange scientist, and 3 East German meteorologists, led by Günter Skeib, also wintered-over. **Aug. 3, 1960**: Fire killed 8 men (*see* **Deaths in Antarctica**, 1960). **1961 winter**: Valentin Mikhaylovich Driatskiy (leader). Three East German meteorologists, led by Peter Glöde, wintered-over. **1962 winter**: Viktor Ivanovich Venediktov (leader). Four East German scientists, led by Georg Dittrich, wintered-over. **1963 winter**: Nikolay Ivanovich Tyabin (leader). **1964 winter**: Pavel Kononovich Sen'ko (leader). **1965 winter**: Ivan Grigor'yevich Petrov (leader). Two East German scientists, led by Hans Wirth, wintered-over, as did a Polish met man. **1966 winter**: Leonid Ivanovich Dubrovin (leader). **1967 winter**: Vladislav Iosifovich Gerbovich (leader). **1968 winter**: Vladimir Aleksandrovich Shamont'yev (leader). Two East German geophysicists wintered-over. **1969 winter**: Dimitriy Dimitriyevich Maksutov (leader). Three East Germans scientists, led by Hans Diescher, wintered-over. One died (*see* **Deaths**, 1969). **1970 winter**: Vladislav Iosifovich Gerbovich (leader). **1970-71**: The station was re-built, the old one now being covered under several feet of ice. The main street was called (up to 1990) Lenin Street, and was, at first, 200 yards long, and finally 900 feet. **1971 winter**: Vyacheslav Mikhaylovich Rogachev (leader). Mirnyy had been the main Soviet station until this season, when Molodezhnaya took over that position. **1972 winter**:

Nikolay Nikolayevich Ovchinnikov (leader). **1973 winter**: Vladimir Nikolayevich Petrov (leader). **1974 winter**: Aleksandr Nikitovich Artem'yev (leader). **1975 winter**: Sergey Efimovich Nikolayev (leader). **1976 winter**: Georgiy Iosifovich Kizino. **1977 winter**: Vasiliy Semenovich Sidorov (leader). **1978 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1979 winter**: Viktor Grigor'yevich Smirnov (leader). **1980 winter**: Vladimir Nikolayevich Yefremenko (leader). **1981 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1982 winter**: Yuriy Mikaylovich Zusman (leader). **1983 winter**: Valeriy Innokent'yevich Sedyukov (leader). **1984 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1985 winter**: Anatoliy Nikolayevich Semenov (leader). **1986 winter**: Arkadiya Mikhlovich Soshnikov (leader). **1987 winter**: Igor' Antonovich Korzhenevskiy (leader). **1988 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1989 winter**: Vladimir Makarovich Loginov (leader). **1990 winter**: Igor' Antonovich Korzhenevskiy (leader). **1991 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1992 winter**: Leonid Sergeyevich Alekseev (leader). **1993 winter**: Valeriy Filippovich Iagarshev (leader). **1994 winter**: Leonid Anisimovich Popolitov (leader). **1995 winter**: Lev Nikolayevich Matveechev (leader). **1996 winter**: Aleksandr Mikhaylovich Koalovskiy (leader). **1997 winter**: Vladimir Mikhaylovich Stepanov (leader). **1998 winter**: Viktor Mikhaylovich Venderovich (leader). **1999 winter**: Viktor Alekseevich Smirnov (leader). **2000 winter**: Vladimir Mikhalovich Stepanov (leader). The station continues to be open.

Punta Miró *see* **O'Cain Point**

Gora Mirotvorceva *see* **Mount Mirotvortsev**

Mirotvorcevfjellet *see* **Mount Mirotvortsev**

Mount Mirotvortsev. 71°50' S, 12°17' E. Rising to 2830 m, 2.5 km NE of Mount Neustruyev, in the Südliche Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Remapped by Norwegian cartographers (but not named by them), from ground surveys conducted during NorAE 1956-60, and also from air photos taken in 1958-59, from the same long expedition. Remapped by SovAE 1960-61, and named in 1966 by the USSR as Gora Mirotvorceva, for geographer and explorer Klavdiy Nikolayevich Mirotvortsev (1880-1950). US-ACAN accepted the translated name Mount Mirotvortsev in 1970. The Norwegians call it Mirotvorcevfjellet (which means the same thing).

Mirounga Flats. 60°42' S, 45°36' W. A small, partially enclosed tidal area in the inner, NW, corner of Borge Bay, Signy Island, in the South Orkneys. Its E limit is formed by the Thule Islands, and its N and W limits by Signy Island itself. The tidal area dries at low water. Roughly surveyed in 1933 by Discovery Investigations personnel, and again in 1947 by FIDS, who named it for the elephant seals (*Mirounga leonina*) found here in large numbers during the molting period. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Mirounga Point. 62°14' S, 58°41' W. The E entrance point to Potter Cove, King George Island, in the South Shetlands. In 1966 the Argentines named it Punta Baliza (i.e., "buoy point"), but later, after Potter Peninsula had been established as SSSI #13, they called it Punta Elefante, for the elephant seals in the area. Claiming that the name Punta Elefante, or, at least, an English translation of that name, would lead to confusion with Elephant Point (on Livingston Island), which it may well have done, UK-APC named it Mirounga Point, on Nov. 13, 1985 (*see* **Mirounga Flats** for an explanation of the name), and US-ACAN followed suit. Plotted by the UK in late 2008.

Mirror Point. 62°32' S, 58°09' W. A small promontory below Ladies Buttresses, on the N shore of Ezcurra Inlet, in the area of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980. Somehow the Poles connected the name to the four ladies who summered-over at Arctowski Station in 1977-78 and the five ladies who summered-over there in 1978-79. One does not know the precise reason why the Poles would name this point thus, but one can guess. *See* **Polish Antarctic Expeditions**, and also **Ladies Buttresses** and **Ladies Icefall**.

Mirsky Ledge. 84°37' S, 111°40' W. A snow-covered, shelf-like feature about 16 km NE of Mount Schopf, in the Ohio Range. Urbanak Peak and Iversen Peak rise above the ledge which seems to be the NE extremity of the Horlick Mountains. Named by US-ACAN in 1962, for Arthur Mirsky, assistant director of the Institute of Polar Studies, at Ohio State University, which sent geological researchers to the Horlick Mountains in the period between 1958 and 1962.

Miscast Nunataks. 80°30' S, 159°09' E. A group of 4 rock outcrops in the form of nunataks, rising to a maximum elevation of 910 m, on the S side of Byrd Glacier, between Mount Tadpole and Mount Madison, in the Churchill Mountains. The feature was geologically mapped as the Dick Formation, a clastic sandstone unit, by NZGSAE 1960-61. It was remapped by USAP geologist Ed Stump in 2000-01, and he determined that the entire group is Shackleton Limestone, rather than just partly, as had been supposed by NZ geologist D.N.B. Skinner in 1964. However, this (in itself) does not seem to be a good reason for changing the name, which Stump did. US-ACAN accepted Stump's naming in 2003, and NZ-APC followed suit on Feb. 27, 2003.

Misch Crag. 71°14' S, 159°52' E. A rock crag, rising to 2590 m, 1.5 km NE of Forsythe Bluff, on the W side of the Daniels Range, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1986, for Peter Misch, professor emeritus of geology at the University of Washington, who trained numerous geologists who worked in Antarctica.

The *Mischief*. A 45-foot pilot cutter built in Cardiff in 1906 by Thomas Baker. In 1954, after many adventures, she was bought by Bill Tilman in Mallorca, and embarked on several more adventures. Tilman skippered her to the South Shetlands in 1965-66, with a motley crew (*see* **Tilman, Bill**), the first private expedition to visit BAS bases. She hit a rock in the Arctic in 1968 and was sunk.

Misery Peak. 85°31' S, 178°16' W. Rising to 2724 m above sea level, at the extreme W side of the Roberts Massif. It was occupied as a survey station. Named by the Southern Party of NZGSAE 1961-62, for the many miserable hours spent on the summit while waiting for the clouds to pass.

Misery Trail. Nickname for the trail forged by Finn Ronne from the Ross Ice Shelf in 1933 during ByrdAE 1933-35.

Roca Misión *see* **Mission Rock**

Canal Misionero. 64°20' S, 63°00' W. A very narrow channel separating Gamma Island from those islands to the N, and which joins the waters of Melchior Harbor to the W, in the Melchior Islands. It appears for the first time on a Chilean chart of 1955, and was named for the missionaries in southern Chile. The Argentines apparently use the same name.

The *Misiones*. Destroyer, built in England in 1938. She was on Argentine naval maneuvers, in the South Shetlands in Feb. 1948, under the overall command of Contra almirante Harald Cappus (q.v. for details). Skipper of the ship was Capt. Néstor P. Gabrielli. The vessel was decommissioned in 1970.

Punta Misiones. 64°27' S, 63°54' W. A point on the NW coast of Anvers Island. Named by the Argentines.

Misnomer Point. 62°22' S, 59°41' W. A conspicuous point, forming the E entrance point of, and immediately to the N of, Carlota Cove, 2.5 km NE of Fort William, on the NW coast of Robert Island, in the South Shetlands. Charted by the Discovery Investigations in 1935, and erroneously called by them Cornwall Point (*see* **Cornwall Island**). It appears as such on a 1948 British chart, and that was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. It was photographed aerially in 1956 by FIDASE. It appears as such on a 1968 British chart. It appears as Punta Cornwall on a 1957 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. In 1967, an RN Hydrographic Survey unit on the *Protector* re-surveyed it, and on Nov. 3, 1971, UK-APC renamed it Misnomer Point, for the confusion that had reigned here for 35 years. US-ACAN accepted the new name in 1972. The new situation appears in the 1974 British gazetteer. The Chileans call it Punta Cornejo, for Cabo (roughly equivalent to a corporal) Jorge Cornejo Galaz, of the Chilean Navy, who assisted in the emergency repairs to the alternators of the *Piloto Pardo* during ChilAE 1962, repairs which enabled the expedition to continue. Last plotted by the UK, in late 2008.

The *Miss American Airways*. The Pilgrim

single-engine monoplane — NC74N — taken by Byrd on his expedition of 1933-35. The plane returned home to the USA at the end of the expedition.

Missen Ridge. 70°41' S, 166°24' E. A long, ice-covered ridge, S of Davis Ice Piedmont, it extends along the peninsula of which Cape Hooker is the NE point, on the N coast of Victoria Land. Named by ANARE for R. Missen, weather technician on the ANARE cruise on the *Thala Dan* along the coast in 1962. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Mission Island *see* **Masson Island**

Mission Rock. 67°49' S, 68°25' W. A low-lying rock, rising to 1 m above sea level, SW of the Guébriant Islands, off the SW end of Adelaide Island. Surveyed and charted by an RN Hydrographic Survey unit on the *John Biscoe* in early 1963. Named by UK-APC on Feb. 12, 1964, in association with the Guébriant Islands, themselves named for the missionary Père Guébriant. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964. The Argentines call it Roca Misión (which means the same thing).

Mist Rocks. 66°48' S, 66°37' W. A group of rocks in water, close NW of Holdfast Point, at the entrance to Lallemand Fjord, on the Loubet Coast of Graham Land. Discovered and surveyed on Aug. 21, 1956, by the first Fids who sledged N from Base W. They were searching in the mist for a secure camp site, and fortuitously discovered these rocks at which to make such a site. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57. UK-APC accepted the name on Sept. 23, 1961, and it appears on a British chart of 1961. US-ACAN accepted the name in, 1965. The Argentines have translated the name as Rocas Niebla.

Mistake Crag. 62°09' S, 58°11' W. A slightly bowed crag extending N from Cinder Spur, and rising to about 90 m above the presently (2010) unnamed glacier on its W side, on the S coast of King George Island, in the South Shetlands. The name came about from the mistaken belief that Cinder Spur was mainly composed of cinders from the supposed adjacent volcanic vent, now proved by snow retreat to be a cirque. The crag is formed of sedimentary rock, whereas Cinder Spur is a dyke. UK-APC accepted the name on April 23, 1998, and US-ACAN followed suit in 1999. Plotted by the UK in late 2008.

Mistake Peak. 77°26' S, 160°13' E. A high, snowy peak, rising to about 2600 m, 5 km WSW of, and several hundred feet lower than, Shapeless Mountain, at the S end of the Willett Range, and immediately NW of the immense icefalls of the upper Wright Glacier, in Victoria Land. So named by the NZ Northern Survey Party of BCTAE (who established a survey station on its summit on Dec. 24, 1957) because they climbed it in the mistaken belief that they were climbing Shapeless Mountain, which is obscured from the S and W by this peak. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Misthound Cirque. 79°46' S, 156°12' E. A large embayment in the E side of Haskell Ridge, in the Darwin Mountains. Discovered by VUWAE 1962-63, and named by them for the hound-shaped boulders lying on the often mist-filled floor of this eerie and dramatic place. US-ACAN accepted the name in 1968.

Mistichelli Hills. 70°02' S, 72°52' E. A group of moderately low, rocky coastal hills, about 1.5 km SW of the McKaskle Hills, on the E margin of the Amery Ice Shelf. Delineated by U.S. cartographer John H. Roscoe, in 1952, from air photos taken during OpHJ 1946-47, and named by him for Gabriel Mistichelli (b. Feb. 15, 1927), OpHJ aviation radioman 2nd class on the photographic flights over this area. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Mistral Ridge. 69°33' S, 68°04' W. A mostly snow-covered ridge, running for about 10 km in a NNW-SSE direction, at an elevation of about 750 m above sea level, 8 km E of Zonda Towers, SE of Mount Edgell, at the point where the Rymill Coast meets the Fallières Coast, on the W coast of Graham Land. In 1958 the Argentines from General San Martín Station built a refugio here. Photographed aerially by USN in 1966, and surveyed by BAS personnel from Base E in 1971-72. In keeping with the practice of naming certain features in this area after famous winds of the world, this ridge was named by UK-APC on Dec. 8, 1977, for the mistral, the cold northwesterly of the south of France. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Misty Mountain *see* **Mount Elder**

Misty Nunatak. 62°06' S, 58°31' W. A steep nunatak, usually covered with fog (hence the name), W of Admiralen Peak, in Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Misty Pass. 63°29' S, 57°59' W. About 700 m above sea level, running NNW between the head of Broad Valley and a valley descending N to Bransfield Strait, on the W side of the Laclavère Plateau, 13 km SE of Cape Ducorps, on Trinity Peninsula. Surveyed and mapped by Fids from Base D in March 1946, and named by them for the misty clouds rolling E through the pass to signal bad weather ahead. UK-APC accepted the name on March 21, 1949, and US-ACAN followed suit in 1952.

Caleta Mitchell *see* **Mitchell Cove**

Mount Mitchell. 82°43' S, 165°36' E. Rising to 1820 m, it stands 8 km SW of Cape Goldie, in the N part of the Holland Range. Mapped by USGS from USN air photos taken in 1960, and from tellurometer surveys conducted in 1961-62. Named by US-ACAN in 1966, for Cdr. George W. Mitchell, captain of the *Burton Island*, 1962-65.

Punta Mitchell *see* **Mitchell Point**

Mitchell, Bowles. Baptized June 26, 1758, at Deptford, son of Robert Mitchell and his wife Elizabeth Adcock. He was an able seaman on the *Barfleur* when he transferred to the *Resolution* on Jan. 22, 1772 for Cook's 2nd voyage, 1772-75. On June 12, 1772 he became a midshipman, but reverted to able seaman on July 1, 1773. He kept a diary. He joined the *Discovery* for Cook's 3rd expedition, but was dismissed before the expedition sailed. He was promoted to lieutenant in 1777, and from 1788 to 1791 was skipper of the cutter *Kite*. He retired as a commander in 1810, and died in Ramsgate on Jan. 18, 1824.

Mitchell, David. b. April 9, 1963. BAS electrician who wintered-over at Faraday Station in 1986 and 1987, being also base commander during the second year. He was in South Georgia for 5 months in 1988, and in the summer of 1988-89 was on James Ross Island. In 1989-90 he assisted in the rebuilding of Halley Bay Station, and in 1990 was in the Arctic. He was then appointed base commander at Faraday, and between 1990 and 1993 spent between 4 and 5 months each year at the station. In 1994 and 1997 he tried crossing the Arctic by para-wing (*see* **Martin, Stephen John**, for details).

Mitchell, George *see* **USEE 1838-42**

Mitchell, Gilbert M. "Frank." b. March 31, 1883, Wright Co., Iowa, son of druggist William Henry Mitchell and his second wife Evaline Prichard Packard. The family moved to Sioux City, and when he was 15, Frank lied about his age, and joined the Army for the Spanish-American War, serving in the Philippines as a private. On Oct. 12, 1903, he enlisted in the U.S. Navy, as a water tender, something he remained throughout his career with that organization. He served during World War I, and in 1932 entered the merchant marine, going to Antarctica as a fireman and oiler on the *Jacob Ruppert*, 1933-35. He did not winter-over. He served on merchant ships during World War II (on the Murmansk run) and Korea, and as late as 1960, at the age of 79, still a Navy reservist, and in remarkable shape, living at Newburyport, Mass., and on call from the Navy for 30-day stints to see to their boilers. He died in July 1964, in Newburyport.

Mitchell, John *see* **USEE 1838-42**

Mitchell, Robert. Captain of the London sealer *Woodburn*, in the South Shetlands for the 1820-21 season.

Mitchell, William C. "Bill." Known, of course, as "Mitch." Catapult engineer officer on the *Balaena*, in Antarctic waters in 1946-47.

Mitchell, William Spence "Bill." b. Oct. 7, 1936, Glasgow. He joined FIDS in 1958, as a diesel electric mechanic, and wintered-over at Signy Island Station in 1959, and at Base D in 1960. He married Barbara, and they live in Auchterarder, Scotland. Not long into a most agreeable interview for this book with Mr. Mitchell, his wife cut it short, cut it dead.

Mitchell Cove. 62°23' S, 59°38' W. About 2.5 km E of Coppermine Cove, and separated from it by a mountainous peninsula, on Robert Island, in the South Shetlands. Its coasts are formed of glaciers and ice cliffs. Roughly charted by 19th-century sealers, it was named Cossets Harbor on Dec. 18, 1821, by Pendleton, yet it appears as Copper Mine Cove on Powell's chart of 1822. It was re-charted by the Discovery Investigations in 1934-35, photographed aerially

by FIDASE in 1956–57, and surveyed by FIDS between 1957 and 1959. Since the name Cossets Harbor does not seem to have outlived Pendleton's trip there, and since the name Copper Mine had long been applied to the cove to the west, UK-APC renamed this one on Aug. 31, 1962, as Mitchell Cove, for James Mitchell, of London, co-owner of the cutter *Beaufoy of London* (q.v.). It appears on a British chart of 1962. Mitchell's name had been applied by Weddell to what is now Robert Island (q.v.). The name Caleta Nailon (i.e., "nylon cove") was given to this feature by Capitán de corbeta José Duarte Villarroel, skipper of the *Lautaro* during ChilAE 1947–48, and it appears as such on a Chilean chart of 1961, and that is the name chosen by the 1974 Chilean gazetteer. The Argentines called it Caleta Enojada, after their 3-masted ship the *Enojada* (not in Antarctic waters), but today they call it Caleta Mitchell. Plotted by the UK in late 2008. Note: The SCAR gazetteer gives Mitchell Cove and Caleta Enojada as 2 separate and distinct entities, which may be the truth, as a 1978 Argentine reference to Caleta Enojada seems to indicate that it is only part of the main cove.

Mitchell Glacier. 77°57' S, 163°03' E. Descends steeply from Chaplains Tableland, in the NE part of the Royal Society Range, and flows ENE between Transit Ridge and Ibarra Peak, to join the Blue Glacier drainage S of Granite Knolls, in Victoria Land. Named by US-ACAN in 1992, for J. Murray Mitchell (1928–1990), climatologist with the U.S. Weather Bureau and its successor agencies, 1955–86, much involved with Antarctica over the years.

Mitchell Island *see* **Mitchell Peninsula**

Mitchell Nunatak. 70°58' S, 71°30' E. The central of 3 nunataks in the N part of the Manning Nunataks. The Manning Nunataks were photographed aerially during OpHJ 1946–47, and again by ANARE in 1958. They were visited by SovAE 1965, and by the ANARE Prince Charles Survey Party of 1973. This one was named by ANCA for Raymond John "Ray" Mitchell (b. April 19, 1930), mechanic and driver who wintered-over at Wilkes Station in 1967, and as senior diesel mechanic at Mawson Station in 1969 and 1971, at Casey Station in 1972, and back at Mawson in 1984. In Jan.–Feb. 1969, he assisted the Amery Ice Shelf Project in the recovery of vehicles. US-ACAN accepted the name in 1973. *See also* **Mitchell Ridge**.

Mitchell Peak. 76°25' S, 147°22' W. A solitary peak, 22 km W of Birchall Peaks, on the S side of Guest Peninsula, in Marie Byrd Land. Discovered aerially by Byrd on Dec. 5, 1929, during ByrdAE 1928–30, and named by him for U.S. Coast and Geodetic Survey mathematician Hugh C. Mitchell, a member of the National Geographic Society committee who ascertained that Byrd had actually flown over the North and South Poles. US-ACAN accepted the name in 1947.

Mitchell Peninsula. 66°20' S, 110°32' E. A rocky peninsula, 4 km long and 3 km wide, between O'Brien Bay and Sparkes Bay, at the E side of the Windmill Islands. First mapped from aerial photos taken in Feb. 1947, during OpHJ 1946–47, and thought to be an island connected by a steep snow ramp to the continental ice overlying the Budd Coast. It was named Mitchell Island, for Ray A. Mitchell (b. Jan. 18, 1905, Sevierville, Tenn. d. Sept. 9, 1987, Bellvue, Wash.), who joined the U.S. Navy in July 1923, and who was captain of the *Cacapon* during OpHJ 1946–47. Capt. Mitchell retired from the Navy in Nov. 1951. However, in 1957, personnel from Wilkes Station re-defined this feature as a peninsula, and US-ACAN accepted the new name in 1963. The Russians call it Poluostrov Sotovyj.

Mitchell Point. 64°13' S, 62°03' W. At the S side of the entrance to Hill Bay, on the E coast of Brabant Island, in the Palmer Archipelago. Roughly charted by an RN Hydrographic Survey unit on the *John Biscoe*, in 1951–52, and re-surveyed in April 1955, by FIDS on the *Norsel*. Photographed aerially by FIDASE in 1956–57, and, from these efforts, the point was mapped in 1959 by FIDS cartographers. Named by UK-APC on Sept. 23, 1960, for Silas Weir Mitchell (1829–1914), U.S. physician and novelist, prominent in scientific circles for his promotion of the rest cure for neurological disorders. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Punta Mitchell.

Mitchell Ridge. 73°04' S, 60°40' E. A low, snow-covered rock ridge, about 2 km W of Humphreys Ridge, in the Goodspeed Nunataks, in the S part of the Prince Charles Mountains. Discovered by an ANARE seismic traverse party in 1957, and photographed aerially by ANARE in 1958 and 1960. Named by ANCA for Raymond John "Ray" Mitchell, plant inspector who wintered-over at Wilkes Station in 1967, and at Mawson Station in 1969 and 1971, and who was a member of the ANARE Prince Charles Mountains survey party of early 1972. He wintered-over at Casey Station in 1974, and at Mawson again in 1984. The Russians call it Gora Krutaja.

Mitchells Island *see* **Robert Island**

Mite Nunatak. 75°05' S, 166°20' E. On the S side of Larsen Glacier, in the Prince Albert Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1962–63, for the mites found here.

Mite Skerry. 67°52' S, 67°19' W. A small island, rising to an elevation of 5 m above sea level, in the S part of the entrance to Lystad Bay (it is actually the southernmost island in that bay), off Horseshoe Island, in Square Bay, off the W coast of Graham Land. Roughly charted by ArgAE 1952–53, and named by them as Islote Sur (i.e., "southern island"). It appears as such on their 1953 chart, and is the name listed in the 1970 Argentine gazetteer. However, it does also appear on one of their 1958 charts as Islotito Sur (i.e., "tiny southern island"). Surveyed by FIDS between 1955 and 1957, and re-named by UK-APC on July 7, 1959, for its size (cf Mane Skerry). US-ACAN accepted the name in 1965.

Mites. Order: Acarina. There are 67 nonparasitic species in Antarctica, living under stones, and associated with spore-reproducing plants (*see* **Fauna**). Dr. Ove Wilson brought about 100 of them back from Antarctica at the end of NBSAE 1949–52. Later, Keith Wise discovered mites living only 309 miles from the South Pole. *See also* **Halozetes Valley**, **Mite Nunatak**.

Mitev Glacier. 64°12' S, 62°09' W. A glacier, 2.9 km long and 2.5 km wide, it flows northeastward to enter Hill Bay W of Petroff Point, on Brabant Island, in the Palmer Archipelago. Named by the Bulgarians on June 3, 2010, for scientist Ivan Mitev (1924–2006), who discovered the 6th heart tone. Dr. Mitev, as well as the discovery, while both undoubtedly authentic, do not seem to have been much in the news outside Bulgaria.

The Mitre. 66°31' S, 98°54' E. A conspicuous nunatak on the N side of Davis Peninsula, Queen Mary Land. Named descriptively by AAE 1911–14.

Isla Mitre *see* **Lavoisier Island**

Mitsudomoe Islands. 69°57' S, 38°45' E. Also spelled Mitudomoe Islands. Three small islands close together, off Insteodden Point, on the E side of Havnsbotn, 1.5 km W of Strandnebba, in the SE extremity of (i.e., near the head of) Lützow-Holm Bay. Mapped by Japanese cartographers from surveys conducted by JARE between 1957 and 1962, and named by them on Oct. 1, 1962, as Mitudomoe-zima (or Mitsudumoe-shima), which means roughly islands which look like commas joined together to form a circle. The Norwegians call them Tresteinane (i.e., "the three stones").

Mitsudomoe-shima *see* **Mitsudomoe Islands**

Mittelnunatak *see* **Sanctuary Cliffs**

Mittelnuten *see* **Sanctuary Cliffs**

The Mitten. 75°59' S, 160°30' E. A large, bare, flat-topped mountain (the New Zealanders call it a nunatak, which it really isn't), which looks like a mitten when seen from above, 5 km NW of Mount Armytage, between that mountain and McLea Nunatak, in Victoria Land. So named for its shape by NZGSAE 1962–63. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Mittens *see* **Gloves**

Mitterling Glacier. 66°50' S, 64°18' W. Flows S between Mount Vartdal and Mount Hayes, into the N part of Mill Inlet, E of Karpf Point, on the Foyn Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1963–64, and named by UK-APC on July 21, 1976, for Philip Ira Mitterling (1926–1999), U.S. historian (*see* the Bibliography). US-ACAN accepted the name later in 1976.

Mittlere Petermann Range. 71°30' S, 12°28' E. One of the Petermann Ranges, it extends N-S for 28 km from Johnson Peaks to Store Svarthorn Peak, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and named by them as Mittlere Petermannkette, for its middle (mittlere) position in the N part of the Petermann Ranges. US-ACAN accepted the name Mittlere Petermann Range in

1970. The Norwegians call it Midtre Petermannkjeda, while the Russians call it Hrebet Krasovskogo.

Cerro Mitty *see* **Mount Jacquinot**

Nevado Mitty *see* **Mount Jacquinot**

Mitu-iwa. 68°58' S, 39°44' E. A coastal rock exposure on the E side of the Flatvaer Islands, off the Prince Olav Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962. So named by the Japanese on June 22, 1972 (name means "three rocks"), because, when covered with snow, it appears as three rocks.

Mitudomoe-sima *see* **Mitsudomoe Islands**

Mitudomoe Islands *see* **Mitsudomoe Islands**

Mituike-teiti. 69°03' S, 39°32' E. A valley with three ponds in it, in the W extremity of Nisi-Teøya (the SW island of Teøyane), S of Ongul Island, in the Flatvaer Islands, off the Prince Olav Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962. Named by the Japanese on March 22, 1994 (name means "three-pond valley").

Miura, Kotaro. b. 1886, Miyagi, Japan. Cook on Shirase's Japanese South Polar Expedition of 1910-12. He left the expedition after the first season, and was replaced by seaman Chikasaburo Watanabe. Miura died in 1967.

Mixon Rocks. 76°43' S, 159°23' E. Rock outcrops about 4 km W of Gadarene Ridge, and about 5 km W of Tilman Ridge, in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition of 1964, and named by them for Lt. William A. Mixon, USN, medical officer at McMurdo who treated an injured member of the NZ expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Miyake, Yukihiko. b. Kyoto, 1884. He was mate in training and translator on the 2nd half of Shirase's Japanese South Polar Expedition of 1910-12. He died in 1965.

Miyoda Cliff. 68°22' S, 65°05' W. A rock cliff rising to about 400 m, at the NE end of Rock Pile Peaks, on the Bermel Peninsula, and marking the S entrance point to Solberg Inlet, along the Bowman Coast, S of Palmer Station, on the E coast of Graham Land. Photographed aerially in 1940 by USAS 1939-41, and by USN in 1966, and surveyed by Fids from Base E in 1946-48. Named by US-ACAN in 1978, for Larry Miyoda (1947-2007), mechanical engineer with Holmes & Narver, who wintered-over at Siple Station in 1974, was the leader at Palmer Station in 1976, and who was for many seasons at McMurdo in the early 1990s. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

The *Mizar*. A small, 1850-ton, 266-foot ice-strengthened U.S. cargo vessel of the Eltanin class, built for the Military Sea Transportation Service in 1957 by Avondale Marineways, in Avondale, La., and launched on Oct. 7 of that year. She entered service on March 7, 1958, went to the Arctic that summer (i.e., she was not in Antarctica in 1957-58, as some historians have claimed). She did go to Antarctica, for OpDF 62 (i.e., 1961-62), under the command of Captain Ben Senia. On Nov. 28, 1961, she arrived in McMurdo Sound, a full month before any previous cargo ship had ever done so in the season. On Feb. 16, 1990, she was struck from the register, and sold for scrap.

Mizar Nunataks. 81°52' S, 154°35' E. A small cluster of rock nunataks, about 22 km S of Wilhoite Nunataks, near the Polar Plateau. Named by US-ACAN in 1965, for the *Mizar*.

Mizir, Thomas *see* **USEE 1838-42**

Miziya Peak. 62°32' S, 60°10' W. Rising to over 600 m, it is the highest point on Vidin Heights, on Varna Peninsula, in the E part of Livingston Island, in the South Shetlands. It stands 5.5 km NE of the summit of Gleaner Heights, 4.43 km NNE of Leslie Hill, 7.6 km N by W of Sliven Peak, and 9.4 km N by E of Mount Bowles, and overlooks Kaliakra Glacier to the S and SE, and a portion of the island's ice cap that is draining into Hero Bay to the NW. Named by the Bulgarians on Feb. 17, 2004, for the town of Miziya (originally named Bukyovtsi), in northwestern Bulgaria. They say the name came from the old Roman province of Moisía (Moesia), which, in turn, took its name from the Moesi tribe living there before the Romans.

Mizuho Plateau. 71°30' S, 39°00' E. A mainly featureless ice plateau eastward of the Queen Fabiola Mountains, and southward of Shirase Glacier, in the NE portion of Queen Maud Land. Its extent is between 30°E and 45°E. Studied by a JARE field party in Nov.-Dec. 1960, and named by them as Mizuho-kogen (Mizuho being one of the ancient names of Japan, and "kogen" meaning "plateau"). The Japanese officially accepted the name on Feb. 1, 1961. The name has also been seen in English as Japan Highland. US-ACAN accepted the name Mizuho Plateau in 1975.

Mizuho Station. 70°42' S, 44°19' E. The second Japanese year-round station in Antarctica, it is 270 km farther inside Enderby Land than is Showa Station, and is located on the Mizuho Plateau, E of Shirase Glacier, inland from the Prince Olav Coast of Queen Maud Land, at an elevation of 2230 m above sea level. Personnel there study glaciology and meteorology. It began as a field camp in July 1970, and ice-coring studies were carried out immediately. In 1972 a winter traverse was made here from Showa Station, and from that time it was sometimes occupied during the winter as well as the summer. From 1976 it was occupied throughout the year. 8 buildings. The Japanese installed an automatic weather station here, at an elevation of 2260 m, in Oct. 2000. The base leader at Showa Station is also the leader of Mizuho.

Mizuho-kogen *see* **Mizuho Plateau**

Mizukuguri Cove. 69°11' S, 39°38' E. In the E side of Lützow-Holm Bay, it indents the W shore of the northern Langovde Hills 0.8 km W of Mount Choto, in Queen Maud Land. Mapped (but not named) by Norwegian cartographers in 1946, using the aerial photos taken by LCE 1936-37. In Feb. 1968 members of JARE scuba-dived here. Named Mizukuguri-ura (i.e., "diving cove") by the Japanese on June 22, 1972. US-ACAN accepted the name Mizukuguri Cove in 1975.

Mizukuguri-ura *see* **Mizukuguri Cove**

Mizukumi Stream. 69°00' S, 39°35' E. A small meltwater stream, flowing westwards, about 160 m N of Hachinosu Peak, on East Ongul Island. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE 1957-62, and named by them on May 1, 1963, as Mizukumi-zawa (i.e., "water-drawing stream"). US-ACAN accepted the name Mizukumi Stream in 1968.

Mizukumi-zawa *see* **Mizukumi Stream**

Mjåkollen. 66°33' S, 53°28' E. A peak, rising to about 1660 m, about 9 km E of Mount Bennett, in Enderby Land. Mapped in 1946 by Norwegian cartographers, from air photos taken by LCE 1936-37, and named by them ("the narrow knoll"). ANCA accepted the name without modification.

Mjell Glacier. 72°07' S, 26°06' E. A glacier, 14 km long, flowing NE between Mount Bergersen and Isachsen Mountain, in the SE portion of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, using air photos taken during OpHJ 1946-47, and named by them as Mjellbreen (i.e., the glacier made up of light and dry snow). They plotted it in 72°13' S, 26°10' E. US-ACAN accepted the name Mjell Glacier in 1966, but with different coordinates.

Mjellbreen *see* **Mjell Glacier**

Mjellbrefjellet. 72°21' S, 25°56' E. The mountain at the uppermost part of Mjell Glacier, in the SE portion of the Sør Rondane Mountains. Name means "the Mjell Glacier mountain" in Norwegian.

Mjellbresåtene. 72°20' S, 26°00' E. A partly snow-covered mountain in the SE part of the Sør Rondane Mountains, close to the upper part of Mjellbreen, in association with which it was named by the Norwegians. The Russians call it Gora Filatova.

The *Mjøfjord*. Norwegian whale catcher, belonging to the Hektor Whaling Company, and working for the *Ronald* out of Deception Island for several season starting in 1911-11.

Mjøllføykje *see* **Mjøllføykje Bluff**

Mjøllføykje Bluff. 73°32' S, 3°45' W. A prominent, partly snow-covered bluff in the Heksegryta Peaks, at the E side of Belgen Valley, between that valley and Tverregg Glacier, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and from 1958-59 air photos taken during NorAE 1956-60, and named by them as Mjøllføykje (like the word "mjell," "mjøll" means "light and dry new snow," and "føykje" means "whirling snow"). US-ACAN accepted the name Mjøllføykje Bluff in 1966.

Mjøllkvaevane *see* **Mjøllkvaevane Cirques**

Mjøllkvaevane Cirques. 71°53' S, 14°27' E. A series of small, snow-filled cirques which in-

dent the E side of Kvaevefjellet Mountain, in the Payer Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Mjøllkvaevane (*see* **Kvaevefjellet Mountain** and **Mjøllføykje Bluff**, for the meanings of these Norwegian component words). US-ACAN accepted the name Mjøllkvaevane Cirques in 1970.

Mount Moa. 80°46' S, 157°57' E. Rising to over 2000 m above Kiwi Pass, at the S end of the Kent Plateau, at the N end of the Churchill Mountains. In association with Kiwi Pass, this mountain was named by NZ-APC on Feb. 27, 2003, for the extinct flightless NZ bird, the moa. US-ACAN accepted the name later in 2003. There were several species of moa, two of them — both named Dinornis (not named by the Maoris) — when standing upright, reaching 12 feet, which is one frighteningly big bird. Too big, in fact, for the Maoris (or anyone else) to co-exist with happily. Within 100 years of the Maoris arriving in New Zealand about 1300, the moa had been rendered extinct.

Moa Glacier. 77°42' S, 162°46' E. A small glacier flowing NE of Marr Glacier, and due S of Nussbaum Riegel, in the valley of Taylor Glacier, in Victoria Land. Named by NZ-APC on Oct. 7, 1998, for the NZ bird. US-ACAN accepted the name later in 1998. The name appears in the 2009 NZ Antarctic gazetteer.

Moad, J. *see* **Mort, Jacob**

Cerro Moai. 62°27' S, 60°48' W. A hill on Punta Rapa Nui, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because of the similarity between this hill and the Easter Island statues, which are called moais. *See* **Punta Rapa Nui** for more on these statues.

Moawhango Névé. 72°15' S, 163°34' E. A small névé between Mount Camelot and Monte Cassino, in the Freyberg Mountains. Named by NZGSAE 1967-68 for a locality of the same name in NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Mount Moberly. 64°44' S, 63°41' W. A steep-sided, snow-covered mountain, rising to 1535 m at the end of the ridge extending SW from Mount Français, W of Börgen Bay, in the SE part of Anvers Island. It is separated from Mount William to the S by the col at the head of Hooper Glacier. On Feb. 21, 1832, John Biscoe discovered a mountain in this area, and named it for Capt. (Admiral from 1834) John Moberly (1789-1848), RN, who spent the last years of his life in Ontario. Moberly had been Biscoe's captain on the *Moselle*, in the West Indies, between 1813 and 1815. Subsequent expeditions could not find this mountain, but in 1944 personnel from Port Lockroy Station identified it and roughly surveyed it, during Operation Tabarin. It was surveyed again by Fids from Base N in 1955. UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1958. US-ACAN followed suit with the naming in 1963. Naturally, the name Moberly has been subject to much mutilation over the years.

Mobile Bay *see* **Mobiloil Bay**

Mobiline Bay *see* **Mobiloil Bay**

Bahía Mobiloil *see* **Mobiloil Inlet**

Ensenada Mobiloil *see* **Mobiloil Inlet**

Mobiloil Bay *see* **Mobiloil Inlet**

Mobiloil Inlet. 68°35' S, 64°45' W. An ice-filled indentation in the Larsen Ice Shelf, on the E coast of the Antarctic Peninsula, between (on the one hand) Rock Pile Peaks and Periphery Point, and (on the other) Hollick-Kenyon Peninsula, just W of Cape Agassiz. It is fed by several glaciers flowing E and NE. Discovered and photographed aerially by Wilkins on Dec. 20, 1928, and named by him as Mobiloil Bay, for the product of the Vacuum Oil Company of Australasia. Wilkins' 1929 map shows the S limit of the bay as 69°35' S. Following a radio report from the expedition in the field, the feature was also shown as Mobiline Bay, between about 67°30' S and 69°35' S. It appears as such on a 1929 American Geographical Society map. There is also a 1929 reference to it as Mobile Bay. As Mobiloil Bay it appears on a British chart of 1933. It was photographed aerially again by Ellsworth on Nov. 21 and 23, 1935, and appears (unnamed) on the 1937 map drawn up from these photos by U.S. cartographer W.L.G. Joerg, but lying between (what would later be named) Periphery Point and Cape Agassiz. Ground surveys conducted in 1936 by BGLE 1934-37 considerably altered the outline of the feature, and the name Mobiloil Bay was used for a wide indentation in the coast S of Cape Northrop, with its S limit in 68°50' S. It appears as such on a U.S. Hydrographic Office chart, and also on Stephenson's 1940 map of BGLE. In 1940-41 it was photographed aerially and surveyed from the ground by USAS 1939-41, and the name Mobiloil Bay was applied to the inlet between the E extremity of Joerg Peninsula and Cape Agassiz. It appears as such on a 1942 USAAF chart and also on a 1943 USHO photo. At the same time, the N entrance of the inlet was described on USHO charts as Periphery Point and the vicinity of (what would later be named) Pylon Point. On a 1945 Argentine chart Bahía Mobiloil is shown between Pylon Point and Cape Agassiz, and that is how it was accepted by the 1970 Argentine gazetteer. On Finn Ronne's 1945 map, Mobiloil Bay refers to the whole embayment between Cape Northrop and Cape Agassiz, and that is how the feature was accepted by US-ACAN in 1947. The feature was re-surveyed by Fids from Base E and Base D in 1947-48, when it was found that a number of inlets lie between Cape Northrop and Cape Agassiz. On a 1948 Chilean map it appears as Bahía Presidente Balmaceda, named for José Manuel de Balmaceda (1840-1891), president of Chile, 1886-91. In Dec. 1952, Argentine personnel from General San Martín Station made a sledge journey to the bay (which they referred to before starting out as Weddell Bay), and they renamed it Bahía Eva Perón, for María Eva Duarte de Perón (1919-1952), i.e., Evita, wife of the president of Argentina at the time. It appears as such on the 1953 map drawn up by ArgAE 1952-53. This was translated into Eva Perón Bay. UK-APC accepted the name Mobiloil Inlet on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such on a British chart of 1954, in the 1955 British gazetteer, and in the 1956 American gazetteer. It was further surveyed by Fids from Base E between 1958 and 1961. On a Chilean chart of 1962, it appears as Ensenada Mobiloil, and that was the name accepted by the Chilean gazetteer of 1974. Today, the Argentines also call it that. The coordinates given at the head of this entry are the ones used by the Americans. The British use 68°31' S, 64°37' W, and other countries use a variety of different ones.

Kap Möbius. 74°38' S, 164°13' E. A cape, immediately E of the lake the Italians call Lago Gondwana, 5 km E of Mount Browning, and about 10 km NNE of Mario Zucchelli Station. Named by the Germans.

Moby Dick *see* **Pardo Ridge**

Moby Dick Icefall. 61°58' S, 57°42' W. A large icefall at the head of Destruction Bay, between Melville Peninsula and the Faraway Nunataks, on King George Island, in the South Shetlands. Named by PolAE 1980-81, for the great whale in Melville's novel *Moby Dick*. The Poles accepted the name in 1984, UK-APC followed suit on July 8, 2003, and US-ACAN did so on Jan. 1, 2004. Last plotted by the UK in late 2008.

Mochou Hu. 69°22' S, 76°22°E. A lake in the Larsemann Hills. Named by the Chinese.

Mock suns *see* **Phenomena**

Moczydlowski Glacier. 62°13' S, 58°45' W. A large glacier flowing SW into the head of Marian Cove, at Maxwell Bay, King George Island, in the South Shetlands. Named by the Poles in 1984, for Eugeniusz Moczydlowski, leader of the 1980 wintering-over party at Arctowski Station. UK-APC accepted the name on July 8, 2003. Plotted by the UK in late 2008.

Modaine. Cook on the *Pourquoi Pas?* during FrAE 1908-10. Monsieur Modaine has eluded researchers (including this one) with staggering ease.

Nunatak Moder. 76°06' S, 62°32' W. About 33 km SSW of Dodson Peninsula, on the E coast of the Antarctic Peninsula. Named by the Chileans for Jorge Moder Jorquera, scientist from the University of Chile who took part in glaciology and geology studies here on the *Rancagua*, during ChilAE 1955-56.

Moderlandet *see* **Oscar II Coast**

Modesta Automatic Weather Station. 73°38' S, 160°39' E. An Italian AWS in Victoria Land, installed in Feb. 1989, at an elevation of 1923.93 m.

Cabo Modolo *see* **Cape Alexandra**

Isla Moe *see* **Moe Island**

Moe, Magnus Thoralf Joachim. Known as Thoralf. b. Feb. 5, 1878, Sandeherred, Norway, son of ship's pilot Martin Thorvald Moe and his wife Johanne Pauline Johansen. He went to sea as a teenager, and by the age of 21 was a mate.

He became a Chris Christensen whaling captain out of Sandefjord, and was later in the South Shetlands, 1911-12 (also in the South Orkneys that season, conducting a survey of the W coast of Signy Island) and 1912-13, as skipper of the *Tioga*. After the *Tioga* sank (Feb. 4, 1913), M.T. Moe made his way to Port Stanley, where he took passage on the *Orissa*, bound for Liverpool, arriving there on March 18, 1913, and making his way back to his home and wife in Christiania (Oslo). On April 7, 1914, he left Hamburg, bound for Buenos Aires, and in May 1916 he left Montevideo on the *Highland Rover*, bound for Norway.

Moe Island. 60°45' S, 45°42' W. About 1.5 km long by about 1 km wide, it is separated from the SW end of Signy Island by Fyr Channel, in the South Orkneys. Charted by Petter Sørlle in 1912-13, and named for M. Thoralf Moe. It appears on Sørlle and Hans Borge's chart of 1913, and on a 1913 chart prepared by Captain Moe himself (as Moe Insel). It was re-surveyed by the Discovery Investigations in 1927 and again in 1933, and appears on their charts of 1927 and 1934. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was surveyed by Fids from Signy Island Station in 1957-58. The Argentine naming history of this island is interesting in the basic error around which it revolves. On a 1930 chart it appears, simply misspelled, as Isla Noe, and the Argentines, thinking this should read Noé (which is their version of the Biblical name "Noah"), used the name Isla Noé on one of their 1945 charts. In order to avoid further confusion (once this was brought to their attention), they renamed it (with praiseworthy self-deprecating humor) Isla Morisqueta ("morisqueta," a word hardly ever heard today, for obvious reasons, signified, in old Spain a dirty trick played by the Moors), and the 1970 Argentine gazetteer accepted that name. In 1967 it was created SPA #13.

Moe Point. 70°18' S, 62°20' W. A point comprising a small, bare rock bluff, just S of Croom Glacier, on the NW side of Smith Inlet, on the Wilkins Coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Richard "Dick" Moe, USARP biologist at Palmer Station in 1974. UK-APC accepted the name on July 21, 1976.

Mount Moffat. 83°32' S, 55°17' W. Rising to 1250 m, 6 km NE of Mount Ege, on the Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN that same season, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Robert J. Moffatt, construction electrician who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Moffett Glacier. 85°52' S, 161°00' W. A tributary glacier, about 8 km wide and 22 km long (the New Zealanders say about 30 km long), it flows in a northeasterly direction from the Rawson Plateau, between Mount Ellsworth and Mount Breyer, into the Amundsen Glacier just S of Mount Benjamin, in the Queen Maud Mountains. Discovered aerially by Byrd during his South Polar flight of Nov. 28-29, 1929, during ByrdAE 1928-30, and named by him for Rear Admiral William Adger Moffett (1869-1933), USN, first chief of the Bureau of Aeronautics (from 1921 until his death), Department of the Navy. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Mount Mogensen. 77°34' S, 85°50' W. A snow-covered mountain rising to 2790 m, 8 km NE of Mount Ulmer, in the N part of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN in 1960, for Palle Mogensen.

Mogensen, Palle. b. June 24, 1908, Copenhagen. He graduated from Copenhagen Navigation School, went to sea in 1924, earned his master's license in Denmark, moved to the USA, married, earned his master's license in the US, and lived in Alexandria, Va. On April 7, 1941, at Newark, and now living in Plainfield, NJ, he enlisted in the U.S. Army, for World War II, serving as captain of a seagoing tug, and in 1942 became a U.S. citizen. After the war he went back to sea, and was 1st mate on Moore McCormack Lines and Labrandtsen Company ships. On April 6, 1951, he joined the U.S. Army again, and served in Korea. During a stint in the Arctic in 1953 he was a passenger in a helicopter when the pilot died at the controls. Mogensen broke his hip in the crash. He and another Army major, Skip Dawson, were brought in, along with Lt. Philip M. Smith, and 3 Army enlisted men, to form the Army part of the Army-Navy team that went out filling in crevasses on the trail to the new Byrd Station, in 1956-57, despite the fact that he and Dawson had no crevasse experience. He took over from Paul Siple as scientific leader at Pole Station on Nov. 30, 1957, and led the scientists there for the winter of 1958. He almost didn't get from McMurdo to the Pole. Two of the planes carrying him crashed on successive days before he finally made it. He returned home to Alexandria on Dec. 5, 1958, and died there on Oct. 4, 1991.

Mogilyane Peak. 63°41' S, 58°23' W. A rocky peak rising to 850 m in Erul Heights, 1.92 km WNW of Coburg Peak, 1.83 km N of Lopyan Crag, 1.55 km E of Gigen Peak, 2.39 km SE of Drenta Bluff (which is on the Louis Philippe Plateau), and 4.23 km WSW of Chochoveni Nunatak, it surmounts Cugnot Ice Piedmont to the NE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Mogilyane, in southern Bulgaria.

Isla Mogote *see* **Hummock Island**

Møgsterbrekka. 74°49' S, 11°22' W. A slope at the S side of Bonnevie-Svendsenbreen, in the S part of the Heimefront Range, in Maudheimvidda, in the Queen Maud Mountains. Named by the Norwegians for merchant Abelone Møgster (b. 1883). Living on a small island off Stavanger, she and her brother helped British agents and Norwegian refugees escape to Britain. She was arrested in 1942.

Islotes Mohai *see* **Sewing-Machine Needles**

Rocas Mohai *see* **Sewing-Machine Needles**

Mohaupt Island *see* **Currituck Island, Mohaupt Point**

Mohaupt Point. 66°04' S, 100°47' E. The E point of Currituck Island, in the Highjump Archipelago, off the Bunger Hills. Originally Currituck Island was thought to be 2 islands, and so the name Mohaupt Island was given by US-ACAN in 1956, to the N part, while the name Currituck Island was applied to the S part. SovAE 1956-57 found that the so-called Mohaupt Island was, in fact, part of Currituck Island, and US-ACAN did some re-defining here in 1961. Harold Ernest Mohaupt (b. May 21, 1916. d. Aug. 29, 2001), USN, was an air crewman on OpHJ 1946-47. Son of Chisholm, Minn., novelty storekeeper, Albert Mohaupt and his Canadian wife Isabelle, he enlisted on Jan. 5, 1942, served in World War II, and was buried in Quantico Naval Cemetery, Va. ANCA accepted the name on May 18, 1971.

Mount Mohl. 78°33' S, 85°05' W. Rising to 3710 m at the E side of the Vinson Massif, it surmounts the ridge between the heads of Dater Glacier and Thomas Glacier, in the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Cdr. (later Capt.) Edgar Vincent Mohl (b. Aug. 16, 1915, NY. d. Sept. 1980, Md.), USN, engineer and hydrographic officer on the staff of the commander of Task Force 43, during OpDF I (i.e., 1955-56) and OpDF II (i.e., 1956-57). Capt. Mohl was later very active in shore erosion control with the Maryland Department of Natural Resources.

Picos Mohn *see* **Mohn Peaks**

Mohn Basin. 86°30' S, 168°00' W. A major depression in the surface near the edge of the Polar Plateau, it extends southward from the W limit of the Quarles Range for about 160 km, and includes the névé area adjacent to the heads of Bowman Glacier, Devils Glacier, Amundsen Glacier, and Scott Glacier, all in the Queen Maud Mountains. Discovered in Dec. 1911 by Amundsen while he was on his way to the Pole. Later named by US-ACAN for Henryk Mohn (1835-1916), Norwegian meteorologist and author of the meteorological report of NorAE 1910-12. NZ-APC accepted the name.

Mohn Peaks. 73°04' S, 61°10' W. Two ice-covered peaks, the N one being 1275 m, and the S one 1230 m, 14 km WSW of the head of Mason Inlet, between that inlet and New Bedford Inlet, on the Lassister Coast, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940 by USAS 1939-41 (at least that is what the American gazetteer says; the British one is a little more cautious, saying that the feature was probably seen from the air on that date). In late 1947 the peaks were photographed aerially by RARE 1947-48, and also,

that season, surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by FIDS for Henryk Mohn (*see* **Mohn Basin**). UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. The feature appears in the 1955 British gazetteer, and on a 1955 U.S. Hydrographic Office chart, both times with the coordinates 73°07' S, 61°15' W. It was re-photographed aerially by USN between 1965 and 1967, replotted by USGS from these photos, and appears, with the new coordinates, on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears on a 1966 Chilean chart as Picos Mohn (it was misspelled, but their intention was clear).

Moider Glacier. 67°43' S, 67°38' W. Flows W into the E side of Dalgliesh Bay, on Pourquoi Pas Island, Marguerite Bay, on the Loubet Coast, on the W side of the Antarctic Peninsula. BAS personnel from Base E did geological work here from 1965 to 1970. Named by UK-APC on June 11, 1980, in association with nearby Perplex Ridge. It appears in the 1982 British gazetteer. US-ACAN accepted the name. *See also* **Moider Peak** (below).

Moider Peak. 65°55' S, 63°09' W. Rising to 1165 m, on the divide between Fleece Glacier and the upper reaches of Leppard Glacier, 20 km W of Mount Alibi, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by Fids from Base D in Oct. 1955, and so named by them because, at the time of the survey, low cloud obscured this peak, thus making it impossible to relate the peak to other features in the vicinity (moider means "to confuse"). UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1961. US-ACAN accepted the name in 1963. Further surveyed by BAS personnel from Base E in 1964-65.

Pico Mojón. 64°04' S, 60°59' W. A peak, immediately E of Cape Sterneck, at Hughes Bay, on the Danco Coast, on the W coast of Antarctica. Named by the Argentines.

Mokren Bight. 63°19' S, 58°43' W. An embayment, 3 km wide, indenting the W coat of Astrolabe Island for 850 m, in the Bransfield Strait, it is entered N of Geja Point. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Mokren, in southeastern Bulgaria.

Lednik Mokryj *see* **Kreitzer Glacier**

La Molaire *see under* **L**

Molane. 72°30' S, 28°02' E. Three small nunataks SE of Vørterkaka Nunatak, at the SE end of the Sør Rondane Mountains. Named by the Norwegians ("the small pieces").

Molar Island. 78°40' S, 101°22' E. An ice-covered island of irregular shape, 400 m long, between the Early Islands and the Cosgrove Ice Shelf, in the extreme SE part of Ferrero Bay, on the Eights Coast. The occurrence of open water around this island, clearly shown in USGS aerial photos and satellite images taken between 1966 and 2000, has drawn attention due to the island's position behind the fast ice of Ferrero Bay. So named by US-ACAN on April 21, 2009, because it resembles a molar in shape.

Molar Massif. 71°38' S, 163°45' E. A large mountain massif immediately E of the Lanterman Range, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by US-ACAN in 1970 because when viewed in plan, the outline of this mountain looks like a molar tooth.

Molar Peak. 64°41' S, 63°19' W. A steep-sided peak rising to 1065 m, between Mount Camber and Copper Peak, in the SW part of the Osterrieth Range, on Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in Nov. 1955, when the first ascent was made, and so named by UK-APC on Sept. 4, 1957, for its shape. It appears on a British chart of 1959. US-ACAN accepted the name in 1963. The Argentines call it Pico Elevado.

Skala Molchanija *see* **Molchaniya Rock**

Molchanijaberget *see* **Molchaniya Rock**

Molchaniya Rock. 72°09' S, 14°08' E. A small, isolated nunatak, 10 km WNW of Rokhlin Nunataks, in the S part of the glaciated area between the Payer Mountains and the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Remapped by the Russians from ground surveys and air photos taken by SovAE 1960-61, and named by them in 1966, as Skala Molchanija (i.e., "silent rock"). US-ACAN accepted the name Molchaniya Rock in 1970. The Norwegians call it Molchanijaberget.

Gora Molchanova *see* **Hånuten**

Molds. There are many species in Antarctica (*see* **Flora**).

Mole, Leonard Usher "Len." b. 1937, Chester-le-Street, Durham (his mother's name was Usher). He joined FIDS in 1963, as a meteorologist, left Southampton on the *Shackleton* in late Sept. 1963, and was base leader at Base B for the winter of 1964, and at Base T for the winter of 1965. He was back, just as met man, at Signy Island Station, for the winter of 1967.

Molecule Island. 66°28' S, 66°24' W. The most easterly of the Bragg Islands, in Crystal Sound, 12 km N of Cape Rey, Graham Land. Surveyed by FIDS in 1958-59. Named by UK-APC on Sept. 23, 1960, in association with nearby Atom Rock. It appears in the 1961 British gazetteer. US-ACAN accepted the name in 1965.

Molholm Island. 66°16' S, 110°33' E. At the entrance to McGrady Cove, in the E part of Newcomb Bay, in the Windmill Islands. Delineated from air photos taken by OpHJ 1946-47. Named by Carl Eklund in 1957, for John Robertson Latady Molholm (b. 1938), who was at Tufts University when he (Molholm) became assistant glaciologist to Richard Cameron at Wilkes Station in 1957. He was part of the Ellsworth Highland Traverse of 1960-61, led by Charlie Bentley, and also of the Antarctic Peninsula Traverse 1961-62 (q.v.), led by John Behrendt, and on which he was assistant to glaciologist Hiro Shimizu. Related to Bill Latady (q.v.). US-ACAN accepted the name in 1960, and ANCA followed suit.

Molholm Shoal. 66°16' S, 110°33' E. A shoal area with depths of less than 11 m (there are depths of 3.4 m at the S end), extending for about 320 m in a N-S direction, about 160 m W of Molholm Island, and about 3 km from the summit of Shirley Island, in the Windmill Islands. Discovered and charted in Feb. 1957, by personnel from the *Glacier*. Re-discovered and re-charted by Tom Gale in 1962, during a hydrographic survey of Newcomb Bay and its approaches, during an expedition led by Phil Law on the *Thala Dan*. Named by ANCA in 1962, in association with nearby Molholm Island. US-ACAN accepted the name in 1963.

Cabo Molina *see* **Cabo Rudecindo**

Punta Molina *see* **Molina Point**

Rocas Molina *see* **Molina Rocks**

Molina Point. 64°48' S, 62°51' W. A point which forms the extreme NE of Lemaire Island, to the N of Paradise Harbor, off the Danco Coast, on the W side of Graham Land. Named Punta Molina by ChilAE 1950-51, for reasons unknown. It appears as such on their 1951 chart, and was the name accepted by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1957-58, and surveyed from the ground by Fids from Base O between 1956 and 1958. UK-APC accepted the translated name on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer. The Argentines call it Punta Quilmes (*see* **Mount Quilmes**), there being references with that name as far back as at least 1978.

Molina Rocks. 63°22' S, 58°27' W. A small group of 3 rocks, 6 km W of the Tupinier Islands, and 6 km ESE of the extreme SE point of Astrolabe Island, between that island and Lafond Bay, at Trinity Peninsula. Named by ChilAE 1950-51 (for reasons not clear today) as Rocas Molina, it appears as such on their 1951 chart, and also on a 1959 Chilean government chart. It was the name accepted by the Chilean gazetteer of 1974. Surveyed by Fids from Base D in 1960-61. UK-APC accepted the translated name Molina Rocks on Feb. 12, 1964, and US-ACAN followed suit that year.

Cordón Molinero *see* **Butson Ridge**

Möll Spur. 76°23' S, 112°09' W. A jagged rock spur projecting southward from Jaron Cliffs, on the S slope of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Markus Möll, from the University of Bern, in Switzerland, USARP glaciologist at Byrd Station in 1969-70.

Molle Glacier. 67°31' S, 47°10' E. Also called Hannan Glacier. A glacier, 6 km wide, flowing NNE (the Australians say ENE) into the N part of the Hannan Ice Shelf, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for John D. Molle, radio officer at Davis Station in 1960 and 1962. US-ACAN accepted the name in 1965.

Møller Bank. 67°34' S, 62°52' E. A marine bank, about 137 m wide, about 366 m long in a

NNE-SSW direction, and with a least depth of 32 m (the Australians say "with depths less than 91 metres," but, subsequently, go on to say "with a least depth of 31 metres"), at the N end of Kista Strait, 1.5 km W of Welch Island, in Holme Bay, in Mac. Robertson Land. Charted by Tom Gale during an ANARE hydrographic survey from the *Thala Dan* in Feb. 1961. Named by ANCA on July 4, 1961, for J. Wennerberg Møller, 3rd mate on the *Thala Dan* that year. Mr. Møller assisted with the survey. US-ACAN accepted the name in 1965.

Möller Ice Stream. 82°20' S, 63°30' W. Flows NNE into the Filchner Ice Shelf, to the W of the Foundation Ice Stream, and, for much of its length, parallel to it, the Rambo Nunataks separating the drainage basins of the two ice streams. Delineated by German cartographers from U.S. Landsat images taken between Jan. and March 1986, and named by them as Möllereisstrom, for German engineer Prof. Dietrich Möller (b. 1927), director of the Institute for Land Survey, at the Technical University of Braunschweig, from 1972; deputy leader, and in charge of geodetic work, at Filchner Station, on the Ronne Ice Shelf, in 1979–80; coordinator of the glacial geodetic program on the Filchner Ice Shelf and the Ronne Ice Shelf from 1980.

Möller Trough. 76°35' S, 30°40' W. A submarine trough in the Weddell Sea. Named by Heinrich Hinze in Jan. 1997, for geodesist Dietrich Möller (b. 1927), president of the German Society for Polar Research. The name was accepted by international agreement in June 1997.

Möllereisstrom *see* **Möller Ice Stream**

Molley, William. Midshipman and 3rd mate on the *Terror* during RossAE 1839–43. Name also seen as Molloy.

Molley Corner. 64°09' S, 58°20' W. A point on the N side of Röhss Bay, 5 km E of Cape Obelisk, in the W part of James Ross Island. Surveyed by Fids from Base D between 1952 and 1954. BAS did geological work here between 1981 and 1983. Named by UK-APC on April 3, 1984, for William Molley. It appears in the 1986 British gazetteer. US-ACAN accepted the name. The Argentines call it Cabo Heinen (which should read Heynen—*see* **Bahía Heynen**).

Mollonex, John. b. Whitehaven, Cumberland, son of gardener John Mollonex. On March 29, 1772, at Deptford, he joined the *Adventure*, as sergeant of Marines, for Cook's 2nd voyage, 1772–75. On Nov. 6, 1774, at St Bees, he married Elinor Woodthorp, and died in 1778.

Molloy, William *see* **Molley, William**

Mollusc Pond. 68°37' S, 78°08' E. A small pond, about 50 m long, on the E side of Marine Plain, in the Vestfold Hills. It has numerous shell fossils outcropping on the W side. Named by ANCA on July 26, 1983.

Mollusks. There is a variety of these living on the sea beds near the shores (*see* **Fauna**). *See also* **Punta Nacella** (under N).

Mollweide Glacier. 77°57' S, 163°45' E. A steep glacier. 1.5 km S of Mount Kowalczyk, it descends W from Hobbs Ridge into Blue Glacier, in Victoria Land. In keeping with the practice of naming several features in this area after surveying terms, this was named by NZ-APC in 1992, for the Mollweide Projection, an equal area map projection with the parallels and central meridian being straight lines. US-ACAN accepted the name in 1993.

Rocas Molnar *see* **Molnar Rocks**

Molnar Rocks. 66°11' S, 66°58' W. Rocks awash, 6 km W of the middle of Lavoisier Island, in the Biscoe Islands. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956–57. Named by UK-APC on Sept. 23, 1960, for George William Molnar (1914–1993), U.S. physiologist who specialized in the reactions of the human body to cold. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call them Rocas Molnar.

Molnia Bluff. 77°16' S, 160°57' E. A steep bluff rising to 1750 m, and extending W-E for 1.5 km at the SE end of Parker Mesa, in the Clare Range of Victoria Land. The elevation drops to 1350 m at the foot of the bluff. Named by US-ACAN in 2005, for Bruce Franklin Molnia, USGS geologist who conducted seismic studies in the Southern Ocean and Antarctic marginal seas from the *Eltanin*, in 1965–66. NZ-APC accepted the name on Sept. 12, 2005.

Molodezhnaya Station. 67°40' S, 45°51' E. At a height of 42 m above sea level, in the Thala Hills, 0.6 km from the S shore of Alasheyev Bight, on the Prince Olav Coast of Enderby Land. Official name: Antarctic Meteorological Center Molodëzhnaja. Named for the "molodëzh" or "young people" who constructed the station. **1961–62**: The station was built, and occupied for 3 months. **Jan. 14, 1963**: The station opened permanently. **1963 winter**: Pavel Timofeyevich Morozov (leader). **1964 winter**: Nikolay Aleksandrovich Kornilov (leader). **1964–65 summer**: Extensive reconstruction began. **1965 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1965–66 summer**: Four Polish scientists, led by Seweryn Maciej Walewski, summered over. **1966 winter**: Nikolay Nikolayevich Ovchinnikov (leader). **1967 winter**: Ivan Mikhaylovich Titovskiy (leader). **1968 winter**: Nikolay Aleksandrovich Kornilov (leader). **1968–69 summer**: The Polish expedition worked here. **1969 winter**: Khatskel' Gershevich Bunyak (leader). **1970 winter**: Ivan Mikhaylovich Titovskiy (leader). **1970–71 summer**: It succeeded Mirnyy as Soviet headquarters in Antarctica. It was the largest of the Russian stations, anyway. Meteorology was the main study, of course, but rocketry (from 1970) and geophysics were also studied. About 128 persons wintered-over every year (which was a lot), and there were over 200 in the summer. It had 70 buildings, a synoptic meteorology bureau and a landing strip. **1971 winter**: Ivan Grigor'yevich Petrov (leader). **1972 winter**: Vyacheslav Grigor'yevich Aver'yanov (leader). Five East German geologists and glaciologists, led by Klaus Dressler, wintered-over. **1973 winter**: Pavel Kononovich Sen'ko (leader). **1974 winter**: Veniamin Stepanovich Ignatov (leader). Seven German scientists, led by Georg Dittrich, wintered-over. **1975 winter**: Nikolay Aleksandrovich Kornilov (leader). Four East German physicians and met men wintered-over too, led by Götz Unger. **1976 winter**: Gennadiy Ivanovich Bardin (leader). **1977 winter**: Leonid Ivanovich Dubrovin (leader). **1977–78 summer**: Landing ground built for aircraft. **1978 winter**: Oleg Konstantinovich Sedov (leader). **1978–79**: First flight in from Moscow. **1979 winter**: Aleksandr Nikitovich Artem'yev (leader). **May 3, 1979**: Helo crash. 3 killed (*see* **Deaths**, 1979). **1980 winter**: Nikolay Ivanovich Tyabin (leader). **1980–81 summer**: Regular flights established between Moscow and Molodezhnaya. **1981 winter**: Vladimir Aleksandrovich Shamont'yev (leader). **1982 winter**: Ryurik Maksimovich Galkin (leader). **1983 winter**: Aleksandr Nikitovich Artem'yev (leader). **1983–84 summer**: A Cuban party visited. **1984 winter**: Lev Valer'yanovich Bulatov (leader). **1985 winter**: Dmitriy Dmitriyevich Maksutov (leader). **1986 winter**: Valeriy Fedorovich Dubovtsev (leader). **1987 winter**: Valeriy Yakovlevich Vovk (leader). **1988 winter**: Yuriy A. Khabarov (leader). **1989 winter**: Lev Valer'yanovich Bulatov (leader). **1990 winter**: Vladislav Mikhaylovich Piguzov (leader). **1991 winter**: Lev Mikhaylovich Savatyugin (leader). **1992 winter**: Yevgeniy Nikolayevich Uranov (leader). **1993 winter**: Robert Aleksandrovich Dedushkin (leader). **1994 winter**: Leonid Grigorevich Gindin (leader). **1995 winter**: Yevgeniy Nikolayevich Uranov (leader). **1996 winter**: Vladimir Vasil'yevich Kiyselev (leader). **1997 winter**: Yevgeniy Nikolayevich Pugachev (leader). It was open for the 1998–99 summer, but not for the 1999 winter, and then re-opened for the 1999–2000 summer. It was not open for the winter of 2000, but was open for the winter of 2001 and 2002. It was mothballed after that. **Feb. 2006**: Plans were announced to re-open Molodezhnaya in 2007–08. During this season, i.e., 2005–06, the Russians removed over 100 tons of scrap metal from the base.

Oazis Molodëzhnyj. 67°40' S, 46°52' E. An oasis, SW of Molle Glacier, in Enderby Land. Named by the Russians.

Nunatak Moltke *see* **Moltke Nunataks**

Picos Moltke *see* **Moltke Nunataks**

Moltke Group *see* **Moltke Nunataks**

Moltke Nunatak *see* **Moltke Nunataks**

Moltke Nunataks. 78°58' S, 35°30' W. Also called Moltke Group. A group of 4 nunataks rising to about 500 m close to the NE end of the Filchner Ice Shelf, they trend N-S in a chain on the Luitpold Coast. In 1912, GermAE 1911–12 roughly mapped one of them in 78°20' S, 35°00' W, and Filchner named it Moltke Nunatak, for Gen. Helmuth Johannes Ludwig von Moltke (1848–1916), chief of the German General Staff and secretary of state for home affairs, 1906–14. On a 1943 USAAF chart, they appear as Moltke Nunataks, and on a 1946 Argentine chart they appear as Picos Moltke. This is not to suggest that anyone yet knew there was more than one; USAAF simply made a mistake, and the Argentines copied it. US-ACAN accepted the name Moltke Nunatak in 1947. On a 1952 Argentine chart, the named one appears as Nunatak Moltke,

and the 1970 Argentine gazetteer accepted that name. In Oct. 1956, the nunataks were surveyed by BCTAE, and on Nov. 12, 1957, Salta Refugio was established by the Argentines 4 km W of the nunataks. These expeditions were able to describe the feature correctly. However, on Ronne's map of 1961, the feature seems to appear as Moltke Peninsula, and on John Behrendt's map of 1962, the feature is still singularized, as Moltke Nunatak (this map reflected Mr. Behrendt's Antarctic Peninsula Traverse of 1961-62). UK-APC accepted the name Moltke Nunataks on Aug. 31, 1962, and US-ACAN followed suit that year. The 1970 Argentine gazetteer has Nunatak Norte (q.v.), referring to the northernmost of these nunataks. The Germans call the whole feature Moltkenunatakker.

Moltke Peninsula *see* **Moltke Nunataks**

Moltkenunatakker *see* **Moltke Nunataks**

Molybdenum. Mawson was the first to find it in Antarctica. It has since been found several times.

Islote Mom. 62°58' S, 56°11' W. The largest of the Medley Rocks, in the Joinville Island group. Named by the Argentines, in association with one of the names they have used for the group, Islotes Mom.

Islotes Mom *see* **Medley Rocks**

Mom Peak. 85°27' S, 173°00' E. Rising to 3260 m, in the E part of Otway Massif, 8 km SE of Mount Petlock. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1973, for "Antarctica Mom," i.e., Mrs Shirley Anderson (b. May 17, 1922, Perth, Australia, daughter of Manchester-born immigrant George Cleveland John Russell-Davison and his wife Katie Marion Ambrose. d. Nov. 1, 1992, San Diego), of 1059 Sapphire Street, San Diego Calif., who, in the years following 1961, wrote to thousands of American winterers in Antarctica, thus boosting morale. During World War II she had been a driver in the Australian army, then married James C. Anderson, an American, and come to live in the States.

Momchil Peak. 62°32' S, 59°41' W. Ice-covered, and rising to 620 m, in Breznik Heights, N of Zheravna Glacier, 1.8 km NE of Razgrad Peak, and 1.47 km NW of the summit of Viskyar Ridge, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the Bulgarian town of Momchilgrad, which, in turn, was named for Momchil, the Bulgarian ruler of Aegean Thrace in the 14th century.

The *Momo*. French yacht, skippered by Charles and Jean-Marie Ferchaud, which visited the Antarctic Pensinula, the South Shetlands, and the South Orkneys, in 1979-80.

Monaco. The principality which shares a border with France, it became the 47th signatory to the Antarctic Treaty, on May 31, 2007, and in Jan. 2009 its first expedition went to Antarctica — a one-man expedition led by Prince Albert II, to investigate global warming.

Cabo Mónaco *see* **Cape Monaco**

Cape Monaco. 64°43' S, 64°18' W. Forms the NW entrance point of Wylie Bay, and also the SW tip of Anvers Island, in the Palmer Archipelago. Discovered and roughly charted by Dallmann in 1873-74, but he did not realize what it was. Charted by FrAE 1903-05, and named by Charcot as Cap Albert de Monaco, a name that became Cape Albert de Monaco in English. Prince Albert I of Monaco (1848-1922) was a patron of Charcot's expedition, as well as of his next one, FrAE 1908-10. The name appears on Charcot's maps, as also does Cap A. de Monaco, and Pointe Monaco. On a British chart of 1908 it appears as Cape Albert de Monaco. On a Chilean chart of 1947, it appears as Cabo Alberto de Mónaco, and that was the name accepted by the Chilean gazetteer of 1974, despite the fact that it appeared on a 1963 Chilean chart as Punta Alberto de Monaco. It appears as Cape Monaco on a British chart of 1952, and that was the name accepted by UK-APC on Jan. 28, 1953, and which appears in the 1955 British gazetteer. US-ACAN accepted that name in 1960. It appears as such on a British chart of 1961. On an Argentine chart of 1953 it appears as Cabo Mónaco, and that was the name accepted by the 1970 Argentine gazetteer. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base N. The Chileans and Argentines, over the years, have used a few very slight variations of this name.

Pointe Monaco *see* **Cape Monaco**

Cape Monakov. 67°09' S, 48°41' E. On the SW part of Dingle Dome, on the NW coast of Sakellari Peninsula, in the area of Casey Bay, Enderby Land. The general area was photographed by ANARE in 1956, and by personnel from the *Lena*, during SovAE 1957. Named by the USSR as Mys Monakova, for S. Ye. Monakov, polar aviator who died in the Arctic. ANCA accepted the English-language translation on June 9, 1964, and US-ACAN followed suit in 1971.

Mys Monakova *see* **Cape Monakov**

Monastery Nunatak. 77°58' S, 160°35' E. A spectacular isolated nunatak at the head of Ferrar Glacier, between Mount Feather and Pivot Peak, in Victoria Land. The NZ Northern Survey Party of BCTAE 1956-58 established a survey station on its summit on Jan. 16, 1958, and named it for its likeness to a Tibetan monastery. It is composed of a cap of pale sandstone, with vertical walls, standing above a horizontal base of black dolerite. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Mondai Rock *see* **Kasumi Rock**

Mondor Glacier. 63°28' S, 57°08' W. A glacier, 5.5 km long, it flows SW from the head of Depot Glacier, into Duse Bay, on Trinity Peninsula. These two glaciers fill the depression between Hope Bay and Duse Bay which marks the N limit of Tabarin Peninsula. Surveyed by Fids from Base D in 1946 and 1956. Named by FIDS in association with the French "Bal Tabarin" from literature. Tabarin and Mondor were both characters from the same book. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Cabo Moneta. 60°44' S, 44°46' W. One of the 2 capes forming the end of Mackenzie Peninsula, at the W end of Laurie Island, in the South Orkneys. Named by the Argentines for José Manuel Moneta. *See also* **Cabo Díaz**.

Moneta, José Manuel. Technician with the Argentine National Meteorological Service, who wintered-over at Órcadas Station in 1923 and 1925, then led the wintering-over party there in 1927 and 1929. He installed the first radio station there that had a permanent connection to Buenos Aires. He wrote *Cuatro Años en las Órcadas del Sur* (1939: Editorial Peuser). From 1946 to 1948 he was secretary general of the National Antarctic Commission, and was on various international whaling commissions. In 1959 he was one of the Argentine signatories of the Antarctic Treaty.

Cap Monflier *see* **Monflier Point**

Cape Monflier *see* **Monflier Point**

Punta Monflier *see* **Monflier Point**

Monflier Point. 65°55' S, 66°04' W. At the N of the entrance to Pendleton Strait, it marks the extreme SW end of Rabot Island, in the Biscoe Islands, off the W coast of the Antarctic Peninsula. First charted by FrAE 1908-10, and named by Charcot as Cap Monflier, for Georges Monflier, lawyer, and secretary general of the Normandy Geographical Society, in Rouen, who assisted the expedition, and who arranged the reception at Rouen on their return in 1912. It appears as such on Charcot's maps of 1910 and 1912. On a British chart of 1914, it appears as Cape Monflier, as it does on Rymill's 1938 map of BGLE 1934-37. On a 1946 USAAF chart it appears misspelled as Cape Montflier, and on a Chilean chart of 1947 it appears as Cabo Monflier. UK-APC accepted the name Cape Monflier on Sept. 20, 1955, and US-ACAN followed suit in 1956. It was photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC redefined it as Monflier Point, and it appears as such on a British chart of 1960. US-ACAN accepted the new name later that year. The Argentine gazetteer of 1970 accepted the name Cabo Monflier. It appears on a Chilean chart of 1962 as Punta Monflier, and that was the name accepted by the Chilean gazetteer of 1974.

Île Monge *see* **Monge Island**

Monge Island. 66°47' S, 141°29' E. A small, rocky island, immediately S of La Conchée, and 0.8 km NE of Cape Mousse, between Port-Martin Station and Cape Découverte. Charted in 1951 by the French, and named by them as Île Monge, for Gaspard Monge (1746-1818), French mathematician. US-ACAN accepted the English-language translation in 1962.

Monte (or Pico) Mónica *see* **Mount Monique**

Roca Mónica *see* **Monica Rock**

Monica Rock. 62°20' S, 59°44' W. A rock, rising to about 1.5 m above sea level, 1.1 km W of Cornwall Island, in English Strait, in the South Shetlands. It has 2 humps on it, and during most states of the tide, it looks like 2 islands. Charted by ChilAE 1949-50, and named by them as Roca Mónica, for the eldest daughter of

one of the officers on the expedition, 1st Lt. Venturini. It appears as such on a Chilean chart of 1961, and is the name listed in the 1974 Chilean gazetteer. Re-charted by an RN Hydrographic Survey unit on the *Protector*, in 1967. UK-APC accepted the translated name Monica Rock, on Nov. 3, 1971, and US-ACAN followed suit in 1972.

Monié, Jean. b. Dec. 27, 1816, Bordeaux. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Roca Monigote *see* **Lay-Brother Rock**

Monte Monique *see* **Mount Monique**

Mount Monique. 69°45' S, 75°30' W. Rising to about 600 (once estimated at 750 m), with a prominent rocky N face and ice-covered S slopes, 5 km W of Marion Nunataks, on the N coast of Charcot Island. Discovered and roughly mapped on Jan. 11, 1910, by FrAE 1908-10, and named by Charcot as Sommet Monique, for his second daughter, Monique (b. 1907; later Madame Allart-Charcot). It appears as such on Charcot's 1912 map, and on a British chart of 1916. On a 1914 British chart it appears as Monique Mount, on Wilkins' map of 1929 as Monique Peak, on Aagaard's 1930 map as Moniquefjellet, on a 1930 British chart as Mount Monique, on a British chart of 1940 as Monique Mountain, on a 1942 USAAF chart misspelled as Monigue Mountain, on a 1946 Argentine chart as Monte Monique, on a 1947 Chilean chart translated all the way as Pico Mónica, on a 1949 Argentine chart as Pico Monique, and on an Argentine chart of 1953 as Monte Mónica. Photographed aerially on Feb. 9, 1947, during OpHJ 1946-47. US-ACAN had accepted the name Mount Monique in 1950, and UK-APC followed on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. In those days it was plotted it in 69°55' S, 75°13' W. It was mapped from the OpHJ photos in 1959-60 by Searle of the FIDS. He plotted it in 69°32' S, 75°14' W. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer. The Chilean gazetteer of 1974 accepted the name Monte Monique, and, today, the Argentines seem to call it Monte Mónica (which does no justice to the supposed honoree).

Sommet Monique *see* **Mount Monique**

Monique Mountain *see* **Mount Monique**

Monique Peak *see* **Mount Monique**

Islotes Monje *see* **Monk Islands**

Islote Monk *see* **Monk Islands**

Monk, Geoffrey "Geoff." b. Dec. 30, 1930, Oxford, son of Wilfred Harry Monk, a processing engraver with the *Oxford Mail* newspsper, and his wife Dorothy Jenny Agg (who died when Geoff was 8). At 15 he joined the Navy, and in 1955—10 years later—found himself back on Civvy Street. A friend saw an ad for FIDS in the *Oxford Mail*, and suggested he go for it. He motorcycled down to London in Aug. 1956, and was interviewed by Johnny Green, Bill Sloman, and Len Tyson. Later that year, one step ahead of the murderous husband of a lady he had become acquainted with, he left Southampton on the *Shackleton*, which took him to Base G, where he wintered-over in 1957 and 1958. In 1959, the *John Biscoe* picked him (and his motorcycle) up, and took him back to Port Stanley. On his way back to the UK, he and Graham Davey took a six-month motorcycling trip through South and Central America. They split up in Laredo, Texas, and Geoff made his way to Vancouver, where he got hit by a drunk driver. Then to New York by Greyhound, then on the Cunard ship *Sylvania* back to Liverpool, where he arrived on March 19, 1960. His intention was to get the required certificate to work as a radio operator on the DEW Line in the Arctic, but that fell through, and he returned to welding in Oxfordshire. He married in 1973, and lived in Banbury, Oxon. He was severely injured in a car crash, was given up for lost by the doctors, but came back to drive a commercial bus for 20 years. He ended his life on Sept. 25, 2008.

Monk Islands. 60°40' S, 45°55' W. A group of very small islands and rocks, reaching an elevation of about 7 m above sea level, 2.5 km S of Meier Point, off the S coast of Coronation Island, in the South Orkneys. Charted by Petter Sørlle in 1912-13, who named the largest of the group as Munken (i.e., "the monk"). The group appears as Munken Islets on a British chart of 1916, on a 1925 British chart as Munken Islands, and on a 1930 Argentine chart as Islas Munken. The Discovery Investigations re-surveyed the group in 1933, and on their 1934 chart the group appears as Monk Islands. A British chart of 1942 has the main island as Monk Islet, and an Argentine chart of 1945 has it as Islote Monk. A British chart of 1948 has the group as Monk Islets, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 20, 1955. On an Argentine chart of 1952, the group appears as Islotes Monje (meaning the same thing). They were surveyed by Fids from Signy Island Station between 1956 and 1958, and, on July 7, 1959, the term "islet" now being out of fashion, UK-APC renamed the group as the Monk Islands, with US-ACAN following suit in 1963.

Monk Islet(s) *see* **Monk Islands**

Punta Monnier *see* **Monnier Point**

Monnier Point. 67°06' S, 64°45' W. A low, flat, and mainly ice-covered point forming the SW side of the entrance to Mill Inlet, 45 km SW of Cape Robinson, on the Foyn Coast, on the E coast of Graham Land. Photographed from the air by RARE 1947-48, surveyed from the ground by Fids from Base D in 1947, and named by FIDS that year for for Franz Ritter von Le Monnier (1856-1921), Austrian polar bibilographer with the Geographical Society of Vienna. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and also in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Punta Baxter, but on one of their 1957 charts as Punta Monnier, a name that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was re-surveyed by BAS personnel from Base E in 1963-64.

The Monolith. 66°57' S, 163°17' E. A pinnacle rock, rising to about 77 m, broad at the base and tapering up to a point, to produce a remarkable effect on the viewer, close off the N end of the islet S of Sabrina Island, and about 2.5 km SE of Cape McNab (on Buckle Island), in the Balleny Islands. Named for its shape. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Monolith Lake. 63°54' S, 57°57' W. South of Abernethy Flats, about 2.5 km NW of Stickle Ridge, on James Ross Island. It has massive blocks of volcanic breccia on its SW side, the tallest of which is about 12 m high. Named descriptively by UK-APC on Dec. 2, 1993.

Gora Monolitnaja. 73°31' S, 68°30' E. A monolithic nunatak on the Mawson Escarpment. Named descriptively by the Russians.

El Monolito *see* **Petes Pillar**

Isla Monroe *see* **[1]Monroe Island**

[1]Monroe Island. 60°36' S, 46°03' W. The largest of the Larsen Islands, off the W end of Coronation Island, in the South Orkneys. For a history of this island as part of the Larsen Islands, see **Larsen Islands**. This individual island was named in 1933 as Larsen Island, by the personnel on the *Discovery II*, and it appears as such on their 1934 chart. It appears on a 1945 Argentine chart as Isla Larsen. Surveyed by Fids from Signy Island Station between 1947 and 1952. Renamed Monroe Island by UK-APC on March 31, 1955, for the *James Monroe*, which anchored near here in Dec. 1821. US-ACAN accepted the name later in 1955. It appears as such in the 1958 British gazetteer. It appears on a 1960 Argentine chart as Isla Monroe, and that was the name accepted by the 1970 Argentine gazetteer.

[2]Monroe Island *see* **Snow Island**

Monroe Point. 62°49' S, 61°31' W. A point, 5 km NW of Cape Conway, on the SW side of Snow Island, in the South Shetlands. On a 1908 Argentine map it appears in error as Cabo Wallace (*see* **Cape Wallace**). In 1935 it was descriptively named Low Point by personnel on the *Discovery II*, but this name seems never to have been used. Photographed aerially by FIDASE in 1956. On Aug. 31, 1962, UK-APC changed the name to commemorate the old name for Snow Island—i.e., Monroe Island. US-ACAN accepted this change in 1965. Last plotted by the UK, in late 2008.

Monsimet. Stoker on the *Pourquoi Pas?* during FrAE 1908-10. A couple of clues to this man. One is that Monsimet is a big name in Saint-Malo. Another is that a seaman signed on to the *West Harcuvar* in New York in April 1921. He was 39, Spanish (sic), and his name was A. Monsimet. Aside from that, not much of anything.

Anse Monsimet *see* **Monsimet Cove**

Caleta Monsimet *see* **Monsimet Cove**

Monsimet Cove. 62°11' S, 58°33' W. A cove, 0.8 km W of Hervé Cove, along the S side of Ezcurra Inlet, in Admiralty Bay, King George Island, in the South Shetlands. First charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Anse Monsimet, for Monsimet, one of his crew. It appears as such on Charcot's map

of 1912. It was re-surveyed by the Discovery Investigations in 1927, and appears on their 1929 chart as Monsimet Cove, a name that was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Caleta Monsimet, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Mount Monson. 77°31' S, 143°31' W. Rising to 1555 m, 2.5 km N of Vivian Nunatak (in the Ford Ranges of Marie Byrd Land), in the SW part of the Mackay Mountains, of which group it is the highest summit. Mapped by USAS 1939–41, and remapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Laurence C. Monson, III, USNR, LC-130F Hercules aircraft co-pilot during OpDF 68 (i.e., 1967–68).

Monsrudnabben. 74°41' S, 11°57' W. A small nunatak in the SW part of Sivorfgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for farmer's wife Berthe Monsrud (b. 1896), who concealed Norwegian Resistance leaders. She and her husband, Jorgen (b. 1879), together with 6 sons, helped to recover air-dropped weapon containers used to fight the Nazi menace.

Montague, John Thomas. b. 1869, Hackney, London, son of wood turner Thomas Montague and his wife Margaret Elizabeth Walker. He went to sea as a ship's cook, married Elizabeth Aspinall at Poplar All Saints, on Nov. 4, 1895, and raised a family, first in Hackney, and then in East Ham. Working his way up through the cook ranks, he made chief cook by 1906, and, on July 26, 1907, at Poplar, signed on as cook aboard the *Nimrod*, for BAE 1907-09. At the end of the expedition, he was discharged at Poplar on Aug. 31, 1909. He continued to sail into the 1920s, and died in Greenwich in 1927.

Montana Bluff. 62°37' S, 60°11' W. An ice-covered peak rising to 670 m, in the central part of Bowles Ridge, next E of the S entrance of Omurtag Pass, 820 m S of Ticha Peak, 2.3 km WSW of Maritsa Peak, 1.77 km NW of Kuzman Knoll, and 3.8 km NE of Orpheus Gate, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the city of Montana, in northwestern Bulgaria.

Isla Montaner *see* **Rollet Island**

Monte Cassino. 72°19' S, 163°40' E. A peak, rising to 2270 m, at the SE side of Moawhango Névé, in the Freyberg Mountains. Named by the Northern Party of NZGSAE 1963–64, in association with Lord Freyberg, for the famous battle. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mount Monteagle. 73°43' S, 165°28' E. A high, sharp peak rising to 2780 m, 16 km N of Cape Sibbald, and westward of the Lady Newnes Ice Shelf, in the Mountaineer Range of Victoria Land. It surmounts Aviator Glacier to the W, and the large cirque of Parker Glacier to the E. Discovered in Jan. 1841 by Ross, who named it for Thomas Spring Rice, 1st Baron Monteagle of Brandon (1790–1866), chancellor of the exchequer, 1835–39. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Monte Rosa *see under* **R**

Monteath Hills. 72°06' S, 166°30' E. A group of mountains in the Victory Mountains of Victoria Land. They are bounded by Jutland Glacier, Midway Glacier, Pearl Harbor Glacier, and Plata Glacier. The group includes Mount Crowder, Mount Tararua, and Mount Holdsworth. Named by NZ-APC in 1983, for Colin Monteath, field operations officer with the Antarctic Division, NZ Department of Scientific and Industrial Research (DSIR). US-ACAN accepted the name.

Montecchi Glacier. 72°04' S, 167°35' E. A tributary glacier flowing E from Bertalan Peak to enter Tucker Glacier just N of Mount Hazlett, in the Victory Mountains of Victoria Land. First mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Pietrantonio Montecchi, geophysicist at McMurdo, 1966–67.

Nunatak Montecino. 66°03' S, 60°42' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Ensenada Montecinos *see* **Montecinos Cove**

Montecinos Cove. 62°30' S, 59°41' W. A small cove, E of Ferrer Point, between that point and Sotos Point, on the E coast of Discovery Bay, Greenwich Island, in the South Shetlands. Charted by ChilAE 1946–47, and named by them as Ensenada Condestable Montecinos, for Condestable Montecinos, a member of the expedition. It appears as such on their 1947 chart, but, on a Chilean chart of 1951, it first appears in the abbreviated form Ensenada Montecinos. UK-APC accepted the translated name on May 11, 2005. Plotted by the UK in late 2008. Note: "Condestable" (i.e., "constable") was his rank, not his name. It indicates a gunnery deck officer.

Nunatak Montero. 66°01' S, 60°31' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Monteverdi Peninsula. 72°30' S, 71°50' W. A large, ice-covered peninsula between the Bach Ice Shelf and George VI Sound, it forms the most southerly part of Alexander Island. The S side of the peninsula was discovered and charted by Finn Ronne and Carl Eklund, who traversed the entire length of George VI Sound during USAS 1939–41. Photographed aerially in Nov. 1947, by RARE 1947–48, surveyed by FIDS between 1948 and 1950, and mapped by FIDS cartographers (mainly Derek Searle) from these efforts. Searle plotted it in 72°30' S, 72°00' W. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973. Named by UK-APC on Dec. 20, 1974, for the Italian composer Claudio Monteverdi (1568–1643). US-ACAN accepted the name in 1975.

Fondeadero Montevideo. 62°10' S, 58°32' W. A small recess in the coastline S of Ezcurra Inlet, with a hill standing at the SW, at Admiralty Bay, King George Island, in the South Shetlands. It provided an anchorage for FrAE 1908–10, and was named for the Uruguayan capital, which assisted that expedition so greatly, as it has assisted hundreds of expeditions. Whether it was named by Charcot or by the Chileans, it is difficult to determine from the Chilean gazetteer. The Argentines also use the term.

Cape Montflier *see* **Monflier Point**

Glaciar Montgolfier *see* **Montgolfier Glacier**

Montgolfier Glacier. 64°47' S, 62°15' W. Flows NW into Piccard Cove, between Rozier Glacier and Woodbury Glacier, in Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956–57. Named by UK-APC on Sept. 23, 1960, for French paper-makers Joseph-Michel Montgolfier (1740–1810) and his brother, Étienne-Jacques Montgolfier (1745–1799), inventors of the hot-air balloon (1782–83), with Joseph being the balloonist. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Montgolfier.

Montgomerie Glacier. 83°47' S, 166°55' E. Also spelled (erroneously) as Montgomery Glacier. A narrow tributary glacier, 16 km long (the New Zealanders say 30 km long), on the N side of Mount Bell, it flows N along the W side of Hampton Ridge, in the Queen Alexandra Range, to enter Lennox-King Glacier. Named by the Northern Party of NZGSAE 1961–62, for John Montgomerie, assistant surveyor with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Montgomery, Thomas Towell "Tom." b. Aug. 22, 1925, Cleveland, O., son of salesman Robert Leo Montgomery and his wife Alethe Towell. He joined the U.S. Navy in 1942, served in the Pacific during World War II, married Rose Campbell on Martha's Vineyard, Mass., in 1946, and and was in the Atlantic on the *Benham* in 1955 when he saw the notice for volunteers to go to Antarctica. He went back to Washington, DC, for training with Task Force 43, and then, by now attached to the Seabees, he sailed on the *Atka* to Christchurch, NZ, and then on to McMurdo Sound in the austral summer of 1955–56 as part of OpDF I, helped build the base, and wintered-over there. On Nov. 20, 1956, as one of the first Seabee party, he flew to the Pole in the *Que Sera Sera* piloted by Gus Shinn, as the radioman who helped build South Pole Station (q.v.). He was one of the last group to leave the Pole, flying back to McMurdo on Jan. 4, 1957, then to NZ, then to Australia, and then back home. He retired in 1964, but was called back in 1966 for Vietnam, and finally retired in 1968. For the next 20 years he worked for Sears Roebuck, then retired in Florida.

Montgomery Glacier *see* **Montgomerie Glacier**

Lago Monti. 74°59' S, 162°30' E. A lake with permanent ice covering, 185 m above sea level, and measuring 110 by 100 m, 1 km NE of Mount Gerlache, behind Terra Nova Bay, in Victoria Land. Surveyed by Vittorio Libera, during ItAE

1988–89. Named by the Italians on July 17, 1997, for Prof. Rina Monti, Italian zoologist and limnologist.

Punta Monti. 63°18' S, 57°43' W. A point on the N coast of Trinity Peninsula, immediately SE across the water from the Kevin Islands. Named by the Argentines.

Roca(s) Montiel *see* **Northtrap Rocks**

Montigny Glacier. 71°05' S, 163°24' E. A steep tributary glacier flowing E in the Bowers Mountains, and at its terminus coalesces with Irwin Glacier (from the S), with which it enters the larger Graveson Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Raymond J. Montigny, glaciologist who studied Meserve Glacier in 1966–67.

Île Montravel *see* **Montravel Rock**

Îlot Montravel *see* **Montravel Rock**

Islote Montravel *see* **Montravel Rock**

Roca Montravel *see* **Montravel Rock**

Roche(r) Montravel *see* **Montravel Rock**

Montravel, Louis-François-Marie Tardy de *see under* **Tardy**

Montravel Rock. 63°09' S, 58°02' W. A rock, rising to about 12 m above sea level, about 17.5 km NNW of Cape Legoupil, off the NW coast of Trinity Peninsula. Discovered and charted on Feb. 28, 1938 by FrAE 1837–40, and named by Dumont d'Urville as Roche Montravel, for Louis Tardy de Montravel (*see under* Tardy). It appears as such on the expedition's chart, and also in Vincendon-Dumoulin's 1847 atlas. On the expedition chart of 1842 it appears as Îlot Montravel, and in 1851 Vincendon-Dumoulin refers to it as Île Montravel. On a Spanish chart of 1861 it appears as Roca Montravel, and on Friederichsen's 1895 German map it appears as Montravel Felsen. On a British chart of 1901 it appears as Montravel Rock. It was re-surveyed by FrAE 1908–10, and appears on Charcot's 1912 map as Rocher Montravel. In Oct. 1946, Fids from Base D charted it in 63°15' S, 57°41' W, confusing it with (what later became known as) Nomad Rock (q.v. for details). It appears thus on their 1949 chart. The situation was corrected, and accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. ChilAE 1946–47 surveyed it, and it appears on their 1948 chart as "Isla Teniente Paredes (Montravel)," and on a 1951 Chilean chart shortened and pluralized to "Islotes Paredes (Montravel)." It is not quite clear who this Paredes was. The 1970 Argentine gazetteer accepted the name Roca Montravel. Today the Chileans call it Islote Montravel.

Mount Montreuil. 73°04' S, 166°11' E. Rising to 2680 m, along the N side of Gair Glacier, 13.5 km E of Mount Supernal, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Paul L. Montreuil, biologist at McMurdo, 1964–65.

Île Montrol *see* **Montrol Rock**

Rocas Montrol *see* **Montrol Rock**, **Northtrap Rocks**

Montrol Rock. 62°58' S, 56°21' W. The larger of two rocks which are surrounded by a shallow deep that extends for about 1.5 km in all directions, 8 km NW of the NW point of d'Urville Island, E of Cape Juncal (which is on d'Urville Island), in the Joinville Island group. Discovered and charted in Feb. 1938, by FrAE 1837–40, the big rock was named by Dumont d'Urville as Île Montrol, for François de Mongin de Montrol, French journalist and politician. It appears as such on his 1838 map, and also in Vincendon-Dumoulin's 1847 atlas. The group was further charted by Ross in 1842–43. The big rock appears as Isla Montrol on an 1861 Spanish chart, as Montrol Island on a 1901 British chart, as Montrol Rock on a 1942 USAAF chart and a 1945 British chart, and as Roca Montrol on a 1947 Chilean chart. The group appears as Montrol Rocks on a 1943 U.S. Hydrographic Office chart. The name Montrol Rock was accepted by UK-APC on Sept. 8, 1953. The group was photographed aerially by FIDASE in 1956–57. On an Argentine chart of 1957, the group appears as Rocas Montrol, and the big rock as Roca Pico, named for Gen. Blas José Pico (1782–1868), Argentine soldier who fought in the War of Independence. The group appears on an Argentine chart of 1959 as Rocas Pico, and that was the name accepted by the 1970 Argentine gazetteer. The group was surveyed by Fids from Base D in 1960–61, the big rock appears as Montrol Rock on a British chart of 1962, that name was accepted by US-ACAN in 1965, and it appears as such in the 1977 British gazetteer. The Chilean gazetteer of 1974 accepted the name Rocas Montrol, for the group. *See also* **Northtrap Rocks**.

Montserat, Francis *see* **USEE 1838–42**

Islote Montufar *see* **Montufar Island**

Montufar Island. 62°26' S, 59°45' W. A triangular island, 0.3 km E of Dee Island, in the South Shetlands. Named by the Ecuadorians in 1990, as Islote Montufar, for a member of the 2nd Ecuadorian Antarctic Expedition, who had an accident in early 1990, while building Pedro Vicente Maldonado Station. UK-APC accepted the translated name on Sept. 19, 2005. Plotted by the UK in late 2008.

Acantilado Montura *see* **Cordón Fehrman**

Île Montura *see* **Saddle Island**

Isla Montura *see* **Saddle Island**

The Monument. 63°44' S, 57°53' W. An isolated rock pillar, rising to 495 m, and looking like a monument, on the NW side of Red Island, and level with the main summit of the island, which is in Prince Gustav Channel, 3 km S of Trinity Peninsula. Discovered in 1903, by SwedAE 1901–04. Charted and named by Fids from Base D in Aug. 1945. UK-APC accepted the descriptive name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer.

Monument Nunataks. 72°35' S, 162°15' E. A group of nunataks, N of Sculpture Mountain, in the upper part of Rennick Glacier. Named by the Northern Party of NZGSAE 1962–63, for the numerous pinnacles and odd-shaped projections resembling monuments here. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Monument Rocks. 64°01' S, 60°57' W. A group of rocks, the highest rising to an elevation of 55 m above sea level, in the entrance to Curtiss Bay, 6 km NE of Cape Sterneck, on the Davis Coast, on the W coast of Graham Land. Roughly charted and named descriptively by James Hoseason in 1824. They appear on Powell's chart of 1829, and on a British chart of 1838. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. They appear on an American chart of 1963. The Argentines call them Rocas Monumento. The Chileans call them Rocas Macera, for engineer Capitán de corbeta Emilio Macera Dellarossa (*see* **Caleta Acosta**, under **A**).

Rocas Monumento *see* **Monument Rocks**

Monuments *see* **Stewart Stacks**

Cape Moody *see* **Moody Point**

Mount Moody. 71°31' S, 162°52' E. Rising to 2040 m, 8 km SE of Carnes Crag, in the NW part of the Lanterman Range (in fact, it is the westernmost peak in the range), in the Bowers Mountains. Named by the Northern Party of NZGSAE 1963–64, for Lt. Daniel Major Moody, USN, of VX-6, who flew support flights for the expedition (*see also* **Moody Nunatak**). NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Point Moody *see* **Moody Point**

Punta Moody *see* **Moody Point**

Moody, Edward Lester "Ed." b. Feb. 17, 1911, Tamworth, NH, son of farm manager Lester E. Moody and his wife Mary. Ed grew up on a farm in Tamworth, and, at 12, began making sledges, learning from Arthur Walden. He became an engineer, and was a dog driver on the shore party of ByrdAE 1933–35, wintering-over in 1934 at Little America. On Jan. 8, 1941, in Manchester, he joined the Army as a private, soon made sergeant, and for part of World War II was in Greenland with Joe Healy. He and his wife Dot lived in Rochester, NH, where Ed continued to make sledges, many of them winners in famous Arctic races, until he died on Sept. 28, 1994.

Moody, William *see* **USEE 1838–42**

Moody Glacier. 84°30' S, 165°48' E. Between Martin Ridge and the Adams Mountains, in the Queen Alexandra Range, it flows S into Barwick Glacier. Named by US-ACAN in 1966, for P.R. Moody, USN, construction electrician at McMurdo in 1963.

Moody Island. 77°20' S, 149°12' W. Ice-covered and 16 km long, it lies between Kizer Island and Steventon Island, in the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Ed Moody.

Moody Nunatak. 83°07' S, 159°30' E. A prominent, isolated nunatak at the E side of Marsh Glacier, 6 km W of Bartrum Plateau, in the Queen Elizabeth Range. Discovered by NZGSAE 1964–65, and named by them for Lt. Daniel Moody (*see also* **Mount Moody**), who flew the southern party of this expedition in and out of the field. NZ-APC accepted the name,

and US-ACAN followed suit in 1966, with ANCA doing likewise on Aug. 10, 1966.

Moody Peak. 78°22' S, 158°35' E. A peak with precipitous S and E faces, rising to over 1800 m, it marks the N limit of the Boomerang Range. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Junior L. Moody, USN, aviation bosun's mate in charge of loading and offloading aircraft at McMurdo, in 1959-60. ANCA accepted the name.

Moody Point. 63°18' S, 55°05' W. It forms the E end of Joinville Island, off the NE end of the Antarctic Peninsula. Discovered and charted on Dec. 30, 1842, by RossAE 1839-43, and named by Ross for Lieutenant Governor Richard Clement Moody (1813-1887), first governor of the Falkland Islands, 1841-49. It appears on Ross's 1847 chart. On Robertson's chart of 1893 (Dundee Whaling Expedition), it appear as Cape Ross, named for its discoverer. However, on Friederichsen's 1895 German map it appears as Cap Moody, and as Kap Moody on Nordenskjöld's 1904 chart of SwedAE 1901-04. On Irízar's 1904 Argentine map it appears as Point Moody, but on his 1907 map it appears as Punta Moody. It appears as Moody Point on a 1937 British chart, and that name was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. In those days it was plotted in 63°18' S, 54°59' W. On an Argentine chart of 1953, it appears as Punta Rara (i.e., "rare point"), a name the Argentines use to this day. It was surveyed from the ground by Fids from Base D in Dec. 1953, and in 1956-57 was photographed aerially by FIDASE. The Chileans call it Punta Moody.

Bahía Moon *see* **Moon Bay**

Moon Bay. 62°35' S, 60°00' W. A bay, 11 km wide, it recedes 6 km between Edinburgh Hill and Renier Point, on the E side of Livingston Island, in the South Shetlands. Its coasts are formed by glaciers and ice cliffs which fall off sharply to the sea, and from which icebergs and debris continually discharge. Discovered before 1821, and roughly charted by early sealers as Elephant Bay, after the elephant seal. It appears as such in Palmer's log of Dec. 1, 1820. On Weddell's 1825 map, it appears as Maggys Cove, and on Powell's 1831 chart as Maggy's Cove. Recharted in 1935 by personnel on the *Discovery II*, who named it Moon Bay, in association with nearby Half Moon Island. It appears as such on their charts of 1935 and 1937. It appears as Half-moon Bay on a 1943 U.S. Hydrographic Office chart. It appears on a Chilean chart of 1947 as Bahía Luna, and on an Argentine chart of 1949 as Bahía Moon. Moon Bay was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Puerto Luna, but the name Bahía Luna was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Luna Bay weather station is here, belonging to Argentina.

Moon Island *see* **Half Moon Island**

Mount Mooney. 86°34' S, 145°48' W. Also called Mount English. A ridge-shaped mountain rising to 2850 m between Albanus Glacier and Scott Glacier, just N of the La Gorce Mountains, where it rises above the middle of Robison Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for writer and educator James Elliott Mooney (1901-1968), who assisted this and later Byrd expeditions. Mooney was subsequently president of the University of Tampa, and in 1957, just before Byrd died, assisted the admiral in drafting the legislation necessary to bring a central Antarctic repository into being, and, thus, from 1959 to 1965, was deputy U.S. Antarctic Projects Officer. US-ACAN accepted the name.

Mount Moonie. 70°13' S, 65°07' E. Just S of Mount Dart, and 1.5 km W of Mount Cardell, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from 1965 ANARE air photos. Named by ANCA in 1971, for Pat Moonie. US-ACAN accepted the name.

Moonie, Patrick John "Pat." b. July 28, 1936. Radio operator-in-charge at Mawson Station for the winters of 1967, 1969, 1971, 1973, and 1975. In 1967 he was part of the traverse to the Gustav Bull Mountains. In 1969 he was a member of the Prince Charles Mountains Survey Party.

Moonie Nunatak. 67°54' S, 66°13' E. A small nunatak, about 1 km E of Jaques Nunatak, and about 5.6 km S of Mount Kennedy, in Mac. Robertson Land. Mapped by Australian cartographers from ANARE air photos taken in 1956 and 1959. The position of this nunatak was fixed by John Manning, surveyor at Mawson Station in 1967, during the Mawson-Church Mountain tellurometer traverse. Named by ANCA for Pat Moonie (q.v.), who assisted in the traverse.

Moonie Skerry. 66°55' S, 57°18' E. The central of the Rigel Skerries, off the coast of Kemp Land. Named by ANCA on Dec. 7, 1986, for Pat Moonie (q.v.), leader of the dog sledge party that established a depot on the island in 1975.

Cape Moonlight *see* **Moonlight Point**

Moonlight Point. 61°27' S, 55°56' W. The NW point of Aspland Island, in the South Shetlands. Named Cape Moonlight by the British Joint Services Expedition canoeing from O'Brien Island to Aspland Island, on Jan. 3, 1977, because the point appeared silhouetted against a full moon. It appears on Chris Furse's 1979 map of that expedition. UK-APC accepted the name Moonlight Point on June 11, 1980, and US-ACAN followed suit in 1993. Plotted by the UK, in late 2008.

Moonlight Range *see* **Athos Range**

Bukhta Moora *see* **Stevenson Cove**

Cape Moore. 70°56' S, 167°54' E. A dark headland at the E end of Tapsell Foreland which forms the NW side of the entrance to Smith Inlet, 24 km southeastward of Cape Dayman, on the N coast of Victoria Land. Discovered by Ross in 1841, and named by him for Lt. Thomas E.L. Moore. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Mount Moore. 80°25' S, 97°45' W. An isolated mountain, 2270 m above sea level, it rises 305 m above the surrounding snow surface, 13 km N of Mount Woollard, and 240 km W of the Heritage Range, in the Ellsworth Mountains. Discovered on Feb. 4, 1958, by the Marie Byrd Land Traverse Party, and named by them for Lt. John P. Moore. US-ACAN accepted the name in 1960.

Moore, Arthur. Able seaman on the *Discovery II*, 1935-37, and bosun's mate on the same vessel, 1937-39.

Moore, Barrington Lungley "Barry." b. Nov. 25, 1901, India, only son of Lt. Col. Harry Alexander Moore, of the 36th Sikhs. In 1930 he was a lieutenant. On Aug. 8, 1931, as a lieutenant commander on the *Norfolk*, he married Mary Edith (known as Jane) Conway, in London, and they lived in Taunton, Devon. From June 9 to May 19, 1944 he was skipper of the *Slinger*. He was captain of the *Nigeria*, in Antarctic waters in 1947-48. He retired, and married again, in 1951, to Mrs. Mary Magniac (née Stokes), and died on April 5, 1985, in Bideford, Devon.

Moore, David Peter. b. Aug. 30, 1934, Leigh-on-Sea, Essex, son of gas engineer David George Moore and his wife Edith Turnage. He left school in 1950, worked in the offices of Shell Tankers, and then did his national service in the RAF, in Germany, training as a radio operator. In 1955, upon being demobbed, his girlfriend, Charlotte Hamilton, saw an ad for FIDS in the *Evening Standard*, he was accepted, as a radio operator, and left Southampton in very late Dec. 1955, on the *Shackleton*, bound for Montevideo, and then Port Stanley, where he transferred to the old *John Biscoe*, which took him to South Georgia, then on to Base B, Base D, Base F, Base N, and Base O, unloading stores and men along the way, and all the time looking for a site for the new Base W, which they eventually found on Detaille Island. Here he wintered-over in 1956, the youngest man on base. In Jan. 1957 the Duke of Edinburgh arrived at the base, and a short while later the new *John Biscoe* came to pick up the Fids, taking them to various FIDS bases (the Fids were employed as supernumeraries while on board ship during these island hops; this meant they worked whenever and at whatever it was deemed necessary). Then to South Georgia, back to Port Stanley, and from there, via Tristan da Cunha, and St. Helena, back to the UK (still on the new *John Biscoe*). He couldn't face an office, so he worked on a farm for a year, then in Sept. 1958 began a year's study at the Essex Agricultural College, at Writtle. In 1959 he married Charlotte, and then went into farming in the Midlands, working mostly in pig husbandry. In 1968 his health was beginning to suffer, and he moved into the insurance adjusting business, working with farms, but, by 1974, working mostly in the Watford area, he found that much of his work consisted of dealing with London claims, and he was taken on as a risk assessor, working for a company that dealt with Lloyd's of London. He left that job in 1999, but in 1997 had already begun his own company,

dealing direct with Lloyd's. He finally retired to Radlett, Herts.

Moore, George. He joined FIDS in 1959, as a cook, and wintered-over at Halley Bay Station in 1960 and 1961. He married Kate. He died on Nov. 10, 2008, sitting in front of his favorite chair while watching TV.

Moore, James Inglis. b. Sept, 18, 1911, North Bierley, Yorks, son of Major Sydney Moore, of the West Yorkshire Regiment, and his wife Charlotte Rosa Hall. After Cambridge, he was in the Arctic in 1932. In 1934 he married Frances Elizabeth (known as Elizabeth) Creswick (*see* **Creswick Peaks**), and immediately became 2nd engineer and surveyor on the *Penola* during BGLE 1934-37, and became an expert sledger. He moved to Pretoria, South Africa, and during World War II was a major with the South African Engineers in Abyssinia, and later with the Eighth Army from the time of El-Alamein. After the war he was chief mechanical engineer to the Kenyan government, and in 1964 retired to Cornwall, where he died on March 8, 1989.

Moore, John Pinkney. b. 1928, Lenoir, NC, son of farmer Pinkney Hardie Moore (known as Hardie) and his wife Effie Ethel Bryant. He graduated from NC State in 1948, and joined the U.S. Naval Reserve, becoming a lieutenant (jg) on the *Atka*. He flew his helicopter into the ice during a whiteout while part of the U.S. Navy Antarctic Expedition of 1954-55, at Kainan Bay, on Jan. 22, 1955, and died the same day.

Moore, Robert Rouse. b. Aug. 3, 1904. A graduate of the Naval Academy, he married Katherine Hope Nicholson. Captain of the *Mount Olympus* during OpHJ 1946-47. He died on June 2, 1965, and is buried in Arlington National Cemetery.

Moore, Thomas Edward Laws. b. 1817, Brompton, Kent. RN midshipman on the *Terror*, during the Ross Expedition 1839-43. After marrying Emma Jane Taplen in Devon in 1843, he was back in southern waters in 1844-45, this time as a lieutenant, and skipper of the *Pagoda*, which reached 67°50' S. In 1847-48 he was in the Arctic, as captain of the *Plover*, looking for the lost Sir John Franklin, and on Jan. 11, 1848 was promoted to the rank of commander. He was governor of the Falkland Islands, 1855-62, and Emma Jane died in Stanley on April 9, 1859. He married again, in London, in 1865, to Eliza Waghorn, and retired as a rear admiral in 1866. He died in East Stonehouse, Devon, on April 30, 1872.

Moore, William. 1st mate on the *Eliza Scott* during the Balleny Expedition, 1838-39. He was a married man with children.

Moore Bay *see* **Moore Embayment**

Moore Dome. 74°20' S, 111°20' W. An ice dome, circular in plan, and of 24 km extent, rising to about 700 m, and forming the NW portion of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from air photos taken during OpHJ 1946-47, and by USN in 1966. Named by US-ACAN in 1977, for Capt. Robert G. Moore, U.S. Coast Guard, skipper of the *Burton Island*, which, during OpDF 75 (i.e., 1974-75), operated in the areas of the Ross Sea, Pine Island Bay, and the Antarctic Peninsula.

Moore Embayment. 78°45' S, 165°00' E. Also called Moore Bay. A large, ice-filled embayment between Shults Peninsula and Minna Bluff, along the NW side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named by Scott for Admiral Sir Arthur Moore (1847-1934), naval commander-in-chief at Cape Town, who was of enormous help in getting the *Discovery* fixed up, by placing the resources of the Cape's naval dockyard at the expedition's disposal before it went on to NZ and then Antarctica. US-ACAN accepted the name in 1947.

Moore Island. 69°40' S, 68°39' W. The largest of the Rhyolite Islands, in the W part of the group, close off the Rymill Coast, on the W coast of the Antarctic Peninsula, at George VI Sound. Named by US-ACAN in 1977, for Donald E. Moore, lab manager at Palmer Station, for the winter of 1968, and the summer of 1968-69.

Moore Mountains. 83°21' S, 160°45' E. A small but conspicuous group of mountains immediately N of New Year Pass, and bordering Marsh Glacier, in the Queen Elizabeth Range. Discovered on Dec. 26, 1957, by the NZ Southern Party of BCTAE, who named them for Sydney-born Richard Douglas "Dick" Moore (b. 1903), general manager of the Bank of New Zealand, and treasurer of the Ross Sea Committee for BCTAE. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Moore Peak. 77°31' S, 168°27' E. Rising to about 2500 m on the W slope of Mount Terror, on Ross Island, the peak is about 2.5 km SW of the summit of Mount Terror, and 1.5 km S of Mount Sutherland. Named by Phil Kyle for James A. Moore, a member of the New Mexico Institute of Mining and Technology team on Mount Erebus in the 1983-84 and 1985-86 field seasons. He completed his masters thesis on the geology of Mount Erebus. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Moore Pinnacle. 80°13' S, 156°49' E. A solitary peak rising to 2650 m, in the S part of Mount Olympus, in the Britannia Range. In association with Mount Olympus and Byrd Glacier, it was named by US-ACAN in 2001, for Capt. Robert Moore.

Moore Point. 70°30' S, 67°53' W. A rocky point surmounted by a small peak rising to about 460 m, it fronts the E side of George VI Sound and marks the N side of the mouth of Meiklejohn Glacier, on the W coast of Palmer Land. First photographed aerially and surveyed from the ground in Oct. 1936, by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Re-surveyed by Fids from Base E in 1949. Named by UK-APC on March 31, 1955, for James I. Moore. US-ACAN accepted the name later in 1955.

Mount Moore Pyramid *see* **Moore Pyramid**

Moore Pyramid. 70°18' S, 65°08' E. A snow-covered mountain resembling a pyramid, 1.5 km NW of Mount Wishart, on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Allan Linden Moore, of Niddrie, Vic., radio operator at Mawson Station in 1963 and 1965 (the latter season as radio operator-in-charge). US-ACAN accepted the name in 1967. A summer field station was opened here by the Australians in 1971-72, and was run until 1974. It is reported that the Russians call the feature Mount Moore Pyramid, which, though possible, seems unlikely.

Moore Ridge. 73°07' S, 161°45' E. The most northerly ridge of the Caudal Hills, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Bruce F. Moore (b. Jan. 14, 1941, Port Townsend, Wash. d. July 2, 2009, Florida), who joined the U.S. Navy in 1958 and was a VX-6 photographer at McMurdo in 1966. He retired in 1988, as a lieutenant commander.

Moores, Prince B. b. 1800, Mass. He moved to Nantucket as a whaler, married Sarah Dexter there on Sept. 10, 1815, and was captain of the *George Porter*, in the South Shetlands, 1821-22. He was still living in Nantucket in 1830, but also had a place in Worcester, Mass. By 1835 he was living in Vassalboro, Maine, and was still there in 1850, working as a tanner.

Moores Peak. 62°41' S, 60°20' W. Rising to about 370 m on the W side of False Bay, near the head of that bay, on Hurd Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on May 13, 1991, for Prince B. Moores. US-ACAN accepted the name. Plotted by the UK in late 2008.

Moorey, George. Midshipman on the *Adventure* during Cook's 2nd voyage, 1772-75.

Mooring Point. 60°43' S, 45°37' W. On the W side of Factory Cove, on the S side of Borge Bay, between Drying Point and Knife Point, on the E side of Signy Island, in the South Orkneys. Surveyed by the Discovery Investigations in 1927, it appears on their 1929 chart, but may reflect an earlier naming by whalers in the area. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

Moos Inseln *see* **Moss Islands**

Moosbach. 62°09' S, 58°57' W. A little stream running into See-Elefanten Bucht, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Punta Moot *see* **Moot Point**

Moot Point *see* **Redondo Point**

Moraine Bay. 68°36' S, 78°02' E. A bay, 700 m by 1 km, in the shape of an oblong, on the N side of Ellis Fjord, in the Vestfold Hills. Named by ANCA.

Moraine Bluff. 78°46' S, 162°12' E. Rising to 930 m (the New Zealanders say 609 m), on the E side of Skelton Glacier, N of Red Dike Bluff. Surveyed in Feb. 1957 by the NZ party of BCTAE, who named it for the long morainic strip which extends from the foot of the bluff to Skelton Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Moraine Canyon. 86°09' S, 157°30' W. A canyon, 13 km long, and with very steep rock walls, it indents the N part of the Nilsen Plateau just W of Fram Mesa, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for the glacial moraine which completely covers the floor of the canyon.

Moraine Corrie *see* **Khufu Corrie**

Moraine Corrie Valley *see* **Khufu Corrie**

Moraine Cove. 68°35' S, 67°08' W. A small cove at the N end of Mikkelsen Bay, along the W coast of Graham Land. A moraine descends to this cove from the SW end of Pavie Ridge. In 1947, Robert L. Nichols, part of RARE 1947-48, examined the geology in this area and gave the name Moraine Point to the end of the moraine. Surveyed by Fids from Base E in 1948-49. The name was re-applied to this cove, by UK-APC on March 31, 1955, and US-ACAN accepted that name in 1956. The Argentines call it Caleta Morena (which means the same thing).

[1]**Moraine Point**. 62°04' S, 58°24' W. A small morainic promontory (hence the name given by the Poles in 1980) on the E coast of Keller Peninsula, at Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands.

[2]**Moraine Point** *see* **Moraine Cove**

Moraine Ridge. 72°18' S, 168°03' E. A small ridge in the NE part of the Cartographers Range, in Victoria Land, it descends to the SW flank of Tucker Glacier, just S of the junction of that glacier with Pearl Harbor Glacier. Named by NZGSAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1971.

Moraine Strait. 78°12' S, 165°48' E. A strait on the McMurdo Ice Shelf that trends N-S between (on the W) Brown Peninsula, Mount Discovery, and Minna Bluff, and (on the E) Black Island. The surface of the strait, especially the N part between Brown Peninsula and Black Island, is noteworthy for the presence of broad moraine belts that obscure much of the ice, and suggest the name. Discovered by BNAE 1901-04. Named by US-ACAN in 1999. NZ-APC accepted the name on Nov. 4, 1999.

Moraine Valley. 60°43' S, 45°37' W. A valley, about 1.2 km long, and filled with morainic debris, it drains S-N into Cemetery Bay, E of Orwell Glacier, on the E side of Signy Island, in the South Orkneys. In summer, a stream, fed by the ice slopes at its S end, runs in this valley. Surveyed by FIDS between 1947 and 1950, and named descriptively by them. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Moraines. Piles of rocky rubbish deposited glacially. There are 3 types of moraine: 1. lateral moraine — this is material derived from the sides of valleys. 2. median moraines — this is rubble carried on top of a glacier. 3. terminal moraines — this is rubble from the bed of a glacier, and pushed along in front of it.

Islotes Morales. The SE sub-group of the Wideopen Islands, N of Joinville Island. Charted by ArgAE 1953-54, and named by them for José Martín Morales, an able seaman on the *Uruguay*, 1903-04. This feature appears on an Argentine chart of 1957.

Morales Peak. 86°15' S, 126°22' E. A peak rising from the S part of Metavolcanic Mountain, just E of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Tommy S. Morales, Jr. (b. Feb. 15, 1937, Pecos, Tex. d. April 4, 2003, Pecos), USN, radioman at Byrd Station in 1962.

Morall, Alexander Gordon "Alec." b. Dec. 3, 1865, Dundee, son of hawker Daniel Morall and his wife Margaret Gordon. He went to sea in the 1880s, and became an able seaman and ship's carpenter. He was an able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Moran, James *see* **USEE 1838-42**

Moran Bluff. 74°23' S, 132°37' W. A steep coastal bluff close W of Mathewson Point, on the N side of Shepard Island, along the edge of the Getz Ice Shelf. Visited by the *Glacier* on Feb. 4, 1962. Named by US-ACAN in 1974, for Gerald F. Moran, USN, construction mechanic who wintered-over at McMurdo in 1965, and at Plateau Station in 1968, and who summered-over at Byrd Station in 1969-70.

Moran Buttress. 85°31' S, 125°38' W. A steep bluff, over 2600 m above sea level, 3 km S of Koopman Peak, it forms a major projection between Davisville Glacier and Quonset Glacier, along the N wall of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Clifford D. Moran, USN, aircraft pilot during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Moran Glacier. 69°14' S, 70°16' W. A glacier, 16 km long, joined at the S side by Walter Glacier, it flows E into Schokalsky Bay, in the NE part of Alexander Island. Photographed aerially by RARE 1947-48, and surveyed by FIids from Base E between 1948 and 1950. Named by US-ACAN for Cdr. Clifford D. Moran, USN, VXE-6 aircraft pilot during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). UK-APC accepted the name on June 11, 1980.

Moränenbach. 62°09' S, 58°56' W. A little stream flowing on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Morava Peak. 63°44' S, 58°28' W. Rising to 966 m, in the NE extremity of Trakiya Heights, 1.72 km NE of Mount Daimler, 4.94 km E of Irakli Peak, and 6.1 km SSW of Gigen Peak, it surmounts Russell East Glacier to the N and E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Morava, in northern Bulgaria.

Mørch, Jens Andreas. b. Sept. 8, 1859, Skauger, Sem, Norway, son of farmer Morten M. Mørch and his wife Elise. He became a whaling engineer, and in 1906 was working at the Alexandra Whaling Company's station at Collafirth, in the Shetlands (Scotland). He was in Antarctica about 1912, and found parasites on humpback whales, which he pickled in formalin. He died in 1915.

Ostrov Mordinova *see* **Elephant Island**

Mordrins Island *see* **Elephant Island**

Ostrov Mordvinova *see* **Elephant Island**

More, John *see* **USEE 1838-42**

More, Samuel *see* **USEE 1838-42**

Moreau, Pierre. b. May 12, 1825, at Pantin, France. At the age of 12 he was cabin boy on the *Zélée* during FrAE 1837-40, and was still only 12 when he went to Antarctica, one of the youngest adults ever in Antarctica. He died at Hobart, on Dec. 21, 1839, aged 14.

Moreland Nunatak. 81°15' S, 87°05' W. An isolated nunatak, about 24 km W of the Pirrit Hills. Mapped by USGS from 1961 USN air photos. Named by US-ACAN in 1964, for William B. "Bill" Moreland, meteorologist-in-charge at Little America in the winter of 1957.

Morelli Glacier. 72°59' S, 102°38' W. In the W part of King Peninsula, about 28 km SE of Cape Waite, it flows NE to the Abbot Ice Shelf, in Peacock Sound. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Panfilo S. Morelli (b. 1937), glaciologist at Byrd Station, 1961-62.

Morelli Ridge. 77°36' S, 162°16' E. A ridge, 4.2 km long, extending N from Hoehn Peak into the upper part of Bartley Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Frank A. Morelli, of the Bioscience and Planetary Section, at the Jet Propulsion Lab, who studied the surface distribution of microorganisms in soils of the McMurdo Dry Valleys, in the 1970-71 field season. In 1973-74 he was a member of the environmental monitoring team for the Dry Valley Drilling Project. NZ-APC accepted the name.

Moremore Nunataks. 77°19' S, 160°27' E. A group of nunataks, 3 km long, immediately W of McSaveney Spur and Mount Bastion, on the plateau of the Willett Range, in Victoria Land. Named descriptively by NZ-APC on Sept. 12, 2005. US-ACAN accepted the name in 2006. Apparently, "moremore" is a Maori word meaning "bald head."

Caleta Morena *see* **Moraine Cove**

Isla Morency *see* **Morency Island**

Islote Morency *see* **Morency Island**

Morency, Anthony Joseph Leo "Moe." b. June 28, 1908, Manville, RI, as Antoine Morency, son of clerk (later stonemason) Léon (later called Leo) Morency and his wife Eugénie (later called Virginia), both French Canadians from Saint-Pascal, Quebec. American gravity physicist, a sergeant with the Fourth Armored Division, who served as tractor driver and communications man at East Base during USAS 1939-41. On Sept. 30, 1942, he married Oletta N. Montgomery, and re-enlisted in the Army on March 20, 1943. He also took part in OpHJ 1946-47, and in 1957 served at Byrd Station. He died on Aug. 9, 1984, in Jefferson Co., Colo., and was buried in Riverside, Calif. Oletta died in 2001.

Morency Island. 71°02' S, 61°09' W. A high island of uncovered rock, 1.5 km long, emerging from the mantle of ice close W of Steele Island, 16 km NW of Cape Bryant, and 20 km SE of Cape Sharbonneau, off the Black Coast, on the E coast of Palmer Land. Discovered and surveyed aerially and from the ground in Dec. 1940, by members of East Base, during USAS 1939-41, and named by them for Anthony Morency. It appears on a USAAF chart of 1942, plotted in 71°02' S, 61°15' W. On an Argentine chart of 1946, it seems to appear as Isla Sharbonneau, named for Charlie Sharbonneau of USAS (there must be an error involved here; the Argentines would have no vested interest in deliberately naming a feature for Charles Willie, especially when the feature already had the name of another USAS member; the only way this makes any sort of sense is if it were confused with Cape Sharbonneau). In Nov. 1947, it was re-surveyed by a joint sledging team of RARE personnel and Fids from Base E. It appears on a 1953 Argentine chart as Isla Morency. On Jan. 28, 1953, UK-APC accepted the name Morency Islet, and US-ACAN followed suit that year. On an Argentine chart of 1958, it appears as Islote Morency, and that name was accepted by the 1970 Argentine gazetteer of 1970 and also by the 1974 Chilean gazetteer. On July 7, 1959, UK-APC dropped the term "islet," and renamed it Morency Island. US-ACAN accepted the new name in 1963.

Morency Islet *see* **Morency Island**

Dolina Morennaja. 70°43' S, 66°25' E. A valley on the W side of Mount Trott, in the Prince Charles Mountains. Named by the Russians.

Sopka Morennaja *see* **Morennaya Hill**

Morennaya *see* **Morennaya Hill**

Morennaya Hill. 66°34' S, 93°00' E. A small hill, rising to 40 m, 1.5 km SW of Mabus Point and Mirnyy Station, on the coast of East Antarctica. Discovered by AAE 1911-14. Named Sopka Morennaja, or simply Morennaja (name also seen as Morennaya — meaning "morainic") by SovAE 1956. US-ACAN accepted the English-language translation in 1961.

Ozero Morennoe. 70°32' S, 68°48' E. A lake, N of Jetty Peninsula, in the Amery Ice Shelf. Named by the Russians.

Nunataki Morennye. 71°04' S, 71°46' E. A group of nunataks, NE of Foster Nunatak, in the S part of the Manning Nunataks, on the E side of the Amery Ice Shelf. Named by the Russians.

Île Moreno *see* **Diamonen Island, Moreno Rock**

Isla Moreno *see* **Auguste Island**

Islote Moreno *see* **Diamonen Island, Moreno Rock**

Point Moreno. 60°45' S, 44°42' W. At the E side of the entrance to the small cove at the head of Scotia Bay, on the S coast of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce for Francisco Pascasio "Perito" Moreno (1852-1919), almost legendary Argentine scientist and explorer, and director of the Museo de la Plata. It appears on a 1930 Argentine chart as Punta Moreno, and that was the name accepted by the 1970 Argentine gazetteer. Resurveyed by the Discovery Investigations in 1933, it appears as Point Moreno on their 1934 chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. *See also* **Obrecht Pyramid**.

[1]**Punta Moreno** *see* **Point Moreno**

[2]**Punta Moreno**. 62°35' S, 59°54' W. A point on the N side of Half Moon Island, opposite the tiny Islote Girardi, on the E side of Livingston Island, in the South Shetlands. Named by the Argentines.

Moreno Island *see* **Moreno Rock**

Moreno Rock. 64°05' S, 61°18' W. A rock, rising to an elevation of 50 m (the Chileans say 30 m), in Gerlache Strait, S of Diamonen Island, 11 km WSW of Cape Sterneck, between that cape and Two Hummock Island, off the Danco Coast, on the W side of Graham Land. Roughly charted on Jan. 24, 1898, by BelgAE 1897-99, when a landing was made, and named by de Gerlache as Île Moreno, for Francisco P. Moreno (*see* **Point Moreno**). It appears on Dr. Frederick Cook's 1900 English language version of that expedition's maps as Moreno Island, as it does on a 1901 British chart. Over the years, there was confusion between this rock and Diamonen Island (q.v.). Moreno Rock was sketched by Lester and Bagshawe during the British Imperial Antarctic Expedition of 1920-22. US-ACAN accepted the name Moreno Rock in 1952. It was photographed aerially by FIDASE in 1956-57, and, by comparing these photos with charts and other findings by previous expeditions, FIDS cartographers were able to sort out the confusion between this rock and Diamonen Island. UK-APC accepted the name Moreno Rock on Sept. 23, 1960, and US-ACAN accepted the new situation. It appears as such on a British chart of 1961. ArgAE 1956-57 named it Islote Pastore, for Capitán de fragata Juan B. Pastore, of the Argentine Navy. Also, on a 1957 Argentine chart, it appears pluralized, as Islotes Pastores (sic). It appears on a Chilean chart of 1961, as Islote Vío, for Claudio Vío, a naval officer on the *Primero de Mayo*, during ChilAE 1943, and that was the name accepted by the 1974 Chilean gazetteer.

Punta Moreton *see* **Moreton Point**

Moreton, Harold Vale. b. July 29, 1901, Lydd, Kent, son of Birmingham navy man Godfrey Thomas Moreton and his wife Caroline Pittard. He entered Dartmouth at 11, and joined the RN in 1916 as a signalman, but was invalided out in 1926. He was an able seaman on the *Discovery II*, 1929-31, and a bosun's mate on the same vessel, 1931-35. He was gunner with 532 Coast Regiment Royal Artillery during World War II, and after the war went back to the research ships, being promoted to bosun in 1950, and retiring in 1970. He died in 1982.

Moreton Point. 60°37' S, 46°02' W. A point, 1.5 km N of Return Point, it forms the N entrance point of Fulmar Bay, at the W end of Coronation Island, in the South Orkneys. Roughly charted by Powell and Palmer in 1821. It appears on Powell's 1824 chart with the unlikely name of Cap Ouest (i.e., French for "west cape"). Charted again by personnel on the *Discovery II*, in 1933, and named by them for Harold Moreton. It appears on their 1934 chart, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. On a 1945 Argentine chart it appears as Punta Moreton, and that name was accepted by the 1970 Argentine gazetteer.

Mount Morgagni *see* **Mount Cabeza**

Mount Morgan. 76°53' S, 143°34' W. A mountain, 8 km NE of Mount Swan, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41, and named for Charles Gill Morgan. US-ACAN accepted the name in 1966.

Morgan, Charles Gill. b. June 22, 1906, Dallas, Tex., son of Alabamian school teacher and later bank cashier Joseph Morgan and his school principal wife Frances. Geophysicist and geologist who went south on the *Bear of Oakland* for ByrdAE 1933-35, and who was one of the shore party during the winter-over of 1934. On Jan. 24, 1941, at Bronxville, NY, he married Carolyn Leonard Good, and they settled in Houston, where Morgan was head of an engineering company. He served with the U.S. Army in World War II, and later became a consultant in geophysics and geology, and president of the Atlas Land Company, in Dallas, which is where he died, on Aug. 8, 1980.

Morgan, Cyril Victor "Vic." b. Aug. 30, 1934. Senior diesel mechanic at Wilkes Station in 1963. He had also wintered-over at Macquarie Island in 1960. He should have a feature named after him, a ridge, perhaps, and he does — McLean Ridge (q.v. and sic). There is no Morgan Ridge, not named after him anyway. Mr. Morgan died in 1998. The name McLean Ridge appears on the 1:100,000 and the 1:1 million Australian topographic maps, in the Australian gazetteers, the U.S. gazetteer and all the other gazetteers of the world. In 2009, when informed of the error, AANMC (ANCA"s successor) swung into action, proposed a change to Morgan Ridge, and informed all other mapping authorities. However, as there is already a Morgan Ridge in the Prince Charles Mountains, this proposal will be rejected, and Vic Morgan will, in due time, give his name to some other feature. However, by 2011 nothing had happened.

Morgan, Ebenezer B. Captain of the Stonington sealer *Herald*, in the South Shetlands, 1844-45.

Morgan, Geoffrey Francis "Geoff." They called him "Strider." b. May 15, 1939, Sunshine, Vic. Senior diesel mechanic and 2nd-in-command at Davis Station in 1974, plant inspector at Mawson Station in 1976. He later changed his last name to Holbery-Morgan.

Morgan, Ivor Protheroe. b. Aug. 3, 1937, London, son of Welsh-speaking parents, dairyman John Morgan and his wife Elizabeth Jones. He was sent to Cardiganshire for part of the war. He did 2 years national service in the RAF, as an

officer, and then studied science at the University of Bristol (he was there with Dave Nash). He was recruited for FIDS in 1961 by Bill Sloman, as a surveyor, took a course in surveying under Alfred Stephenson at Imperial College, London, and left Southampton on the *John Biscoe* bound for Montevideo and Port Stanley. He wintered-over at Base E in 1962 and at Base T in 1963, going back to Port Stanley on the *Protector* on one occasion between winters. In 1964 the *John Biscoe* came to pick him up, and take him home. In 1965, in Germany, he married schoolteacher Bärbel Deckermann. He had joined Alcan, and in 1969 moved with them to Montreal. Having a doctorate from Harvard, he was a professor of business administration at Boston University, and in Lausanne and Barcelona, and now lives in Lexington, Mass.

Morgan Glacier. 73°17' S, 68°17' E. A small mountain glacier in the central part of the McIntyre Bluffs, on the Mawson Escarpment, and flowing W into the Lambert Glacier, in Queen Maud Land. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973, and named by ANCA for Vin I. Morgan, glaciologist with the Antarctic Division, Melbourne, and a member of the ANARE Prince Charles Mountains survey parties of 1973 and 1974. US-ACAN accepted the name on Oct. 20, 2009.

Morgan Inlet. 72°12' S, 96°00' W. An ice-filled inlet, with 2 branches, indenting the E coast of Thurston Island for about 28 km between Lofgren Peninsula and Tierney Peninsula. Discovered on helicopter flights from the *Glacier* and the *Burton Island*, during the USN Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN in 1966, for Lt. Cdr. Joseph R. Morgan, USN, hydrographic and oceanographic officer of Task Force 43 during this expedition.

Morgan Nunataks. 75°22' S, 70°35' W. A small group of nunataks, rising to about 1355 m, the most southwesterly outliers of the Sweeney Mountains, in Ellsworth Land. Discovered aerially by RARE 1947-48. Named by US-ACAN in 1968, for William Raleigh Morgan, USN, from Warren, RI, cook at Eights Station in 1964. They appear on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Morgan Peak. 75°47' S, 68°24' W. Rising to about 1100 m, 5 km NE of Mount Leek, in the Hauberg Mountains of Ellsworth Land. Named by US-ACAN in 1985, for Cdr. William Allen Morgan (b. 1935), USN, commander of an LC-130 aircraft in support of a USGS geological party to this area in 1977-78, and who, from May 1978 to May 1979, was commanding officer of VXE-6. UK-APC accepted the name on Nov. 13, 1985. Morgan was known as WAM (for his initials), or as "CP," standing for "Cocked Pistol," because of his hair-trigger temper. However, he knew his job, was a great navigator (from his days in the Merchant Marine, and from 23 years in the U.S. Navy), but he wasn't the most likable guy in the world, and many's the pilot who absolutely refused to serve under him again. He retired from the Navy in 1982, and got a job as a jet pilot with Hughes Aircraft, in Texas. He was hardly ever at home, in Virginia Beach, and when he was, things were pretty bad. Most of the time he spent in Dallas. In Sept. 1984 his abused and battered wife, Doris Morton (7 years his junior) filed for divorce, and WAM made a beeline for Virginia Beach, his intention being to save the marriage (so he said). Instead, a judge ordered him out of the house, his company was threatening to can him for overdue leave, he hired a private dick who found out Doris was having an affair with a nursing home chaplain (or so he claimed; the P.I. later denied it), and he went on Xanax, washing it down with a case of beer a day. On Sept. 24, 1985, Doris pulled into the parking lot at Independence Junior High School, where she worked as a bus driver. As she was sitting in her 66 Mercury, she knew she was in trouble. "I heard Bill Morgan's car coming. I knew it was going to be bad," she said. WAM's 60s muscle car, with glass-packed mufflers, screeched up behind her. Unable to find her keys, Doris dove into the back seat and curled up, as WAM busted open the windows with the butt of his black .22 Beretta, and opened fire, shooting her 8 times, once in the eye, as Doris yelled, "Help me, Jesus!" Horrified schoolchildren at a bus stop watched as the commander calmly walked off, got into his car, and drove away, to Norfolk Naval Base, where he dumped the car. He lived for a while under an assumed name in flophouses in Ocean View, and then on to Florida, using aliases (including Allen Morgan) and as many as 23 false social security numbers, working on fishing trawlers, managing rental properties, and liquidating $200,000 in assets belonging to him and his wife. Not knowing who he was, a Florida court convicted him of 2 felonies connected with social security scams. In 2002, while running a modest 7-unit boarding house above Cindy Comstock's Court of Two Sisters antique shop, in Tarpon Springs, under the alias of William Saussy, a series of money transfers led authorities to believe he was laundering money. They ran a check on him, found the old Virginia warrant out on him, and he was arrested by Federal agents and Florida police on May 1, in his apartment in the boardng house, and was returned to Virginia. "It's news to me!," he exclaimed, denying not the shooting itelf, but any memory of it (there's a difference). He languished in prison for 3 years until May 19, 2005, when he stood trial in Virginia Beach. Doris was there in a wheelchair, testifying against him. He was convicted of malicious wounding and a weapons charge. The jury recommended 15 years, and his family was upset he didn't get the maximum of 22. "God bless the jury," said his 37-year-old son Keith, "My mom won't have to look over her shoulder anymore." He appealed, but his plea of temporary insanity didn't find a receptive audience in the appellate judge, and on July 10, 2007, he was returned to jail.

[1]**Morgan Ridge** *see* **Morgan, Cyril Victor**

[2]**Morgan Ridge**. 70°29' S, 64°41' E. A small rock ridge trending E-W, just E of Mount Pollard, between that mountain and Mount Small, and about 9 km W of the Crohn Massif, in the Porthos Range of the Prince Charles Mountains. The E end of the ridge consists of 2 spurs which give the feature a Y shape in plan. Recorded on terrestrial photos taken by Syd Kirkby in 1956, and on ANARE air photos taken in 1965, and mapped by Australian cartographers from those efforts. Named by ANCA for Peter J. Morgan, glaciologist at Wilkes Station in 1964. US-ACAN accepted the name in 1970.

Morgan Upland. 69°00' S, 66°00' W. An undulating, featureless (but beautiful) ice-covered snow plateau in the central part of the Antarctic Peninsula, bounded by Cole Glacier and Clarke Glacier on the N and W, by Weyerhaeuser Glacier on the E, by Airy Glacier on the S, and by Hariot Glacier on the SW. Photographed aerially in Sept. 1962, by BAS surveyor Ivor Morgan (q.v.), for whom this feature was named, and mapped by Bob Metcalfe, also of BAS. US-ACAN accepted the name in 1965, and UK-APC followed suit on Nov. 3, 1971. It appears in the 1974 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Moriarty. 73°40' S, 165°58' E. Rising to 1700 m, 6 km NE of Mount Casey, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Cdr. Jack Owen Moriarty (b. Oct. 23, 1933, Parsons, Kans. d. Aug. 16, 2000, NC), USN, who wintered-over as air operations officer at McMurdo in 1966.

Isla Morisqueta *see* **Moe Island**

The *Moritz D*. German yacht, skippered by Harald Voss, which visited the South Shetlands and the Antarctic Peninsula in 1992-93, and again in 1997-98.

Mørkenatten *see* **Mørkenatten Peak**

Mørkenatten Peak. 71°52' S, 10°34' E. Rising to 2515 m, 1.5 km S of Chervov Peak, in the mountain area the Norwegians call Småskeidrista, in the Shcherbakov Range, in the easternmost part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Mørkenatten (i.e., "the dark night"). US-ACAN accepted the name Mørkenatten Peak in 1970.

Mount Morley. 69°40' S, 71°34' W. Rising to about 1550 m (formerly estimated at about 1750 m), it surmounts the S part of the Lassus Mountains, in the NW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken by RARE 1947-48. He plotted it in 69°33' S, 71°37' W. Named by UK-APC on March 2, 1961, for the composer Thomas Morley (1557-1603). US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with those new coordinates, the feature appears in the 1977 British gazetteer. The Americans plot it in 69°40' S, 71°28' W.

Morley, John. b. 1934. In 1950 he joined the Navy as a midshipman, and by 1954 was 4th officer on the *Empire Windrush*. Then he served for 6 years as an officer on the *John Biscoe,* rising to the rank of 1st officer, and being promoted to lieutenant commander in the RNR. In 1959 he was appointed FIDS ice navigation officer, and was based at the Scott Polar Research Institute. Sir Vivian Fuchs persuaded him to take a geography degree at St Johns, Cambridge. By the time he graduated, in 1965, he was married to Moira, and had a family. He moved to Norfolk, and became a warden naturalist with the Nature Conservancy, rising high within the organization until he retired in 1995. He died of liver cancer in 2006.

Morley Glacier. 71°12' S, 162°45' E. A steep tributary glacier flowing S between Hicks Ridge and Mount Tokoroa, 13 km E of Mount Soza, in the Explorers Range of the Bowers Mountains, to feed the Carryer Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Keith T. Morley, Australian meteorologist during IGY, who wintered-over as an observer at Weather Central (q.v.), at Little America, in 1958. NZ-APC accepted the name.

The *Morning*. Norwegian whaler built by Svend Foyn, the inventor of the harpoon gun. She was 140 feet long, weighed 452 tons, and was originally called the *Morgen* (which means "morning"). Bought by Sir Clements Markham (father of BNAE 1901-04) with money publicly subscribed in Britain, and renamed into English, she was the relief ship commanded by Colbeck which went south in 1902-03, to relieve BNAE 1901-04. She left McMurdo Sound for home on March 2, 1903, with Shackleton aboard. Colbeck returned with the *Morning* in 1904, again to relieve Scott's expedition (this time successfully), and this time accompanied by the *Terra Nova*.

Lake Morning. 78°21' S, 163°53' E. An ice lake, 2.8 km long, about 15 km NNE of Mount Morning, at the E head of Koettlitz Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1963, in association with the mountain. NZ-APC accepted the name, but as Morning Lake.

Mount Morning. 78°31' S, 163°35' E. A dome-shaped mountain of massive appearance, with 3 slightly elevated sharp peaks, it rises to 2725 (the New Zealanders say 1761 m), on the E side of the Koettlitz Glacier, and WSW of Mount Discovery, along the W edge of the Ross Ice Shelf, in Victoria Land. Discovered during BNAE 1901-04, and named by Scott for the *Morning*. It is an entirely volcanic formation. The NZ gazetteer says that no party has been nearer to it than Heald Island on the Koettlitz, from which point it appears to consist of an aggregate of a large number of large cones and centers of activity, rather than material from a single vent. All of that statement may still hold good.

Morning Glacier. 78°28' S, 163°47' E. Close W of upper Vereyken Glacier, on the NE slope of Mount Morning, in Victoria Land. It flows partway down the mountain, terminating 7 km S of Lake Morning. Named by US-ACAN in 1994, in association with the mountain.

Morning Lake *see* **Lake Morning**

Moro, Antonio *see* **Antonio Moro Refugio, Órcadas Station**, 1948

Moro Refugio *see* **Antonio Moro Refugio**

Gora Morozova. 83°35' S, 55°22' W. A nunatak, on the SW side of Mount Moffatt, on the Washington Escarpment, in the Neptune Range, in the Pensacola Mountains. Named by the Russians.

Morozumi Range. 71°39' S, 161°55' E. An isolated mountain range extending for 40 km (the New Zealanders say more like 50 km) in a NW-SE direction, between the Helliwell Hills and the Bowers Mountains, its N elevations overlooking the convergence of Gressitt Glacier and Rennick Glacier. For spectacular beauty, this is one of the ranges to see. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Masakiyo "Henry" Morozumi, aurora scientist at Pole Station in 1960 (he was the first Japanese citizen to winter-over there), and scientific leader at Byrd Station in 1963. NZ-APC accepted the name.

Morrell, Alexander *see under* **Morall**

Morrell, Benjamin, Jr. b. July 5, 1795, Rye, NY, but raised in Stonington, Conn., son of failed shipbuilder Benjamin Morrell and his 1st wife Abigail (who died in 1802). He ran away to NYC in 1812, and was taken on as a seaman on the *Enterprise*, heading for Lisbon. On the way back, off Newfoundland, they were taken prisoner by the British in a war that was complete news to them. He was freed after 8 months, and was then quartermaster on the *Joel Barlow*. He was captured again, and thus sat out the war in prison at Dartmoor, in England. On his return to the USA, after the war, he sailed on various ships, and was 1st mate on the *Wasp* in 1821-22, in the Antarctic, commanded by Capt. Robert Johnson. Morrell's brother was 2nd mate. On Johnson's instructions, Ben Morrell joined the *Jane Maria* (another of the expedition's ships) at Staten Island (Chile) at the end of the expedition, and navigated her back to New York. He got his first captaincy in 1822-23, as skipper of the *Wasp*, in which, that austral summer, he made a controversial survey of East Antarctica waters. On that trip he sailed for a little of the way accompanied by the *Henry* (Robert Johnson commanding). After the expedition he cruised the *Wasp* up the Chilean coast and sold her at Valparaíso in 1824, making his way back to Salem, Mass., on the *Endeavor*. He arrived home on May 18, 1824, to find that his wife and 2 children were dead. On June 25, 1824 he married again, to his 15-year-old cousin Abby Jane Wood. He was captain of the *Tartar*, 1824-26, and of the *Antarctic*, 1828-31. His wife was with him on this last voyage (not in Antarctic waters, however), and even wrote a book about it. In 1832 his book *Narrative of Four Voyages* was published. He died of fever in Mozambique, in 1839. *See also* **New South Greenland**.

Morrell's Land *see* **New South Greenland**

Morrill Peak. 69°39' S, 72°18' W. A sharp-pointed peak rising to about 550 m, 3 km WNW of Thuma Peak, in the Desko Mountains, in the SE part of Rothschild Island, off the extreme N end of Alexander Island. Named by US-ACAN for Peter A. Morrill, U.S. Coast Guard, exec on the *Westwind* during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). UK-APC accepted the name on June 11, 1980.

Cabo Morris *see* **Fort William**

Cape Morris *see* **Fort William**

Mount Morris. 78°19' S, 86°10' W. A steep, sharp mountain, about 1.5 km S of Mount Ostenso, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1960, for Wesley R. Morris, meteorologist who wintered-over at Byrd Station in 1957, at Pole Station in 1961, and as scientific leader at Eights Station in 1964.

Rocas Morris *see* **Morris Rock**

Morris, Captain. Skipper of the Plymouth sealer *Queen Charlotte*, in South Shetlands waters for the 1820-21 season.

Morris, Albert Edward. Radioman on the *Discovery II*, 1933-39.

Morris, Leslie Frederick "Fred." b. Feb. 14, 1925, Redditch, Worcs. Carpenter on the 2nd part (1956-58) of the British Royal Society Expedition. In 1957, aside from wintering-over at Halley Bay, he helped ready BCTAE. After the expedition, he left Las Palmas on the *City of Port Elizabeth*, arriving back in Plymouth on Feb. 20, 1958.

Morris Basin. 75°39' S, 159°09' E. A basin, about 9 sq miles in area (i.e., about 2330 hectares), in the N part of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. The S portion of the basin is ice-free, but the N part is occupied by a large lobe of ice. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Robert W. Morris, biologist at McMurdo, 1965-66 and 1966-67. ANCA accepted the name on Sept. 26, 1978.

Morris Cliff. 80°20' S, 81°49' W. A steep, east-facing cliff between the Marble Hills and the Independence Hills, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN in 1966, for Lt. Harold M. "Hal" Morris, USN, pilot of the LC-47 aircraft that crashed on the Ross Ice Shelf on Feb. 2, 1966 (*see* **Deaths**, 1966).

Morris Glacier. 84°46' S, 169°30' W. A small glacier, about 16 km long, it flows NE from Mount Daniel to the Ross Ice Shelf, between the Lillie Range and Clark Spur. Named by the Southern Party of NZGSAE 1963-64 for Cdr. Marion E. "Moe" Morris (b. July 4, 1926, Memphis. d April 2, 2005, Colorado Springs), who joined the U.S. Navy in March 1944, served in World War II (Japan) and Korea, and was executive officer of VX-6, who piloted the aircraft which flew that NZ party's reconnaissance. Morris was later VX-6 commanding officer during

OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66), and flew the men into the new Plateau Station for their wintering-over of 1966. NZ-APC accepted the name, and US-ACAN followed suit in 1966. Capt. Morris retired from the Navy in Oct. 1973.

Morris Head. 74°54' S, 134°50' W. An ice-covered headland that marks the seaward end of Hagey Ridge, and the NE extremity of McDonald Heights, on the coast of Marie Byrd Land. Photographed aerially on Dec. 18, 1940, during USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lloyd Morris, USN, chief quartermaster and senior member of the bathythermograph team on the *Glacier* off this coast in 1961-62.

Morris Heights. 83°28' S, 169°42' E. Relatively smooth ice-covered heights forming a peninsula-like divide between Beaver Glacier and King Glacier, at the N end of the Queen Alexandra Range. Named by US-ACAN in 1966, for Lt. Clarence T. Morris, USN, aerology officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1962 and 1963.

Morris Hills. 80°23' S, 27°27' W. A scattered group of hills, rising to about 1050 m, 10 km NE of Petersen Peak, in the La Grange Nunataks of the north-central part of the Shackleton Range. First mapped in Oct. 1957 by BCTAE 1956-58, and named by them as Morris Nunataks, for Fred Morris (*see* **Morris, Leslie Frederick**). UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. The term "hills" was deemed more appropriate, and on Dec. 20, 1974, UK-APC changed the name to Morris Hills, and US-ACAN followed suit in 1975.

Morris Island. 76°37' S, 147°48' W. An ice-covered island, about 11 km long, 8 km W of Farmer Island, in the Sulzberger Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lt. (jg) J.E. Morris, USNR, who was on the *Glacier* in this area in 1961-62.

Morris Nunataks *see* **Morris Hills**

Morris Peak. 84°56' S, 167°22' W. A prominent peak rising to 910 m, it marks the NW end of the Duncan Mountains, at the E side of the mouth of Liv Glacier, where that glacier enters the Ross Ice Shelf. Named by US-ACAN in 1966, for Lt. Cdr. Henry C. Morris, USN, captain of the *Mills* during OpDF 63 (i.e., 1962-63).

Morris Rock. 62°22' S, 59°48' W. A rock, rising to 55 m above sea level, 3 km W of Fort William, it is the most northwesterly feature of the Aitcho Islands, in English Strait, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, in association with Cape Morris, a name given by personnel on the *Discovery II* in 1935 to the W extremity of Robert Island. This cape was later found to be the original location of Fort William, so that term was reinstated. The name of this rock is intended to preserve the naming of Morris in the area. US-ACAN accepted the name in 1965. It appears on a British chart of 1968. The Argentines pluralize this feature as Rocas Morris. Last plotted by the UK, in late 2008. Alfred Morris (b. 1890) was a draftsman in the Admiralty Hydrographic Office in 1935.

Glaciar Morrison *see* **Morrison Glacier**

[1]**Mount Morrison**. 66°48' S, 51°27' E. About 2.5 km NE of Mount Best, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Murde Morrison. US-ACAN accepted the name.

[2]**Mount Morrison**. 76°54' S, 161°32' E. Rising to 1895 m (the New Zealanders say 1807 m), W of the head of Cleveland Glacier, between (on the one hand) that glacier and (on the other) Midship Glacier and Benson Glacier, about 6 km N of Mackay Glacier, in the Prince Albert Mountains of Victoria Land. Discovered during BNAE 1901-04, and named by Scott for J.D. Morrison. US-ACAN accepted the name in 1965, and NZ-APC followed suit.

Morrison, Edward. b. 1870, Dundee. He went to sea, and became an able seaman. He was sailmaker on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04. On July 26, 1907, at Poplar (in London), he signed on as sailmaker aboard the *Nimrod*, for the first half of BAE 1907-09, being discharged in Lyttelton on May 20, 1908.

Morrison, John Donald "J.D." b. 1873. Chief engineer on the *Morning*, 1902-04. He also took photographs.

Morrison, John Harold "Jack." b. 1901, Dunedin, NZ. he worked for years with engineering companies in Dunedin, and on Jan. 20, 1930, when the *Eleanor Bolling* sailed out of Dunedin on her last relief trip south, during ByrdAE 1928-30, Jack Morrison was on board, as an oiler and 4th engineer. He signed on again on March 11, 1930, in Dunedin, for the trip to the USA. He was a crewman on the *Jacob Ruppert* during ByrdAE 1933-35. He spent the last 7 months of his life in a home for the aged, outside Dunedin, and died there on May 15, 1986.

Morrison, Murde Campbell. Fireman on the *Discovery* during the 2nd half of BANZARE 1929-31.

Morrison Bluff. 75°05' S, 114°20' W. A high rock and ice bluff on the w side of Kohler Glacier, 8 km E of Manfull Ridge, and 20 km SW of Mount Isherwood, in the W massif of the Kohler Range, in Marie Byrd Land. Lichens are to be found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Charles E. Morrison, USGS topographical engineer who took part in the surveys of Marie Byrd Land in 1966-67, and in Ellsworth Land in 1967-68. He also took part in the establishment of the Byrd ice-strain network, in 1964-65. In 1971-72 he was in the McMurdo Dry Valleys.

Morrison Glacier. 66°08' S, 63°30' W. A glacier, 5 km long (the Chileans say 11 km), between Attlee Glacier and Eden Glacier, it flows S to the head of Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. Charted in 1947 by Fids from Base D, and named by them for Herbert Stanley Morrison (1888-1965), British member of the War Cabinet which created Operation Tabarin. Photographed aerially by RARE 1947-48. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on an Argentine chart of 1957 as Glaciar Morrison, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Morrison Hills. 84°12' S, 168°40' E. A series of rugged hills trending E-W in the Queen Alexandra Range, between Garrard Glacier and Hewson Glacier. Named by US-ACAN in 1966, for Lt. I. James Morrison, who did preliminary work leading to the induction of C-130 aircraft into Antarctica in Feb. 1960, and who was in Antarctica many times after 1958-59.

Morrison Rocks. 76°51' S, 117°39' W. A group of rocks which outcrop along the S slope of Mount Frakes, in the Crary Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Paul W. Morrison, USN, hospital corpsman at Pole Station in 1974.

Morriss Peak. 76°50' S, 144°29' W. Rising to 950 m, at the SW end of the Wiener Peaks, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and named by Byrd for P.G.B. Morriss, manager of the Hotel Clark, in Los Angeles, who provided pre-expedition office space and living quarters for ByrdAE 1928-30 and ByrdAE 1933-35. The peak was re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. US-ACAN accepted the name in 1970. Percy George Brockhurst Morriss, known as "Bud," was born in Redditch, Worcs, England, on Dec. 13, 1884. He got a job as post officer's clerk at Cooper's Hill School, in West Bromwich, then went to sea as an apprentice under sail, becoming a ship's radio man. He came into the USA via Canada on July 2, 1909, and moved to Chicago, where he married Leah, an advertising manager. In 1910, he was the first man to send a radio communication from an airplane to the ground, went back to England to learn to fly, then operated a flying boat service on the Chicago lake front. He then joined the Benoist Airplane Company of St. Louis, becoming, successively, assistant pilot and instructor, chief instructor, and vice president and sales engineer, leaving the company in 1916. In 1917 he enlisted as a seaman in the Navy, for World War I, and by the time he got out he was executive officer of aviation schools at a naval air station. After managing a textile manufacturing company in Orange, NJ, he became one of the pioneers of commercial aviation between the wars, and started the Early Bird's Aviator Club (a club for pioneer flyers). He lived in grand style

in Hempstead, New York, and also in Pasadena. He played around with radio, wrote a book called *How to Plan a Convention*, was president of the California State Hotel Association, and (until 1940) ran the famous Clark Hotel, in LA, which hosted everyone who was anyone. He died on Aug. 4, 1944.

Cabo Morro *see* **The Naze**

Islote Morro *see* **Islote Calvo**

Punta Morro *see* **The Naze**

Península Morro Chato *see* **Flat Top Peninsula**

Cerro Morro Colorado. 63°29' S, 57°01' W. A hill, immediately E of Mineral Hill, on Tabarin Peninsula, on Trinity Peninsula. Named by the Argentines.

Cabo Morro del Medio *see* **Seaplane Point**

Punta Morro del Medio *see* **Seaplane Point**

Cerro Morro del Paso. 63°29' S, 58°03' W. A hill, hard by Cerro Argentino, 11 km SSE of the extreme N of Cape Ducorps, and S of Lafond Bay, Trinity Peninsula. Named by the Argentines. The name is also seen as Morro del Paso Peak.

Morro del Paso Peak *see* **Cerro Morro del Paso**

Cabo Morro Negro *see* **Black Head**

Península Morro Plano *see* **Flat Top Peninsula**

Cape Morse. 66°15' S, 130°10' E. A low, ice-covered cape marking the E side of the entrance to Porpoise Bay, and forming the division between the coast of Wilkes Land and the Banzare Coast. Delienated from air photos taken during OpHJ 1946-47. Named by US-ACAN for William H. Morse (*see also* **Morse Glacier**, for details of the misspelling Cape Mose). ANCA accepted the name.

Mount Morse. 80°49' S, 157°21' E. Rising to over 1800 m at the end of the ridge extending W from Mount Egerton (it is 10 km W of the summit of that mountain), in the Churchill Mountains. Named by US-ACAN in 2003, for Robert M. Morse, of the department of physics at the University of Wisconsin, a USAP principal investigator, 1989-2002. His work in Antarctica included research related to AMANDA, the Antarctic muon and neutrino detector array, near Pole Station.

Morse, William H. Master's mate on the *Porpoise*, during USEE 1838-42. Actually he started the expedition as a purser's steward, and got his master's mate rank on July 1, 1839. On March 3, 1849, he was promoted to 2nd master, and resigned from the Navy on May 25, 1859.

Morse Glacier. 66°21' S, 130°05' E. A channel glacier flowing to the E side of Porpoise Bay, 5 km SSW of Cape Morse, on the Banzare Coast of Wilkes Land. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for William H. Morse. However, due to a spelling mistake, this feature was spelled Mose Glacier in the 1956 gazetteer, and thereafter for many years, including on a 1960 U.S. Hydrographic Office chart, just as Cape Morse was similarly misspelled. ANCA accepted the name on Oct. 22, 1968.

Morse Nunataks. 84°16' S, 160°50' E. Isolated rock nunataks, 7 km S of Mount Achernar, between Lewis Cliff and the MacAlpine Hills, in the Queen Maud Mountains. Named by US-ACAN in, 1966, for Oliver C. Morse III, ionosphere scientist at Pole Station in 1960.

Morse Spur. 77°19' S, 161°49' E. A spur projecting S from the Saint Johns Range, between Deshler Valley and Crawford Valley, in Victoria Land. Named by US-ACAN in 2005, for David L. Morse, of the Institute for Geophysics, at the University of Texas, at Austin, who was in Antarctica for 10 field seasons between 1990 and 2004, including 4 at the Taylor Dome ice-core site; 3 conducting aerogeophysical research in both East and West Antarctica; and 3 seasons of ground-based studies of the Bindschadler Ice Stream and the Taylor Glacier. NZ-APC accepted the name on Sept. 12, 2005.

Morsetbreen. 74°44' S, 11°30' W. A glacier, about 5 km long, at the W side of the mountain ridge the Norwegians call Malmrusta, in the SW part of Sivorgfjella, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for teacher Peder Morset (b. 1887), who, with his 7 sons, formed part of the Trondheim Resistance during World War II. In 1943, the Gestapo surrounded the Morset farm. Peder was arrested and executed. His son, Oddmund (b. 1916), shot his way through, but was subsequently killed.

Mort, Jacob. On Nov. 17, 1913, in Melbourne, he signed on to the *Aurora* as a fireman, at £5 per month, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on Feb. 27, 1914. All this from Herbert Goddard's diary, reliance upon which, as a sole source, may, at times, be too heavy. There simply was no Jacob Mort. The Friends of Mawson Society, working from, among other sources, Goddard, also give the information about Mort, but they also list one J. Moad, fireman, but no dates of sail are ascribed to him, which leads one to believe he and Jacob Mort are one and the same, especially as this J. Moad requested, at the end of the expedition (March 14, 1914), that his bonus be sent to Port Pirie, South Australia. This Moad seems to have been on the 3rd and last voyage south of the *Aurora*, during AAE 1911-14, as, of course, Jacob Mort was meant to be. There was a Joe Mort, a Liverpool boy, sailing the Antipodean seas for years as a fireman, but this is not our man. Aside from Joe, there is no fireman named Mort at around that time, and no Moad.

Estrecho Morton *see* **Morton Strait**

Mount Morton. 64°24' S, 61°01' W. Rising to about 1350 m, SE of Hughes Bay, between Blériot Glacier and Cayley Glacier, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Grant Morton, U.S. aviator who, in 1912, was the first man to bail out of a plane carrying a loose parachute. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. In pursuit of Grant Morton, on May 14, 1905, at Chutes Park, Calif., one "Professor" W.M. Morton, aeronaut, was involved in a horrible accident when the balloon he was going to jump from crashed into a wooden pole, taking the jumper with it, right into the pole. On July 2, 1905, i.e., six weeks later, at Urbita Springs, Calif., one Grant Morton was involved in a horrible accident when the balloon he was going to jump from crashed into trees, taking the jumper with it, right into the trees. His injuries were so serious it did not look as if he would make it. On April 28, 1912, in Venice, Calif., one William M. Morton went up to 2600 feet in a Wright biplane piloted by Phil Parmalee, then jumped for 300 feet before opening his chute, in front of 40,000 spectators. He landed in some electrical wires, and was slightly hurt. On May 30, 1928, over McKeesport, Pa., one Walter M. Morton was in a balloon race when his balloon was struck by lightning, and crashed, killing Mr. Morton. It was said that this Morton, known as "Old Mort," had been a parachute jumper on the West Coast for years, sideshows, carnivals, state fairs, that sort of thing, and had made over 300 jumps.

Morton, Ashley Clarke "Ash." b. June 3, 1953. Between 1981 and 1982 he spent 78 months at Rothera Station as a BAS polar guide and field assistant, including 4 winters (1982, 1983, 1986, and 1989), 2 as base commander. He was the local magistrate who conducted the inquest on Giles Kershaw (q.v.). He was also in South Georgia.

Morton Cliff. 62°28' S, 60°08' W. Prominent sub-vertical rock cliffs, rising to about 35 m above sea level, and forming the W escarpment of Williams Point, Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 12, 1997, for Ash Morton. US-ACAN accepted the name in 1998. Plotted by the UK in late 2008.

Morton Glacier. 83°12' S, 168°00' E. A glacier, 24 km long, flowing eastward from the Holland Range, between Vaughan Promontory and Lewis Ridge, into the Ross Ice Shelf. Named by US-ACAN in 1966, for Lt. Cdr. John A. Morton, officer-in-charge of VX-6 Detachment ALFA, at McMurdo in the winter of 1964.

Morton Strait. 62°42' S, 61°13' W. A strait, 8 km across at its narrowest point, running NW-SE between Snow Island on the SW, and Rugged Island and Byers Peninsula (which is on Livingston Island) on the NE, in the South Shetlands. Discovered in 1819, and called Strait Despair, Strait of Despair, or Straits of Despair. It appears as such on Fildes' chart of 1821. Renamed by Weddell in 1823 as Mortons Strait, it appears as such on his 1825 chart. On Fildes' 1827 chart it appears as Despair Strait, and on Powell's 1828 chart as Morton's Strait. On a British chart of 1839 it appears as Morton Strait, on an 1861 Spanish chart it is translated as Estrecho de Morton, and on an 1864 chart it was confused with Hell Gates (q.v.). On de Gerlache's 1902 map of BelgAE 1897-99, it appears as Détroit Morton. On a 1908 Argentine map Estrecho Mortor (sic)

appears as the strait separating Livingston Island from Deception Island. On Charcot's 1912 map of FrAE 1908–10, it appears as Détroit de Morton. It was re-charted by the Discovery Investigations in 1930–31, and appears on their chart as Morton Strait, as it does on a British chart of 1937. On an Argentine chart of 1946 it appears as Estrecho Morton. Morton Strait was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazeteer, and on a 1962 British chart. It appears misspelled on a 1954 Argentine chart as Estrecho Norton. Photographed aerially by FIDASE in 1956–57. The name Estrecho Morton was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

Morton's Strait *see* **Morton Strait**

Glaciar Mosby *see* **Mosby Glacier**

Mosby, Haakon. Name also seen as Håkon Mosby. b. July 10, 1903, Kristiansand, Vest-Agder, Norway, son of schoolteacher Salve Mosby and his wife Mette Katarina Nodeland. An oceanographer and meteorologist, he was assistant to Nansen, and then scientific leader of the *Norvegia*'s first trip to Antarctica, in 1927–28 (he shared a cabin with Ditlef Rustad). On March 1, 1930 he married Alfhild Heiberg Mowinckel. From 1948 to 1973 he was professor of oceanography at the University of Bergen. He died in 1989. A ship and a mud volcano were named after him.

Mosby Glacier. 73°09' S, 61°40' W. A glacier, 8 km wide at its mouth, flowing SE to the NW corner of New Bedford Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by USAS 1939–41. Re-photographed aerially in Nov. 1947, by RARE 1947–48, and in Dec. 1947 surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by FIDS in 1947 for Haakon Mosby. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, on a U.S. Hydrographic Office chart of that year. It appears on a 1966 Chilean chart as Glaciar Mosby. Re-photographed aerially by USN between 1965 and 1967, it appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land.

Moscow University Ice Shelf. 67°00' S, 121°00' E. A narrow ice shelf, about 200 km long, which fringes the Sabrina Coast and Banzare Coast between Totten Glacier (116°10' E) and Paulding Bay (123°15' E). Dalton Iceberg Tongue extends N from the E part of the shelf. Partly delineated from air photos taken during OpHJ 1946–47, but first seen directly by SovAE 1958, who named it Shel'fovjy Lednik Moskovskogo Universiteta. Seen again aerially by ANARE in 1962–63. ANCA accepted the translated name on May 18, 1971, and US-ACAN followed suit in 1995. Originally plotted in 66°30' S, 118°30' E, it has since been replotted.

Cape Mose *see* **Cape Morse**

Mose Glacier *see* **Morse Glacier**

Moseley, Henry Nottidge "H.N." b. Nov. 14, 1844, Wandsworth (now part of London), son of the Rev. Henry Moseley, canon of Bristol, and his wife Anne. In 1871 he was part of the expedition to observe the eclipse in Ceylon, then he was naturalist on the *Challenger*, 1872–76. In 1881 he married Annabel, daughter of J. Gwyn Jeffreys, the famous Welsh naturalist. They lived in Oxford, where he taught. He died on Nov. 10, 1891, at Firwood, Clevedon, Somerset. Father of Henry Gwyn Jeffreys Moseley, the physicist.

Glaciar Moser *see* **Moser Glacier**

Moser, Frédéric. Armorer and smith on the *Astrolabe* during FrAE 1837–40. He ran from the scurvy-ridden expedition at Talcahuano, Chile, on May 1, 1838.

Moser Glacier. 64°51' S, 62°22' W. Flows W into the NE arm of Andvord Bay just SE of Arago Glacier, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897–99, and photographed aerially by FIDASE in 1956–57. Named by UK-APC on Sept. 23, 1960, for Ludwig Ferdinand Moser (1805–1880), German inventor of stereoscopic photography, in 1844. It appears misspelled as Mozer Glacier on a British chart of 1961. US-ACAN accepted the name Moser Glacier in 1965. The Argentines call it Glaciar Moser.

Mount Moses. 74°33' S, 99°11' W. Rising to 750 m, it is the highest and most prominent of the Hudson Mountains, near the center of the group, about 22 km NNE of Mount Manthe. Mapped from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1968, for Robert L. Moses, seismologist and geomagnetist at Byrd Station in 1967.

Kupol Moskovskij. 70°09' S, 1°25' E. A dome, in the area of Zaliv Moskovskiy (see the entry below), in association with which it was named by the Russians.

Zaliv Moskovskij. 70°08' S, 1°25' E. A gulf, NE of Proshchaniya Bay, along the ice shelf that fringes the coast of Queen Maud Land. Named by the Russians.

Shel'fovyj Lednik Moskovskogo Universiteta *see* **Moscow University Ice Shelf**

Nunataki Moskvitina. 72°25' S, 20°12' E. A group of nunataks, immediately S of Tonynuten, in the W part of the Sør Rondane Mountains. Named by the Russians.

Mosley, Miles Vernon. b. 1946, Nuneaton, but raised in Leeds, son of Vernon Mosley and his wife Barbara G. Bostock. He joined BAS in 1970, and wintered-over as general assistant at Base E in 1971 and 1972. He was back as base commander at Halley Bay for the winter of 1978. He was going to be base commander again, at Halley, in 1980, but was killed in Antarctica on Feb. 2, 1980, hit by a low-flying aircraft. He was buried at sea. Jack Scotcher assumed his duties. *See* **Deaths**, 1980.

Mosley-Thompson Cirques. 78°01' S, 161°28' E. Cirques on the W side of Ugolini Peak, at the S side of Ferrar Glacier, and due N of Waddington Glacier, on the Colwell Massif, in Victoria Land. Named by US-ACAN in 1994, for Ellen Stone Mosley-Thompson, glaciologist at the Byrd Polar Research Center, at Ohio State University. Since 1974, Dr. Thompson has analyzed ice samples from Antarctica, and conducted field research at Pole Station, Siple Station, and Plateau Remote Camp.

Moss Braes. 60°41' S, 45°37' W. West-facing slopes (braes), W of Robin Peak, on Signy Island, in the South Orkneys. So named by UK-APC on May 13, 1991 because of the extensive moss banks on the dissected rocky slopes. US-ACAN accepted the name.

Moss Island *see* **Moss Islands**

Moss Islands. 64°09' S, 61°03' S. A group of small islands and rocks, ice-free in summer, E of Midas Island, between that island and Cierva Point, N of Apéndice Island, in Hughes Bay, off the Danco Coast, on the W coast of Graham Land. Probably discovered in Jan. 1898, by BelgAE 1897–99. First charted in detail in Dec. 1902, by SwedAE 1901–04, who named the largest and easternmost of these islands descriptively as Moos-Insel (i.e., "moss island"), for the abundant growth of moss and lichen here in the summer. As a consequence of the vegetation, the islands present a reddish, coffee color. Skottsberg, in 1912, refers to it as such. Further charted by FrAE 1903–05, the big island appears on Gourdon's 1908 chart as Île Moose (sic). On Nordenskjöld's 1917 map the group appears as Moos-Inseln. ChilAE 1947–48 surveyed the group, and named them Islotes López, for Capitán de fragata Alfredo López Costa, skipper of the *Rancagua* that season. On a 1956 Argentine chart appears Islotes General Levene, probably referring to this group, and on the same chart the largest of the islands seems to be called Isla Ricardo. Photographed aerially by FIDASE in 1956–57. UK-APC, on Sept. 23, 1960, named the group Moss Islands, and they appear as such on a British chart of 1961. US-ACAN followed suit with the British naming in 1965. On 1957 and 1962 Chilean charts the largest of the islands appears as Isla Ximena (q.v.). The Chilean gazetteer of 1974 accepted the name Islotes López, for the group, and Isla Ximena, for the big island. On a 1963 American chart, the name Moss Island appears for the big island.

Moss Lake. 60°42' S, 45°37' W. The most southerly of 3 lakes in Paternoster Valley, on Signy Island, in the South Orkneys. BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for the luxuriant stand of moss (*Calliergon sarmentosum* and *Drepanocladus eduncus*) on the floor of the deeper part of the lake. US-ACAN accepted the name in 1975.

Moss Valley. 68°28' S, 78°25' E. A depression, or shallow gully, on the S slope of a hill next to Lichen Valley and Luncke Ridge, on the N side of the E extremity of Langnes Peninsula, in the Vestfold Hills. So named by ANCA on Dec. 3, 1984, because there are very well-developed moss beds in the valley.

Mossel Lake. 68°38' S, 78°18' E. An irregular, although roughly oblong-shaped, lake, measuring about 300 m across and surrounded by low hills, in the Vestfold Hills. So named by ANCA on July 26, 1983 because there are well-

developed moss beds on the E side. One wonders what exactly this has to do with it, seeing that there is no such word as "mossel," not in in the English language, anyway.

Mosses. Found in Antarctica. Along with liverworts they make up the Bryophytes. They predominate in maritime areas, but can grow anywhere that lichens can (*see* **Flora**). One of the species, Andreaea, a black-brown moss, is best exemplified in a stand of it on Andreaea Plateau, on Signy Island, in the South Orkneys.

Ensenada Mossman *see* **Mossman Inlet**

Península Mossman *see* **Mossman Peninsula**

Mossman, Robert Cockburn. b. Nov. 7, 1870, Edinburgh, son of jeweler James Mossman and his wife Annie M. Mercer. He was trained in his father's business, but was a natural meteorologist, so much so that, without any formal training in the subject, he so impressed the great met man Sir Alexander Buchan, that he was allowed to go to work at the famous observatory at Ben Nevis. He was meteorologist and climatologist on ScotNAE 1902-04, and co-wrote *The Voyage of the Scotia*. He married Sarah Limont in 1907, and went several times to the Arctic. In 1920 he became chief climatologist to the Argentine government, dying on July 19, 1940, in Buenos Aires.

Mossman Inlet. 73°15' S, 60°26' W. A narrow, ice-filled inlet indenting the Lassiter Coast for 16 km between Cape Kidson and Jeffries Bluff (the SW end of Kemp Peninsula), along the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940, by USAS 1939-41. In Nov. 1947 it was photographed aerially by RARE 1947-48, and surveyed from the ground in December of that year by a combined sledging team of RARE personnel and Fids from Base E. Named by those Fids for Robert C. Mossman. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a U.S. Hydrographic Office chart of 1955. In those days it was plotted in 73°17' S, 60°32' W. It was photographed aerially by USN between 1965 and 1967, and, with the corrected coordinates, it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1977 British gazetteer. It appears on a Chilean chart of 1966, as Ensenada Mossman.

Mossman Peninsula. 60°46' S, 44°43' W. A narrow peninsula, 5 km long, extending S from the W part of Laurie Island, and separating Scotia Bay from Wilton Bay, in the South Orkneys. Discovered by Powell and Palmer in Dec. 1821, and roughly charted on Powell's map of 1822. It was again roughly charted by Weddell in 1822. Surveyed on June 23, 1903, by ScotNAE 1902-04, and named by Bruce in 1904 for Robert Mossman. It appears as such on the expedition's charts. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart. It appears on a 1945 Argentine chart as Península Mossman, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Mossman Peninsula in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer.

Cape Mossyface *see* **Cape Canwe**

Gora Most. 72°46' S, 68°29' E. A nunatak, NE of Rofe Glacier, in the N part of the Mawson Escarpment. Named by the Russians.

Mostich Hill. 62°38' S, 61°17' W. A rocky hill rising to 130 m, 700 m NE of Benson Point, 3 km SSE of Cape Sheffield, and 3.9 km W of Radev Point, in the SW part of Rugged Island, off the W coast of Byers Peninsula (which is on Livingston Island), in the South Shetlands. Mapped by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for Mostich, 10th-century chief boyar of Czar Simeon the Great and Peter I of Bulgaria.

Mosuso-yama. 71°43' S, 35°47' E. A round-topped hill rising to 2153 m, forming the SW part of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979 ("skirt mountain"), because the foot of this feature is covered by ice-cored moraines resembling skirts.

Møteplassen *see* **Møteplassen Peak**

Møteplassen Peak. 72°47' S, 3°09' W. A snow-covered nunatak, the most northerly peak of the group bordering the S side of Frostlendet Valley, between that valley and Penck Trough, in the SE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Møteplassen (i.e., "the meeting place"). US-ACAN accepted the name Møteplassen Peak in 1966.

Mötesudden *see* **Cape Well-Met**

Mother I. An American automatic weather station, deployed on Iceberg B-153, in Oct. 2003, by the first-ever all-female flight crew.

Mother II. An American automatic weather station, deployed on Iceberg B-153, in Oct. 2003, by the first-ever all-female flight crew.

Motherway Island. 66°26' S, 110°31' E. A small rocky island about 325 m N of Peterson Island, near the S end of the Windmill Islands, off the Budd Coast. First mapped from air photos taken in Feb. 1947 during OpHJ 1946-47. Named by US-ACAN in 1956, as Motherway Rock, for CPO Paul Thomas Motherway (b. June 15, 1927, Michigan. d. Oct. 9, 2002, Norfolk, Va.), who took part in OpW 1947-48, as a photographer. ANCA accepted the name on July 4, 1961. However, it was felt that the term island was more appropriate, so it was renamed Motherway Island by US-ACAN in 1963, and ANCA followed suit with that naming.

Motherway Rock *see* **Motherway Island**

Punta Mothes *see* **Mothes Point**

Mothes Point. 67°14' S, 67°52' W. A point, 11 km SW of The Gullet, at Barlas Channel, on the E side of Adelaide Island. Photographed aerially in late 1947 by RARE 1947-48, surveyed from the ground by Fids from Base E in Sept. 1948, re-photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Hans Mothes (1902-1989), German glaciologist who, in 1926, with Bernhard Brockhamp (*see* **Brockhamp Islands**), made the first seismic soundings of a glacier, in Austria. US-ACAN accepted the name in 1965. The Argentines call it Punta Mothes.

Motian Jiao. 69°22' S, 76°20' E. A reef in the Larsemann Hills. Named by the Chinese.

Motoi-iwa. 71°47' S, 36°12' E. Rising to 2341.2 m, it is the southeastern of 2 small rock exposures 13 km SE of Mount Gaston de Gerlache, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1969, and named by the Japanese on Nov. 22, 1975 ("base rock").

Motor sledges *see* **Sledges**

Motor vehicles *see* **Aircraft**, **Amphibious vehicles**, **Automobiles**, **Cletracs**, **Motorcycles**, **Ships**, **Sledges**, **Snowmobiles**, **Weasels**, and other direct entries

Motorcycles. Geoff Monk had his Manchester-built 197 DOT (nicknamed Devoid of Trouble) shipped down in a crate on the *Shackleton* for his second winter at Base G (1958). He developed and modified it, in order to take it on a journey through the Americas in 1959, with Graham Davey. He actually rode it on the ice in Antarctica. When he got to Port Stanley, he modified Davey's bike as well. One of the lads had a motorcyle at Wilkes Station, for the winter of 1963. During the 1968 winter at Halley Bay, Ken Halliday and Chris Sykes had two Greaves motorcycles, which they did use around the base, but were really for their touring expedition of the Falklands when they returned to Port Stanley at the end of their Antarctic tour.

Mott, Peter Grey. b. June 29, 1913. He graduated from Oxford (in English) in 1935, and that year, and in 1936, he was in Greenland, on expeditions. During World War II he was with the Royal Engineers, and on Aug. 27, 1940, married Eleanor Buckley, of Montreal. As director and general manager of Hunting Surveys, he was leader of FIDASE 1955-57. In 1968 he married Suzette Troop. He died in Nov. 1995, in Yeovil.

Mott Snowfield. 63°20' S, 57°20' W. An ice-cap covering the NE part of Trinity Peninsula, it extends E from Cape Legoupil and the Laclavère Plateau to Antarctic Sound, and rises to 570 m in Magnet Hill. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Peter Mott. US-ACAN accepted the name later that year.

Mottershead, Ronald Clifford "Ron." b. May 15, 1929, Manchester, son of Thomas Mottershead and his wife Rosie White. He was a lab assistant at a girls' school in Manchester, then went out to the Falklands as a peripatetic teacher. He returned to London, was accepted by FIDS, and as meteorologist he left London in 1953, bound for Montevideo, and on from there to winter-over at Base D in 1954. He went back to the Falklands, and then on to Montevideo, where he caught the *Argentina Star* bound for London, arrving there on Feb. 15, 1955, in company with John Standring, Barry Golborne, and Mike Faulkner. He did a course in the South of En-

gland, and in the 1960s lived in Aspatria, Cumberland, dying in Carlisle in 1966, of a heart attack, aged 37, and unmarried.

Moubray, George Henry. b. 1810, Jamaica. He joined the Royal Navy, became a clerk on April 27, 1828, an assistant paymaster on Aug. 3, 1831, and was clerk in charge of the *Terror*, during the Ross Expedition 1839-43, during which he also did drawings. On Sept. 3, 1841, he was promoted to paymaster, and, after his return, in Dec. 1845, he was transferred to the *Terrible*. On April 1, 1870 he was promoted to paymaster-in-chief. He lived in Portsmouth, with his wife Eliza Ann Moore (whom he had married in London in 1851) and their family, and died on Jan. 9, 1887, in Upper Norwood, London.

Moubray Bay. 72°11' S, 170°15' E. Indents the N part of the E coast of Victoria Land between Cape Roget (on the N) and Cape Hallett (on the S), in the W part of the Ross Sea. Discovered in 1841 by Ross, and named by him for George Moubray. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Moubray Glacier. 71°52' S, 170°18' E. A rather steep glacier flowing S to Moubray Bay from Adare Saddle, on Adare Peninsula, being contained between that peninsula and spurs of the Admiralty Mountains. It is one of the main glaciers feeding Moubray Piedmont Glacier. Named by NZGSAE 1957-58, in association with the nearby bay. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Moubray Piedmont Glacier. 71°55' S, 170°20' E. Fills the N part of Moubray Bay, and is formed by the confluence of Moubray Glacier and ice streams falling from the W side of the S end of Adare Peninsula. The greater part of it is probably afloat. Named by NZGSAE 1957-58, in association with the nearby bay. NZ-APC and US-ACAN both accepted the name.

Glaciar Mouillard *see* **Mouillard Glacier**

Mouillard Glacier. 64°18' S, 60°53' W. Flows W into the SE corner of Brialmont Cove, at Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Portal Point between 1957 and 1959, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for Louis-Pierre Mouillard (1834-1897), French gliding pioneer. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Mouillard.

Moulder Peak. 80°05' S, 83°02' W. A sharp peak, 5 km SE of Mount Rosenthal, in the Liberty Hills of the Heritage Range. Named by US-ACAN in 1966, for Andrew Burl Moulder, USN (born Oct. 7, 1934), storekeeper at Pole Station, killed on Feb. 13, 1966, when he was crushed between a 20-ton cargo sledge and the loading ramp of the Hercules aircraft he was unloading.

Mount Moulton. 76°03' S, 135°08' W. A broad, ice-covered mountain rising to 3070 m, 16 km E of Mount Berlin, in the Flood Range of Marie Byrd Land. Discovered aerially in 1940 by USAS 1939-41, and named for Dick Moulton. US-ACAN accepted the name in 1947. Lichens are to be found here.

Moulton, Kendall N. "Ken." b. Nov. 1926, Meredith, NH, son of carpenter George Leroy Moulton (known as Roy) and his wife Hazel. He was a meteorologist, then joined the National Science Foundation, and was IGY representative at McMurdo, 1955-56 (for OpDF I). He was in Antarctica more than 12 times between the years 1958 and 1977. In the winter of 1966 (his 7th season) he was the USARP representative and senior scientist in Antarctica. He also spent 2 winters (at least) in the Arctic. He later lived in Maine.

Moulton, Richard Stanley "Dick." b. July 29, 1917, Meredith, NH, brother of Ken Moulton (see above). In 1934 he was working for the WPA in Meredith, during his last year at school, but, rather tragically, he failed to graduate from college because he lacked only one credit. 16 were needed; he had 15; the Depression was raging, and he lacked the money to get that one credit. By July 1939 he was working at the Wonalancet kennels, in NH, when he became photographer and chief dog driver at West Base, during USAS 1939-41. On his way south, on the *North Star*, while going through the Panama Canal, he dived into the water, and chipped a vertebra. He was a member of the survey party which sledged to the W end of the Flood Range in Dec. 1940. He died in Holderness, NH, on May 8, 2000.

Moulton Escarpment. 85°10' S, 94°45' W. A rock and ice escarpment, 13 km long, in a somewhat isolated position about 16 km W of the Ford Massif, where it forms the W shoulder of the Thiel Mountains. Surveyed by the USGS Thiel Mountains party in 1960-61. Named by US-ACAN in 1962, for Ken Moulton.

Moulton Icefalls. 76°00' S, 134°35' W. Steep icefalls flowing from the N slopes of Mount Moulton (hence the name given by US-ACAN in 1974), in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966.

Mount Bird Ice Cap. On top of Mount Bird, Ross Island.

Mount Brown Automatic Weather Station. 69°08' S, 86°00' E. An Australian AWS installed on Mount Brown, at an elevation of 2064 m, on Dec. 23, 1998. It was removed on July 7, 2000, and on April 2, 2003 was replaced, in the same spot, by Mount Brown-A, which was still operating in 2009.

Mount Erebus Hut. 77°30' S, 167°10' E. American hut built on Ross Island.

Mt. Ginnis Peak *see* **McGinnis Peak**

Mount Howe Automatic Weather Station. 87°22' S, 149°30' W. American AWS, at an elevation of 2400 m, on Mount Howe, which began operating in Jan. 1992, and was removed on Jan. 22, 1994.

The *Mount Olympus*. Launched on Oct. 3, 1943, at the North Carolina Shipbuilding Company, in Wilmington, as the *Eclipse*, a transport ship. On Dec. 27, 1943, she was renamed the *Mount Olympus*, and the following year converted into a specially-designed Mount McKinley-class command ship and communications ship, being commissioned into the U.S. Navy. After war service in the Philippines, she was selected, in Sept. 1946, to be the the flagship of the Central Group during OpHJ 1946-47, Capt. R.R. Moore commanding. She had positions for 50 radio operators, and carried the Noorduyn Norseman airplane. She left Norfolk on Dec. 2, 1946, and after the expedition, made her way back to NZ, on Jan. 16, 1947, and was detached from Highjump on Feb. 11, 1947. She arrived back in Norfolk on April 17, 1947. She served in the Arctic, and was decommissioned on April 1, 1956, and struck from the Navy register on June 1, 1956. In 1966 she was transferred to the Maritime Administration, and was scrapped in 1973.

Mount Parry Range *see* **Mount Parry** (under **P**)

Mount Siple Automatic Weather Station. 73°15' S, 126°06' W. An American AWS, installed in 1992, at an elevation of 230 m, on Mount Siple, in Pine Island Bay.

Mountain Ranges *see* **Ranges**

Mountain Travel. In Jan. 1969 tour operators extraordinaire Leo Le Bon, Allen Steck, and Barry Bishop founded Mountain Travel, and in so doing revolutionized commercial travel. Specializing in "handcrafted travel adventures for small groups," they operated out of Albany, Calif., and then out of El Cerrito. By 1990 they were doing over 50 trips to 7 continents. As for Antarctica, they did trips similar to those of Lindblad Travel and Society Expeditions, i.e., 15-day cruises to the South Shetlands and the N tip of the Antarctic Peninsula, for (1990 figures) $3975-$6975 (depending on cabin) including the air fare (all Mountain Travel Antarctica expeditions included Lan Chile economy class air fare out of Miami). The difference was that they used (from 1989 to 1990, anyway) the *Nordbrise*, and before that the *Bahía Paraíso* of painful memory (*see also* **Sobek Expeditions**). These were not tourist ships, and more time was spent on land. Skiing and Sno-trac rides were available. The tours typically called at Primavera Bay, Esperanza Bay, Pyramid Peak, Mount Flora, the Danco Coast, Gerlache Strait, Paradise Harbor, Almirante Brown Station, Neumayer Channel, Palmer Station, Anvers Island, the Melchior Islands, Deception Island, Jubany Station, and King George Island — if all went well with the weather and politics. A more exciting trip was the assault on the Vinson Massif, the highest point in Antarctica. From 1986, Mountain Travel led a successful climb up this mountain massif. A ski-equipped Twin Otter flew 7 members out to the peaks and they climbed under the supervision of a professional. It was a 3-day expedition, generally leaving Nov. 15 and Jan. 15, and cost in excess of $15,900 per person. But, the most exciting of all, and the one that had the whole world talking, was the Polar Trek, an idea conceived by Mr. Le Bon, who organized it and advertised for 10 paying travelers minimum and maximum. It was claimed that it was not economically feasible, at only $69,950 per person,

to take fewer than 10, yet in the end only 6 went: Col. J.K. Bajaj, from the Nehru Institute of Mountaineering, in Uttakashi, India; Ron Milnarik, a USAF colonel and dentist (b. 1942), from Belleville, Ill.; Shirley Metz, a woman from Capistrano Beach, Calif.; Jerry Corr, from East Lansing, Mich.; Victoria E. Murden, from Somerville, Mass.; and Joe Murphy, from Minneapolis. These 6 civilians had trained for a year. There were 3 guides: Stuart Hamilton, from Canada; Mike Sharp, from Britain; and Alejo Contreras, from Chile. Canadian Martyn Williams, co-owner of Adventure Network International (see that entry for the relationship between the two companies) led the group, and American Jim Williams was co-leader. These were the 11 people who took part in one of the most dangerous and astonishing treks available to mankind. The plan was to cross the continent of Antarctica on skis from the Weddell Sea, via the Ellsworth Mountains, to the South Pole, and then fly back — that is, if they made it to the Pole alive! What actually happened was not only astoundingly true to the plan, but worthy of some examination. **Nov. 15, 1988**: Under the co-ordination of Nadia Le Bon in California, the party set out. Mountain Travel and Adventure Network had put this historic first together, with Mountain Travel very much the senior partner. Adventure Network provided logistical backup. Sponsored by Lan Chile, this was intended to be a one-shot deal, not a regularly-offered expedition, partly because the U.S. National Science Foundation was against it, considering it too much of a risk for ordinary civilians to undertake a 60-day expedition of this nature, with 50 days or so on the actual continental traverse. **Nov. 26, 1988**: The band of intrepids flew from Punta Arenas, Chile, to the Patriot Hills in 80°S, and then flew again, in a ski-equipped Twin Otter, to Hercules Inlet, not far away on "the edge of the Ronne Ice Shelf, where the journey started." **Nov. 29, 1988**: They left Hercules Inlet. **Dec. 1, 1988**: They arrived at Patriot Hills Camp. They had snowmobiles (for pulling supplies only), air backup (Giles Kershaw was the expedition pilot) and medical assistance available from Pole Station should they need it. Fuel for the snowmobiles was at depots created by airdrops every 120 miles, in 82°S, 84°S, 86°S, and 88°S. **Dec. 3, 1988**: The 11-person party left the Patriot Hills. **Jan. 17, 1989**: After skiing 770 miles in 49 days, or, in the words of Mountain Travel, "they covered the 750-mile distance to the Pole by skiing across the high Polar Plateau at an average distance of 15 miles per day," they arrived at the Pole at noon (Pacific time). They were then airlifted back to the Patriot Hills, and then by DC4 to the USA. Mountain Travel produced a newsletter in the spring of 1989 in which they claimed that this trip was the first in which an American had reached the Pole by an overland route. This was an innocent error, made in the enthusiasm of the moment. Many Americans had traversed to the Pole. But Mountain Travel was right in that the first Indian and the first woman did so on this trip. They were incorrect in that only 10 men had ever crossed to the Pole on foot (Amundsen's party of 5, and Scott's party of 5), the rest having used mechanized transport. They forgot the In the Footsteps of Scott Expedition. Although Mountain Travel enjoyed the luxury of snowmobiles, they were not for the use of the travelers, only for the supplies. The astonishing thing is that 6 ordinary people (including 2 women) did in 49 days what it took the very fast Amundsen 55 days to do. Granted, it was a different route, and when the Norwegians did it, no one else had ever done it before — but then, Shackleton had come within 97 miles of the Pole a couple of years before Amundsen, so, when you really get down to it, there was no real 4-minute mile type mental barrier to face for Amundsen. Also, Amundsen had no backup, not even radio. Perhaps more to the point, Fuchs, during BCTAE 1955-58, took 57 days with mechanized transport, along a route close to that taken by Mountain Travel. And the Mountain Travel expedition had the remarkable luck, coincidence, and/or planning to arrive at the Pole on the 77th anniverary of Scott's arrival there during that fateful expedition in 1911-12. In 1990 Mr. Le Bon retired, and in 1991 the company merged with Sobek Expeditions, to create Mountain Travel Sobek (q.v.).

Mountain Travel Sobek. Formed in 1991 as a merger between Mountain Travel (q.v.), and Sobek Expeditions (q.v.). In 1994 Barry Bishop died. In 1996 Richard Bangs left and went to Microsoft. They operate out of Emeryville, Calif.

Mountaineer Range. 73°28' S, 166°15' E. That range of mountains lying between Mariner Glacier and Aviator Glacier, in Victoria Land. It contains 4 peaks over 10,000 feet: Supernal, Murchison, Overlord, and Gobey, as well as Mount Monteagle (at 9121 ft). The seaward parts of the range were first seen in 1841, by Ross, and by many subsequent British and American expeditions. The precise mapping of its overall features was accomplished from USN air photos and also from ground surveys conducted by New Zealand and American field parties, such as NZGSAE. Named by NZGSAE 1958-59, in association with the names "Mariner" and "Aviator," but also in keeping with the background of members of that field party and also of NZGSAE 1957-58, both of whom made reconnaissance of the area. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Mountains. *see also* **Hills**, **Highest points in Antarctica**, **Ranges**, **Nunataks**, and the names of the individual mountains and ranges. It would seem that a range is smaller than a group of mountains, so, the Transantarctic Mountains, for example, the largest group in Antarctica, will contain ranges. Since the IGY, mountains have been visited only by reconnaissance parties, "professional" mountain climbers, and the more adventurous tourists, but in the early days peaks were climbed with regularity (and necessity sometimes) by the explorers. The main groups of mountains designated as such (for example, the Transantarctic Mountains), as opposed to Ranges (for which, q.v.), are as follows: Adams, Admiralty, Alexandra, Allegheny, Anare, Arctowski, Barkley, Barton, Batterbee, Behrendt, Belgica, Bender, Berg, Blackwall, Bowers, Boyle, Brugmann, Bush, Chester, Churchill, Clark, Colbert, Columbia, Concord, Conrad, Cook, Crary, Dana, Darwin, Desko, Dismal, Dorsey, Drygalski, Duncan, Du Toit, Eland, Ellsworth, Fief, Filchner, Fosdick, Framnes, Freyberg, Gagarin, Gjelsvik, Gothic, Grosvenor, Grove, Gruber, Gustav Bull, Haines, Hanson, Harold Byrd, Hauberg, Havre, Hayes, Herbert, Herrmann, Hess, Hoel, Horlick, Hudson, Humboldt, Hutton, Ickes, Jones, Kinnear, Kraul, Kurze, La Gorce, Lashly, Lassus, Latady, Lawrence Peaks [sic], Lazarev, Lomonosov, McCuddin, Mackay, Marshall, Merrick, Moore, Mühlig-Hofmann, Munro Kerr, Napier, Nordwestliche Insel, Nye, Orvin, Paulsen, Payer, Pegasus, Pensacola, Phillips, Playfair, Prince Albert, Prince Charles, Prince de Ligne, Prince Olav, Quartermain, Queen Fabiola, Queen Maud, Raggatt, Ravens, Rawson, Read, Rockefeller, Rouen, Russkiye, Sarnoff, Scaife, Scott, Seward, Sofia, Solvay, Sør Rondane, Southern Cross, Sverdrup, Swanson, Sweeney, Tangra, Tapley, Theron, Thiel, Thomas, Thalmann, Transantarctic, Traverse, Tula, Tyndall, Usarp, Victory, Walker, Walton, Welch, Werner, Weyprecht, Whitmore, Wilkins, Wilkniss, Wilson, and Wohlthat. The most southerly mountain in Antarctica (and in the world) is Mount Howe, followed by (working north): Mount McIntyre, Mount Beck, Mount Early, and Mount Weaver. The northernmost mountain in Antarctica (beginning at 60°S) is Mount Nivea, on Coronation Island, in the South Orkneys.

Mountainview Ridge. 78°55' S, 83°42' W. A gentle, ice-covered ridge, forming the SE extremity of the Sentinel Range. Named by the University of Minnesota Geological Party here in 1963-64, for the excellent view of the high peaks of the range as seen from here. US-ACAN accepted the name in 1966.

Cape Moureaux *see* **Moureaux Point**
Île Moureau *see* **Moureaux Islands**
Île Moureaux *see* **Moureaux Islands**
Islas Moureaux *see* **Moureaux Islands**
Islotes Moureaux *see* **Moureaux Islands**
Pointe Moureaux *see* **Moureaux Point**
Punta Moureaux *see* **Moureaux Point**
Moureaux Island *see* **Moureaux Islands**

Moureaux Islands. 65°05' S, 63°08' W. Two completely snow-covered islands and off-lying rocks, all very close together, 4 km WNW of Pelletan Point, in the NE part of Flandres Bay, off the Danco Coast, on the W coast of Graham Land. On Feb. 11, 1898 BelgAE 1897-99 landed on one of the islands, and charted the group, which de Gerlache named Îles Moureaux, for meteorologist Claude-Théodule-Hirman Moureaux (1842-1919), director of the magnetic section at the Parc Saint-Maur Observatory, near Paris, the institution from which Lecointe and Danco received their assignment. The feature appears as such on Lecointe's 1899 and 1900 maps of that expedition, but on the photo accompanying the 1900 map, it appears as Îles

Moureau. The larger island appears on that 1900 map as Île Moureau, but on Dr. Frederick Cook's 1900 English language version of the expedition's maps it appears as Moureaux Island. On Arctowski's 1901 map of the same expedition, the group appears as Moureaux Islands. On Gourdon's 1908 map the larger island appears as Île Moureaux, and on an Argentine chart of 1954 the group appears as Islas Moureaux. They were photographed aerially by FIDASE in 1956-57. On an Argentine chart of 1957, they appear as Islotes Moureaux, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Moureaux Islands on Sept. 23, 1960, and US-ACAN followed suit in 1965.

Moureaux Point. 63°57' S, 61°49' W. Forms the N extremity of Liège Island, in the Palmer Archipelago. Charted by FrAE 1903-05, and named by Charcot as Pointe Moureaux, for Th. Moureaux (*see* **Moureaux Islands**). It appears as such on Charcot's maps, and on a British chart of 1916. On British charts of 1909 and 1937, it appears as Moureaux Point, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a British chart of 1962. However, on Lester's chart of the British Imperial Antarctic Expedition, 1920-22, it appears as Cape Moureaux. On a Chilean chart of 1947, it appears as Punta Moureaux, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. Not surprisingly, this name has often been misspelled. However, all the misspellings are easily spotted, except perhaps Monreaux.

Mousinho Island. 70°38' S, 71°58' E. A partly ice-covered island, rising to 235 m above sea level, about 2.5 km from the S end of Gillock Island, in the Amery Ice Shelf. Photographed aerially during OpHJ 1946-47, and again by ANARE in 1958. First visited by John Manning's Jan. 1969 ANARE Prince Charles Mountains Survey party. Named by ANCA on May 18, 1971, for Anthony L. "Tony" Mousinho, pilot of the Beaver aircraft with that party. He had been a squadron leader in India in the mid-1960s. US-ACAN accepted the name in 1973.

Cap des Mousses *see* **Cape Mousse**

Cape Mousse. 66°48' S, 141°28' E. A small cape, half rock, half ice, protruding through the coastal ice cap 4 km SW of Cape Découverte, between that cape and the Port-Martin peninsula, it is fringed by many small islands, and backed by moraine close to the S. This area was photographed aerially by OpHJ 1946-47, but this particular feature was charted by the French in 1949-51, and named by them as Cap des Mousses, for the several patches of lichens found here on the exposed rocky surfaces. Mousse is the French for "moss." US-ACAN accepted the name Cape Mousse in 1955.

Moutonnée Lake. 70°52' S, 68°19' W. A sea lake, marginal to the George VI Ice Shelf, 6 km S of Ablation Point, in Ganymede Heights, on the E side of Alexander Island. BAS personnel from Fossil Bluff conducted limnological and tidal studies here from 1971. Named by UK-APC on Dec. 20, 1974, for the roches moutonnées (sheep back rocks) on the lake's shores. US-ACAN accepted the name in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Moutonnée Point. 70°51' S, 68°18' W. A prominent point NE of Moutonnée Lake, in Ganymede Heights, on the E side of Alexander Island. Named by UK-APC on Jan. 18, 2002, in association with the lake.

Moutonnée Valley. 70°51' S, 68°25' W. A valley running E to Moutonnée Lake and George VI Sound, in Ganymede Heights, on the E side of Alexander Island. In 1978-79, a team from the University of Aberdeen's geography department conducted glacial geomorphological studies here in cooperation with BAS personnel from Fossil Bluff. They named it in association with the lake. UK-APC, on Dec. 9, 1981, accepted the name Mountonnée Valley (which was simply a misspelling; it was corrected by UK-APC on Nov. 13, 1986). US-ACAN accepted the correct spelling.

Movies set in Antarctica. There have not been many feature films set in Antarctica, and that is because the scenery, on film anyway, as majestic as it may be, becomes monotonous, particularly when that very scenery is so dominating. It will invariably overpower actors, acting, dialog, and possibly even music, although the music and the scenery may well enhance the other, if the music is good enough. Aside from that, ice doesn't sell, as a rule, not in the movies. However, if the movie is about a famous explorer, it might succeed, or if it has a unique gimmick, like friendly penguins as the stars (*see* ***Happy Feet***). The most famous Antarctic movie was, for decades, *Scott of the Antarctic* (1949) (q.v.), but *Shackleton: the Greatest Survival Story of All Time* (2002) (q.v.), starring Kenneth Branagh, may well have superseded that one, not because of any merits the film may have had, but because Shackleton himself has become so big in recent years. The most spectacular feature film (as opposed to documentaries) has been the Japanese movie, *Antarctica* (q.v.), released in 1984, the story of the dogs Taro and Jiro. A similar story (some might say rip-off) was *Eight Below* (2006) (q.v.). They filmed part of the Alan Ladd movie, *Hell Below Zero* (1954) in the Weddell Sea, during the 1952-53 summer season, using the *Kista Dan*. Alan Ladd was on board part of the time. The Japanese movie, *Virus*, was shot partially in Antarctica in 1979-80, with the technical aid of the Chileans. Aside from Paul Carpenter's *The Thing* (1982), that seems to be about it, although Antarctica has been mentioned many times in motion pictures (the funniest moment, perhaps, being in *Mr. Belvedere Goes to College*, when Clifton Webb claims to have been part of Admiral Byrd's expedition), and Sean Connery did play Amundsen in *The Red Tent*, but that was an Arctic story. There have been stacks of documentaries, the most well-received being, perhaps, *The Secret Land* (q.v.), a 1948 film about Byrd; Frank Hurley's magnificent documentaries (*see* Hurley for a list of his films); and Herbert Ponting's silent film, *90 Degrees South*, which he re-made in 1933 with sound. Shackleton, during BAE 1907-09, was the first to take moving pictures in Antarctica. There was a great documentary made in 1944, called *The Return of the Vikings*, a propaganda film made by the British and extolling the virtues of the Norwegians. The central character was a Norwegian whaling skipper, and there are tremendous scenes of Antarctic whaling. A company called Image Associates produced many 1970s documentaries on the Antarctic, for the National Science Foundation. *Antarctica* was 57 minutes long, produced in 1975, and narrated by Burgess Meredith. *Antarctica: Laboratory for Science* (1978) was 27 minutes long, and showed research being conducted by the Americans. There are many, many others, constantly seen on TV, such as *Alone in Antarctica*, a PBS video about Byrd; another one about the same subject, *Alone on the Ice*; *Amundsen: Frozen Hearts*, about his telepathic relationship with Kiss Bennett; two from the *Great Explorers* series: *Antarctica: Journey to the Ice*, and *Antarctic Pioneers*, narrated by Frank Hurley; *Antarctic Wildlife Adventure*, a National Geographic documentary; *Life in the Freezer*, a David Attenborough and National Geographic video; *The Life and Works of Frank Hurley*, narrated by Leo McKern; *Race for the Poles*; *Robert Falcon Scott*, one of the *Great Adventurers* series; *Shackleton's Boat Journey*, directed by Harding McGregor Dunnett and produced by the James Caird Society and Dulwich College; *Shackleton*; *Escape from Antarctica*; *Sir Douglas Mawson*; *Tragedy at the Pole*; *Shackleton's Antarctic Adventure* (2001), narrated by Kevin Spacey; *The* Endurance*: Shackleton's Legendary Antarctic Expedition* (2000-originally a PBS Nova special), narrated by Liam Neeson, and based on Caroline Alexander's book; *The Last Place on Earth* (1994), narrated by Martin Shaw; *With Byrd at the South Pole: the Story of Little America* (1930). The most famous documentary about Antarctica is *March of the Penguins*. In 1964-65, the BAS lads at Signy Island got a buzz when Svetlana, the Russian movie star, made a visit off the Russian shipping vessel *Gnevny*.

Möwenbach. 62°11' S, 58°59' W. A little stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Mount Moxley. 78°25' S, 162°21' E. Surmounts the divide between Potter Glacier and Wirdnam Glacier, 13 km NNW of Mount Cocks, in the Royal Society Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1963, for Lt. (jg) Donald F. "Don" Moxley (b. June 6, 1934, Casey, Ky. d. May 1981, Ky.), USN, VX-6 Otter and helicopter pilot at McMurdo in 1960. *See also* **Darbyville**.

Caleta Moyano *see* **Mill Inlet**

Cerro Moyano *see* **Marin Bluff**

Islas Moyano *see* **Pitt Islands**

Møyenknatten. 74°21' S, 10°15' W. A nunatak in the westernmost part of Milorgfjella, in the

N part of the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for economist Knut Møyen (b. 1907), Resistance leader in Norway during World War II. He escaped to England in 1942, returning later to Norway as a commando.

Cape Moyes. 66°35' S, 96°25' E. An ice-covered cape fronting the Shackleton Ice Shelf, 33 km W of Cape Dovers, on the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Morton Moyes. US-ACAN accepted the name in 1948.

Moyes, Morton Henry. b. June 29, 1886, Koolunga, South Australia, 2nd surviving son of headmaster John Moyes and his wife Ellen Jane Stoward. A teacher and notable athlete, he successfully applied to join Mawson's AAE 1911-14, of which he was a geologist with the Western Base Party. Immediately after the expedition he was recruited by the Royal Australian Navy as a navigation instructor, and was navigating officer on the *Aurora* (under John King Davis) when, in 1916-17, that ship went to rescue the Ross Sea Party of Shackleton's BITE expedition. Refused permission to go to war (his job was too important), he married Miriam Esther King in Sydney, on Jan. 11, 1919. Mawson enlisted him for BANZARE 1929-31, as physicist, cartographer, and special surveyor, and, although he completed the first half of the expedition, he did not return for the 1930-31 part (he was replaced by A.L. Kennedy). After he retired from the Navy in 1946 he became chief rehabilitation officer for the Commonwealth, getting jobs for over 11,000 ex-servicemen and women. He died in Sydney on Sept. 20, 1981.

Moyes, William. b. 1887, Dundee, Scotland, son of blacksmith William Moyes and his wife Margaret. An itinerant schoolmaster, in the Falklands since 1907, he was the Falkland Islands customs inspector on the whalers *Ronald*, 1911-12, and *Falkland*, 1912-13, that latter season calling at Signy Island. In 1915 he was posted to Nigerian Customs, in Port Harcourt, and remained there for 16 years, then retired to Morocco in 1938, with his wife Margaret Marion (whom he had married in 1922). When World War II threatened they came back to the UK, in April 1939. He died in London, on Aug. 29, 1950.

Moyes Corrie. 60°44' S, 45°39' W. It faces SW and overlooks Fyr Channel, between Hydrurga Cove and Moyes Point, on Signy Island, in the South Orkneys. Surveyed by FIDS in 1947-50, and photographed from the air by the RN in 1968. Named by UK-APC on Sept. 29, 2004, in association with the point. Last plotted by the UK, in late 2008.

Moyes Islands. 67°01' S, 143°51' E. A group of small islands, in the W part of Watt Bay, 4 km SE of Cape-Pigeon Rocks, on the coast of George V Land, in East Antarctica. Discovered by AAE 1911-14, and named by Mawson for Morton Moyes. US-ACAN accepted the name in 1963.

Moyes Nunatak. 67°20' S, 67°31' W. A nunatak, 2.5 km SE of Mount Veynberg, on the W side of Nye Glacier, on Arrowsmith Peninsula, Graham Land. Named by UK-APC on April 3, 1984, for Alastair B. Moyes, BAS geologist who worked in this area in 1980-81. US-ACAN accepted the name. Mr. Moyes was later a professor at the University of Witwatersrand, in Johannesburg.

Moyes Peak. 67°45' S, 61°13' E. A small rock peak, protruding slightly above the ice sheet 3 km N of Pearce Peak, 20 km SW of Falla Bluff, and 38 km S of Cape Simpson, on the coast of Mac. Robertson Land, in East Antarctica. Discovered on Feb. 18, 1931 by BANZARE 1929-31, and named by Mawson for Morton Moyes. The name was accepted by US-ACAN in 1947. The approximate position of this peak was confirmed by aerial photos taken on Feb. 26, 1947, by OpHJ 1946-47.

Moyes Point. 60°44' S, 45°40' W. In the SW part of Signy Island, it forms the E side of the SE entrance to Fyr Channel. First charted by personnel on the *Discovery II* in 1933. Surveyed by FIDS between 1956 and 1958, and named by UK-APC on July 7, 1959, for William Moyes. US-ACAN accepted the name in 1964. Last plotted by the UK, in late 2008.

Moyher Ridge. 78°39' S, 84°52' W. A narrow rock ridge extending WSW-ENE between Saltzman Glacier and Giles Glacier, in the S part of the Sentinel Range of the Ellsworth Mountains. It has a discontinuous appearance because of low ice cols between its peaks. Named by US-ACAN on Nov. 1, 2006, for marine science technician Marian Estelle Moyher (b. May 8, 1956, Sacramento), of Antarctic Support Associates and later of Raytheon Polar Services, supervisor of laboratory services at Palmer Station, 1993-97, and manager of USAP laboratory services to McMurdo, Pole Station, and Palmer Station, between 1997 and 2001.

Mozart Ice Piedmont. 69°53' S, 71°35' W. About 100 km long in a NW-SE direction, being 24 km at its widest, it is backed by Debussy Heights, and extends from the W side of the Lassus Mountains, in the vicinity of Mount Morley, to Gilbert Glacier, in the vicinity of Giovanni Peak, on the W coast of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from aerial photos taken in Dec. 1947 by RARE 1947-48. He plotted it in 70°00' S, 71°00' W, and had it extending E to Walton Heights. Named by UK-APC on March 2, 1961, for the famous Austrian composer, Wolfgang Amadeus Mozart (1756-1791), and plotted by them in 69°53' S, 71°35' W. US-ACAN accepted the name later in 1961, and it appears on a British chart of that year. The feature was re-plotted and re-defined from U.S. Landsat images taken in Feb. 1975 and Feb. 1979, and appears in its corrected form in the 1986 British gazetteer.

Mozer Glacier *see* **Moser Glacier**

Gora Mozhajskogo. 70°37' S, 67°28' E. A mountain, one of the Amery Peaks, in the same co-ordinates as Mount Seaton (so it may even be the Russian name for Mount Seaton), at the E edge of Nemesis Glacier, 5 km S of Sandilands Nunatak, in the Prince Charles Mountains. Named by the Russians for Aleksandr Fyodorovich Mozhaysky (1825-1890), Russian naval officer and pioneer aviator.

Nunataki Mramornyye *see* **Sigurd Knolls**

Lednik Bukhta Mstislava Keldysha. 79°50' S, 160°25' E. An ice bay at the S side of Darwin Glacier, where that glacier flows into the Ross Ice Shelf, near MacDonald Point. Named by the Russians for mathematician Mstislav Vsevolodovich Keldysh (1911-1978), president of the USSR Academy of Sciences, 1961-75.

Muchmore, Donna. b. March 30, 1932, St. Louis, Okla., as Donna Marie Stevens, daughter of oilman Wayne Edward Stevens and his wife Kerry B Critcher (the B did not stand for anything, and neither was it an initial). She was educated at several schools in Oklahoma, Texas, Louisiana, and New Mexico, and graduated in Level Land, Tex., in 1950. In 1951 she began studying to be a nurse, at Oklahome City, one of her instructors being Dr. Harold Muchmore, whom she married just after graduation, in 1954, in Oklahoma. She practiced 3 years as a nurse before retiring to raise her family. Dr. Muchmore began going to Antarctica in 1969-70, and Nan Scott (q.v.) was his lab technician. By 1973 the assistant lab tech they had didn't work out, and Donna went to Antarctica as the replacement. That November (1973) she spent 2 weeks at the Pole (this was the old Pole Station), with Nan Scott and Dr. Muchmore, and thus she and Nan Scott became the first women ever to work at the South Pole. She was back there in Nov. 1975 (the new Pole Station had been built by then), for a short time.

Muchmore, Harold George. b. March 8, 1920, Ponca City, Okla., son of newspaper editor Clyde Estes Muchmore and his wife Iola Winner. His ambition was to be a herpetologist, but at Rice University they offered him two choices — the War or medical school. He chose the latter, but later, did, in fact, join the Air Force and serve in the Korean War when not at Oklahoma City. He married (as his second wife) one of his student nurses, Donna Stevens (*see* **Muchmore, Donna**, above), in 1954. He spent every summer season in Antarctica between 1969-70 and 1981-82, studying the effects of isolation on winterers, as well as infectious diseases. He died on Nov. 14, 1995, in Oklahoma City.

Muchmore Valley. 79°46' S, 156°15' E. A valley, 10 km long, between Haskell Ridge and Colosseum Ridge, in the Darwin Mountains. The valley is filled by ice, except at the head, where flow from the Midnight Plateau ice-cap is insufficient to enter the valley. Named by US-ACAN in 2001, for Harold Muchmore.

Muck Glacier. 84°39' S, 177°30' E. Between Campbell Cliffs and Sullivan Ridge, in the Queen Maud Mountains, it flows generally northward from Husky Heights, and then eastward around the N end of Sullivan Ridge, to enter Ramsey Glacier. Named by US-ACAN in 1966, for Maj. James B. Muck of the U.S. Army Aviation Detachment which supported the Texas Tech Shackleton Glacier Expedition to this area in 1964-65.

Muckle Bluff. 61°09' S, 54°51' W. A bluff, rising to about 635 m, S of Pardo Ridge, and 8 km W of Walker Point, on the SE coast of Elephant Island, in the South Shetlands. Mapped by the British Joint Services Expedition here in 1970-71, when they established "Sailors Cache" near shore below this bluff. Named by UK-APC on Nov. 3, 1971. Muckle means large. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. Last plotted by the UK, in late 2008.

Mud Lake. 62°13' S, 58°27' W. A muddy lake on Creeping Slope, E of Bastion, above Paradise Cove, where Admiralty Bay meets Bransfield Strait, on King George Island, in the South Shetlands. This is a new lake formed as a result of a glacier's thawing since the 1980s. Named by the Poles as Jeziorko Blotniste. The name has been translated.

Muddy Stream. 62°08' S, 58°08' W. A muddy stream running from White Eagle Glacier to King George Bay, between Lions Rump and the Sukiennice Hills, on King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999.

Mudge Passage. 66°02' S, 65°50' W. A deep-water marine passage running E-W from the vicinity of Prospect Point, between Beer Island and Dodman Island to the N, and the Saffery Islands and the Trump Islands to the S, to the vicinity of Extension Reef, on the Graham Coast, on the W coast of Graham Land. Navigated and charted by the *John Biscoe* in Jan. 1977, and by the *Endurance* in 1986. In association with Harrison Passage and Maskelyn Passage to the NE, it was named by UK-APC on Feb. 15, 1988, for Thomas Mudge (1715-1794), British horologist who made substantial improvements to the marine chronometer. US-ACAN accepted the name.

Mudrey Cirque. 77°39' S, 160°44' E. Between Northwest Mountain and West Groin, in the S part of the Asgard Range of Victoria Land. Named by US-ACAN in 1976, for Michael George Mudrey, Jr. (b. Sept. 22, 1945, Pine Bluff, Ark.), Northern Illinois University geologist with the Dry Valley Drilling Project in Victoria Land, in 1972-73, 1973-74, and 1974-75.

Mount Mueller. 66°55' S, 55°32' E. An ice-covered mountain, close E Mount Storegutt, about 42 km W of Edward VIII Bay. Mapped by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Sir Ferdinand Jakob Heinrich, Baron von Mueller (1825-1896), botanist, a member of the Australian Antarctic Exploration Committee in 1886. US-ACAN accepted the name in 1965.

Muellmerstadt, Ludwig. b. 1910, Germany. He went to sea at 17, and was sailing as a ship's 3rd officer for Max Albrecht, when he became 2nd ship's radio officer on the *Schwabenland* during GermAE 1938-39.

Cerro Muga *see* **Fidase Peak**

Isla Mügge *see* **Mügge Island**

Mügge Island. 66°55' S, 67°45' W. One of the Bennett Islands, lying 2.5 km N of the W end of Weertman Island, in Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. ChilAE 1946-47 surveyed it and named it Isla Fresia, after their submarine (not in Antarctic waters). It appears as such on their 1947 chart, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1957 Argentine chart of 1957, as Islote Chayter (*see* **Islotes Chayter**). Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE, 1956-57, and named by UK-APC on Sept. 23, 1960, for Johannes Otto Conrad Mügge (1858-1932), German mineralogist who made pioneer studies of the plasticity of ice, in 1895. It appears as such in the 1961 British gazetteer, and US-ACAN accepted the name in 1965. Today, the Argentines call it Isla Mügge.

Mugla Passage. 62°36' S, 59°54' W. A marine passage, 1.35 km wide, between Half Moon Island and Burgas Peninsula (which is on Livingston Island), in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlement of Mugla, in southern Bulgaria.

Mugridge, William Henry. b. June 17, 1886, Devonport, Devon, son of coachman and ex-Navy man Charles Peter Shepperd Mugridge and his wife Angelina Alvena Colgan. After a period as a stable boy and groom, he joined the Navy, and was in Sydney when he was taken on as 2nd fireman on the *Aurora*, during BITE 1914-17. He was in the NZ Expeditionary Force during World War I. Immediately after the war he was living in Dunedin, but after that his history is unclear.

Mühlig-Hofmann Gebirge *see* **Mühlig-Hofmann Mountains**

Mühlig-Hofmann Mountains. 72°00' S, 5°20' E. A major group of associated mountain features extending E-W for about 110 km between the Gjelsvik Mountains and the Orvin Mountains, in Queen Maud Land. Discovered and photographed by GermAE 1938-39, and named by Ritscher as Mühlig-Hofmann Gebirge, for Albert Mühlig-Hofmann (1886-1980), the division director of the German Air Ministry. It was re-mapped by NorAE 1956-60. The Norwegians accepted the name Mühlig-Hofmannfjella. US-ACAN accepted the name Mühlig-Hofmann Mountains in 1966. The group has Kyrkjeskipet Peak (10,121 feet), and 5 medium-sized peaks: Gessner Peak, Sloknuten Peak, Breplogen Mountain, Risemedet Mountain, and Terningen Peak.

Mühlig-Hofmannfjella *see* **Mühlig-Hofmann Mountains**

Muir, John J. "J.J." III. b. 1906, Hoboken, NJ, but raised in Sheffield, Mass., and Brooklyn, NY, son of Wisconsin-born bank dick turned house painter J.J. Muir II and his wife Annie Clark. A former clerk in his grandfather's brokerage house in New York, he spent five years in the Coast Guard, then sailed from Boston as 3rd mate on the *Jacob Ruppert*, for ByrdAE 1933-35, and within a few days, after the departure of chief officer Henry Burke, was promoted to that spot, partly because he was the only one on board who knew how to milk the cows. When the ship was in at Port Chalmers, NZ, Mr. Muir met Winfred C. Osborn, of Dunedin. It was announced that they were to be married in 1935, in Dunedin, on the trip back to the USA. He joined the Navy, and in 1949 was single, at the Naval Air Base, in South Carolina.

Muir Peak. 79°09' S, 86°25' W. A conspicuous rock peak near the middle of Frazier Ridge, in the Founders Peaks of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Hugh M. Muir, British aurora scientist on exchange at Plateau Station for the winter of 1966.

Muir-Smith, James *see* **Smith, James Muir**

Mukai Rocks. 69°03' S, 39°42' E. A small cluster of rocks on the coast of Queen Maud Land, on the E margin of Ongul Sound, opposite East Ongul Island. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on June 22, 1972 as Mukai-iwa (i.e., "rocks which face"; they face Showa Station). US-ACAN accepted the translated name in 1975.

Mukai-iwa *see* **Mukai Rocks**

Mukluk Lookout. 73°24' S, 65°41' E. The highest point of the 600-meter-high N wall of Mount Rubin, in the southern Prince Charles Mountains. Photographed aerially by ANARE in 1960. It was the site of a geodetic survey station during the ANARE Prince Charles Mountain Survey of 1972. So named by ANCA on Nov. 27, 1973 because the rough rock surface in the area ruined the mukluks of the geologists with the survey party.

Mukluks. High, canvas, felt-lined, very warm boots with thick, rubber soles.

Mount Mulach. 71°07' S, 164°04' E. Rising to 1080 m, 6 km NE of Mount Draeger, on the E side of the Posey Range, in the Bowers Mountains, where it overlooks Lillie Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for William J. Mulach, USN, chief electrician's mate who wintered-over at McMurdo in 1967.

Muldava Glacier. 65°42' S, 64°12' W. A glacier, 4.4 km long and 3.2 km wide, on Magnier Peninsula, it drains the NW slopes of Lisiya Ridge N of Mount Perchot, and flows northward into Leroux Bay, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Muldava, in southernB ulgaria.

Muldoon, Robert David "Rob." b. Sept. 25, 1921, Auckland. Prime minister of NZ, 1975-84, who visited Antarctica in 1982 with Sir Edmund Hillary, to mark New Zealand's 25 years of continuous research on the continent. He died on Aug. 5, 1992.

Mule *see* **Mule Point**

Mule Island. 68°39' S, 77°50' E. A small island, about 1 km long and up to 0.5 km wide, immediately SW of Hawker Island, off the W tip of Mule Peninsula, off the S part of the Vest-

fold Hills, in Prydz Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Muløy (i.e., "snout island"). ANCA accepted the translated name, and US-ACAN followed suit in 1965.

Mule Peninsula. 68°39' S, 77°58' E. An irregular-shaped rocky peninsula, just N of Krok Fjord, between that fjord and Ellis Fjord, in the S part of the Vestfold Hills, it is the southernmost of the 3 major peninsulas which comprise the Vestfold Hills, in Princess Elizabeth Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Breidnesmulen (i.e., "the broad point snout"). ANCA accepted the translated name, and US-ACAN followed suit in 1965.

Mule Point. 67°05' S, 58°12' E. A rocky point projecting from the E side of East Stack, at the E side of Hoseason Glacier, in Kemp Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Mule (i.e., "snout"). Actually what they named Mule was a rocky point just S of East Stack, but ANARE aerial photography showed that this point is part of East Stack, not separate from it. It was first visited by an ANARE party led by Bob Dovers in 1954. ANCA accepted the name Mule Point on Feb. 18, 1958, and US-ACAN followed suit in 1961.

Mulebreen. 67°28' S, 59°21' E. A glacier, between 9 and 11 km wide, flowing WNW into the SE side of Stefansson Bay, on the coast of Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Mulebreen (i.e., "the snout glacier"). ANCA accepted the name Dover Glaciers on Nov. 28, 1955, but US-ACAN, in 1965, accepted the Norwegian name without modification.

Pico Muleta *see* **Crutch Peaks**

Mulga Island. 67°14' S, 46°43' E. A small island, 5 km off the coast of Enderby Land, 6 km ENE of the Boobyalla Islands, and 8 km NE of Kirkby Head. Photographed aerially by ANARE in 1956, and plotted from these photos by Australian cartographers, who named it for the Australian shrub. US-ACAN accepted the name in 1965.

Mulgrew, Peter David. b. Nov. 21, 1927, Lower Hutt, NZ, elder son of boilermaker William John Mulgrew and his wife Edith Matthews, who worked in the woolen industry. On May 2, 1945 he escaped oblivion and joined the NZ Navy, in which he trained as a radioman, becoming involved in a major way in surveying, mapping, and especially mountain climbing. He was still only 19 when he was elected a fellow of the Royal Geographical Society, and the same age when he made petty officer. He was picked to go on NBSAE 1949-50, but the Navy wouldn't let him go. He served in Korea, and in 1952 was promoted to chief petty officer radio engineer-electrician. On Sept. 20, 1952 he married June Martha Anderson, in Wellington. He was chief radio operator at Scott Base in the winter of 1957, and in 1957-58 went with Hillary to the Pole as part of BCTAE. He was commissioned after the expedition. On May 18, 1961, while climbing Mount Makalu, he suffered a pulmonary embolism, and, on top of that, suffering from extreme frostbite, and only just got down alive. His lower legs and the tips of some of his fingers were not so lucky. His fight back to health made him a public hero in a new field. On May 3, 1965 he retired from the Navy, and threw himself into business and competitive sailing. In 1977 he became a commentator on Air New Zealand flights over Antarctica. On Nov. 29, 1979, he was on his 4th such flight, Air New Zealand champagne flight TE901, the one that flew into the side of Mount Erebus (*see* **Deaths**, 1979).

Mulgrew Nunatak. 79°38' S, 157°56' E. A prominent nunatak, rising to 1600 m above sea level (the Australians say 1710 m), about halfway along the length of the Darwin Glacier, 6 km E of Tentacle Ridge, in the Cook Mountains. Mapped by the Darwin Glacier Party of BCTAE 1956-58, and named by them for Peter Mulgrew. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Mulhern, Robert Joseph. b. April 22, 1912, Boston, Mass. When Robert was a small child, his father died, and his Canadian mother, the former Mary L. Miller, married again, to a milk salesman named Charles E. Hopkins, and in the 1920s they moved to Somerville. Robert left school and became a stock clerk. However, he soon joined the U.S. Navy, and was a seaman 1st class on the *Bear*, during USAS 1939-41. For the 2nd half of the expedition he was promoted to bosun's mate 2nd class. He married Grace Josephine Lynch, and they lived in Elizabethtown, NY. He died in Seminole, Fla., on March 21, 1995.

Mount Mull. 74°33' S, 63°08' W. On the E flank of Irvine Glacier, 18 km SW of Mount Owen, in the Guettard Range of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for William B. Mull, USN, cook who wintered-over at Pole Station in 1964. UK-APC accepted the name on Dec. 20, 1974.

Mount Mullen. 78°48' S, 84°36' W. A double-peaked mountain, 4 km ESE of Mount Milton, in the S part of the Sentinel Range, in the Ellsworth Mountains. It rises to 2400 m, and forms the divide between Kornicker Glacier and Wessbecher Glacier. Named by US-ACAN in 2006, for Roy R. Mullen, with USGS from 1960 to 1995. From 1980 to 1995 he was associate chief of the National Mapping Division, with responsibility for Antarctic mapping. He was also USGS representative to SCAR.

Müller, Edmund *see* **Órcadas Station**, 1926, 1928, 1931

Müller, Johannes. 2nd officer and navigation officer on the *Deutschland* during GermAE 1911-12.

Müller, Josef. b. March 31, 1876, Hassfurt-am-Main. 1st bosun on the *Gauss* during GermAE 1901-03. He was very capable, but reserved, not popular with the rest of the crew.

Müller, Leonhard. b. Sept. 7, 1858, Richland, Franken, Germany. Stoker on the *Gauss* during GermAE 1901-03.

Müller Crest. 72°11' S, 8°08' E. A short, ridge-like nunatak rising to 2620 m, which marks the SE extremity of the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Müllerkammen, for Johannes Muller. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. They called it Müllerkammen. US-ACAN accepted the name Müller Crest in 1966. The name has also been seen as Johannes-Müller-Kamm, and Johannes Müller Crests.

Müller Glacier. 72°16' S, 166°24' E. A tributary glacier flowing NE from the Millen Range to enter Pearl Harbor Glacier close NW of Mount Pearson. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for DietlandM üller-Schwarze.

Müller Ice Front. 67°12' S, 66°52' W. The seaward face of the Müller Ice Shelf, extending E and W from Humphreys Ice Rise. Named by UK-APC on Nov. 13, 1985.

Müller Ice Shelf. 67°15' S, 66°52' W. An ice shelf, SW of Hooke Point, in the SW part of Lallemand Fjord, at Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. It is fed from the S by Bruckner Glacier and Antevs Glacier. Photographed aerially by FIDASE in Jan. 1957, it was not recognized as an ice shelf until the 1970s. Named by UK-APC on Dec. 15, 1982, for Prof. Fritz Müller (1926-1980), Swiss-Canadian glaciologist. US-ACAN accepted the name. It appears in the 1986 British gazetteer.

Müllerkammen *see* **Müller Crest**

Müller-Schwarze, Dietland and Christine B. A husband and wife team working in Antarctica in the 1960s and 1970s. Dietland (b. Oct. 4, 1934, Grosshartmannsdorf) was an ethnologist (a zoologist specializing in animal behavior), a PhD from the Max Planck Institute of Behavioral Psychology, in Seewisen, Bavaria. In 1964 he became the first German scientist to be invited to work on USARP, and was the biologist at Hallett Station during the summer of 1964-65. In 1965, back in Germany, he met Christine, at Freiburg University. She was a German psychologist, also a PhD. They married and came to the USA. Dietland became associate professor of wildlife resources at Utah State University. He received a grant from the National Science Foundation to continue his penguin studies in Antarctica, and his wife went with him in Oct. 1969. This set a few records, among which was that they became the first husband and wife team to work in Antarctica, and that Christine became the first woman scientist to come out of the USA to work on the Antarctic continent, and she was the only woman to work with USARP. They studied penguin behavior at Cape Crozier, Ross

Island, during the 1969-70 summer and 1970-71 summer. In 1971-72 they were in the Antarctic Peninsula, studying chinstraps and gentoos. Dietland then transferred to Syracuse, NY, and continued alone in Antarctica until 1976 (Christine was a mother by now). From 1977 they were in the Arctic, studying reindeer.

Mulligan Peak. 77°11' S, 160°15' E. An ice-free peak, rising to 2400 m, 1.5 km N of Robison Peak, at the N end of the Willett Range, S of the head of Mackay Glacier, and adjacent to the Polar Plateau, in Victoria Land. Named by US-ACAN in 1963, for John J. Mulligan, of the U.S. Bureau of Mines, who climbed this peak and the peak to the S of it, during Dec. 1960, and found coal beds and fossil wood. NZ-APC accepted the name.

Mullins Valley. 77°54' S, 160°35' E. A valley, 6 km long, at an elevation of 5400 feet in the McMurdo Dry Valleys of Victoria Land. It is one of the few dry valleys in the world to contain rock glaciers. USAP research has dated the subsurface ice in this valley at 4 million years old, making it among the oldest ice on earth. USAP research has also shown that the rock glaciers here are analogous to the Arsia Mons region of Mars. Named by US-ACAN in 1992, for Jerry L. Mullins, USGS and NSF geophysicist who managed the South Pole winter-over program from 1989 to 1994.

Mulock, George Francis Arthur. b. Feb. 7, 1882, Blackpool, son of Irish civil engineer George Phillips H. Homan-Mulock and his first wife Clara Frances Lugsdin, who died in childbirth. His father married again, when George was 1, to Jane Elizabeth Collister, a Liverpudlian. He joined the RN on Jan. 15, 1896, on the *Britannia*, and served in China on the *Victorious*, and in the Channel Squadron, on the *Magnificent*. He was 3rd lieutenant on the *Morning*, during BNAE 1901-04, but on March 1, 1903, transferred to the *Discovery*, taking Shackleton's place on the shore party (Shackleton was invalided home). Mulock compiled the survey on that expedition, *Survey Work of the National Antarctic Expedition, 1901-04*. He qualified in marine surveying while serving on the *Triton*, was a beachmaster at Gallipoli in 1915, and retired in 1920, to become marine superintendent for the Asiatic Petroleum Co. (North China), Ltd., based in Shanghai. In 1927 he was promoted to captain (retired list), and again served in the navy during World War II, and was captured by the Japanese. He died on Dec. 26, 1963, in Gibraltar.

Mulock Glacier. 79°00' S, 160°00' E. A very large glacier flowing ESE from the S part of the Worcester Range, through the Hillary Coast, into the NW corner of the Ross Ice Shelf. Named by NZ-APC in association with Mulock Inlet. US-ACAN accepted the name in 1961. An American automatic weather station was installed here on Oct. 25, 2006, at an elevation of 1000 m.

Mulock Inlet. 79°08' S, 160°40' E. A re-entrant (i.e., a bay, not of water, but of shelf ice, indenting the main part of the continent), 16 km wide, in the W half of Moore Bay, between Cape Teall and Cape Lankester, it is occupied by the lower Mulock Glacier, which flows through it to the Ross Ice Shelf. Discovered during BNAE 1901-04, and named by them for Lt. George Mulock. US-ACAN accepted the name, and NZ-APC followed suit.

Muløy *see* **Mule Island**

Mulroy, Thomas B. "Tom," Jr. b. Oct. 15, 1895, St. Louis, son of Irish immigrant plumber Thomas Mulroy and his first wife, Delia. His mother died in 1900, and his father married again, to an Irish girl named Kate. He joined the Merchant Marine as an engineer, and by 1923 was 3rd assistant engineer on the *Leviathan*. That year he married a Washington, DC girl named Ruth. With Byrd in the Arctic, he was then chief engineer on the shore party of ByrdAE 1928-30. He returned to NYC to work as an aeronautics engineer for an oil company, and in 1940 was living in Carrollton, New Orleans with his second wife, Sarah Baird, daughter of a former planter in Honduras. Tom Mulroy died in June 1962.

Mulroy Island. 71°45' S, 98°06' W. A small island just off Black Crag (the E extremity of Noville Peninsula), on Thurston Island. Discovered by the USN Bellingshausen Sea Expedition of Feb. 1960. Named by US-ACAN in 1961, for Tom Mulroy.

Mulvaney, Robert. b. May 19, 1958. BAS glaciologist who summered in the Antarctic Peninsula for 6 months, 1985-86, 1988-89, 1991-92, and 1992-93. In 1994-95 he spent 5 months on the Ronne Ice Shelf, and in 1997-98 three months in Queen Maud Land. He was also in the Arctic in 1987 and 1997, for 3 months each year. His specialty is ice-drilling and coring.

Mulvik *see* **Ellis Fjord**

Mulvikholmane *see* **Donskiye Islands**

Mount Mumford. 71°33' S, 65°09' W. Rising to 1580 m, it is the central summit in the line of low rock peaks 6 km N of the W end of the Rathbone Hills, in the Gutenko Mountains of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Lt. Joel H. Mumford, USN (b. Nov. 1944, New England), medical officer at Palmer Station in 1972. He later practiced as an anesthesiologist in Vermont. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mumford, Douglas Colin Geoffrey "Doug." b. March 9, 1932, High Beach, Essex, son of horticultural nursery manager James Charles Mumford, and his wife Olga Bunn. He became a radio operator in the Merchant Navy, and between 1950 and 1952 did his national service, as a radio mechanic in the RAF, and, back on civvy street, got a job at a radio station. In 1953, he applied to the government for an expedition to Africa, but got Antarctica instead, as FIDS radio man. He left Southampton on the *John Biscoe*, and, via Montevideo and the Falklands, arrived at Base B (Deception Island). Just after arriving he found Arthur Farrant lying on the ice with his brains blown out. A bad start, but he wintered-over in 1954. In 1955 he took the *John Biscoe* back to England, got a hush-hush job in Edmonton, London, at an electronics lab (guided missiles, etc), but lasted 12 weeks before the oudoor life called. He spent 20 years as a woodman (lumberjack) in Epping Forest, and another 20 years as forest keeper, retiring to Saxmundham, Suffolk, in 1994, to become a landlord.

Île Mumm *see* **Mumm Islands**

Mumm Islands. 65°01' S, 63°59' W. A group of several small islands and rocks 2.5 km NW of Turquet Point, Booth Island, off the W coast of Graham Land. Discovered and charted in 1904, by FrAE 1903-05, plotted by them as one island, and named by Charcot as Île Mumm, for the Mumm cordon rouge champagne that accompanied the expedition. It appears as such on Charcot's 1906 map. Further charted by FrAE 1908-10, and renamed by Charcot as Îles Mumm. It appears a such on Matha and Rey's 1911 map. They appear as Mumm Islets on a 1943 U.S. Hydrographic office chart. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Mumm Islands on July 7, 1959, and they appear as such on a British chart of 1960. US-ACAN accepted that name in 1965.

Mumm Islets *see* **Mumm Islands**

Mummery Cliff. 80°27' S, 21°23' W. Rising to about 1250 m, to the SE of Whymper Spur, in the central part of the Pioneers Escarpment, in the E part of the Shackleton Range. Named by UK-APC on Jan. 5, 1972, for Albert Frederick Mummery (1855-1895; he died on Nanga Parbat, in Kashmir), British mountain climber and designer of the Mummery tent. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Mummification. The dryness and cold in Antarctica can mummify and preserve anything. Some seals, dying many miles inland in a vain search for food, were found years later, their leathery carcasses preserved. Explorers who visit huts left by the old pioneers, are constantly amazed at the fresh state of things, including the food, some of which can still be eaten, decades later.

Mummy Pond. 77°40' S, 162°39' E. Between Suess Glacier and Lacroix Glacier, in Taylor Valley, Victoria Land. Named by U.S. geologist Troy L. Péwé, in Dec. 1957, for the mummified seals found around the pond. US-ACAN accepted the name in 1960.

Mummy Ridge. 72°16°S, 165°39' E. A ridge, about 1.75 km E of Pyramid Peak, in the Destination Nunataks, in the N part of Victoria Land. Visited in 1981-82, by NZGSAE geologist Bradley Field, who named it in association with nearby Pyramid Peak and Sphinx Peak, and also because its shape resembles a recumbent mummy. NZ-APC accepted the name, and US-ACAN followed suit.

Mümü Nunatak. 77°27' S, 169°04' E. In the N part of the Kyle Hills, 3 km WSW of Towle Point, and 1 km inland from steep cliffs that form the NE edge of Ross Island. Named by NZ-APC on Feb. 20, 2001. US-ACAN accepted the name later in 2001. Apparently it is a Maori name meaning "boisterous wind."

Mundlauga *see* **Mundlauga Crags**

Mundlauga Crags. 71°57' S, 8°24' E. A group of partly snow-covered rock crags rising to 2455 m above sea level, forming the S end of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Mundlauga (i.e., "the finger-bowl"). US-ACAN accepted the name Mundlauga Crags in 1967.

Isla Munita *see* **Racovitza Islands**

Península Munita *see* **Waterboat Point**

Monte Munizaga. 63°44' S, 61°41' W. A mountain on the coast at the head of Milburn Bay, on the NW side of Trinity Island, in the Palmer Archipelago. Named by the Chileans for Maj. Fernando Munizaga, Chilean Army representative on ChilAE 1949-50.

Munizaga Peak. 85°32' S, 177°37' W. An ice-free peak rising to 2590 m, 5 km ESE of Misery Peak, in the Roberts Massif of the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Fernando S. Munizaga, Chilean geologist who took part in the USARP Ellsworth Land Survey of 1968-69, and who, the same season, accompanied a Texas Tech geological party in a survey of the Roberts Massif.

Munken *see* **Monk Islands**

Islas Munken *see* **Monk Islands**

Munken Islands *see* **Monk Islands**

Munken Islets *see* **Monk Islands**

Cabo Muñoz *see* **Cabo Próspero**

Punta Muñoz *see* **Muñoz Point**

Muñoz, Cayetano. b. 1878, Chile. Whaler in the South Orkneys in the summer of 1912-13, who died when the *Tioga* went down off Port Jebsen, Signy Island, on Feb. 4, 1913. He was buried in the Whalers Bay Cemetery on Deception Island.

Muñoz Point. 64°50' S, 62°54' W. A high, steep point, with irregular relief, it is the SE point of Lemaire Island, off the Danco Coast, on the W coast of Graham Land. First mapped (but not named) by BelgAE 1897-99. During the British Imperial Antarctic Expedition of 1920-22, Lester charted it as Lemaire Point, named in association with the island. Named Punta Muñoz by ChilAE 1950-51, for Roberto Labra Muñoz, leader at General Bernardo O'Higgins Station for the winter of 1950. It appears on their 1951 chart, and was the name accepted by the 1974 Chilean gazetteer. UK-APC accepted the translated name on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer. The Argentines, since about 1978, have been calling it Punta Irigoyen, for their ship of that name (*see* **The *Irigoyen***). Lt. Col. Labra was Chilean Armed Forces delegate on the *Maipo* during ChilAE 1954-55 (*see also* **Morro Labra**).

Munro Kerr Mountains. 69°44' S, 74°14' E. A group of peaks forming the NE flank of the Amery Ice Shelf, on the Ingrid Christensen Coast, in Princess Elizabeth Land. It is possible that they were first seen on Feb. 9, 1931, by BANZARE 1929-31. They were definitely seen 2 days later from the airplane, and Mawson mapped them in about 67°48' S, 73°24' E. He named them for Rear Admiral William Munro Kerr (1876-1959; later promoted to vice admiral, and knighted), the First Naval Member and chief of the Australian Naval Staff at the time of the expedition. However, on Jan. 24, 1931, the Norwegian whale catcher *Bouvet III* was off this coast, in about 68°S, 74°E, and her skipper, Carl Sjøvold claimed to have seen what he thought were volcanic mountains in the SW, and these were named by the Norwegians as the Sjøvold Mountains. It would appear that both Mawson and Sjøvold were in error regarding direction and distance of the mountains, which undoubtedly included Mount Caroline Mikkelsen (which was seen and named on Feb. 20, 1935, by Capt. Klarius Mikkelsen). ANCA accepted the name on Nov. 24, 1953, but plotted the feature in 70°50' S, 73°30' E. It has since been replotted.

Mount Munson. 84°48' S, 174°26' E. Rising to 2800 m (the New Zealanders say about 2900 m) from the NW flank of Mount Wade and 5 km from its summit, in the Prince Olav Mountains. Discovered and photographed aerially by Byrd in Nov. 1929, during ByrdAE 1928-30. Named by US-ACAN in 1962, for Captain William Harvey "Bill" Munson, USN, commander of VX-6, 1959-61. He was on the April 9, 1961 flight that rescued Leonid Kuperov (q.v.). NZ-APC accepted the name.

Mural Nunatak. 64°59' S, 61°32' W. A conspicuous nunatak, rising to about 800 m, W of Cape Fairweather, on the E side of Hektoria Glacier, 8 km NW of Shiver Point, on the Nordenskjöld Coast, on the E coast of Graham Land. Surveyed by FIDS from Base D in Nov. 1947 and Sept. 1955. So named by UK-APC on Sept. 4, 1957, for its wall-like appearance when seen from the SW. US-ACAN accepted the name in 1963.

Muralla de Ébano *see* **Ebony Wall**

Muramatsu, Susumu. b. 1885, Yamanashi, Japan. 2nd engineer on the *Kainan Maru* during the first half of Shirase's Japanese South Polar Expedition of 1910-12. For the second half he replaced Keiichi Tada as expedition secretary. He died in 1927.

Punta Muratto *see* **Berlioz Point**

The *Murature*. A 1030-ton Argentine Navy patrol ship, 77 m long, built by the Arsenal Shipyard, at the naval base at Río Santiago, in 1944, and named for José Luis Murature (*see* **Punta Wensley**). Sister ship of the *King*, she was capable of 18 knots, and could carry 180 men. She took part in ArgAE 1946-47, under the command of Capitán de corbeta Enrique Albani (he was skipper from Dec. 30, 1946 to Sept. 14, 1947). On March 17, 1947 she was in at Port Lockroy, with the *King*, and still under Capt. Albani. She was back for ArgAE 1947-48 (Captain Adolfo V. Cordeu, from Sept. 14, 1947 to Dec. 30, 1948). She became part of the Fuerza Naval del Plata, and took an active part in the 1955 revolution in Argentina. She was still going, in magnificent condition, in 2009, she and the *King* being the oldest ships of the fleet.

Canal Murature *see* **Canal Borrowman**

Punta Murature *see* **Punta Wensley**

Murayama, Masayoshi. b. 1918, Japan. One of the great forces of Antarctic exploration. He took part in JARE I (1956-58), was deputy leader of JARE II (1957-59) and JARE III (1958-60), and was leader of the 1959 wintering-over party at Showa Station. He was also leader of JARE V (1960-62), and led the 1961 wintering-over party at Showa Station. He was leader of JARE VII (1965-67), going south on the *Fuji* (Murayama had been instrumental in getting the old *Soya* replaced by the *Fuji*), although he did not winter-over that season. He led JARE IX (1967-69), and on Sept. 8, 1968, as base leader at Showa Station for the 1968 winter, he led an 11-man team out of Ongul Island, and on Dec. 19, 1968, they arrived at the South Pole. On Feb. 16, 1969, they returned to base, after 3219 miles, the longest ever Antarctic trek. He was the first Japanese leader to reach the Pole overland. He led JARE XV (1973-75), on the *Fuji*, but did not winter-over. In 1988 he landed at the North Pole in a chartered plane, thus becoming the first Japanese to reach both poles. He died on Nov. 6, 2006.

Murayama Crests. 79°12' S, 158°34' E. A group of about 4 peaks or nunataks, the highest rising to 2020 m, 6 km NNE of Kanak Peak, in the Cook Mountains. Named by US-ACAN in 2001, for Haruta Murayama, of Yokohama National University, geochemist with JARE in the McMurdo Dry Valleys in 1981-82.

Mount Murch. 84°38' S, 65°25' W. A small mountain, rising to 1100 m, 8 km S of Mount Suydam, in the SW part of the Anderson Hills, in the central Patuxent Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Paul L. Murch, cook who wintered-over at Palmer Station in 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

[1]**Mount Murchison**. 67°19' S, 144°15' E. A dome-shaped, mostly snow-covered mountain, rising to 567 m, on the W side of Mertz Glacier, about 16 km SW of the head of Buchanan Bay, in George V Land. Discovered by AAE 1911-14, and named by Mawson for Roderick Murchison (1848-1921), banker of Melbourne, and a patron of the expedition. US-ACAN accepted the name in 1950, and ANCA followed suit.

[2]**Mount Murchison**. 73°25' S, 166°18' E. A very prominent mountain, rising to 3500 m, and marking the high point on the rugged divide between Fitzgerald Glacier and Wylde Glacier, westward of Lady Newnes Ice Shelf, in the Mountaineer Range of Victoria Land. Discovered in Jan. 1841 by Ross, and named by him for Scottish geologist Roderick Impey Murchison (1792-1871; knighted in 1863; created a baronet in 1866), general secretary of the British Associ-

ation, and, in the 1840s and 1850s, three-time president of the Royal Geographical Society. US-ACAN accepted the name, and NZ-APC followed suit.

Murchison Cirque. 80°42' S, 24°33' W. A glacier-filled cirque between Kuno Cirque and Arkell Cirque, on the S side of Holmes Summit, on the S side of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Roderick Murchison (*see* [2]**Mount Murchison**). US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Murcray Heights. 78°05' S, 162°13' E. On the NW side of Mount Potter, in the Royal Society Range of Victoria Land. Sickle Ridge terminates at these heights. Named by US-ACAN in 1994, for the two brothers, David Guy Murcray (1924-2009) and Frank H. (1930-1992), and also Frank James (b. 1950; son of David), University of Denver, long term specialists in infrared spectroscopy in Antarctica.

Cabo Murdoch *see* **Cape Murdoch**

Cape Murdoch. 60°48' S, 44°41' W. Forms the SE tip of Mossman Peninsula, and the W entrance point of Scotia Bay, on the S coast of Laurie Island, in the South Orkneys. Charted on May 5, 1903, by ScotNAE 1902-04, and named by Bruce as Cape Burn Murdoch, for W.G. Burn Murdoch (*see under* **B**). It appears as such on the expedition's charts of 1903 and 1905, as well as a British chart of 1917. It was further charted by Petter Sørlle in 1912-13, and appears on his (and Hans Borge's) chart of 1913 as Stranger, named for Sigurd Stranger. The name should really have read Kapp Stranger, for that is how it appears on Sørlle's 1930 chart. It appears on an Argentine chart of 1930 as Cabo Murdoch. Re-surveyed by the Discovery Investigations in 1933, it appears on their 1934 chart as Cape Burn Murdoch. On an Argentine chart of 1945, it appears as Cabo Burn Murdoch, but on a 1952 chart of theirs as Cabo B. Murdoch. The name Cape Burn Murdoch was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and appears in the 1955 British gazetteer, and in the 1956 U.S. gazetteer. On Sept. 23, 1960 UK-APC accepted the name Cape Murdoch, and US-ACAN followed suit. Notwithstanding, the 1961 British gazetteer has it as Cape Burn Murdock (sic). The Argentine gazetteer of 1970 accepted the name Cabo Burn Murdoch, but today, the Argentines tend to call it Cabo Murdoch. The 1977 British gazetteer has it as Cape Murdoch.

Murdoch, Burn *see* **Burn Murdoch** (under **B**)

Murdoch Nunatak. 65°01' S, 60°02' W. A nunatak rising to about 320 m above the Larsen Ice Shelf, 5 km NE of Donald Nunatak, in the Seal Nunataks, off the Nordenskjöld Coast, on the E coast of Graham Land. On de Gerlache's 1900 map (reflecting BelgAE 1897-99), it appears erroneously as Île Jason, and on a 1946 USAAF chart it appears erroneously as Donald Nunatak. Surveyed and charted in Aug. 1947 by Fids from Base D, and named by them as Burn Murdoch Nunatak, for W.G. Burn Murdoch. UK-APC accepted that name on May 23, 1951, and US-ACAN followed suit in 1952. On July 7, 1959, UK-APC shortened the name to Murdoch Nunatak, and it appears as such in the 1960 British gazetteer. US-ACAN accepted the shortened name in 1963.

Muren. 73°44' S, 15°00' W. A mountain in the southernmost part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the brick wall").

Murgash Glacier. 62°30' S, 59°53' W. A glacier, flowing generally southward (5 km in an E-W direction and 4 km in a N-S direction), E and S of Lloyd Hill, and W of Tile Ridge, to enter McFarlane Strait between Telerig Nunatak and Triangle Point, on Greenwich Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for Murgash Peak, in the western Balkans, in Bulgaria.

Murihau Peak. 78°08' S, 163°10' E. A peak, rising to 2026 m (the New Zealanders say 2062 m), 2.5 km W of Armitage Saddle, off the N end of Chancellor Ridge (the W-E ridge at the head of Blue Glacier), in the Royal Society Range of Victoria Land. Named by NZ-APC on March 1, 1994. US-ACAN accepted the name later that year. Apparently, "murihau" is a Maori word meaning "area of gentle breeze." The area does not experience strong winds, and is relatively calm.

Murkwater Lake. 69°25' S, 76°13' E. An oval-shaped lake in the Larsemann Hills, it is situated in a very flat valley floor, and has a vertical snow and ice cliff on its N shore. Named by ANCA on Nov. 24, 1987.

Mys Murmanskij *see* **Cape Murmanskiy**

Cape Murmanskiy. 69°40' S, 13°20' E. An ice-cape projecting from the W side of the Lazarev Ice Shelf, about 40 km NNE of Leningradskiy Island, in Queen Maud Land. Mapped by SovAE 1959, and named by the USSR in 1964, as Mys Murmanskij, for their city of Murmansk. US-ACAN accepted the translated name in 1971.

Glaciar Murphy *see* **Murphy Glacier**

Mount Murphy. 75°20' S, 110°44' W. A massive, snow-covered volcano, with steep, rocky slopes, it rises to 2705 m, directly S of Bear Peninsula, overlooking the Walgreen Coast of Marie Byrd Land. It is bounded by Smith Glacier, Pope Glacier, and Haynes Glacier. Delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1955, for Robert Cushman Murphy (1887-1973) of the American Museum of Natural History, an authority on Antarctic and sub-Antarctic bird life. He was the naturalist on the *Daisy* during the 1912-13 summer at South Georgia (he never got south of 60°S). Algae and lichens are to be found here. Incidentally, Mr. Murphy returned to South Georgia on the *Lindblad Explorer* in 1970, as a tourist.

Murphy, Charles John Vincent "Charlie." b. Oct. 11, 1904, Newton, Mass., a twin. After Harvard, he became a reporter, and was asked by Byrd to be communications officer on the *Jacob Ruppert* during ByrdAE 1933-35. He wintered-over in 1934 as a member of the shore party, during the expedition. It was Murphy who actually wrote Byrd's 3 books about the expedition—*Little America*, *Discovery*, and (the most famous) *Alone*. In 1935 he joined *Time* magazine, and later *Life*. In 1941 he was one of the 323 passengers aboard the Egyptian steamer *Zamzam* when it was sunk by the Nazis. All survived. He covered World War II in Europe and the Pacific, and his series on Churchill led to his being asked to write the famous *A King's Story*, the biography of the Duke of Windsor, and then, in 1955, *The Heart Has its Reasons*, about the Duchess. In the late 1970s he and Joe Bryan wrote *The Windsor Story*. He also wrote *Little Toot*, the famous children's book about a tug boat. In 1952 he became chief of *Fortune* magazine's Washington bureau, a post he held until 1966, and continued to live in the capital until he moved to Vermont in 1980, the year his wife, Jane Brevoort Walden, died. He died on Dec. 29, 1987, in Grafton, Vt.

Murphy, E. Fireman on the *Aurora*, 1917, during BITE 1914-17.

Murphy, Herbert Dyce. Name also seen as Herbert Dyce-Murphy, son of Alexander Dyce Murphy and his wife Ada Maud Florence Hopkins. b. Oct. 18, 1879, Como, South Yarra, Melbourne. He spent part of his childhood in England, and as a schoolboy went 3 times to the Arctic with his uncle, Sir William Waller, on the yacht *Gladiator*. After Oxford he spent some time as a spy, then volunteered for BAE 1907-09, but was turned down as being too effeminate. However, the Australians didn't object to that quality, and he went on AAE 1911-14, as a dog handler and in charge of stores. Mawson refers to "his services cheerfully rendered." After the expedition he ran a sheep station in Whittlesea, Victoria, but continued to act as ice master on Norwegian sailing ships. He moved to Mount Martha and in the 1930s ran a home for under-privileged children. On Feb. 13, 1934, at Toorak, he married Muriel Idrene Nevile Webster, retired from sailing in 1965, and died on July 20, 1971, in Mornington. This has been an underplayed entry, partly because in 2001 Heather Rossiter wrote his biography, *Lady Spy, Gentleman, Explorer: The Life of Herbert Dyce Murphy, the Most Extraordinary Australian You've Never Heard Of*.

Murphy, John C. b. St. John's, Newfoundland. Boatswain on the *Bear of Oakland*, during the 2nd half of ByrdAE 1933-35.

Murphy, Thomas Leyden "Tom." b. July 15, 1927, Stirling, Scotland, son of C. Murphy. A civil engineer, he joined FIDS in 1955, as an assistant surveyor, and wintered-over as leader of Base W in 1956. He died in Aug. 1985, in Sleaford, Lincs.

Murphy Bay. 67°42' S, 146°19' E. A bay, about 12 km wide, just W of Cape Bage, between that cape and Penguin Point, on the coast of George V Land. Discovered in 1912, by AAE 1911-14, and named by Mawson for Herbert

Dyce Murphy. US-ACAN accepted the name, and ANCA followed suit.

Murphy Glacier. 66°54' S, 66°20' W. A glacier, flowing generally westward from Lampitt Nunatak to Orford Cliff and the general vicinity of Mount Goldring, and merging with Wilkinson Glacier before terminating in the E side of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. Following a ground survey by Fids from Base W in Sept. 1956, UK-APC, on July 7, 1959, named the upper part of this glacier as Goldring Glacier, for Denis Goldring, and the lower part (together with the S arm) as Murphy Glacier, for Tom Murphy. However, after FIDS cartographers had examined aerial photos taken by FIDASE in 1956-57, and further ground surveys conducted by Fids from Base W, between 1957 and 1959, UK-APC, on Sept. 23, 1960, dropped the name Goldring entirely, and named the entire glacier Murphy Glacier, but left the S arm unnamed. They did name Mount Goldring, however, that same day, for Mr. Goldring. The glacier appears this way on a 1961 British chart, and was the name and definition accepted by US-ACAN in 1964. The Argentines call it Glaciar Murphy.

Murphy Inlet. 71°59' S, 98°02' W. An ice-filled inlet with 2 parallel branches at its head, indenting the N coast of Thurston Island for about 28 km between Noville Peninsula and Edwards Peninsula. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Charlie Murphy. Originally plotted in 71°56' S, 98°03' W, it has since been replotted.

Murphy Peak. 77°59' S, 164°04' E. A prominent, partly ice-covered peak, rising to 1280 m, at the S side of Salmon Glacier, about 4.5 km SW of Haggerty Hill, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992, for Robert L. Murphy, Holmes & Narver manager, 1976-80 and 1990-92.

[1]**Murphy Rocks**. 68°14' S, 78°44' E. Two rounded, dark-gray rocks in the sea, about 200 m in diameter, and about 3 km offshore, in the Vestfold Hills. An ANARE survey station (NM/S/268) was established here in Jan. 1979. Brian Murphy made extensive surveys in the Vestfold Hills in 1978-79, including Doppler fixes, a tellurometer survey, and a site survey of Davis Station. Named by ANCA on Oct. 18, 1979.

[2]**Murphy Rocks**. 77°35' S, 144°55' W. Rock outcrops, 20 km SE of Mount West, on the broad ice-covered ridge between Hammond Glacier and Boyd Glacier, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Dion M. Murphy, USN, aviation machinist's mate and helicopter flight crewman in Antarctica during OpDF 68 (i.e., 1967-68).

Murphy Valley. 77°26' S, 161°47' E. An upland valley, opening N to Victoria Valley, on the NE side of Mount Booth, in the E part of the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Kenneth W. Murphy, Jr., USGS cartographic technician, a member of the USGS satellite surveying teams at Pole Station for the winters of 1981 and 1987. NZ-APC accepted the name on Nov. 30, 2004.

Cabo Murray *see* [1]**Cape Murray**

Caleta Murray *see* **Murray Harbor**

Cap Murray *see* [1]**Cape Murray**

[1]**Cape Murray**. 64°21' S, 61°38' W. A cape forming the NW end of Murray Island (or Bluff Island, as the British call it), and also the W entrance point of Murray Harbor, off the Danco Coast, on the W coast of Graham Land. Roughly charted by Hoseason on the *Sprightly* in 1824, and named descriptively by him as Bluff Point. It appears as such on Powell's 1828 chart, and also on a British chart of 1839. Roughly charted on Feb. 7, 1898, by BelgAE 1897-99. They thought it was part of the mainland, and named it Cap Murray, for Sir John Murray. It appears as such on Lecointe's 1899 and 1900 maps of the expedition. On Dr. Frederick Cook's 1900 English language version map of the expedition, it appears as Cape Murray, as it also does on British charts of 1908 and 1937. However, on a 1902 map prepared by de Gerlache, it appears as Pointe Bluff. SwedAE 1901-04 charted it as Kap Murray. Gould's 1941 map incorrectly positioned it on Hughes Bay. Cape Murray was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, on a British chart of 1961, and in the 1977 British gazetteer. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer show it as Cabo Murray.

[2]**Cape Murray**. 79°35' S, 160°11' E. A low, mainly ice-covered coastal bluff, at the N side of the mouth of Carlyon Glacier, along the W edge of the Ross Ice Shelf between Mulock Inlet and Barne Inlet. Discovered in Nov. 1903, on Barne's Western Journey Party, during BNAE 1901-04, and named by Scott for botanist George Robert Milne Murray (1858-1911), temporary director of the civilian scientific staff of the expedition, who had accompanied the *Discovery* as far as Cape Town in 1901. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. *See also* **Mount George Murray**.

Fondeadero Murray *see* **Murray Harbor**

Isla Murray *see* **Murray Island**

Islotes Murray *see* **Murray Islands**

Mount Murray. 76°09' S, 161°50' E. A sharp granite peak, showing evidence of glaciation, and rising to 1005 m, 13 km W of Bruce Point, on the N side of Mawson Glacier, and about 8 km SE of Mount Smith, in the Prince Albert Mountains of Victoria Land. First charted by BAE 1907-09, and named by them for James Murray. US-ACAN accepted the name in 1949, and NZ-APC followed suit.

Murray. b. Conn. Crew member on the *Wasp*, 1822-24.

Murray, Cyril Aubrey "Bill." b. Dec. 2, 1923, Glen Falls, NY, son of British draftsman Cyril Aubrey Murray and his Italian wife Silvia Ilaria Bergna. He joined the Royal Navy during World War II, and in 1958 joined FIDS, as a surveyor, wintering-over at Base D in 1959, and at Base F in 1960, the second year also as base leader. He died in Aug. 1990, in Huntingdon.

Murray, James. b. 1865, Glasgow. He married in 1892. In 1902 Sir John Murray took him on as biologist on the Scottish Lakes Survey. He was biologist on the *Nimrod*, during BAE 1907-08, and was in charge of Cape Royds when Shackleton was away. He was lost in the Arctic in Feb. 1914, with A.F. Mackay, during the Stefansson expedition.

Murray, John. b. March 30, 1831, Cobourg, Ontario, to Scottish immigrant parents. He studied in Scotland, and in 1868 left for Spitzbergen as a ship's surgeon. In 1872 he went on the *Challenger* Expedition as oceanographer (he was the first to use the term "oceanography," and has been called "the father of oceanography"), and naturalist in charge of bird specimens, and concerned with pelagic organisms and ocean deposits. He took over the editing of the expedition report, 50 volumes completed by 1896. He believed strongly in Antarctic research, was a patron of BelgAE 1897-99, and was knighted in 1898. He died on March 16, 1914, in a car accident near Kirkliston, West Lothian, Scotland.

Murray, William. b. 1871, Peterhead, Aberdeenshire, but raised in nearby Stirling Village, Boddam, son of blacksmith John Murray and his wife Jessie Soutter. Trained as a baker. 2nd cook on the *Scotia*, during ScotNAE 1902-04.

Murray Bay *see* **Murray Harbor**

Murray Canyon. 65°45' S, 73°00' E. A submarine feature off the Amery Ice Shelf. Named by international agreement for George Murray (*see* **Cape Murray**).

Murray Dome. 70°42' S, 67°12' E. A dome-shaped rock feature, with flat areas to the N and E of the feature, about 5.5 km SE of Mount McKenzie, in the Amery Peaks, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for D. Lyndon "Lyn" Murray, medical officer who wintered-over at Wilkes Station in 1964. The year before, 1963, he had wintered-over at Macquarie Island. US-ACAN accepted the name in 1967.

Murray Dry Valley. 71°36' S, 170°00' E. A low plateau, over 1.5 km wide, and sloping toward the sea, near Murray Glacier, in Oates Land. Named (inappropriately) by Campbell's Northern Party, during BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Murray Foreland. 74°00' S, 114°30' W. A high, ice-covered peninsula, about 30 km long and 16 km wide, forming the NW arm of the larger Martin Peninsula, on the coast of Marie Byrd Land. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN for Grover Elmer Murray (1916-2003), NSF geologist (and a member of their board of directors from 1964), and president of Texas Tech from 1966 to 1976 (Texas Tech in Lubbock has sent down several expeditions to Antarctica).

Murray Glacier. 71°39' S, 170°00' E. A valley glacier, 30 km long and about 4 km wide, with

a face on Colbeck Bay, it flows seaward along the E side of Geikie Ridge, mainly W of Duke of York Island, in the Admiralty Mountains, and its terminus coalesces with that of Dugdale Glacier, where both glaciers discharge into the S end of Robertson Bay, in Oates Land, along the N coast of Victoria Land. First charted by BAE 1898-1900, and named by Borchgrevink for Sir John Murray. US-ACAN accepted the name, and NZ-APC followed suit.

Murray Harbor. 64°21' S, 61°35' W. A small harbor, E of Cape Murray, on the N side of Murray Island, between that island and Challenger Island, off the Danco Coast, on the W coast of Graham Land. It was charted as Murray Bay by Lester and Bagshawe during the British Imperial Antarctic Expedition of 1920-22. They also mapped it (either at that time, or on their later charts) as Cape Murray Harbour and Cape Murray Bay. It is possible that they were the ones who gave it the name, but it may have been the local whalers. Either way, it was named in association with Cape Murray. On an Argentine chart of 1949 it appears as Fondeadero Murray, but on one of their charts of 1954 as Caleta Murray, that latter name being accepted by not only the 1970 Argentine gazetteer but also the 1974 Chilean gazetteer. UK-APC accepted the name Murray Harbour on Sept. 23, 1960, and it appears as such on a British chart of 1961. US-ACAN accepted the name Murray Harbor in 1965.

Murray Island. 64°22' S, 61°34' W. An island, 10 km long, it forms the SW entrance of Hughes Bay, off the Danco Coast, on the W coast of Graham Land. Discovered from the *Sprightly* in 1824, it appears on Powell's 1828 map. Roughly mapped by BelgAE 1897-99, but as part of the mainland. Its insular status was proved in 1922 by the whale catcher *Graham* passing through the channel separating it from the mainland, and it appears as such on a 1938 British chart. ChilAE 1946-47 surveyed it, and named it Islote Teniente Kopaitic, for Boris Kopaitic O'Neill (*see* **Kopaitic Island**). It appears as such on their 1947 chart. On a 1954 Argentine chart, it appears as Isla Murray, named in association with Cape Murray, the seaward extremity of the island. It appears as such in the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956-57. On Sept. 23, 1960, UK-APC named it (for themselves only) as Bluff Island, in order to preserve the original naming of Cape Murray (which was Bluff Point). This decision had nothing whatever to do with the fact that if they had named it Murray Island, it would have been copying an Argentine name. It appears as such on a British chart of 1961. On a Chilean chart of 1962 it appears as Isla Gándara, named for Jorge Gándara Bofill (*see* **Gándara Island**), and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected the proposed Isla Teniente Kopaitic and Islote Kopaitic). US-ACAN accepted the name Murray Island in 1965.

Murray Islands. 60°47' S, 44°31' W. A group of small islands, 1.9 km SSE of Cape Whitson, off the S coast of Laurie Island, in the South Orkneys. Discovered and roughly charted in Jan. 1823, by Matthew Brisbane (under the direction of Weddell), and named by Weddell as Murry's Islands, which really should have read Murray's Islands, for Scotsman James Murray (1780-1847), of Cornhill, London, maker of the chronometers used on Weddell's voyage. They appear on Weddell's chart published in 1825. On Powell's 1831 chart they appear as Murray Islands, as they do on an 1839 British chart. On the 1838 chart drawn up by FrAE 1837-40, they appear as Îles Murray, but on Vincendon-Dumoulin's 1847 atlas they appear misspelled as Îles Murroys. On Friederichsen's 1895 German map they appear as Murray Inseln. On Sept. 23, 1903, they were re-surveyed by ScotNAE 1902-04, and they appear on Bruce's 1903 chart as Murray Isles. Petter Sørlle made a running survey of the South Orkneys in 1912, and charted this group as Morray Islands. On Sørlle and Hans Borge's chart of 1913, they appear singularized as Murrai Island. On a British chart of 1916 they appear as Murray Islets, but on Sørlle's 1930 chart they appear as Murray Øya. On an Argentine chart of 1930, they appear as Islotes Murray. Re-surveyed by the Discovery Investigations in 1933, they appear as Murray Islands on their 1934 chart. On an Argentine chart of 1947 they appear singularized as Isla Murray, but on Moneta's Argentine chart of 1951 they appear as Islas Murray. The name accepted by US-ACAN in 1952 was Murray Islets, and UK-APC followed suit with that naming on Sept. 20, 1955. On July 7, 1959, UK-APC redefined them as Murray Islands, and US-ACAN accepted that new name in 1963. The Argentine gazetteer of 1970 accepted the name Islotes Murray.

Murray Isles *see* **Murray Islands**

Murray Islets *see* **Murray Islands**

Murray Monolith. 67°47' S, 66°54' E. A rock outcrop rising to 370 m above sea level, it is actually the detached front of Torlyn Mountain, between 6 and 9 km E of Scullin Monolith, on the coast of Mac. Robertson Land. Discovered in Jan. 1930, by BANZARE 1929-31, and named in Feb. 1931 by Mawson, for Sir George Murray (1863-1942), chief justice of South Australia, chancellor of the University of Adelaide, and a patron of BANZARE 1929-31.

Murray Pond. 77°33' S, 160°55' E. A pond, 0.6 km ESE of Gupwell Pond, and 1 km W of Connell Pond, in the feature called Labyrinth, in Wright Valley, in the McMurdo Dry Valleys of Victoria Land. It is the westernmost of 3 aligned ponds S of the E part of Hoffman Ledge. Named by US-ACAN in 2004, for D.F.C. Murray, a driller with the NZ drilling team during the McMurdo Dry Valleys Drilling Project, 1973-76. NZ-APC accepted the name on Nov. 8, 2006.

Murrin, John. Seaman and deckhand on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Murrish Glacier. 71°02' S, 61°45' W. A glacier, about 24 km long, on the E side of Palmer Land, it flows ENE to the N of Stockton Peak and Abendroth Peak, and merges with the N side of Gain Glacier before the latter enters the Weddell Sea at the Larsen Ice Shelf, opposite (i.e., west of) Morency Island, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS from these efforts. Named by US-ACAN in 1976, for biologist David Earl Green Murrish (b. Jan. 18, 1937, Glasgow, Mont.), leader of an Antarctic Peninsula bird study program in the summers between 1972 and 1975. UK-APC accepted the name on July 21, 1976.

Murry Peak *see* **Mount Nemesis**

Murrys Islands *see* **Murray Islands**

Mursteinane. 73°42' S, 14°50' W. Small mountain crags NE of the mountain the Norwegians call Muren, in the S part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the bricks"), in association with Muren.

Murtaugh Peak. 85°41' S, 130°15' W. A sharp peak, rising to 3085 m, surmounting a ridge 6 km WNW of Mount Minshew, in the Wisconsin Range of the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1966, for John Graham Murtaugh, geologist with the Ohio State University geological party to the Horlicks in 1964-65.

Musala Glacier. 62°32' S, 59°37' W. A glacier, extending 3.7 km in an E-W direction, and 2 km in a N-S direction, flowing eastward into Bransfield Strait N of Fort Point, on Greenwich Island, in the South Shetlands. It is bounded by Vratsa Peak to the SW, by the central Breznik Heights to the W, and by a low ridge bordering Hardy Cove to the NE. Named by the Bulgarians on Nov. 4, 2005, after Musala Peak, in Rila Mountain, the highest peak in Bulgaria and at the same time in the entire Balkan Peninsula.

Muschelbach. 62°10' S, 58°58' W. A little stream that flows W from the little lake the Germans call Muschelsee, into Muschelbucht, at Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Muschelbucht. 62°10' S, 58°59' W. A small bay, within Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Muschelsee. 62°10' S, 58°57°W. A little lake W of Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. From this lake, Muschelbach flows W into Muschelbucht.

Museum Ledge. 84°45' S, 113°48' W. A flat sandstone bed about 25 m long and between 9 and 12 m wide, exposed by erosion, on the SW shoulder of Mount Glossopteris, in the Ohio Range of the Horlick Mountains. Named by Bill Long (*see* **Long Hills**) for the display of fossil wood found here. US-ACAN accepted the name in 1964.

Nunatak Mushka. 70°49' S, 66°10' E. The nunatak immediately N of Nunatak Sputnik, S

of Mount Afflick, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Mushketov Glacier. 71°20' S, 14°55' E. A large glacier, about 70 km long and 60 km wide, trending northeastward from the area between the Wohlthat Mountains on the W, and the Weyprecht Mountains, the Payer Mountains, and the Lomonosov Mountains on the E, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. SovAE 1958-59 re-photographed it aerially, and surveyed it from the ground, naming it Lednik Mushketova, for geologist and geographer Ivan Vasil'yevich Mushketov (1850-1902). US-ACAN accepted the translated name Mushketov Glacier in 1970. The Norwegians call it Mushketovbreen.

Gora Mushketova. 72°32' S, 68°21' E. A nunatak just NE of Lines Ridge, at the N end of the Mawson Escarpment. Named by the Russians.

Lednik Mushketova *see* **Mushketov Glacier**

Mushketovbreen *see* **Mushketov Glacier**

Ghiacciaio Mushroom. 74°09' S, 163°02' E. A glacier, 1.7 km long, opening toward Priestley Glacier, 4 km from the summit of Mount Levick, in Victoria Land. Named by the Italians on Feb. 22, 2002, for the shape of the glacier's terminus, which is rather narrow at the start, and then enlarges into a conical, dome-shaped front.

Isla Mushroom *see* **Mushroom Island**

Mushroom Hill *see* **Horatio Stump**

Mushroom Island. 68°53' S, 67°53' W. An island rising to an elevation of about 150 m above sea level, 16 km WSW of Cape Berteaux, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. It is ice-covered except for its SE face, which presents a cliff of bare rock. First surveyed and charted in 1936, by BGLE 1934-37, and named by them because it looks like a mushroom cap as seen from the air. It appears on Stephenson's 1940 map of that expedition, and also on a 1940 British chart. On a 1942 USAAF chart it appears as Mushroom Islands. On a Chilean chart of 1947, it appears fully translated as Isla Hongo. Re-surveyed by Fids from Base E in 1948-49. US-ACAN accepted the name Mushroom Island in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1956 U.S. Hydrographic Office chart it appears as Mushroom Islet. The Argentine gazetteer of 1970 accepted the name Isla Hongo, and the Chilean gazetteer of 1974 accepted Isla Mushroom.

Mushroom Islands *see* **Mushroom Island**

Mushroom Islet *see* **Mushroom Island**

Musialski Point. 62°04' S, 58°46' W. A cape between Grzybowski Bay and Wisniewski Cove, on the Joannes Paulus II Coast, on King George Island, in the South Shetlands. Named by the Poles in 1980, for Zdzislaw Musialski, air mechanic on PolAE 1980-81. The Chileans call it Punta Rocoso (i.e., "rocky point").

Muskeg Gap. 64°23' S, 59°39' W. A low isthmus at the N end of Sobral Peninsula, in Graham Land. It provides a coastal route which avoids a long detour around the peninsula. Surveyed by Fids from Base D in 1960-61, plotted by them in 64°25' S, 59°41' W, and named by UK-APC on Feb. 12, 1964, for the Bombardier Muskeg tractor. US-ACAN accepted the name later in 1964. Hard to believe, but the Argentines translated it as Istmo Almizclero (i.e., "musk deer isthmus"), and plotted it in 64°25' S, 59°45' W. The British plot it in 64°25' S, 59°41' W.

Muskegbukta. 70°10' S, 2°31' W. A small bay in the Fimbul Ice Shelf, on the Princess Martha Coast. Named by the Norwegians after the Muskeg tractor.

Muskegs. Canadian tractors in use in Antarctica. Fuchs took one on BCTAE 1957-58.

Cabo Musselman *see* **Cape Musselman**

Cape Musselman. 71°17' S, 61°00' W. A notable headland, composed of black rock, with a similarly small black rock cone forming its summit, it marks the SW side of the entrance to Palmer Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially in 1940 by members of East Base, during USAS 1939-41, and named by USAS for Lytton Musselman (q.v.), a member of the East Base party which sledged across the Dyer Plateau to the vicinity of Mount Jackson, which stands inland from this cape, and surveyed this cape from the ground. It appears on a 1943 U.S. Hydrographic Office chart. On a 1946 USHO chart, the name refers erroneously to Cape Healy, and, as a consequence, it appears on a 1952 Argentine chart as Cabo Healey (sic). US-ACAN accepted the name Cape Musselman in 1947. In Nov. 1947, a combined sledging team of personnel from RARE 1947-48 and Fids from Base E surveyed it again from the ground. It appears on a 1949 Argentine chart as Cabo Musselman, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. UK-APC accepted the name Cape Musselman on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Musselman, Lytton C. b. March 24, 1911, Beloit, Wisc., son of machinist and diesel machine operator John Ellery Musselman and his wife Myrtle Mayo. On May 21, 1938, he was appointed 2nd Lt., U.S. Infantry Reserve, and from Aug. 1, 1938 to Sept 30, 1939, he was on active duty with the Civilian Conservation Corps. He was communications man and dog driver at East Base during USAS 1939-41. On Nov. 5, 1941, he went on extended active service with the Army, but in 1942, while stationed at Fort Knox, he blotted his copybook by being found guilty of fraud and forgery. In 1946 he married 23-year-old Roberta A. Roberts (they were divorced in Los Angeles in July 1967). He died on April 27, 1968, in Los Angeles.

Musson Nunatak. 71°31' S, 63°27' W. A pyramidal nunatak, rising to about 2100 m, 16 km S of Mount Jackson, at the E margin of the Dyer Plateau, in central Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for John M. Musson, USN, photographer and member of the cartographic aerial mapping crew of LC-130 Hercules aircraft with VX-6, in Antarctica, 1968-69. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mussorgsky Peaks. 71°30' S, 73°19' W. Two rocky peaks rising to 500 m above sea level, overlooking the N shore of Brahms Inlet, between that inlet and Mendelssohn Inlet, 10 km NW of Mount Grieg, on Derocher Peninsula, in the SW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, from air photos taken by RARE 1947-48, and plotted by him in 71°22' S, 73°36' W. Named by UK-APC on March 2, 1961, for Russian composer Modeste Petrovich Mussorgsky (1839-1881). US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, as such, the feature appears in the 1977 British gazetteer.

Must, Ole. b. 1878. He was a Sami from northern Norway, and one of the two Lapp dog-handlers who wintered-over with Borchgrevink on BAE 1898-1900. He died in 1934.

Gora Musy Dzhalilja *see* **Mount Dzhalil'**

Mutel Peak. 76°31' S, 146°03' W. A rock peak rising to 860 m, 3 km SW of Mount Iphigene, in the Ford Ranges of Marie Byrd Land. Photographed aerially and roughly plotted during ByrdAE 1928-30, and again by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Robert Lucien Mutel (b. June 22, 1946, St. Albans, NY), ionosphere physicist at Byrd Station in 1969, and later long associated with the University of Iowa.

Islas Mutilla *see* **Palosuo Islands**

Cabo Mutto. 63°18' S, 61°57' W. A little point, in the area of Cape Hooker, Low Island, in the South Shetlands. Named by the Argentines.

Caleta Mutton *see* **Mutton Cove**

Mutton Cove. 66°00' S, 65°39' W. An anchorage, 0.8 km NE of the S end of Beer Island, in the Biscoe Islands, off Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. It is formed by 4 small islands — Harp Island, Upper Island, Cliff Island, and Girdler Island. The SE coast of Beer Island shelters the cove from the W. Roughly charted between Feb. 17 and 21, 1935, by BGLE 1934-37, and named in 1937 in association with Red Ryder of that expedition, who had trained at Devonport. Mutton Cove, near Plymouth, was well known to Ryder. It appears on Rymill's 1938 map of that expedition, as well as on British charts of 1948 and 1950, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer, and on a British chart of 1960. It appears fully translated as Caleta Cordero on an Argentine chart of 1953, and that was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57. The anchorage itself (in contradistinction to, say, the

entire cove) appears on a 1957 Argentine chart as Fondeadero Caleta Cordero ("fondeadero" meaning "anchorage"). In the 1961 British gazetteer, it appears erroneously as Martin Cove. On a 1962 Chilean chart, the cove appears as Caleta Mutton, and that name was accepted by the Chilean gazetteer of 1974.

Isla Mutton Cove *see* **[2]Beer Island**

Mutton Cove Island *see* **[2]Beer Island**

Muus Glacier. 71°26' S, 61°36' W. A glacier flowing SE into the N side of Odom Inlet between Snyder Peninsula and Strømme Ridge, W of Cape Howard, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972–73. Named by US-ACAN in 1976, for David Muus, USARP oceaonographer on the *Northwind*, in the Ross Sea area, in 1971–72, and on the *Glacier*, in the Weddell Sea area, during the Weddell Sea Oceanographic Investigations of 1974–75. UK-APC accepted the name on July 21, 1976.

Myall Islands. 67°40' S, 45°43' E. An archipelago of 2 small islands, about 1.5 km offshore from Gaudis Point, in Alasheyev Bight, in the Thala Hills, in the area of Molodezhnaya Station, in Enderby Land. By far the bigger of the group is about 550 m long, and 0.4 km wide. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for the Australian tree. US-ACAN accepted the name in 1965.

Mount Myers. 72°07' S, 170°02' E. A coastal mountain rising to 645 m, near the center of Honeycomb Ridge, on the Borchgrevink Coast of Victoria Land. The mountain is ice-covered except for the E slope, which is marked by a triangular-shaped cliff that towers above the shore of Moubray Bay, on the Ross Sea. Named by US-ACAN in 2006, for Charles E. Myers, of the NSF's Office of Polar Programs, 1974–2005, who drafted language for use in the legislation of the Antarctic Conservation Act of 1978.

Myers Glacier. 72°16' S, 100°07' W. A valley glacier, about 11 km long, flowing SW from Mount Noxon, on Thurston Island, to the Abbot Ice Shelf, in Peacock Sound. Delineated from air photos taken by VX-6 in Jan. 1960. Named by US-ACAN in 1960, for Lt. (jg) Dale P. Myers, USN, helicopter pilot on the *Burton Island* in the area during the USN Bellingshausen Sea Expedition of Feb. 1960. Originally plotted in 72°14' S, 100°18' W, it has since been replotted.

Mygehenget. 74°52' S, 11°23' W. A rock face in the southernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the three Myge brothers — Erling (b. 1906), Peder (b. 1909), Sverre (b. 1913), all laborers in the Stavanger area of Norway, who became Communist Resistance leaders during World War II. Peder and Sverre were killed by the Gestapo in 1943, and Erling was arrested at the end of the war.

Mylius, Axel. Flight mechanic specialist on GermAE 1938–39. It is difficult to believe that someone with such a singular name could be so elusive.

Myosotisnunatak. 73°01' S, 161°30' E. A somewhat isolated nunatak, due E of Waring Bluff, in the Sequence Hills of Victoria Land. Named by the Germans.

Myoto Islands *see* **Meoto Rocks**

Myrcha Point. 62°03' S, 58°07' W. A rocky promontory in front of Polonia Glacier, King George Bay, King George Island, in the South Shetlands. Named by the Poles in 1981, for biologist Andrzej Myrcha, a member of PolAE 1977–78 and PolAE 1979–80.

Îles Le Myre de Vilers *see* **Vedel Islands**

Myres, John *see* **USEE 1838–42**

Myriad Islands. 65°05' S, 64°25' W. A (still incompletely charted) scattered group of small islands, including Flank Island and Final Island, and also rocks, extending for 8 km WNW of the Dannebrog Islands and 6 km NW of the Vedel Islands, on the N side of French Passage, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934–37. ChilAE 1951–52 individualized them as a group, and named them Islotes Jorquera, for Pedro Jorquera Goicolea (*see* **Jorquera Glacier**), who was on board the *Leucotón* that season. That name appears on a Chilean chart of 1962, and was accepted by the 1974 Chilean gazetteer. They were photographed aerially by FIDASE in 1956–57, and (before the FIDASE photos were analyzed by FIDS cartographers) they appear on a 1958 British chart as part of the Dannebrogs. They were individualized as a group and so named by UK-APC on July 7, 1959, because of the large number of islands in the group. It appears as such on a British chart of 1960. US-ACAN accepted the name in 1971.

Île Mystère. 66°40' S, 138°57' E. An island in the Géologie Archipelago. Named by the French on Feb. 16, 2010 ("mystery island").

Mysteries. These are some of the more famous Antarctic mysteries: Was Edwards Island the same as Deception Island? What was the mysterious New South Greenland discovered by Capt. Robert Johnson in 1821–22? The ancient Piri Reis map (*see* **Mapping of Antarctica**) depicts Antarctica as an ice-free continent. How? And why? Why are there oases in Antarctica? When was Français Glacier formed? What is the true story of the *Jenny*? In 1893 Carl Anton Larsen discovered, on Seymour Island, 50 clay balls neatly arranged on small clay pillars, which seemed to have been fashioned by human hands. If they were, who left them? When Fids were surveying Whistling Bay in 1948, they heard curious and still unidentified whistling sounds in the area. They would have recognized the sound of whales, so what were they?

Mysticeti *see* **Baleen whales**

N.A.F. McMurdo *see* **McMurdo Station**

Mount N.D. Lorette *see* **Mount Lorette**

N. Persson Island *see* **Persson Island**

The N.T. *Nielsen-Alonso* *see* **The *Nielsen-Alonso***

Mount Naab. 76°36' S, 160°56' E. Rising to 1710 m, it surmounts the E part of Eastwind Range in the Convoy Range. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for Capt. Joseph W. "Joe" Naab, Jr. (b. July 27, 1913, NY, son of test car driver Joe Naab and his wife Anna. d. Dec. 12, 1980, Brunswick, Me.), of the U.S. Coast Guard, who served in World War II, and was commander of the *Eastwind*, 1960–61 and 1961–62. He retired on June 30, 1969.

Nabbodden *see* **Tilley Nunatak**

Nabbøya. 69°16' S, 39°35' E. A small but high bare rock island 1.5 km W of Hamnenabben Head, in the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers, who also named this feature. Name means "the peg island." US-ACAN accepted the name, without modification, in 1968.

Nabbvika *see* **Tilley Bay**

Massif Nabljudenij. 72°45' S, 64°15' E. In the S part of the Prince Charles Mountains. Named by the Russians.

Punta Nacella. 62°28' S, 60°47' W. A small point forming the extreme N of Playa El Remanso, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by scientific personnel of the Instituto Antártico Chileno during ChilAE 1990–91, for the many shells they found here of the Antarctic mollusk Nacella, the most abundant mollusk on the shores of the islands in the South Shetlands.

Nadeau Bluff. 84°04' S, 175°09' E. A mainly ice-covered bluff, just SW of Giovinco Ice Piedmont, it juts out into Canyon Glacier from the E side of that glacier. Named by US-ACAN in 1966, for Francis A. Nadeau, Jr. (b. April 10, 1929, Ticonderoga, NY. d. May 11, 1989), RMCM (master chief radioman), who joined the U.S. Navy in June 1946, and was a member of the support party at McMurdo Station in the winter of 1963. He retired in May 1966.

Gora Nadezhda. 72°44' S, 64°10' E. A hill in the S part of the Prince Charles Mountains. Named by the Russians.

The *Nadezhda Krupskaya*. A small passenger liner, named for the Russian revolutionary, chartered by the Arctic and Antarctic Research Institute, Leningrad, for use during the 17th SovAE, 1971–73. She left Leningrad in July 1972, and 4 weeks later was in Antarctica. She sailed back to the USSR in early March 1972. Skipper was Aleksandr Aleksandrovich Aristov.

Ostrov Nadezhdy *see* **Nadezhdy Island**

Poluostrov Nadezhdy *see* **Nadezhdy Island**

Nadezhdy Island. 70°44' S, 11°40' E. A bare rock island, 1.3 km long, on the N side of the lake the Norwegians call Sundsvatnet, just off the N central side of the Schirmacher Hills, on the Princess Astrid Coast, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938–39. Mapped by SovAE 1961, and named by the USSR in 1961 as Poluostrov Nadezhdy (i.e., "hope peninsula"), and the Norwegians called it Nadezhdyhalvøya (which means the same thing). Its insular status has since been recognized, however, and the Russians now call

it Ostrov Nadezhdy (i.e., "Nadezhdy island"). (*See also* **Sundsvassheia**.

Nadezhdyhalvøya *see* **Nadezhdy Island**

Nadir Bluff. 77°58' S, 160°27' E. Rising to 2355 m, it forms a shoulder-like projection from the E side of Mount Feather, in the Quartermain Mountains of Victoria Land. Surveyed by the New Zealanders, and named by NZ-APC in 1992. US-ACAN accepted the name in 1993.

Nadjakov Glacier. 64°45' S, 62°23' W. A glacier, 5.5 km long and 2 km wide, on Arctowski Peninsula, it flows NNE to enter the head of Beaupré Cove, E of Stolze Peak, on the Danco Coast, on the W coast of Graham Land. Named by the Bulgarians on June 3, 2010, for Bulgarian physicist Georgi Nadjakov (1896-1981), who discovered the photoelectric effect essential to modern photocopying.

Gora Nadkarovaja. 71°31' S, 67°36' E. A nunatak, SW of the Fisher Massif, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Naeshornet *see* **Nashornet Mountain**

Naess Glacier. 70°22' S, 67°55' W. A small glacier flowing WNW from Creswick Gap, on the W coast of Palmer Land, into George VI Sound N of Burns Bluff, and separated from Chapman Glacier to the N by a rocky ridge. First surveyed in Oct. 1936, by BGLE 1934-37, and then again in 1949 by Fids from Base E. UK-APC named it on March 31, 1955 for Erling Dekke Naess (1901-1993), Norwegian manager of the Vestfold Whaling Company, and co-founder of United Whalers Ltd., who helped BGLE by providing facilities at Stromness (in South Georgia) for the refitting of the *Penola* in 1936. US-ACAN accepted the name later in 1955. It appears on a 1955 U.S. Hydrographic Office chart.

NAF McMurdo *see* **McMurdo**

Naga-iwa *see* **Naga-iwa Rock**

Naga-iwa Rock. 68°27' S, 41°31' E. A small, conspicuous, craggy, ice-free rock on land which juts out into the sea, W of Higashi-naga-iwa Glacier, 3 km E of Cape Akarui, about 25 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped from ground surveys and air photos taken by JARE 1957-59. Named Naga-iwa (i.e., "long rock") by the Japanese, on Oct. 1, 1962. In 1968, US-ACAN accepted the name Naga-iwa Rock. The Norwegians call it Langknatten (which pretty much means the same thing).

Nagagutsu Point. 69°41' S, 38°21' E. Also spelled Nagagutu Point. An ice-covered point forming the SE extremity of Padda Island, in the innermost part of Lützow-Holm Bay, on the Prince Harald Coast of Queen Maud Land. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by the Japanese from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them as Nagagutu-misaki (i.e., "boot point"). US-ACAN accepted the name Nagagutsu Point in 1968. The Norwegians call it Støvelodden (which means the same thing).

Nagagutu-misaki *see* **Nagagutsu Point**

Nagagutu Point *see* **Nagagutsu Point**

Mount Nagata. 71°21' S, 162°47' E. A mostly snow-covered mountain, rising to 2140 m, 3 km E of Mount Gow, in the Bowers Mountains. Named by US-ACAN in 1984, for Takeshi Nagata.

Nagata, Takeshi. b. June 24, 1913, Aichi, Japan. He graduated from Tokyo University, where he also got his doctorate in geophysics. Becoming a professor, he led JARE I (i.e., 1956-58), JARE II (i.e., 1957-59), and JARE III (i.e., 1958-60) (i.e., the first 3 Japanese Antarctic expeditions — the 2nd one having to be aborted due to thick ice). He masterminded the establishment of Showa Station during JARE I. He was back in Antarctica again, later, in the *Fuji*, and in 1968 was director of the University of Tokyo's Geophysical Institute. He was also, in his career, director of the Japanese National Institute of Polar Research, and was well-known as a pioneer in the study of paleomagnetism. He took part in JARE XXV in 1983-85. He died on June 3, 1991.

Nunatak Nahodka. 81°23' S, 28°21' W. One of the Whichaway Nunataks, on the S side of Recovery Glacier, to the W of the Shackleton Range. Named by the Russians for the city of Nahodka, on the Sea of Japan.

Caleta Nailon *see* **Mitchell Cove**

Naisbitt, Christopher. b. June 12, 1893, Sunderland, but raised partly in Cheshire, son of Thomas Naisbitt and his wife Anne Philliskirk. He worked for many years in Portugal, and then became a salesman for W.R. Grace & Co., of New York. On April 1, 1920, he left Liverpool on the *Baltic*, bound for the company's head office, arrived in New York on April 10, stayed a month, and then headed off for Rio. When Shackleton pulled into Rio on his last expedition, Naisbitt asked an officer from the British Club there to introduce him to the famous explorer, with the intention of going on the trip to Antarctica. Apparently, Naisbitt was dressed in a Palm Beach suit and a Panama hat, and Shackleton asked him if he had ever done a hard day's work in his life. Nevertheless, he was taken on, as ship's clerk and cook's assistant on the *Quest*, 1921-22. After the expedition, Frank Wild wrote, "Naisbitt's work has often been trying and difficult, but he has performed it uncomplainingly, and he has also done a great deal of useful clerical work." He went back to Rio in 1927, married, and during World War II was in British Army Intelligence, as a defense security officer, with the rank of sergeant major, based in Georgetown, British Guiana. Just after the war he was living in north London, and died toward the end of 1978, in Brent, Mdsx.

Naitou Jiao. 69°22' S, 76°19' E. A cape in the Larsemann Hills. Named by the Chinese.

Nakai Snowfield. 77°29' S, 161°31' E. About 1600 m above sea level, it occupies the col between Mount Hercules and Mount Jason, in the Olympus Range, in the McMurdo Dry Valleys. Named by US-ACAN in 2004, for Noboyuki Nakai, of the department of earth sciences, at Nagoya University, in Japan, a member of the Dry Valleys Drilling Project, 1973-76. NZ-APC accepted the name on Nov. 8, 2006.

Naka-nagaone. 72°34' S, 31°16' E. The middle one of three ridges running parallel with each other in the N part of the Belgica Mountains. Photographed aerially by JARE in 1976, and surveyed from the ground by JARE in 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "long central ridge).

Naka-no-roka. 72°34' S, 31°14' E. A valley in the N part of the Belgica Mountains. Photographed aerially by JARE in 1976, and surveyed from the ground by JARE in 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "central passageway").

Naka-no-seto *see* **Nakano-seto Strait**

Nakano-seto *see* **Nakano-seto Strait**

Nakano-seto Strait. 69°01' S, 39°33' E. A very narrow strait, between Ongul Island and East Ongul Island, in the E part of Lützow-Holm Bay. JARE 1957 discovered, photographed it aerially, and surveyed it, and Japanese cartographers mapped it from these efforts, naming it on Oct. 1, 1962, as Nakano-seto or Naka-no-seto (i.e., "central strait"). Its discovery was important in that, until then, what is now East Ongul Island was thought to be the NE part of Ongul Island. US-ACAN accepted the name Nakano-seto Strait in 1968.

Naka-no-tani. 69°13' S, 39°45' E. A glacial valley dividing the Langhovde Hills into two parts, N and S, on the E shore of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and roughly mapped from these photos by Norwegian cartographers in 1946. JARE surveyed it from the ground and photographed it aerially, between 1957 and 1962, and from this Japanese cartographers mapped it accurately, and named it on June 22, 1972. The name means "central valley."

Naka-no-ura. 69°01' S, 39°34' E. A cove deeply indenting the E part of Lützow-Holm Bay between Ongul Island and East Ongul Island. Mapped by the Japanese from ground surveys and air photos taken by JARE, 1957-62. Named by the Japanese on Nov. 24, 1981 (name means "central cove). The Norwegians descriptively call it Hornpollen (i.e., "the horn bay").

Nakasu-iwa. 71°39' S, 35°42' E. A small rock exposure, rising to 2049.6 m above sea level, in the vast moraine field that the Japanese call Ogiga-hara, in the S part of the Queen Fabiola Mountains. Surveyed by JARE in 1969, and mapped by Japanese cartographers, who named it on March 22, 1979. Name means "channel bar rock."

Islotes Nakaya *see* **Nakaya Islands**

Nakaya Island *see* **Nakaya Islands**

Nakaya Islands. 66°27' S, 66°14' W. A small group of islands in Crystal Sound, off Darbel Bay, 16 km NE of Cape Rey, on the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers in 1959, from aerial photos taken by FIDASE in 1956-57, and from surveys conducted by Fids from Base W in Sept. 1958. Named by UK-APC on Sept. 23, 1960,

for Japanese physicist Ukichiro Nakaya (1900-1962), of the University of Hokkaido (1932-62), specialist in single ice crystals and snowflakes. The feature appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call them Islotes Nakaya. Oddly, the feature appears singularized in the British gazetteer of 1974, as Nakaya Island. This may refer to the main island, or it many simply be an error.

Cape Nakayubi. 69°14' S, 39°39' E. A rocky point marking the S extremity of a U-shaped, dock-like peninsula which juts out into the sea like a finger from the W side of the Langhovde Hills, in Queen Maud Land. Photographed aerially by LCE 1936-37, and roughly mapped from these photos by Norwegian cartographers in 1946. It was accurately mapped by Japanese cartographers from ground surveys and air photos made by JARE between 1957 and 1962, and named by the Japanese on June 22, 1972, as Nakayubi-misaki (i.e., "middle finger point"), in association with Cape Koyubi ("little finger point"), 0.8 km to the NW. US-ACAN accepted the name Cape Nakayubi in 1975.

Nakayubi-misaki *see* **Cape Nakayubi**

Nakayubi-one. 71°54' S, 24°30' E. A projecting mountain ridge, the central one of 5 such, stretching northward in the middle part of the Brattnipane Peaks, 14 km NW of Mefjell Mountain, in the Sør Rondane Mountains. Photographed aerially by JARE in 1981-82, and again in 1986, and surveyed from the ground by JARE between 1984 and 1991. The Japanese named it on Oct. 18, 1988. The name ("middle finger ridge") is because the surveyors saw Brattnipane looking like a left hand. The Norwegians call this ridge Niperyggen (i.e., "projecting ridge").

Naka-zima. 68°57' S, 39°39' E. A small island midway between Showa Station and Tottsuki Point. Photographed aerially by LCE 1936-37, and mapped by Norwegian cartographers in 1946 from these photos. Surveyed from the ground by JARE in 1957, and named by the Japanese on Oct. 1, 1962 (name means "middle island").

Nalder, Roderick Harry W. "Rick." b. 1932, Barnet, Herts, son of Albert H. Nalder and his wife Daisy Carter. He joined FIDS in 1953, as a radio operator, and wintered-over at Base G in 1954. In 1964, in Surrey, he married Gillian D. Bryant, and they lived in Ruislip from 1964 to 1967, and in Harrow from 1968 to 1972. From 1977 to 1981 they were in Tunbridge Wells.

Nålegga *see* **Nålegga Ridge**

Nålegga Ridge. 72°39' S, 4°03' W. A narrow rock ridge marking the N end of the Seilkopf Peaks, in the westernmost part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Surveyed from the ground and photographed from the air by NBSAE 1949-52, mapped from these efforts by Norwegian cartographers, and named by them as Nålegga (i.e., "the needle ridge"). US-ACAN accepted the name Nålegga Ridge in 1966.

Skaly Nalivkina. 71°45' S, 12°47°E. Rocks in the S part of the Südliche Petermann Range, in the Wohlthat Mountains of Queen Maud Land. Named by the Russians for Dmitri Nalivkin (1889-1982), geologist famous for indexing the geological maps of Russia.

Namako-hyoga. 72°34' S, 31°16' E. A mountain glacier flowing SE, in the N part of the Belgica Mountains, at the edge of Queen Maud Land. Photographed aerially by JARE in 1976, and surveyed from the ground by JARE in 1979-80. Named by the Japanese, on Nov. 24, 1981, for its shape (name means "sea cucumber glacier").

The *Nambuk*. A 5549-ton, 104-meter South Korean stern trawler, built in 1974, for the Nambuk Fisheries Company, in Pusan, for research purposes. She was in Antarctic waters in 1978-79 (*see* **South Korea**), researching surimi (the Korean name for "krill"). She later became known as the *Nambuk-Ho*.

Nameless Glacier. 71°38' S, 170°18' E. Flows W from Adare Peninsula into Protection Cove, Robertson Bay, 3 km NE of Newnes Glacier, on the coast of northern Victoria Land. Surveyed, charted, and named in 1911, by Campbell's Northern Party during BAE 1910-13. It had been the only Robertson Bay glacier left unnamed by Borchgrevink during BAE 1898-1900. US-ACAN and NZ-APC both accepted the name.

Namigatadai. 67°56' S, 44°31' E. A terrace with a rugged surface, on Shinnan Rocks, at the W side of Shinnan Glacier, in Queen Maud Land. Photographed aerially by JARE in 1962, and surveyed from the ground by JARE in 1974. Named by the Japanese on March 12, 1977 ("wave-shaped terrace").

Cordón Namuncura *see* **Cordón Sikorsky**

Glaciar Namuncura *see* **Glaciar Huneeus**

Cape Nan Anderson *see* **Cape Anderson**

The *Nana*. A Noorduyn C-64 Norseman single-engine cargo plane developed in Canada for cold-weather operations, she was named by Ronne during RARE 1947-48 for the North American Newspaper Alliance for which his wife was a reporter. One of the 3 planes on the expedition, it was test flown in Antarctica on Sept. 14, 1947.

Nance Ridge. 84°23' S, 65°36' W. A rock ridge, at an elevation of 840 m above sea level, 3 km NE of Mount Yarbrough, in the Thomas Hills, in the N part of the Patuxent Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Vernon Lee Nance (b. 1934), USN, radio operator who wintered-over at Palmer Station in 1966. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

The *Nancy*. A 150-ton sealing brig, built in Amesbury in 1819, and owned by William Fettyplace, Joseph White, Stephen White, and Gideon Barstow. Registered in Salem, Mass., on Aug. 11, 1820, she was part of the Salem Expedition which spent the 1820-21 and 1821-22 seasons in the South Shetlands, anchored for a lot of the time in Clothier Harbor. Crew: Benjamin Upton (captain), Henry Russell (1st mate), John Furbush (2nd mate), Henry Cole, Thomas Milburn, M. Milburn, Jeremiah Sheldon, George Messer, Jonathan Pease, Josiah Bacon, Somers N. Larrabee, George W. Smith, John Walsh, Pinson Beckford, John Beckford, Nathaniel H. Sanderson, William Proaly, John Baldwin, George G. Scott, Jeremiah U. Vanderbilt, and Frederick Fanning. She would have wintered-over, but this letter, from a gentleman aboard, written on March 2, 1821, while at Yankee Harbor, explains why she didn't: "We have reconnoitred the coast to but very little extent; we have information, however, from boats passing to and from the different Islands. The country is very mountainous and rocky (resembling Gibraltar rock), and generally covered with snow and ice — with volcanoes. The coast is desolate and dangerous, being barricadoed with breakers and sunken rocks, which render it impossible to sail within 10 or 12 miles of the shore. The harbours are bad, being so near the sea — this [i.e., Yankee Harbor] is the best we have seen. Thousands of seals continually cover the beach and penguins are numberless. It being impossible to winter here, we shall repair to the Falkland Islands, and return here in the spring." And the *Nancy* did lay up in the Falklands between sealing seasons, and did return for the 1821-22 season, along with the rest of the fleet. She took in 2000 skins and 100 barrels of oil, and arrived back in Salem on May 27, 1822.

Islote Nancy. 64°21' S, 62°56' W. A small island, hard by Islote Diana, in the W part of the Omicron Islands, SE of Omega Island, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines. *See also* **Islote Diana**.

Nancy Automatic Weather Station. 77°55' S, 168°10' E. American AWS at an elevation of 25 m, on the Scott Coast of Victoria Land. It operated from Jan. 17, 1983 until Nov. 25, 1983. Named for the wife of Dr. Charles Stearns, founder of the AWS project.

Nancy Rock. 62°13' S, 59°06' W. A rock in water, off the N coast of Nelson Island, 3 km W of Flat Top Peninsula, King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK on Aug. 31, 1962, for the *Nancy*. It appears on a British chart of 1962. US-ACAN accepted the name in 1965.

Lake Nanda. 70°46' S, 11°43' E. In the Schirmacher Hills, on the Princess Astrid Coast of Fimbulheimen, in Queen Maud Land. Named by the Indians.

Nanheng Shan. 69°25' S, 76°04' E. A hill in the Larsemann Hills, on the SE shore of Prydz Bay. Named by the Chinese.

Nanok Deep. 68°40' S, 71°00' E. A submarine feature, actually a bathymetric deep, slightly elongated in a NE-SW direction but with irregular boundaries which are (as of this time of writing) ill-defined. It is over 500 m deep, and extends under the Amery Ice Shelf. Named by ANCA for the *Nanok S.* (see below).

The *Nanok S*. Real name *Nanok Sunder*. A 3000-ton Danish ship, 88.5 meters long, built in 1962 at the Svenborg Skibsvaerft shipyards, she was chartered by ANARE from A.E. Sørensen of Svenborg, to supply Australian bases,

1979-84. She had a crew of 24, and a passenger capacity of 24. She was ANARE's 3rd ship. Her skipper for the relevant ANARE seasons was Gisli Gudjonssen (1979-80, 1980-81, 1981-82, 1982-83, 1983-84). On Feb. 26, 1984 she struck an uncharted rock off Mawson Station, and was replaced with the *Icebird*.

Île Nansen *see* **Lavoisier Island**, [2]**Nansen Island**

Isla Nansen *see* [2]**Nansen Island**

[1]**Mount Nansen** *see* **Mount Fridtjof Nansen**

[2]**Mount Nansen**. 74°34' S, 162°36' E. A prominent tabular mountain, rising to 2740 m (the New Zealanders say 2377 m), with precipitous walls, and surmounting the steep E escarpment of the Eisenhower Range, just N of Reeves Glacier, and 17.5 km S of Mount Baxter, in Victoria Land. Discovered by BNAE 1901-04, and named by Scott for Fridtjof Nansen (1861-1930), the great Arctic explorer, who gave advice to Scott. US-ACAN accepted the name in 1947.

Nansen Ice Sheet. 74°53' S, 163°10' E. An ice shelf about 50 km long and 16 km wide, behind Terra Nova Bay, in Victoria Land. It is fed by Priestley Glacier and Reeves Glacier, and adjoins the N side of the Drygalski Ice Tongue. Explored by Edgeworth David's party of 1908-09 during BAE 1907-09, and by Campbell's Northern Party during BAE 1910-13. Debenham, on the latter expedition, called it the Nansen Sheet, for nearby Mount Nansen (the dominant feature in the area). Later, the name was changed slightly. The Italians installed an automatic weather station here, at an elevation of 50 m. US-ACAN accepted the name in 1950.

[1]**Nansen Island** *see* **Lavoisier Island**

[2]**Nansen Island**. 64°35' S, 62°06' W. The largest of the islands in Wilhelmina Bay, it lies in the outer part of that bay, off the Danco Coast, on the W coast of Graham Land. Discovered by BelgAE 1897-99. On Jan. 24, 1898, they charted this island and Enterprise Island together as one island, and de Gerlache named it Île Nansen, for Fridtjof Nansen, the Arctic explorer (*see* **Mount Nansen**). It was used as an anchorage by the *Solstreif* and other whalers in Jan. 1922, the whalers having for some time been aware that there were actually two islands here, and were calling them North Nansen Island and South Nansen Island. They were first charted as two islands by the British Imperial Antarctic Expedition of 1920-22, the names reflecting the whalers' naming of them (as mentioned above). Lester and Bagshawe (of the BIAE; actually, they were the BIAE at that point) also referred to them collectively as the Nansen Islands, as did the whalers, and they appear as such on a British chart of 1930 and also on a 1937 chart prepared by BGLE 1934-37 (both times plotted erroneously in 64°32' S, 61°58' W). The Argentines were in a similar position as regards the naming. On at least two 1953 charts they appear variously as Islas Nansen, and as Isla Nansen Sur and Isla Nansen Norte. On Sept. 8, 1953, UK-APC renamed the islands officially. North Nansen Island became Enterprise Island (q.v.), and South Nansen Island retained the name Nansen Island. They appear as such (with revised co-ordinates) in the British gazetteers of 1955 and 1960, and on a British chart of 1959. FIDASE photographed both islands aerially in 1956-57. US-ACAN accepted the new situation in 1965. Today the Chileans call it Isla Nansen, and the Argentines call it Isla Nansen Sur (their name for Enterprise Island is Isla Nansen Norte). To add to the confusion, there was another Île Nansen, to the south, named by Charcot (*see* **Lavoisier Island**).

Nansen Islands *see* **Enterprise Island**, **Nansen Island**

Isla Nansen Norte *see* **Enterprise Island**

Nansen Sheet *see* **Nansen Ice Sheet**

Isla Nansen Sur *see* [2]**Nansen Island**

Nansenisen. 72°30' S, 24°00' E. The inland icefield, blue in color, S and to 45°E of the Sør Rondane Mountains. Named by the Norwegians for Fridtjof Nansen (*see* **Mount Nansen**). The name is also seen as Nansenisen Icefield. Meteorites have been found here.

Nansenisen Icefield *see* **Nansenisen**

Nantai Shan. 62°14' S, 59°00' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Nanten-iwa. 71°58' S, 35°22' E. A small, reddish-colored rock exposure, 8 km NE of Kurakake-yama, in the isolated group of nunataks the Japanese call Minami-Yamato-nunatak-gun, about 40 km SW of the Queen Fabiola Mountains. Surveyed by JARE in 1973, and named by the Japanese on Nov. 24, 1981 (name means "the rock which breaks misfortune").

Nantes, Mario Juan. b. Montevideo. He joined FIDS in 1956, as a meteorologist, and wintered over at Base F in 1957 and 1959. In the early 1960s he visited Cambridge. He later became head of the Uruguayan Met Office.

Ensenada Nantucket *see* **Nantucket Inlet**

Nantucket Inlet. 74°35' S, 61°55' W. An ice-filled inlet, 10 km wide, it recedes 22 km in a NW direction between Smith Peninsula and Bowman Peninsula. In effect, it is a Weddell Sea indentation in the Lassiter Coast, on the SE coast of Palmer Land, just N of where the Ronne Ice Shelf meets the Antarctic Peninsula. Discovered on Dec. 30, 1940 on a flight from East Base during USAS 1939-41. It appears on a USAAF chart as Fran Inlet (sic). What this implies is unclear, but it might mean that it was originally named after the *Fram* (Finn Ronne was part of USAS. His father, Martin, had been sailmaker on the *Fram*. However, if it was named for this reason, it wasn't named by Finn Ronne, otherwise the feature would surely not appear on his 1945 map with the name Innes-Taylor Inlet, named for Alan Innes-Taylor. That name soon disappeared, as did Fran Inlet). It was also called Ickes Inlet for a while, named for Harold Ickes (*see* **Ickes Mountains**), but was soon renamed Nantucket Inlet, for Nantucket, Mass., home port for many of the early sealers to the South Shetlands, and it appears as such on a 1943 U.S. Hydrographic Office chart, and also on another 1943 American chart. It appears on a 1946 Argentine map, translated as Ensenada Nantucket, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. US-ACAN accepted the name Nantucket Inlet in 1947, but with the coordinates 74°15' S, 61°55' W. UK-APC accepted the name on Jan. 28, 1953, but with the coordinates 74°35' S, 61°48' W, based on the FIDS survey conducted by Dougie Mason of Base E in 1947. It appears as such in the 1955 British gazetteer. The coordinates were corrected on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1977 British gazetteer. The Americans plot it in 74°35' S, 61°45' W, as do the Chileans. The Argentines plot it the way the British do.

Nanwang Shan. 69°24' S, 76°19' E. A hill in the Larsemann Hills. Named by the Chinese.

Nanxingan Ling. 69°22' S, 76°23' E. A small peak in the Larsemann Hills. Named by the Chinese.

Roca Napier *see* **Napier Rock**

Napier, Cyrus. b. Nov. 13, 1914, Houston Co., Ga. son of farmer Lee N. Napier and his wife Emma. He was in the U.S. Navy, and was a steward on the *Northampton*, then, re-enlisting, served on the *Philadelphia* from Aug. 1938, leaving that ship in 1940. He was officer's cook 3rd class on the *Bear* during the 2nd half of USAS 1939-41. In 1943 and 1944, during World War II, he served as a cook 2nd class, and then 1st class, on the *Belleau Wood*. He was a chief steward when he retired. After the war he settled in Los Angeles, and died there on Jan. 30, 2010, aged 95.

Napier, Ronald Gordon "Ron." b. 1924, West Ham, London, son of William A. Napier and his wife Katherine Morley. He joined FIDS in 1954, as a general assistant and handyman, and left Dover on a ship chartered from Sweden, bound for the Falkland Islands, and from there to winter-over at Signy Island Station in 1955. Then, he was leader at Base G until he drowned on March 24, 1956 (*see* **Deaths**, 1956).

Napier, William. Captain of the *Venus* in the South Shetlands in 1820-21. He brought back several specimens of a lichen he found there.

Monte Napier Birks *see* **Mount Birks**

Mount Napier Birks *see* **Mount Alibi**

Napier Ice Rise *see* **Napier Island**

Napier Island. 69°14' S, 67°47' W. An island, 1.3 km long, near the SW end of Wordie Bay, in the SE part of Marguerite Bay, 20 km WNW of Mount Balfour, on the Fallières Coast, on the W coast of Graham Land. In Nov. 1958 Fids from Base E surveyed it and mapped it as an ice rise (which it was, back then) on the SW part of the Wordie Ice Shelf, and named it Napier Ice Rise, for John Napier (1550-1617), the Scottish inventor of logarithms. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. However, a U.S. Landsat image of Feb. 1989 showed that the Wordie Ice Shelf had receded eastward, leaving this ice rise as an island, and the name was changed accordingly by UK-APC, on June 15, 1999, to Napier Island. US-ACAN followed suit with the new naming on July 17, 2007.

Napier Mountains. 66°30' S, 53°40' E. A group of more or less separated peaks, the highest rising to 2300 m above sea level, this group extends for 60 km in a NW-SE direction from Mount Codrington, and centers on a point about 60 km S of Cape Batterbee, on the coast of Enderby Land. Discovered in Jan. 1930 by BANZARE, and named by Mawson as the Napier Range, for Thomas John Mellis Napier (known as John; and as Sir John after 1945) (1882-1976), South Australian Supreme Court judge, 1924-67, and chief justice, 1942-67. US-ACAN accepted the name in 1947. First visited in 1960, by an ANARE party. The term "mountains" has been deemed more appropriate than "range."

Napier Peak. 62°40' S, 60°19' W. Rising to 340 m, on the W side of Huntress Glacier, near the head of False Bay, Hurd Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on May 13, 1991, for Capt. William Napier. US-ACAN accepted the name. Last plotted by the UK, in late 2008.

Napier Range *see* **Napier Mountains**

Napier Rock. 62°10' S, 58°26' W. A rock in water, rising to 5 m above sea level, 2.3 km ESE of Point Thomas, in Admiralty Bay, King George Island, in the South Shetlands. Charted by FrAE 1908-10. Charted during an RN Hydrographic sketch survey on the *John Biscoe*, in 1951-52, but they plotted it 1 km ENE of where it should be. Named by UK-APC on Sept. 23, 1960, for Ron Napier. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Argentines call it Roca Napier. On Jan. 11, 1969, an RN Hydrograhic Survey unit flew over the area in a helicopter off the *Endurance*, and corrected the coordinates. The new coordinates were seen on the 1970 unit chart, and accepted by UK-APC on Dec. 20, 1974. US-ACAN has also accepted those new coordinates.

Narabi Rocks. 68°24' S, 41°47' E. Three bare rocks in a row, on land, extending almost 5 km along the coast between Temmondai Rock and Kozo Rock, about 37 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE, 1957-59, and named by them on Oct. 1, 1962, as Narabiiwa (i.e., "rocks in a row"). US-ACAN accepted the name Narabi Rocks in 1968. The Norwegians call this feature Rekkjenabbane, which means the same thing.

Narabi-ga-oka. 67°58' S, 44°04' E. Two low ridges in the central part of Cape Ryugu, on the coast of Queen Maud Land. Photographed aerially by JARE in 1962, and surveyed from the ground by JARE in 1977-78. Named by the Japanese on March 22, 1979 (name means "two hills in a row").

Narabi-iwa *see* **Narabi Rocks**

Narebski Point. 62°14' S, 58°47' W. A rocky promontory composed of basaltic plug, midway between South Spit and Winship Point, on Barton Peninsula, at Maxwell Bay, King George Island, in the South Shetlands. Named by the Poles in 1984, for mineralogist and geochemist Wojciech Narebski, of the Polish Academy of Arts and Sciences, at Krakow, who worked with the igneous rock on King George Island. There is a chinstrap penguin rookery on this point.

Narechen Glacier. 69°34' S, 71°40' W. A glacier, 9 km long and 11 km wide, it flows W from the W slopes of the Lassus Mountains, to enter Lazarev Bay S of the SW ridge of Mount Wilbye Nunatak, and N of Faulkner Nunatak, on Alexander Island. Named by the Bulgarians on Nov. 23, 2009, for the settlement and spa resort of Nerechen, in southern Bulgaria.

Mount Nares. 81°27' S, 158°10' E. A massive mountain, rising to over 3000 m, just S of Mount Albert Markham, and overlooking the head of Flynn Glacier, in the Churchill Mountains. Discovered by BNAE 1901-04, and named by Scott for George Nares (q.v.), a member of the ship committee for Scott's expedition. US-ACAN accepted the name.

Nares, George Strong. b. April 24, 1831, Llanseneld, near Abergavenny, Monmouthshire, son of naval commander William Henry Nares and his wife Elizabeth Rebecca Gould Dodd. He joined the RN in 1845, and in 1852, as a mate on the *Resolute*, he went to the Arctic on Belcher's expedition, looking for Sir John Franklin. In 1858 he married Mary Grant and had 9 children (over the years, that is). He served several years in Australian waters, and was present at the opening of the Suez Canal in 1869. He was captain of the *Challenger* for the first half of the expedition, i.e., from 1872 to 1874. He even took his 9-year-old son, William Grant Nares, on the expedition with him, complete with a tutor. They crossed the Antarctic Circle in 1874. Being one of the leading surveyors of the day, he was recalled to lead an expedition to the Arctic (1875-76) in the *Alert* and *Discovery*, with the main intention of reaching the North Pole. They didn't, but they set a new northing record. He was knighted in 1876 and retired in 1886. He was promoted to rear admiral (retired list) in 1887, and vice admiral (retired list) in 1892. His wife died in 1905, and he died on Jan. 15, 1915, at his home in Surbiton, Surrey.

Islote Narrow *see* **Furse Peninsula**

Narrow Inlet. 74°59' S, 163°42' E. A long, narrow inlet, 500 feet wide, S of Inexpressible Island, in Terra Nova Bay, Victoria Land. Named descriptively by Campbell's Northern Party during BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

Narrow Isle *see* **Gibbs Island**

Narrow Neck. 73°06' S, 169°03' E. A narrow, but elevated, isthmus between Langevad Glacier and Mandible Cirque, it joins Tousled Peak and the Mount Lubbock area to the main part of Daniell Peninsula, in the S part of that peninsula, in Victoria Land. Descriptively named by NZ-APC in 1966. US-ACAN accepted the name later in 1966.

Narrow Peninsula *see* **Furse Peninsula**

[1]**The Narrows** *see* **Fildes Strait**

[2]**The Narrows**. 67°36' S, 67°12' W. A narrow marine channel, about 900 m wide, separating Pourquoi Pas Island from Blaiklock Island, it runs NW-SE from Bigourdan Fjord to Bourgeois Fjord, off the Loubet Coast, on the W coast of Graham Land. Discovered aerially on March 31, 1936, by BGLE 1934-37, surveyed by them from the ground on Aug. 4, 1936, and named descriptively by Rymill. It appears on a 1947 Chilean chart, translated as Las Angosturas. Resurveyed from the ground by Fids from Base E between 1948 and 1950. It appears on a British chart of 1952, as The Narrows, and that name was accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1962 Chilean chart as La Angostura, and in 1974 the Chilean gazetteer, after rejecting the name Paso Las Angosturas, accepted the name Paso La Angostura (i.e., "passage of much narrowness"). The Argentines call it Canal Angosto (i.e., "very narrow channel").

The *Narval*. A 384-ton Norwegian whale catcher, built in Oslo in 1929, and owned by Tønsbergs Hvalfangeri. She was 118 feet 9 inches long; 24 feet 4 inches wide; had 101 nhp; and was registered at Buenos Aires. She was later (1934) owned by the Compañía de Pesca Argentina, and was in Antarctic waters in 1940-41.

Nunatak Narvskij. 71°33' S, 71°30' E. Due W of the lake the Russians call Ozero Lednikovoe, in the Prince Charles Mountains. Named by the Russians.

Nascent Automatic Weather Station. An American AWS, on Nascent Iceberg, at an elevation of 30 m, installed in Nov. 2004, to study iceberg calving and the Ross Ice Shelf Air Stream (RAS). It was visited in Oct. 2006.

Nascent Glacier. 73°22' S, 167°37' E. A short, fairly smooth glacier, in the E extremity of the Mountaineer Range, it flows SE to the coast of Victoria Land between Gauntlet Ridge and Index Point. Named descriptively by NZ-APC in 1965. US-ACAN accepted the name in 1966.

Nascent Iceberg. An area at the front of the Ross Ice Shelf, that looks as if it is going to calve off in the near future.

Monte Nash *see* **Mount Nash**

Mount Nash. 74°14' S, 62°20' W. Rising to 1294 m, 22 km WNW of the head of Keller Inlet, and 20 km NNE of Mount Owen, in the Hutton Mountains, on the Lassiter Coast, on the E coast of Palmer Land. First seen from the air by RARE 1947-48, as one of several rock exposures at the head of Keller Inlet. Following a Dec. 1947 joint survey by RARE personnel and Fids from Base E, the name Mount Nash was applied to the most prominent peak near the head of Keller Inlet, named for Henry R. Nash, curator of paintings at the department of arts, at the Carnegie Institute, in Pittsburgh, Pa., a contributor. It was plotted it in 74°16' S, 62°00' W. US-ACAN accepted the name, and UK-APC followed suit on Jan. 28, 1953. It appears on a British chart of 1954, in the 1955 British gazetteer, and on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears on a 1954 Argentine chart as Monte Nash. It appears in error as Mount McElroy on a 1959 U.S. Hydrographic Office chart. Mapped and replotted

by USGS from USN air photos taken between 1965 and 1967.

Nash, David "Dave." He went to the University of Bristol with Ivor Morgan (q.v.), joined FIDS in 1961, as a surveyor, and wintered-over at Base T in 1962 and 1963. He went to work for Hunting Ltd., spending much time conducting oil exploration in places like Libya, and Nigeria. His daughter Jane was medical officer at Rothera Station for the winter of 2003.

Nash, Erastus *see* **The *Margaret***

Nash Canyon. 64°00' S, 126°00' E. Submarine feature off the coast of East Antarctica.

Nash Glacier. 71°15' S, 168°10' E. A glacier, 30 km long, flowing from the N slopes of the Dunedin Range, in the Admiralty Mountains. The terminus of this glacier merges with those of Wallis Glacier and Dennistoun Glacier before reaching the sea E of Cape Scott. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Arthur R. Nash, USN, VX-6 helicopter pilot during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68).

Nash Hills. 81°53' S, 89°23' W. A short range of isolated, ice-covered hills, about 40 km NW of the Martin Hills. Positioned on Dec. 10, 1958, by the U.S. Ellsworth-Byrd Traverse Party. Named by US-ACAN in 1964, for Lt. (later Cdr.) Archie Ray Nash, USN, officer-in-charge at Byrd Station in 1962.

Nash Nunatak. 66°42' S, 51°53' E. A small nunatak about 16 km ENE of the Crosby Nunataks, in Enderby Land. Named by ANCA for Robert A. "Rob" Nash, weather observer who wintered-over at Mawson Station in 1975, and who was a member of the ANARE Enderby Land Survey party of 1976. He was back at Mawson for the winters of 1977 and 1993.

Nash Peak. 77°15' S, 166°45' E. A prominent peak, rising to over 1600 m, 2.3 km N of the summit of Mount Bird, in the NW part of Ross Island. Originally Phil Kyle suggested the name Chuan Peak (q.v.) for this feature, but NZ-APC wanted Nash Peak, and that was what they got. Named by NZ-APC on Feb. 20, 2001. US-ACAN accepted the name later in 2001. While he was NZ's prime minister (1957-60), English-born Walter Nash (1882-1968; in NZ since 1909; knighted 1965) signed the Antarctic Treaty on behalf of his country. Before that, while leader of the opposition, he had supported NZ participation in BCTAE 1955-58.

Nash Range. 81°55' S, 162°00' E. About 60 km long, and mainly ice-covered, behind the Shackleton Coast, it borders the W side of the Ross Ice Shelf, and is overlooked by the Churchill Mountains. It is bounded by Beaumont Bay to the N, by Cape Wilson and Nimrod Glacier to the S, and by Bridge Pass and Algie Glacier to the W, or, to put it another way, it stands between Dickey Glacier and Nimrod Glacier. This range contains Mount Canopus and Mount Christmas. Named by the Ross Sea Committee during BCTAE 1955-58, for Walter Nash (*see* **Nash Peak**). US-ACAN accepted the name in 1965.

Nash Ridge. 74°17' S, 163°00' E. A high, massive ridge, 16 km long and 8 km wide, it projects between the flow of O'Kane Glacier and Priestley Glacier, in the E part of the Eisenhower Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Harold Anthony Nash (b. Sept. 28, 1918, Corvallis, Oregon), biologist at McMurdo Station in 1965-66 and 1966-67.

Nashornet *see* **Nashornet Mountain**

Nashornet Mountain. 72°22' S, 2°00' W. A mountain, partly snow- and ice-capped, 10 km NE of Viddalskollen Hill, on the S side of Viddalskollen Valley, between Viddalen Valley and Jutulstraumen Mountain, in the SE part of Maudeheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from NBSAE 1949-52 ground surveys and air photos, and also from new 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Nashornet (i.e., "the rhinoceros"). US-ACAN accepted the name Nashornet Mountain in 1966.

Nashornkalvane *see* **Nashornkalvane Rocks**

Nashornkalvane Rocks. 72°19' S, 1°56' W. A group of three rocks on land (or small nunataks), 3 km N of Nashornet Mountain, at the S side of the mouth of Viddalen Valley, between Viddalen Valley and Jutulstraumen Mountain, in the SE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Nashornkalvane (i.e., "the calves of the rhinoceros"). US-ACAN accepted the name Nashornkalvane Rocks in 1966.

Nåsudden *see* **The Naze**

Natal Ridge. 71°50' S, 68°18' W. A prominent, snow-free, terraced ridge, forming part of the N boundary of the Two Step Cliffs massif, in the S part of Alexander Island. Named by UK-APC on Dec. 2, 1993, for the scientists from the University of Natal, who conducted geomorphological and biological surveys in the Mars Glacier group, in 1992-93. US-ACAN accepted the name in 1994.

Natani Nunatak. 84°46' S, 66°30' W. Rising to about 1250 m, 2.5 km NNE of the extremity of Snake Ridge, in the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS in 1962, photographed aerially by USN in 1964, and mapped from these efforts by USGS. Named by US-ACAN in 1968, for Kirmach Natani (b. June 1935), USARP psychologist specializing in sleep research who wintered-over at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Nathan Hills. 73°25' S, 164°24' E. A series of hills in the E part of the Arrowhead Range of the Southern Cross Mountains, in Victoria Land. Named by the Southern Party of NZGSAE 1966-67, for Simon Nathan, senior geologist with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

The *Nathaniel B. Palmer*. A 6800-ton, 93.9-meter U.S. supply and research icebreaker built in 1991 by Edison Chouest Offshore (ECO), specificially for the NSF, named after Nat Palmer, and launched in 1992. She had icebreaking capability, a crew of 26, and could carry 39 scientists. Operated for the NSF by Antarctic Support Associates (ASA), with an ECO crew. She first appeared in Antarctic waters in April 1992, in the area of the Antarctic Peninsula, under the command of skipper Joe Borkowski III (b. 1955, Biloxi, Miss.). Again under the command of Capt. Joe, she was in Antarctic waters in 1992-93 (co-skipper that year was Russel Bouziga), 1994-95 (Captain Joe), 1995-96 (Captain Joe), 1996-97 (Captain Joe), and 1997-98 (Captain Joe). She made a mid-winter trip to McMurdo Sound in 1998, and between May 1 and June 19 of that year she conducted ice dynamics studies in the Ross Sea. On Dec. 26, 1998, she left Lyttelton, in NZ, for the Antarctic, for the 1998-99 season, to conduct further ice dynamics studies. Skipper was still Borkowski. During this expedition, the vessel discovered 4 new fish species living under the ice, and she also visited McMurdo. On Dec. 20, 1999, she left Lyttelton again, for another tour in the Ross Sea, again under Captain Joe. On Feb. 10, 2000, she arrived at McMurdo, re-fueled from the *Polar Star*, and left McMurdo on Feb. 15, 2000. On March 1, 2000, she arrived back in Christchurch, NZ. She was back every season between 2000-01 and 2008-09.

Paso Natho. 63°25' S, 58°32' W. The marine passage that separates Astrolabe Island from the Antarctic Peninsula. Named by ChilAE 1949-50, for Comodoro Alfredo Natho Davidson (*see* **Aguda Point**).

Punta Natho *see* **Aguda Point**

National Antarctic Expedition *see* **British National Antarctic Expedition 1901-04**

National Environment Research Council. British government council (NERC) whose mission is explained by its title. Based out of Polaris House, in Swindon, England, it supports (among other institutions) BAS and the British Geological Survey.

The *National Geographic Endeavour* *see* **The *Caledonian Star***

The *National Geographic Explorer*. The former Hurtigruten ship *Lyngen*, she was bought by Lindblad Travel in 2007, and renamed *National Geographic Explorer*, with a new captain, Leif Skog. 367 feet long, she could take 148 guests in 81 outward-facing cabins. She was refitted and launched in Aug. 2008, much lauded as the "best-equipped expedition ship in the world," and so on, with the latest technology to detect icebergs, etc, an eerie echo of the excessive praise that was thrust upon the *Titanic*. She was in Antarctic waters in 2009-10.

National Ozone Expedition. Known as NOZE. An initiative put together by NOAA (National Oceanographic and Atmospheric Administration), NASA, and the NSF. 16 ozone researchers, led by Susan Solomon (b. 1956; an atmospheric chemist with NOAA) and David

Hoffman (of the University of Wyoming) arrived at McMurdo on Aug. 23, 1986, to study the ozone hole. This was NOZE 1, as it turned out. There was another one, NOZE 2, the following year.

National Science Foundation. Also seen as NSF. An independent U.S. federal agency founded in 1950 and headed by a presidentially-appointed director. After IGY (1957–58) the NSF assumed the responsibility for all U.S. Antarctic research, and in 1970 was designated the leading agency for American activities in Antarctica. At that stage all USARP was consolidated under the NSF. Logistical backup was (until 1997) provided by U.S. Naval Support Force, Antarctica. The NSF also hires a contractor (*see* **Antarctic Support Associates**, as an example). About 1000 scientists and other staff are employed by the NSF. Its research ship in the Antarctic from 1968 to 1984 was the *Hero*, this being replaced by the *Polar Duke*.

Natural resources. Science, freedom, ice, water, storage, space, and the land itself, are all natural resources of Antarctica, but nothing of real economic value has yet been found. The mineral and biological resources are not, as yet, exploitable to any great degree.

Nature Conservation Glacier. 62°10' S, 58°18' W. Between Vauréal Peak and Puchalski Peak, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Nausea Knob. 77°31' S, 167°09' E. A prominent outcropping of jumbled rocks, 3633 m above sea level, formed as a lava flow on the NW upper slope of the active cone of Mount Erebus, on Ross Island. It is near a camp site used mainly in the 1970s by teams working at a seismic station near the summit, and so named by NZ-APC on Feb. 20, 2001, because several of the team members became nauseous due to elevation sickness (11,000 feet). US-ACAN accepted the name later in 2001.

Monte Nautilus *see* **Nautilus Head**

Nautilus Head. 67°38' S, 67°07' W. A prominent headland rising to 975 m, just S of the NE extremity of Pourquoi Pas Island, on Bourgeois Fjord, off the Loubet Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, and again by Fids from Base E in 1948. They named it for Jules Verne's fictional submarine. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1982. The Argentines translated it as Monte Nautilus.

The *Navaho* *see* **The *Penola***

Navajo Butte. 77°58' S, 162°03' E. A sandstone butte which displays large-scale cross bedding, rising from the south-central part of Table Mountain, in the Royal Society Range, in Victoria Land. Named by Alan Sherwood, leader of the NZGSAE 1987–88 field party here, for the famous Navajo sandstone of Utah. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Naval Air Facility McMurdo *see* **McMurdo**

The *Navarin*. Soviet reinforced dry cargo diesel-electric vessel with an icebreaker hull. She left Leningrad in Nov. 1972, bound for Antarctica, as part of SovAE 1971–73. She was back for SovAE 1972–74. Skipper both seasons was Yuriy Konstantinovich Karlov. She was back for SovAE 1990–92, under the command of Capt. S.G. Kuznetsov.

The *Navarino*. Chilean ship belonging to the line Empresa Marítima del Estado, which took 84 tourists from Punta Arenas to the South Shetlands between Feb. 9 and March 4, 1959. Fernando García was the captain. Lindblad Travel chartered her in 1968, but she was not iceworthy, and a Jan. 1968 trip to Antarctica was cut short by an accident at Cape Horn. However, she did make it to the ice in February of that year, sailing from Punta Arenas, under Capt. Eugenio Oliva Bernabé, and visited the South Shetlands and the Antarctic Peninsula.

Punta Navarrete. 64°50' S, 62°32' W. A low point forming the S side of Neko Harbor, on the NW coast of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1956–57, for Comodoro Alejandro Navarrete Torres (see the entry below).

Navarrette Peak. 75°55' S, 128°45' W. A rock peak, 6 km SW of Mount Petras, and marking the SW extremity of that mountain's massif, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for Captain Claude J. Navarrette (b. Oct. 24, 1925, Washington, DC), who joined the U.S. Navy in Nov. 1943, and was deputy commander and chief of staff to the commander, U.S. Naval Support Force, Antarctica, during OpDF 72 (summer season of 1971–72). He had also served on the staff during OpDF 69 and OpDF 70. He retired in Aug. 1975.

Navarrete Torres, Alejandro. Son of high-ranking Chilean naval officer Alejandro Navarrete Cisterna and his wife Emelinda Torres. Leader of ChilAE 1956–57, and later rear admiral in charge of the First Naval Zone.

Cabo Navarro *see* **Cabo Meneses**

Navarro Ridge. 76°52' S, 160°13' E. A rugged ridge, 6 km long, that runs SE from Coombs Hill to the W side of Cambridge Glacier, in Victoria Land. The central peak of the ridge rises to 2100 m. Named by US-ACAN on Oct. 21, 2008, for members of the remarkable Navarro family, who carried on support activities for USAP at McMurdo, Palmer Station, and Pole Station, from 1989 onwards. Kenneth Navarro, the logistics supervisor at Palmer, worked at the 3 stations for 18 seasons and 4 winters; his wife Carol Gould Navarro, engaged in logistics and administration at Palmer and McMurdo for 5 summers and 4 winters; his sister, Suzanne McCullough Navarro, a cook at McMurdo for 4 summers and 1 winter; his brother, Steven Navarro, carpenter at Palmer and McMurdo for 3 summers a a winter; and Kenneth and Carol's two sons, Eliot Gould Navarro and Tyler Gould Navarro, who both worked in Antarctica for a few seasons.

Punta Navegante Reyes *see* **Reyes Spit**

Islote Navegante Vidal *see* **Vidal Rock**

Fondeadero Navidad. 64°35' S, 62°06' W. An anchorage in Nansen Island, in the outer part of Wilhelmina Bay, off the Graham Coast, on the W coast of Graham Land. Named by the Argentines.

Punta Navidad *see* **Cape Christmas**

Île du Navigateur *see under* **D**

Navigator Nunatak. 73°15' S, 164°13' E. A large nunatak in the middle of the head of Aviator Glacier, in Victoria Land. So named by the Northern Party of NZGSAE 1962–63, because it is a good landmark, and also in association with nearby Aviator Glacier, Pilot Glacier, and Co-Pilot Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Navigator Peak. 79°23' S, 85°48' W. A sharp and prominent peak, rising to 1910 m, 6 km E of Zavis Peak, in the N part of White Escarpment, in the Heritage Range. So named by the University of Minnesota Geological Party here in 1963–64 because it was a landmark for pilots. US-ACAN accepted the name in 1966.

Mount Navy *see* **Mount Butler**

Navy Point. 64°30' S, 62°28' W. The NE entrance to Chiriguano Bay, on the SE of Brabant Island, in the Palmer Archipelago. Charted by ArgAE 1953–54. Surveyed by Fids on the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956–57. In 1978 it was named by the Argentines as Punta Marina, for the Argentine navy. It was visited by the British Joint Services Expedition to Brabant Island, in 1984. Rather than translate it as Marina Point (there was already a feature of that name, in the Argentine Islands), UK-APC went for Navy Point on Feb. 12, 1988. US-ACAN accepted that name.

Navy Range *see* **Colbert Mountains**

Punta Nazar. 68°17' S, 67°10' W. The point forming the extreme NW of Península Gabriel (which separates Neny Fjord to the N from Rymill Bay to the S), on the E coast of Marguerite Bay, off the W coast of the Antarctic Peninsula. Named by the Chileans for Sgt. Salvador Nazar, of the Chilean Air Force, who went to Antarctica on the *Angamos* to help in the rebuilding of General Bernardo O'Higgins Station during ChilAE 1950–51. The Argentines call it Punta Ejército (i.e., "Army point").

Gora Nazarova. 81°55' S, 161°15' E. A nunatak, close NW of Powell Hill, in the Nash Range of Victoria Land. Named by the Russians.

Nunataki Nazarova. 83°55' S, 55°22' W. A group of nunataks, NE of Elmers Nunatak, in the Neptune Range of the Pensacola Mountains. Named by the Russians.

The Naze. 63°55' S, 57°30' W. A narrow peninsula on the north-central side of James Ross Island, terminating in Dagger Peak and Comb Ridge, it extends about 8 km NE from Terrapin Hill toward the south-central shore of Vega Island, and forms the SE entrance to Croft Bay, and also marks the SE entrance to Herbert Sound. Discovered and surveyed in 1903, by SwedAE 1901–04, and named by Nordenskjöld as Nåsudden. The name was later translated into English, as The Naze. It appears on a British

chart of 1937, plotted in 63°53' S, 57°29' W. In Nov. 1945, Fids from Base D re-surveyed the feature. It appears on a 1947 Chilean chart as El Promontorio (i.e., "the promontory"), and on a 1949 Argentine chart as Cabo The Naze. Re-surveyed by Fids from Base D between 1952 and 1954. UK-APC accepted the name The Naze, on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, plotted in 63°57' S, 57°32' W. The coordinates were corrected by 1974, and with the new coordinates, the feature appears in the 1977 British gazetteer. The NE extremity of this peninsula appears on a 1953 Argentine chart as Cabo Morro (i.e., "hill cape"), and that name and situation was accepted by the Argentine gazetteer of 1970, although the entire peninsula is often referred to by the Argentines as Punta Morro. The entire peninsula appears on a 1961 Chilean chart as Punta Naze, and that was the name and situation accepted by the Chilean gazetteer of 1974.

Cabo The Naze *see* **The Naze** (directly above)

Punta Naze *see* **The Naze**

Nunatak Nazimova *see* **Nordsteinen**

NBSAE *see* **Norwegian-British-Swedish Antarctic Expedition**

Neale, William Henry. b. in late 1888, at 57 Hawke St., Portsmouth, son of retired naval quartermaster William Henry Neale and his wife Elizabeth. He joined the merchant service, and was steward on the *Terra Nova* during BAE 1910-13. In 1914, in Portsmouth, he married Ivy Grace Robinson, and they would live in Portsmouth for the rest of their lives. He died in 1958, and she died in 1984.

Neall Massif. 72°04' S, 164°28' E. A mountain massif rising between the Salamander Range and the West Quartzite Range. Named by NZ-APC for geologist Vince E. Neall, a member of VUWAE 1965-66, and leader of NZGSAE 1967-68. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Neb Bluff. 67°00' S, 66°35' W. A conspicuous rock bluff, 10 km S of Orford Bluff, it overlooks the E side of Lallemand Fjord, N of McCall Point, on the Loubet Coast, on the W coast of Graham Land. Surveyed by Fids from Base W in Aug. 1956, and named by them for its neb-like appearance (a neb being a snout). UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1964.

Cape Nebbet. 67°54' S, 80°31' E. In the area of Prydz Bay. Named by the Russians.

Nebbhornet. 72°01' S, 26°01' E. One of the 5 nunataks in what the Norwegians collectively call Horna, in the Sør Rondane Mountains. Named by the Nowegians ("the beak horn"). *See* **Horna** for a list of the four other "horns."

Nebelbach. 62°13' S, 58°57' W. A little stream that flows through Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Bukhta Nebesnaja *see* **Sparkes Bay**

Nebhut, John *see* **USEE 1838-42**

Punta Nebles *see* **Nebles Point**

Nebles Hafen *see* **Collins Harbor**

Nebles Harbor *see* **Collins Harbor**, **Nebles Point**

Nebles Point. 62°11' S, 58°51' W. Forms the W side of the entrance to Collins Harbor, 2.3 km E of Suffield Point, on the N coast of Maxwell Bay, in the SW part of King George Island, in the South Shetlands. In 1825 Weddell named a harbor near here, possibly what is now Collins Harbor (or perhaps an anchorage N of Ardley Island), as Nebles Harbor (also seen as Nebles Hafen). On Sept. 23, 1960, unable to be sure of Weddell's location, UK-APC named this point (which lies midway between the two possibilities) in order to preserve the spirit of Weddell's naming in the area. US-ACAN accepted the name later in 1960. It appears on a British chart of 1962. The Argentines called it Punta Nebles, but in 1978 they began calling it Punta Perro, a descriptive name ("dog point"), say the Argentines, for its "conformación fisiográfica," that last statement probably being a slight digression from the absolute truth, given that the Chileans call it Punta San Bernardo, for the Saint Bernard dogs that were brought to Antarctica as an experiment, by ChilAE 1947-48. Last plotted by the UK, in late 2008.

Nebraska Peaks. 80°04' S, 159°30' E. A scattered group of peaks and nunataks, E of Gaussiran Glacier and Merrick Glacier, in the E part of the Britannia Range. Named by US-ACAN in 2000, after the University of Nebraska, at Lincoln, which was the location of the Ross Ice Shelf Project management office, 1972-77. Several features in this group have been named for RISP personnel — Borowski Peak, Eilers Peak, Kirchner Peak, MacAyeal Peak, Rand Peak, Sternberg Peak, and Whiting Peak. Gaylord Ridge is here too, and the Brandwein Nunataks mark the NE extent of the group. NZ-APC accepted the name on Feb. 20, 2001.

Pasaje Neck-or-Nothing *see* **Neck or Nothing Passage**

Paso Neck or Nothing *see* **Neck or Nothing Passage**

Neck or Nothing Passage. 62°28' S, 60°21' W. A narrow passage leading in an E-W direction from Blythe Bay between the extreme S end of Desolation Island and a small group of islands 300 m southward in Hero Bay, off Livingston Island, in the South Shetlands. It appears on Fildes' 1821 chart, and seems to have been named before that, by sealers who frequented Blythe Bay, as they occasionally used to race their vessels to this neck in order to get out in time to miss the severe easterly gales. It appears on a British chart of 1916 as Neck-or-Nothing Passage (i.e., with hyphens), was re-charted by the Discovery Investigations in 1935, and was unhyphenated in a British chart of 1948. UK-APC accepted the unhyphenated name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer, and on a 1962 British chart. It appears on a 1953 Argentine chart as Pasaje Neck-or-Nothing, and that was the way it appeared in the 1970 Argentine gazetteer, although one also sees that name unhyphenated as well. The Chileans call it Paso Neck or Nothing. Last plotted by the UK, in late 2008.

Cerro Necochea *see* **Cerro Romero**

Nedelya Point. 62°37' S, 60°59' W. A sharp, ice-free point, 1.7 km SW of Bilyar Point, 3 km E of Lair Point, and 1.6 km NE of Sparadok Point, and which projects into Barclay Bay, being linked by a chain of rocks to Cutler Stack 300 m to the NNW, on the N coast of Livingston Island, in the South Shetlands. Mapped by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, for educator Nedelya Petkova (1826-1894), who was fondly known as Baba Petkova, or Grandma Nedelya.

Mount Neder. 71°02' S, 167°40' E. A mountain with a small pointed summit rising to 1010 m, it surmounts the NW part of Quam Heights, in the Anare Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Irving Robert Neder (b. Dec. 11, 1931, Los Angeles. d. Jan. 2, 1996), USARP geologist in the Ohio Range and Wisconsin Range areas in 1965-66, and at McMurdo in 1966-67.

Gora Nedostupnaja. 70°39' S, 67°06' E. The eastern of 3 nunataks standing in a row running E-W, close NE of Mount McKenzie, in the Amery Peaks of the Aramis Range, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Nedre Sandvatn. 70°47' S, 12°01' E. A small lake, in the E part of the Schirmacher Hills. Named by the Norwegians ("lower sand lake"). *See also* **Øvre Sandvatn**.

Nedrenuten. 66°36' S, 55°30' E. The southeasternmost of 3 nunataks in a row running NW-SE (the NW one being Øvrenuten and the middle one being Menuten), in the Nicholas Range of Kemp Land. Name means "lower nunatak" in Norwegian.

Nedresjöen *see* **Lake Unter-See**

The Needle *see* **The Spire**

Needle Peak. 62°44' S, 60°10' W. A sharp-pointed black cliffed peak, rising to 370 m (the British say about 300 m), at the W side of Brunow Bay, 9 km NE of Barnard Point, on the SE coast of Livingston Island, in the South Shetlands. Named Barnard's Peak by Weddell, in 1825 (at least, it appears as such on his map of that year), for Capt. Charles Barnard. It appears as such on Powell's chart prepared in 1828, and also on an 1837 British chart. It appears as Pic Barnard on the expedition map from FrAE 1837-40. Re-charted by the Discovery Investigations personnel aboard *Discovery II* in 1934-35, and renamed by them descriptively as Needle Peak. The new name appears on their 1937 chart, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. Photographed aerially by FIDASE in 1956-57, it was also surveyed from the ground by FIDS between 1957 and 1959. On a 1947 Argentine chart it appears as Pico Needle, and on a 1947 Chilean chart as Pico Aguja (which means the same thing). It also appears as Pico Aguja on an Argentine

chart of 1953, and that was the name accepted by the Argentines in 1956, and the name that was listed in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, there is a 1957 Argentine reference to it as Morro Aguja (i.e., "needle hill"), but that name died a quick death. Last plotted by the UK, in late 2008.

Needles *see* **Renier Point**

The Needles *see* **Les Dents** (under **L**), **Cape Renard**

Neff Nunatak. 74°58' S, 72°08' W. Rising to about 1500 m (the British say about 1400 m), 1.5 km SE of Schmutzler Nunatak, in the SE end of the Grossman Nunataks, ESE of the Lyon Nunataks, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from USN air photos taken between 1965 and 1968. Named by US-ACAN in 1988, for Richard J. "Dick" Neff, USGS cartographer who wintered-over at Casey Station as a guest of the Australians, in 1975. UK-APC accepted the name on Feb. 15, 1988.

Negovan Crag. 63°50' S, 58°30' W. A peak rising to 760 in Kondofrey Heights, 2.3 km E of Mount Reece, 9.48 km S of Mount Daimler, 8.6 km NE of Mount Bradley, and 5.55 km WNW of Pitt Point, it surmounts Victory Glacier to the N and Chudomir Cove to the SE, on Trinity Peninsula. Mapped by the British and Germans in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Negovan, in western Bulgaria.

Bahía Negra *see* [2]**Black Head**

Isla Negra *see* **Black Rock**

Mesa Negra *see* **Birdsend Bluff**

Punta Negra *see* **Black Point,** [1]**Lava Point**, **Negra Point**, **Siffrey Point**

[1]**Roca Negra**. 62°16' S, 58°57' W. A notable black rock (hence the name given by the Chileans), 40 m high, and very cliffed, about 1.5 km SW of Rip Point, on the coast of Edgell Bay, in the SW part of Fildes Bay, on the NE coast of Nelson Island, in the South Shetlands.

[2]**Roca Negra** *see* **Negra Rock**

Negra Point. 62°25' S, 59°38' W. A steep, black point (hence the name) at the SE entrance point to Mitchell Cove, on the SW coast of Robert Island, in the South Shetlands. Surveyed by ChilAE 1974-75, and named by them as Punta Negra, it appears as such on their chart of 1975. UK-APC accepted the name Negra Point on May 11, 2005. Last plotted by the UK, in late 2008.

Negra Rock. 62°28' S, 59°39' W. West of Ash Point (the SE entrance point of Discovery Bay), and close by Poisson Hill, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1964-65, and named by them as Roca Negra, for its color. It appears on their 1965 chart. UK-APC accepted the name Negra Rock, on May 31, 2004. Last plotted by the UK, in late 2008.

Nunatak Negro *see* **Spigot Peak**

Pico Negro *see* **Greaves Peak**

Cerro Negro Cuadrado *see* **Elephant Point**

Negro Hill. 62°39' S, 61°00' W. Rising to about 100 m above sea level (the Chileans say 162 m), near the E end of South Beaches, on the S side of Byers Peninsula, 6 km ESE of New Plymouth, on the S coast of Livingston Island, in the South Shetlands. Surveyed by ArgAE 1957-58, and named descriptively by them as Morro Negro (i.e., "black hill"). It appears as such on their 1958 chart. It appears on a 1971 Chilean chart as Cerro Negro (which means the same thing), and that was the name accepted by the 1974 Chilean gazetteer. The British were calling it Negro Hill as early as 1972, and that was the name accepted by UK-APC on Feb. 7, 1978, with US-ACAN following suit. Surveyed by BAS geologists in 1975-76. Not be confused with False Negro Hill.

Promontorio Negro Notable *see* **Precious Peaks**

Neil Peak *see* **Neill Peak**

Neill, William *see* **USEE 1838-42**

Neill Peak. 67°50' S, 66°37' E. Also seen spelled as Neil Peak, and even Heil Peak. A mountain (the Australians describe it as a narrow rock ridge), rising to 460 m, about 5.5 km SW of Scullin Monolith, in Mac. Robertson Land. Discovered and mapped on Feb. 13, 1931, by BANZARE, and named by Mawson for Major Eric Vansittart Ernest "E.V.E." Neill (b. June 3, 1878, Melbourne) a mutual friend who arranged for BANZARE funds from Macpherson Robertson. It was mapped in 1946 by Norwegian cartographers, working from air photos taken during LCE 1936-37. US-ACAN accepted the name in 1947. The position of the feature was fixed accurately by John Manning (*see* **Manning Massif**), surveyor at Mawson Station in 1967, during an ANARE tellurometer-controlled mapping survey.

Neilson Peak. 70°57' S, 62°13' W. Rising to about 1250 m, in the central part of the Parmelee Massif, at the head of Lehrke Inlet, it is the highest point on that massif, on the S side of Eielson Peninsula, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for David R. "Dave" Neilson, USARP biologist at Palmer Station in 1975. UK-APC accepted the name on July 21, 1976. The Chileans call it Monte Lavín, for Squadron Leader (later a general and ambassador to Honduras) Alfredo Lavín Ramírez (known as "the Duck" to his friends), of the Chilean Air Force, who was on the *Maipo* during ChilAE 1949-50. It appears on a 1957 Argentine chart as Monte Berezoski, and on another from the same year as Monte Berezosky. On a 1963 Argentine chart it appears as Monte C. Berezoski. Named for Cabo 1st class Juan Carlos Berezoski, Argentine naval engineer.

Neimo, Peter James. b. Sept. 29, 1900, Natalie, Pa., but raised mostly in nearby Mount Carmel and Kulpmont, son of retail grocer Fiorante "Sandy" Naimo (sic) and his wife Rosie Marie Morasco (they had immigrated from Italy to the USA just before Peter was born). He was admitted to the U.S. Naval Academy on July 10, 1918. He married Virginia Patterson (from Springfield, Mo.), and they lived in Somerville, Mass., and then San Diego. He was a lieutenant and 2nd officer on the *Bear* during USAS 1939-41 (his wife went as far as South America with him), and, during the expedition, was promoted to lieutenant commander. After the expedition, he skippered the *Bear* to Greenland, to fight the Nazi menace. He served in Korea, and retired as a captain. He died on May 30, 1978, in Woodbridge, Va., and was buried 2 days later in Arlington National Cemetery.

Neiswender, Jesse Anthony, Jr. Known as "J.A." b. Nov. 25, 1918, Bellingham, Wash., but raised in Seattle, son of grade school principal Jesse Anthony Neiswender and his wife Helen M. van Vliet. He went to sea at 18, as an oiler, and, in that capacity, was on the *North Star* for the 2nd half of USAS 1939-41. On his return to Seattle, on June 21 1941 he signed onto the *Iroquois*, as an oiler, for the voyage up to Victoria, BC. However, on Oct. 22, 1941, he joined the U.S. Navy, and worked his way up to assistant chief machinist's mate during World War II. He died on April 20, 1996, in Tacoma.

Neith Nunatak. 83°17' S, 55°55' W. Rising to 1120 m, 5 km N of Baker Ridge, in the northern Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Willard F. Nieth [sic] (b. Aug. 1, 1919, Chicago. d. April 2, 2001, Fort Lauderdale), photographer on the U.S. Air Force Electronics Test Unit 1957-58. UK-APC accepted the name, error and all, with no independent checking, on Nov. 3, 1971. It appears in the 1974 British gazetteer.

The *Neko*. Built in 1891 by Armstrong Mitchell in Newcastle as a German passenger and cargo ship plying between Europe and South America, via Cape Horn and the Falklands, for the Kosmos Company, of Hamburg. In 1911 she was bought by the Scottish whaling company Salvesen, and converted by Smith's Dock Company of Middlesbrough, into Salvesen's first actually converted floating factory whaler. She was fitted out with whaling equipment in Sandefjord, and, weighing 3576 tons, operated in the South Shetlands and Antarctic Peninsula waters in 1911-12, with her 3 catchers, *Scapa*, *Silva*, and *Sonja*. The *Horatio* had also been scheduled to go down with the fleet, but got beset in the English Channel. The *Neko* and her catchers found it difficult to get through the pack-ice to Deception Island, but she finally arrived there in mid-December 1911, and had a successful season. The *Neko* was back in the South Shetlands for the 1912-13 (Alex Lange was manager, and gunners were Arne and Ole Skontorp, and Søren Beckmann), 1913-14, 1914-15, and 1915-16 seasons, at

least one of these seasons under Capt. Thomas Sinclair. Alf Skontorp was skipper for the last season, 1915-16, bringing the *Neko* back to Runcorn, Cheshire on April 23, 1916, and then on to Norway. For the 1916-17 season she was leased to the Southern Whaling Company, and for part of the war helped out at South Georgia, going into Antarctic waters that season and again in 1917-18. Three of her 4 whale catchers throughout this whole period were the *Scapa*, the *Silva,* and the *Hanka*. Always in a notoriously dirty condition, the *Neko* also steadfastly refused to cooperate with the British government (this was almost a Salvesen policy). After the war she continued to go to the South Shetlands every season from 1918-19 until 1923-24, based out of Deception Island. That last season, one of her catchers was the *Spuma*. On May 8, 1924, not far from Rio, on her way home to Europe after her last Antarctic season, she was wrecked. Salvesen replaced her with the *Saragossa*.

Puerto Neko *see* **Neko Harbor**

Neko Harbor. 64°50' S, 62°33' W. A small bay that indents the extreme NE shore of Andvord Bay, 10 km SE of Beneden Head, along the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 12, 1898, by BelgAE 1897-99. David Ferguson, geologized here in 1913, and in 1921 was the first to publish the name. This does not mean that he coined the name, however, for it was probably thus named by whalers on the *Neko*, which used this bay as an anchorage for the seasons she was in Antarctica. It appears on a 1943 U.S. Hydrographic Office chart. The Argentine refugio, Capitán Fliess, was built on the SE point of this harbor, in 1951. UK-APC accepted the name Neko Harbour on Sept. 22, 1954, and US-ACAN followed suit in 1956 (without the "u" in "Harbour," of course). It appears in the 1955 British gazetteer, and on a 1956 British chart. It was photographed aerially by FIDASE in 1956-57. It appears on a 1949 Argentine chart, as Puerto Neko, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Neko Refugio *see* **Capitán Fliess Refugio**

Utësy Nekrasova. 80°28' S, 27°45' W. Cliffs in the N central part of the Shackleton Range. Named by the Russians for the poet Nikolay Alekseyevich Nekrasov (1821-1878).

Cerro Nélida. 63°22' S, 57°10' W. A somewhat isolated hill, in the general area of Hope Bay, in the NE part of the Trinity Peninsula, off the tip of the Antarctic Peninsula. Named by the Argentines.

The *Nella Dan*. A 2206-ton, 75.5-meter ship built by the Aarlborg Shipyard, in Denmark, commissioned and owned by the Lauritzen Lines, with much involvement by the Antarctic Division of Australia (i.e., ANARE), and placed under charter to Australia for her Antarctic expeditions. Named for Nel Law, Phil Law's wife. She could take 54 passengers, and was capable of 12.5 knots. She was used by ANARE as their chief transport vessel in 1961-62 (Capt. Hans Christian Petersen), 1962-63 (Capt. Gunnar Bertelsen), 1963-64 (Petersen again), 1964-65 and 1965-66 (Capt. Wenzel Gommersen on both cruises), 1966-67 (Capt. Bent Thygesen Hansen), 1967-68, 1968-69, and 1969-70 (all three times again under Capt. Hansen), 1970-71 (Capt. Hans A.J. Nielsen), 1971-72 (Capt. Thygesen Hansen again), 1972-73 (Capt. Frank Larsen), 1973-74 (Capt. Helmuth Klostermann), 1974-75 (Capt. John Jensen; *see* **Jensen Island**), 1975-76, 1976-77, 1977-78, and 1978-79 (Capt. Klostermann again all four times), 1979-80, 1980-81, and 1981-82 (Capt. John Jensen again, all three times), 1982-83 and 1983-84 (Capt. Arne Jacob Sørensen). In 1984-85 she had two skippers, Capt. Sørensen and Peter Granholm. In 1985, 45 days of krill research were conducted from the ship in Prydz Bay, and in late October of that year she got trapped in 13-foot-thick ice off Enderby Land. The *Icebird* tried to help, but almost got trapped herself, and after 52 days the *Nella Dan* was released by the *Shirase*. On Oct. 20, 1985, Kim Nielsen, the ship's cook, died (*see* **Deaths**, 1985). The same dual-skipper situation was there in 1985-86 and 1986-87, and the *Nella Dan* was trapped again in the latter season, this time being freed by the *Mikhail Somov*. On Dec. 3, 1987, during the ANARE of 1987-88, and this time under Capt. Sørensen alone, she ran aground off Macquarie Island, and, despite salvage attempts by the *Lady Lorraine*, was sunk on Dec. 24, 1987, after 26 years of continuous service to the Australian government. She was finally replaced in 1990 by the *Aurora Australis*.

Nella Fjord. 69°22' S, 76°21' E. Separates Lied Promontory from Fletcher Promontory, near Law Base, in the Larsemann Hills, on the SE shore of Prydz Bay. Photographed aerially by LCE 1936-37, and plotted from these photos. Named by the 1986-87 ANARE field party, for the ship (the *Nella Dan*) that took them to the area.

Nella Island. 70°37' S, 166°04' E. The N of 2 small rocky islands just off the NW edge of Davis Ice Piedmont, off the N coast of Victoria Land. Named by ANARE for the *Nella Dan*, which, in 1961-62, explored this area. US-ACAN accepted the name in 1964.

Nella Rim. 68°35' S, 71°20' E. An irregular raised submarine feature, less than 500 m in depth, extending from beneath the Amery Ice Shelf, and surrounding Nanok Deep on its NE, and then passsing under the Amery Ice Shelf again. Named by ANCA for the *Nella Dan*, from which vessel was gathered much of the information that enabled them to define this feature.

Nella Rock. 67°31' S, 62°51' E. A shoal (or reef) sounding 2½ fathoms (4.5 m), in the entrance to Holme Bay, 2.5 cables (about 430 m) from, and bearing 81 from, the E extremity of the largest of the Sawert Rocks, off the Mawson Coast of Mac. Robertson Land. Named by ANCA for the *Nella Dan*, which struck this rock on March 4, 1969, while en route from Mawson Station back to Melbourne. US-ACAN accepted the name in 1973.

Punta Nelly *see* **Conesa Point**

Nelly Island. 66°14' S, 110°11' E. The largest and most easterly of the Frazier Islands, in Vincennes Bay. The S edge of the island is a steep cliff rising sheer from the water to a high, pointed peak 90 m high. The N half of the island is a long ridge about 30 m above sea level. The Frazier Islands were first delineated from air photos taken during OpHJ 1946-47. Nelly Island was first visited on Jan. 21, 1956 by Syd Kirkby's ANARE party, which established an astronomical control station here. Named by ANARE for the "nelly" (a nickname for the giant petrel) rookeries here. US-ACAN accepted the name in 1958.

Nelly Point *see* **Condesa Point**

The *Nelson*. A 247-ton London sealer, built at Southampton in 1815, and owned by Sturge (*see* **Sturge Island**). After making one trip to the South Seas, she left Gravesend on Oct. 29, 1818, under Capt. David Burney, bound for the South Atlantic. In 1819 she was in at the Galapagos Islands, and in 1820-21 took part in the South Shetlands sealing season. Coming home by way of St. Helena, she arrived back at Gravesend on April 6, 1821, and in to London on April 9, with 13,800 seal skins and 150 tanks of oil. She was back again in the South Shetlands for the period 1821-23.

Cabo Nelson *see* **Nelson Point**

Estrecho Nelson *see* **Nelson Strait**

Île Nelson *see* **Nelson Island**

Isla Nelson *see* **Nelson Island**

[1]**Mount Nelson**. Discovered near the Bay of Whales by Amundsen in 1910-11, along with Mount Ronniken. These two mountains were not very tall, and by 1928, when Byrd arrived, they were covered with snow.

[2]**Mount Nelson**. 85°47' S, 153°48' W. Rising to 1930 m, 5 km NE of Mount Pulitzer, near the W side of Scott Glacier, in the Queen Maud Mountains. First mapped during ByrdAE 1933-35. Named by US-ACAN in 1967, for Randy L. Nelson, geodesist who wintered-over at McMurdo Station in 1965.

Nelson, Andrew Laidlaw. b. 1904, Clydebank. He went to sea in 1920, as a merchant seaman, and by 1925 was 3rd mate on the Henderson Line's ship *Martaban*, out of Glasgow. He was also a lieutenant in the RNR when he was appointed to the *Discovery II*, as 2nd officer, in Oct. 1929, under Cdr. Carey. He became 1st officer and navigator in April 1930, and continued as such until Carey was washed overboard off Ushant in May 1933, when Nelson took command of the ship and brought her back to England. He skippered the ship on the next cruise south, 1933-35. He served in the RN during World War II, and in 1954 became oceanographer at the Lamont Geological Observatory, N.Y., and died in hospital in Newark, N.J. Aug. 26, 1958.

Nelson, Clayton Edward. b. 1901, Vernon, Minn., but raised mostly in McKinnon, ND, son of farmer Elbert J. Nelson and his wife Annie. He joined the U.S. Navy, as a submariner, served at the sub base in Panama, and in the 1930s married Evelyn, and they lived in Uncasville, Conn. He served as chief machinist's mate on the *Bear*,

during both halves of USAS 1939-41. As a lieutenant (jg), his submarine went missing on July 24, 1944, during World War II.

Nelson, David. b. 1875, Kirkcaldy, Fife, as David Neilson, and raised at McGill Row, Cupar, Fife, son of laborer William Neilson and his wife Margaret Gatherum. After a start as a jute laborer, he joined the merchant navy, and by 1900 was plying the Antipodean seas as a fireman and trimmer on Union Steamship Company vessels. He was a fireman on the *Morning*, during that vessel's 1903-04 relief of BNAE 1901-04. By 1905, he had got his able seaman's ticket, and was still in Australian and New Zealand waters, when, on Nov. 30, 1908, at Lyttelton, he signed onto the *Nimrod*, as 2nd engineer (replacing Hugh McGeown), and on Dec. 1, 1908, left NZ for the 2nd half of BAE 1907-09. He was discharged at Poplar (in London) on Aug. 31, 1909.

Nelson, Edward William "Ted." b. June 6, 1883, 9 Marlborough Hill, St Johns Wood, London, son of microscopist Edward Milles Nelson and his wife Laura Blanche Matilda Bruce. Educated at Clifton, Tonbridge, and Christ's, Cambridge, he was an invertebrate biologist (i.e., he studied invertebrates) with the Plymouth Marine Laboratory, when he went on BAE 1910-13, during which he was part of Campbell's Northern Party. Known to his fellow expeditioners as "Marie" or "Bronte" (*see* **Atkinson, Edward**, for more on this British phenomenon of giving girls' names to boys; i.e., it does not necessarily imply anything sinister about the recipient of such a name), he was remembered as a dedicated scientist, a great lecturer, and a chess expert, although, in June 1911, Scott referred to him in his diaries thus: "Nelson is very quick & clever, the makings of a man who might have gone far, but he is a skimmer, armed with superficial information, on many subjects, profound knowledge concerning none, as a fact he will get nowhere in life — he is too typically 'dilettantish.'" Scott was right. The fact that Nelson was independently wealthy may have had something to do with this. Immediately upon his return, Ted married Violet Helen Thomas (who called him "Marquis"), at Plymouth, on Nov. 12, 1913, and they had a daughter, Barbara, in 1916 (she died as late as 2009 while heading to Antarctica on the *Spirit of Enderby*). He was in the RN Division during World War I, fighting at Gallipoli, and by 1918 decided to end the marriage. In Sept. 1921 he became scientific superintendent of the Scottish Fishery Board's marine laboratory at the Bay of Nigg, Aberdeen. In April 1922 he finally left his wife, and on Jan. 15, 1923, while at his lodgings in Stanley Street, Aberdeen, he received notification that the courts had ordered a "restitution" of his wife's "conjugal rights," which, given the circumstances, terrified Nelson to death, as it would anyone. On the morning of Jan. 17, 1923, an attendant came into the lab, and found Ted dead. He had injected a strong poison into his leg with a hypodermic needle.

Nelson, Horatio. Seaman on USEE 1838-42. He joined in the USA, and was discharged in Oahu, Oct. 31, 1840. Not to be confused with the hero of Trafalgar.

Nelson, O. *see* **USEE 1838-42**

Nelson, Pedro. Argentine skipper out of Buenos Aires. In 1818-19 he was skipper (and part-owner) of the *San Juan Nepomuceno*, sealing in Patagonia. Then, in May 1819 he transferred to the *Espíritu Santo*.

Nelson, Peter Robert. b. 1948, Whangarei, NZ. A garage mechanic, he wintered-over as fitter and mechanic at Scott Base in 1982 and 1984.

Nelson, Philip Humphrey Hardwick "Phil." b. Jan. 23, 1938, Liverpool, son of Humphrey G. Nelson and his wife Margaret E. Hardwick. After Manchester University, he joined FIDS, and headed south in Oct. 1959, with Neil Aitkenhead, as a geologist who wintered-over at Base D in 1960 and 1961. For details of his career between Oct. 1959 and 1965, see Neil Aitkenhead's entry, because they are identical, except that Mr. Nelson left FIDS in Sept. 1965, and got his PhD in 1965, from Birmingham, based on his thesis on the James Ross Island volcanic group. In 1966, in Birmingham, he married Mary C. Roberts.

Nelson Cliff. 71°14' S, 168°42' E. A prominent rock cliff at the W side of Simpson Glacier, on the N coast of Victoria Land. First charted by Campbell's Northern Party during BAE 1910-13, and named by them as Nelson Cliffs, for Ted Nelson. The name was amended slightly a little later. US-ACAN accepted the amended name in 1970, and NZ-APC followed suit.

[1]**Nelson Cliffs**. 64°20' S, 57°35' W. Vertical rock cliffs, about 350 m high, on the N side of Lomas Ridge, extending for about 8 km in an E-W direction between Tortoise Hill and a point 5 km N of Jefford Point, on James Ross Island. These cliffs contain important geological features used to correlate geological sections between Hamilton Point and Jefford Point and assign eruptive environments to the geological units. Named by UK-APC on Nov. 15, 2006, for Phil Nelson (q.v.), who carried out the first geological survey of the James Ross Island Volcanic Group. He spent 325 days in the field during the 1960-61 season, and traveled 2250 miles.

[2]**Nelson Cliffs** *see* **Nelson Cliff**

Nelson Island. 62°18' S, 59°02' W. An island, 20 km long and 11 km wide, SW of King George Island (being separated from that island by Fildes Strait and Maxwell Bay), it is one of the main islands in the South Shetlands. It is separated from Robert Island (to the SW) by the Nelson Strait. Entirely covered with a thick mantle of ice, it is of moderate height, and reaches 150 m in its central part, the summit also being thickly covered with ice. The island is also one of the main homes of the chinstrap penguin. Discovered by William Smith in Oct. 1819. Roughly charted by Bransfield in Oct. 1820, and again by von Bellinghausen's Russian expedition on Jan. 25, 1821. The Russians named it Ostrov Leipzig (i.e., "Leipzig island"), after the 1813 Napoleonic battle of Leipzig. By 1820 it was being charted as Nelson's Island, named (almost certainly) for the *Nelson*. From the same year, charts show that it was also called Nelson's Islands, or Nelson's Isles, although what this pluralization means is not clear. Briefly called O'Cain's Island (by the sealers in the 1820-21 season), named for the *O'Cain*, there is evidence that Palmer refers to it by this name in 1821. There is an 1823 French map showing King George Island and Nelson Island lumped together as one island, and named Île Nelson (but this was simply an error). Île Nelson is seen on the 1842 map prepared by FrAE 1837-40, but as applied only to the correct feature. Weddell named it Strachan Island, or Strachan's Island, after John Strachan (*see* **Spiro Hill**), but that name did not catch on. It appears as Nelson Island on the chart prepared by the *Chanticleer* Expedition, 1828-31, again on an 1844 British chart, and on the 1937 chart prepared by the Discovery Investigations (they re-charted it in 1935), and was the name accepted by US-ACAN in 1947 (after they had rejected O'Cain Island), and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1962. However, Frank Debenham refers to it in 1945 as Leipzig Island. There is a 1948 Chilean reference to it as Isla Almirante Uribe, named after the whale catcher. It appears on a Spanish map of 1861, as Isla Nelson, and that was the name accepted by the Argentine gazetteer of 1970, and also by the Chilean gazetteer of 1974. Photographed aerially by FIDASE in 1956-57. Last plotted by the UK, in late 2008.

Nelson Nunatak. 72°56' S, 167°54' E. A mainly ice-covered nunatak, in the middle of Hand Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Thomas R. Nelson, USN, construction mechanic at McMurdo in 1967.

Nelson Peak. 83°40' S, 55°03' W. Rising to 1605 m, at the E end of Drury Ridge and Brown Ridge, where these 2 ridges abut Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1965, for Willis H. "Willie" Nelson (b. Dec. 2, 1920, Three Forks, Mont. d. Sept. 26, 2010), USGS geologist (1949-85) here in 1963-64. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. Originally plotted in 83°40' S, 54°50' W, the coordinates were corrected by 1969.

Nelson Point. 61°11' S, 55°24' W. The SE entrance point of Table Bay, Elephant Island, in the South Shetlands. It first appears named on an Argentine chart of 1977, as Cabo Nelson, but plotted in 61°10' S, 55°15' W. UK-APC accepted the translation, Nelson Point, on Dec. 16, 2003, but with newly-plotted coordinates.

Nelson Rock. 67°23' S, 62°45' E. A solitary, partially ice-covered dark rock in water, 5 km N of Williams Rocks, off the coast of Mac. Robertson Land, and about 24 km NNW of Mawson Station. Mapped by Bob Dovers (of

ANARE) in 1954. Named by ANCA for Robert E.K. "Bob" Nelson, weather observer at Mawson in 1962, who assisted with Dave Carstens' triangulation of this rock, and also with the erection of a beacon. US-ACAN accepted the name in 1965.

Nelson Strait. 62°21' S, 59°17' W. A strait running NW-SE between Robert Island to the SW and Nelson Island to the NE, in the South Shetlands. It appears as Harmony Strait or Harmony Straits on Palmer's chart of Feb. 23, 1821, so it was named early on by sealers in the area, in association with Harmony Cove. Whether Powell himself named it or not is unknown. It appears on Fildes' chart of 1821 as King George's Strait, named thus in association with King George Island. It appears on Sherratt's 1821 chart as Parry's Straits or Perry's Straits, probably named after Admiral Parry (*see* **Mount Parry**). It appears as King Georges Straits on Pendleton's chart of Nov. 21, 1821, on Capt. John Davis's chart of Feb. 18, 1822 as Davis's Strait, and on an 1823 French chart as Détroit de Clothier, after the American sealer *Clothier*. Weddell, on his 1825 map, has it as Parrys Straits, on a British map of 1838 it appears as King George Strait, and the FrAE 1837-40 chart of 1838 has it as Détroit King George. It first appears as Nelson Strait (named in association with the island) on a British chart of 1834. It appears on an 1861 Spanish chart as Estrecho del Rey Jorge, and Charcot's map of 1912 shows it as Détroit de Nelson. There is a 1908 Argentine reference to it as Estrecho Nelsen (sic). Some people were still calling it Parry Strait into the 1920s. Maxime Lester spelled it Nelson Straight or Nelson Straits on his 1922 chart. It was re-surveyed in 1930 by the Discovery Investigations, and appears on their 1933 chart as Nelson Strait, but on a 1943 U.S. Hydrographic Office chart it appears as "Harmony Strait (Nelson Strait)." It appears on an Argentine chart of 1946 as Estrecho Nelson, but on one of 1947 as Estrecho de Nelson. It appears as Nelson Straight on a 1947 USAF chart. US-ACAN accepted the name Nelson Strait in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1957. Photographed aerially by FIDASE in 1956-57. The name Estrecho Nelson was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Originally plotted in 62°19' S, 59°20' W, it was replotted in late 2008, by the UK.

Nelson's Island *see* **Nelson Island**

Nelson's Isles *see* **Nelson Island**

Nematodes. Round worms, microfauna of Antarctica (*see also* **Fauna**).

Cabo Nemesio *see* **Cape Marsh**

Mount Nemesis. 68°12' S, 66°54' W. Also called Nemesis Mountain. Rising to 790 m, 3 km NE of the seaward extremity of Roman Four Promontory, close N of Neny Fjord, and E of Neny Bay, at Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, it appears on Rymill's 1938 map of that expedition. Further surveyed in 1940 by USAS 1939-41, and probably named by them. Re-surveyed by Fids from Base E in 1947. Bill Latady, on his 1948 map of the area made during RARE 1947-48, calls it Murry Peak. Andy Thompson, of the same expedition, refers to it as Mount Nemisis (sic), and Dick Butson of the FIDS called it Nemesis Peak, in 1949. In 1954 Ray Adie, of the FIDS, called it Mount Nemesis, and that name was accepted by UK-APC on March 31, 1955, and by US-ACAN later that year. There is a 1978 Argentine reference to it as Cerro Serrano (i.e., "Serrano hill"), named by one of the Argentine Antarctic expeditions for Lt. Serrano, of the Argentine army. The Chileans call it Cerro Durán, for Hugo Durán Díaz, the first Chilean to hoist the Chilean flag at the South Pole, in 1964.

Nemesis Glacier. 70°35' S, 67°30' E. A large glacier (the Australians call it a small glacier) flowing NE through the center of the Aramis Range of the Prince Charles Mountains into the Amery Ice Shelf. Discovered by Bill Bewsher's ANARE Southern Party in Jan. 1957, and named by ANCA on July 22, 1957, after the Homeric character, for the difficulties it caused while traversing here. US-ACAN accepted the name in 1961.

Nemesis Mountain *see* **Mount Nemesis**

Nemesis Peak *see* **Mount Nemesis**

Caleta Nemo *see* **Nemo Cove**

Pico Nemo *see* **Nemo Peak**

Nemo Cove. 67°43' S, 67°18' W. Midway along the SE coast of Pourquoi Pas Island, on Bourgeois Fjord, in the NE part of Marguerite Bay, off the Loubet Coast, on the W coast of Graham Land. First surveyed in 1936 by BGLE 1934-37. In 1948 Fids from Base E re-surveyed it, and named it for the Jules Verne character. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Caleta Nemo. *See* **Pourquoi Pas Island** for a literary tour of Verne's novel, *Twenty Thousand Leagues Under the Sea*.

Nemo Glacier. 67°43' S, 67°22' W. Flows E into Nemo Cove, along the SE coast of Pourquoi Pas Island, on Bourgeois Fjord, in the NE part of Marguerite Bay, off the Loubet Coast, on the W coast of Graham Land. BAS did geological work here from 1965 to 1970. Named by UK-APC on June 11, 1980, in association with the cove. US-ACAN accepted the name.

Nemo Peak. 64°46' S, 63°16' W. A conspicuous peak, rising to 864 m, 1.5 km NE of Nipple Peak, and 6 km S of Cape Astrup, in the N part of Wiencke Island, in the Palmer Archipelago. Discovered in Feb. 1898, by BelgAE 1897-99. Charted by the Discovery Investigations in 1927, it appears on their 1929 chart. They may not have named it; older whalers may have done, for the Jules Verne character. It appears on a 1947 Argentine chart as Pico Nemo, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. US-ACAN accepted the name Nemo Peak in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57.

Bahía Neny *see* **Neny Bay**

Fiord Neny *see* **Neny Fjord**

Fiordo Neny *see* **Neny Fjord**

Fjord Neny *see* **Neny Fjord**

Fondeadero Neny. 68°12' S, 66°58' W. The anchorage in Neny Bay, off the Fallières Coast, on the W coast of Graham Land. As a separate feature (i.e., as distinct from the bay itself), it first appears on an Argentine chart of 1953, and was the name accepted by the Argentine gazetteer of 1970. The name Fondeadero Bahía Neny has also been seen.

Isla Neny *see* **Neny Island**

Islote Neny *see* **Neny Island**

Seno Neny *see* **Neny Fjord**

Neny Bay. 68°12' S, 66°58' W. On the E side of Marguerite Bay, it is a small indentation into the Fallières Coast, 14 km from Cape Calmette, on the W coast of Graham Land. It is bounded on the W by Neny Island, on the NW by Stonington Island, and on the SE by Roman Four Promontory. First charted in 1936, by BGLE 1934-37. During USAS 1939-41, personnel from East Base surveyed it again, and the part of the bay between Neny Island and Stonington Island they named Neny Channel. Neny Channel appears on maps of 1941 and 1945, but the name subsequently disappeared from usage. They called the whole feature Neny Island Bay, in association with the island, and it appears as such on a 1943 U.S. Hydrographic Office chart. In 1947 Fids from Base E re-surveyed it. There is a 1947 Argentine reference to this feature as Isla Bahía Neny, but on a Chilean chart of 1947 it appears as Bahía Neny, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. It has also been seen occasionally as Bahía Isla Neny. US-ACAN accepted the name Neny Bay in 1953, and UK-APC followed suit on March 31, 1955. It appears as such on a 1956 British chart. It was re-charted by an RN Hydrographic Survey unit in 1966. The Argentines have actually named the anchorage in the bay — as Fondeadero Neny.

Neny Channel *see* **Neny Bay**

Neny Fiord *see* **Neny Fjord**

Neny Fjord. 68°16' S, 66°50' W. About 16 km long in an E-W direction, and 8 km wide, it is an indentation in the Fallières Coast, between Rymill Bay and Stonington Island. It is actually 6 km from Stonington Island, in Marguerite Bay. Strictly speaking, it is a bay, and lies between Red Rock Ridge and Roman Four Promontory, on the W coast of Graham Land. It is not to be confused with nearby Neny Bay. FrAE 1908-10, in Jan. 1909, discovered a bay from a distance, and Charcot named it Fiord Neny, or Fjord Neny. It appears on their expedition maps, and also on a British chart of 1914 (as Neny Fd.). Charcot believed it to be an extensive fjord running SE from the S side of Square Bay. However, this fjord of Charcot's seems to have been about 30 km to the N of the feature we know today as Neny Fjord. In 1936, BGLE 1934-37 made a thorough survey of the area, with both ground surveys and air reconnaissance, and determined that there was only one large fjord in the area. Combining their

work with that of Charcot, they decided, then, that this was the feature that needed to be called Neny Fjord. Over the years this has become accepted. It appears on a 1940 British chart as Neny Fiord. On a 1947 Chilean chart it appears as Fiordo Neny. It was re-surveyed by Fids from Base E in Dec. 1949. US-ACAN accepted the name Neny Fjord in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1962, as Seno Neny (which means the same thing, roughly), and that was the name accepted by the 1974 Chilean gazetteer. The 1970 Argentine gazetteer accepted the name Fiordo Neny. Who was Neny?

Neny Fjord Thumb *see* **Little Thumb**

Neny Glacier. 68°15' S, 66°25' W. Flows NW and W into the N part (i.e., the head) of Neny Fjord, at Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Surveyed near its mouth in 1936, by BGLE 1934-37. Following a May 21, 1940 reconnaissance flight by USAS 1939-41, this glacier (which was used by the expedition as a sledging route) and (what would later be called) Gibbs Glacier (which flows SE), were together determined to occupy a transverse depression running all the way from Neny Fjord (on the W side of the Antarctic Peninsula) to the Mercator Ice Piedmont (on the E side of the Antarctic Peninsula). This transverse depression, consisting of the two glaciers (which are separated by a col running at about 1050 m above sea level) was traversed by a USAS sledging party in Jan. 1941, and named by them as Neny Valley (i.e., the whole depression was called Neny Valley). The part of the valley that could not be seen from Neny Fjord (i.e., the more E part) was named Neny Trough. However, by 1948, the name Neny Trough had been applied to the entire valley, glaciers and all. UK-APC accepted that situation on March 31, 1955, and US-ACAN followed suit in 1956. However, there is a 1953 British reference to Neny Glacier as being a synonym for the entire valley (but that naming turned out to be ephemeral). Following a survey by Fids from Base E in 1958 (a party that included Peter Gibbs and Pete Forster), this complex situation was cleared up. On Aug. 31, 1962, UK-APC allocated two separate names, one for each of the two glaciers. The NW glacier became Neny Glacier, and the SE one became Gibbs Glacier (q.v.). US-ACAN accepted this new situation in 1963.

Neny Glacier Island *see* **Pyrox Island**

Neny Island. 68°12' S, 67°03' W. An island, 2.5 km long in an E-W direction, and 1.5 km wide, forming the W entrance point to Neny Bay, it is entirely occupied by a sharp-pointed mountain rising to 675 m above sea level (the Chileans say 634 m), with sheer cliffed sides (partly ice-free in summer) which drop off into the sea, and lies 1.5 km NW of Roman Four Promontory, 6 km SE of Millerand Island, and directly N of the mouth of Neny Fjord, 3 km S of Stonington Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Discovered in 1936, by BGLE 1934-37, and named by Rymill in association with the fjord. US-ACAN (after rejecting the term Neny Islands) accepted the name Neny Island in 1947, and UK-APC followed suit on March 31, 1955. There is a 1945 American reference to the mountain, as Neny Mountain, but this name did not stick (as the mountain is virtually the island, and vice versa). The mountain was further surveyed (and climbed) by Fids from Base E between 1946 and 1948. It appears on a 1947 Chilean chart as Isla Neny, and that was the name accepted by the Chilean gazetteer of 1974, as well as by the Argentine gazetteer of 1970.

Neny Island Bay *see* **Neny Bay**

Neny Islands *see* **Neny Island**

Neny Matterhorn. 68°20' S, 66°51' W. A sharp, pyramid-shaped peak, rising to over 1125 m, in the NW part of the Blackwall Mountains, on the S side of Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936 by BGLE 1936-37. Named by RARE 1947-48 and Fids from Base E (they named it together), in association with the nearby fjord, and for its resemblance to the Swiss mountain. Re-surveyed (and climbed) by Fids from Base E in 1948-49. Dick Butson refers to it in 1949. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Neny Mountain *see* **Neny Island**

Neny Trough *see* **Neny Glacier**

Neny Valley *see* **Neny Glacier**

Nenzyumo-ike. 69°02' S, 39°33' E. A lake, usually covered with perennial snow, in the S part of Ongul Island. Mapped from air photos taken by JARE in 1992, and named by the Japanese on March 22, 1994 (the name means "lake of blue-green algae").

Neofit Peak. 63°01' S, 62°35' W. Rising to 1750 m, 1.13 km SSW of Slaveykov Peak, 3 km SW of the summit of Mount Foster, and 10.6 km NE of Cape James, it overlooks Gramada Glacier to the S and Armira Glacier to the E and SE, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the Bulgarian monk, scholar, and artist Neofit Rilski (1793-1881), who translated the Bible into modern Bulgarian.

Poluostrov Neozhidannyj *see* **Neozhidannyj Peninsula**

Neozhidannyj Peninsula. 66°18' S, 108°58' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Neozhidannyj. ANCA translated it.

Nepal Peak. 79°43' S, 159°35' E. Rising to 1203 m, at the N end of Goorkha Craters (hence the name), in the Cook Mountains, in the Transantarctic Horst. Named by US-ACAN in 2000. NZ-APC accepted the name on Feb. 20, 2001.

Ostrov Neptun *see* **Neptun Island**

Neptun Island. 66°09' S, 101°06' E. In the Bunger Hills. Charted by SovAE 1956. Named by the Russians as Ostrov Neptun (i.e., "Neptune island"), which ANCA translated.

Neptune Glacier. 71°44' S, 68°17' W. A glacier, 20 km long and 6 km wide, flowing E into George VI Sound, to the S of Triton Point, between that point and Cannonball Cliffs, on the E coast of Alexander Island. Discovered aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. The mouth of the glacier was surveyed in Oct. 1936 by BGLE 1934-37, and the results can be seen on Stephenson's map of 1940. Surveyed again near its mouth, in 1949, by Fids from Base E. Named by UK-APC on March 31, 1955, for the planet. US-ACAN accepted the name later in 1955. It appears on a 1956 U.S. Hydrographic Office chart. The entire glacier was mapped in 1959-60 by Searle of the FIDS, working from air photos taken in late 1947 by RARE 1947-48. The Argentines call it Glaciar Neptuno.

Neptune Nunataks. 76°37' S, 145°18' W. A small group of nunataks between the Chester Mountains and the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and remapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Gary D. Neptune, geologist on Marie Byrd Land Survey II, 1967-68.

Neptune Range. 83°40' S, 56°00' W. A mountain range, 110 km long between Spanley Rocks in the N and Final Rock in the S, and rising to 1975 m in Mount Hawkes, it lies WSW of the Forrestal Range, in the central part of the Pensacola Mountains. It is bounded to the W by the Schmidt Hills and the Wilson Hills, and to the E by the Washington Escarpment and its associated ridges, valleys, and peaks. The range also includes the Iroquois Plateau. Discovered and photographed aerially on Jan. 13, 1956, during Jack Torbert's non-stop flight from McMurdo Sound to the Weddell Sea and back, and named by US-ACAN in 1957, for the P2V-2N Neptune aircraft from which the observation was made. It appears on the *National Geographic* map of 1957. It appears on a 1962 American Geographical Society map of 1962, but referring to the W half of the Pensacola Mountains. UK-APC accepted the name on Feb. 12, 1964, but with the coordinates 83°45' S, 52°00' W. The entire Pensacola Mountains were photographed aerially by USN in 1964, and surveyed from the ground between 1965 and 1967 by USGS, during their Pensacola Mountains Survey, and the coordinates of the Neptune Range were corrected by 1969, and appear in the 1977 British gazetteer. The Americans plot it in 83°30' S, 56°00' W. Between Nov. 1963 and Jan. 1966, the Americans had Camp Neptune here (a 16' x 24' Jamesway hut), on the E side of Roderick Valley, in 83°34' S, 57°24' W. It is now buried in snow. The Neptune Range (or at least part of it) appears on a 1966 Argentine map as Cordillera Santa Teresita (named after St. Theresa), and that name was accepted by the 1970 Argentine gazetteer.

Neptunes Bellows. 63°00' S, 60°34' W. One of the famous features in the South Shetlands, it is the narrow gap, or marine channel, on the SE side of Deception Island, which leads through

the horseshoe shape of the island, between Fildes Point and Entrance Point, into Port Foster. Named by U.S. sealers here before 1822, probably as Neptune's Bellows, but an 1821 quote from Capt. Robert Fildes leads one to think the original name may have signified something different, "The entrance is by the Americans called Neptune's Billow's [sic] owing to the gusts that blow in and out as if they came through a trumpet or funnel." Another old name for it was Dragon's Mouth, named for the *Dragon*. As Neptune's Bellows (i.e., with the apostrophe) it appears on Fildes' 1829 chart, on a British chart of 1921, and on a 1948 FIDS photograph. FrAE 1908-10 called it Passe du Challenger, and it appears as such on Charcot's 1912 map. Consequently, through the 1920s one finds English language references to this as Challenger Passage, Challenge Passage (sic), and Challenger Pass, this last a 1939 reference by Bagshawe of the British Imperial Antarctic Expedition of 1920-22. It first appears as Neptunes Bellows (i.e., sans apostrophe) on a 1942 USAAF chart, and, with that spelling the name was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1953 Argentine chart, translated as Fuelles de Neptuno (which is what the Argentines had always called it). The Argentine gazetteer accepted the name Pasaje Fuelles de Neptuno, and the Chilean gazetteer of 1974 accepted Paso Fuelles de Neptuno, but, of course, in real life, both countries call it Fuelles de Neptuno.

Neptunes Window. 62°59' S, 60°33' W. A narrow gap between two rock pillars, W of South East Point, and close E of Whalers Bay, on the SE side of Deception Island, in the South Shetlands. Bagshawe, on his 1939 map reflecting the British Imperial Antarctic Expedition of 1920-22, refers to it as The Gap, which probably reflects an earlier naming, perhaps a much earlier naming. ChilAE 1946-47 named it Ventana del Chileno (i.e., "window of the Chilean"). Lt. Cdr. David Penfold named it Neptune's Window, following his RN Hydrographic survey of the island in 1948-49, because, from here, he could conveniently observe the ice and weather conditions at Neptune's Bellows. It appears as such on his 1949 chart. Like the bellows, the window later lost its apostrophe, and UK-APC accepted the name Neptunes Window on Nov. 15, 1951, with US-ACAN following suit in 1952. It appears as such on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Ventana de Neptuno, which means the same thing, but, today, the Argentines tend to call it Caleta Ventana de Neptuno ("caleta" meaning "cove").

The *Neptunia*. Polish ship, in Antarctic waters in 1981-82. Skipper Jerzy Wojtkiewicz.

Glaciar Neptuno *see* **Neptune Glacier**

NERC *see* **National Environment Research Council**

The *Nereiad*. A 284-ton single-decked sealing ship, built in Greenock in 1807, sheathed with copper, and operating out of London. She was in South Shetlands waters in 1822-23, under the command of Capt. David Kell.

The *Nereide*. British ship under the command of Paul Robert Helfrich Harrison. She visited FIDS stations and foreign stations in the South Orkneys and South Shetlands in the 1953-54 season.

Nereide Patch. 61°57' S, 56°44' W. A reef named for the *Nereide*, just off King George Island, in the South Shetlands. It is a term no longer used.

Nereson Glacier. 73°56' S, 124°24' W. About 8 km long, it flows from the N side of Siple Island, off the coast of Marie Byrd Land. Named by US-ACAN in 2003, for Nadine A. Nereson, University of Washington glaciologist who, in the 1990s, studied the history of ice flow in West Antarctica, and the past and present stability of the ice sheet.

Nergaard Peak. 72°00' S, 9°27' E. Rising to 2475 m, 5 km S of Niels Peak, in the southernmost part of the Gagarin Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 air photos taken during that same long expedition, and named by them as Nergaardnuten, for Niels S. Nergaard (b. 1921), who wintered-over as scientific assistant at Norway Station during NorAE 1956-60. US-ACAN accepted the translated name Nergaard Peak in 1966. *See also* **Nielsnapen**.

Nergaardnuten *see* **Nergaard Peak**

Mount Nero. 71°12' S, 159°50' E. Rising to 2520 m, it surmounts the W wall of the Daniels Range, 5 km N of Forsythe Bluff, and about 7.4 km S of Fisher Spur, in the Usarp Mountains, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Leonard L. Nero (b. Jan. 1947), USARP biologist at McMurdo Station in 1967-68. ANCA accepted the name.

Ostrov Nerpa. 68°54' S, 77°48' E. An island in the Rauer Islands, in the SE part of Prydz Bay. Named by the Russians. Despite the confusion sometimes caused by the Russians naming features already named by someone else, this does seem to be a separate island, not named by anybody else.

Mount Nervo. 83°14' S, 58°00' W. Rising to 1070 m, 5 km N of Mount Coulter, it is the highest peak in the Schmidt Hills, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1966. Named by US-ACAN in 1968, for George William Nervo (b. July 1928), USN, radioman at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Nesbrekka. 69°47' S, 37°31' E. An icefall, E of Fletta Bay, on the Prince Harald Coast. Name means "the point slope" in Norwegian.

Sedlovina Nesebar *see* **Nesebur Gap**

Nesebar Gap *see* **Nesebur Gap**

Nesebur Gap. 62°39' S, 60°13' W. A gap, at an elevation of 550 m above sea level, 1.3 km wide, bounded to the W by Pliska Ridge, and to the E by the N slope of Mount Friesland, in the E part of Livingston Island, in the South Shetlands. It is part of the divide between the glacial catchments of Perunika Glacier to the N and Huntress Glacier to the south. Named by the Bulgarians as Sedlovina Nesebar, on Oct. 29, 1996, for their town of Nesebar. There are at least 3 spellings of this name the way it is rendered in the English language — Nesebar, Nesebur, and Nessebar, very definitely in that order of popularity. UK-APC accepted the name Nesebur Gap on April 29, 1997, and US-ACAN followed suit that year. Last plotted by the UK, in late 2008.

Nesholmen *see* **Nesholmen Island**

Nesholmen Island. 69°44' S, 38°12' E. A small island, 0.8 km off Djupvikneset Peninsula, in the S part of Lützow-Holm Bay, on the Prince Harald Coast. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Nesholmen ("the ness island"), for its proximity to the peninsula (ness). US-ACAN accepted the name Nesholmen Island in 1968.

Neshyba Peak. 71°14' S, 62°45' W. A small, sharp peak, mostly snow-covered, and rising to 2105 m, surmounting the N part of a complex ridge 26 km ENE of Mount Jackson, at the W of the head of Palmer Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974, from these efforts. Named by US-ACAN in 1976, for Stephen Neshyba, USARP oceanographer who studied the laminar structure of the bottom water off the Antarctic Peninsula in 1972-73. UK-APC accepted the name on July 21, 1976.

Nesla Glacier. 65°43' S, 64°16' W. A glacier. 6.2 km long and 2 km wide, on Magnier Peninsula, it flows from the W slopes of Lisiya Ridge W of Mount Perchot, westward into Bigo Bay next N of the terminus of Kolosh Glacier, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Nesla, in western Bulgaria.

Mount Nesos. 78°12' S, 167°06' E. A hill, the remnants of a volcanic core, rising to over 400 m (the New Zealanders say it is 350 m high), projecting through the ice near the SW end of White Island, in the Ross Archipelago. It is separated from the main part of the island by the ice sheet, but, nonetheless, it is still part of the island. Named descriptively by NZGSAE 1958-59 (nesos is Greek for "island"). NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Nesøya. 69°00' S, 39°35' E. An island, 0.8 km long, close off the N point of East Ongul Island, in the Flatvaer Islands, on the E side of the entrance to Lützow-Holm Bay, on the Prince Olav Coast. Discovered and photographed aerially by LCE 1936-37, and mapped from these

photos in 1946 by Norwegian cartographers, who named it ("the point island"). US-ACAN accepted the name without modification in 1971.

The *Nespelen*. Familiarly called the *Nes*. Built in 1944 by Cargill, in Savage, Minn., and launched on April 10, 1945. Named after the river in Washington state, she was commissioned as U.S. gasoline tanker, AOG-55, on Aug. 9, 1945, with Lt. Thomas R. Purcell, USNR, in command. 311 feet long, 4130 tons, 2 propellers, maximum speed of 15.5 knots, and room for 124 men, she was designed for Arctic work, and had a reinforced bow. She took part in OpDF I, under the command of Lt. George Clarence "Larry" Sup (b. Feb. 18, 1926. Ohio. d. Nov. 23, 1990, Monterey, Calif.), leaving Norfolk, Va., on Nov. 6, 1955, arriving at Christchurch, NZ, on Dec. 12, 1955, and proceeding from there on Dec. 17 to McMurdo Sound, where she arrived with the *Wyandot* and the *Edisto*, on Dec. 27, 1955. On Jan. 15, 1956 she was holed by an ice floe, and lost 125,000 gallons of fuel. After fueling the McMurdo tank farm, she sailed, unescorted for NZ on Feb. 12, 1956, arriving at Dunedin in a bad way on Feb. 23, 1956. She also took part in OpDF II (1956-57; Capt. Sup), leaving NZ for Antarctica on Dec. 10, 1956, in company with the *Towle*. She was back for OpDF III (1957-58), under the command of Capt. Sup again, and then for OpDF IV (1958-59; captain unknown). She was struck from the register on July 1, 1975, and sold for scrap in 1976.

Mount Nespelen. 76°47' S, 161°48' E. A massive mountain on the N side of Benson Glacier, and about 7 km SW of Mount Davidson, it is the highest in the coastal ranges between Mackay Glacier and Fry Glacier. Named by the NZ Northern Survey Party of BCTAE 1957-58, for the *Nespelen*. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Mount Ness. 71°20' S, 66°52' W. Rising to about 1890 m, it is the most northeasterly of the Batterbee Mountains, 14 km NE of the summit of Mount Bagshawe, 22 km inland from George VI Sound, on the W coast of Palmer Land. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Surveyed in Oct. 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition. Surveyed by Fids from Base E in 1948-49. Named by UK-APC on March 31, 1955, for Mrs. Patrick Ness, a patron of BGLE. Elizabeth Wilhelmina Miller (1881-1962), the widow of Major Patrick Powell Ness (1881-1914; they had married in London in 1903), was the first woman to become a council member of the Royal Geographical Society (in 1930). An intrepid traveler, she wrote the book *Ten Thousand Miles in Two Continents*. US-ACAN accepted the name later in 1955. It appears on a U.S. Hydrographic Office chart of that year. The British plot it in 71°20' S, 66°57' W.

Ness, Gerald Thomas "Gerry." In Antarctica he is known as "Rocky." b. June 20, 1956, Minneapolis, son of Arnold Henry Ness and his wife Edna Joan Hadash. After graduating in 1979, from St. Cloud State University, he was working at a dead-end management job when his brother, who had summered and wintered-over in Antarctica, suggested him to ITT for their first year of operations in Antarctica, and he went south in late 1980, wintering-over in 1981 as a power plant mechanic at Palmer Station. He was back for the winter of 1983, in a similar capacity, at McMurdo, and in 1985 and 1987 at Palmer. He was the water plant operator for the 1989 winter at McMurdo, and again in 1991, also as power plant operator. He was facilities engineer at Palmer for the summer of 1992-93, and station manager there for the 1993 winter, leaving Palmer in early spring of 1994. He came in to McMurdo, to Williams Field, on the Winfly of 1995, and wintered-over there that year as winter operations supervisor at McMurdo, for Antarctic Support Associates. He did the same thing in 1996 and 1997 (he arrived at McMurdo on Feb. 2, 1997, and left on Oct. 2, 1997), and in 1998 (he developed acute appendicitis, and had to be flown to NZ — in the austral winter!). He arrived back at McMurdo, as site manager, on Feb. 1, 1999, wintered-over, and left on Oct. 13, 1999. On Feb. 9, 2000, by now working for Raytheon, he was back at McMurdo. He was at Palmer Station for the winter of 2003, and his last winter-over was at Palmer in 2004, as site manager. Altogether, since 1980, he has spent an incredible 15 winters and 158 months on the ice.

Nestinari Nunataks. 62°39' S, 60°05' W. A pair of rock peaks 250 m away from each other, and rising to 470 m and 520 m respectively, in the middle of Huron Glacier, 3.8 km ESE of Kuzman Knoll, 1 km NW of Plana Peak, 2.5 km NNE of Levski Peak, and 1.5 km ENE of Ravda Peak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the nestinari, the dancers who take part in the folkloric festival of Nestinarstvo, from the Strandzha Mountains near the Black Sea, and which involves barefoot dancing on hot embers.

Nestling Rock. 71°23' S, 170°24' E. A rock in water, just E of the N portion of Adare Peninsula, along the coast of Victoria Land, in the shade of the huge Downshire Cliffs. Named descriptively by NZ-APC. US-ACAN accepted the name in 1966.

Mount Nestor. 64°25' S, 63°28' W. Rising to 1250 m (the British say about 1280 m), it is the most northerly peak in the Achaean Range, on Anvers Island, in the Palmer Archipelago. Its W wall rises steeply from the Marr Ice Piedmont, while its E side is a jumble of crevasses and jagged rock pinnacles. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957, for the Homeric character. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Netherlands. Willem van der Does, a Dutch artist, was a whaler on the *Sir James Clark Ross* in 1923-24, and, as incredible as this may sound, was perhaps the first Dutchman in Antarctic waters. The *Willem Barendsz*, a Dutch whaler, was in Antarctic waters from 1946-47. The Netherlands was ratified as the 16th signatory to the Antarctic Treaty on March 30, 1967. The first Dutch expeditionary involvement was in the 1964-67 period, when three Belgian-Dutch expeditions went south, but then the Netherlands decided to pull out of any further Antarctic research. However, the threat of global warming led to a resurgence in their activities, and the first two Netherlands Antarctic programs (1985-88 and 1989-93) were put together. The first Netherlands Antarctic Expedition was organized and because of this active involvement they were granted Consultative Party status within the Antarctic Treaty system on Nov. 19, 1990. The country has no scientific stations or bases of its own, relying on Treaty partners for facilities.

Netherlands Antarctic Expedition. 1990-91. Led by Willem J. "Wim" Wolff. They were based out of Arctowski Station.

Neu Schwabenland *see* **New Schwabenland**

Neuburg Peak. 82°38' S, 52°54' W. Seen sometimes (erroneously) as Newberg Peak. A jagged rock peak, rising to 1840 m, 4 km E of Walker Peak, in the SW part of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66 during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Hugo Alfred Carl Neuburg (b. Aug. 25, 1920, Hoboken, NJ. d. Dec. 16, 2010, Va.), USARP glaciologist at Ellsworth Station in 1957, and one of the first party to visit the Dufek Massif in Dec. 1957. He was senior scientist at McMurdo for the winter of 1960. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Neujahrsrücken. 71°52' S, 162°38' E. A somewhat isolated ridge, NW of Onlooker Nunatak, in the area of the Rennick Glacier, just SE of the Morozumi Range. Named by the Germans (means "new year's ridge").

Neumann Peak. 67°04' S, 67°35' W. Rising to about 800 m near the N end of Hansen Island, in Hanusse Bay, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers from air photos taken in late 1947 by RARE 1947-48, and by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Franz Ernst Neumann (1798-1895), German physicist specializing in ice. US-ACAN accepted the name in 1965.

Cabo Neumayer *see* **Cape Neumayer**

Canal Neumayer *see* **Neumayer Channel**

Cape Neumayer. 63°42' S, 60°34' W. A cape forming the NE end of Trinity Island, and projecting into Orléans Strait, in the Palmer Archipelago. Charted in 1902 by SwedAE 1901-04, and named by Nordenskjöld as Kap Neumayer, for Georg von Neumayer (*see* **Neumayer Channel**). From the time of World War I, it became confused with Cape Wollaston, the NW cape of Trinity Island (Foster named that one in 1829). For example, it appears in error as Cape

Wallaston — misspelled, at that — on British charts of 1921 and 1948, and on a 1947 Chilean chart as Cabo Wallaston (but they were only translating from the erroneous 1921 British chart). According to the (recent) Chilean gazetteer, it appears on one of their 1951 charts as Cabo Neumayer. It appears on a British chart of 1954 as Cape Wollaston, and that was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. After FIDASE photographed it aerially in 1956, UK-APC accepted the name Cape Neumayer on Sept. 23, 1960, and US-ACAN followed suit that year (the name Cape Wollaston was re-applied to the NW point of the island). It appears on a British chart of 1961. However, it was still appearing on Argentine charts as Cabo Wollaston (in 1963, for example), but today the Argentines, like the Chileans, call it Cabo Neumayer, even though the 1974 Chilean gazetteer accepted the name Cabo Wollaston. However, the Chileans have another name for it — Cabo Winter.

Chenal de Neumayer *see* **Neumayer Channel**

Kap Neumayer *see* **Cape Neumayer**

Mount Neumayer. 75°16' S, 162°17' E. Rising to 720 m, it surmounts D'Urville Wall, on the N side of the terminus of David Glacier, and is the most southerly of the peaks between that glacier and Larsen Glacier, in Victoria Land. Discovered by BNAE 1901-04, and named by them for Georg von Neumayer (*see* **Neumayer Channel**). US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Neumayer Canyon. 69°45' S, 9°50' W. It runs between 69°30' S and 70°00' S, and between 11°20' W and 8°20' W. A submarine feature, immediately SW of Drygalski Canyon, and N of the Ekström Ice Shelf, which is on the Princess Martha Coast. Named by Heinrich Hinze, in 1997, in association with Neumayer Station (which is on the Princess Martha Coast). The name was accepted by international agreement that year.

Neumayer Channel. 64°46' S, 63°30' W. A narrow, S-shaped marine channel, 26 km long and 2.5 km wide, running in a NE-SW direction, with majestic cliffs flanking it, it separates the SE part of Anvers Island from Wiencke Island and Doumer Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Its NE entrance is between cape Astrup and Félicie Point, and its SW entrance is between Cape Lancaster and Cape Kemp. The SW entrance was discovered by Dallmann, in 1873-74, and the channel was called Roosen-Strasse, for the famous Hamburg banking family who contributed toward his expedition. This was translated as Roosen Strait, and both names appear on various 1875 charts of the expedition. On Fricker's 1898 map it appears as Rosen Strasse. BelgAE 1897-99 sailed through it on Feb. 8-9, 1898, and de Gerlache re-named it Chenal de Neumayer, for Georg Balthasar von Neumayer (1826-1909), German physicist. The name was soon translated as Neumayer Channel, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Chileans and Argentines both call it Canal Neumayer. The Chileans plot it in 64°49' S, 63°35' W, the Argentines in 63°47' S, 63°27' W, the British in 64°47' S, 63°27' W, and the Americans in 64°47' S, 63°30' W.

Neumayer Cliffs. 73°07' S, 1°45' W. A series of abrupt rock cliffs forming the NE end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Discovered by GermAE 1938-39, and named as Neumayersteilwand ("Neumayer's end wall"), for Georg von Neumayer (*see* **Neumayer Channel**). Surveyed by NBSAE 1949-52. US-ACAN accepted the name Neumayer Cliffs in 1966. The (later) Germans (who mapped it in 73°10' S, 1°50' W) and the Russians (who mapped it in 73°10' S, 2°00' W) both call this feature Neumayersteilwand and the Norwegians, who mapped it in 73°10' S, 1°10' W, call it Neumayerskarvet (which means the same thing).

Neumayer Escarpment *see* **Neumayer Cliffs**

Neumayer Station *see* **Georg von Neumayer Station**

Neumayereishöcker *see* **Neumayerryggane**

Neumayerryggane. 70°32' S, 8°33' W. Ice rumples at the front of the Ekström Ice Shelf, just W of Atka Iceport, on the Princess Martha Coast, and NW of Neumayer Station, in association with which it was named by the Norwegians. The Germans call it Neumayereishöcker (which means the same thing).

Neumayerskarvet *see* **Neumayer Cliffs**

Neumayersteilwand *see* **Neumayer Cliffs**

Mount Neuner. 75°18' S, 72°41' W. Rising to 1420 m, 5.5 km SW of Mount Chandler, in the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1966, for Charles Seburn "Chuck" Neuner (b. June 10, 1931, Ohio. d. Aug. 15, 1997, Richmond, Mich.), who, after serving in the Air Force in Korea, was USARP station engineer at Camp Sky-Hi (*see* **Eights Station**), 1961-62. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Zaliv Neupokoëva *see* **Neupokoyev Bight**

Neupokoyev Bight. 70°05' S, 4°45' E. A bight, about 50 km wide, indenting the ice shelf that fringes the coast of Queen Maud Land, about 30 km NE of Tsiolkovskiy Island. Mapped (but not named) by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60. Re-mapped by SovAE 1961, and named by them as Zaliv Neupokoëva, for Konstantin Konstantinovich Neupokoyev, Arctic hydrographer in the 1920s. US-ACAN accepted the translated name in 1970.

Neuschwabenland *see* **New Schwabenland**

Gora Neustruëva *see* **Mount Neustruyev**

Neustruevfjellet *see* **Mount Neustruyev**

Mount Neustruyev. 71°15' S, 12°14' E. A nunatak, rising to 2900 m, 8 km NNE of Gneiskopf Peak, in the Südliche Petermann Range of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1966 as Gora Neustruëva, for soil scientist Sergey Semenovich Neustruyev (1874-1928). US-ACAN accepted the name Mount Neustruyev in 1970. The Norwegians call it Neustruevfjellet.

Colina Nevada *see* **Snow Hills**

Isla Nevada *see* **Snow Island**

Cerro Nevado *see* **Mount Cardinall**

[1]**Névé** *see* **Firn snow**

[2]**Névé**. A snowfield at the head of a glacier that has become transformed into ice.

Névé Nunatak. 78°17' S, 160°54' E. An isolated nunatak, rising to 1707 m, just N of Halfway Nunatak, 6 km SW of the Upper Staircase, between that feature and the E side of Skelton Névé (it marks the beginning of that névé). Surveyed by the NZ Northern Survey Party of BCTAE in Feb. 1957, and named by them in association with Skelton Névé. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Isla Neves *see* **Stanley Island**

Piedra Neves *see* **Inott Point**

Punta Neves. 64°34' S, 62°02' W. The point immediately S of Punta Rivero, on Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines (*see* **Inott Point**).

Nevestino Cove. 62°20' S, 59°38' W. A cove, 1.55 km wide, indenting the N coast of Robert Island for 1.5 km between Catharina Point and Hammer Point, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the three settlements of Nevestino, in southeastern, south, and western Bulgaria resp.

Nevlingen *see* **Nevlingen Peak**

Nevlingen Peak. 67°59' S, 55°05' E. A prominent, isolated peak, rising to 2100 m, 21 km SE of Doggers Nunataks, and about 57 km SSW of Rayner Peak, in Kemp Land, in Enderby Land. Mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936-37, and named by them as Nevlingen. First visited by an ANARE dog sledge party in Dec. 1958, when an astrofix was obtained by Graham Knuckey. Named by ANCA (but only for themselves) on July 22, 1959, as Mount Channon, for Grey Channon (q.v.). US-ACAN accepted the name Nevlingen Peak in 1967.

Nevlya Peak. 62°32' S, 59°44' W. Rising to 380 m in Breznik Heights, 600 m W of Terter Peak, and 1.15 km ESE of the summit of Oborishte Ridge, overlooking Wulfila Glacier to the W and S, on Greenwich Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and again in 2009, and named by them on Nov. 23, 2009, for the settlement of Lower Nevlya, in western Bulgaria.

Kotlovina Nevskaja. 67°00' S. 7°00' E. An anchorage in the sea the Russians call More Lazareva, beyond the Fimbul Ice Shelf, in the Weddell Sea. Named by the Russians.

Skaly Nevskië *see* **Nevskiye Nunataks**

Nevskiye Nunataks. 71°40' S, 8°05' E. A group of scattered nunataks in the Drygalski Mountains of Queen Maud Land, they comprise the Sørensen Nunataks and the Hemmestad Nunataks. Mapped by cartographers at the Norsk Polarinstitutt from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1961, and named by the USSR as Skaly Nevskië (the name means "rocks of the Neva," i.e., the river in Russia). US-ACAN accepted the name Nevskiye Nunataks in 1970.

Ensenada New Bedford *see* **New Bedford Inlet**

Estero New Bedford *see* **New Bedford Inlet**

Estrecho New Bedford *see* **New Bedford Inlet**

New Bedford Inlet. 73°26' S, 61°04' W. A large, pouch-shaped, ice-filled Weddell Sea inlet, 14 km wide, indenting the NW part of the Lassiter Coast for about 40 km, along the E coast of Palmer Land, between Cape Kidson and Cape Brooks. Discovered and photographed aerially on Dec. 30, 1940 by USAS 1939-41, it appears on a 1943 U.S. Hydrographic Office photograph. It was roughly mapped from the USAS photos, plotted in 73°55' S, 60°00' W (these coordinates were wrong, due to a USAS navigational error), and named Douglas Inlet. As such it appears on a 1942 USAAF chart. However, on a 1943 USAAF chart it appears as New Bedford Inlet, plotted in 73°58' S, 59°30' W, and named for the town of New Bedford, the New England whaling center of the 19th century. That is how US-ACAN accepted the name in 1947. It appears on a 1946 Argentine chart translated as Ensenada Nueva Bedford. It appears on a 1947 Chilean chart as Estero New Bedford, but on one of their 1948 maps as Ensenada Presidente Barros Luca, named after Ramón Barros Luca (1835-1919), president of Chile, 1910-15. It was surveyed by a combined sledging team of Fids from Base E and personnel from RARE 1947-48, and found by them to be about 65 km NW of its previously reported position. On Dougie Masons's FIDS map of 1950 it is plotted in 73°22°S, 61°15' W, and that was how UK-APC accepted it on Jan. 28, 1953. On a 1952 Argentine chart it appears as Seno Nueva Bedford, but on one of their 1953 charts it appears as Ensenada Bedford. Mapped by USGS from USN air photos taken in 1965-66, and, with corrected coordinates, it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. The Argentine gazetteer of 1970 accepted both Ensenada Nueva Bedford and Ensenada New Bedford. The Chilean gazetteer of 1974 accepted Ensenada New Bedford, after rejecting Seno New Bedford and Estrecho New Bedford. With the new coordinates, the feature appears in the 1977 British gazetteer.

New Byrd Station *see* **Byrd Station**

New College Valley. 77°14' S, 166°23' E. Name given to SPA #20, the area of predominantly ice-free land between the cliff top above and inland from Caughley Beach (it is surrounded on 3 sides by this beach), and about 300 m E of the Mount Bird Ice Cap, on Ross Island, and between a line S of the main stream bed of Keble Valley, and the S ridge of New College Valley. It comprises glacial moraine of basalt and scoria, and contains streams flowing toward the shore. There are algae, lichens, and mosses here in abundance. Named by NZ-APC on Sept. 14, 2001, for the Oxford University college.

New Glacier. 77°02' S, 162°24' E. A tiny glacier which flows ENE from the low, ice-covered plateau at the S side of Mackay Glacier, and which terminates at the SW extremity of Granite Harbor immediately N of Mount England, and immediately to the S of Mackay Glacier Tongue, in Victoria Land. Charted by Grif Taylor during BAE 1910-13, while the *Discovery* was seeking the farthest possible southern anchorage along the coast of Victoria Land, and so named by him because he walked around a bluff one day, and there it was, unexpected, a new glacier in the corner of Granite Harbor. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

New Harbor. 77°36' S, 163°51' E. A bay, about 16 km wide, it is a McMurdo Sound entrant indenting the S coast of Victoria Land for about 13 km between Cape Bernacchi and Butter Point. Behind it are Taylor Valley, the Kukri Hills, and Ferrar Glacier. Discovered in 1901-02 by BNAE 1901-04, and named New Harbour by them because at that stage it was the harbor farthest S that they had ever found. US-ACAN accepted the name in 1947, and NZ-APC followed suit. The current name can be, and is, spelled New Harbor or New Harbour, depending on which country's spelling you subscribe to. In 1998-99, the Americans built a refuge hut (a Jamesway hut) here, New Harbour Hut, in 77°34' S, 163°31' E.

New Harbor Dry Valley *see* **Taylor Valley**

New Harbor Glacier *see* **Ferrar Glacier**

New Harbor Heights *see* **Mount Barnes**

New Island *see* **Foyn Point**

New Mountain. 77°52' S, 161°06' E. Rising to 2260 m (the New Zealanders say 2387 m), on the S side of Taylor Glacier, at the axis of that glacier and Ferrar Glacier, between Arena Valley and Windy Gully, or (to put it another way) between Beacon Heights and Knob Head, in southern Victoria Land. Charted and named by BNAE 1901-04. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

New Plymouth. 62°37' S, 61°11' W. A small bay, bordered by an extensive line of beaches, S of Start Point, between that point and Cape Sheffield, in the South Shetlands. It is actually formed by Rugged Island to the SW, Astor Island to the S, and Ray Promontory (the extreme NW point of Livingston Island) to the NE. In 1820-21, American sealers here called it President's Harbor, or President Harbor. It appears in two 1821 British references as, variously, New-Plymouth and New Plymouth, named after Plymouth, in Devon. Also in 1821, Fildes called it Ragged Harbour (in association with Rugged Island), "which is by far the most just name for it." It appears as such on his 1827 map. In Pendleton's log book entry of Jan. 18-19, 1822, he refers to it twice, once as "Raged Harbour" and then as "Ragged Harber" (and Pendleton was American, which shows that within a year the name President's Harbor had been forgotten). It was an unsafe anchorage in 1821-22, when Powell was there (it appears on his 1822 chart), being, as it was, open to NW winds, which sent in a heavy sea, and it also had a foul bottom. On Weddell's 1825 map it appears as New Plymouth Harbour. There is an 1844 reference to it as Bay of Plymouth, and on an 1861 Spanish chart it is shown as Nueva Plymouth. On a 1916 British chart it appears as "New Plymouth or Rugged Harbour." The name New Plymouth appears on a 1937 British chart. On a 1943 U.S. Hydrographic Office chart it appears as "President's Harbor (New Plymouth) (Rugged Harbor)," and on a 1946 USAAF chart as President's Harbor (perhaps the name was not so forgotten). US-ACAN accepted the name Plymouth Harbor in 1952 (after rejecting Rugged Harbor), with UK-APC following suit (but with the "u" in "harbor," of course) on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and also on a 1962 British chart. On a 1949 Argentine chart it appears as Puerto New Plymouth, but ArgAE 1952-53 renamed it Puerto Súarez, probably after a member of the expedition. However, ArgAE 1956-57 renamed it Puerto Echeverría, for Argentine poet and philosopher Esteban Echeverría (1805-1851), and it appears as such on their 1957 chart, and was the name accepted by the 1970 Argentine gazetteer. It was photographed aerially by FIDASE in 1956-57. It appears on a Chilean chart of 1961 as Bahía Nueva Plymouth, but the name accepted by the 1974 Chilean gazetteer was Bahía New Plymouth. It appears on an American chart of 1963 as New Plymouth Harbor, and on a 1968 British chart as New Plymouth Harbour. Last plotted by the UK, in late 2008.

New Rock. 63°00' S, 60°44' W. A rock in water, rising to 105 m (the Chileans say 75 m) above sea level, 1.2 km off the SW coast of Deception Island, in the South Shetlands. Presumably known to 19th-century sealers, it was first charted by the Norwegians in 1930-31, on the *Norvegia*, and named by them as Hjelmen (i.e., "the helmet") or as Ny Rock ("new rock"). Resurveyed by the Discovery Investigations in 1935, it appears on their chart of that year as New Rock, and that name appears on a British chart of 1945. It was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1944, translated as Roca Nueva, and on one of their 1946 charts as Isla Roca Nueva. Roca Nueva was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Last plotted by the UK, in late 2008.

New Sandefjord *see* **Deception Island**

New Schwabenland. 72°30' S, 1°00' E. Also called New Swabia. More than 800 km in extent, this is the mountainous upland of Queen Maud Land, extending from the Kraul Mountains to Vorposten Peak. GermAE 1938-39 was the first to explore and photograph it, aerially, and Ritscher named the area Neu Schwabenland, for his ship, the *Schwabenland*. The maps published by this expedition were of uneven quality, the features in the E portion of the area being plotted with greater reliability. The W part of this area was surveyed by NBSAE 1949-52, and the entire area was mapped by Norwegian cartographers using not only those surveys, but also surveys conducted during NorAE 1956-60, and 1958-59 air photos taken during the same long expedition. US-ACAN accepted the translated name in 1966.

The *New Sevilla*. Also seen as the *Sevilla*, the *New Seville*, and the *Seville*, and not to be confused with the older whaler, the *Sevilla*. A 12,482-gross ton British steam passenger ship, built for the White Star Line in 1900 as the *Runic*, by Harland & Wolff, the famous Belfast shipbuilders (this *Runic* is not to be confused with another White Star liner with the same name, which eventually became the *Guvernøren*). 565 feet long, with a beam of 63 feet 4 inches, and a speed of 10.5 knots. On Nov. 3, 1928 her stern was damaged when she collided with the *London*, and, in July 1930, she was bought by the New Sevilla Company (*see* **The *Sevilla***, for more detals of this company), and re-fitted at the Germania Shipyard, in Kiel, as a floating factory whaler, with 13,801 gross tonnage (the largest of the pre-World War II converted factories; she also had a stern slip), immediately going to Antarctic waters for the 1930-31 pelagic whaling season, under the command of Norwegian skipper, Capt. H.H. Halvorsen, along with her four whale catchers, *Bouvet I*, *Bouvet II*, *Bouvet III*, and *Bouvet IV*. In Jan. 1931 she discovered the Princess Astrid Coast, and between Feb. and March 1931 explored farther along the coast of Queen Maud Land. In April 1931 Christian Salvesen's, of Edinburgh, bought the New Sevilla Company (including the *New Sevilla* and her four *Bouvet* catchers), and continued to run her (and the catchers) to Antarctica under the New Sevilla Company banner for the 1931-32, 1932-33, 1933-34, 1934-35, 1935-36, and 1936-37 seasons. She also holds the distinction of being the only modern factory with a stern slip to go on an Arctic expedition. She was back in Antarctic waters in 1937-38, 1938-39, and 1939-40. Her other catchers over the years included the *Sigfra*, the *Shera*, the *Simbra*, the *Stefa*, the *Svega*, the *Sukha* and the *Santa*. During World War II she was en route from Liverpool to Aruba and South Georgia when, on Sept. 20, 1940, off the coast of Northern Ireland, she was sunk by a U-boat.

New snow. Recent snow in the form of crystals or flakes.

New South Greenland. Unidentified land discovered to the SE of the Seal Islands, in the South Shetlands, by Captain Robert Johnson, in the *Wasp*, in 1821-22. It is to be taken for granted that he saw something, but it was probably part of the South Shetlands, or maybe even the Antarctic Peninsula. Hence, for a while, it was also another name for Antarctica. Ben Morrell (q.v.) assumed it to be the whole continent, or at least part of it, and hence another name for New South Greenland is Morrell's Land. Filchner spent over a week looking for it in June 1912 (he didn't look very hard, though, for madness, mutiny, assassination, and death were raging in his expedition). It is reckoned to be somewhere between 62°S and 69°S, and around 48°W.

New South Shetland *see* **South Shetland Islands**

New World Point. 62°17' S, 58°51' W. A double rocky promontory between O'Cain Point and Duthoit Point, on Nelson Island, in the South Shetlands. To visitors from King George Island it looks like a new world, hence the name given by the Poles in 1984.

New Year Nunatak. 71°02' S, 71°12' E. In the central part of the Manning Nunataks, in the SE part of the Amery Ice Shelf. The Mannings were photographed aerially by ANARE in 1957, and plotted by Australian cartographers from these photos. This feature was visited by a SovAE geological party on Jan. 1, 1966, hence the name give by ANCA on Aug. 10, 1966. It was used as a survey station in 1969, by the ANARE Prince Charles Mountains Survey Party. US-ACAN accepted the name in 1970.

New Year Pass. 83°28' S, 160°40' E. A low snow pass between the Moore Mountains and Mount Weeks, at the S end of the Queen Elizabeth Range. Used on Jan. 1, 1958 by a NZ party of BCTAE to get from Marsh Glacier over into a high basin that overlooks the Bowden Névé, at January Col, on the Prince Andrew Plateau. NZ-APC accepted the name, and ANCA followed suit on Oct. 11, 1960. US-ACAN accepted the name in 1966.

New Year Peak. 72°14' S, 166°03' E. Rising to about 2600 m, it is the major peak on the NW side of Toboggan Gap, in the Millen Range, in the Victory Mountains of Victoria Land. Named by NZ geologist Bradley Field, whose field party camped below the peak around New Year's Day, during NZGSAE 1981-82. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

New York Sealing Expedition. A two-part expedition, 1820-21 and 1821-22, to the South Shetlands, organized by New York sealing magnate James Byers after he heard of William Smith's discovery of the South Shetlands the year before (i.e., 1819). **June 24, 1820**: The *Henry* left first, commanded by Benjamin Brunow. **July 1, 1820**: The *Aurora* was the next to leave, under Capt. Robert B. Macy. **Oct. 9, 1820**: The *Venus* sailed, under Capt. Napier. Later that year, at the Falklands, they met up with Capt. Robert Johnson, another Byers man, who was to lead the expedition. Johnson was at that time captain of the *Jane Maria*, and Donald McKay was skipper of her tender, the *Sarah*. Tagging along, but not part of the expedition, was the *Charity*, under Capt. Charles Barnard. **Dec. 1820**: They all arrived in the South Shetlands, late in the season, and the expedition was a financial loss. **March 7, 1821**: The *Venus* was wrecked. The *Sarah* was lost in a storm, and the *Aurora* was so badly damaged she was sold off for salvage in the Falklands, where the remaining vessels wintered over. Another Byers ship, the *Wasp*, arrived from New York, with Capt. Robert Johnson in command, and still overall leader of the expedition. Ben Morrell was 1st mate, and Morrell's brother was 2nd mate. The *Jane Maria* was now under the command of Capt. Abraham Blauvelt. The *Henry* was still commanded by Ben Brunow. **Sept. 15, 1821:** The fleet was at Staten Island, in southern Chile. **Oct. 31, 1821**: The newly-constructed fleet was back in the South Shetlands, for the 1821-22 season, still accompanied by the *Charity,* and also by the *Lynx*, an Australian vessel. The *Wasp* made a trip to Yankee Harbor. **Late Nov. 1821**: The *Wasp* was at the Seal Islands, but, finding little there of worth, they headed SE on an exploring mission. **Dec. 2, 1821**: They found an uncharted island in about 60°30' S, and Morrell and a member of the crew rowed the 10 miles to it and landed. But they lost the schooner in a gale, and it took them 2 days of adventure (a mini *Endurance* epic, as it were) to get back to her. The *Wasp* then headed back to Staten Island, where they met the *Jane Maria*, heading back to New York. Ben Morrell joined the *Jane Maria* at this point in order to navigate her back to the Falklands (where they stayed a month) and then the USA. **April 26, 1822**: The *Jane Maria* arrived back in New York.

New Zealand. The country of New Zealand (NZ) was first thought to be part of the great southern continent (whatever that was in people's minds). Cook disproved this notion when he sailed around NZ in 1768. Two New Zealand lads, John Keeffe and John Flanagan, sailed on the New London (USA) sealer *Talma* as crewmen, in the South Shetlands, 1834-35, and John Sac served on the crew of the *Vincennes*, during USEE 1838-42. Four NZ boys went on BAE 1898-1900, and in the early part of the 20th century so many kiwis went south as ship's crew it almost defies enumeration. The country of New Zealand, fondly remembered for its hospitality by anyone who has been there, was especially so by expeditioners on British and American Antarctic expeditions of the first half of the 20th century. On July 30, 1923 Britain awarded to NZ the Ross Dependency, a huge chunk of Antarctica, and in 1959 NZ was one of the 12 original signatories to the Antarctic Treaty. Well-represented in IGY (1957-58), NZ has been researching in Antarctica continuously since 1957 (*see* **New Zealand Geological Survey Antarctic Expeditions**). The NZARP (New Zealand Antarctic Research Program) is centered at Scott Base, on Ross Island. Other NZ stations in Antarctica are (or have been) Hallett (formerly a US/NZ station), Vanda and Cape Bird. On Nov. 11, 1969, Pam Young (a New Zealander) became one of the first women to stand at the South Pole

(*see* **Women in Antarctica**). In 1982 NZ's prime minister Robert Muldoon, visited the continent with Sir Edmund Hillary, the greatest NZ name associated with Antarctica. The country has an organization called the New Zealand Antarctic Society (founded in Wellington, on Nov. 15, 1933). In 1994 NZ determined that Antarctica was strategically important to it (NZ), and the NZ Antarctic Institute (NZAI) was founded (its name had to change, obviously, and did, from July 1, 1996, when it became known as Antarctica New Zealand). *See also* VUWAE (**Victoria University of Wellington Antarctic Expeditions**) and **New Zealand Alpine Club Expedition**.

Mount New Zealand. 74°11' S, 162°30' E. A large, prominent peak, rising to 2890 m, immediately NW of Nash Ridge, and W of Mount Queensland, on the S side of Priestley Glacier, in the Eisenhower Range, inland from the head of Wood Bay, about 50 km WNE of Mount Melbourne, in the Prince Albert Mountains of Victoria Land. Discovered by BNAE 1901-04, and named by them for the country of New Zealand. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

New Zealand Allan Hills Expedition *see* **New Zealand Geological Survey Antarctic Expeditions**

New Zealand Alpine Club Expedition. 1959-60. This was a party of 8 men, led by Robert W. Cawley. On Nov. 23-24, 1959, they were flown to the Beardmore Glacier in two R4Ds out of McMurdo. They split up into 2 parties of four men each. The first comprised biologist C. Hugh Tyndale-Biscoe (deputy leader), surveyor N.C. Cooper, and field assistants Brian J. McGlinchy and Barry L. Smith. The second part consisted of geologist Robin L. Olliver, surveyor Murray R. Bolt, field assistant P.L.M. Bain, and Cawley himself. They explored the mountains E of the Beardmore, and were flown back to base on June 10, 1960.

New Zealand Antarctic Institute. Founded in 1994 to handle NZ's Antarctic involvement, and acronymed as NZAI, a strangely poor choice, anagramatically speaking, until it was rectified on July 1, 1996, to the more playful Antarctica New Zealand (q.v.).

New Zealand Antarctic Place-Names Committee. Abbreviated to NZ-APC. Established in 1956, as part of the New Zealand Geographic Board (which had been set up in 1946).

New Zealand Antarctic Research Programme. More commonly known as NZARP. This is the ongoing NZ effort in Antarctica from 1955 to the present. In 1955-56 Trevor Hatherton accompanied the American OpDF I (1955-56), to scout out a base site in the Ross Dependency. For a list of wintering-over personnel see primarily Scott Base, but also Vanda Station. **NZARP 1956-57**. The *Endeavour*, commanded by Capt. Harry Kirkwood, and escorted by the *Hawea* and the *Pukaki*, took down the NZ IGY expedition. Harold Ruegg, Ross Dependency administrator, was aboard too. 5 members of the shore party wintered-over at Scott Base in 1957, under the command of Mr. Hatherton. After accompanying the *Endeavour* to 67°30' S, 179°58' E (about 50 km inside the pack-ice), the *Hawea* and the *Pukaki* conducted oceanographic investigations north of Scott Island. They tried to land there, but could not get in because of the ice. The *Endeavour* was used again for NZARP 1957-58, NZARP 1958-59, NZARP 1959-60, and NZARP 1960-61. The new *Endeavour* was used for the first time during NZARP 1961-62, and again for NZARP 1962-63, during which expedition a refuge hut was built at Cape Royds in Sept. 1963. The new *Endeavour* was used again for NZARP 1963-64 (and would be for the next several years). During that expedition Sir Bernard Fergusson visited Antarctica, and a refuge hut was established at Cape Evans. A FIAT 500D car was used at Scott Base for trials. During NZARP 1966-67, a summer station was opened at Cape Bird Huts, and during NZARP 1967-68, a field station was established at Lake Vanda. During NZARP 1969-70, a refuge hut was built in the Asgard Range. The *Endeavour* was used for the last time for NZARP 1970-71, and from now on personnel would fly into McMurdo, courtesy of the Americans. For the first time, during NZARP 1976-77, separate leaders were appointed for summer and winter. This would be the rule from now on.

New Zealand Antarctic Society. Formed in Wellington, on Nov. 15, 1933. In March 1956 it published the first edition of *Antarctic*.

New Zealand Federated Mountain Clubs Expedition. 1962-63. An eight-man expedition, sponsored by the FMC, organized by the Tararua Tramping Club, and led by surveyor John Millen. Its objectives were to explore, map, and make geological investigations. The two four-man parties were flown to a point 100 miles west of Hallett Station. The Southern Party consisted of Millen, Roger Lloyd (field assistant), Peter Le Couteuer (geologist), and Ian Joice (field assistant), while the Northern Party comprised Gerald Holdsworth, Frank Pearson (surveyor), Evan Leitch (geologist), and John Hayton (field assistant). They were flown back to Scott Base on Jan. 26, 1963.

New Zealand Geological Survey Antarctic Expeditions. Almost always seen as NZGSAE. The first NZGSAE was 1957-58, and there has been one every austral summer since. **NZGSAE 1957-58**. Led by Larry Harrington (q.v.). 4 geologists — Harrington (leader), B.L. Wood, Ian McKellar, and Gerald Lenson; 3 surveyors — E.B. Fitzgerald (leader), Brian Hearfield, N.J. Croll, and Arnold Heine (who joined them from the BCTAE summer party of 1956-57); and one stores officer. This was the first official NZ government expedition to Antarctica. On Nov. 22, 1957, they left Lyttelton on the *Atka*, bound for Little America V. All the men were experienced mountain climbers. On Dec. 15 and 16, 1957, they were flown from McMurdo to Hallett Station. G. Turnbull, a British paleomagnestist, was attached to the party for 2 weeks. **NZGSAE 1958-59**: Led by geologist Larry Harrington. Surveyor E.B. Fitzgerald was deputy. The others were: B.N. Alexander and G.B. Henderson (surveyors), Alan C. Beck and Ian Speden (geologists), Arnold J. Heine (stores officer), Keith Wise (mountaineer assistant and radio officer), and Walter Romanes, M.R. White, J.G. Wilson, and J. Harrison (all mountaineer assistants). There were 2 parties, one led by Fitzgerald, and the other by Harrington. **NZGSAE 1959-60**: Murray Robb (leader). On Nov. 3, 1959, 3 dog teams left Scott Base, driven by Bernie Gunn, Garth Matterson, and Ken C. Wise, assisted by Peter Hunt. Wise was later replaced by Dick Walcott (q.v.). On Nov. 7, 1959, 2 Sno-cats followed. That team was Murray Robb, Tom Couzens, Don Goldschmidt, and Jim Lowery. On Nov. 10, 1959, the Sno-cats caught up with the dog teams. Couzens died on this expedition, when his Sno-cat plunged into a crevasse. **NZGSAE 1960-61**: The Northern Party of 4 men, comprising two 9-dog teams, led by Garth Matterson, was flown in by R4D aircraft on Nov. 10, 1960. The Southern Party, again with 4 men forming two 9-dog teams, was flown in on Nov. 30, 1960. Peter Hunt led this party, which also included Malcolm Laird and Wally Herbert (q.v.). They were flown out on Feb. 9, 1961, back to Scott Base. **NZGSAE 1961-62**: Dick Walcott (q.v.) led the Northern Party, which was flown on to the Polar Plateau on Dec. 5, 1961. George Grindley was one of his party. Wally Herbert (q.v.) led the Southern Party, which included Kevin Pain, Victor McGregor, and Peter Otway. **NZGSAE 1962-63**: Geologist Henry Gair led the Northern Party, which was flown in aboard an R4D aircraft, with dogs and sledges, to the Aeronaut Glacier and the Campbell Glacier areas. The surveyors were Kevin Pain and James Tobin, and Maurice Sheehan was field assistant. They were flown out in an R4D on Jan. 21, 1963, back to McMurdo. The Southern Party, led by Ronald Hewson, left Scott Base on Oct. 18, 1962, in two 9-dog sledge teams. Other members of the party were geologist D.N.B. Skinner, surveyor Malcolm Ford, and geologist John Ricker. They were accompanied by Ray Logie, Peter Otway, and the NZ ornithologists Keith Wise and Owen Wilkes. They traveled via Granite Harbor to Mawson Glacier, and, during the expedition, there were some replacements flown in. They flew out in an R4D on Feb. 4, 1963. **NZGSAE 1963-64**: Bob Miller led the Northern Party of 6 men, the others being Malcolm Ford (deputy leader and surveyor), Maurice Sheehan, Frank Graveson, and geologists Arnold Sturm and Tas Carryer. On Oct. 20, 1963 they were flown in by Hercules aircraft to Hallett, with 36 dogs in 4 teams. This was the last NZ dog sledging expedition. This party formed two subteams, a northern and a southern. The northern comprised Miller, Sheehan, and Sturm, while the southern comrpised Ford, Graveson, and Carryer. The whole Northern Party of NZGSAE was flown back to McMurdo in 2 flights on Jan. 28, 1964. The Southern Party (i.e., the main Southern Party of NZGSAE that season) was led by geologist Victor McGregor. The other 3 men were Peter Barrett (q.v.) and Peter Le Couteur

(geologists), and A.L. Gough (surveyor). On Nov. 5, 1963 all except Le Couteur were flown in on 2 C47s (Le Couteur was flown in on Nov. 13), to the Ross Ice Shelf, between the Strom Glacier and the Shackleton Glacier. They had 2 motor toboggans. On Jan. 8, 1964, they were picked up by 2 C47s, and all flown back to McMurdo. **NZGSAE 1964-65**: The Northern Party (also known as the Allan Hills Expedition) was organized and led by geologist Guyon Warren, and also included geologists Peter Ballance and Bill Watters, as well as Tasmanian paleobotanist John Townrow, and Ivan MacDonald (field assistant). On Nov. 22, 1964, the team was flown to the Odell Glacier. No dogs, no sledges. On Nov. 23, 1964, Guyon Warren fell while climbing at 7000 feet, broke a leg, but the party carried on working at the head of the Mackay Glacier, and in the Wright Valley. They were flown back to base on Dec. 23, 1964. The Southern Party was subdivided into 2 distinct parts — a/ and b/. a/ was led by Malcolm Laird, and was flown on to the Polar Plateau on Nov. 10-11, 1964. They had 2 Polaris motor toboggans and 4 sledges, and worked basically north of the Nimrod Glacier. The other member of this group were geologists J.M.A.Chappell and Graham Mansergh, as well as Dave Massam. Chappell got sick, and was flown to McMurdo on Nov. 28, 1964. Brian Ahern took his place. This group was flown out on Jan. 13, 1965, back to Scott Base. b/ was led by geologist Peter Le Couteur, and also included geologists M.R. Gregory and Bob Adamson, as well as surveyor Bill Lucy. They were airlifted to the Geologists Range on Nov. 28 and 29, 1964. **NZGSAE 1965-66**: The Northern Party was led by geologist Dave Lowe, and on Nov. 25 and 27, 1965, they were flown to the head of Aviator Glacier in 2 C47s. They had 2 Polaris motor toboggans. The others in the party were geologists R.J. Cavaney and Bob Adamson, and field assistant D.R. Bates. On Jan. 11, 1966, they were flown back to Scott Base. The Southern Party worked 450 miles to the south of Scott Base, at the head of the Beardmore Glacier. They were flown there on Dec. 9, 1965, by a C130 Hercules. The team comprised geologists Alan C. Bibby (leader), D.J. Young, and R.J. Ryburn, as well as A.C. Rayment (field assistant). They were picked up by a Herc on Jan. 7, 1966. **NZGSAE 1966-67**: There were 2 parties, as usual — the Northern Party and the Southern Party. The Northern Party (also known, on this occasion, as the Mawson Glacier Party) was led by J.E.S. Lawrence. The other members of the party were geologists Graham Hancox and Bruce Riddolls, and field assistant David Gobey. The Southern Party (also known, on this occasion, as the Aviator Glacier Party) was led by Ross Chisholm. The other members of the party were geologists Simon Nathan and Frank Schulte, and field assistant Ian Stewart. Both parties were flown in on Nov. 25, 1966, in a C130 aircraft, to the heads of the mariner Glacier and the Aviator Glacier, and both had 2 motor toboggans and 3 sledges. On Dec. 13, 1966, the Northern Party was picked up by C130, and flown back to McMurdo. The Southern Party was transferred to the *Staten Island* on Jan. 11, 1967, and that American ship took them back to McMurdo. NZGSAEs continued, of course, yearly, and today NZGSAE is known as the Institute of Geological and Nuclear Sciences. Note: A good number of the men in this article have features name after them, so more detail on each can be found under their respective names.

Mount Newall. 77°30' S, 162°42' E. Also spelled (erroneously) as Mount Newell. Rising to 1920 m (the New Zealanders say 2133 m), it forms the NE extremity of the Asgard Range, 16 km NNW of Taylor Valley, and 20 km W of New Harbor, in southern Victoria Land. Discovered by BNAE 1901-04, and named by them for Hugh Frank Newall (1857-1944), assistant director of the observatory at Cambridge, one of the men who helped raise funds to send the *Morning* to the relief of the expedition. From 1909 Newall would be professor of astrophysics at Cambridge. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Newall Glacier. 77°30' S, 162°50' E. In the E part of the Asgard Range of Victoria Land, it flows E immediately S of Mount Newall, between that mountain and Mount Weyant, into Wilson Piedmont Glacier. It rises in a high névé that extends W slightly beyond the head of Lacroix Glacier, with which it has a snow saddle. Named by the NZ Northern Survey Party of BCTAE in 1957 in association with the mountain. They camped on this glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Newberg Peak *see* **Neuburg Peak**

Montaña Newbery *see* **Frigga Peak**

Newbold, James Neville Fairhurst. Known as Neville. b. Sept. 1, 1905, Auckland, NZ, son of Thomas Walter Newbold and his wife Ellen Hopwood. Immediately after getting his degree at Otago University, he became 3rd mate on the *Eleanor Bolling*, 1929-30, i.e., during the 2nd half of ByrdAE 1928-30, leaving Dunedin on Jan. 20, 1930, bound for Antarctica. He was back in Antarctica as 2nd mate on the *Bear of Oakland* during the 2nd half of ByrdAE 1933-35. On his return, he moved to Niemur, NSW, as a civil engineer. In 1943 he married Edna Clementine Lawrence, in Sydney.

Cabo Newburg *see* **Newburgh Point**

Newburgh Point *see* **Newburgh Point**

Newburgh Point. 66°06' S, 66°46' W. The NW point of Lavoisier Island, in the Biscoe Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1957-58, and named by UK-APC on Sept. 23, 1960, as Newburg Point, for Louis Harry Newburgh (1883-1956), U.S. physiologist specializing in cold areas. US-ACAN accepted the name in 1965. Consequently, the Argentines called it Cabo Newburg. In the late 1990s someone found out that Newburg should really read Newburgh, and the name was amended accordingly.

Newcomb Bay. 66°16' S, 110°32' E. A bay, 1.5 km in extent, between Clark Peninsula and Bailey Peninsula, in the Windmill Islands, on the Budd Coast. Plotted from air photos taken by OpHJ 1946-47. Surveyed and charted by Willis Tressler in Feb. 1957, and he named it for Robert Carl Newcomb (b. April 14, 1926, Woburn, Mass. d. Feb. 29, 2008, Fairfax, Va.), who joined the U.S. Navy in June 1944, and was navigator (1955-56, and 1956-57) on the *Glacier*, the icebreaker from which the survey was done. Newcomb also took part in the survey. He retired as a captain in June 1973. US-ACAN accepted the name in 1957. ANCA accepted the name.

Newcomer. 62°01' S, 58°06' W. A recently emerged nunatak surmounting Gniezno Glacier, 685 m NE of Mount Hopeful, in the Arctowski Mountains, N of King George Bay, King George Island, in the South Shetlands. Named by the Poles in 1980 (but not for Loyd Newcomer).

Newcomer, Loyd Edward. b. May 14, 1918, Russell, Kans., son of farmer Clarence Newcomer and his wife Clara. He joined the U.S. Navy in Feb. 1941, and during World War II was an aircraft carrier flight pilot. He also fought in the Korean War. He was a commander and VX-6 pilot, 1959-60. On Dec. 3, 1959, he flew a P2V-7 ski-equipped aircraft 1170 miles from McMurdo to Wilkes Station to pick up a sick Australian and bring him back to McMurdo Station. It was a very dangerous flight, over previously uncharted territory, and the landing at Wilkes was done on an unprepared snow surface with no tower and no crash facilities. He won the DFC for this. Any flying after March is considered too dangerous, but on April 10, 1961, Newcomer piloted a double crew of 16 and a special crew of 5, in a C-130BL Hercules from Christchurch, NZ, to Byrd Station, at night, using the stars as a guide, and set down at Byrd Station to pick up sick Russian exchange scientist Leonid Kuperov. This was the first nocturnal flight made in Antarctica, and one of the great flights in history. He retired in Jan. 1962, and worked as a flight instructor at Jefferson County Airport, in Colorado, and as chief research pilot at the National Center for Atmospheric Research, at Boulder. He died of respiratory failure on Dec. 18, 2003, in Boulder.

Newcomer Glacier. 77°47' S, 85°27' W. A glacier, 30 km long, running through the N portion of the Sentinel Range, and flowing SE from the vicinity of Allen Peak and then E to where it leaves the range N of Bracken Peak. Named by US-ACAN in 1961, for Loyd Newcomer.

Mount Newell *see* **Mount Newall**

Punta Newell *see* **Newell Point**

Newell Point. 62°20' S, 59°32' W. A point, 4 km E of the N end of Robert Island, in the South Shetlands. Charted and named in 1935 by personnel on the *Discovery II*. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. The Chileans and Argentines both call it Punta Newell.

Newfoundland Steam Whaling Company. Formed on Sept. 15, 1900, at St. John's, Newfoundland, to operate whaling stations in that country. In 1907, just as Arctic whaling was declining, Antarctic whaling was beginning to offer

promise, and the company bought a British freighter, the *Sobraon*, and converted her at Sandefjord, Norway, into a whaling factory ship. It was the first British company to get a whaling license from the Falkland Islands government, when the *Sobraon* pulled into Port Stanley in Dec. 1907, for the 1907-8 whaling season in the South Shetlands, along with her two catchers, *Lynx* and *Puma*. Nokard Davidsen was the manager of the ship. The *Sobraon* was back again at Deception Island in 1908-09, and 1909-10. The company sold the *Sobraon* to the Odd Company in 1910, and the company was liquidated that year.

Newham, Brian William. b. Aug. 3, 1958, Harrow, son of Douglas F. Newham and his wife Mary J. Harris. BAS polar guide and base commander who wintered-over at Rothera Station in 1984. In 1991-92 helped re-build Halley Station, and was base commander there in 1992.

Newing, Albert. b. Dec. 21, 1891, Falkland Islands, son of Lawrence Newing, a warder at Stanley Prison. In 1906 he became a post office messenger, and then a customs officer. In that latter role he was appointed (by the Falkland Islands government) aboard the *Sobraon*, in 1910-11, to make sure that the Odd Company played fair in their reporting of the number of whales caught on their ship. In 1913 he became a customs officer at South Georgia, and resigned on Oct. 10, 1916. On Sept. 29, 1920, at Stanley, he married Dorothy Aldridge, sister of Bert Aldridge. He died on Feb. 2, 1957, in the Falklands.

Newing, Lawrence. b. July 1850, St. Martins Hill, Canterbury, Kent, son of laborer Henry Newing and his wife Mary Anne. At 14 he began an apprenticeship as a shipsmith, in Gillingham, and in the 1870s shipped out for the Falkland Islands. A police constable and jailer in Stanley, he became the first Falkland Islands government official to be appointed to a whaling factory ship, when, on Dec. 21, 1905, he went aboard the Norwegian whaler *Admiralen*, as customs inspector (this at the Ørnen Company's expense). He stayed with the ship when it was in Falklands waters, but did not go to Antarctica. He died on Jan. 8, 1934, in the Falklands. Father of Albert Newing (q.v.).

Mount Newman. 69°11' S, 71°26' W. Rising to about 1150 m, in the NE part of the Havre Mountains, in the N part of Alexander Island. Surveyed by BAS personnel from the Fossil Bluff station in 1975-76. Named by UK-APC on June 11, 1980, for John Newman (b. 1946), BAS diesel mechanic who wintered-over at Base T in 1969, and at Base E in 1970 and 1973, and who was instrumental in modifying BAS motor sledges, first used successfully as a replacement for dog teams. US-ACAN accepted the name in 1995.

Newman, John. BAS general assistant and tractorman who wintered-over at Base T in 1969, and then was back for the winters of 1970 and 1973, at Base E, as diesel electric mechanic. Between 1974-75 and 1986-87 he spent 5 summers in Antarctica.

Newman, Silas Alexander Frederick. b. Jan. 9, 1921, Walker Creek, West Falkland, son of laborer Silas Newman and his wife Margaret Milnes Summers Jaffray. He joined FIDS in 1945, as a cook, and wintered-over at Base B in 1946. He was later the cook on the *John Biscoe*. On April 21, 1947, in Stanley, he married Josephine Winifred Blyth, had a son and a daughter, and on Dec. 5, 1960 the family sailed for England on the *Darwin*. They arrived there on New Years Eve 1960-61, stayed for 12 days, then pressed on to their new home in New Zealand, where Silas died on Oct. 13, 1989.

Newman Island. 75°39' S, 145°30' W. An ice-covered island, 24 km long, the largest of 3 grounded islands in the Nickerson Ice Shelf, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Cdr. James Franklin "Jim" Newman, USN, ship's officer on the staff of the commander, Task Force 43, during OpDF 1966 (i.e., 1965-66).

Newman Nunataks. 66°40' S, 54°45' E. A group of nunataks about 19 km W of Aker Peaks, about midway between those peaks and the Napier Mountains, in Enderby Land. Photographed aerially by LCE 1936-37, and roughly mapped (but not named) from these photos by Norwegian cartographers in 1946. Re-mapped by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Alan Newman (*see* **Newman Shoal**). US-ACAN accepted the name in 1965. *See also* **Tretoppen**.

Newman Shoal. 68°35' S, 77°54' E. At the SW side of Davis Anchorage, just off the Vestfold Hills, about 160 m SE of Hobby Rocks. It has depths of one fathom or less, and extends over an area of about 330 m long, and about 90 m wide, in an ENE-WSW direction. Charted by Tom Gale during a Feb. 1961 ANARE hydrographic survey on the *Thala Dan*, led by Don Styles. Named by ANCA on July 4, 1961, for Alan J. Newman, senior diesel mechanic at Davis Station in 1959 and Mawson Station in 1961. Newman assisted with the survey around Davis Station.

Newnes Glacier. 71°41' S, 170°14' E. A valley glacier dropping sharply from Adare Saddle into Protection Cove, at the head (i.e., the S part) of Robertson Bay, in northern Victoria Land. Charted in 1899, by BAE 1898-1900, and named by Borchgrevink as Sir George Newnes Glacier, for his major sponsor, Sir George Newnes (b. March 13, 1851, Matlock, Derbyshire. d. June 9, 1910), founder of *Tit-Bits* and *Strand* Magazine, the first magazine publisher to sell to the average person, he also trained Northcliffe and Pearson. The name was later shortened. US-ACAN accepted the name, and NZ-APC followed suit.

Newport Point. 77°32' S, 166°10' E. The S entrance point to Horseshoe Bay, in the W part of Ross Island. Named by the New Zealanders in the field just after Terry Newport, NZARP carpenter, died in a helo crash near this point in Oct. 1992 (*see* **Deaths**, 1992). NZ-APC accepted the name on Nov. 12, 1999, and US-ACAN followed suit in 2000.

Newspapers *see* ***AirOpFacts***, ***Antarctic Bulletin***, ***Casey Rag***, ***Hope Bay Howler***, ***McMurdo News***, ***McMurdo Sometimer***, **Showa Station**, ***South Polar Times***, and the **Bibliography**

Île Newton *see* **Newton Island**

Mount Newton. 74°01' S, 65°30' E. A large, humped outcrop, about 18 km long and 7 km wide, with a a boulder-strewn surface and a conical peak near the center, between the flow of Collins Glacier and Mellor Glacier, about 57 km S of Mount Rubin, in the southern Prince Charles Mountains. Mapped by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA on July 4, 1961, for Geoff Newton, medical officer at Mawson Station in 1960. US-ACAN accepted the name in 1967. The Russians call it Gora Sergeya Vavilova.

Newton Island. 66°46' S, 141°27' E. A rocky island, facing seaward, 0.8 km NW of Laplace Island, 1.8 km NNW of Cape Mousse, between the Port-Martin peninsula and Cape Découverte, in the Géologie Archipelago. Charted by the French in 1951, and named by them as Île Newton, for Sir Isaac Newton (1642-1727). US-ACAN accepted the name Newton Island in 1962. What is astonishing is that there are no other features named for Newton, escpecially by the British.

Nextdoor Glacier. Unofficial name given by the Americans in the area in the 1960s to a glacier in the region of Wright Valley.

Caleta Neyt. 63°58' S, 61°48' W. A small inlet with ice-cliffed coasts, about 700 m wide at its mouth, indenting the N coast of Liège Island for about 700 m in a NE-SW direction, about 1.3 km SE of Moureaux Point (which is the N extremity of the island), in the Palmer Archipelago. Named by the Chileans in association with nearby Neyt Point.

Cabo Neyt *see* **Neyt Point**

Cap Neyt *see* **Neyt Point**

Cape Neyt *see* **Neyt Point**

Punta Neyt *see* **Neyt Point**

Neyt Point. 63°58' S, 61°48' W. A very cliffed promontory, 1.5 km SE of Moureaux Point (the NE extremity of Liège Island), in the Palmer Archipelago. Discovered, charted and photographed on Jan. 23, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Neyt, for General Neyt, of the Belgian Arrmy, the first financial supporter of the expedition. It appears as such on the expedition maps. On Dr. Frederick Cook's English language version of the maps, it appears as Cape Neyt, as it does on a British chart of 1909. On a 1937 British chart it again appears as Cape Neyt, plotted in 64°00' S, 61°45' W, and that name and those coordinates were accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. It appears as such on a British chart of 1957. It was photographed aerially by FIDASE in 1956-57. UK-APC redefined it as Neyt Point on Sept. 23, 1960, and listed new coordinates. US-ACAN accepted that later in 1960. It appears as such on a British chart of 1961. The name Cabo Neyt was accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974, but more

recently the Argentines have been referring to it as Punta Neyt.

Skala Nezametnaja. 67°17' S, 46°32' E. A rock on the W side of Kirkby Head, it is, indeed, the main rock on that feature, in Enderby Land. Named by the Russians.

Nunataki Nezametnye. 70°05' S, 64°55' E. A group of nunataks NW of Mount Dovers, in the Athos Range of the Prince Charles Mountains. Named by the Russians.

Niagara-Eisfälle. 72°50' S, 165°41' E. Icefalls, SE of The Pleiades, in Victoria Land. Named by the Germans.

Niangniang Zui. 69°24' S, 76°15' E. A slope in the Larsemann Hills. Named by the Chinese.

Playa Nibaldo. 62°27' S, 60°47' W. A beach between Punta Fidelidad and Punta Oeste, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for marine biologist Jorge Nibaldo Bahamonde Navarro (b. 1924, Ancud, Chiloé, Chile), professor of biology and chemistry at the University of Chile, and former head of the hydrobiology section at the National Museum of Natural History, who collaborated in the plans for biological studies by the Chileans in Antarctica, and who took part in the first Pinniped census, during ChilAE 1965-66.

Niban Rock. 68°14' S, 42°28' E. A coastal rock exposure, 2.9 sq km in area, protruding into the sea, 13 km SW of Cape Hinode, and about 70 km W of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Oct. 1, 1962, as Niban-iwa (i.e., "number two rock"), because it was the second easternmost rock reached in this area during JARE I, in 1957. US-ACAN accepted the name Niban Rock in 1964. The Norwegians call it Andretoppen (which means the same thing).

Niban-higasi-iwa. 68°15' S, 42°30' E. The N cape of Niban Rock, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Nov. 24, 1981. The name means "eastern Niban Rock," and was so named because it lies in the magnetic eastern part of the rock.

Niban-iwa *see* **Niban Rock**

Niban-nisi-iwa. 68°17' S, 42°28' E. The S cape of Niban Rock, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62. The name means "western Niban Rock," and was so named because it lies in the magnetic western part of the rock.

Nibelungen Valley. 77°37' S, 161°20' E. An ice-free valley, just W of Plane Table and Panorama Peak, in the Asgard Range of Victoria Land. Named by NZ-APC for the Teutonic gods. US-ACAN accepted the name in 1976.

The Niblets. 66°00' S, 65°40' W. Small, niblet-type rocks in water, between Harp Island and Beer Island, 13 km W of Prospect Point, off the Graham Coast, on the W coast of Graham Land. Charted and named descriptively in Feb. 1936, by BGLE 1934-37. The feature appears on Rymill's 1938 map of the expedition, on a 1947 U.S. Hydrographic Office chart, on a British chart of 1950, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year.

Cabo Nicholas *see* **Mount Nicholas**

Cape Nicholas *see* **Mount Nicholas, Nicolas Rocks**

Capo Nicholas *see* **Mount Nicholas**

Kapp Nicholas *see* **Mount Nicholas**

Mount Nicholas. 69°22' S, 69°50' W. Rising to 1465 m (the British say 1350 m), 9 km SSW of Cape Brown, it forms the N limit of the Douglas Range, on the NE side of Alexander Island. Discovered from a distance in Jan. 1909 by FrAE 1908-10, and named by Charcot as Île Nicolas II, for Nicholas II (1868-1919), tsar of Russia, 1895-1918. Charcot thought it was an island, or perhaps a headland, but on his maps it is definitely separated from the island by a channel. The British called it Nikolas II Island, Nicolas II Island, or Nicholas II Island. On Feb. 1, 1937, BGLE 1934-37 aerially photographed the coast in this area, and confused this feature with Mount Calais, 22 km to the NNW. So, in the minds of BGLE, Mount Nicholas had become a redundant naming, and, in order to preserve the name "Nicholas" in the area, they named the seaward bulge of Mount Calais as Cape Nicholas. A 1946 Argentine chart shows this bulge as Cabo Nicholas, and a 1947 Chilean chart shows it as Cabo Nicolás. Hansen's Norwegian chart of 1947 shows it as Kapp Nicholas, and a Russian map of 1949 shows it as Mys Nikolaya. During the FIDS survey of 1948, Charcot's Île Nicolas II was identified, but as a mountain, and given the name Mount Nicholas. UK-APC accepted the name Mount Nicholas on March 31, 1955, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1956. This new situation is reflected in the Italian maps (Capo Nicholas, or — on a 1958 map — Cap Nicola), a Russian map of 1961 (Gora Nikola), and a 1963 Chilean map (Monte Nicolás II). It is Monte Nicolás II in the Chilean gazetteer of 1974.

Nicholas Mountains *see* **Nicholas Range**

Nicholas Range. 66°40' S, 55°28' E. A line of rocky peaks, extending in a N-S direction, close E of Aker Peaks, between 39 and 46 km SW of Magnet Bay, in Kemp Land. Discovered on Jan. 12, 1930 by BANZARE, and named by Mawson for George Richard Rich "G.R." Nicholas (1884-1960) of Melbourne, aspirin manufacturer, a patron of the expedition. The individual peaks were plotted by Norwegian cartographers in 1946, working from aerial photos taken by LCE 1936-37. US-ACAN accepted the name in 1965. The Australians plot this feature in 66°40' S, 55°37' E. Jennings Bluff is in this range.

Nicholas Rocks *see* **Nicolas Rocks**

Nicholas II Island *see* **Mount Nicholas**

Punta Nicholl *see* **Nicholl Head**

Nicholl, Timothy Michael. Known as Jumbo, because of his big ears. b. Jan. 10, 1927, Bulwa, Tanganyika, only son of Major Edwin McKillop Nicholl, 14th Lancers, and his wife Edith Charlotte Sutton, who was a nurse. His mother contracted malaria before Jumbo was born, and he was not expected to live. However, just as his mother passed through the Suez Canal into the Mediterranean, on her way back to an English hospital, Jumbo passed through the appropriate canal into this world, then he and his mother returned to Africa. There were several trips back and forth between Tanganyika and England, and in 1939, he left his father's coffee plantation in order to continue his education in England. During World War II he became a commando, and was at the re-taking of Singapore (his father was a prisoner at Changi). In 1947, back in England listening to the BBC one Sunday night, he heard something about FIDS, and his father suggested he should do it. He went to London, was interviewed by E.W. Bingham, and left Tilbury on Dec. 19, 1947, on the *John Biscoe*, bound for Port Stanley. He wintered-over as base leader at Base F in 1948 and 1949, the dogs being his specialty. He left Santos, Brazil, on the *Andes*, arrived back in Southampton on April 16, 1950, and participated in the Dome of Discovery exhibit at the Festival of Britain in 1951. He then went to Canada, and became a conservation officer on Hudson's Bay. On May 26, 1953, in Toronto, he married Belinda Joan Crossley, and they moved to York Factory. In 1962 and 1963 he was at Aklavik in the Northwest Territories, and then back to England for a brief while, where his marriage ended. He went back to Canada alone, then back to the UK, where he saw an ad for the Turks and Caicos Islands, in fisheries conservation. He married again, to Patricia Marie Kobin, but that marriage ended in divorce, and he moved to Florida.

Nicholl Head. 67°47' S, 67°06' W. The bold W extremity of the ridge separating Dogs Leg Fjord from Square Bay, it is actually the N entrance point to the latter, in Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936 by BGLE 1934-37, it appears (unnamed) on Rymill's map of 1938. It was surveyed again, in 1948, by Fids from Base E, who named it for Jumbo Nicholl. UK-APC accepted the name on March 31, 1955, and it appears as such in the British gazetteer of 1956. US-ACAN accepted the name in 1956. Both the Argentines and the Chileans call it Punta Nicholl, it first appearing as such on a Chilean chart of 1963. It also appears as such in the Chilean gazetteer of 1974.

Nicholls, William Albert G. b. late 1933, Portsmouth, son of William E. Nicholls and his wife Lilian May Schillemore. He joined FIDS in 1955, as a general assistant and mountain climber, and left Southampton later that year, bound for Montevideo, and from there to winter-over at Base D in 1956, and in 1957 at Base F, as general assistant and assistant meteorologist. On his return to London, in 1958, he married Mary T. Carmody. They lived in Kensington for a while, then moved out to Surrey. He died in NZ, while on vacation.

Mount Nichols. 85°27' S, 146°05' W. Rising to 670 m, in the central part of the Harold Byrd Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for William L. Nichols, construction mechanic who wintered-over at Byrd Station in 1957.

Nichols, Robert Leslie "Bob." b. June 10, 1904, Quincy, Mass., son of marine engineer Clarence Nichols and his Irish wife Eva. He married Frances in 1935. Professor of geology at Tufts University who went on RARE 1947-48. In 1958-59 he led a geological expedition from Tufts to the dry valleys of Victoria Land. He died on Feb. 25, 1995, in Tampa, Fla.

Nichols Glacier *see* **Nichols Snowfield**

Nichols Ridge. 77°28' S, 162°44' E. A rock ridge between Denton Glacier and Decker Glacier, descending from heights N of Newall Glacier to the snout of Wright Lower Glacier, at the E end of Wright Valley, in the E part of the Asgard Range, in Victoria Land. Named by US-ACAN in 1997, for Bob Nichols (q.v.), one of the first American scientists to do research in Wright Valley.

Nichols Rock. 75°23' S, 139°13' W. On the W side of Kinsey Ridge, in the middle of Strauss Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Clayton Worthington Nichols, Jr., geophysicist at Byrd Station in 1969-70.

Nichols Snowfield. 69°25' S, 71°05' W. Also called Nichols Glacier. 35 km long and 13 km wide, it extends N-S between Palestrina Glacier and Gilbert Glacier, and is bounded by Care Heights, the Rouen Mountains and the Elgar Uplands to the E, and the Lassus Mountains to the W, in the N part of Alexander Island. Discovered aerially in 1937 by BGLE 1934-37, and roughly mapped by them. Named by RARE 1947-48 for Bob Nichols. Mapped in detail in 1959-60 by Searle of the FIDS, working from air photos taken by RARE. He plotted it in 69°33' S, 71°14' W. UK-APC accepted the name on March 2, 1961, and US-ACAN followed suit that year, but with different co-ordinates. *See also* **Tufts Pass**.

Lake Nicholson. 60°37' S, 78°14' E. At an altitude of 8 m, it lies about 1.1 km S of Ellis Rapids, in the S part of the Vestfold Hills. Named by ANCA for Robert "Bob" Nicholson, who wintered-over at Davis Station in 1971, as senior radio technician (meteorology).

Nicholson, Charles H. *see* **USEE 1838-42**

Nicholson, Derwent Newman "Derry." Also known as "Nick." b. Jan. 9, 1928, Stanley, Falkland Islands, son of British-born Leslie Holliday Nicholson (ex-Royal Navy) and his Falkland Islander wife Alice Isabella Theresa Newman. The parents were caretakers at the Admiralty Wireless Station, in Stanley. He joined FIDS in 1945, as a handyman, and wintered-over at Base C in 1946, and at Base D in 1947. In 1948 he became a merchant seaman, sailed on the *John Biscoe* for a while, and in the early 1950s moved to the USA. In 1954 he was sailing on the *Caronia*, as an able seaman with the Cunard Line, and the following year was plying American seas, as a bosun's mate on the *Queen of Bermuda*. He moved to Oklahoma, and on May 1, 1971, in Las Vegas, he married Evelyn M. Deegan. He later lived in Manning, Oregon.

Nicholson, John Astbury. b. 1915, Saltash, Cornwall, son of engineer-captain James Bell Nicholson, RN, and his wife Ella Astbury. He took 1st class honors in zoology, at Bristol, and was one of the scientific staff on the *Discovery II* cruise of 1937-39. On Sept. 19, 1942, during World War II, as a lieutenant, RNVR, on the trawler *Alouette*, he was torpedoed and drowned.

Nicholson Island. 66°17' S, 110°32' E. The most westerly of the Bailey Rocks, about 170 m NE of Budnick Hill, in Newcomb Bay, in the Windmill Islands, just NW of Casey Station. First mapped from air photos raken by OpHJ 1946-47. Named by ANCA for Robert Thomas "Bob" Nicholson (b. Feb. 24, 1938, NZ), senior carpenter at Wilkes Station in 1966, who helped construct Casey Station that year. He was back at Wilkes in 1968, and also 2nd-in-command at Mawson Station in 1970. US-ACAN accepted the name in 1971. Three bollards on the E end of the island are used to moor ships unloading bulk fuel at Casey.

Nicholson Peninsula. 80°43' S, 160°30' E. A broad, ice-covered peninsula, about 23 km long, between Couzens Bay and Matterson Inlet, on the W side of the Ross Ice Shelf. Mapped by USGS from air photos taken by USN. Named by US-ACAN in 1965, for Capt. William M. Nicholson (b. June 15, 1918, Napa, Calif.), who joined the U.S. Navy in June 1937, and was chief of staff to the U.S. Antarctic Projects Officer, 1964. He retired in Feb. 1971. ANCA accepted the name.

Nicholson Rock. 75°50' S, 114°56' W. A rock, 4 km E of Cox Bluff, on the mainly snow-covered Spitz Ridge, in the E part of the Toney Mountain massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Charles E. Nicholson, USN, who wintered-over as construction electrician at Pole Station, in 1974.

Nickell Peak. 77°19' S, 161°28' E. An ice-free peak at the W side of Victoria Upper Lake, 1.5 km SE of Sponsors Peak, in Victoria Land. Named by US-ACAN in 1976, for Gregory William Nickell (b. Feb. 28, 1948, Boulder City, Nev. d. May 15, 1974), NSF employee, manager of the Eklund Biological Center, and the Thiel Earth Sciences Laboratory at McMurdo in 1974 (*see* **Deaths**, 1974). His cremated remains were returned to Henderson, Nev., by registered air parcel post on Sept. 5, 1974.

Mount Nickens. 73°56' S, 100°20' W. A snow-covered, mesa-type mountain with a steep N rock face, which marks the NW extremity of the Hudson Mountains, just E of the base of Canisteo Peninsula, and overlooking the Cosgrove Ice Shelf. Mapped from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1968, for Herbert P. Nickens, map compilation specialist who contributed significantly to the construction of USGS sketch maps of Antarctica.

Mount Nickerson. 83°28' S, 168°48' E. A broad mountain, rising to 1480 m, between Lennox-King Glacier and Beaver Glacier, 6 km SW of Yeates Bluff, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Cdr. Norval Eugene Nickerson (b. June 4, 1920, Los Angeles. d. April 6, 2006, Newport Beach, Calif.), USN, captain of the *Edisto* during OpDF 1965 (i.e., 1964-65).

Nickerson Ice Shelf. 75°44' S, 145°00' W. About 56 km wide, N of Siemiatkowski Glacier and the W part of the Ruppert Coast. It contains 3 grounded islands — Groves Island, Newman Island, and Stephen Island. Discovered and roughly mapped during ByrdAE 1928-30. Named by US-ACAN in 1966, for Cdr. Henry John Nickerson (b. March 27, 1918, Wheeling, W. Va. d. June 11, 2002, Pensacola, Fla.), USN, administrative officer on the staff of the commander, Task Force 43, during OpDF 66 (i.e., 1965-66).

Nicknames of Antarctica. The early Russian nickname was "The Ice Continent." Mawson called it "The Home of the Blizzard." Other names have been: "The White Desert," "The Pulsating Continent," "The Last Continent," "The Sixth Continent," "Down South," "Down Under," but the most durable has been "The Ice." The Antarctic Peninsula, because of its comparatively warm climate, is often called "The Banana Belt."

Nickols Island. 69°43' S, 73°44' E. A prominent, steep-sided rock island in Sandefjord Bay, about 24 km WNW of Mount Caroline Mikkelsen. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Instøy (i.e., "inner island"). Visited many times by members of the ANARE Amery Ice Shelf party, and the ANARE Prince Charles Mountains survey party, in Jan.-Feb. 1969. Named by ANCA on Oct. 22, 1968, for Alan H.F. Nickols, electronics engineer who wintered-over with the Amery Ice Shelf party in 1968.

Nicks Nase. 72°50' S, 166°13' E. A point in the Lawrence Peaks of Victoria Land. Named by the Germans ("Nick's nose").

Nico Automatic Weather Station. 89°00' S, 89°41' E. An American AWS, at an elevation of 2935 m, installed near the South Pole on Jan. 26, 1993. Named for the son of John Carroll, faculty member at the University of California at Davis.

Nicol Crags. 80°44' S, 24°05' W. Rock crags rising to about 1300 m, to the S of Arkell Cirque, on the S side of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for William Nicol (1770-1851), Scottish natural philospher who devised the Nicol prism and the preparation of thin rock sections, thus contributing to the techniques of microscopy.

US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Capo Nicola *see* **Mount Nicholas**

Cabo Nicolás *see* **Cape Brown**, **Mount Nicholas**

Cape Nicolas *see* **Nicolas Rocks**

Rocas Nicolás *see* **Nicolas Rocks**

Nicolas Islet *see* **Nicolas Rocks**

Nicolas Rocks. 60°34' S, 46°06' W. A group of rocks in water, forming the NW extremity of the Larsen Islands, 4 km off the W end of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Powell and Palmer, and named by Powell as Cape Nicolas (at least, the N part of the most northerly of these rocks was thus named), for the feast day of Saint Nicholas, Dec. 6, the day of the discovery. It appears as such on Powell's chart published in 1822. Petter Sørlle was surveying here in 1912-13, and on his 1912 chart Powell's cape appears as simply Nicolas. However, on Sørlle's chart published in 1930 it appears as Nicolas Pynten (i.e., "the Nicolas point"). The *Norvegia* was here in 1927, surveyed the group, and named the most northerly of the rocks as Nikolaus II Øya, thinking that it had been originally named for that tsar. In 1929, the Discovery Investigations surveyed these rocks, and named the northern one as Nicolas Islet. It appears that way on their 1930 chart. On the Discovery Investigations chart of 1934, and also on a British chart of 1948, Powell's cape appears as Cape Nicolas. On a 1947 Argentine chart, Powell's cape appears as Cabo Nicolás, and the northern rock itself appears as Isla Nicolás, and that latter name was accepted by the 1970 Argentine gazetteer. The feature was later re-defined by UK-APC on March 31, 1955, as Nicolas Rocks, the name Cape Nicolas was eliminated, and US-ACAN went along with all that later in the year. It appears that way in the 1958 British gazetteer. However, in the 1961 British gazetteer, it appears as Nicholas Rocks. Today, the Argentines use the name Rocas Nicolás.

Île Nicolas II *see* **Mount Nicholas**

Monte Nicolás II *see* **Mount Nicholas**

Nicolas II Island *see* **Mount Nicholas**

Rocas Niebla *see* **Mist Rocks**

Niederhauser, John. b. Bern, Switzerland. A clockmaker who tried his luck in the USA in the 1830s, got nowhere, and joined a shady New York sealing operation whereby he and a small group of men would be deposited by a schooner on an island in Tierra del Fuego, hunt seals, skin them, and then the schooner would arrive to take off the skins, re-provision the men for another 3 months, and then do the same thing over and over until someone got tired. It worked all right the first time, but then the schooner was never seen again. Most of the men departed in a boat, but Niederhauser and an English colleague, George Berdine, stayed on and went native, learning the Patagonian language and making an attempt to assimilate into the tribe (the local girls being the main thrust of this sociological experiment). Then things started to go wrong, and just in time Dumont d'Urville picked them up on Jan. 5, 1838, and took them to Antarctica with him, the Swiss on the *Astrolabe* and Berdine on the *Zélée*. The Frenchman described Niederhauser as a "decrepit, miserable looking fellow." On April 18, at Talcahuano, in Chile, with scurvy raging on board both ships, the two hitch-hikers left the expedition in a hurry.

Niel, Léonard-François. b. Nov. 3, 1806, Toulon. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Niels Peak. 71°57' S, 9°23' E. Rising to 2525 m, 5 km N of Nergaard Peak, in the Gagarin Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Nielsnapen, for Niels Nergaard (*see* **Nergaard Peak**). US-ACAN accepted the translated name Niels Peak in 1970.

[1]**Nielsen, Hans**. Able seaman on the *Southern Cross* during BAE 1898-1900.

[2]**Nielsen, Hans**. b. 1912, Denmark. He went to sea in 1935, on Danish ships, as an assistant engineer, soon joined as such by his younger brother Kaj. In 1938 he was discharged from a ship in St. John's, New Brunswick, made his way back to Germany, and became 5th engineer on the *Schwabenland* for GermAE 1938-39.

Nielsen, Jerri Lin. b. March 1, 1952, Salem, Ohio. In 1977 she graduated from medical college in Toledo, and in 1998, a recently-divorced emergency room doctor in Ohio, she answered an ad for medical officers at South Pole Station, for the winter of 1999, and went, being the only medical officer there. One month after the point of no return, when weather prohibited flights, she discovered a lump in her breast, and diagnosed herself with cancer. As the only doctor at Pole Station, she had a job to do, so she administered chemotherapy herself. She was finally airlifted out on Oct. 16, 1999, by Hercules aircraft, when the temperature on the ice rose to -53°F. She and Maryanne Vollers wrote *Ice Bound: A Doctor's Incredible Story of Survival at the South Pole*. She became a motivational speaker, but in 2005 she was hit again, with liver and bone cancer, and in Oct. 2008 developed a brain tumor. She had remarried, in 2006, to Tom Fitzgerald, and died on June 23, 2009.

Nielsen, M. Sverre. Manager of the Hektor Company's whaling station at Deception Island, 1929-30.

Nielsen, Olav. b. 1867, Norway. Whaling mate in the South Shetlands during the 1913-14 season, who died of apoplexy on Jan. 7, 1914, in Admiralty Bay, King George Island, and was buried in the Whalers Bay Cemetery on Deception Island.

The *Nielsen-Alonso*. Full name was The *N. T. Nielsen-Alonso*, and the name is also often seen as *Nilsen-Alonzo*. Formerly a tramp steamer, she was converted in 1926 into a Norwegian whaler, with a stern slip, for the Polaris Company (Melsom & Melsom), and operated in the Ross Sea in 1926-27 and 1927-28, both seasons under the command of Capt. Fred Gjertsen. She was back in the Ross Sea in 1928-29, under Capt. Hans Andresen, and again in 1929-30 and 1930-31 (skipper unknown). On Dec. 15, 1929, in the Ross Sea, she lost one of her catchers, the *Southern Sea*. She was back in Antarctic waters in 1933-34, 1934-35, 1935-36, 1936-37, 1937-38, 1939-40, and 1940-41. She was torpedoed in the North Atlantic on Feb. 22, 1943.

Nielsen Bay *see* **Nilsen Bay**

Nielsen Fjord. 70°42' S, 165°50' E. A fjord, about 3 km wide, just E of Cape North, between that cape and Gregory Bluffs, on the N coast of Victoria Land. Named by ANCA for Capt. Hans Nielsen, captain of the *Thala Dan*, 1961-62. US-ACAN accepted the name in 1964.

[1]**Nielsen Glacier** *see* **McMahon Glacier**

[2]**Nielsen Glacier**. 71°31' S, 169°41' E. A glacier, 6 km long, flowing into the SE part of Relay Bay, on the W side of Robertson Bay, just W of Calf Point, in northern Victoria Land. First charted by BAE 1898-1900, and named by Borchgrevink as Yngvar Nielsen Glacier for Professor Yngvar Nielsen (1843-1916) of Christiania University, Norway. US-ACAN accepted the shortened name in 1947, and NZ-APC followed suit.

Nielsenholen. 71°23' S, 13°01' E. A small mountain in Deildebreen, in the westernmost part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (i.e., "Nielsen ridge").

Nielsnapen *see* **Niels Peak**

Nielson Bay *see* **Nilsen Bay**

Niépce Glacier. 65°07' S, 63°22' W. Joins with Daguerre Glacier and flows N into Lauzanne Cove, Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Shown (but not named) on an Argentine chart of 1954. Named by UK-APC on Sept. 23, 1960, for French physicist Nicéphore Niépce (1765-1833; born Joseph Niépce, but changed his first name), one of the most important of all the photography pioneers. US-ACAN accepted the name in 1965. Pronounced "knee-apes," with the stress on the second syllable.

Nieva, Guillermo *see* **Órcadas Station**, 1939

Niewoehner, Victor G. b. Nov. 10, 1907, Willow Creek, ND, son of farmer William Niewoehner and his wife Louise. He was a mechanic on the *Bear of Oakland* during the first half of ByrdAE 1933-35, and 2nd assistant engineer on the *Jacob Ruppert* during the second half. He died on June 10, 1979, in Detroit, and was buried in Oregon.

The *Nigeria*. An 8530-ton Colonial-class British light cruiser, 555 feet 6 inches long, and capable of 33 knots, she was ordered on Dec. 20, 1937, laid down on Feb. 8, 1938, at Vickers Armstrong's yard at Walker-on-Tyne, and launched on July 18, 1939, the sister ship of the *Mauritius* (which was launched the following day, from the neighboring yard of Swan Hunter). She was commissioned into the Royal Navy on Sept. 23, 1940, and served in World War II. **Feb. 1948**: The *Nigeria* left Simonstown, South

Africa, bound for the Falkland Islands, Capt. Barrington Lungley Moore commanding. **March 1, 1948**: The *Nigeria* left the Falklands, bound for Antarctica, with Governor Miles Clifford aboard. The vessel was to visit FIDS stations, sometimes in company with the *Snipe*, on a 9-day cruise. **March 5, 1948**: In the morning she pulled in to Port Foster, Deception Island, where Governor Clifford delivered a formal note of protest to the Argentine base, objecting to the Argentine presence. It was a useless protest. The *Nigeria* then left, bound for Greenwich Island. **March 7, 1948**: The *Nigeria* reached Greenwich Island. **March 10, 1948**: The *Nigeria* and the *Snipe* arrived back at Port Stanley. The *Nigeria* then set out, that same day, back to Simonstown. In April 1954 she was sold to the Indian Navy (as their 2nd cruiser), for £300,000, renamed the *Mysore*, refitted at Cammell Laird's yards at Birkenhead, and in a formal ceremony at Birkenhead on Aug. 27, 1957, handed over to Mrs. Pandit, the high commissioner. On Dec. 30, 1957 the *Mysore* arrived in Bombay. She was decommissioned on Aug. 20, 1985.

Islote Nigg *see* **Nigg Rock**

Nigg Rock. 60°43' S, 44°51' W. A rock in water, rising to 155 m above sea level, 0.8 km NW of Route Point (on Mackenzie Peninsula, the NW tip of Laurie Island) in the South Orkneys. Discovered and charted by Powell and Palmer in Dec. 1821. Recharted in 1903 by ScotNAE 1902-04, and named by Bruce for the birthplace of his wife in Scotland (*see* **Jessie Bay**). It appears on an Argentine chart of 1931 as Islote Nigg. It was re-charted by the Discovery Investigations in 1933, and appears misspelled on their 1934 chart as Eigg Rock. Consequently, it appears on a 1947 Argentine chart as Roca Eigg. It appears on a British chart of 1938 as Nigg Rock, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1958 Argentine chart it appears as Isla Nigg, but the name accepted by the Argentine gazetteer of 1970 was Islote Nigg.

Nigger. One of the greats, the lead dog on Scott's BNAE 1901-04. A Russian, from Archangel, he had uncanny instincts and great intelligence, as all the great dogs do. He had been king, ruling over hundreds of dogs back home, and in Antarctica he held sway over the other dogs as absolute monarch. Any rebellion he would break up immediately, and would often nudge his human companions into a start mode when the trail was tough. Nigger, like Jim, and Lewis, and Spud, Gus, Stripes, Snatcher, and Vic, died out there on the trail.

Nigger Head. 71°27' S, 169°23' E. The N point of Berg Bay, in the area of Robertson Bay, in northern Victoria Land. Named by Campbell's Northern Party during BAE 1910-13, but no one knows what inspired this name. The name appears in the 1958 NZ provisional gazetteer.

Niggli Nunataks. 80°38' S, 23°20' W. A group of nunataks, rising to about 1470 m, 10 km NNE of Mount Wegener, near the E end of the Read Mountains, in the Shackleton Range. Mapped by USGS in 1974 from USN air photos taken in 1967, and from ground surveys conducted by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1971, for Paul Niggli (1888-1953), professor of geology at the University of Zurich, who introduced the cataloguing of magma types by molecular or Niggli values. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Nigglifirnfeld. 72°43' S, 167°01' E. A snowfield, SE of Mount Hancox, in the Victory Mountains of Victoria Land. Named by the Germans for Paul Niggli (*see* **Niggli Nunataks**).

Night. There are 3 months of continuous night, and another 3 of twilight. These 6 months are the so-called "night months" of Antarctica. At the South Pole itself there are more dark days (*see* **Seasons**).

Gora Nikiforova. 70°00' S, 64°45' E. A nunatak to the E of Mount Fox, in Mac. Robertson Land. Named by the Russians.

Nikitin Glacier. 73°48' S, 75°36' W. Flows N into Stange Sound, on the English Coast of Ellsworth Land, eastward of Hall Glacier. Named by the USSR Academy of Sciences in 1987, as Lednik Afanasija Nikitin, after Athanasius Nikitin (d. 1472), who traveled in India and Africa. US-ACAN accepted the name Nikitin Glacier in 2006. One must, generally speaking, accept rather idiosyncratic plotting from the Russians, and not be disturbed by it. Yet, because they plotted this particular feature in 73°40' S, 76°00' W, so different from the coordinates given by the Americans for Nikitin Glacier, SCAR's Composite Gazetteer was provoked to say it is not the same feature as Nikitin Glacier. Yet there are only three ice courses flowing N into Stange Sound, viz. (running E-W) Nikitin Glacier, Hall Glacier, and Lidke Ice Stream, all running parallel, and the Russians' cordinates fit better with Nikitin Glacier than with the other two. And, besides, despite their warning, the gazetteer then proceeds to list the Russian glacier as the same feature as Nikitin Glacier, which, of course, it is. To add to the confusion, UK-APC, on May 10, 2006, voiced their reservations about naming any of these features until further proof came in of their separate and distinct existences.

Nunataki Nikity Izotova. 84°25' S, 62°51' W. A group of nunataks, SW of Weber Ridge, in the N part of the Patuxent Range, in the Pensacola Mountains. Named by the Russians.

Gora Nikola *see* **Mount Nicholas**

Bukhta Nikolaeva. 66°28' S, 83°35' E. A bay indenting the Wilhelm II Coast. Named by the Russians.

Gora Nikolaeva *see* **Mount Nikolayev**

Nikolaevtoppen *see* **Mount Nikolayev**

Mys Nikolaja Feoktistova *see* **Cape Feoktistov**

Gora Nikolaja Vavilova *see* **Vavilov Hill**

Zaliv Nikolaja Zubova. 66°35' S, 115°33' E. A gulf between the Budd Coast and Sabrina Coast of Wilkes Land. Named by the Russians. Cape Waldron forms its N side.

Mys Nikolaya *see* **Mount Nicholas**

Mount Nikolayev. 71°44' S, 12°26' E. Rising to 2850 m, the central peak on Aurdalsegga Ridge, in the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1963 as Gora Nikolaeva, for petrographer Viktor Arsen'yevich Nikolayev (1893-1960). US-ACAN accepted the translated name in 1970. The Norwegians call it Nikolaevtoppen.

Nikolayev Range. 71°54' S, 6°02' E. Between Austreskorve Glacier and Lunde Glacier, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 61, and named by them as Hrebet Andrijana Nikolaeva, for cosmonaut Andriyan Grigoryevich Nikolayev (1929-2004). US-ACAN accepted the name Nikolayev Range in 1970.

Nikopol Point. 62°40' S, 61°05' W. A point, snow-free in summer, that projects 600 m into the Bransfield Strait from the W end of South Beaches, 1.4 km ESE of Sealer Hill, Byers Peninsula, on the S coast of Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the town of Nikopol, in northern Bulgaria.

Nikyup Point. 63°52' S, 59°39' W. Next E of the terminus of Andrew Glacier, 12.65 km SSE of Radibosh Point, 6.3 km NE of Velichkov Knoll, 6.76 km W of Almond Point, and 19.2 km SW of Cape Kjellman, on Trinity Peninsula. It shape has been enhanced by the retreat of the Andrew in the late 1990s and early 2000s. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Nikyup, in northern Bulgaria.

Nila. Gray sludge ice which can be up to 4 inches thick.

The *Nile*. Sealing brig out of New London, Conn. Her only South Shetlands cruise was 1872-73. Crew: John L. Williams (captain), Erastus Church, Jr. (1st mate), John Glass (2nd mate), James H. Glass (3rd mate), William P. Shotwell, Charles Krause, Jesse Antone Degradaca, Daniel Williams, Emil Seringud, Charles E. Purdy, John Decorsky, Antone DeBar (black), José Martin, Julio Mendes, William Kent, John Smith, Edward Smith, Frederick G. Morton, E.O. Newton, Charles Fox, Lathrop Bentley, George McClellan. This was the vessel that rescued James King from King George Island, after he had been stranded there for the winter of 1872.

Niles Island. 66°26' S, 110°24' E. A small, rocky island, about 330 m long, close off the S end of Holl Island, in the Windmill Islands. First

mapped from air photos taken in Jan. 1947 by OpHJ 1946–47 and in Jan. 1948 by OpW 1947–48. Named by US-ACAN in 1963, as Niles Rock, for G.W. Niles, aerial photographer on OpHJ 1946–47, and OpW 1947–48. The term "island" has since been considered more appropriate.

Niles Rock *see* **Niles Island**

Mount Nils. 68°04' S, 48°01' E. Prominent and ice-covered, close W of Rayner Glacier, and 5.5 km SW of Mount Christensen, in Enderby Land. Plotted from ANARE air photos taken in 1956 and 1957, and named by ANCA for Nils Larsen. US-ACAN accepted the name in 1965.

Nils Jørgen Peaks. 71°52' S, 2°36' W. A group of small, nunatak-type peaks, about 10 km NE of Mount Schumacher, on Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos conducted by NBSAE 1949–52, and from new air photos taken in 1958–59 during NorAE 1956–60, and named by them as Nils Jørgennutane, after Nils Jørgen Schumacher. US-ACAN accepted the translated name Nil Jørgen Peaks in 1966.

Nils Jørgennutane *see* **Nils Jørgen Peaks**

Glaciar Nils Larsen *see* **Nils Larsen Glacier**

Mount Nils Larsen. 72°13' S, 23°06' E. Rising to 2190 m, 5 km SW of Mount Widerøe, between that mountain and Hansenbreen, in the W part of the Sør Rondane Mountains. Photographed aerially by OpHJ 1946–47, and mapped from these photos in 1957 by Norwegian cartographers, who plotted it in 72°15' S, 22°46' E, and named it Nils Larsenfjellet, for Nils Larsen. US-ACAN accepted the translated name Mount Nils Larsen in 1962. It has since been re-plotted.

Nils Larsen Glacier. 68°44' S, 90°39' W. Flows for 4.5 km to the Lazarev Coast 8 km SSW of Cape Eva, and pushes out to sea beyond the W coast of Peter I Island, close northward of Norvegia Bay. Named Nils Larsenbreen by the Norwegians for Nils Larsen, who made a survey of the island in 1929. In 1952, US-ACAN accepted the translated name Nils Larsen Glacier. The Chileans call it Glaciar Nils Larsen.

Nils Larsenbreen *see* **Nils Larsen Glacier**

Nils Larsenfjellet *see* **Mount Nils Larsen**

Nils Plain. 72°07' S, 0°27' E. An ice plain 40 km in extent, N of Mount Roer, between Helle Slope and the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Nilsevidda, for Nils Roer. US-ACAN accepted the translated name Nils Plain in 1966.

Mount Nilsen. 78°03' S, 155°00' W. A peak rising to 610 m, 6 km WSW of Mount Paterson, and NW of Mount Helen Washington, in the Rockefeller Mountains, on Edward VII Peninsula, in Marie Byrd Land. Discovered on Jan. 18, 1929, during ByrdAE 1928–30, and named by Byrd for Oscar Nilsen. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Nilsen, Andreas. b. Sept. 3, 1876, Norway. Cousin of Adolf Amandus Andresen. He went to sea in 1891, and was skipper of the whaler *Gobernador Bories*, in the South Shetlands in 1906–07, 1907–08, 1908–09, and 1909–10. In 1910–11 he was a manager in the Falkland Islands, and then went to work for the Dominion Whaling Co., working in Angolan waters from 1912 (he was there in 1915, on the *Pythia*). He was back in African waters in 1923, on the *Bas II*, and at Spitzbergen in 1926–27. In 1932 he left the sea to become a ship broker, but, in 1936, tried to get a whaling expedition together to go to the South Shetlands, but couldn't find the money. He tried again in 1937, 1938, and 1939, and then World War II came along. He died on Jan. 3, 1955.

Nilsen, Oscar. b. 1887. Norwegian Antarctic whaling captain. He took over as skipper of the *Sir James Clark Ross* when Carl Anton Larsen died on board during the early stages of the 1924–25 expedition. He then led the expedition to a reasonably successful conclusion. He was skipper of the *C.A. Larsen*, 1928–30, and was of enormous help to Byrd (*see* **Byrd's 1928–30 Expedition**). In 1930–31 he was captain of the new *Sir James Clark Ross*. It was this ship that transported coal to the *Discovery* during BANZARE 1929–31. He was back in Antarctic waters in 1932–33, again as skipper of the new *Sir James Clark Ross*.

Nilsen, Roland. Skipper of the *Telefon*, 1908–09.

Nilsen, Schjølberg. b. May 1, 1904, Dverberg, Norway, son of fisherman Sedolf Olai Nilsen and his wife Kristine Karoline. Cook on NBSAE 1949–52.

Nilsen, Thorvald. b. Aug. 6, 1881, Kristiansand, Norway, son of merchant Nikolai Emil Nilsen and his wife Anne Lovise Tønnesdatter Aarestad. Norwegian naval lieutenant and linguist. His original application in 1909 to join Amundsen (then aiming for the North Pole) was refused. The man who got the job, Ole Engelstad, was killed by lightning in July 1909, so Nilsen then re-applied, and became captain of the *Fram*, and, as such, in Jan. 1910, was the first to hear of Amundsen's plan to go south instead of to the North Pole, becoming 2nd-in-command of NorAE 1910–12. He translated Amundsen's lectures into English. On Sept. 14, 1918, he married Frida Lem, and in 1920 moved to Buenos Aires, working in the insurance business. He died there on April 19, 1940.

The *Nilsen-Alonzo* *see* **The *Nielsen-Alonso***

Nilsen Bay. 67°36' S, 64°34' E. A small bay just W of Strahan Glacier, 28 km ESE of Cape Daly, on the Lars Christensen Coast of Mac. Robertson Land. Discovered by BANZARE in Feb. 1931, and named by Mawson for Oscar Nilsen. Mawson misspelled it as Nielsen Bay, and mapped it too far W (*Geographic Journal*, Aug. 1932). The name has also been misspelled as Nielson Bay. US-ACAN accepted the name Nilsen Bay in 1965, and ANCA followed suit.

Nilsen Mountains *see* **Nilsen Plateau**

Nilsen Peak. 84°32' S, 175°25' W. A prominent peak, rising to 780 m on the N end of Waldron Spurs, it marks the E side of the mouth of Shackleton Glacier. Named by US-ACAN in 1966, for Willy B. Nilsen (b. Nov. 16, 1921. d. 1989), captain of the *Chattahoochee* during OpDF 65 (i.e., 1964–65).

Nilsen Plateau. 86°20' S, 158°00' W. A rugged, ice-covered plateau, 50 km long, between 1.5 and 20 km wide, and 3940 m at its highest, it lies between the upper reaches of Amundsen Glacier and Scott Glacier, between the Prince Olav Mountains and the Horlick Mountains, in the Queen Maud Mountains. Fram Mesa is on this plateau. When Amundsen was rushing toward the Pole, he discovered this plateau on Nov. 28, 1912, and named it Thorvald Nilsen Plateau, for Thorvald Nilsen, captain of the *Fram*. Over the years this feature has been seen named and spelled in a variety of ways, including: Thorvald Nilsen Mountains, Mount Thorvald Nilsen, as well as several variants of the names Thorvald and Nilsen, such as Thorald, Nilesen, Nielson, etc. US-ACAN accepted the name in 1966, and NZ-APC followed suit.

Nilsevidda *see* **Nils Plain**

Nilsson, R. "Nisse." Photographer on NBSAE 1949–52.

Nilsson Rocks. 71°45' S, 67°42' E. A group of 3 fairly low rock outcrops which enclose 2 meltwater lakes (which the Russians call Ozero Zagadochnoe and Ozero Reliktovoe) about 14 km S of the Fisher Massif, in the Prince Charles Mountains. Plotted from air photos taken by ANARE in 1956, and named by ANCA for Carl Sigurd Nilsson (b. Sept. 29, 1936), radio physicist at Mawson Station in 1957. In the 1970s and 80s he was an oceanographer with the Royal Australian Navy's Research Laboratory. US-ACAN accepted the name in 1961.

Nimbus Hills. 79°35' S, 82°50' W. A rugged line of hills and peaks, about 22 km long, forming the SE part of Pioneer Heights, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for the NASA weather satellite Nimbus, which on Sept. 13, 1964, took photos of Antarctica (including these hills) from 500 miles up.

Nimbusryggen. 73°44' S, 14°52' W. A mountain ridge, 1 km long, between the two mountains the Norwegians call Muren and Skansen, in the S part of the Kraul Mountains, in the W part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the meteorological satellite Nimbus-6. An automatic station, transmitting environmental data to Nimbus-6, was established on this ridge in Jan. 1977. "Ryggen" means "the ridge."

Nimitz Glacier. 78°55' S, 85°10' W. About 60 km long and 8 km wide, it flows SE from the area about 16 km W of the Vinson Massif, between the Sentinel Range and the Bastien Range, into Minnesota Glacier, in the central Ellsworth Mountains. Discovered aerially by VX-6 flights on Dec. 14–15, 1959, and mapped by USGS from these photos. Named by US-ACAN in 1961, for

Fleet Admiral Chester W. Nimitz, USN (*see* **Nimitz Hall**).

Nimitz Hall. The library and office building at McMurdo Station, named in May 1956 for Fleet Admiral Chester W. Nimitz (b. 1885, Fredericksburg, Tex. d. 1966, Oakland, Calif.), USN, chief of naval operations at the time of OpHJ 1946-47.

The *Nimrod*. Shackleton's ship during BAE 1907-09. Built in 1866 by Alexander Stephen & Sons, of Dundee, she was a 200-ton sealer altered and repaired by R & H Green of Blackwall, and given a brand new engine which gave a 6-knot speed. Shackleton first saw her in the Thames on June 15, 1906. Rupert England was captain during the first part of the expedition, i.e., from 1907 to 1908, with John King Davis as chief officer. When the ship left Cape Royds, on Feb. 22, 1908, England carried sealed instructions to his superiors from Shackleton, instructing them to send down Capt. F.P. Evans as captain for the next (relief) season. There is definitely truth in that Shackleton and England disagreed. Evans was, indeed, captain for the 2nd season. He was replaced later in 1909 by John King Davis. On Jan. 31, 1919, the *Nimrod* ran aground in the North Sea.

Mount Nimrod. 85°25' S, 165°45' E. Rising to 2835 m (the New Zealanders say 3200 m), 6 km (the New Zealanders say 13 km) SSE of Mount Saunders, in the N part of the Dominion Range. Discovered by BAE 1907-09, and named by Shackleton for his ship, the *Nimrod*. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Pasaje Nimrod *see* **Nimrod Passage**

Nimrod Glacier. 82°21' S, 163°00' E. 135 km long, and about 16 km wide in its lower reaches, it is one of the major glaciers feeding the Ross Ice Shelf from the Transantarctic Mountains. It flows from the Polar Plateau, in a northerly direction, between the Geologists Range and the Miller Range, then northeasterly between the Churchill Mountains and the Queen Elizabeth Range, finally spilling into the head of Shackleton Inlet at the W side of the Ross Ice Shelf between Cape Wilson and Cape Lyttelton. Photographed aerially by OpHJ 1946-47. In association with the name Shackleton, it was named by US-ACAN in 1956, for the *Nimrod*. NZ-APC accepted the name.

Nimrod Ice Stream. 83°20' S, 154°30' E. An ice stream trending northwards across the Polar Plateau for about 95 km before discharging into the Nimrod Glacier. Discovered by the Northern Party of NZGSAE 1961-62, and named by them in association with the famous glacier. NZ-APC accepted the name, and ANCA followed suit.

Nimrod Passage. 64°59' S, 63°58' W. A marine passage running W-E from Bismarck Strait to the N end of Lemaire Channel between the Wauwermans Islands to the N and the Dannebrog Islands to the S, in the Wilhelm Archipelago. Named by UK-APC on Nov. 3, 1971, for the motor survey boat *Nimrod*, which was used to take most of the soundings when the RN Hydrographic Survey unit navigated this passage safely in the *John Biscoe* in March and April 1964. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer, and on a British chart of that year. The Argentines call it Pasaje Nimrod.

Nims Peak. 72°34' S, 160°58' E. A sharp rock peak about 5 km NW of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for David J. Nims, ionosphere physicist at McMurdo in 1968.

The *Nina Sagaydak*. Soviet freighter, used on SovAE 1973-75. Skipper V.S. Trofimov. She was crushed by Arctic ice on Oct. 8, 1983, and sunk.

90 Degrees South *see* **Kristensen, Monica**

Ninnis, Aubrey Howard. Known as Howard. b. June 3, 1883, St Pancras, London, son of Howard Ninnis and his wife Fanny Elvira Gore, and cousin of Cherub Ninnis (see below). He had worked for the Admiralty for 7 years when he went on BAE 1910-13, only to get injured at Cape Town on the way down and be forced to quit. He then went to Canada for 4 years. On Sept. 18, 1914, he left Dover as the motor engineer, one of the 11 Ross Sea Party members, on the *Ionic*, for BITE 1914-17. He was on the *Aurora* when it drifted away from Ross Island. In 1916-17 he signed on again, as paymaster and photographer cum purser, this time to go down to Cape Evans on the *Aurora* to relieve the Ross Sea Party. He was in the RNVR for the rest of World War I. Later he lived in Dunedin, NZ, and about 1925 married Constance Brown. He died on Aug. 1, 1956, in Dunedin.

Ninnis, Belgrave Edward Sutton "Cherub." b. Jan. 22, 1887, Streatham, London, son of naval surgeon, naturalist, and Arctic explorer Belgrave Ninnis, and his wife Ada Jane Sutton. His cousin was Aubrey Howard Ninnis (see above). He joined the Royal Fusiliers (2nd lieutenant, March 18, 1908; 1st lieutenant, Jan. 1. 1912), and went on AAE 1911-14, as dog handler. While on the Far Eastern sledge journey with Mawson and Mertz, he fell down a crevasse and disappeared on Dec. 14, 1912.

Ninnis Glacier. 68°22' S, 147°00' E. A large, heavily hummocked and crevassed glacier, flowing from the high interior of George V Land, and descending steeply in a broad valley between Mertz Glacier and the Cook Ice Shelf into the sea. Discovered by AAE 1911-14, and named by Mawson for B.E.S. Ninnis. US-ACAN accepted the name in 1947, and ANCA followed suit. Originally ploted in 68°12' S, 147°12' E, it has since been replotted.

Ninnis Glacier Tongue. 68°05' S, 147°45' E. A broad glacier tongue which forms the seaward extension of Ninnis Glacier, projecting out to sea for 50 km from the coast of George V Land (at least it was in 1962). Discovered by AAE 1911-14, and named by Mawson in association with the glacier. US-ACAN accepted the name in 1947. Originally plotted in 68°07' S, 147°51' E, it has since been replotted.

Ninnis Nunatak. Named by NZ in 1960, as part of the group they called Aurora Nunataks, in the Grosvenor Mountains, in the Queen Maud Mountains. Named for Howard Ninnis, it does not seem to exist, and seems never to have existed.

Nipe Glacier. 71°52' S, 25°15' E. A broad glacier on the N side of Menipa Peak, between that peak and the Austkampane Hills, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by OpHJ 1946-47, and named by them as Nipebreen (i.e., "the mountain peak glacier"), in association with Menipa. US-ACAN accepted the name Nipe Glacier in 1966.

Nipebreen *see* **Nipe Glacier**

Nipehorga *see* **Koyubi-one**

Nipehovden *see* **Tekubi-yama**

Nipeodden *see* **Hitosasiyubi-one**

Niperyggen *see* **Nakayubi-one**

Mount Nipha. 78°09' S, 167°24' E. A hill, rising to 760 m, almost precisely in the center of White Island (the New Zealanders describe it as the center hill along the E side of the island), in the Ross Archipelago. So named by NZGSAE 1958-59 because it is surrounded by ice and snow (nipha means "snow" in Greek). NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Nipple Peak. 64°47' S, 63°17' W. Rising to 675 m, 1.5 km NE of Channel Glacier, in the N part of Wiencke Island, in the Palmer Archipelago. Discovered on Feb. 8-9, 1898, by BelgAE 1897-99. Named descriptively in 1944 by personnel from Port Lockroy Station, during Operation Tabarin. They mapped the peak. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1951. It appears in the 1955 British gazetteer, and on a British chart of 1959.

Nishava Cove. 62°37' S, 61°16' W. A cove, 800 m wide, indenting the N coast of Rugged Island for 950 m, off the W coast of Byers Peninsula, between the Chiprovtsi Islets and Chiprovtsi Point on the E and the small peninsula forming Cape Sheffield on the W, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for the Nishava River, in western Bulgaria.

Nishi-naga-iwa Glacier. 68°31' S, 41°18' E. A wide glacier flowing to the sea on the E side of Daruma Rock, between that rock and Cape Akarui, westward of Naga-iwa Rock, 14 km E of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on May 1, 1963, as Nisi-naga-iwa-hyoga or Nishi-naga-iwa-hyoga (i.e., "western long rock glacier"), in association with Higashi-naga-iwa Glacier. US-ACAN accepted the name Nishi-naga-iwa Glacier in 1968. The Norwegians call it Darumabreen (i.e., "Daruma glacier").

Nishi-naga-iwa-hyoga *see* **Nishi-naga-iwa Glacier**

Nishikawa, Genzo. b. 1887, Tottori, Japan. Steward on Shirase's Japanese South Polar Expedition of 1910-12. He died in 1925.

The *Nishin Maru* *see* **The *Nisshin Maru***

Nishino-seto *see* **Nishino-seto Strait**

Nishino-seto Strait. 69°01' S, 39°29' E. A narrow strait between Ongulkalven Island and Ongul Island, in Lützow-Holm Bay, on the Prince Olav Coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos in 1946, by Norwegian cartographers. Surveyed from the ground and photographed from the air by JARE between 1957 and 1962, mapped from these efforts by Japanese cartographers, who named it on May 1, 1963, as Nisi-no-seto, Nishi-no-seto, or Nishino-seto (i.e., "western strait"), for its location in the Flatvaer Islands. US-ACAN accepted the name Nishino-seto Strait in 1968. The Norwegians call it Vestsundet (which means the same thing).

Nishino-ura *see* **Nishino-ura Cove**

Nishino-ura Cove. 69°01' S, 39°34' E. Indents the W side of East Ongul Island. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Surveyed by JARE in 1957, and named by the Japanese on May 1, 1963, as Nisi-no-ura (i.e., "western cove"). US-ACAN accepted the name Nishino-ura Cove in 1968.

Nisi-hamna-ike. 69°17' S, 39°43' E. A small lake at the S extremity of Hamnenabben Head, on the E side of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on Nov. 22, 1973 ("west Hamna pond"), in association with Hamnenabben.

Nisi-naga-iwa-hyoga *see* **Nishi-naga-iwa Glacier**

Nisi-no-seto *see* **Nishino-seto Strait**

Nisino-seto *see* **Nishino-seto Strait**

Nisino-ura *see* **Nishino-ura Cove**

Nisi-Ongul-to *see* **Ongul Island**

Nisi-Teøya. 69°03' S, 39°33' E. The most southwesterly of the Te Islands. First mapped as part of Teøya by Norwegian cartographers in 1946 working from aerial photos taken by LCE 1936-37. JARE ground surveys and air photos, 1957-62, showed that there are in fact 3 islands, separated by narrows. On March 12, 1977, they named this one ("west Teøya").

[1]**The *Nisshin Maru***. A 16,764-ton Japanese floating whale factory ship, built along the lines of the *Sir James Clark Ross*, launched on Aug. 1, 1936, and operating in Antarctic waters in 1936-37. She was back in 1937-38, 1939-40, and 1940-41, each time along with the *Nisshin Maru 2*. In World War II, she became a Japanese oil tanker, and was sunk off Borneo on May 16, 1944.

[2]**The *Nisshin Maru***. This was the second Japanese whaler of this name (see the entry above). She was built in 1951, was 16,777 tons, and, replacing the *Nisshin Maru 1*, was in Antarctic waters in 1951-52, 1952-53, 1953-54 (she was using a helicopter that season), 1954-55, 1955-1956, and 1956-57. From the 1957-58 season she went to Antarctica every year in company with the *Nisshin Maru 2*, until 1960-61, and then every year with both the *Nisshin Maru 2* and the *Nisshin Maru 3* from the 1961-62 season until the 1964-65 season. In 1965-66, 1966-67, and 1967-68 she was accompanied by the *Nisshin Maru 3*. That was her last season in Antarctica. She became a tanker, and was sold to China in 1973.

The *Nisshin Maru 1*. An 11,803-ton Japanese floating whale factory ship, formerly the tanker *T-2*, she was refitted as the *Nisshin Maru 1*, and was in Antarctic waters in 1946-47, 1947-48, 1948-49, 1949-50, and 1950-51. She was then laid up for 3 years, being replaced in Antarctic waters by the new *Nisshin Maru* (*see* [2]**The *Nisshin Maru***). In 1954 the *Nisshin Maru* 1 reemerged as the *Kinjo Maru* (q.v.).

[1]**The *Nisshin Maru 2***. A 17,579-ton Japanese whaler, built in 1937, she was in Antarctic waters with the *Nisshin Maru* in 1936-37, 1937-38, 1939-40, and 1940-41. She became a Japanese oil tanker in World War II, and was sunk by the Allies on April 16, 1943, off Ishigaki Island. She was towed to Keelung, in Formosa, and scrapped on Nov. 30, 1943. Not to be confused with the second *Nisshin Maru 2* (see below).

[2]**The *Nisshin Maru 2***. This was the old South African whaler *Abraham Larsen*, sold to the Japanese in 1957, and refitted as the 27,035-ton *Nisshin Maru 2* (she was the second ship to bear that name — see the entry above). The new *Nisshin Maru 2* (i.e., the old *Abraham Larsen*), worked in Antarctic waters each season from 1957-58 until 1964-65 (her last season), and then went to work in the Bering Sea as mother ship for a fishmeal factory ship. She was scrapped in Taiwan in 1987.

The *Nisshin Maru 3*. Formerly the *Kosmos III*, she was sold by Anders Jahre to the Japanese in 1961, was refitted, and became the 23,106 ton Japanese whaler *Nisshin Maru 3*. She was in Antarctic waters from the 1961-62 season onwards. From 1987-88 she was just about the only ship whaling in the Antarctic. In 1988-89 she had three catchers. She caught 241 Minke whales. She was back in 1989-90, and caught 330 Minkes; again in 1990-91, with 3 catchers, and took 327 Minkes. That was her last season.

The *Nisshin Maru 4*. Her first Antarctic season was 1991-92, and she was the only whaler from any country in Antarctic waters. She was back in 1992-93, 1993-94, 1994-95, 1995-96, 1996-97, 1997-98, 1999-2000, and several seasons thereafter.

Nitti, Teodoro *see* **Órcadas Station**, 1945

Niubi Hu. 69°23' S, 76°20' E. A lake in the Larsemann Hills. Named by the Chinese.

Niujiao Jian. 62°10' S, 58°59' W. A point composed of a sharp cliff giving way to low lying rocks, it marks the S entrance to Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese in 1986. However, in 1984 the Brazilians had named it Pontal Sehnem (i.e., Sehnem Point), and in 1996 the Chileans would name it Punta Brigadier Escobar. UK-APC went with Sehnem Point, on June 6, 2007, instead of with the proposed Escobar Point (partly because there was another Punta Escobar, named by the Argentines). It was plotted by the UK in late 2008.

Niulang Shan *see* **Tumbledown Hill**

Niutou Bandao. 69°23' S, 76°21' E. A peninsula in the Larsemann Hills. Named by the Chinese.

Niuyan Hu *see* **Discussion Lake**

Niuzai Wan. 69°23' S, 76°21' E. A cove in the Larsemann Hills. Named by the Chinese.

Niuzui Jiao *see* **Sørensen Bluff**

Mount Nivea. 60°35' S, 45°29' W. A conspicuous, snow-topped mountain, rising to 1265 m, with a number of formidable rock towers on the NW side, at the head of Sunshine Glacier, in the N central part of Coronation Island, in the South Orkneys. It is the highest mountain on Coronation Island, and the most northerly mountain in Antarctica. Surveyed by Fids from Signy Island Station in 1948-49, and named by them for *Pagodroma nivea* (the snow petrel) which breeds here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Lance Tickell and Alan Grant, of Signy Island Station, were the first to climb it, on Sept. 11, 1956. Re-surveyed by Fids from Signy between 1956 and 1958. It seems odd, but the Argentines apparently chose to call it Cerro Níveo (which means "snowy hill").

Cerro Níveo *see* **Mount Nivea**

Nivlisen. 70°20' S, 11°00' E. An ice shelf N of the Schirmacher Hills, on the Princess Astrid Coast. Named by the Norwegians ("level ice").

Nixon, John Brian. Known as Brian. b. 1937, Carlisle, son of Robert Clifford Nixon and his wife Mary Rush. In 1959 he left London for the Falkland Islands, and there in 1960, joined FIDS, as a general assistant, wintering-over at Port Lockroy Station in 1961, and at Base T in 1962, the first year also as base leader. He retired to Wigton, Cumbria, where, in 1965, he married Margaret D. Holliday. Mr. Nixon did not wish to be interviewed for this book.

Ozero Nizhnee. 70°33' S, 67°56' E. A lake at the NW side of the Loewe Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Nizi-no-kubo. 71°23' S, 35°33' E. A semicircular depression indenting the W side of Mount Fukushima, in the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979 ("rainbow cirque").

Gora Nizkaja. 71°50' S, 67°44' E. A nunatak SE of Nilsson Rocks, in the Prince Charles Mountains. Named by the Russians.

Pereval Nizkij. 73°00' S, 65°54' E. A pass on the NE side of Mount Rymill, in the southern Prince Charles Mountains. Named by the Russians.

Niznik Island. 69°47' S, 68°30' W. An island off the NE end of the George VI Ice Front, in the N part of George VI Sound, opposite the mouth of Eureka Glacier, and SSE of the Rhyolite Islands, near the coast of Palmer Land. Photographed aerially on Aug. 16, 1936, by BGLE 1934-37, but when a sledging party from the same expedition surveyed this vicinity that Oc-

tober, they did not see it, so it does not show up on the expedition's maps. Seen again, aerially, in Dec. 1947, by RARE 1947-48, and named by Ronne for the family of Dr. Theodore Thaddeus Niznik (1907-1963), contributors from Baltimore. It appears on Ronne's map of 1948. It was surveyed by Fids from Base E in 1948. US-ACAN accepted the name Niznik Island in 1953, and UK-APC followed suit. However, on March 31, 1955, UK-APC accepted the name Niznik Islet, and US-ACAN followed suit in 1956. It appears as such on a U.S. Hydrographic Office chart of 1955. However, it appears in the 1956 British gazetteer as Niznik Island, and UK-APC accepted that name officially on July 7, 1959. It appears as such on a British chart of 1961. US-ACAN (again) accepted the name Niznik Island in 1963. On a Chilean chart of 1947, 4 scattered islands in 69°58' S, 68°23' W, are shown as Grupo Rancagua, named after the *Rancagua*. This is probably meant to represent Niznik Island.

Niznik Islet *see* **Niznik Island**

Njord Valley. 77°37' S, 161°07' E. A high, mainly ice-free valley, 3 km long, E of Oliver Peak, in the Asgard Range of Victoria Land. Named by Graeme Claridge (q.v.). NZ-APC accepted the name in 1978, and US-ACAN followed suit in 1982.

No Name Valley. Unofficial name given by the Americans here to a dry valley in southern Victoria Land.

Noack, Georg. b. March 26, 1877, in Schönefeld bei Leipzig. Able seaman on the *Gauss* during GermAE 1901-03. He was back in Antarctica, on the *Deutschland,* as part of GermAE 1911-12, in charge of the preservation of seals and penguins as zoological specimens.

Nob Island. 65°12' S, 64°19' W. The largest of the Anagram Islands, on the S side of French Passage, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Surveyed by Fids from the Argentine Islands station in 1960. So named by UK-APC on Aug. 31, 1962 because there is a black knob of rock, almost permanently snow-free, on the N side of the island, which is a useful navigational mark for vessels using French Passage. Nob is a variation of knob. US-ACAN accepted the name later in 1962.

Nobble Head *see* **Knobble Head**

Nobby Nunatak. 63°25' S, 56°59' W. Rising to 270 m (the British say 885 m), 1.5 km S of Lake Boeckella, and 1.5 km E of Mount Flora, at Hope Bay, Trinity Peninsula, at the NE end of the Antarctic Peninsula. This area was first explored by Dr. Gunnar Andersson's party, during SwedAE 1901-04. Surveyed and charted in 1945 by the personnel of Operation Tabarin from Base D, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer. Re-surveyed by Fids from Base D in July 1955. The Argentine refuge hut Islas Malvinas was here.

Glaciar Nobile *see* **Nobile Glacier**

Nobile Glacier. 64°32' S, 61°28' W. Flows NW into the SE part of Recess Cove, Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point between 1956 and 1958. Named by UK-APC on Sept. 23, 1960, for Umberto Nobile (1885-1978), the Arctic explorer. It appears on a 1961 British chart. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Nobile.

Cerro Noble *see* **Mount Noble**

Mount Noble. 60°39' S, 45°16' W. Rising to 1165 m, on the N side of Roald Glacier, 3 km W of Gibbon Bay, in the E part of Coronation Island, in the South Orkneys. Probably first seen by Palmer and Powell in 1821. Roughly mapped by Weddell on Jan. 20, 1823, and named by him as Noble's Peak, for a friend of his, James Noble (d. 1834), professor of oriental languages at the Scottish Naval and Military Academy, at Edinburgh. It appears as such on Weddell's chart, published in 1825. It appears on a U.S. Hydrographic Office chart of 1894, as Noble Peak, and also appears that way on a British chart of 1916. On an Argentine chart of 1930 it appears as Cerro Noble (i.e., "Noble hill"), and that was the name accepted by the 1970 Argentine gazetteer. It was surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart as Mount Noble. That was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. The Argentines call it Cerro Noble (i.e., "Noble hill"). It was re-surveyed by Fids from Signy Island Station between 1956 and 1958. In the 1974 British gazetteer it appears misspelled as Mount Nobel.

Pico Noble *see* **Noble Peak**

Point Noble. 67°21' S, 59°28' E. On the W side of William Scoresby Bay, in Kemp Land. Discovered by personnel on the *William Scoresby* in Feb. 1936, and named by them for their vessel.

Noble, George. Second mate of the *Henry*, 1822-23.

Noble, Hugh MacAskill. b. Dec. 15, 1934, Argyll, Scotland, son of a fishmonger. An enthusiastic mountain climber (Alps and Scottish Highlands), he was halfway through his physics course at Glasgow University in 1956, when he saw an ad for Royal Society glaciologists in South Georgia. He didn't get the job (Jerry Smith did; he was later killed in the Alps), but the Royal Society passed his application on to FIDS, who invited him to join them, which he did, on an 18-month contract (because of IGY; most FIDS went down for 30 months). After a 3-month crash course in glaciology, under Prof. Gordon Manley, at Bedford College, he sailed from Southampton on the maiden voyage of the new *John Biscoe*, bound for Montevideo, then on to Port Stanley, and wintered-over at Base G in 1957. In the summer of 1957-58 he hopped a ride on the *Shackleton* down to Adelaide Island, for a visit, and spent a couple of months at Base O, and then the *John Biscoe* came to pick him up, took him to Port Stanley, then on to Montevideo, from where he flew to Chile, got married to Mary, and trekked by pony and foot into the Andes, did some climbing, and some exploring around the Atacama Desert, and then back to Montevideo, from where he and Mary took the mail boat *Highland Chieftain* back to London, where they arrived on July 23, 1958. They lived for a while in Llandinam, in Montgomeryshire, Wales, and he returned to university, graduating that year. He became a teacher, and continued with his education to PhD level, and went into computers and research. He lives in Portnacroish, near Appin, in Scotland, and writes books (for example, a novel called *The Ice Man*).

Noble, John Redman B. b. Feb. 19, 1942, Birmingham. A mountain climber, he applied in 1963 to BAS, and was taken on in November of that year. He was due to winter over at Base E in 1964, but went instead to Signy Island Station, as cook and general assistant. He returned to the UK in 1965, and, later that year, sailed south again, wintering-over as general assistant at Base E in 1966 and 1967. After BAS, he went to teachers training college, and was an Outward Bound instructor in the USA, a tutor and instructor in outdoor education at Britain's national mountain center — Plas y Brenin, in Snowdonia, Wales, and also taught at the Lester Pearson College, on Vancouver Island. In 1985 he started his own adventure travel company, Travellers Unusual Journeys.

Noble, John Rushton. b. Oct. 7, 1927, Gateshead, Durham, son of Robert Noble and his wife Hannahbella Rushton. After 3 years at Gateshead Tech, he joined FIDS in 1954, as a meteorologist (he was also an artist), and left London in 1954, bound for Montevideo, and from there to winter-over as base leader at Base G in 1955, and just as a met man at Base D in 1956. After his tour, he returned to Port Stanley, and then to Montevideo, where he caught the *Ledbury*, bound for Liverpool, arriving there on July 28, 1958. In July 2008, he contracted an abdominal ailment, and died within 4 months.

Noble, Peter John "Pete." He joined FIDS in 1960, as a radar technician, and wintered-over at Halley Bay Station in 1961.

Noble, Thomas *see* **USEE 1838-42**

Noble, William *see* **USEE 1838-42**

Noble Glacier. 62°04' S, 58°24' W. A small glacier, just N of Flagstaff Glacier, on the E side of Keller Peninsula, it flows SE toward Visca Anchorage, at Admiralty Bay, King George Island, in the South Shetlands. Named by UK-APC on Sept. 23, 1960, for Hugh Noble (q.v.), who made detailed studies of the regime of Flagstaff Glacier and Stenhouse Glacier in 1959-60. US-ACAN accepted the name later in 1960. Last plotted by the UK, in late 2008.

Noble Nunatak. 85°12' S, 121°29' W. An isolated nunatak, in the N part of the Horlick Mountains, 13 km N of Widich Nunatak, along the N side of Shimizu Ice Stream. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for William C. Noble, meteorologist who wintered-over at Byrd Station in 1958.

[1]**Noble Peak** *see* **Mount Noble**

[2]**Noble Peak**. 64°48' S, 63°26' W. Rising to 560 m (the British say 720 m), in the N part of the Comer Range, 1.5 km SW of Lockley Point, and marking the NE end of a prominent ridge on the NW side of Wiencke Island, in the Gerlache Strait, between Anvers Island and the W coast of Graham Land. Discovered and roughly charted on Feb. 8-9, 1898, by BelgAE 1897-99. The name Noble Peak first seems to appear on the 1929 chart drawn up by the Discovery Investigations to reflect their 1927 survey, but may have been named before that date, probably by whalers. Surveyed in 1944 by personnel from Port Lockroy Station, during Operation Tabarin. It appears on a Chilean chart of 1947 as Pico Notable. It appears on an Argentine chart of 1949 as Pico Noble, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Noble Peak in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1974 British chart. It was further surveyed by Fids from Base N in 1955.

Noble Ridge. 72°56' S, 61°13' E. A snow-covered ridge, just N of Betts Nunatak, just W of Humphreys Ridge, and about 9 km E of Skinner Nunatak, in the Goodspeed Nunataks, at the W end of the Fisher Glacier, in the southern Prince Charles Mountains. First sighted by an ANARE seismic traverse in 1957, and photographed aerially by ANARE in 1958 and 1960. Named by ANCA for Roger S. Noble, who wintered-over as a weather observer at Mawson Station in 1971, and who was a member of the ANARE Prince Charles Mountains Survey Party of 1972. Originally plotted in 72°55' S, 61°16' E, it has since been replotted. The Russians plot it in 72°55' S, 61°10' E, and call it Gora Bilibin, for geologist Yuriy Aleksandrovich Bilibin (1901-1952).

Noble Rocks. 67°52' S, 68°41' W. A group of about 19 small, low rocks in Marguerite Bay, E of Jester Rock and Emperor Island in the Dion Islands, S of Adelaide Island. The Dions were discovered and roughly charted in 1909 by FrAE 1908-10. This partuicular group of rocks was surveyed by FIDS in 1949, and named by UK-APC on March 31, 1955, in association with Emperor Island. US-ACAN accepted the name in 1956. It appears on a British chart of 1964.

Nobleknausane. 80°40' S, 19°22' W. In the Pioneers Escarpment, in the easternmost part of the Shackleton Range of Queen Maud Land. Named by the Norwegians after Peter Howard Noble (b. 1943, Pudsey, Yorks), BAS general assistant who wintered-over at Halley Bay Station in 1967 and 1968. Mr. Noble wrote the book *Dog Days on Ice*. *See also* **Carterknattane**, **Rileyryggen**, and **Gallsworthyryggen**.

Noble's Peak *see* **Mount Noble**

Noché, François. b. 1815, Ambon, France. He embarked as a junior seaman at Hobart, on Dec. 15, 1839, on the *Zélée* during FrAE 1837-40, and ran at Otago, NZ, on April 13, 1840. However, he had made the 2nd of the expedition's trips to Antarctica.

Nodder, Richard Henry. b. May 24, 1876, Wellington Cottages, Torpoint, Antony, Cornwall, son of marine works accountant Richard Nodder (later the foreman in a chemical works) and his wife Mary Webb. He joined the RN, and on Dec. 1, 1908 (he had joined the crew at Lyttelton the day before), he left NZ on the *Nimrod* as an able seaman, for the 2nd half of BAE 1907-09. He was discharged at Poplar (in London) on Aug. 31, 1909.

Nødtvedt, Jacob Berthelsen. b. 1857, Manger, near Bergen, Norway. Actually, he was born Jakob Berthelsen, son of farmer Berthel Jakobsen and his wife Ragnilde Monsdatter. When the time came in Norwegian history to adopt proper surnames, the family chose the name of their farm, Nødtvedt. Jacob trained as a blacksmith and had been a ship's stoker, but was 2nd engineer on the *Fram* under Sverdrup in the Arctic in 1898-1900, and same role, same ship, with Amundsen, during NorAE 1910-12. He was not part of the shore party, having gone home from Buenos Aires in Sept. 1911. He lived in Tromsø, with his wife Julie (whom he had married in the early 1880s) and their several children.

Nødtvedt Nunataks. 86°32' S, 162°18' W. Isolated, in the flow of Amundsen Glacier, 11 km ENE of Mount Bjaaland. Named by US-ACAN in 1967, for Jacob Nødtvedt.

Nodule Nunatak. 63°19' S, 56°05' W. A small but prominent isolated nunatak, rising to 440 m, 5 km S of Mount Tholus, and W of Gibson Bay, in the S part of Joinville Island. Surveyed by Fids from Base D in 1953-54, and so named by them for its small size. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963.

Nodwell Peaks. 64°21' S, 59°46' W. Two outstanding peaks, rising to 1020 m, less than 1.5 km apart, on the E side of Edgeworth Glacier, NW of Larsen Inlet, on the Nordenskjöld Coast of the Antarctic Peninsula. Mapped by FIDS cartographers from surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Nodwells (q.v.). US-ACAN accepted the name later in 1964.

Nodwells. The RN 50 Nodwells are tracked vehicles built by Robin-Nodwell Mfg. Ltd., of Calgary, Canada. Used in Antarctica since 1960.

Isla Noé *see* **Moe Island**

Cerro Noel *see* **Noel Hill**

Colina Noel *see* **Noel Hill**

Mount Noel. 69°55' S, 67°55' W. A large, ice-capped mountain, rising to about 1600 m in the Traverse Mountains, isolated by wide snow passes from McHugo Peak and Mount Allan to the N and S of it, on the Rymill Coast, on the W coast of Palmer Land, at George VI Sound. Named by UK-APC on Dec. 8, 1977, for John Noel. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Noel, John Fraser. b. Nov. 10, 1941, Cardiff. He joined BAS and left the UK on the *John Biscoe*, on Oct. 22, 1964, as radio operator for the 1965 winter at Base T and the 1966 winter at Base E. On May 23, 1966 he and Tom Allan left Base E on survey, and were found on June 6, in 68°S, 66°47' W. *see* **Deaths**, 1966.

Noel Automatic Weather Station. 79°18' S, 111°05' E. An American AWS, at an elevation of 1833 m, installed in Jan. 2000, on the Polar Plateau. Noel was the middle name of the wife of polar scientist John Cassano. It was removed in Jan. 2002.

Noel Hill. 62°13' S, 58°44' W. A conspicuous slate knob, ice-free in summer, rising to 255 m (the British say 295 m), on Barton Peninsula, in the W part of King George Island, in the South Shetlands. Roughly mapped by David Ferguson in 1913-14, it appears on the 1921 report of his survey. He may have named it, but equally it may have been a name used earlier, by whalers in the area. It was re-surveyed by the Discovery Investigations in 1929, and appears on their 1930 chart. They re-surveyed it in 1934-35. It appears on an Argentine chart of 1948, translated as Colina Noel, but on a 1954 Argentine chart the name Cerro Noel appears, erroneously signifying the summit of the ice-cap to the NE. This mistake was cleared up by the time of a 1955 chart. UK-APC accepted the name Noel Hill on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955, and on a 1962 British chart. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. The 1970 Argentine gazetteeer accepted the name Colina Noel, and the 1974 Chilean gazetteer accepted Cerro Noel (but defined correctly). Last plotted by the UK, in late 2008.

Nogal de Saldán. 69°49' S, 68°33' W. Argentine refugio, SE of Cape Jeremy, built by Army personnel on ArgAE 1957-58, opened on Sept. 26, 1957, and used by personnel from San Martín Station. Named after the Argentine town of Saldán, where Gen. San Martín stopped in 1814, after being forced to give up his command through ill health.

Nogaret, Raimond de *see under* **De Nogaret**

Mount Noice. 73°17' S, 164°39' E. Rising to 2780 m, it surmounts the SW edge of Deception Plateau, 13 km S of Mount Overlord, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Gary E. Noice, USN, VX-6 navigator at McMurdo in 1966.

Rocher Noir *see* **Tristan Island**

Pointe Noire. 66°40' S, 140°01' E. A small rocky cape on the S coast of Pétrel Island, between Anse du Pré and Chenal Buffon, in the Géologie Archipelago. So named by the French in 1977 because its rocks are black.

Roche Noire *see* **Noire Rock**

Noire Rock. 64°40' S, 62°34' W. A dark twin-pinnacle rock rising to about 350 m above sea level on the E side of Errera Channel, 2.5 km SW of Mount Dedo, on the Danco Coast, on the W coast of Graham Land. Charted in Feb. 1898 by BelgAE 1897-99, and named descriptively by de Gerlache, as Roche Noire. It appears as such on Lecointe's 1903 map of the expedition. Surveyed by ArgAE 1942-43, and descriptively named by them as Monte Doble (i.e., "double

mountain"). It appears as such on their 1943 chart, again on a 1949 Argentine chart, and was the name accepted by the 1970 Argentine gazetteer. There is also a 1958 reference to it as Nunatak Negro (i.e., "black nunatak"). Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O between 1956 and 1958. UK-APC accepted the name Sable Pinnacles on Sept. 23, 1960, and it appears as such on a British chart of 1961. US-ACAN accepted the name Noire Rock in 1965.

Nøkkel Island. 69°28' S, 39°28' E. A small island, the most southerly of the Nøkkelholmane Islands, just W of the N point of Skarvsnes Foreland, in the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Nøkkeløya (i.e., "the key"). US-ACAN accepted the name Nøkkel Island in 1968.

Nøkkelholmane *see* **Nøkkelholmane Islands**

Nøkkelholmane Islands. 69°24' S, 39°29' E. A group of about 24 scattered islands and rocks (including Nøkkel Island), just W of the N point of Skarvsnes Foreland, in the E part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named them Nøkkelholmane (i.e., "the key islands"). US-ACAN accepted the name Nøkkelholmane Islands in 1968.

Nøkkeløya *see* **Nøkkel Island**

Nolan Island. 77°13' S, 147°24' W. An ice-covered island, 10 km long, 3 km N of Court Ridge, in the Sulzberger Ice Shelf, along the coast of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for William G. Nolan, USN, radarman 1st class on the *Glacier*, 1957-58 and 1961-62.

Nolan Pillar. 85°27' S, 86°52' W. A rock mountain, or pinnacle, rising to 1940 m, 5 km SE of Smith Knob, it marks the E extremity of the Thiel Mountains. Named by Peter Bermel and Arthur Ford, leaders of the USGS Thiel Mountains party, 1960-61, for Thomas Brennan Nolan (1901-1992), assistant director of USGS from 1944 to 1956, and 7th director from 1956 until 1965. US-ACAN accepted the name in 1962.

Nolen, Jerry Leon. b. Aug. 26, 1934, Fort Smith, Arkansas, son of carpenter and painter Samuel Nolen and his wife Elizabeth Caroline Montgomery. In 1945 he moved to Detroit, and in 1953 joined the Navy, going through boot camp at Great Lakes Naval Station. He was then posted to Oklahoma Air Training School, at Norman, and then Aerographer's Mate Training School, in Paterson, NJ. In 1955 he was in Trinidad, working on equipment assembly, when he saw the notice for "volunteers for the South Pole." He was attached to the Seabees, and went to Davisville, RI, for training, and it was from here that he shipped out on the *Edisto*, bound for Boston, leaving there on Oct. 31, 1955, through the Panama Canal, to Christchurch, NZ, then on to McMurdo Sound. He helped build the base there, and wintered-over in 1956. There were 4 aerographers in Antarctica at that time, and he was chosen to be one of the first party who were flown to the Pole on Nov. 20, 1956, as meteorologist and aerographer in charge of balloons, who helped build Pole Station in Nov. and Dec. 1956 (*see* **South Pole Station**). He was one of the 2nd team out, back to McMurdo, on Dec. 29, 1956. He shipped out of McMurdo in March 1957, on the *Curtiss*, and that month got out of the Navy a month early. On Aug. 8, 1957 he married Patricia Collin, and went to Wayne State College, and then the University of Michigan, to study business. He worked in the National Bank in Detroit, and then from 1966 until he retired in 1997 he worked in the financial business in Florida.

Noll Glacier. 69°33' S, 159°09' E. A glacier, nearly 30 km long, flowing NE from Jones Nunatak in the central part of the Wilson Hills. It then turns NW at Wegert Bluff, and enters the lower part of Tomilin Glacier before that glacier debouches into the sea, on the coast of Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Major Edmund P. Noll, U.S. Marines, cargo officer and VX-6 LC-130 aircraft commander during OpDF 68 (i.e., 1967-68). ANCA accepted the name.

Nomad Rock. 63°13' S, 57°42' W. An isolated rock in water in Bransfield Strait, 8 km off the N coast of Trinity Peninsula, and 15 km NE of Cape Legoupil. Charted from the coast by Fids from Base D in Oct. 1946, and identified in error with Montravel Rock. It appears thus on a British chart of 1949, and that mistake was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. However, as a result of an RN Hydrographic Survey unit's efforts here on the *John Biscoe* in 1951-52, this situation was corrected on the unit's 1954 chart, but not in time for the 1955 British gazetteer. On Sept. 4, 1957, UK-APC accepted the correction, naming the rock Nomad Rock because of the confusion about the identity of geographic points along this coast, and because of the wandering of features and names on charts in this vicinity, most notably this one. US-ACAN accepted the new name in 1963. The Argentines call it Roca Nómade.

Roca Nómade *see* **Nomad Rock**

Nomadedalen *see* **Yuboku-dani**

Nomenclature *see* **Mapping of Antarctica, Nicknames in Antarctica**

Nomura, Naokichi. b. 1866, Ishikawa, but raised in Tokyo. Captain of the *Kainan Maru*, during Shirase's Japanese South Polar expedition of 1910-12. He led a party back to Japan, mid-expedition, in the summer of 1911-12, to get more funds, and to bring in new men and dogs. On May 4, 1917 he left his wife in Tokyo and sailed on the *Inaba Maru*, and on May 23, 1917 arrived in Seattle, bound for New York. He was not immigrating, and his mission remains a mystery. He died in 1933.

Nonplus Crag. 70°58' S, 68°55' W. A prominent rock cliff, rising to 1250 m, in the LeMay Range, W of, and near the head of, Jupiter Glacier, in the east-central part of Alexander Island. Photographed from the air on Nov. 23, 1935, by Ellsworth, and mapped from these photos by U.S. cartographer W.L.G. Joerg in 1936. On Dec. 3, 1947, during 1947-48, new aerial trimetrogon photos were taken, and in 1959-60 Searle of the FIDS mapped the feature again, from these photos. He plotted it in 70°58' S, 69°10' W. Named by UK-APC on March 2, 1961. This crag was the first prominent feature appearing on the RARE photos after an unaccountable break in the photography, and Searle was nonplussed until he recognized it from other photos taken from farther away. US-ACAN accepted the name later in 1961. It was re-plotted from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Nonshøgda. 72°00' S, 2°31' E. The most northwesterly height of Grjotlia (the W slope of Jutulsessen Mountain), in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians. "Non" means "noon," and "høgda" means "the heights."

Noonan Cove. 66°15' S, 110°31' E. On the W side of Clark Peninsula, to the S of Stonehocker Point and Wilkes Station. First mapped from air photos taken by OpHJ 1946-47. Re-photographed aerially by ANARE in 1956, and by SovAE 1956. Named by Carl Eklund (who surveyed it from the ground in 1957) for Paul F. Noonan (b. 1930, Boston), who joined the U.S. Navy in 1950, and was the photographer's mate who went down on the *Arneb* to Wilkes Station, where he wintered-over in 1957. He later volunteered for Task Force 43, and in 1958-59 was back in Antarctica on the *Edisto*, to cover the transfer of Ellsworth Station to the Argentines. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

The *Nor*. Built in 1874 by Charles Connell & Co., of Glasgow, for W.A. Brown & Co., of Glasgow, as the fully-rigged 3-masted sailing ship *Charlotte Croom*. She was sold to W. McKinnon, of Glasgow, in 1886, and in 1890 to the Astracana Sailing Ship Company, changed her name to the *Astracana*, and plied wool and humans between the UK and Australia. In 1906 Chris Christensen bought the (then) 1567-ton windjammer in Liverpool for £2700, and on July 17, 1906 she arrived at Sandefjord, Norway, to be converted into the 1725-ton whaling factory *Nor*, by Christensen's shipyard, Framnaes Mek. In 1906-07, under the banner of Christensen's newly-created Nor Company, and skippered by manager T. Andersen Lystad, she accompanied the *Admiralen* to the South Shetlands. She had one catcher that season, the *Svip*, and caught 81 whales. *See* **The *Admiralen*** for details of the expedition. On May 9, 1907, along with the rest of the *Admiralen* fleet, she left Port Stanley, bound for Norway. She was back in 1907-08 (Capt. Lystad again), this time with two catchers, the *Svip* and the *Ravn*. On Dec. 20, 1907, she was at Deception Island, where Edward

Binnie boarded her as customs man, to insure revenue for the British government. She was back in 1908-09 (this time under Capt. Thorvald Rove), again attended by the *Svip* and the *Ravn*. In 1909 Captain Rove brought her back from the South Shetlands to Norway in a record-breaking 52 days. That year the ship was sold to Christensen's Condor Company (manager was Lars Christensen, son of Chris), and operated out of Grytviken, South Georgia, in 1909-10 (Capt. Harald Horntvedt; manager, Lars Christensen), going back to Graham Land as well that season. In 1910-11, 1911-12, and 1912-13, still based out off Grytviken, she again ventured into Antarctic waters, as a skrott factory (skrott being the remains of a whale carcass after flensing, etc.) for each of those seasons. At the end of the 1910-11 season, she did the trip back from South Georgia to Sandefjord in 50 days, another record. In 1913 she was sold to Einar Nøer's Grib Company, of Sandefjord, and for the 1913-14 season was used in the South Shetlands as a skrott factory, working with the *Hvalen*. That season, on March 1, 1914, mate Søren Hansen, drowned. In 1916, during World War I, she sailed from Bordeaux bound for New York, and was never seen again.

The Nor Company. Established by Chris Christensen in 1906, in Sandefjord, originally for whaling in Spitsbergen, it ran the whaler *Nor* in Antarctic waters in 1906-07, 1907-08, and 1908-09. In 1909 the *Nor* was sold to Christensen's Condor Company. The Nor Company also ran the *Bombay* from 1909 to 1921, the *Falk* from 1921 to 1931, and the *Professor Gruvel*, 1927-28. In 1912 the Nor company merged with the Ørnen Company, and, although one company from then on, the two names continued.

[1]**Nor Rock**. 62°02' S, 62°25' W. A rock, 80 km northward of Cape Smith (the N extremity of Smith Island), in the South Shetlands. On U.S. Hydrographic Office charts of 1916, 1930, 1943, and 1948, this feature's existence was said to be doubtful. The 1948 chart tells us that the Discovery Investigations did not see it.

[2]**Nor Rock**. 64°33' S, 62°01' W. In Foyn Harbor, between Nansen Island and Enterprise Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named for the *Nor*. However, there seems to be no mention anywhere of this feature today, so one must conclude that it does not exist.

Nora Island *see* **Stedet Island**

NorAE *see* **Norwegian Antarctic Expedition**

Île du Nord *see* **Nord Island**

Nord Island. 66°45' S, 141°33' E. A small rocky island, in the NW part of the Curzon Islands, indeed the most northerly feature of that group, just off Cape Découverte, along the coast of Adélie Land. Charted by the French in 1951, and named descriptively by them as Île du Nord (i.e., "north Island"). In 1952, US-ACAN accepted the name Nord Island.

The *Nordbrise*. Ice-strengthened Norwegian ship of 485 tons. 145 feet long, she had a cruising speed of 11 knots, and could carry 39 passengers. In 1989-90 she became Mountain Travel's new chartered vessel for tours in Antarctica. She had been 8 years in Greenland, and now had 19 newly-decorated cabins, 4 zodiacs, 5 decks — observation, sun, main, salon, and sauna.

Nordbukta. 69°38' S, 38°21' E. A bay on the N side of Padda Island, in the inner part of Lützow-Holm Bay, on the Prince Harald Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it (name means "the north bay"). The name was accepted without modification by US-ACAN, in 1968.

The *Norddeble*. Norwegian whale catcher belonging to Andorsen & Neuman's Norddeble Company. She and another catcher, the *Selvik* (q.v.), were normally based at the Faroe Islands, but were chartered to the Hvalen Company in 1910-11 to go whaling in South Shetlands waters for the *Hvalen*.

Costa Nordenskjöld *see* **Nordenskjöld Coast**

Nordenskjöld, Nils Otto Gustaf. Known as Otto. b. Dec. 6, 1869, Hesselby, Småland, Sweden, son of Otto Gustaf Nordenskjöld and his wife Anna Elisabet Sofia Nordenskiöld (related; but a different spelling). After Uppsala University, he got his doctorate in geology in 1894, and became a geologist. After expeditions to Patagonia and the Klondike, he led SwedAE 1901-04. He was the only explorer to conduct any interior investigations of the Antarctic Peninsula during the Heroic Age (q.v.). In 1905 he became professor of geography at the University of Göteborg. He was in Greenland in 1909, and in the 1920s in South America, exploring. He died on June 2, 1928, at Göteborg, Sweden.

Nordenskjöld Barrier *see* **Nordenskjöld Ice Tongue**

Nordenskjöld Basin. 76°03' S, 165°00' E. A submarine feature of the Ross Sea. Formerly plotted in 76°00' S, 154°30' E, it has since been re-plotted. Named by the Germans, in association with the Nordenskjöld Ice Tongue, the name was accepted by US-ACAN in 1980. However, by 2004 it was apparent that this basin was actually part of Drygalski Basin.

Nordenskjöld Channel. 66°27' S, 98°36' E. Between 5 and 8 km wide, it separates David Island from Melba Peninsula, Queen Mary Land. Named by AAE 1911-14, for Otto Nordenskjöld.

Nordenskjöld Coast. 64°30' S, 60°30' W. That stretch of the NE coast of Graham Land between Cape Longing and Cape Fairweather. Named in 1909 by Edwin Swift Balch (*see* the Bibliography) for Otto Nordenskjöld, who explored here in 1902. US-ACAN accepted the name in 1947, and UK-APC followed suit on Jan. 22, 1951. The Chileans and Argentines both call it Costa Nordenskjöld.

Nordenskjöld Glacier Tongue *see* **Nordenskjöld Ice Tongue**

Nordenskjöld Ice Barrier *see* **Nordenskjöld Ice Tongue**

Nordenskjöld Ice Tongue. 76°11' S, 162°45' E. Also called Nordenskjöld Barrier, Nordenskjöld Glacier Tongue, Nordenskjöld Ice Barrier, and Nordenskjöld Tongue. Actually, it is a broad glacier tongue, about 8 km wide, at the Ross Sea end of Mawson Glacier, in southern Victoria Land. Discovered in 1902 by BNAE 1901-04, and named by Scott for Otto Nordenskjöld. At that time it extended about 30 km out into the Ross Sea. Originally plotted in 76°12' S, 163°00' E, it has since been re-plotted. The reason it is called an ice tongue is because it always was called an ice tongue, even though it isn't. US-ACAN abd NZ-APC both accepted the name.

Nordenskjöld Outcrops. 64°27' S, 58°58' W. Rock outcrops on the W side of Longing Peninsula, extending southward for about 3.5 km from Longing Gap, at the NE end of the Nordenskjöld Coast. The feature exhibits an example of the geologic Nordenskjøld Formation. BAS did geological work here in 1987-88. Named by UK-APC on May 13, 1991, in association with the geologic formation, and, of course, with the coast. US-ACAN accepted the name.

Nordenskjöld Station. 73°03' S, 13°20' W. Wasa Station and Aboa Station together.

Nordenskjöld Tongue *see* **Nordenskjöld Ice Tongue**

Glaciar Nordeste *see* **Northeast Glacier**

Punta Nordeste *see* [2]**Macaroni Point**

Nordhaugen *see* **Nordhaugen Hill**

Nordhaugen Hill. 71°43' S, 25°27' E. The northernmost of 3 hills bordering the E side of Kamp Glacier, in the N and central part of the Sør Rondane Mountains. Photographed by LCE 1936-37, and, in 1946, mapped from these photos by Norwegian cartographers, who also mapped it again in 1957, from air photos taken by OpHJ 1946-47. They plotted it in 71°43' S, 25°31' E, and named it Nordhaugen (i.e., "the north hill"). US-ACAN accepted the name Nordhaugen Hill in 1966. The feature has since been re-plotted.

Nordhausane. 71°27' S, 25°23' E. A group of nunataks E of Nordtoppen Nunatak, in the N part of the Sør Rondane Mountains, in Queen Maud Land. Named by the Norwegians (name means "the north peaks").

Mount Nordhill. 70°55' S, 63°27' W. A high, sharp, pointed peak, rising to about 2925 m, between Steel Peak and Kosky Peak, in the E ridge of the Welch Mountains, in Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Cdr. Claude H. Nordhill, USN, VXE-6 operations officer during OpDF 1970 (i.e., 1969-70), and commanding officer of that outfit from July 1971 to June 18, 1972. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Nordhortane. 71°53' S, 12°47' E. A group of nunataks on Horteflaket Névé, between the Hoel Mountains and the Petermann Ranges of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Named means "the north rock crags" in Norwegian.

Nordic Antarctic Research Expeditions. A series of joint Norwegian-Swedish-Finnish Antarctic expeditions, known, of course, as NARP.

These were the expeditions: **NARP 1991-92**. They arrived in Antarctica on the *Akademik Fedorov*, and established Nordenskjöld Station as a summer base. The leaders were, respectively, oceanographer Svein Østerhus (of Bergen University), endocrinologist Olle Melander (of Malmö University), and geologist Jaakko Siivola (of the University of Helsinki). Oceanographer Ole Anders Nøst was also on this expedition. **NARP 1992-93**. 63 scientists and technicians, 42 from Norway, 10 from Sweden, and 7 from Finland. They arrived on the *Lance* and the *Polarbjørn*. This time they used Troll Station as well as Nordenskjöld. The leaders were, respectively, Olav Orheim, Jan-Erik Hellsvik, and Harri Kuosa (from the Institute of Marine Research, in Helsinki, where all but one of the 7 Finns was from). **NARP 1993-94**. They arrived on the *Polar Queen*, and used Nordenskjöld Station and Troll Station. The leaders were, respectively, Brit Åse Luktvasslimo, Olle Melander and Anders Karlqvist, and Jaakko Siivola. **NARP 1995-96**. They arrived in the Antarctic on the *Aranda*, and stayed aboard, conducting oceanographic studies in the Weddell Sea. The leaders were, respectively, Yngve Kristoffersen, Anders Karlqvist, and Jouko Launiainen. **NARP 1996-97**. They arrived on the *Polar Queen* with South African assistance. The leaders were, respectively, Jan Erling Haugland, [Swedish and Finnish leaders unknown]. An 1100 kilometer trek was made, and a biological survey was conducted in the eastern Weddell Sea, led by Arnoldus Schytte Blix. In Dec. 1996 they made official Antarctic Treaty inspections of four stations. **NARP 1997-98**. They chartered two South African ships, the *Agulhas* and the *Outeniqua*, and worked out of Nordenskjöld Station and Troll Station. Icelandic and Dutch scientists participated. Leaders were, respectively, Torkild Tveraa, [Swedish leader unknown], and Tapio Ruotoistemmäki. **NARP 1999-2000**. They arrived on the *Akademik Fedorov*, and worked out of Nordenskjöld Station and Troll Station. Leaders were, respectively, Jan Erling Haugland, Magnus Augner, and [Finnish leader unknown]. **NARP 2000-01**. They came down on the *Akademik Fedorov*, and worked out of Nordenskjöld Station and Troll Station. **NARP 2001-02**. Same bases, same ship. **NARP 2002-03**. Ditto. **NARP 2003-04**. Ditto. The South Africans assisted. **NARP 2004-05**. Ditto. A Norwegian party wintered at Troll. The South Africans assisted. **NARP 2005-06**. Ditto. A Norwegian party wintered at Troll. The South Africans assisted. **NARP 2006-07**. Ditto. A Norwegian party wintered at Troll. The South Africans assisted. **NARP 2007-08**. Same bases, but the *Ivan Papanin* was used. A Norwegian party wintered at Troll Station. The South Africans assisted.

Nordkammen *see* **North Masson Range**

Nordkammen Crest *see* **North Masson Range**

Nordkap. 66°47' S, 89°12' E. A Davis Sea indentation into the coast of Wilhelm II Land, on the N side of Gaussberg, immediately W of Posadowsky Glacier. Named by the Germans.

The *Nordkapp*. Norwegian tourist ship, she could carry 471 passengers. She was in Antarctic waters in early 2006, when she sank. She was refloated.

Nördliche Collinsmoräne. 62°09' S, 58°55' W. A moraine on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

The *Nordnorge*. Norwegian tourist ship, with a capacity for 400 passengers, in Antarctic waters in 2002-03, 2005-06, and again in 2007-08, in the latter season rescuing survivors from the *Nordkapp* in 2007 and from the *Explorer* in Nov. 2007.

Nordøyane *see* **Sirius Islands**

Nordpassage *see* **North Pass**

Nordseth, Alf. b. 1887, Skien, Norway, son of Ella Nordseth. He went to sea in 1907, and was 2nd mate on the *Wyatt Earp* during Ellsworth's last expedition to Antarctica, 1938-39.

Nordsim Peak. 75°03' S, 69°17' W. The main peak of the Cantrill Nunataks, in the Sweeney Mountains of Ellsworth Land. Surveyed by USGS, 1961-62, and named by UK-APC on Oct. 4, 2004, for the Nordsim Laboratory, located in the Laboratory for Isotope Geology, at the Swedish Museum of Natural History.

Nordsteinen. 71°56' S, 16°11' E. A small nunatak between Vorposten Peak and Sarkofagen Mountain, in the easternmost part of Fimbulheimen, in Queen Maud Land. Name means "the north stone" in Norwegian. This feature occupies almost exactly the same coordinates as those of the feature the Russians call Nunatak Nazimova. The SCAR gazetteer lists them as two separate and distinct features, but they may well be one and the same.

Nordston, Andrew *see* **USEE 1838-42**

Nordtoppen *see* **Nordtoppen Nunatak**

Nordtoppen Nunatak. 71°29' S, 25°14' E. Rising to 1100 m, 26 km N of the Austkampane Hills, in the north-central part of the Sør Rondane Mountains of Queen Maud Land. Photographed by LCE 1936-37, and mapped in 1946 from these photos by Norwegian cartographers, who mapped it again in 1957 from air photos taken by OpHJ 1946-47. They plotted it in 71°27' S, 25°28' E, and named it Nordtoppen (i.e., "the north peak"). US-ACAN accepted the name Nordtoppen Nunatak in 1966. The feature has since been re-plotted.

Nordvendfjøra *see* **Kitami Beach**

Nordvestøya *see* **Nordwestliche Insel Mountains**

Nordwestinsel *see* **Nordwestliche Insel Mountains**

Nordwestliche Insel *see* **Nordwestliche Insel Mountains**

Nordwestliche Insel Mountains. 71°27' S, 11°33' E. A small, detached, island-like group of mountains that form the N extremity of the Humboldt Mountains, and at the same time forming the NE (the Norwegians say the NW) extremity of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered, photographed aerially, plotted, and named Nordwestliche Insel (i.e., "northwest island") by GermAE 1938-39. US-ACAN accepted the name Nordwestliche Insel Mountains in 1970. The Norwegians call them Nordvestøya (which means "the northwest island"). It is reported that the Rusians call them the Insel Range, but it is hard to give credence to that, unless it is a translation.

Nordwestplattform. 62°11' S, 58°58' W. A platform on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Punta Noreste *see* **Macaroni Point**

Norfolk Glacier. 85°53' S, 130°18' W. A glacier, 20 km long, flowing westward from the Wisconsin Range to enter Reedy Glacier between Mount Soyat and Mount Bolton. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Norfolk, Va., location of Detachment Three, the Meteorological Support Unit of U.S. Naval Support Force, Antarctica.

Norge Company. Norwegian whaling company founded by Chris Nielsen in Larvik, in 1910. It ran two whaling ships in the South Shetlands and off Graham Land — the *Solstreif* (1910-31) and the *Svend Foyn* (1913-14; the company had bought this vessel from the Sydhavet Company in 1913). It also ran the *Norge* (but out of South Georgia).

Norge Station *see* **Norway Station**

The *Norhval*. Norwegian floating factory ship, built at Haverton Hill-on-Tees, by the Furness Shipbuilding Company, for the Norwegian government. She was in Antarctic waters in 1945-46, 1946-47, and 1947-48, operated by Melsom & Melsom. From the 1948-49 season she had 10 catchers — *Pol* 6, 7, 10, 11, 12, and *Globe* 7, 8, 9, 10, and 11. In 1952-53 she was using a Westland Sikorsky S51 helicopter to spot whales. Its pilot was A.E. Bristow, and assistant pilot was the Norwegian J. Kirkhorn. There were also 2 ground crew for the chopper. She was in Antarctic waters every season until her last, 1961-62.

Norie, Samuel. b. 1814, New London, Conn. He went to sea and was 1st mate on the *General Williams*, in the Pacific, in 1840. In 1843 he was skipper of the whaling bark *White Oak*, and in 1847 reliquished command of that ship for the *Franklin*. A succession of ships followed, the *Brookline* and the *Tenedos* being two of them, and then he took the *Mary Chilton* to the South Shetlands for the 1876-77 sealing season. His son, Samuel, Jr., was one of the crew.

Noring Terrace. 76°54' S, 160°40' E. A relatively level ice-covered terrace, rising to about 2000 m above sea level, with an area of about 4 sq miles, between Mount Gunn and Mount Basurto, in the SW part of the Convoy Range, in Victoria Land. Ice from this terrace drains westward into Cambridge Glacier, and also eastward into the short Scudding Glacier toward Battleship Promontory. Named by US-ACAN on Jan. 15, 2008, for Randy "Crunch" Noring, who served 16 summer seasons and two winters between 1991 and 2007, at Pole Station and at

McMurdo, working in operations, heavy equipment, and fuels, and, from 1999, as camp manager at Marble Point. NZ-APC accepted the name on April 7, 2008.

Baia de Norm *see* **Norma Cove**

Bukhta Norma *see* **Norma Cove**

Norma Cove. 62°11' S, 58°55' W. Between Suffield Point and Jasper Point, at Maxwell Bay, King George Island, in the South Shetlands. Surveyed in the late 1960s and early 1970s by SovAE from Bellingshausen Station, and named by them as Bukhta Norma (i.e., "norm bay"). It appears such on the 1973 map prepared by L.S. Govorukha (of the Odessa Hydrometeorological Institute) and Igor Mikhaylovich Simonov (leader at Bellingshausen for the winter of 1970). That name was first translated into English as Norma Inlet. On Feb. 8, 1978, UK-APC accepted the name Norma Cove (it's better than Norm Cove, say), and it appears that way in the 1980 British gazetteer. US-ACAN accepted that name. It appears as Baia de Norm on the 1984 Brazilian map of the Fildes Peninsula. Last plotted by the UK, in late 2008.

Norma Inlet *see* **Norma Cove**

Norma Snow Nunataks *see* **Snow Nunataks**

Norman, John Nelson. Known as Nelson Norman. b. May 16, 1932, Ross-shire, Scotland. RAMC captain seconded to FIDS in 1958, to be medical officer at Halley Bay Station for the first winter (1959) that the station was a FIDS base (after they had taken it over from the British Royal Society Expedition, who had built it for IGY and ran it during that "long year"). He was there from Dec. 1958 to Jan. 1960. Among his achievements was the faithful and thorough collecting of emperor penguin embryos from the rookery nearby, a mission carried out under difficult and dangerous circumstances. After the expedition, he left Cape Town on the *Carnarvon Castle*, arriving back in England on March 18, 1960. In 1970 he became director of the BAS Medical Unit, at Aberdeen, and from 1976 to 1983 was a medical consultant to BAS, and chief medical officer with BAS from 1994. Then he moved to the Persian Gulf.

Norman Crag. 77°14' S, 166°45' E. A rugged nunatak, with a divided summit area, and rising to over 1400 m, 3.3 km N of the summit of Mount Bird, on Ross Island. Named by NZ-APC on Feb. 20, 2001, for Bob Norman, civil engineer, NZ commissioner of works (1983-85), and chairman of the Ross Dependency Research Committee from 1988. US-ACAN accepted the name later in 2001.

Norman Glacier. 71°25' S, 67°30' W. A glacier, 8 km long, flowing SW from Palmer Land to enter George VI Sound just N of Bushell Bluff. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for Shaun Michael Norman (b. 1943, Hemel Hempstead, Herts), BAS meteorologist who wintered-over at Base B in 1967, and was then a general assistant at Base E for the winters of 1968 and 1969, in the latter year also being base commander. US-ACAN accepted the name later in 1976, and it appears on the 1979 USGS sketch map of the N part of Palmer Land.

Norman Peak. 69°09' S, 66°08' W. Rising to 1790 m on the N side of Airy Glacier, between that glacier and Hariot Glacier, 6 km NNE of Anchor Crag, and about the same distance W of Peregrinus Peak, in the SW part of Graham Land. Photographed aerially by RARE 1947-48, and surveyed by FIDS in 1958. Re-surveyed by BAS personnel from Base E between 1971 and 1973. Named by UK-APC on Dec. 8, 1977, for Robert Norman, late 16th-century compass maker, who discovered magnetic dip in 1576. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Normann Sundet *see* **Normanna Strait**

The *Normanna*. Built in 1885, by Armstrong, Mitchell, in Newcastle, as the *Hajeen*, for the Bedouin Steam Navigation Company, of Liverpool. 2831 tons, 310 feet 6 inches long, and capable of 9.5 knots, she was sold in 1900 to the Aznar Company, in Bilbao, and re-named the *Berriz*, and then bought again in 1907 by the Wallsend Slipway & Engine Co., and re-named the *Belgian Prince*. In 1910 Haldor Virik's ad hoc company, Normanna Whaling (formed at first for African whaling), out of Sandefjord, bought her, and re-named her the *Normanna*. In 1911 she was rebuilt as a floating whaling factory by Framnaes Mek., and as such she plied the waters of the South Orkneys, South Shetlands, and Antarctic Peninsula, in the 1912-13 and 1913-14 seasons. Captain K.O. Stene. She was chartered for Antarctic whaling in the South Shetlands in 1914-15 by the Sociedad Ballenera de Magallanes, who, at that moment, were without a ship of their own. Capt. Stene still commanded. She was back in 1915-16. In early 1916 she was seriously damaged on the rocks, at the Melchior Islands, and on Feb. 22, 1917 she was torpedoed by U-21 off the Scilly Isles.

Arrecife Normanna *see* **Normanna Reef**

Estrecho Normanna *see* **Normanna Strait**

Normanna Channel *see* **Normanna Strait**

Normanna Reef. 64°21' S, 62°59' W. A reef, with a least depth of 4 m, near the center of the S entrance to The Sound, SE of Gamma Island, between that island and Omega Island, in the Melchior Islands, in Dallmann Bay, in the Palmer Archipelago. Surveyed by the Discovery Investigations in 1927, and it appears on their 1929 chart. It may have been named by them, but more likely it was named earlier by Norwegian whalers, for the Normanna Whaling Co., of Sandefjord, Norway, which worked ships in this area, including the *Normanna*. It appears on a 1946 Argentine chart as Arrecife Normanna (which means the same thing), and that name was accepted by the Argentine gazetteer of 1970. UK-APC accepted the name Normanna Reef on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, and on a British chart of 1956. US-ACAN accepted that name in 1956. It appears on a 1962 Chilean chart as Arrecifes Normanna, but the 1974 Chilean gazetteer accepted the name in the singular, as the Argentines had done.

Normanna Strait. 60°40' S, 45°38' W. A strait, 1.5 km wide, running E-W between Signy Island and Coronation Island, in the South Orkneys. Discovered by Matthew Brisbane in 1823, who roughly charted the S coast of Coronation Island under the direction of Weddell. The name appears on a chart based upon a 1912-13 survey conducted in this area by Petter Sørlle. He may have named it, but it may have been named slightly earlier by Norwegian whalers. The honoree is either the *Normanna*, or the Normanna Whaling Company (*see* **Normanna Reef**), which amounts to the same thing. It appears on Sørlle's 1930 chart as Normann Sundet (sic). It appears on a 1933 Argentine chart as Estrecho Normanna, and that was the name accepted by the 1970 Argentine gazetteer. Re-surveyed by the Discovery Investigations in 1933, it appears on their chart of that year as Normanna Channel, but on their 1934 chart as Normanna Strait. US-ACAN accepted the name Normanna Strait in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Normbach. 62°11' S, 58°55' W. A little stream that flows E out of the lake the Germans call Normsee, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Normsee. 62°11' S, 58°56' W. A little lake on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Cerro Noroeste *see* **Telefon Ridge**

Norosidai. 71°34' S, 35°35' E. A small, flat-topped nunatak, rising to 2019 m, 1 km N of Mount Derom, in the S part of the Queen Fabiola Mountains. Surveyed by JARE 1960, and named by the Japanese on Nov. 24, 1981 (name means "signal fire platform").

Norris Glacier. 77°40' S, 162°12' E. Flows eastward between Kennedy Glacier and Mount Darby into the upper part of Matterhorn Glacier, in the Asgard Range of Victoria Land. Named by NZ-APC in Nov. 1997, for Baden Norris, honorary curator of the Antarctic collection at Canterbury Museum. He worked in Antarctica as a conservator of historic huts. US-ACAN accepted the name in 1998.

Norris Island *see* **Teksla Island**

The *Nørrona I*. Norwegian whale catcher working for the *Lancing* in Antarctic waters in 1925-26.

The *Norsel*. Norwegian seal-catching vessel of 700 tons, out of Tromsö (which is where the entire crew came from), built in 1945, and fitted out in 1949 as the expedition ship for NBSAE 1949-52. Guttorm Jakobsen was skipper throughout the course of the long expedition, as well as being brother of the owner (as was the chief engineer). Each winter during the expedition the ship returned to Norway. FIDS chartered her for the 1954-55 season, she left London on Jan. 16, 1955, went to Montevideo, then to Port Stanley (she was there for a couple of days), and by Feb. 28, 1955 was in Arthur Harbor. Olav Johannessen was captain that season (and the following season), and Torstein Tørgersen was first mate.

On June 11, 1955 she arrived back in London. She was also the vessel which brought the French Polar Expedition, 1955-56, leaving Hobart on Dec. 26, 1955, under the command of Capt. Guttorm Jakobsen, and docking at the French Antarctic base on Jan. 2, 1956. This was the first time the French had been back since the disastrous fire at Port-Martin. On Oct. 7, 1956 the *Norsel* left Le Havre, again under Capt. Jakobsen, taking the next French expedition south. On Jan. 7, 1958 she docked again in Antarctica, having taken down the 3rd French expedition. Captain that season was former mate Tørgersen. Tørgersen again commanded in 1958-59, while relieving the French bases. The *Norsel* also took down the French expeditions of 1959-61 and 1960-62. She later became a fishing vessel in the Norwegian fjords, and one of her distinguished passengers was Michael Palin on his TV program "Pole to Pole."

Punta Norsel *see* **Norsel Point**

Récif du Norsel *see under* **D**

Rock Norsel *see* **Récif du Norsel** (under **D**)

Norsel Bank. 71°15' S, 11°42' W. A submarine bank, with a least depth of 100 m, SW of Norsel Iceport, off the coast of Queen Maud Land. Named by Heinrich Hinze in 1997, the name was accepted by international agreement that year.

Norsel Bay *see* **Norsel Iceport**

Norsel Iceport. 71°01' S, 11°00' W. A small iceport in front of the Quar Ice Shelf, on the icy Princess Martha Coast of Queen Maud Land. Used by NBSAE 1949-52, to moor and unload the *Norsel*. The low ice front permitted easy access onto the Quar Ice Shelf, where the expedition established Maudheim, their base, 1.5 km S of the iceport. Named Norselbukta (i.e., "Norsel bay") for the expedition ship. The feature was later re-defined slightly, and US-ACAN accepted the name Norsel Iceport in 1970.

Norsel Point. 64°46' S, 64°06' W. A rocky point on Amsler Island, on the NW side of Arthur Harbor, close off the S side of Anvers Island, 2.5 km N of Palmer Station, it forms the SW entrance point of Loudwater Cove, and the S flank of Wylie Bay, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955. Named by UK-APC on Sept. 4, 1957, for the *Norsel*. It appears on a British chart of 1958. US-ACAN accepted the name in 1963. It appears on a Chilean chart of 1962 as Punta Norsel, and that name was accepted by the Chilean gazetteer of 1974. In 2005, when the Marr Ice Piedmont receded, Norsel Point was found to be on Amsler Island, rather than at the end of the peninsula on Anvers Island.

Norsel Rock *see* **Récif du Norsel** (under **D**)

Norselbukta *see* **Norsel Iceport**

Norseman Point. 68°12' S, 67°00' W. The easternmost point on Neny Island, and the W entrance point of Neny Bay, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936 during BGLE 1934-37. Re-surveyed by Fids from Base E in 1947, and named by them for the Norseman airplane which landed near here to relieve the FIDS party at Base E, on Stonington island, in Feb. 1950 (*see* **Base E**). UK-APC accepted the name on Sept. 20, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1956. It appears on a 1969 Chilean chart as Punta Parodi (*see* **Teniente Arturo Parodi Station**).

Glacier Norsk Polarinstitutt *see* **Norsk Polarinstitutt Glacier**

Norsk Polarinstitutt Glacier. 72°34' S, 31°16' E. Flows SW between Mount Perov and Mount Limburg Stirum, in the Belgica Mountains. Discovered by BelgAE 1957-58, and named by Gaston de Gerlache, leader of the expedition, as Glacier Norsk Polarinstitutt, for the Norwegian Polar Institute, in Oslo. US-ACAN accepted the translated name in 1962.

Norsk Polarklubb. The Norwegian Polar Club. Founded in Oslo in 1933. In 1949 it published the first edition of *Polarboken* (in English, the *Polar Book*).

Norske Sund *see* **McFarlane Strait**

Nørsteholmen *see* **Wyatt Earp Islands**

Brazo Norte *see* **Lientur Channel**

Cabo Norte *see* **[2]North Foreland**

Islote Norte *see* **D'Hainaut Island, Mane Skerry**

Monte Norte *see* **Monte Munizaga**

Nunatak Norte. 78°01' S, 35°48' W. A nunatak, SW of Vahsel Bay, it is the northernmost of the Moltke Nunataks, on the Luitpold Coast. Named by the Argentines.

Promontorio Norte *see* **North Foreland**

Punta Norte *see* **[1]North Point**

Roca Norte. 62°05' S, 62°26' W. A rock, 80 km N of Cape Smith, on Smith Island, in the South Shetlands. It has been looked for unsuccessfully so many times that its existence is doubted. These are the Chilean coordinates. The Argentine ones seem to be 63°00' S, 62°30' W, which would place this rock right in the middle of Smith Island itself.

Valle Norte *see* **North Pass**

Cape North. 70°41' S, 165°48' E. A large, precipitous, bluff, with much rock exposed along its N and E sides, at the foot of the Anare Mountains, on the W side of Nielsen Fjord, about 17 km westward of Cape Hooker, in Oates Land, on the N coast of Victoria Land. The top of the bluff is snow-covered, and rises to about 500 m (the New Zealanders say "over 60 m," and they are surely right). Discovered by Ross in 1841, and so named by him because it was the most northerly cape observed westward of Cape Hooker (even though it is not, as it happens, the most northerly point in the immediate area). US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. However, it seems that NZ-APC did not accept the name officially until Nov. 17, 1964.

North, James Heyward. b. 1815, Charleston, S.C., son of Dr. Edward W. North. He joined the U.S. Navy, was promoted to midshipman on May 29, 1829, married Emily Klein in 1835, was promoted to passed midshipman on July 5, 1835, and was acting master of the *Vincennes* during USEE 1838-42. During the expedition, on Sept. 8, 1841, he was promoted to lieutenant. On Jan. 15, 1861, he resigned his commission to go south, and on March 26, 1861 became a lieutenant in the Confederate Navy. He was described as standing just under 6 feet tall, with blue eyes, a Grecian nose, a round chin, brown hair, and a fair complexion. He became a purchasing agent for the Confederates in Europe, and not a very good one. He died in 1893.

North Anchorage *see* **Visca Anchorage**

North Angle Lake. 68°38' S, 77°55' E. A highly saline lake a number of meters below sea level, and measuring about 400 m by 150 m, at the W end of Mule Peninsula, in the Vestfold Hills. It should be considered meromictic. A large sandbar, observable from the air during summer, crosses the center of the lake. Named by ANCA on April 27, 1995 for the long axis which forms a right angle with nearby South Angle Lake.

[1]North Bay *see* **Uruguay Cove**

[2]North Bay. 77°38' S, 166°23' E. A small bay, between Cape Evans and Cape Barne, off the W coast of Ross Island. So named by BAE 1910-13 because it is on the N side of Cape Evans. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

North Beach. 71°17' S, 170°14' E. Between The Spit, at Ridley Beach, and Cape Adare, in northern Victoria Land. Named by Campbell's Northern Party during BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

North Cliff. 71°17' S, 170°15' E. A high cliff, the top of which is serrated by several stream channels, just E of North Beach, at Cape Adare, in northern Victoria Land. Named by Campbell's Northern Party during BAE 1910-13. The name appears in the 1958 NZ provisional gazetteer.

[1]North Cove. 64°54' S, 62°51' W. A small cove indenting Coughtrey Peninsula, Paradise Harbor, on the Danco Coast, on the W coast of Graham Land, NE of Almirante Brown Station. Named by the Poles on Sept. 1, 1999.

[2]North Cove. 67°34' S, 68°07' W. On the N side of Rothera Station, on Adelaide Island. Hydrographic work was done here on the *Endurance*, in 1976-77. Named descriptively (cf **South Cove**) by UK-APC on May 21, 1979. It appears on a 1980 British chart.

North Crest *see* **North Masson Range**

North Dome *see* **Reinwarthhöhe**

North Doodle Lake. 67°46' S, 62°50' E. Also seen as Northdoodle Lake. A triangular-shaped lake, permanently frozen, and about 1.8 hectares in area, 400 m N of Rumdoodle Lake, and 800 m NNW of Rumdoodle Peak, in the North Masson Range of Mac. Robertson Land. Named by ANCA.

North Forel Glacier *see* **Sharp Glacier**

[1]North Foreland *see* **Brimstone Peak**

[2]North Foreland. 61°54' S, 57°41' W. A cape, rising to an elevation of about 80 m above sea level, in the form of a tongue of rock about 1.5 km long, the most northeasterly point on King George Island, and the E entrance point of Emerald Cove, in the South Shetlands. Its W coast is formed of steeply-sloping sand and

pebble beaches. Roughly charted on Oct. 16, 1819, by William Smith, who, as this was the most easterly point he saw on this trip, named it after England's most easterly point (in Kent, actually). It appears on his chart of 1819, and on several sealing charts of 1820. On Powell's chart, published in 1822, it appears by error as Cape Melville, and that error was perpetuated on the chart prepared by the *Chanticleer* Expedition of 1828-31, in Vincendon-Dumoulin's atlas of 1947 (as Cap Melville), and on other charts even up to World War II. Biscoe's 1833 chart shows it as North-Foreland, but it appears as North Foreland on British charts of 1901 and 1937. On Irízar's Argentine maps of ca. 1904-07, it appears as Cabo Foreland, a name that appears in the English language versions of those maps as Cape Foreland. On David Ferguson's 1921 map it appears as North Foreland Point. The Discovery Investigations charted it in 1937, and landed here on Jan. 6 of that year, in order to take astronomical observations. The N end of the feature they called North Foreland Spit. On an Argentine chart of 1939 the cape appears as Cabo Norte. There are 1939 references to it as Cape North Foreland and Northeast Foreland. In 1945 Frank Debenham referred to it as North Foreland Cape, and, as a consequence, it appears on a 1946 Argentine chart translated as Cabo Foreland Norte, and on one of their 1949 charts as Cabo North Foreland. It appears on a 1947 Chilean chart as Promontorio Norte. On a 1949 Argentine chart it appears as Cabo Promontorio Norte, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name North Foreland in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956. Last plotted by the UK, in late 2008.

Cabo North Foreland *see* [2]**North Foreland**
Cape North Foreland *see* [2]**North Foreland**
North Foreland Cape *see* [2]**North Foreland**
North Foreland Head *see* **Caroline Bluff**
North Foreland Point *see* [2]**North Foreland**
North Foreland Spit *see* [2]**North Foreland**
[1]**North Fork** *see* **Taylor Glacier**

[2]**North Fork**. 77°32' S, 161°15' E. The N arm of Wright Valley, in Victoria Land. It is separated from the South Fork by The Dais. Named descriptively by VUWAE 1958-59. US-ACAN accepted the name in 1976.

North Fork Basin. 77°32' S, 161°24' E. An area in Wright Valley, in southern Victoria Land.

North Gneiss. 60°43' S, 45°38' W. The more northerly of the two flat-topped hills that comprise the Gneiss Hills, to the W of McLeod Glacier, in the S part of Signy Island, in the South Orkneys. Named by UK-APC on Sept. 29, 2004.

North Head *see* [2]**Macaroni Point**
North Heights *see* **Davies Heights**
North Heim Glacier *see* **Antevs Glacier**
North Island *see* **Hansen Island**

North Korea. Ratified as the 35th signatory of the Antarctic Treaty on Jan. 21, 1987. The first North Korean scientists in Antarctica went down with the SovAE 1989-90, and worked at Molodezhnaya Station. The second North Korean Antarctic expedition was in 1990-91, and was led by Zang-Gi Bong, again supported by the Russians. They established a summer station, Gazal-1, four huts adjacent to Molodezhnaya Station.

North Masson Range. 67°47' S, 62°49' E. Also called Nordkammen Crest, and North Crest. The most northerly of the segments of the Masson Range, it extends 5 km in a N-S direction, and rises to 1030 m. The Masson Range itself was discovered by AAE 1911-14, and named by Mawson. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Nordkammen (i.e., "the north crest"). ANCA renamed it on July 22, 1959, and US-ACAN accepted the Australian naming in 1965.

North Nansen Island *see* **Enterprise Island**

North Pass. 62°11' S, 58°55' W. A pass, trending NW-SE, where the ice-cap gives way to land, at the N end of Fildes Peninsula, King George Island, in the South Shetlands. The pass, which contains a meltwater stream and several small lakes, forms the route across the NW side of the peninsula from Artigas Station. The Germans named it Nordpassage in 1984, the Chinese named it Ice Edge Valley in 1986, and the Chileans named it Valle Norte in 1996. UK-APC accepted the name North Pass on June 6, 2007, rather than the proposed North Valley. Last plotted by the UK, in late 2008. *See also* **Südpassage**.

[1]**North Point**. 60°41' S, 45°38' W. Marks the N extremity of Signy Island, in the South Orkneys. Roughly charted by 19th-century sealers, and charted later by Norwegian whalers. It appears on Capt. Moe's 1913 chart as Cape Underset, named thus, presumably, for its position in relation to Coronation Island. Further surveyed by the personnel on the *Discovery II* in 1933, and named by them as North Point. It appears as such on their 1934 chart. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Punta Norte, and that is what the Argentines call it today.

[2]**North Point**. 62°54' S, 60°38' W. At the NE end of Kendall Terrace, it is the northernmost headland of Deception Island, in the South Shetlands. Apparently it was charted by Don Hawkes in 1961. Named descritivley by the Poles on Sept. 1, 1999.

[3]**North Point**. 64°46' S, 64°05' W. On Anvers Island. The British Base N was here, as was its American successor, Palmer Station (now called Old Palmer—*see* **Palmer Station** for details). US-ACAN accepted the name. The name is not used anymore.

North Portal. 68°35' S, 78°08' E. The N of a pair of buttresses which flank the entrance to The Corridor, on Breidnes Peninsula, in the Vestfold Hills, on the Ingrid Christensen Coast. Named by ANCA. *see* **South Portal**.

North Spit. 62°13' S, 58°48' W. A rocky spit forming the N side of the entrance to Marian Cove, on King George Island, in the South Shetlands. It appears on a British Admiralty chart showing the results of the survey done in this area by personnel on the *Discovery II* in 1935. It appears on a British chart of 1948, and the name was accepted by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. US-ACAN followed suit with the naming in 1965. Last plotted by the UK, in late 2008.

[1]**The *North Star***. A wooden U.S. Bureau of Indian Affairs diesel-powered ice-ship of 1434 tons, built in 1932 for the run from Seattle to Alaska and back, she was used (with many of her regular Arctic crew) as the vessel for West Base (Little America III) during USAS 1939-41. Lt. Cdr. Isak Lystad commanded.

[2]**The *North Star*** *see* **The *Caledonian Star***
North Star Island *see* **Eta Island**
North Star Islands *see* **Northstar Islands**
North Star Islet *see* **Northstar Island**

North Stork. 67°31' S, 68°11' W. With a narrow ridge, and rising to about 433 m above sea level, it forms the NE part of Stork Ridge, at Rothera Station, on Adelaide Island. Photographed aerially by FIDASE in 1957, it was named by UK-APC on Sept. 29, 2004.

North Thor Island. 64°32' S, 61°59' W. A little island just NE of South Thor Island, in Foyn Harbor, Wilhelmina Bay, off the W coast of Graham Land. Named by whalers in 1921-22, for the *Thor I*, which operated here that season. Later, the UK renamed both these islands, or rather, they renamed South Thor Island as Thor Island, and the little island just NE of it (i.e., the object of this entry), lost its name altogether.

North Valley *see* **North Pass**
North Victoria Land *see* **Victoria Land**

North Weddell Ridge. 58°07' S, 12°15' W. This submarine feature was formerly called America-Antarctic Ridge, and the coordinates above are, of course, N of 60°S. However, in order to bring it into the bailiwick of the Antarctic Treaty, its coordinates were officially brought S by a couple of degrees, and it was renamed after James Weddell.

Mount Northampton. 72°40' S, 169°06' E. A high peak, rising to 2465 m above the central part of the ridge just E of Bowers Glacier, between Mount Vernon Harcourt and Mount Brewster, behind the Borchgrevink Coast, in the Victory Mountains, in northern Victoria Land. Discovered in Jan. 1841 by Ross, who named it for Spencer Joshua Alwyne Compton, 2nd Marquess of the County of Northampton (1790-1851), president of the Royal Society. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

The *Northanger*. A 14.5-ton, 54-foot (16.37 m) steel-hulled British yacht, designed by Michel Joubert, and built in Faversham, England, in 1982, by Conyer Marine, for owners Mike Sharp and Rick Thomas, with a view to sailing to remote areas of the world in order to launch mountain climbing expeditions, in a continuation of the work done by Bill Tilman. The vessel could carry 6 crew and 2 passengers. After an

expedition to Alaska in 1984, she went south with a NZ crew, under the command of Rick Thomas (in 1985 he became sole owner), and visited the South Shetlands and the Antarctic Peninsula in 1985-86, on the so-called Smith Island Expedition (a failed attempt to climb Mount Foster). The *Northanger* reached 67°50' S. In 1988-89 *Northanger* became the first British vessel to negotiate the Northwest Passage (in the Arctic). Mr. Thomas died in a climbing accident in British Columbia, and in 1989 New Zealander Greg Landreth and Canadian Keri Pashuk bought the *Northanger* from his estate, and then got married. The *Northanger* was back in Antarctica in 1995-96, on another visit to the Antarctic Peninsula and the South Shetlands. Skippers this time were Landreth and Pashuk. Others aboard were Bruce Dowrick, Joanne Stratford, Roger Thompson, Anna Kemp, and cinematographers Dan and Veronica Mannix. They left Puerto Williams, Chile, on Jan. 6, 1996, and arrived at Smith Island, where some of the party became the first ever to climb Mount Foster, on Jan. 17, 1996. The *Northanger* arrived back in Chile on March 17, 1996. She was back in the 1996-97 season, same skippers, and making an atempt on Cape Renard Towers. She was back in 2002-03 (carrying the Ocean Cruising Club of Great Britain), 2004-05, 2005-06, 2006-07, 2007-08, and 2008-09.

Northcliffe Glacier. 66°40' S, 98°52' E. Flows from the ice plateau of Queen Mary Land to enter the Shackleton Ice Shelf immediately SE of Davis Peninsula. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Lord Northcliffe, a patron (*see* **Mount Harmsworth**). US-ACAN and ANCA both accepted the name.

Northcliffe Peak. 78°44' S, 161°08' E. A prominent peak, rising to 2255 m (the New Zealanders say 2307 m), 6 km SE of Mount Harmsworth, in the Worcester Range. Surveyed in Feb. 1957 by the NZ party of BCTAE, and named by them in association with Mount Harmsworth. Sir Alfred Harmsworth, a sponsor of BNAE 1901-04, later became Lord Northcliffe. *See* **Mount Harmsworth**. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Northcott Ridge. 73°00' S, 61°14' E. A snow-covered rock feature in the Goodspeed Nunataks, about 9 km ESE of Skinner Nunatak, in the southern Prince Charles Mountains. Discovered by an ANARE seismic traverse party in 1957. Photographed aerially by ANARE in 1958 and 1960. Named by ANCA on Nov. 29, 1973, for Ian R. Northcott, aircraft engineer with the ANARE Prince Charles Mountains Survey parties of 1971 and 1972.

Northdoodle Lake *see* **North Doodle Lake**

Northeast Foreland *see* **[2]North Foreland**

Northeast Glacier. 68°09' S, 66°58' W. A steep, heavily crevassed glacier, 22 km long and 8 km wide at its mouth, flowing westward from McLeod Hill (which is between Stonington Island and Cape Keeler), on Mile High Plateau, and then SW into Marguerite Bay between (on the one hand) the Debenham Islands and (on the other) Roman Four Promontory and Stonington Island, on the Fallières Coast, on the W coast of Graham Land. First surveyed in 1936, during BGLE 1934-37, it appears on Rymill's 1938 map of that expedition. Re-surveyed in 1940 by the personnel at East Base (on Stonington Island), during USAS 1939-41, and so named by them because the glacier lies at the NE side of their base. They were the first to use this glacier as a sledging route. It appears on Glenn Dyer's map of 1941, and Dick Black's map of 1945 (both from that expedition). Re-surveyed by Fids from Base E in 1946, in 1949 Dick Butson called it North East Glacier, but it appears as Northeast Glacier on Dougie Mason's 1950 FIDS map. In the mid-1950s, Fids here referred to a steep slope near the head of this glacier as Sodabread Slope, the name being descriptive of the texture of the snow at this point. UK-APC accepted the name Northeast Glacier on March 31, 1955, and US-ACAN followed suit that year. On Nov. 4, 1955, the Argentines established Yapeyú Refugio at the head of the glacier. In the 1961 British gazetteer, the glacier appears as North-east Glacier. The Argentines call it Glaciar Nordeste.

Northern Foothills. 74°44' S, 163°55' E. A line of low coastal hills, southward of Browning Pass, they form a peninsular continuation of the Deep Freeze Range, on the W side of, and overlooking, Terra Nova Bay, in Victoria Land, between Gerlache Inlet and Inexpressible Island. The peninsula is surmounted by Mount Abbott. So named by Campbell's Northern Party during BAE 1910-13, because Inexpressible Island (close to the southward, on the opposite side of Evans Cove) was originally called the Southern Foothills. US-ACAN and NZ-APC both accepted the name.

Northern Islands *see* **Wyatt Earp Islands**

The *Northern Light*. Swedish yacht, skippered by Rolf Bjelke and Deborah Shapiro, which visited the South Shetlands and the Antarctic Peninsula in 1983-84. They were back in Antarctic waters in 1990-92, wintering-over at Hovgaard Island in 1991. They wrote *Time on Ice*.

The *Northern Ranger*. A 2340-ton Canadian vessel, built in 1986 at Port Weller Dry Docks, in Ontario, and owned since 1997 by Newfoundland & Labrador Provincial Ferry Services, but chartered out to Blyth Travel, of Toronto, in 1992-93 and 1993-94, for two seasons of Antarctic cruises out of Ushuaia. She could take about 70 passengers. One of those was Pierre Trudeau, on the first trip, but not quite as far as Antarctica.

Northern Victoria Land Expedition. 1981-82. On Oct. 24, 1981, Allan Priddy and his Antarctic Services, Inc. employees flew into northern Victoria Land in an LC-130 Hercules to build the camp for this expedition. At the end of 2 weeks they had erected a field camp called NVL at 72°12' S, 163°50' E, at the N end of Evans Névé, near the head of Canham Glacier. The camp consisted of 5 Jamesway huts and a plywood generator hut. On Nov. 6, 1981 the first scientists arrived, and science flights began on Nov. 9, 1981. Between this time and the end of the expedition on Jan. 13, 1982, 22 geology and geophysics projects were carried out by the USA, NZ, West Germany, and Australia, in an area with a 100-mile radius. The American Edmund Stump was chief scientist, and camp manager was Philip V. Colbert of ITT/Antarctic Services. Three UH-1N helicopters were used for local transportation, as well as motor toboggans. Information gained helped perfect 12 Antarctic Geological Reconnaissance series maps. Other studies included glaciation, gravity, airborne radiometric surveys, a search for meteorites, and lichen studies.

Northernmost features in Antarctica. The most northerly named feature south of 60°S is the Lazarev Seamount, in 60°09' S. The most northerly landfall is the South Orkneys, more specifically Karlsen Rock (in 60°21°S) and Won Rock (in 60°29' S). *See also* **Southernmost features in Antarctica.**

Cabo Northrop *see* **Cape Northrop**

Cape Northrop. 67°24' S, 65°16' W. A conspicuous rocky bluff rising to about 1160 m, forming the N side of the entrance to Whirlwind Inlet, on the E coast of Graham Land, where it projects into the Larsen Ice Shelf N of Francis Island, and divides the Foyn Coast from the Bowman Coast. Discovered by Wilkins on Dec. 20, 1928, from his plane, a Lockheed Vega, designed and made by John Knudsen "Jack" Northrop (1895-1967), who had founded Lockheed in 1927. It appears on Wilkins' 1929 map, plotted in 67°30' S, 62°45' W. It appears as such on Wordie's map of 1929, and on British charts of 1933 and 1940. Photographed aerially in 1940 by USAS 1939-41, and again by FIDS in 1947, who charted it. It appears on a 1946 Argentine chart as Cabo Northrop, and that was the name accepted by the 1970 Argentine gazetteer and by the 1974 Chilean gazetteer. However, there is a 1948 Chilean reference to it as Cabo Policarpo Toro, named thus by ChilAE 1947-48, presumably for a member of the expedition. When Fids from Base D came to survey it in Dec. 1947, they did not have Wilkins' published photographs, and so could not with any certainty identify the feature Sir Hubert had seen in 1928, so they name this one as Cape Northrop. UK-APC accepted that situation on Jan. 22, 1951, and US-ACAN followed suit in 1952. The coordinates were corrected by the time of a British chart of 1954, and, as such, it appears in the 1955 British gazetteer.

Northrup Head. 69°52' S, 160°09' E. An ice-covered headland, a coastal extension of the Wilson Hills, on the N side of Suvorov Glacier, 5.5 km WSW of Belousov Point. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for David A. Northrup, USN, VX-6 aviation electronics technician at McMurdo in 1967.

North's Coast. 67°00' S, 127°45' E. Part of what is now the Banzare Coast. This was a term

given to the stretch of coast, in East Antarctica, which Wilkes had inadequately described as North's High Land. Because Wilkes' definition was unspecific, as was his terminology, in both geographical and topographical terms, latter-day geographers gave the coastal area the name North's Coast. After 1930 the term became defunct because Mawson included it in the Banzare Coast. In 1955, Gard Blodgett, the U.S. cartographer, working from air photos taken by OpHJ 1946-47, was able to verify the existence of a highland section here, which had been Wilkes' original 1840 discovery (but he had not been believed). They now call it Norths Highland (see below).

Norths Highland. 66°40' S, 126°00' E. An ice-covered upland behind the Voyeykov Ice Shelf, in Wilkes Land, close S of Cape Goodenough, it surmounts the Banzare Coast between Maury Bay and Porpoise Bay. Discovered by Wilkes in 1840, during USEE 1938-42, and named by him as North's High Land, for James H. North. Because Wilkes had been fooled so much by looming (q.v.) in his plotting of features, no one could trust him, so the name North's Coast was applied to an area of the coast at and around 127°45' E (*see* the entry **North's Coast**, directly above). The apostrophe was later dropped, and the "high" and "land" were joined (on paper). US-ACAN accepted the new name and situation in 1956.

North's Land *see* **North's Coast**, **Norths Highland**

Northstar Island. 68°11' S, 67°07' W. A tiny, low, rocky islet, no more than 0.4 km long by a few hundred meters wide, the larger of 2 islands and offlying rocks 1.5 km NW of the W tip of Neny Island, between that island and Millerand Island, 2.5 km E of Stonington Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First roughly charted in 1936 by BGLE 1934-37. Re-surveyed by ChilAE 1946-47, and named by them as Isla Profesor Oliver Schneider, for Carlos Oliver Schneider (q.v., under **O**), the naturalist on the expedition. It appears as such on their 1947 chart. Re-surveyed again by Fids from Base E in 1947, and named by them as North Star Islet, for the ship *North Star*, which visited Marguerite Bay in 1940, during USAS 1939-41. It appears spelled that way in Ray Adie's 1947 report (Adie was right in his spelling; everyone else has been wrong). Somewhere between that report and March 31, 1955, when UK-APC accepted the name Northstar Islet, the spelling became corrupted. US-ACAN accepted the corruption in 1956. It appears as such on a British chart of 1956. However, with the disappearance of the term "islet" in the late 1950s, UK-APC redefined it as Northstar Island on July 7, 1959, and US-ACAN followed suit in 1963. *See also* **Islotes Estrella del Norte**, because the Chileans have come up with that name to include this island (which they call Islote Estrella del Norte) and the offlying islets and rocks. Note: The name Northstar Island should read North Star Island. US-ACAN and UK-APC are well aware of this, as the descriptors in both the American and British gazetteers mention, and have always mentioned, the *North Star* in their texts. Yet they have done nothing to amend the name itself. They have done exactly the same with Polarstar Peak. Things looked promising for accuracy when the two islands in the area appeared as the North Star Islands on a 1973 British chart, but then that idea went nowhere.

Northstar Islet *see* **Northstar Island**

Northtrap Rocks. 62°55' S, 56°35' W. Three isolated rocks in water NW of Cape Juncal, d'Urville Island. ArgAE 1952-53 surveyed them, and named them Rocas Montiel, or Roca Montiel, probably after a member of the expedition. The feature appears both ways on their 1953 chart. ArgAE 1953-54 re-charted them, but as Rocas Montrol, or Roca Montrol, in confusion with Montrol Rock (q.v.). This error was perpetuated on a 1957 Argentine chart. Photographed aerially by FIDASE in 1956-57. In association with Southtrap Rock, this feature was renamed by UK-APC on Feb. 12, 1964, as the more northern of 2 features to be avoided by vessels coming into Antarctic Sound from the north (*see also* **Southtrap Rocks**). US-ACAN accepted the British naming later in 1964.

Northwest Mountain. 77°38' S, 160°38' E. A massive mountain, rising to 2286 m, just NE of Beehive Mountain, on the N side of the upper Taylor Glacier, in Victoria Land. The name appears on maps prepared by BAE 1910-13. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

[1]**The *Northwind*** *see* **The *Staten Island***

[2]**The *Northwind***. A 6515-ton U.S. Coast Guard icebreaker and research ship of 10,000 hp, launched in 1945. Part of Task Force 68 during OpHJ 1946-47, during which she was the icebreaker for the Central Group, Captain Charles W. Thomas. She also took part in OpDF II (1956-57; Captain Joseph A. Bresnan), OpDF IV (1958-59; Captain Thomas Robley Midtlyng). In April 1959 she took off the 1958 winterers from the FIDS Base W. She was back for OpDF 72 and 73 (1971-72 and 1972-73; both times under Capt. Norman C. Venzke), OpDF 77 (1976-77; Capt. Joseph Henry "Joe" Wubbold), OpDF 80 (1979-80; Capt. Royce R. Garrett), and was decommissioned on Jan. 20, 1989, and moved to Wilmington, NC.

Northwind Glacier. 76°40' S, 161°18' E. A large glacier flowing N from the W part of Flight Deck Névé (the high névé SW and W of Flagship Mountain), between Elkhorn Ridge and Sunker Nunataks, on the E side of the Convoy Range, into Fry Glacier (it is one of the major sources of the Fry), in Victoria Land. The Northwind has an ice divide with the NW source of the Benson Glacier, and a lobe of it (i.e., the Northwind) flows W a short distance into the mouth of Granville Valley. Named by the NZ Northern Survey Party of BCTAE 1957-58 for the *Northwind*. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Norton, Benjamin *see* **USEE 1838-42**

Norton, Hiram. b. 1788, Goshen, Conn., son of Alexander Norton and his wife Rhoda Collins. He was a crewman on the *Huron*, in the South Shetlands, 1820-22.

Norton, Nelson *see* **USEE 1838-42**

Norton Crag. 78°21' S, 161°05' E. A rock crag forming the N end of Halfway Nunatak, on the W side of The Landing, almost in the center of the upper Skelton Glacier. Named by US-ACAN in 1994, for William L. Norton, USGS cartographer, a member of the satellite surveying team at Pole Station in the winter of 1991.

The *Norton Sound*. A 15,000-ton U.S. ship built as a seaplane tender in San Pedro, Calif., in 1942. After the war she was converted into an experimental guided missile-launching test-ship, and on Aug. 22, 1958, as part of Operation Argus, fired three atom bomb-armed missiles from Antarctic waters, 300 miles into the atmosphere where they were exploded. Rear Adm. Lloyd M. Mustin was in command of the ship and of the project. The vessel was decommissioned in 1962, became a weapons research ship, and was finally decommissioned (i.e., presumably re-de-commissioned) in 1968.

Norücken. 73°32' S, 166°56' E. A ridge, due N of Caliper Cove, in the Mountaineer Range of Victoria Land. Named by the Germans (name means "north ridge").

Bahía Noruega *see* **Norvegia Bay**

Cabo Noruega *see* **Cape Norvegia**

Norumnuten. 74°44' S, 11°40' W. A mountain ridge, about 3 km long, NW of the mountain peak the Norwegians call Paalnibba, in Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Range of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for teacher Kåre Arvid Norum (1907-1981), a Resistance leader during World War II.

The *Norvegia*. A 291-ton Norwegian whaling and sealing ship, built in 1919 at Jacob Iversen's Shipyard in Soon, Norway, as the *Vesleper*, for Winge & Co., of Norway, and bought by whaling magnate Lars Christensen in 1927. **First voyage**: The ship first went to Antarctica in 1927-28 on a scientific expedition led by Haakon Mosby. Harald Horntvedt was ship's captain. The *Norvegia* left Norway on Sept. 26, 1927. The main aim of the expedition was to establish a shelter on Bouvet Island (in the South Atlantic), and to leave a cache of provisions there for shipwrecked sailors. It was on this trip that Ditlef Rustad "discovered" the ice fish (q.v.). **Second voyage**: In 1928-29 the *Norvegia* was back again on an expedition led by Ola Olstad, to observe the movements of whales and ice currents. Ship's captain this time was Nils Larsen. Mr. Christensen had ordered Capt. Larsen to prove or disprove the existence of the mythical Thompson Island and the Chimneys, reputed to lie adjacent to Bouvet island. The ship left Norway on Oct. 14, 1928, and Larsen searched between 52°S, 06' E and 55°S, 05' E, but never saw the elusive islands. The first landing on Peter I Island was effected from this ship, on Feb. 2, 1929. Then they went on an unsuccessful search for the mythical Dougherty's Island. **Third voyage**: The *Norvegia* was one of the ships that carried Riiser-Larsen

to Antarctica in 1929-31, with 2 seaplanes aboard that had been transferred in mid-ocean from the *Thorshammer*. Once again, Nils Larsen was ship's captain, and Finn Lützow-Holm was ship's pilot. In Dec. 1929 they reached Enderby Land, making several airplane flights. Riiser-Larsen landed on a small island SW of Cape Ann and claimed the area for Norway. On Jan. 14, 1930 they met the *Discovery*, the ship carrying BANZARE, and agreed with the British to divide their spheres of exploration. This was the expedition that discovered the extent of the coastline of Queen Maud Land. On March 23, 1930, the expedition then headed north. **Fourth voyage**: On Oct. 4, 1930, the *Norvegia* left Cape Town heading south again. Larsen was still captain of the ship, but this time Major Gunnar Isachsen commanded the expedition. Halfway through the expedition, Riiser-Larsen replaced Isachsen. Many new lands and coasts were discovered and named. The *Tørlyn* was also in the area that summer. The expedition ended on May 15, 1931. On June 16, 1931, the *Norvegia* was sold to Elling Aarseth, of Ålesund, and renamed *Kvitøy*. The *Kvitøy* was crushed in Arctic ice on March 19, 1933.

Cape Norvegia. 71°20' S, 12°18' W. A prominent cape that marks the NE extremity of the Riiser-Larsen Ice Shelf, on the Princess Martha Coast of Queen Maud Land. It also marks the natural E limit of the Weddell Sea. Discovered in Feb. 1930 by Riiser-Larsen while on a flight from the *Norvegia*. He named it Kapp Norvegia, for his ship, and plotted it in 71°25' S, 12°20' W. US-ACAN accepted the name Cape Norvegia in 1947. There are references to the Chileans calling this feature Cabo Noruega (i.e., "Norwegian cape").

Kapp Norvegia *see* **Cape Norvegia**

Mount Norvegia. 67°51' S, 48°08' E. A large, ice-covered mountain, rising to 1340 m, 15 km (the Australians say 10 km) N of Mount Christensen, in Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956 and 1957. Named by ANCA for the *Norvegia*. US-ACAN accepted the name in 1965.

Norvegia Bank. 71°18' S, 12°24' W. The name was proposed by Heinrich Hinze in Jan. 1997, in association with Cape Norvegia, off which this submarine feature lies, off the Princess Martha Coast of Queen Maud Land, and was accepted by international agreement in June 1997.

Norvegia Bay. 68°45' S, 90°42' W. An open cove (or small bay, as the Norwegians describe it) at the N side of Cape Ingrid, between that cape and the S side of Nils Larsen Glacier, in the N part of the coast the Norwegians call Lazarevkysten, on the W side of Peter I Island. Named by the Norwegians as Norvegiabukta, for the *Norvegia*, and they plotted it in 68°49' S, 90°43' W. The Chileans call it Bahía Noruega, which defeats the object of the original.

Norvegiabukta *see* **Norvegia Bay**

Norway. In 1877 Peter Christiansen (b. 1842, Norway), a resident of New York, sailed to the South Shetlands as a crew member aboard the *Charles Colgate*, out of New London, for the 1877-78 sealing season. In 1897-99 Norway's Roald Amundsen was part of BelgAE. In 1910-12 he was back, as leader of NorAE 1910-12, and with his four companions was the first leader to get to the South Pole. In between Amundsen's two expeditions, Norway was establishing a major whaling presence in Antarctic waters (*see* **Whaling**), and in 1929 Riiser-Larsen discovered, named, and explored Queen Maud Land, a huge area that Norway claimed in 1939 (*see* **Norwegian Dependency**). The next great Norwegian expedition was NorAE 1956-60 (see below). One of the 12 original signatories of the Antarctic Treaty in 1959, Norway had a scientific station there, Norway Station (also called Princess Martha Coast Station), but on Jan. 8, 1960, she gave it to South Africa (who, for a few years continued to call it Norway Station). It was the first, and for many years the only, Norwegian scientific station in Antarctica, but it wasn't the end of Norwegian involvement. The country still sent summer research parties, with the cooperation of other countries (*see* **Norwegian Antarctic Expedition** 1968-69, 70-71, 1974-75, 1984-85, 1986-87, and 1989-90). Norway took part in the Filchner Ice Shelf Program (FISP) and in 1986-87 it fielded a small expedition to Peter I Island for mapping and aerial photography (*see* below, **Norwegian Antarctic Expedition 1986-87**). During the course of these latter expeditions, two stations were built, Troll and Tor. In the 1990s there were several Norwegians who led private expeditions to Antarctica, but none offically sponsored by the Norsk Polarinstitutt, who look after all national interests in the Antarctic. However, there was a series of expeditions called the Nordic Antarctic expeditions (q.v.), which comprised Norwegians, Swedes, and Finns. In 1995-96 a party of Norwegians accompanied ChilAE on a trip to Deception Island, to survey the remains of the old whaling station there.

Caleta Norway *see* **Norway Bight**

Camp Norway. There have been several camps with this name established by the Norwegians in Maudheimvidda, in Queen Maud Land. They have been field camps only, expendable after the season. They have been designated Camp Norway I, Camp Norway II, etc. Camp Norway I was built in 1968-69, in 73°30' S, 13°40' W, in the Kraul Mountains, by a Norwegian team led by geologist Thore Winsnes (*see* **Norwegian Antarctic Expedition 1968-69** and **Winsnesfjellet**). Camp Norway III was in 72°30' S, 15°00' W. Camp Norway IV was in 73°45' S, 14°30' W. Camp Norway V was in the area of Svarthamaren Mountain, in the Mühlig-Hofmann Mountains of Queen Maud Land, and was established in early 1985 by NorAE 1984-85.

Ensenada Norway *see* **Norway Bight**

Norway Bay *see* **Norway Bight**

Norway Bight. 60°37' S, 45°49' W. A bay, 6 km wide, indenting the S coast of Coronation Island between Meier Point and Mansfield Point, in the South Orkneys. Roughly charted by 19th-century sealers. On a 1908 Argentine map it appears in error as Bahía Iceberg (*see* **Iceberg Bay**). Surveyed in 1912-13 by Petter Sørlle, and named by him as Norway Fjord, for his native country. It appears as such on his and Borge's chart of that season. Re-surveyed by the Discovery Investigations in 1933, and renamed by them as Norway Bight. It appears as such on their 1933 and 1934 charts, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears on a French chart as Norway Bay (rather than, say, Baie Norway). It appears on an Argentine chart of 1947 as Ensenada Norway, and that was the name accepted by the 1970 Argentine gazetteer. However, Moneta, in 1951, refers to it as Caleta Norway. It was re-surveyed by Fids from Signy Island Station between 1956 and 1958.

Norway 5. 72°15' S, 0°10' W. A Norwegian station in the Sverdrup Mountains of Queen Maud Land.

Norway Fjord *see* **Norway Bight**

Norway Glacier. 86°34' S, 164°02' W. A tributary glacier, about 16 km long, it descends from the Polar Plateau just W of Mount Prestrud, and flows NW to enter Amundsen Glacier between Mount Bjaaland and Mount Hassel, in the Queen Maud Mountains. Discovered by Amundsen on Nov. 29, 1911, during his trek to the Pole, and named by him for his country. Modern day geographers have been hard pressed to determine the exact mountain that Amundsen had in mind, and so they (actually US-ACAN) named this one, arbitrarily, in 1967, in order to keep his naming.

Norway Rocks. 76°10' S, 168°20' E. A dangerous reef of rocks, "the charted position of which is doubtful" (says the American gazetteer), which "is reported to extend" 6 km southward of Bernacchi Head (the SE extremity of Franklin Island), in the Ross Sea. In 1923, Frank Debenham was of the opinion that there was probably a deep water passage between the rocks and the head (the head being called Cape Bernacchi in those days). Discovered in 1841 by Ross, but not named by him. Named by Borchgrevink during BAE 1898-1900, for his country. US-ACAN accepted the name in 1952, and NZ-APC followed suit. Why US-ACAN, in particular, has accepted this feature, when it has withheld such recognition from other features for far less delinquency of solid evidential material, is striking, if not odd.

Norway Station. 70°30' S, 2°32' W. Also called Norge Station, and Princess Martha Coast Station. On the Princess Martha Coast of Queen Maud Land, to the E of the Weddell Sea. **Jan. 10, 1957**: It was established as Norway's only IGY station. The base leader for the entire time, 1957 to 1960, was Sigurd Helle. **1957 winter**: Jarl Tønnesen (chief meteorologist), Torgny E. Vinje (2nd meteorologist), Bjørn Grytøyr and Hans-Martin Henriksen (meteorological assistants), Håkon Saether (medical officer), Niels S. Nergaard and Odd Gjeruldsen (scientific assistants), Torbjørn Lunde (glaciologist), Stein S. Sørensen (chief radio man), Lars A. Hochlin (field radio operator), Arne Hemmestad (mechanic), Per K. Larsen (cook and steward). **1958**

winter: Jarl Tønnesen (chief meteorologist), Torgny E. Vinje (meteorologist), Anders Vinten-Johansen (medical officer), Niels S. Nergaard and Odd Gjeruldsen (scientific assistants), Bjørn Grytøyr and Hans-Martin Henriksen (meteorological assistants), Torbjørn Lunde (glaciologist), Stein S. Sørensen (chief radio man), John Snuggerud (radio technician), Lars A. Hochlin (field radio operator), Henry R. Bjerke (mechanic), Sverre O. Pettersen (cook and steward). **1959 winter**: Torgny E. Vinje (chief meteorologist), Kåre J. Hansen and Jan. P.H. Madsen (meteorological assistants), Knut Ødegaard (meteorological assistant and radio operator), Astor O.K. Ernstsen (meteorological assistant), Henry R. Bjerke (mechanic), Rolf L. Johnsen (cook). **Jan. 8, 1960**: The South Africans came down on the *Polarhav*, took over the station by arrangement with Norway, and made it their base for SANAE I, their national expedition. They continued to call it Norway Station. **1960 winter**: 10 men. Johannes la Grange (leader), Marten J. Du Preez (radio technician and 2nd-in-command), M.H. "Theo" van Wyjk, George F. Strauss, Dick J. Bonnema, and W.T. "Blackie" de Swardt (meteorologists), Vic von Brunn (geologist), André le R. van der Merwe (doctor), Nick S. Erasmus (radio operator), and Chris de Weerdt (diesel mechanic). **Aug. 29, 1960**: The first sledging trip of any length was begun, by la Grange and von Brunn. Several took place after that. **Oct. 31, 1960**: la Grange and von Brunn began the last major sledging trip. **Dec. 7, 1960**: la Grange and von Brunn returned from their sledging trip, having traversed over 350 miles on dog sledge to the mountains in the south. **Dec. 26, 1960**: The *Polarhav* arrived with the members of the second SANAE. **Jan. 9, 1961**: The *Polarhav* left, taking the first expedition with it back to Cape Town. Johan van der Westhuizen took over as leader. **1961 winter**: 11 men. Johan P. van der Westhuizen (radio engineer and leader), Dick J. Bonnema (meteorologist and 2nd-in-command), D.W. "Willie" Jacobs, Paul van As, Piet M.C. Voges (meteorologists), Barrie Butt (geologist), Anton Swanevelder (surveyor), Ronnie Plotkin (doctor), Rayno van der Riet (radio operator), John W. Viljoen and Hennie V. Liebenburg (mechanics). **Jan. 1962**: Norway Station was relieved by the *R.S.A.* Marten du Preez took over as leader. **1962 winter**: 13 men. Marten J. du Preez (leader), Sieg A. Roussouw (geomagnetician and 2nd-in-command), A.J. "Brandjie" Brand (senior metoerologist), E.E.G. "Charles" Lautenbach (doctor), J.T.J. "Sewes" van Wyk, H.S. "Fanus" Du Preez, Danie S. Oliver (senior mechanic), Henry J. Fulton (diesel mechanic), A.L. "Smitty" Smith (radio operator), Sean Kavanagh, Douw Moller, Dirk Neethling, Duncan Baker. **Jan. 1963**: The station was relieved by the *R.S.A.*, and Andrew M. Venter took over as leader. That summer a newer, bigger, better South African station was built 20 km inland from Norway Station, and called Tottenbukta Sanae Station, or simply Sanae. The name of the station has a capital S, and rest of the letters are small. The South African National Antarctic expeditions are known as SANAE (all capitals). For ensuing years, *see* **Sanae Station**.

Norwegian Antarctic Expedition 1910-12. Led by Roald Amundsen, this was the first one to the South Pole. **Sept. 1909**: Amundsen, planning an expedition to the North Pole in the *Fram*, found that the Pole had been reached by Peary, and immediately decided to go south instead. But he had to keep his move quiet, for fear of losing his funding. **Jan. 1910**: He told the *Fram*'s skipper, Lt. Thorvald Nilsen, of his decision to go south. **June 7, 1910**: After extensive repair work at Horten, the *Fram* left Christiania (later named Oslo). They made for Bundefjord, Amundsen's home, where Hans and Jorgen Stubberud had finished building their Antarctic hut (in secret). It was dismantled, the pieces numbered (for re-construction at a later date), and caused much speculation among the crew. **June 8, 1910**: They were anchored at Horten, then slowly, through June and July, made their way to Bergen, where German oceanographer Adolf Schröer left the expedition. **July 28, 1910**: The *Fram* arrived at Christiansand, where Amundsen, who had had to return to Oslo, met up with her again. Here Amundsen told Gjertsen and Prestrud of his secret. Sverre Hassel and Adolf Henrik Lindstrøm joined the expedition here, and Eliassen, the chief engineer was discharged, and replaced by Knut Sundbeck. **Aug. 9, 1910**: The dogs came aboard, and at 9 P.M. the ship left Christiansand. There were 19 men, 97 dogs, 4 pigs, 6 carrier pigeons, and a canary named Fridtjof; 3000 books, playing cards, a gramophone, a piano, a violin, a flute, mandolins, mouth-organ, an accordion, and sheet music. Masses of gifts: Christmas trees, alcohol, tobacco, candies, chocolates, cheese, cookies, tea, roasted coffee, sugar. Soap for 5 years. Plenty of medicines (though there was no doctor aboard, Lt. Fredrick Gjertsen, the 1st mate, did a hospital and dentistry course), safety matches, ammunition, explosives, ice tools (drills, saw, etc), scientific instruments, binoculars, kitchen utensils and dinner service, personalized stationery and accessories. They were not short of anything, and had all the luxuries. 10 sledges, 20 pairs of skis, all the right clothing, the best tents. By way of the North Sea and the English Channel, they headed toward Madeira. 3 weeks out of Norway, Camilla (one of the 10 female dogs aboard) gave birth to four puppies, the 2 males being allowed to live. **Sept. 5, 1910**: They spotted Madeira. **Sept. 6, 1910**: They anchored at Funchal. The local newspapers were already linking the *Fram* with the South Pole. **Sept. 9, 1910**: At Madeira Amundsen announced to his crew that they were no longer headed to the North Pole but to the South Pole instead. He asked them if that was all right. They said it was. Thorvald Nilsen's brother, who had been on board, sailed back to Norway with the news. Amundsen then sportingly sent a telegram to Scott ("Beg leave to inform you, *Fram* proceeding Antarctica. Amundsen"), who was in Melbourne, preparing to set out for the same destination. This telegram started the so-called Race for the Pole, in 1911. The Norwegians versus the British. So the *Fram* sailed south, instead of north. Only two dogs died on the voyage south, and 2 went over the side. **Oct. 4, 1910**: The *Fram* crossed the Equator. **Oct. 16, 1910**: The *Fram* passed South Trinidad Island. **Nov. 28, 1910**: They sighted land north of the Kerguélen Islands. **Dec. 30, 1910**: They crossed into Antarctic waters. **Dec. 31, 1910**: They were in 62°15' S. **Jan. 1, 1911**: They saw their first iceberg. **Jan. 2, 1911**: at 8 P.M. The *Fram* crossed the Antarctic Circle in 176°E. **Jan. 3, 1911**: They entered the pack-ice in 175°35' E. **Jan. 6, 1911**: By 6 P.M., after an unbelievably short time in the pack, they broke through into the Ross Sea, at 70°S, 180. The *Fram* having a diesel engine, this was the first motor passage of the Antarctic pack-ice. **Jan. 11, 1911**: They sighted the Ross Ice Barrier, at 2.30 P.M. **Jan. 14, 1911**: They arrived at the Bay of Whales, one day earlier than Lt. Nilsen had predicted back in Norway. There were now 116 dogs aboard. **Jan. 15, 1911**: They began unloading the *Fram*. **Jan. 17, 1911**: They began building their base. **Jan. 21, 1911**: The roof of the base was put on. **Jan. 28, 1911**: The hut was ready by noon. **Feb. 4, 1911**: They named their base Framheim. There was a shore party of 9 men — Roald Amundsen, Sverre Hassel, Helmer Hanssen, Oskar Wisting, Olav Bjaaland, Hjalmar Johanssen, Lt. Kristian Prestrud (2nd officer of the *Fram*), Adolf Henrik Lindstrøm (cook), and Jørgen Stubberud. The others on the ship's party included Lt. Thorvald Nilsen (captain of the *Fram* and 2nd-in-command of the expedition), Andreas Beck and Ludvig Hansen (seamen/ice pilots), Lt. Frederick Gjertsen (1st mate), Martin Rønne (sail maker), Knut Sundbeck, Alexander Kutschin (oceanographer), Jacob Nødtvedt, Halvardus Kristensen (deck hand who, during the voyage down had become 3rd engineer), and Karinius Olsen (cook and carpenter). That day Campbell and Pennell from the *Terra Nova* came aboard the *Fram*. **Feb. 10, 1911**: Amundsen, Prestrud, Johanssen, and Hanssen went on a depot-laying expedition in preparation for their push to the Pole later that year. They took 3 sledges and 18 dogs, and other men went as far as the Barrier to help them up the slope onto the ice shelf. **Feb. 14, 1911**: At 11 A.M., Amundsen's depot-laying party reached 80°S. **Feb. 16, 1911**: At noon, the *Fram* left the Bay of Whales, heading north to winter at Buenos Aires. In the Ross Sea she would meet the *Terra Nova* (Scott's ship, sans Scott, who was already at Ross Island). At 9.30 P.M., Amundsen and his men returned to Framheim, having marked the trail, and having covered 62 miles that day. **Feb. 22, 1911**: At 8.30 A.M., the entire Norwegian shore party, with the exception of Lindstrøm, set out along the trail, to lay depots at 81°S, 82°S, and 83°S. 8 men, 7 sledges, 42 dogs. **Feb. 23, 1911**: Eight hours march and 12½ miles. **Feb. 24, 1911**: They were 44½ miles from Framheim. **Feb. 25, 1911**: They did 18 miles. **Feb. 26, 1911**: The *Fram* crossed the Antarctic Circle, heading north. **Feb. 27, 1911**: At 10.30 A.M., Amundsen's party reached the 80°S depot (actually in 79°59' S). **March 3,**

1911: Amundsen's party reached 81°S. The temperature was -45.4°F. **March 4, 1911**: They built and marked the depot at 81°01' S. The depot consisted of 14 cases of dogs' pemmican. **March 5, 1911**: They woke up to -49°F. Hassel, Bjaaland, and Stubberud began their return to Framheim. Odin the dog went with them (he would die shortly after arriving back at Framheim; the harness had rubbed him the wrong way). Amundsen's main party continued south, with 5 dogs. Meanwhile, the *Fram* was in 61°S, 150°W, heading north through hundreds of huge tabular bergs. **March 6, 1911**: At noon Hansen's 3 leading dogs, Helge, Mylius, and Ring, fell into a crevasse, but they were pulled out. **March 7, 1911**: The temperature went from -40°F to -0.4°F in the course of one day. **March 8, 1911**: At 3.30 P.M., the main party reached 82° S, and set up a depot. They had gone 13½ miles that day. **March 9, 1911**: They did not press on to 83°S, partly because the dogs were worn out. Each one of their depots had massive amounts of fuel and food for themselves and the dogs. This one, 12 feet high, had 1370 pounds, mostly pemmican for the dogs. **March 10, 1911**: They set out on the return trip to Framheim, Amundsen leaving his sledge at the depot, and dividing his dogs up between Wisting and Hansen. They did almost 30 miles that day. **March 11, 1911**: They did 25 miles, with the dogs in a pitiful state. Meanwhile Hassel, Bjaaland and Stubberud arrived back at Framheim, and Odin (see above) and 2 of Stubberud's dogs died shortly afterwards. **March 12, 1911**: Amundsen's party passed the 81°S depot. That day they did 25 miles. Meanwhile the *Fram* was in a hurricane. **March 13, 1911**: Amundsen's party ran into a storm, which delayed them for 2 days. **March 14, 1911**: The *Fram* passed her last iceberg, as she headed north. **March 15, 1911**: At 10.30 A.M., Amundsen's party started up again. Thor wouldn't get up, and had to be axed. Lurven, Wisting's best dog, fell down on the march that day, and just died. **March 16, 1911**: They did 17 miles. Jens couldn't go on and was given a ride on Wisting's sledge. **March 17, 1911**: Lassesen fell behind and was never seen again (at least, that's what everyone thought), and Rasmus fell, pulling until he died. That evening, at 8 o'clock, they reached the 80°S depot, after covering 22 miles that day. **March 18, 1911**: Ola and Jens were axed. Lassesen miraculously re-appeared, none the worse for wear. **March 19, 1911**: They saw their old tracks, but a storm blew up, delaying them for a day. Meanwhile, the *Fram* was in a cyclone. **March 21, 1911**: Amundsen's party got moving again. **March 22, 1911**: They pitched their camp that night, 37 miles from Framheim. **March 23, 1911**: They arrived back at Framheim. They had lost 8 dogs. **March 28, 1911**: They saw the aurora australis for the first time. **March 31, 1911**: At 10 A.M., the last depot-laying journey of the season set out. 7 men, 6 sledges, and 32 dogs. The object was to lay in more supplies at the 80°S depot. Amundsen and Lindstrøm stayed behind at Framheim. Meanwhile, the *Fram* passed Cape Horn, heading north for Buenos Aires. **April 11, 1911**: The depot layers returned, minus one dog, Cook (they had a Peary as well, and a Fix). Everyone then prepared to winter-over, in preparation for the summer push to the South Pole. **June 8, 1911**: The *Fram* left Buenos Aires, with 4 new men on board: H. Halvorsen, A. Olsen, F. Steller, and J. Andersen. Only Andersen would not make the next trip down to the ice. He was discharged. Kutschin and Nødtvedt departed at Buenos Aires, and went back to Norway. **June 9, 1911**: The *Fram* arrived at Montevideo. **June 11, 1911**: The *Fram* left Montevideo on a 3-month Atlantic oceanographic cruise. **July 29, 1911**: The *Fram* sighted St. Helena. **Aug. 12, 1911**: The *Fram* saw South Trinidad Island. **Aug. 19, 1911**: The *Fram*'s hydrographic mission came to an end. **Sept. 1, 1911:** The *Fram* docked in Buenos Aires, next to Filchner's ship, the *Deutschland*, and took aboard a much-needed rat-catching cat (who was killed when they reached the ice barrier). **Sept. 8, 1911**: They all (again, save Lindstrøm) left on a premature dash south, with 90 dogs. They went almost 12 miles that day, in 2 hours before pitching camp. **Sept. 9, 1911**: At noon, 3 puppies who had joined the expedition of their own accord, had to be shot. They did 15½ miles that day. **Sept. 11, 1911**: They woke up to a temperature of -67.9°F. **Sept. 12, 1911**: Again with the temperature in the -60°s, and the dogs paralyzed with the cold, they decided to go as far as 80°S, and then turn back. **Sept. 14, 1911**: At 10.15 A.M. they reached the 80°S depot, and almost immediately turned round and headed for home. 68 miles from Framheim, Camilla was let loose, never to be seen again (at least that's what they thought). **Sept. 15, 1911**: They camped 46 miles from Framheim. Hanssen and Stubberud had developed frostbite on their heels. **Sept. 16, 1911**: Amundsen's party set back out for Framheim. Adam and Lazarus dropped behind and were never seen again. Sara just died in her tracks, no previous symptoms. That evening they all reached Framheim. **Sept. 18, 1911**: Wisting and Bjaaland made a trip of almost 40 miles to bring back 10 stragglers who didn't want to come back; they just wanted to stay out on the ice. **Sept. 26, 1911**: Camilla came back to camp, as fat as ever. **Oct. 5, 1911**: The *Fram* left Buenos Aires, with 11 men aboard, as well as 15 live sheep and 15 piglets. 9 piglets would make it to the ice barrier. **Oct. 19, 1911**: There would be two expeditions. The Polar party, and the Eastern Party, which comprised Prestrud (leader), Johansen, and Stubberud. Lindstrøm would remain at Framheim. The Polar party set out again, with 4 sledges, 13 dogs to each sledge, and 5 men — Amundsen, Bjaaland, Wisting, Hassel, and Hanssen. Prestrud was filming them as they left. They covered 17 miles that first day, before camping. Neptune had become so fat he couldn't keep up. He was cut loose. They assumed he would make his way back to Framheim, but he was never seen again. Rotta had also been cut free as being unfit. She did make her way back. Ulrik was ill at the beginning, and hitched a ride on one of the sledges. He picked up later. Peary was also cut loose (more on Peary on Nov. 12, 1911). Uranus and Fuchs were out of condition, but the rest of the dogs were fine. **Oct. 20, 1911**: The Polar party got away at 10 A.M. **Oct. 21, 1911**: In a dramatic moment, Bjaaland's team nearly perished in a crevasse. Later that day Hanssen's team almost died in a crevasse. **Oct. 23, 1911**: They reached the 80°S depot, 99 miles from Framheim, in 4 marches. Uranus and Jaala were really suffering. Uranus was too thin and Jaala was too fat. Both were having a problem keeping up. **Oct. 25, 1911**: They left the 80°S depot, heading south for the 81°S depot. They had determined to do 17 miles a day until they reached 82°S, rather than try for speed records. **Oct. 29, 1911**: Hanssen's dog, Bone, was shot. He was too old to keep up. At 2 P.M., they reached the 81°S depot. **Oct. 31, 1911**: They left 81°S. Again, Hanssen almost fell into a crevasse. **Nov. 3, 1911**: They reached their southernmost depot, 82°S. Uranus was shot. **Nov. 4, 1911**: Jaala, who had just given birth to 8 puppies, was shot, as were the puppies. **Nov. 6, 1911**: At 8 A.M., they left the 82°S depot, heading south. Each dog was now pulling just over 80 pounds. Not long afterwards Lucy had to be shot. They camped that night in 82°20' S. **Nov. 7, 1911**: They stayed in camp for the day. Hassel's favorite dog, Else, had to be shot. She was the last of the females. **Nov. 8, 1911**: The Polar party reached 83°S. That day the Eastern Party left Framheim, with 3 men, 2 sledges, and 16 dogs. **Nov. 9, 1911**: The Polar party built a depot. That night 3 of Lucy's best friends deserted, headed back the way they had come. They were never seen again. **Nov. 11, 1911**: Prestrud's Eastern Party reached a point where they could see the 80°S depot, and from a distance saw movement. It turned out to be Peary, who had been cut loose more than 3 weeks before. He was quite fit, and was therefore attached to Stubberud's team. **Nov. 12, 1911**: The Polar party reached 84°S, getting ever closer to what they had been watching for some time, the great mountains that separated the Ross Ice Shelf from the Polar Plateau. Prestrud reached the 80°S depot. One of his new puppies, Lillegut, ate too much, and was in considerable distress all afternoon. **Nov. 13, 19**11: After creating a depot, the Polar party left, heading south. They covered 23 miles in thick fog. Prestrud and his party set out that morning, headed due east from the 80°S depot. **Nov. 14, 1911**: The Polar party reached 84°40' S. **Nov. 15, 1911**: The Polar party reached 85°S. They now had before them a trip to the Pole and back to this spot, a total of 683 miles. But first they would have to climb the Transantarctic Mountains. **Nov. 16, 1911**: They climbed Mount Betty. **Nov. 17, 1911**: They began the actual ascent of the mountains. They covered 11½ miles and ascended 2000 feet, camping that night on a small glacier surrounded by towering summits. Bjaaland went skiing, which points up an interesting comparison. Even when falling down crevasses, these boys laughed and had a jolly good time. It was all a game, at least it was treated that way. On the other hand, Scott's expedition found everything so awful, such an

overwhelming disaster. The Norsemen were part of their environment. The British were challenged by it every foot of the way. **Nov. 18, 1911**: The Polar party came to the Axel Heiberg Glacier. This glacier was steep, but led directly to the Polar Plateau above them. Scott, on the other hand, was taking the route pioneered by Shackleton four years before, during BAE 1907-09, i.e., the Beardmore, which was longer, less direct, but also less dangerous. The Axel Heiberg had never been climbed before. **Nov. 20, 1911**: Amundsen and his men began the ascent of the Axel Heiberg. They set up a depot at the Butcher's Shop. **Nov. 21, 1911**: They reached the Polar Plateau. **Nov. 26, 1911:** They were in 86°S. **Nov. 28, 1911**: They built a depot at 86°21' S. **Nov. 29, 1911**: While Amundsen and his polarfarers were stuck in the Devil's Glacier, Prestrud, Johansen, and Stubberud were becoming the first men to set foot on Edward VII Land (later called Edward VII Peninsula). For the 2nd time Stubberud's dogs fell into a crevasse, only to be hauled out again. They were 1000 feet above sea level, in 77°32' S. **Dec. 3, 1911**: Amundsen's party got out of the Devil's Glacier. **Dec. 4, 1911**: Amundsen and his men were in the Devil's Ballroom. By the end of the day they were out of the mountains and on the Polar Plateau, heading for the Pole, with 18 dogs, the first animals on the Polar Plateau. **Dec. 6, 1911**: The Polar party reached 88°09' S. **Dec. 7, 1911**: Amundsen beat Shackleton's old southing record of 97 miles to the Pole, 88°23' S. They pushed on to 88°25' S. **Dec. 8, 1911**: They created a depot at 88°25' S. The Major, one of Wisting's best dogs, disappeared, and was never seen again. He was the first of the 18 to go. **Dec. 9, 1911**: They set out, heading south, in a temperature of -18.4°F. **Dec. 10, 1911**: The Eastern Party reached Scott's Nunataks. **Dec. 11, 1911**: The Polar party were in 89°15' S. **Dec. 12, 1911**: They were in 89°30' S. **Dec. 13, 1911**: After going 8 miles, they camped in 89°45' S, with fine weather all the way on the Polar Plateau. **Dec. 14, 1911**: By noon they had reached 89°53' S. At 3 P.M., Amundsen and his four companions became the first men ever to reach the South Pole. Knowing it was probably not the exact Pole point, they determined that in the next few days they would walk around it in a circle, with a radius of 20 km. All 5 of them, together, planted the flag, and then Hanssen had to hit Helge on the head. The other dogs devoured him instantly (Helge, not Hanssen). He was the 2nd dog to go. **Dec. 15, 1911**: They calculated that they were in 89°56' S. At 2.30 P.M., Wisting, Hassel, and Bjaaland began their walk to describe the circle. Not really a circle as we understand it, but one that would achieve the object. **Dec. 16, 1911**: The three "circlers" returned at 10 A.M., after 25 miles of walking. The party left a dark-colored silk tent (made by Martin Rønne), and a wooden plaque bearing the name "*Fram*." Also a letter to the king of Norway, a sextant, a spirit level, several pieces of clothing, a plate bearing the name of the crew, and a letter for "Robert F. Scott." And, of course, the Norwegian flag. The name of their camp was Polheim. On that day Prestrud's Eastern Party got back to Framheim. **Dec. 17, 1911**: The actual Pole point was reached first probably by Olav Bjaaland, at 11 A.M. Dinner that night included the smoking of cigars. **Dec. 18, 1911**: The Polar party left for the return journey, with 16 dogs, and the burning desire to get back to civilization with the news. The temperature was a balmy -2.2°F. **Dec. 19, 1911**: Lasse, completely worn out, was killed, and divided into 15 portions. That day Prestrud's Eastern Party set out again from Framheim, this time to explore the eastern arm of the Bay of Whales. **Dec. 20, 1911**: Wisting's dog, Per, broke down, and had to be carried to their next camp, where he was axed. **Dec. 23, 1911**: Hassel's fat criminal, Svartflekken, had to be axed. Meanwhile, the Eastern Party made it back to Framheim. **Dec. 24, 1911**: On the *Fram,* Tulla, the favorite piglet of A. Olsen, the new hand, was killed for Christmas dinner. Amundsen and his men reached their first return depot, at 88°25' S. **Dec. 25, 1911:** Amundsen and his men did 15 miles. **Dec. 26, 1911**: They passed 88°S, heading home. **Dec. 28, 1911**: They reached the summit of the Polar Plateau, and now began the slow descent toward the top of the mountains. The weather was beautiful, the wind at their backs. Dogs and men very happy. **Dec. 30, 1911**: They passed 87°S. **Jan. 2, 1912**: The Polar party were at the Devil's Glacier, at the top of the Axel Heiberg. They would avoid the Devil's Ballroom. **Jan. 3, 1912**: The Eastern Party set out again from Framheim, to explore the SE corner of the Bay of Whales. **Jan. 4, 1912**: After much difficulty with directions, Amundsen's party found their depot at the Butcher's Shop. **Jan. 5, 1911**: The Polar party camped at the top of the Axel Heiberg Glacier. **Jan. 6, 1912**: At 11 P.M., Amundsen and his men were back down the Axel Heiberg, back on the Ross Ice Shelf, and headed for home. They had been 51 days on "land." Hassel's dog, Nigger, had had to be killed on the way down. They would experience almost tropical weather on the shelf, but much snow. **Jan. 7, 1912**: They reached their depot at 85°05' S. Frithjof had to be killed. This left 5 men and 11 dogs. **Jan. 8, 1912**: The *Fram* arrived off the barrier. **Jan. 9, 1912**: The *Fram* arrived at the Bay of Whales. Amundsen's party saw 2 skuas, and the party camped in 84°15' S. **Jan. 10, 1912**: The Polar party covered 34 miles toward Framheim. The skuas worried them, however, as it was felt that flocks of them might have destroyed the depot food along the trail back. **Jan. 11, 1912**: The Eastern Party, 14 miles out from Framheim, spotted the *Fram* coming in. They quickly made it back to Framheim. **Jan. 13, 1912**: The Polar party reached the 83°S depot, and the skua fears proved to be unfounded. However, they saw dog tracks, only 2 days old, and heading north toward Framheim. None of the food in the depot had been disturbed. The tracks were still visible in 82°45' S, where they camped for the night. **Jan. 16, 1912**: The *Kainan Maru* met the *Fram* at the Bay of Whales. Amundsen's party reached the 82°S depot, which they found ransacked by stray dogs. **Jan. 20, 1912**: The Polar party reached their 81°S depot. No stray dogs had been here. **Jan. 21, 1912**: The Polar party reached the 80°S depot. **Jan. 25, 1912**: The Polar party of 5 men, 2 sledges, and 11 dogs, arrived back at Framheim at 4 A.M., after 1860 miles. "Good morning, my dear Lindstrøm, have you any coffee for us?," were Amundsen's first words to the cook at Framheim, the first of the base members to welcome the polarfarers back. They had done the whole trip in 99 days. "The whole thing went like a dream," Amundsen said. **Jan. 27, 1912**: The *Fram* returned from several days of drifting in the ice. **Jan. 30, 1912**: The expedition left the Bay of Whales at 9.30 P.M., with 39 dogs altogether. **Feb. 9, 1912**: The *Fram* crossed the Antarctic Circle, heading north. At that triumphant moment for Amundsen, Scott and his party were returning from the Pole, and heading for oblivion. **March 4, 1912**: The *Fram* spotted Tasmania. **March 7, 1912**: The *Fram* arrived at Hobart. **March 9, 1912**: The last pig was killed. They gave 21 of their dogs to Mawson. **March 20, 1912:** They left Hobart. **May 6, 1912**: They rounded Cape Horn. **May 21, 1912**: The *Fram* passed Montevideo. **May 23, 1912**: At Buenos Aires the *Fram* rendezvoused with Amundsen, who had come separately from Hobart. **June 29, 1912**: Several of the men arrived in London on the *Highland Scot*, from La Plata — Prestrud, Bjaaland, Gjertsen, Hansen, Hanssen, Hassel, Beck, Kristensen, Rønne, Lindstrøm, Sundbeck, Olsen, Stubberud, and Wisting.

Norwegian Antarctic Expedition 1947-48. Also called the Bråtegg Expedition. Organized by the Federation of Norwegian Whaling Companies, its aims were biological and hydrological. The *Bråtegg*, skippered by Nils Larsen, carried a crew of 17, and 4 scientists — zoologist Holger Holgersen (leader), physical oceanographers Johan M. Natvig and Lars Midttun (aged 27; University of Bergen) and Frederick Beyer (marine biologist; student of oceanography at the University of Oslo). The ship left Sandefjord on Oct. 22, 1947, rounded the Horn (actually through the Straits of Magellan) into the Pacific, and then down to the Antarctic pack-ice, where they conducted hydrography at 57 oceanographic stations, mainly in the Bellingshausen Sea and the Amundsen Sea. On Feb. 10, 1948 they visited Peter I Island. The *Bråtegg* returned to Oslo in April 1948. The account of the trip is in *Reports on the Scientific Results of the* Bråtegg *Expedition 1947-48*. In 1957, Holgersen wrote *Ornithology of the* Bråtegg *Expedition*. Natvig and Midttun wrote *Pacific Antarctic Waters*.

Norwegian Antarctic Expedition 1956-60. Known as NorAE 1956-60. This was really four expeditions in one. It was sponsored by the Norsk Polarinstitutt, and Sigurd Helle led it all the way through. **Nov. 10, 1956**: The expedition ships *Polarsirkel* and the *Polarbjørn* left Oslo on Phase 1 of the expedition, sometimes called NorAE 1956-57. They went by way of Las Palmas and Montevideo, to South Georgia, and then on to Antarctica. They established Norway Station, and a secondary station was established

on the coast. **1957 winter**: *See* **Norway Station**. **1957-58**: This was Phase 2, sometimes called NorAE 1957-58. The ship was the *Tottan*. Norway Station was relieved. **1958 winter**: *See* **Norway Station**. **1958-59:** This was Phase 3, sometimes called NorAE 1958-59. The ship was the *Polarbjørn*. Norway Station was relieved. This was the season dominated by Operation Pingvin, the massive air photography project. **1959 winter**: *See* **Norway Station**. **1959-60**: This was Phase 4, sometimes called NorAE 1959-60. The ship was the *Polarbjørn*. **Jan. 1960**: Norway Station was handed over to the South Africans.

Norwegian Antarctic Expedition 1968-69. Six-man expedition organized by the Norsk Polarinstitutt, in Oslo. Its aim — to carry out mapping, geological and glaciological investigations of the Kraul Mountains (or Vestfjella, as the Norwegians call them) in western Queen Maud Land. Thore Winsnes (geologist and leader; *see* **Winsnesfjellet**) Audun Hjelle (geologist), Torbjørn Lunde (glaciologist), Dag Norberg (topographer), Ola Steine (geodesist), and Kåre M. Bratlien (radio operator). They were taken from McMurdo Station to the Kraul Mountains on Nov. 22, 1968, by U.S. transport, and returned on Jan. 20, 1969, a successful expedition. Camp Norway I was established.

Norwegian Antarctic Expedition 1970-71. The Norsk Polarinstitutt sent this expedition to Antarctica, transportation provided by the USA. A 6-man team led by Thore S. Winsnes, conducted biological, geological, and meteorological research in the area of the Sverdrup Mountains and Jutulstraumen Glacier, in Queen Maud Land.

Norwegian Antarctic Expedition 1974-75. The Norsk Polarinstitutt sent this expedition to Antarctica, on transportation provided by the USA. Thore S. Winsnes led the party of four. They studied geology and glaciology in the Ellsworth Mountains.

Norwegian Antarctic Expedition 1984-85. This Norsk Polarinstitutt expedition to Antarctica was led by Olav Orheim, on the *Andenes*. They built Tor Station.

Norwegian Antarctic Expedition 1986-87. Led by Knut Svendsen, on the *Aurora*, to Peter I Island, where they spent 11 days. Biology, glaciology, geology, mapping, and aerial photography were the disciplines studied.

Norwegian Antarctic Expedition 1989-90. Norsk Polarinstitutt sent this expedition to Antarctica, on the *Andenes*. Olav Orheim led the expedition, and Troll Station was built by Jan Erling Haugland.

Norwegian-British-Swedish Antarctic Expedition 1949-52. Abbreviated to NBSAE 1949-52, and also called the Anglo-Scandinavian Antarctic Expedition, or Anglo-Nordic Antarctic Expedition. There were Finns, too, and Australians, South Africans, and Canadians. The first truly international Antarctic expedition. It was suggested early in 1946, and Hjalmar Riiser-Larsen, who was going to lead the expedition, arrived in London in April 1947, to discuss the expedition with the Royal Geographical Society, but it was not until 1948 that the final plans were made, with John Giaever replacing Riiser-Larsen, and the *Norsel* replacing the proposed *Svalbard* as their ship. One of its main aims was to observe climatic fluctuations and compare them with those observed in the Arctic. Prof. Harald Sverdrup directed the venture, and the members of the expedition were: Capt. John Giaever (Norwegian leader), Valter Schytt (Swedish chief glaciologist and 2nd-in-command), Gordon Robin (Australian physicist, radar expert, and 3rd-in-command), Ove Wilson (Swedish medical officer), Phil Law (Australian observer), Charles Swithinbank (British assistant glaciologist, the youngest member of the expedition), Nils Jørgen Schumacher (Norwegian chief meteorologist), Alan Reece (British geologist), Schjølberg Nilsen (Swedish cook), Nils Roer (Norwegian surveyor), Peter Melleby (Norwegian dog handler and mechanic), Fred Roots (Canadian chief geologist and carpenter), Knalle Ekström (Swedish mechanic in charge of vehicles), Egil Rogstad (Norwegian chief radio operator), Gösta Liljequist (Norwegian meteorologist), and Tom Stobart (British photographer). Norway was responsible for meteorology and surveying, the UK for geology, and Sweden for glaciology. The RAF Antarctic Unit, led by Squadron Leader Brian Walford, and there for reconnaissance, consisted of 2 Auster aircraft fully equipped for the vagaries of the Antarctic. Flight Lt. Hugh Tudor was the other flyer, and the three NCO ground crew were Sgt. Peter Weston, Cpl. Leslie Quar and Cpl. William Gilbey. The expedition's ship, the *Norsel*, on her maiden voyage, was under the command of Capt. Guttorm Jakobsen (who would remain skipper throughout), and left Oslo for London, picking up the British crew. **Nov. 23, 1949**: The *Norsel* left London, bound for Cape Town. Five of the expedition members, 62 dogs (a present from Miles Clifford, governor of the Falkland Islands), and most of the equipment, traveled south on the massive Norwegian factory whaling ship *Thorshøvdi*, which had volunteered its services as it headed down to Antarctic waters for the 1949-50 whaling season. **Dec. 20, 1949**: The *Norsel* reached Cape Town, and one of the Austers was taken out of its crate and assembled, and placed on deck (almost a bad mistake, as it turned out). **Dec. 28, 1949**: The *Norsel* left the Cape, heading south, and ran into foul weather, which threatened everything aeronautic. **Jan. 6, 1950**: The *Norsel* passed Bouvet Island. **Jan. 12, 1950**: The *Norsel* met 4 whaling ships in tight snowdrifts. **Jan. 14, 1950**: The *Norsel* finally — after a delay which they knew would set them back when they got to the ice — made their rendezvous with the *Thorshøvdi*. Everyone and everything that had to be transferred was, all in a dangerous maneuver due to high swells. There were high smells too, because the *Thorshøvdi* was towing 7 whales and had 2 on deck. They had to kill 2 sick dogs, and another died (15 had to be put down on the way south), but the surviving 44 were in good shape, as were their 6000 rations of pemmican and 15 tons of whale meat. That same day the *Norsel* pressed on due south, whale meat everywhere, dogs on all the decks. **Jan. 20, 1950**: The *Norsel* crossed the Antarctic Circle. **Jan. 23, 1950**: The *Norsel* could go no farther due to the ice. **Feb. 1, 1950**: Walford flew 350 miles along the Antarctic Circle on a reconnaissance mission. While stalled in the ice for a week, and trying to find a place to land, the ship's personnel made ready their 3 U.S. military surplus M-29 Weasel tracked vehicles and other equipment. But there was time for fun, too. Aside from soccer matches, and hunting trips for seals and penguins, Rogstad became Antarctic drift ice champion over a rough and broken 2-km ski course, followed by Robin and Wilson. The Norwegians won a subsequent relay race, with the Swedes second and an Australian-Canadian team third. **Feb. 3, 1950**: They reached Cape Norvegia, but still couldn't land. Days and days of maneuvering and air reconnaissance followed. **Feb. 10, 1950**: Finally, Tudor found the spot at what was subsequently called the Quar Ice Shelf on the coast of Queen Maud Land, where the ship was unloaded of 450 tons of equipment in 8 days at Norsel Bay (now called Norsel Iceport). This was the first time a ship had ever broken through the ice off the Queen Maud Land coast. **Feb. 16, 1950**: Walford and Weston, and Tudor and Quar, made two separate exploration and photographic flights. The expedition's base, Maudheim, was built on the ice shelf. **Feb. 18, 1950**: Maudheim was ready, at least the first of two centrally-heated 24-foot-square huts was. It would later have a lab, a hydrogen plant (for balloons), and a shed for a drilling machine, all buildings connected by protected corridors. Electric lights everywhere. Several radio sets, no gramophone (by choice). Smoking was allowed, but not many of the expeditioners smoked. **Feb. 20, 1950**: The *Norsel*, with the RAF unit, left for Cape Town, just getting out in time before the ice closed in (she damaged her steering gear in the dynamite explosions), and leaving 15 men for the winter party, not 14 as originally intended. Nilsen, the cook, was sent home, sick, and was replaced by a crew member from the *Norsel*, John Snarby. In addition, Cpl. Quar was given permission by the RAF to stay, as it was thought his radio skills would come in useful. There were now 6 Norwegians, 5 Britons (as it were, given Roots, the Canadian), and 4 Swedes left alone on the ice — Giaever, Schytt, Robin, Roer, Quar, Snarby, Liljequist, Roots, Wilson, Swithinbank, Melleby, Schumacher, Reece, Ekström, Rogstad, the first time anyone had ever wintered-over in the very cold Queen Maud Land. **March 7, 1950**: The *Norsel* made it back to Cape Town. **March 25, 1950**: The 4 RAF lads made it back to Southampton on the *Warwick Castle*. During the 1950 winter the 15 men in Antarctica practiced dogsledge rides, they continually worked on the Weasels, and several puppies were born. Reece and Roots sledged 80 km SE toward the mountain ranges looking for a place to establish their secondary base. Radio operator Rogstad con-

structed a 15-meter ski-jump, Morse Hill, down by the landing place, and competitions were soon under way. The puppies took to following the competition, and two of them fell into crevasses. Dr. Wilson went down 150 feet to rescue them. Meanwhile, in Harstad, the *Norsel* was being overhauled ready to set out from Oslo to re-supply the expedition and also to make an air photogrammetric map of the coastline of Queen Maud Land between 15°E and 20°W. **Oct. 5, 1950**: A sledge party set out, under Schytt, with accompanying Weasels, heading SW. They got 300 km, laying depots en route, and returned after a 42-day trip in which they laid 138 cairns. **Nov. 15, 1950**: The *Norsel* sailed from Harstad. **Dec. 18, 1950**: Three sledging parties set out for the interior. The first consisted of Robin and Melleby; the second of Schytt, Wilson, and Swithinbank; and the third of Roer, Roots, and Reece. This left 7 men manning Maudheim. **Dec. 21, 1950**: The *Norsel* left Cape Town, heading south, with Professor Sverdrup aboard. **Dec. 29, 1950**: The *Norsel* got to 59°S. **Dec. 30, 1950**: In the early morning the *Norsel* hit the pack ice in 65°S. **Jan. 6, 1951**: Around 8 in the evening there was a knock at the only window at Maudheim not covered by snow, and a strange voice asked the 7 very isolated men inside, "Is anyone at home?" The new faces (aside from Sverdrup) included: John Ellis Jelbart, a 24-year-old Australian physicist here as assistant glaciologist; Brian Roberts of the Scott Polar Research Institute; Stig Hallgren and Curt Jonsson (Swedish film operators); Sigvard Kjellberg (photographer), Lt. R.R. Foster, RN., Bjarne Lorentzen (cook), and much additional equipment. The Swedish Air Force party of 5 who were to do the photo flights in the 2 new seaplanes was led by Capt. Reinhold von Essen, and included Kåre Friis-Baastad (leader of the mapping team; he had the most apt name in Antarctic history), and Anders Jacobsen. **Jan. 29, 1951**: One of the photo seaplanes crashed on landing. Friis-Baastad and Liljequist were unhurt, but it spelled finis to an unsuccessful mission — the weather was simply too bad for air photography. **Jan. 30, 1951**: The *Norsel* left, taking all but the wintering-over party, which consisted of Giaever, Hallgren, Jelbart, Ekström, Quar, Robin, Melleby, Schytt, Wilson, Reece, Swithinbank, Roer, Roots, and Lorentzen. **Feb. 23, 1951**: Around one o'clock in the morning, Ekström, Jelbart, and Quar died when their Weasel fell off the edge of the ice into Norsel Bay. Stig Hallgren managed to swim 200 meters to an ice floe, and survived unhurt. This loss necessitated the recall of Robin and Melleby in the middle of March. **April 4, 1951**: Schytt's sledging group arrived back. **Late May 1951**: Roer's group arrived back, after 5½ months, a record. **July 21, 1951**: Ove Wilson operated to remove Alan Reece's right eye after an accident. **Sept. 22, 1951**: Two sledge parties, comprising 5 men in all, left Maudheim. **Oct. 18, 1951**: The seismic party, under Robin, left with 2 snow tractors, 3 dog teams, and 4 men. Only 5 men remained at Maudheim. Meanwhile the *Norsel* was coming back again, still commanded by Capt. Jakobsen, and with a Saphir airplane on board. **Early Nov. 1951**: In the English Channel, Lt. Robert R. Higgins, RN, was hurt while on deck of the *Norsel*, and taken to Plymouth. **Nov. 27, 1951**: Schytt and Wilson returned from the interior. **Dec. 1, 1951**: The *Norsel* arrived in Cape Town. Higgins rejoined the expedition. **Dec. 5, 1951**: The *Norsel* left Cape Town. **Dec. 16, 1951**: The *Norsel* crossed the Antarctic Circle. **Dec. 22, 1951**: The *Norsel* arrived after a fight with the ice, during which dynamite had to be used. The Swedish flyers, under Capt. von Essen, were back again, a group that included photographers Helge Skappel and "Nisse" Nilsson, and a crewman named Jegestad. Aake Hellström also came, as did Lt. David Blair, RN. **Dec. 31, 1951**: Giaever had his 50th birthday. **Jan. 1952**: Roots and Reece got back from their sledging trip, about the time Melleby and Swithinbank's Weasel party got back. Meanwhile the *Norsel* mapped the coastline. **Jan. 15, 1952**: They left Antarctica. 50 (all but 4) of the dogs had had to be killed before they left Maudheim, as they were suffering from an epidemic disease. The last event there had been a ski jump competition, won by Thorleif Kristensen of the *Norsel*; 2nd place was a tie between Capt Jakobsen himself and Rogstad; 4th was Jegestad; then came Skappel, Melleby, Blair, Nilsson, von Essen, and Higgins. **Feb. 18, 1952**: Giaever and several other members of the expedition (Roer, Liljequist, Melleby, Rogstad, Schumacher, Wilson, Skappel, Hallgren, Roots, Reece, Swithinbank, Robin, and the journalist Halvdan Hydle) landed in Southampton, on the *Venus* from Tenerife. Much exploration of Queen Maud Land had been carried out from Maudheim and from a subsidiary base set up 185 miles inland. Land traverses and aerial photography covered an area of 138,000 square miles of Queen Maud Land, the territory claimed by Norway in 1939.

Norwegian South Pole Expedition. 2000-01. A two-man expedition, Rolf Bae and Eirik Sønneland. **Oct. 20, 2000**: They left Troll Station, in Queen Maud Land, where they had just wintered-over. They were on skis, each pulling a sledge. **Dec. 20, 2000**: They arrived at the Pole. **Feb. 5, 2001**: They arrived at Williams Field, McMurdo Station, rather than going back to Troll Station. They had traveled 3800 km unsupported. This was unprecedented. They stayed at Scott Base. **Feb. 13, 2001**: They were picked up by the *Akademik Shokalskiy* and shipped to NZ. **Feb. 24, 2001**: They arrived in NZ. **Feb. 28, 2001**: They flew out of Christchurch, going by way of Singapore, Frankfurt, and Oslo. **March 1, 2001:** They arrived back at Stavanger in triumph.

Norwegian Whaling Expedition 1930-31. An expedition for the Antarctic Whaling Company out of Tønsberg, led by Otto Borchgrevink in the *Antarctic* (the 2nd ship, at least, with that name). It mapped the coast of Antarctica between 51°30' E and 59°E. On Jan. 14, 1931 they discovered Aker Peaks.

Norwood Scarp. 68°50' S, 65°23' W. A well-defined escarpment, 17.5 km long in a N-S direction, and rising to 1525 m at its highest, it forms part of the E flank of Weyerhaeuser Glacier, on the W side of Earnshaw Glacier, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially on Sept. 28, 1940, during USAS 1939-41. Re-photographed aerially on Aug. 14, 1947, by Fids from Base E. Roughly surveyed from the ground by FIDS in Dec. 1958 and again in Nov. 1960. Named by UK-APC on Aug. 31, 1962, for English mathematician Richard Norwood (1590-1675), navigation pioneer. US-ACAN accepted the name later in 1962.

Nøst Island. 67°37' S, 62°41' E. About 300 m long, 3 km WSW of Evans Island, in the S part of Holme Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Nøstet (i.e., "the boat shed"). US-ACAN accepted the name Nøst Island in 1961.

Nostoc Flats. 78°03' S, 163°41' E. A small, flat, glacial outwash plain, the surface of which is covered with the algae Nostoc. The feature is located E of the S lobe of Joyce Glacier, on the Scott Coast of Victoria Land. Named by NZ-APC in 1994. US-ACAN accepted the name in 1999.

Nostoc Lake. 80°24' S, 30°05' W. An ice-covered meltwater lake, 1.5 km SW of Mount Provender, in the NW part of the Shackleton Range. Surveyed and mapped by BCTAE on Oct. 11, 1957, when the expedition's ski-equipped Otter landed on the lake, and named by them for the freshwater algae Nostoc found growing here. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Pico Notable *see* [2]**Noble Peak**

Caleta Noto *see* **Shirreff Cove**

Mount Notre-Dame de Lorette *see* **Mount Lorette**

Nottage Ridge. 77°27' S, 162°06' E. To the N of Mount Peleus, it separates Baumann Valley from Sanford Valley, in the E part of the Olympus Range, in Victoria Land. Named by US-ACAN in 1997, for George William "Billy" Nottage, topographic engineer, a member of the 1971-72 USGS field party that established a network of horizontal and vertical control in support of compilation of topographic maps at the scale of 1:50,000 of areas of the McMurdo Dry Valleys bounded by 77°15' S and 77°45' S and between 160°E and 164°E.

Nottarp Glacier. 82°37' S, 162°54' E. A small glacier flowing eastward into Lowery Glacier just S of Mount Damm, in the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Frankfurt glaciologist Klemens J. Nottarp (b. Oct. 1928. d. Sept. 22, 1999), who was a usarp on the Ross Ice Shelf, 1962-63 and 1965-66.

Cabo Notter *see* **Notter Point**

Notter Point. 63°40' S, 59°12' W. A rocky point, the E point of a broad peninsula projecting out to sea for about 21 km, 10 km NE of Mount Kjellman, it marks the SW entrance

point of Bone Bay, Trinity Peninsula. Charted in 1902 by SwedAE 1901-04. Re-surveyed by ArgAE 1952-53, and named by them as Cabo Notter, for Sargento Mayor de Marina Tomás Nother (or Notter), Argentine naval officer who served with Almirante Brown during the war of independence against the Spanish, and who died on his schooner *Santísima Trinidad* during the battle of Arroyo de la China, on March 28, 1814. That name was accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. However, it also appears on a 1954 Argentine chart as Cabo Kjellman, confused with Cape Kjellman. Re-surveyed by Fids from Base D in 1960-61. UK-APC accepted the name Notter Point on Feb. 12, 1964, and US-ACAN followed suit that year.

Mount Novak. 77°17' S, 161°17' E. An elongated mountain, rising to about 1400 m, about 1.1 km S of Mount Leland, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Giles Novak, of the department of physics and astronomy, at Northwestern University, in Illinois, USARP astrophysicist at Pole Station for 11 summer seasons between 1992 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Novasio Ridge. 72°03' S, 168°22' E. A long, ice-covered ridge separating the lower portions of Freimanis Glacier and Man-o-War Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Richard A. Novasio (b. Sept. 3, 1929, Jackson, Wyo. d. Dec. 16, 2003, Baltimore), USN, radioman who wintered-over at Hallett Station in 1957. NZ-APC accepted the name.

Otrog Novatorov. 80°43' S, 23°00' W. A spur on the E side of the nunatak the Russians call Gora Stahanova, in the E part of the Read Mountains, in the Shackleton Range. Named by the Russians.

Nove Peak. 63°33' S, 58°34' W. An ice-covered peak, rising to over 1000 m, in the S part of Marescot Ridge, 1.07 km N of Crown Peak, 6.57 km NE of Corner Peak, 6.8 km S by E of Marescot Point, and 4.52 km WNW of Lardigo Peak, it surmounts the head of Malorad Glacier to the SW, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient Roman town of Nove, in northern Bulgaria.

Novel Rock *see* **Nueva Rock**

Mount Noville. 86°27' S, 146°10' W. Rising to 2410 m, between Van Reeth Glacier and Robison Glacier, 6 km E of Mount Bowlin, in the Queen Maud Mountains. Discovered by Quin Blackburn's party in Dec. 1934, during ByrdAE 1933-35. Named by Byrd for G.O. Noville. US-ACAN accepted the name in 1947.

Noville, George Otto "Rex." b. April 24, 1890, Cleveland, O., son of hat manufacturer Otto J. Noville and his wife Neille Paul. A naval flying ace during World War I, in 1919 and 1920 he was an air mail pilot. As a USN lieutenant he was the engineer on the *America* during Byrd's historic flight from New York to Paris in 1927. In 1928, now a lieutenant commander, he was appointed technical director of Union Air Lines, and lived in NYC with his considerably older Virginian wife, Lilian. He was executive officer of ByrdAE 1933-35, Byrd's chief aide, and one of the shore party. He was in charge whenever Byrd wasn't there. From 1938 to 1942 he owned an aeronautical engineering consulting firm in Los Angeles, and, also in L.A., from 1942 to 1944 was general manager of Cargair. In 1944 he reorganized flight operations in South America for petroleum companies, and in 1946 became general manager of the Flying Tiger Line (Skyway Freight Corporation). In 1958 he moved to Chulavista, near Guadalajara, Mexico, and in Sept. 1962 married for the 5th time, to Ruth Reading. 4 months later, on Jan. 3, 1963, he shot himself at his home.

Noville Mountains *see* **Hudson Mountains**

Noville Peninsula. 71°56' S, 98°35' W. A high, ice-covered peninsula, about 50 km long, forming the E flank of Peale Inlet, between that inlet and Murphy Inlet to the W, on the N side of Thurston Island. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47, and plotted in 71°50' S, 98°46' W. Named by US-ACAN in 1952, for G.O. Noville. It has since been replotted.

Novocin Peak. 76°01' S, 69°33' W. Rising to about 1305 m, in the Bean Peaks, near the SE end of the group, in the Hauberg Mountains (it is, in fact, the most southerly peak in the Haubergs), in Ellsworth Land. Discovered aerially by RARE 1947-48. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Norbert W. Novocin (b. May 21, 1936), USARP meteorologist at Byrd Station in 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Novolazarevskaya Station. 70°46' S, 11°50' E. Known as "Novo," and named for Mikhail Lazarev, it was a Soviet (now Russian) scientific station opened 100 km inland, on the extreme SE tip of the Schirmacher Hills, near the Queen Mary Mountains, on the edge of the Lazarev Ice Shelf, about 80 km from the Princess Astrid Coast of Queen Maud Land, on Jan. 18, 1961, by SovAE 1960-61 (the Sixth Soviet Antarctic Expedition). On April 30, 1961, Dr. L.I. Rogozov removed his own appendix. **1961 winter**: Vladislav Iosifovich Gerbovich (leader). The station comprised living quarters, a mess, power station, and service space, as well as space for scientific studies. **1962 winter**: Vyacheslav Mikhaylovich Rogachev (leader). **1963 winter**: Vyacheslav Grigor'yevich Aver'yanov (leader). **1964 winter**: Nikolay Nikolayevich Yeremin (leader). **1965 winter**: Yuriy Aleksandrovich Kruchinin (leader). **1966 winter**: Viktor Federovich Zakharov (leader). **1967 winter**: Oleg Konstantinovich Sedov (leader). **1968 winter**: Vladimir Alaksandrovich Samushkin (leader). **1969 winter**: Gennadiy Nikolayevich Sergeyev (leader). **1970 winter**: Vladimir Alaksandrovich Samushkin (leader). **1971 winter**: Vladimir Alaksandrovich Spishkin (leader). **1972 winter**: Vladilen Vasil'yevich Izmaylov (leader). **1973 winter**: Yuriy Mikhaylovich Zusman (leader). **1974 winter**: Valeriy Fedorovich Dubovtsev (leader). **1975 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1976 winter**: Lev Ivanovich Yeskin (leader). **1977 winter**: Yuriy Alekseyevich Yevtod'yev (leader). **1978 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1979 winter**: Valeriy Dmitriyevich Klokov (leader). **1980 winter**: Igor' Antonovich Korzhenevskiy (leader). **1981 winter**: Vasiliy Semenovich Krylov (leader). **1982 winter**: Gennadiy Petrovich Khokhlov (leader). **1983 winter**: Igor' Mikhaylovich Simonov (leader). **1984 winter**: Vladimir Yevgen'yevich Shirshov (leader). **1984-85 summer**: The compacted snow runway was completed. **1985 winter**: Gennadiy Ivanovich Sergeyev (leader). **1986 winter**: Aleksandr Nikolayevich Shermet'yev (leader). **1987 winter**: Gennadiy Petrovich Khokhlov (leader). **1988 winter**: Vladimir Yevgen'yevich Shirshov (leader). **1989 winter**: Yevgeniy Nikolayevich Uranov (leader). **1990 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1991 winter**: Vladimir Makarovich Loginov (leader). **1992 winter**: Yevgeniy Nikolayevich Pugachev (leader). **1993 winter**: Valeriy Anatolevich Fedorov (leader). **1994 winter**: Nikolay Kuz'mich Dmitriyev (leader). **1995 winter**: Viktor Mikhaylovich Venderovich (leader). **1996 winter**: Viktor Alekseevich Smirnov (leader). **1997 winter**: Aleksandr Vlaimirovich Kondratyev (leader). **1998 winter**: Aleksandr Leonidovich Kochin (leader). **1999 winter**: Vladimir Sergeyevich Bolshakov (leader). **2000 winter**: Yevegeniy Nikolayevich Pugachev (leader). It was moved 80 km inland, on a lake in the extreme SE tip of the Schirmacher Oasis, and was rebuilt on rock, 102 m above sea level, and is now located 5 km from India's Maitri Station. It has 9 buildings, and several smaller storage buildings, and can accommodate 70 persons in summer and 30 in winter. The chief's house is known as "The White House." The station has an ice airfield, 15 km to the S, used between Dec. 1981 and 1991, mainly as an alternative to Molodezhnaya Station. In 1994-95 the old site was dismantled, and cleaned up, as per regulations.

Novosad Island. 70°42' S, 167°29' E. Small and ice-covered, it is one of the Lyall Islands, 6 km NNE of Cape Dayman, off the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Charles Louis Novosad, Jr. (b. Dec. 19, 1930, Bryan, NM. d. April 29, 2008, Albuquerque), medical officer at McMurdo Base in 1957. He was in the U.S. Navy for 12 years.

Cape Novosil'skiy. 68°37' S, 154°46' E. On the ice coast of Oates Land, just W of Slava Bay. Photographed aerially in Jan. 1947, during OpHJ 1946-47, and again by SovAE 1956, who named it Mys Novosil'skogo, for Pavel Novosil'skiy (see below), and plotted it in 68°48' S, 155°02' E. The Australians not only translated it, they replotted it.

Novosil'skiy, Pavel Mikhaylovich. Naval lieutenant on the *Mirnyy* during von Bellingshausen's expedition of 1821-22. He was later a teacher at the Naval Cadet Corps.

Kupol Novosil'skogo. 65°50' S, 100°35' E. A dome in the N part of the Shackleton Ice Shelf, off Queen Mary Land. Named by the Russians for Pavel Novosil'skiy (see above).

Mys Novosil'skogo *see* **Cape Novosil'skiy**

Kupol Novyj *see* **Novyj Island**

Novyj Island. 70°50' S, 2°50' W. Also called Eskimo Ysbult. The larger and southern of two similar ice-covered islands which mark the border of the Jelbart Ice Shelf and Fimbul Ice Shelf, on the coast of Queen Maud Land. The summit of this island rises to about 250 m above the surrounding ice shelf. Partly delineated during NorAE 1956-60, and mapped by SovAE 1961. Named Kupol Novyj (i.e., "new dome") by the Russians in 1961. US-ACAN accepted the name Novyy Island in 1970, but have since amended that to Novyj Island, under the mistaken impression that that spelling is more accurate.

Novyy Island *see* **Novyj Island**

Mount Nowak. 61°57' S, 57°55' W. Rising to between 300 and 400 m above Bolinder Bluff, Venus Bay, on the N side of King George Island, in the South Shetlands. Named by the Poles in 1984, for Henryk Nowak, chief radioman at Arctowski Station in 1980-81.

Nowell, Samuel. Skipper of the London sealer *Livonia*, in the South Shetlands for the 1820-21 and 1821-22 seasons.

Nowland, James *see* **USEE 1838-42**

Mount Noxon. 72°08' S, 100°06' W. In the Walker Mountains, at the head of Myers Glacier, on Thurston Island. Delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Sgt. (later 2nd Lt.) Winfred Charles Noxon (b. May 20, 1921, NY. d. Nov. 14, 1965), U.S. Marine Corps, VX-6 navigator on photographic flights over this area in Jan. 1960.

Noxon Cliff. 77°32' S, 163°05' E. A cliff, trending E-W, at the S end of Flint Ridge, in the Asgard Range of Victoria Land, it encloses the N flank of the Commonwealth Glacier, where it rises from between 50 and 150 m above the glacier. Named by US-ACAN in 1997, for John Franklin Noxon III (b. July 7, 1928, Pittsfield, Mass. d. Jan. 1985; son of eminent, and rather notorious at one time, lawyer John Franklin Noxon, Jr.), of the NOAA's Aeronomy Laboratory, who pioneered the technique of visible spectroscopy for measurements of stratospheric trace gasses, particularly nitrogen dioxide. By 1975 he had begun making measurements of nitrogen dioxide column as a function of latitude, and was surprised to discover an abrupt decrease in the amounts in Arctic air as compared to values observed at lower latitudes. This unexpected phenomenon, with implications for later ozone depletion studies, became known as the Noxon Cliff. In 1978, Noxon sailed on the *Hero* from Ushuaia, and quickly confirmed that a "cliff" in nitrogen dioxide is also found in the Antarctic atmosphere. NZ-APC accepted the name.

Noyes, Joseph. b. Nov. 27, 1788, Westerly, RI, son of Col. Thomas Noyes and his wife Lydia Rogers. On March 30, 1814, in Stonington, Conn., he married Martha Champlin Thompson. He was 2nd mate on the *Seraph* during the Palmer-Pendleton Sealing Expedition of 1829-31. William Noyes was 1st mate, and Ben Pendleton was captain. In 1831 he sailed with William Noyes around the Horn to Valparaíso on a fishing expedition in the *Independence*, but was persuaded by his brother, Thomas, to give up the sea. He married, as his second wife, Prudence Corey. He died on July 6, 1854, in Caton, NY.

Noyes, William. b. Nov. 30, 1801, Stonington, Conn., son of Nathaniel Noyes and his wife Mary Saunders. 1st mate on the *Seraph*, in Antarctic waters in 1829-31. In 1831 he skippered the *Independence* around the Horn to Valparaíso, on a fishing expedition. He was 1st mate on the *Tampico*, in the South Atlantic, in 1834, and skipper of the *Betsey* on two sealing voyages in the Pacific, in 1838 and 1840. On Feb. 14, 1843, he married a relative, Clementina A. Noyes, and died on Dec. 29, 1872.

Sommet Nozal *see* **Nozal Hill**

Nozal, Jacques-Louis-Charles. b. Aug. 31, 1885, Paris, son of landscape painter Victor-Alexandre Nozal and his wife Jeanne Valentine Céline Bousquet. A painter himself, a great friend of the Grand Duchess Victoria, he was married to Julie, the daughter of the great enameler Paul Grandhomme, and a well-known wood engraver in her own right. He was a merchant marine officer when he was taken on as an able seaman on the *Pourquoi Pas?* for FrAE 1908-10, and was promoted to lieutenant during the expedition. After the voyage, he moved to Australia, became a ship's captain and a flyer, and was in Australia when his old comrade Rallier du Baty pulled into Melbourne on the *La Curieuse*. After Jean Loranchet left in mid-1914, to go back to France, Nozal took over as skipper of the *La Curieuse*. (Émile d'Anglade came aboard too, as cook). They were all in Hobart in August when they learned that war had broken out, and it was Nozal who financed the return of the entire crew, including himself, to Paris (d'Anglade didn't go back to France. He would go to the Antarctic on the *Aurora*). Nozal and du Baty left Sydney together on the *Niagara*, in Jan. 1915, and, via Vancouver, Halifax (Nova Scotia), Liverpool, London, and Le Havre, finally reported for duty in Paris, where they both joined up as army officers based at the maritime aviation center at Dunkirk. Du Baty named Anse Nozal after him, in the Kerguélens. Nozal died on Jan. 13, 1932, at Saint-Briac.

Nozal Hill. 65°11' S, 63°57' W. An ice-covered hill rising to 620 m (the British say about 800 m), 1.5 km N of Mount Shackleton, and midway between Régnard Peaks and Blanchard Ridge, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly mapped in 1909, by FrAE 1908-10, and named by Charcot as Sommet Nozal, for Jacques Nozal. It appears as such on the expedition's charts of 1912. It appears as Nozal Peaks on a 1943 U.S. Hydrographic Office chart. US-ACAN accepted the name Nozal Peak in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Following FIDASE aerial photography in 1956-57, it was found by FIDS cartographers to be a hill, rather than a peak, and UK-APC redefined it as Nozal Hill on July 7, 1959. US-ACAN followed suit in 1960.

Nozal Peak(s) *see* **Nozal Hill**

NOZE *see* **National Ozone Expedition**

The Nozzle. 79°55' S, 159°05' E. A relatively narrow defile E of Bastion Hill, at the N side of the lower Darwin Glacier, which flows through this gap, and causes the ice to bank up on the upstream side, in the vicinity of nearby Diamond Hill. Named descriptively by the Darwin Glacier Party of BCTAE 1956-58. US-ACAN accepted the name in 1965.

NSF *see* **National Science Foundation**

Mount Nubian. 78°15' S, 166°25' E. A sharp point of glossy and very black basalt, at the end of a ridge formed by a lava flow, 1.5 km SE of Mount Aurora, on Black Island, in the Ross Archipelago. Named descriptively (and in association with Black Island), by NZGSAE 1958-59, the Nubians being a very black race of people in Upper Egypt in the ancient days. US-ACAN accepted the name in 1963.

Nuclear power. **1955**: The idea was conceived to build a nuclear power plant in Antarctica. **Aug. 1960**: Authorization came from the U.S. Congress to construct Antarctica's first and (as it turned out) only nuclear power plant, at McMurdo Station. It was a Portable Medium Power Range plant, and was the 3rd in an AEC series (hence its name PM-3A), prefabricated at the Martin Marietta Corporation's plant in Baltimore. A pressurized-water reactor, it came in a series of 30-foot modules, and its function was to produce power and heat for the largest Antarctic base. **1961**: Capt. Herb Whitney supervised the site preparation for the plant, halfway up Observation Hill, on Hut Point Peninsula, Ross Island, in the immediate vicinity of McMurdo. Julian P. Gudmondson, USN, blasted the foundation. **Dec. 12, 1961**: PM-3A arrived at McMurdo, and was duly set up on Observation Hill. **March 3, 1962**: PM-3A went critical. **July 10, 1962**: PM-3A started producing power for the station, generating an electrical output of 1800 kilowatts gross. It was operated by Navy men under the direction of the Martin Marietta Corporation. The 1962 wintering-over crew for PM-3A that first season were (all Navy, unless otherwise stated): Lt. Thomas J. Mitchell (officer in charge), Lt. Winfred C. Mathers (plant superintendent), Albert K. Black, Walter P. Brooks (Army), Dale R. Bruce, Roger M. Dubay, Dale L. Fergusen (Army), John B. Fleming, Raymond B. Gabbert, William E. Gaberlein, Stanley F. Kozikowski, Donald H. Lowe (Army), Paul R. Maschka (USAF), James M. McCann, Howard J. Miller, Huey W. Miller, Herbert W. "Herb"

Pollock, Sidney T. Spencer, Byron A. Stierer (USAF), and Donald O. Williams (Army). Bob D. Redman gave summer support. All nuclear wastes were returned to the USA for dumping, as per the rules of the Antarctic Treaty. **Oct. 1, 1962**: A plant at Byrd Station was canceled due to the cost and predicted inefficiency. **1963 winter**: Officer-in-charge was Lt. Ronald P. Cope. **May 27, 1964**: The Naval Nuclear Power Unit took over the running of PM-3A. Officer-in-charge for the winter was Lt. Charles E. Fegley III. **Nov. 21, 1964**: Replacement of the first core began. **Dec. 26, 1964**: The first core was replaced. **1965 winter**: Officer-in-charge was Lt. Cdr. Willard G. Shafer. **1966**: It finally became reliable. Officer-in-charge that winter was Lt. Thomas L. Boennighausen. The rest of the Nukes that winter were: Lt. (jg) J.W. King, John P. Fleming, J.E. Robertson, Jerry Schloredt (*see* **Schloredt Nunatak**), R.J. Whiteman, C.E. Reed, M.E. Ramsey, S. Brown, M.E. Adams, R.J. Moffatt, J.E. Ray, R.T. Plichta, H.L. Persell, G.V. O'Connor, E.H. Hoffmann, R.B. Hair, E.R. Funkhouser, J.W. Gannon, Dale L. Andrews, D.J. Perrotti, Robby J. Robson, Rex A. Hoover, Russ F. Anderson, and M.H. Bell. **1967 winter**: Officer-in-charge was Lt. Cdr. L.K. Donovan. **1968 winter**: Officer-in-charge was Lt. Cdr. A.D. Kohler, Jr. **1969 winter**: Officer-in-charge was Lt. Cdr. Jim Kurtz. **1970 winter**: Officer-in-charge was Lt. Cdr. Ralph R. Reynolds. **1971 winter**: Officer-in-charge was Lt. Cdr. Albert A. Arcuni. **Sept. 1972**: Although for 10 years it had run perfectly safely, and had produced 78 million kilowatt hours of electricity, and run at 78 percent availability, it had had fires, leakages, and shutdowns, but now big problems started to happen, and PM-3A was deactivated, but mainly because it was no longer economical. Officer-in-charge that winter was Lt. Cdr. L.R. Bohning. **Oct. 1973**: Decommissioning began. Officer-in-charge that winter was Lt. Cdr. Tom C. Crane. **1974 winter**: Officer-in-charge was Lt. Cdr. Tom C. Crane again. **1975 winter**: Officer-in-charge was Lt. John V. Filson. **1976**: The plant was finally dismantled. Over 390,000 cubic feet (70 tons) of contaminated rock had to be shipped back to the Port Hueneme, Calif., for dumping. Officer-in-charge that winter was Lt. John V. Filson again. **1977 winter**: Officer-in-charge was Lt. Cdr. C.A. Johannesmeyer. **1978 winter**: Officer-in-charge was Lt. Cdr. C.A. Johannesmeyer again. **May 25, 1979**: The U.S. Department of Energy finally released the site as safe. Officer-in-charge that winter was Lt. M.E. Foster.

The *Nuestra Señora de la Visitación*. One of the fleet of 3 ships commanded by Gabriel de Castilla in southern waters in 1603.

The *Nuestra Señora de las Mercedes*. Gabriel de Castilla's flagship on his 1603 visit to southern waters.

Nuestra Señora de Luján Refugio. 64°08' S, 60°56' W. Argentine refuge hut on the Danco Coast, on the W coast of Graham Land, opened on April 29, 1979.

Roca Nueva *see* **New Rock, Nueva Rock**

Ensenada Nueva Bedford *see* **New Bedford Inlet**

Seno Nueva Bedford *see* **New Bedford Inlet**

Bahía Nueva Plymouth *see* **New Plymouth**

Nueva Rock. 67°44' S, 69°10' W. A submerged rock S of Cono Island, and W of Cox Reef, off the SW end of Adelaide Island. Roughly surveyed by ArgAE 1956-57, and named by them as Roca Nueva (i.e., "new rock"). That is what the Argentines still call it. Recharted by an RN Hydrographic Survey unit on the *John Biscoe* in 1963. UK-APC accepted the somewhat translated name Novel Rock on Feb. 12, 1964, it appearing as such on a British chart of that year. US-ACAN accepted the name Nueva Rock later in 1964.

Cerro Nueve de Julio. 68°26' S, 66°42' W. A hill immediately to the E of Mount Lupa, between Romulus Glacier and Martin Glacier, 8 km E of the head of Rymill Bay, on the Fallières Coast, on the W coast of Graham Land. Named by the Argentines, for the date of the Argentine declaration of independence (the equivalent to the USA's July 4).

Glaciar Nueve de Julio *see* **Nueve de Julio Glacier**

Nueve de Julio Glacier. 68°26' S, 66°52' W. A broad glacier flowing southwestward from Black Thumb and adjoining ridges, into the N part of Bertrand Ice Piedmont, at Rymill Bay, on the Fallières Coast, on the W coast of Graham Land. Named by the Argentines in 1978, as Glaciar Nueve de Julio, to commemorate their Independence Day (July 9). US-ACAN accepted the name Nueve de Julio Glacier.

The *Nuevo Alcocero*. A 2850-ton, 100.62-meter Spanish Fisheries vessel, skippered by Manuel Ríos Caeiro, and with a 51-man crew, which, along with the *Pescapuerta IV*, took two expeditions to Antarctica in 1986-87, one to King George Island to scout out the new Rey Juan Carlos I Station. and the other an oceanographic expedition (*see* **Spain** for details).

Numbat Island. 67°34' S, 47°58' E. A small island, about 3 km ESE of Pinn Island, in the W part of Casey Bay, off the coast of Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956. Named by ANCA for the numbat, the Australian banded anteater. US-ACAN accepted the name in 1965.

Nunakols. A nunakol is a nunatak rounded by glacial erosion, or, put another way, a rounded island of rock in a glacier.

Islotes Nunatak Chico. 64°39' S, 64°16' W. A group of small islands just to the SE of the Rosenthal Islands, W of Anvers Island, in the Palmer Archipelago. Named by the Argentines.

Nunataks. Isolated mountain peaks rising from the bedrock and poking through the surface of the ice. They usually occur near the edge of an ice sheet.

Punta Nunes *see* **Nuñez Point**

Pointe Núñez *see* **Núñez Point, Takaki Promontory**

Punta Núñez *see* **Nuñez Point**

Nuñez Point. 65°33' S, 64°15' W. A point forming the W extremity of Takaki Promontory, 5.5 km SW of Mount Waugh, between Beascochea Bay and Leroux Bay, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Pointe Núñez, for Capitán de navío Guillermo Núñez of the Argentine Navy (he was, interestingly, aside from being director of armaments for the Argentine ministry of marine, technical director and one of the founding members of the Compañía Argetina de Pesca, a real conflict of interest, so to speak). US-ACAN accepted the name Nuñez Point in 1950 (one accent mark was quite enough). The Chileans call it Punta Núñez. The Argentines call it Punta Nunes, as the captain's name is also very definitely seen spelled as Nunes.

Nunn Island. 74°17' S, 117°00' W. An ice-covered island, 15 km long, within the Getz Ice Shelf, just S of Wright Island, along the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Rear Admiral Ira Hudson Nunn (b. March 16, 1901, Camden, Ark. d. Jan. 15, 1998, Falls Church, Va.), World War II naval hero and legal adviser to the Navy during IGY (1957-58).

Nupkins Island. 65°26' S, 65°41' W. An island, NW of Pickwick Island, and 5 km W of Sawyer Island, in the Pitt Islands, in the Biscoe Islands. Named by UK-APC on Sept. 21, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. It was named by ArgAE (probably 1963-64), as Isla Comodor de Quito, after the early Patagonian sealing schooner *Comodor de Quito* (not in actual Antarctic waters, however). It appears as such on a 1964 Argentine chart, and was the name accepted by the 1970 Argentine gazetteer.

Nupshamrane *see* **Nupshamrane Peaks**

Nupshamrane Peaks. 71°57' S, 3°20' W. Just E of the Klumpane Peaks, and N of Flårjuven Bluff, on the W side of Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Nupshamrane (i.e., "the high peaks"). US-ACAN accepted the name Nupshamrane Peaks in 1966.

Nupskammen *see* **Nupskammen Ridge**

Nupskammen Ridge. 72°09' S, 2°19' E. A ridge of jagged, mostly snow- and ice-covered peaks (including Veslenupen Peak and Stornupen Peak), 13 km long, N of Von Essen Mountain, in the W part of the Gjelsvik Mountains, in Fimbulhimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Nupskammen (i.e., "the peak crest"). US-ACAN accepted the name Nupskammen Ridge in 1966.

Nupskåpa *see* **Nupskåpa Peak**

Nupskåpa Peak. 72°44' S, 0°16' E. An ice-

capped peak rising to 2450 m, just S of Reece Valley, in the southernmost part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Nupsskåpa (i.e., "the peak cloak"). US-ACAN accepted the name Nupsskåpa Peak in 1966.

Nupsskåka *see* **Nupsskåka Valley**

Nupsskåka Valley. 71°58' S, 8°48' E. A small ice-filled valley on the SW side of Nupsskarvet Mountain, between that mountain and Hålisrimen Peak, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Nupsskåka (i.e., "the peak shaft"). US-ACAN accepted the name Nupsskåka Valley in 1967.

Nupsskarvet *see* **Nupsskarvet Mountain**

Nupsskarvet Mountain. 71°56' S, 8°52' E. A broad mountain at the N side of Hålisrimen Peak, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Nupsskarvet (i.e., "the peak mountain"). US-ACAN accepted the name Nupsskarvet Mountain in 1967.

Nurket *see* **Nurket Rock**

Nurket Rock. 73°25' S, 3°06' W. A rock face (the Norwegians describe it as a small rock crag) just E of Mount Hallgren, in the northernmost part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Nurket (i.e., "the pygmy"). US-ACAN accepted the name Nurket Rock in 1966.

Nursery Glacier. 81°16' S, 160°30' E. A glacier, about 30 km long, flowing S along the W side of the Darley Hills, and then E, to enter the Ross Ice Shelf just S of Cape Parr, and about 24 km N of Beaumont Bay. So named by the Northern Party of NZGSAE 1959-60 because it was on this glacier that a litter of husky pups was born. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Nurume-ike. 69°13' S, 39°40' E. A small lake in the vicinity of Dokkene Coves, just NW of Hamna Bay, on the W side of the Langhovde Hills, along the E shore of Lützow-Holm Bay, on the Prince Olav Coast Mapped by Japanese cartographers from JARE ground surveys and air photos taken between 1957 and 1962, and named by them on June 22, 1972 (name means "lake warmed by insulation").

Nusbaum, Charles Earl. b. 1902, Logansport, Ind., son of laborer Henry Nusbaum and his wife Mary. He joined the U.S. Navy on May 8, 1920, in Norfolk, Va. He married Mary Florine Turner, and they lived in Portsmouth, Va. He served as a cook 1st class on the *Bear*, during USAS 1939-41. For the 2nd half of the expedition, he was promoted to chief cook and steward. In 1949 he was living in Beverly, Mass.

Mount Nussbaum *see* **Nussbaum Riegel**

Nussbaum Bar *see* **Nussbaum Riegel**

Nussbaum Riegel. 77°40' S, 162°46' E. Also called Mount Nussbaum, and Nussbaum Bar. It is a riegel, or rock bar, across Taylor Valley, in Victoria Land, and extends from the vicinity of Sollas Glacier toward Lake Chad. Charted and named by Grif Taylor's Western Journey Party, during BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Isla Nusser *see* **Nusser Island**

Nusser Island. 65°43' S, 65°43' W. An island, about 2.5 km N of Laktionov Island, off Zubov Bay (on the E side of Renaud Island), in the Biscoe Islands. Charted by ArgAE 1956-57, it appears (unnamed) on their 1957 chart. That same season, 1956-57, it was photographed aerially by FIDASE. Named by UK-APC on July 7, 1959, for Franz Nusser (1902-1987), Austrian-born German meteorologist specializing in sea ice studies, Arctic explorer, and professor of geography at the University of Hamburg. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. The Argentines call it Isla Nusser.

Cape Nutt. 66°38' S, 108°13' E. A mostly ice-covered cape, marked by several rock outcrops with further small outcrops to the NW, it forms the W side of the entrance to Vincennes Bay. It correlates closely with the E end of what Wilkes called Knox's High Land. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Cdr. David Clark Nutt (b. June 21, 1919, Cleveland. d. Jan. 10, 2008, Hanover, NH), USNR, Dartmouth College Museum marine biologist on OpW 1947-48. He had spent years in the Arctic. ANCA accepted the name on July 22, 1959.

Nutt Bluff. 82°34' S, 51°45' W. A rock bluff rising to about 1315 m, SE of Alley Spur, on the Dufek Massif, at the very N of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66 by USGS, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by Art Ford, USGS leader of the geological field party in the Dufek Massif, 1976-77, for Constance Jane Nutt (b. 1950), Stanford geologist who was in Ford's party. US-ACAN accepted the name, and UK-APC followed suit on May 21, 1979. *See also* **Gora Polynova**.

Ny Rock *see* **New Rock**

Nybraaten, Emil Hansen. b. 1892, Norway. Whaling laborer in the South Shetlands, who died of heart failure on April 3, 1892, and was buried in the Whalers Bay Cemetery on Deception Island. This is an unlikely name. The most likely candidate is Emil Hansen, born in 1892 in Myrbraaten, in Botne, Norway, son of laborer Hans Johansen. The classic case of appending a birthplace erroneously to a Norwegian whaler's name is Anton Olsen Ula (*see under* **O**).

Nye, Daniel Butler, Jr. b. Oct. 2, 1815, Sagamore, Mass., son of Daniel B. Nye and his wife Experience Freeman Swift. He became a whaler in 1837, and on May 20, 1850, in Sandwich, Mass., he married Philena D. Nye (sic). He was skipper of the New Bedford bark *Fanny*, in South Shetlands waters for the 1852-53, season, with the *Congress* (at least part of the way). He was skipper of the *Eugenia* in 1871, when that vessel was abandoned and lost. He left the sea after that, and went into farming, with his wife. He died on Aug. 25, 1892.

Nye Glacier. 67°26' S, 67°29' W. On Arrowsmith Peninsula, it flows SW into Whistling Bay, on the Loubet Coast, on the W coast of Graham Land. Surveyed near its mouth by Fids from Base E in Sept. 1948, photographed aerially by FIDASE in 1956-57, and mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for John Frederick Nye (b. 1923), British physicist and glaciologist. US-ACAN accepted the name in 1965.

Nye Islands. 66°10' S, 110°25' E. Two small islands, between Midgely Island and Pidgeon Island, in the Windmill Islands. Photographed aerially by OpHJ 1946-47 and OpW 1947-48, and, although seen quite clearly on the photos, they were not transposed onto the charts therefrom. Named by US-ACAN in 1963, for Harvey M. Nye, meteorological electronics technician at Wilkes Station in 1959.

Nye Mountains. 68°10' S, 49°00' E. A group of mountains, about 50 km long, and between 16 and 24 km wide, trending eastward from the head of Rayner Glacier, and S of Thyer Glacier, overlooking Casey Bay, in Enderby Land. Discovered aerially by Doug Leckie (*see* **Leckie Range**) during an ANARE Beaver flight in Oct. 1956. Named by ANCA on April 29, 1958, for Percival Bartlett "P.B." Nye (1893-1985), government geologist for Tasmania, 1920-33; director of the Bureau of Mineral Resources in Australia, 1951-58. US-ACAN accepted the name in 1961.

Nygaard, H. b. Norway. Skipper of the *Fleurus*, 1924-25 and 1925-26.

Cabo Nygren *see* **Nygren Point**

Cap Nygren *see* **Nygren Point**

Cape Nygren *see* **Nygren Point**

Kap Nygren *see* **Nygren Point**

Punta Nygren *see* **Nygren Point**

Mount Nygren. 65°09' S, 63°48' W. An outstanding pointed mountain, bearing the aspect of a stark rock nunatak of pyramidal shape, rising sharply to about 1000 m near the middle of Hotine Glacier, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and again by VX-6 in 1969. Named by US-ACAN for Rear Admiral Harley D. Nygren (b. Dec. 12, 1924, Seattle), director of the National Oceanic and Atmospheric Administration Corps, 1971-81. He had been the U.S. observer attached to BAS in 1962-63, when he conducted oceanographic research in the *Shackleton*, the *John Biscoe*, and the *Kista Dan*.

In 1970 he was part of the U.S. team inspecting foreign Antarctic bases. UK-APC accepted the name on Dec. 8, 1977, and it appears in the 1980 British gazetteer.

Nygren Point. 64°23' S, 58°13' W. A rocky point, 6 km SE of Cape Broms, it forms the W entrance point of Carlsson Bay, on the SW side of James Ross Island. Discovered, surveyed, and roughly mapped in Oct. 1903, by SwedAE 1901-04, and named by Nordenskjöld as Kap Nygren, for Gottfried Leonard Nygren (b. 1849), Swedish chemist who contributed to the expedition. It appears as Cape Nygren on the English language translations of Nordenskjöld's maps, and as such on a British chart of 1921. Similarly, it has been appearing as Cabo Nygren from Nordenskjöld's day, and that was the name accepted by the Argentine gazeteer of 1970. On one of Charcot's 1912 maps it is seen as Cap Nygren. Re-surveyed by Fids from Base D in 1952. US-ACAN redefined it as Nygren Point in 1956, and it appears as such on a 1956 U.S. Hydrographic Office chart. UK-APC accepted this new name on Sept. 4, 1957. It appears on a Chilean chart of 1962 as Punta Nygren, and that was the name accepted by the 1974 Chilean gazetteer.

Nyheia *see* **Shinnan Rocks**

Nylen Glacier. 77°41' S, 161°29' E. A narrow glacier between Schlatter Glacier and Fountain Glacier, it flows S into Pearse Valley, in the Asgard Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN in 2004, for Thomas H. Nylen, USAP geologist from Portland State University, in Oregon, who studied glaciers in the area of the Taylor Valley, 1999-2003. NZ-APC accepted the name on Nov. 30, 2004.

Nylund, Walfred Andrew. Known as "Swede." b. Nov. 2, 1909, Tilden, Mich., son of farmer Andrew Nylund and his wife Amanda Karlsson, both Swedish immigrants from Finland (sic). He joined the U.S. Navy, was based at the Naval Station in San Diego, and was radioman 1st class on the *Bear*, during USAS 1939-41. For the 2nd half of the expedition, he was promoted to chief radioman. After World War II, he married a Finnish immigrant, Svea Ingegerd Ekfors-Wiklund. He retired as a lieutenant commander, and died on March 4, 1995, in San Diego.

Nyrevatnet *see* **Krok Lake**

Nyvla. 72°01' S, 26°01' E. One of the 5 nunataks that comprise the feature the Norwegians collectively call Horna, in the Sør Rondane Mountains. Name means "the crippled horn."

NZ *see* **New Zealand**

NZ-APC *see* **New Zealand Antarctic Place-Names Committee**

NZARP *see* **New Zealand Antarctic Research Program**

NZGSAE *see* **New Zealand Geological Survey Antarctic Expedition**

Ostrov O. Kocebu. 73°45' S, 73°23' W. An island off the English Coast, on the W side of Palmer Land. Named by the Russians for Otto Kocebu (Otto von Kotzebue) (1787-1846), German-Russian Arctic navigator.

Mount O. Wisting *see* **Mount Wisting**

Cape Oakeley. 71°01' S, 167°54' E. A dark, bold headland on the NE side of Quam Heights, and forming the SE side of the entrance to Smith Inlet, on the W side of Robertson Bay, on the Oates Coast of northern Victoria Land. Named in 1841 by Ross for Henry Oakeley. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Oakeley, Henry. Baptized on Dec. 29, 1816, at Oakeley, Bishops Castle, Lydham, Shropshire, son of Sir Herbert Oakeley, rector and patron of Lydham, and his wife Catherine Bolland. He was mate on the *Edinburgh*, from 1837 to 1839, then 2nd mate on the *Erebus* during RossAE 1839-43. On June 1, 1847 he married in Steyning, Sussex, to a Limerick girl, Emily Letitia Trelawney. He rose through the ranks to commander, retiring to Oakeley House, in his home town, where he owned considerable land. His wife died on June 16, 1871, and he died on March 12, 1877, in Clun, Shropshire.

Cape Oakley *see* **Cape Oakeley**

Oakley Glacier. 73°42' S, 166°08' E. Descends E from Mount Casey in the Mountaineer Range, to merge with the floating tongue from Icebreaker Glacier, at Lady Newnes Bay, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Cdr. Donald C. "Don" Oakley, USN, Protestant chaplain at McMurdo Station for the winter of 1967.

Oamaru Peak. 77°28' S, 167°54' E. A peak rising to about 1000 m, 1.5 km N of Caldwell Peak, and 3 km N of Mount Terra Nova, on Ross Island. Named by NZ-APC in 2000, after Oamaru, the port in Otago, NZ, which was the first port BAE 1910-13 visited after the death of Scott. US-ACAN accepted the name on June 19, 2000.

Oases. Russian name for deglaciated, ice-free coastal areas, unfrozen lakes, and sometimes huge areas of snow-free ground. The minimum area for an oasis is 10 sq km. Antarctica once had a mild climate, with forests and flowers, and the oases remain as a legacy. No one knows why. *See* **Bunger Hills, Langhovde Hills, Schirmacher Oasis, Thala Hills, Vestfold Hills,** and **Dry valleys**.

Oasis Station *see* **Oazis Station**

Oates, Lawrence Edward Grace "Titus." Birdie Bowers called him "Farmer Hayseed," but he was a very gallant gentleman. b. March 17, 1880, Putney, Surrey (now part of London), son of wealthy Yorkshire parents William Edward Oates and his wife Caroline Annie Buckton, and a nephew of African explorer Frank Oates. After Eton, he joined the 3rd West Yorkshire Regiment, and in 1900 was commissioned in the 6th Inniskilling Dragoons, being wounded in the leg while a subaltern in the South African War in March 1901. With a donation of £1000 Captain Oates bought his way into BAE 1910-13, as pony-minder. "The climate is very healthy, although inclined to be cold," he advised his mother in a letter he wrote just before setting out. Scott picked him for the fateful Polar journey of 1911-12. One of the first 10 men ever to reach the South Pole, he suffered on the dismal return journey with severe frostbite and scurvy, and, rather than be any more of a liability to the others than he already was, he left the tent on his 32nd birthday, blizzard raging outside in unspeakably low temperatures, and accompanied only by his last witticism, "I am just going outside and may be some time." "The Soldier" was never seen again. In 2002 a book came out by Michael Smith, called *I Am Just Going Outside*, published by Spellman, which claims that in 1900, when he was 20, Oates, who never married, fathered a daughter by a 12-year old girl named Etta L. McKendrick.

Oates, Thomas Herbert Beveridge "Tom." b. 1910, South Africa, son of John Valentine Oates and his wife Nellie Beveridge (who had previously been married to Capt. Thomas Tillock Hunter). The family returned to England in 1921. He was on the *Garthpool* when she went down on Nov. 11, 1929, at Cape Verde. He was extra 3rd officer on the *Discovery II*, 1933-34, and on Aug. 1, 1935 became probationary sub lieutenant, RNVR, and was appointed 3rd officer on the same vessel, 1935-37. On June 6, he was transferred to the *Drake*, but then became 2nd officer on the *William Scoresby*, in Antarctic waters in 1937-38. His seniority as a sub lieutenant was from July 4, 1938. On May 11, 1939, he was transferred to the *Cumberland*, and just before war broke out he was going to be transferred to the *Osprey* on Sept. 4, 1939, for a course, but in late August was transferred to the *Boyne* instead. He died on Dec. 8, 1941, while serving on the *Condor*.

Oates Bank. 70°15' S, 165°15' E. A sea bank off the Oates Coast. The name was proposed by Steven C. Cande, of the Scripps Institution of Oceanography, in association with the Oates Coast (or Oates Land, as it is known outside the USA). US-ACAN approved the name in Sept. 1997. However, by 2004 it was apparent that this feature does not exist.

Oates Canyon. 69°00' S, 164 30 E. An undersea canyon on the continental rise E of Iselin Bank, off the Oates Coast. Named by the British in 1988, in association with the coast, and US-ACAN accepted the name in 1988.

Oates Coast *see* **Oates Land**

Oates Land. The Americans prefer to call it Oates Coast, plot it with a center of 69°30' S, 159°00' E, and define it as the coastal part of northern Victoria Land between Cape Hudson and Cape Williams, or between Rennick Glacier and the Cook Ice Shelf. The E portion of the coast was discovered by Harry Pennell in the *Terra Nova* on Feb. 22, 1911, and named for Captain Oates. The W portion of the coast, in the vicinity of Mawson Peninsula, was first delineated from air photos taken by OpHJ 1946-47, and was subsequently photographed aerially or explored on the ground by SovAE 1958, by ANARE in 1959, 1961, and 1962, by the USN between 1960 and 1962, and by USGS in 1962-63, and 1963-64. The Australians, for example, when defining Oates Land, give it a center of

72°00' S, 159°30' E, and define it as that sector of Antarctica between 155°E and 165°W. What the Americans call the Oates Coast, the Australians call the coast of Oates Land. Really Oates Land and Oates Coast are two different concepts, but to some extent the namings are synonymous. US-ACAN accepted the name Oates Coast in 1947.

Oates Piedmont Glacier. 76°25' S, 162°35' E. An extensive lowland ice sheet E of the Kirkwood Range, it occupies the whole of the coastal platform between Fry Glacier and Mawson Glacier, in Victoria Land. Surveyed in Nov. 1957 by the NZ Northern Survey Party of BCTAE 1957-58, and named by them for Captain Oates. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Oazis Station. 66°16' S, 100°45' E. Also seen as Oasis Station. Soviet IGY station opened in the Bunger Hills in Oct. 1956. It was established entirely by air that month, and its first leader, from Oct. 1956, was Per Dmitriyevich Tselishchev. **Oct. 15, 1956**: Meteorological and geophysical obervations were begun. **1957 winter**: Grigoriy Ivanovich Paschenko (leader). **1958 winter**: Boris Ivanovich Imerekov (leader). **Jan. 23, 1959**: The USSR transferred it to Poland, and it became Dobrowolski Station (q.v.).

The *Ob'*. A 12,600-ton diesel-electric Soviet icebreaker, research and transport ship, named for the great Russian river. One of the major Antarctic cutters, she was down south almost every year from 1955 to 1976, as flagship supporting SovAE 1955-57 (Captain Ivan Aleksandrovich Man), SovAE 1956-58 (Capt. Man), SovAE 1957-59 (Capt. Man), SovAE 1958-60 (Capt. Aleksandr Iosifovich Dubinin), SovAE 1959-61 (Captain Dubinin), SovAE 1960-62 (Capt. Nikolay Mikhaylovich Sviridov), SovAE 1961-63 (Capt. Sviridov), SovAE 1962-64 (Capt. Oleg Ivanovich Vodenko), SovAE 1963-65 (Capt. Sviridov), SovAE 1964-66 (Capt. Sviridov), SovAE 1965-67 (Capt. Eduard Iosifovich Kupri), SovAE 1966-68 (Capt. Kupri), SovAE 1967-69 (Capt. Kupri), SovAE 1968-70 (Capt. Kupri), SovAE 1969-71 (Capt. Kupri), SovAE 1970-72 (Capt. Kupri), SovAE 1971-73 (Capt. Sergey Ivanovich Volkov), SovAE 1972-74 (Capt. Volkov; on May 22, 1973 the *Ob'* was caught in the pack-ice off George V Land, for 90 days), and SovAE 1974-76 (Capt. Volkov).

Prohod Ob' *see* **Ob' Passage**

Zaliv Ob' *see* **Ob' Bay**

Ob' Bay. 70°35' S, 163°22' E. Between Lunik Point to the W and Cape Williams to the E, or between Yule Bay and Rennick Bay, in northern Victoria Land. The Lillie Glacier Tongue occupies the E part of the bay. Charted by SovAE 1958, and named by them as Zaliv Ob', for the *Ob'*. US-ACAN accepted the name Ob' Bay in 1964.

Ob' Canyon. 63°12' S, 93°47' E. A submarine canyon in the Davis Sea. Named by international agreement, for the *Ob'*. *See also* **Lena Canyon**.

Ob' Passage. 66°32' S, 93°01' E. A marine passage, 0.75 km wide, between Khmara Island and Mabus Point, S of the Haswell Islands, not far from Mirnyy Station, on the coast of East Antarctica. First observed by AAE 1911-14, and mapped by SovAE 1956. Named by the Russians as Prohod Ob', for the *Ob'*. US-ACAN accepted the name Ob' Passage in 1961. Sometimes the name is spelled without the apostrophe.

The *Obdorsk*. Russian fishing trawler, which visited Signy Island Station in 1964-65 and 1966-67 (*see also* **The *Gnevnyy***).

Nunataki Obduvaemye. 71°15' S, 64°42' E. A group of nunataks, close to Mount Lugg, S of Mount Hicks, in the Prince Charles Mountains. Named by the Russians.

Bahía Obelisco *see* **Rum Cove**

Cabo Obelisco *see* **Cape Obelisk**

Cerro Obelisco. 64°07' S, 58°22' W. An obelisk-type pillar, 3 km inland from Cape Obelisk (which marks the N side of the entrance to Röhss Bay), and visible from the NW and S, on the W side of James Ross Island, S of the extreme NE of the Antarctic Peninsula. Named by the Argentines (it means "obelisk hill").

The Obelisk. 71°48' S, 70°24' W. A prominent pillar, rising to 750 m above sea level (the British say 985 m, which is probably the correct figure), in the central part of the Staccato Peaks (in fact, it is the highest of those peaks), 29 km WNW of Mimas Peak, in the S part of Alexander Island. Discovered aerially by Ellsworth on Nov. 23, 1935, and roughly mapped in 1936-37 by W.L.G. Joerg from these photos. RARE 1947-48 photographed them aerially, but in more detail, and in 1959-60, Searle of FIDS mapped this feature from those photos, plotting it in 71°50' S, 70°33' W. Named descriptively by UK-APC on March 2, 1961. US-ACAN accepted the name later in 1961. It has since been re-plotted from Jan. 1973 U.S. Landsat images.

Cabo Obelisk *see* **Cape Obelisk**

Cape Obelisk. 64°08' S, 58°27' W. Marks the N side of the entrance to Röhss Bay, on the W side of James Ross Island, S of the extreme NE of the Antarctic Peninsula. Discovered and mapped in Oct. 1903, by SwedAE 1901-04, and named by Nordenskjöld as Obeliskudden, in association with an obelisk-type pillar 3 km inland from the headland, which is visible from the NW and S (*see* **Cerro Obelisco**). It is seen as Pointe Obélisque, on Charcot's expedition maps from FrAE 1908-10, and appears on a 1937 British chart, as Cape Obelisk, but plotted in 64°07' S, 58°13' W. Re-surveyed by Fids from Base D in Aug. 1945, it appears on a 1949 British chart, but plotted in 64°08' S, 58°22' W. It appears on a Chilean chart of 1947, as Cabo Obelisco, and on a 1949 Argentine chart as Cabo Obelisk. US-ACAN accepted the name Cape Obelisk in 1952, and UK-APC followed suit on Sept. 8, 1953. The coordinates were corrected by the time it appeared in the 1955 British gazetteer. It was resurveyed by Fids from Base D between 1952 and 1954, and again in 1960-61. Cabo Obelisco was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Mount Obelisk *see* **Obelisk Mountain**

Nunatak Obelisk. 71°20' S, 65°00' E. An isolated nunatak in the Prince Charles Mountains. Named descriptively by the Russians.

Obelisk Col. 64°07' S, 58°24' W. A col running in a N-S direction, at an elevation of 150 m above sea level, on the E side of Cape Obelisk, between Rum Cove and Röhss Bay, on the W side of James Ross Island, S of the extreme NE of the Antarctic Peninsula. Named by UK-APC on April 3, 1984, in association with the cape. US-ACAN accepted the name.

Obelisk Mountain. 77°37' S, 161°37' E. Rising to 2200 m between Catspaw Glacier and Mount Odin, near Wright Valley, in the Asgard Range of Victoria Land. Named descriptively in Feb. 1911, by Grif Taylor's Western Journey Party during BAE 1910-13. US-ACAN accepted the name in 1962. The Russians call it Mount Obelisk.

Obeliskudden *see* **Cape Obelisk**

Pointe Obélisque *see* **Cape Obelisk**

Obelya Glacier. 78°37' S, 84°23' W. A glacier, 7.5 km long and 2.5 km wide, S of Remington Glacier, it flows southeastward along the SW side of Johnson Spur, and E of Mount Benson, to join Thomas Glacier, on the E side of the southern Sentinel Range, in the Ellsworth Mountains. Mapped by the Americans. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Obelya, in western Bulgaria (it now forms part of the city of Sofia).

Oberek Cliff. 62°09' S, 58°08' W. A sheer cliff of Chopin Ridge, in Polonez Cove, between Lions Rump and Low Head, King George Island, in the South Shetlands. Named by the Poles in 1980, after a Polish folk dance.

Obernibessov, Nikolay. Lieutenant on the *Mirnyy*, during von Bellingshausen's 1819-21 expedition.

Ober-See *see* **Lake Ober-See**

Lake Ober-See. 71°17' S, 13°39' E. A meltwater lake between Sjøneset Spur and Mount Seekopf, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Ober-See (i.e., "upper lake"). US-ACAN accepted the name Lake Ober-See in 1970. The Norwegians call it Övresjöen (which means the same thing). The name is also seen as Obersee.

Oberon Peak. 71°23' S, 69°18' W. An isolated nunatak, rising to 1250 m (the British say about 1170 m), at the head of Uranus Glacier, 13 km NNW of Titania Peak, in the E central part of Alexander Island. First mapped in 1959 by Searle of the FIDS, from air photos taken in Nov. 1947 by RARE 1947-48. He mapped it in 71°24' S, 69°32' W. UK-APC named it on March 2, 1961, in association with Uranus Glacier (Oberon is a satellite of the planet Uranus). US-ACAN accepted the name later in 1961. It has since been replotted from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Obersee *see* **Lake Ober-See**

Oberst Glacier. 72°03' S, 27°04' E. Flows from the W side of Balchen Mountain, in the

Sør Rondane Mountains. Photographed aerially by OpHJ 1946-47, and mapped in 1957 from these photos by Norwegian cartographers, who named it Oberstbreen, in association with Balchen Mountain. Bernt Balchen had reached the rank of colonel in the U.S. Army Air Force during World War I (Oberstbreen means "colonel glacier" in Norwegian). US-ACAN accepted the name Oberst Glacier in 1966.

Oberstbreen *see* **Oberst Glacier**

Obidim Peak. 63°42' S, 58°19' W. A rocky peak rising to 706 m in Erul Heights, 2 km NW of Panhard Nunatak, 1.25 km ESE of Coburg Peak, and 3.04 km SSW of Chochoveni Nunatak, it surmounts Cugnot Ice Piedmont to the NE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Obidim, in southwestern Bulgaria.

Mount Obiglio. 74°27' S, 131°50' W. A moderate rock summit, actually a volcano, rising to 510 m, in the W central part of Grant Island, along the edge of the Getz Ice Shelf, on the coast of Marie Byrd Land. Discovered by personnel on the *Glacier*, on Feb. 4, 1962. Capt. Edwin A. MacDonald suggested the name, to honor Lt. Guillermo Martín Obiglio, Argentine naval officer on the *Glacier*. In 1955 Obiglio, then a lieutenant, had been skipper of the *Seaver*, and in 1966 would be skipper of the *Granville*. US-ACAN accepted the name in 1962.

Gora Oblachnaja *see* **Oblachnaya Nunatak**

Oblachnaya Nunatak. 67°41' S, 51°16' E. About 12 km SE of the Perov Nunataks, at the E edge of the Scott Mountains, in Enderby Land. SovAE 1961-62 investigated the geology of this nunatak, and they named it Gora Oblachnaja (i.e., "cloudy mountain") in 1962. US-ACAN accepted the name Oblachnaya Nunataki n 1971.

Cabo Obligado. 65°51' S, 64°42' W. A cape at Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Named by the Argentines.

Península Obligado *see* **Península Felipe Solo**

Nunataki Oblomki. 70°35' S, 72°04' E. A group of nunataks on Gillock Island, on the E margin of the Amery Ice Shelf. Named by the Russians.

Oblong Lake. 68°41' S, 78°14' E. A rectangular, highly saline lake in a shallow depression about 1 km SE of Leb'ed Lake, in the Vestfold Hills. The lake was one of several investigated by ANARE biologists wintering-over at Davis Station in 1974. They named it descriptively.

Oborishte Ridge. 62°32' S, 59°45' W. A rocky ridge, 340 m above sea level, in the SW extremity of the Breznik Heights, and extending 1.6 km along the SE coast of Yankee Harbor, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and named by them on Nov. 4, 2005, for the historic site of Oborishte, in central Bulgaria.

Obrecht Pyramid. 68°09' S, 65°32' W. A pyramidal peak, rising to about 600 m, on the N shore of Joerg Peninsula, and on the S side of Trail Inlet, on the Bowman Coast, 15 km directly S of Cape Freeman, on the E side of Graham Land. Photographed aerially in 1940, by USAS 1939-41, and surveyed from the ground by Fids from Base E, between 1946 and 1948. ChilAE 1946-47 named it Punta Alberto Obrecht, plotted it in 68°09' S, 65°28' W, and it first appears on the 1947 chart of that expedition. It was the name accepted by the Chilean 1974 gazetteer. Alberto Obrecht (1859-1924) was the French former director of the Observatorio Astronómico de Chile, and a member of the Subcomisión de Estaciones Magnéticas y Meteorológicas of 1906. BAS personnel from Base E did geological work here between 1963 and 1965. On Feb. 7, 1978, UK-APC named it Obrecht Pyramid, and US-ACAN followed suit. It appears on a 1959 Argentine map as Punta Perito Moreno (*see* **Point Moreno**).

O'Brian *see* **O'Brien**

Isla O'Brien *see* **O'Brien Island**

O'Brien, Bryan R. b. Wellington, NZ. He was a radio singer and entertainer who, with only 2 days notice, went on the *Jacob Ruppert*, 1933-34, for the first half of ByrdAE 1933-35. As soon as he got back from his part in the expedition, he began lecturing in NZ and Australia, on stage and radio, and kept it up for years. During World War II he lectured occasionally with Neville Pepper, and formed the Bryan O'Brien Story Hour Club, touring Wellington to entertain children.

O'Brien, Esmonde Martin. Known as "Obie" b. March 31, 1891, NYC, son of telegraph operator Patrick O'Brien, who worked at the Fire Department. After fighting in World War I (quartermaster 1st class, U.S. Navy), he was marine engineer on the fireboat *New Yorker*, in NYC, when he was picked to be chief engineer on the *City of New York* during ByrdAE 1928-30, partly because he was a boiler expert. He left Antarctica for NZ on the *City of New York* on Feb. 22, 1929. On his return to NY, he got his old job back, at $2600 a year. He died on Nov. 27, 1966, in NYC.

O'Brien, Jerry. Born Bernard Gerald O'Brien, on Feb. 27, 1920, in Raymond, Wash., last child of Canadian immigrant parents, lumberman Christopher Patrick "Chris" O'Brien and his wife Anna T. Lawler. His mother died in 1929, and at 18 Jerry joined the Merchant Navy in Seattle. He was a seaman on the *North Star* during USAS 1939-41. He died on Sept. 17, 2009, in Raymond.

O'Brien, John Sherman "Jack." b. Aug. 18, 1897, Duluth, Minn., but grew up in Minneapolis. After the University of Minnesota (civil engineering), he was a member of the National Guard on the Mexican border in 1916, then in the air service of the A.E.F. during World War I, making sergeant first class. He played semi-professional football, and was assistant engineer and shift inspector on the Holland Tunnel, in NYC, until he got the bends. Then he was picked for ByrdAE 1928-30, acting as fireman, coal pusher, and other menial jobs on the way down on the *Eleanor Bolling*. He was surveyor on the Southern Geological Party led by Larry Gould in Dec. 1929. O'Brien's drinking, and his refusal to stop it, posed a threat of mutiny for Byrd. After he got back to the States, O'Brien began writing, starting with *By Dog Sled for Byrd*, but by the fall of 1932 had fallen on hard times, and had to hock his 1931 Medal. By March 1933, despite the publication that year of his children's adventure novel *Silver Chief: Dog of the North*, the first in a series featuring Jim Thorne and the husky of the title, he was in desperate straits, living on park benches, and contemplating suicide. Things picked up a bit when his story became known on the radio, and he wrote some more novels. On Oct. 34, 1934, he was the guest of honor at Nellie Stone's cocktail party at the Algonquin, in NYC, and immediately afterwards left for northern Canada on an anthropological expedition. In 1935 he wrote Dave Irwin's remarkable (and true) Arctic adventure, first as a serial for the New York *Times*, and then as an "as-told-to" book. By the summer of 1938 he was very ill, and his friends were giving him blood transfusions. He died in NYC, on Dec. 6, 1938, in his East 49th Street apartment. New Jack O'Brien novels continued to be published after his death.

O'Brien, William H. b. 1890, Boston. 1st mate on the *Jacob Ruppert* during ByrdAE 1933-35.

O'Brien Bay. 66°18' S, 110°32' E. A large bay between Bailey Peninsula and Mitchell Peninsula, in the area of the Windmill Islands, on the Budd Coast. Delineated from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1963, for Lt. (later Cdr.) Clement E. O'Brien, USN, radio communications officer on OpW. He had been a submariner during World War II. ANCA accepted the name. The Russians call it Bukhta Lagernaja.

O'Brien Island. 61°30' S, 55°58' W. A small rocky island rising to an elevation of 540 m above sea level, 3 km SW of Aspland Island, SW of Eadie Island, and S of Elephant Island, it is one of the so-called Elephant Island group (i.e., the easterly group of the South Shetlands known by the Chileans as Islas Piloto Pardo). Roughly charted by Bransfield in Feb.-March 1820, and grouped together with (what were later named) Aspland Island and Eadie Island, and named by Bransfield as O'Brien's Islands. In 1821 von Bellingshausen charted the three islands, and called them Ostrova Tri Brata (i.e., "three brothers islands"), but also in 1821 Powell gave the individual names of Aspland's Island and O'Brien's Island to two of the three, leaving the third one unnamed. Occasionally one would see O'Brian's Island (sic) for this one. It appears as O'Brien Island on a British chart of 1839. The island was further charted by the German Atlantic Expedition (on the *Meteor*) in 1926. It appears as O'Brien Island on the Discovery Investigations chart of 1939 (reflecting their survey of Feb. 1937), and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8,

1953. It appears as such in the 1955 British gazetteer. It was being called Isla O'Brien by the Argentines as far back as 1908, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

O'Brien Islet *see* **Pidgeon Island**

O'Brien Peak. 85°28' S, 156°42' W. Rising to 670 m (the New Zealanders say 840 m), 5 km W of the N extremity of the Medina Peaks, on the E side of the terminus of Amundsen Glacier, between that glacier and Scott Glacier, overlooking the Ross Ice Shelf. Discovered by Larry Gould's party of Dec. 1929 during ByrdAE 1928-30, and named by Byrd for Jack O'Brien. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

O'Brien's Islands *see* **Aspland Island, O'Brien Island**

Obrivistyj Island. 66°18' S, 101°02' E. In the Bunger Hills. Charted by SovAE 1956, and named by them as Ostrov Obryvistyj. They plotted it in 68°08' S, 101°01' E. The Australians, who plotted it in 66°18' S, 101°02' E, call it Obrivistyj Island.

Mount Obruchev. 68°54' S, 154°12' E. A flat-topped rock massif 24 km ESE of Scar Bluffs, near the base of Mawson Peninsula, in George V Land. Photographed aerially during OpHJ 1946-47. Visited and mapped by an airborne geological party from the *Ob',* during SovAE 1958, and named by them as Gora Obrucheva, for geologist Vladimir A. Obruchev (1863-1956). US-ACAN accepted the translated name Mount Obruchev in 1967, and ANCA followed suit.

Obruchev Hills. 66°35' S, 99°46' E. A group of rounded hills on the coast between Denman Glacier and Scott Glacier, or between Jones Ridge and Cape Hoadley, on the coast of Queen Mary Land, in East Antarctica. Plotted as a great rock face by the Western Base Party of AAE 1911-14. They were later redefined and plotted in more detail from aerial photos taken during OpHJ 1946-47, and by SovAE 1956. Named by the Russians as Holmy Obrucheva, for Vladimir Obruchev (*see* **Mount Obruchev**). US-ACAN accepted the translated name Obruchev Hills in 1967, and ANCA has followed suit.

Gora Obrucheva *see* **Mount Obruchev**

Holmy Obrucheva *see* **Obruchev Hills**

Lednik Obrucheva. 66°32' S, 99°40' E. A glacier, NE of Robinson Bay, and NW of the Obruchev Hills, in Queen Mary Land. Named by the Russians, for geologist Vladimir Obruchev (*see* **Mount Obruchev**).

Oazis Obrucheva. 66°33' S, 99°47' E. An oasis in the N part of the Obruchev Hills, in Queen Mary Land. Named by the Russians in association with the hills.

Ostrov Obryvistyj *see* **Obrivistyj Island**

Observador Walter Soto Refugio. 76°40' S, 29°40' W. Argentine refuge hut opened by the Navy on Jan. 6, 1964, 110 km from General Belgrano Station. Usually called Soto Refugio, or just Soto.

Observasjonsberget *see* **Tensoku Rock**

Observation Bluff. 60°43' S, 45°36' W. Rising to 110 m, it is the E summit of the ice-free ridge which forms the N side of Paal Harbor, SE of Signy Island Station, on Signy Island, in the South Orkneys. Roughly surveyed in 1933 by the Discovery Investigations. Surveyed by FIDS in 1947, and so named by them because it was from here that they made daily observations of the sea ice. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Observation Hill. 77°51' S, 166°40' E. A conical hill, rising to 230 m (the New Zealanders say 220 m), 0.8 km E of, and above, McMurdo Station, and 0.8 km N of (and surmounting) Cape Armitage, it stands in the shadow of Mount Erebus, at the S end of Hut Point Peninsula, on Ross Island. Discovered in 1902 by BNAE 1901-04, and descriptively named by Scott in February of that year, it was used to observe the comings and goings of sledge parties during the expedition. US-ACAN accepted the name in 1952, and NZ-APC followed suit. Called Ob Hill, for short, halfway up it was the nuclear plant (from the 1960s, that is), and at the top is the Polar Party Cross, erected in Jan. 1913, to honor Scott's last party. On April 1, 1956, 17 adventurers from McMurdo climbed it before breakfast (Easter Sunday).

Observation Island. 67°01' S, 50°24' E. A small irregular island just to the W of the mouth of Beaver Glacier, in the E part of Amundsen Bay, in Enderby Land. Visited in 1956 by Peter Crohn's ANARE party, and so named by ANCA on July 22, 1957, because the island was used as a magnetic and astronomical observation station. US-ACAN accepted the name in 1961.

Observatorieheia *see* **Temmondai Rock**

Isla Observatorio *see* **Gamma Island**

Observatory Creek. 62°30' S, 58°29' W. A small creek near the geophysical observatory (hence the name given by the Poles in 1980) at Arctowski Station, at Admiralty Bay, King George Island, in the South Shetlands.

Observatory Island *see* **Gamma Island**

Collado de los Obsidianas *see under* **D**

Obzor Hill. 63°16' S, 57°06' W. Rising to 490 m, 2.46 km WSW of Cape Dubouzet, 1.18 km N of Mount Bransfield, and 1.87 km NW of Vishegrad Knoll, at the NE tip of Trinity Peninsula. Mapped by the British and Germans in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Obzor, in eastern Bulgaria.

Skaly Obzornye. 67°45' S, 46°27' E. A group of rocks, SE of Hays Glacier, in Enderby Land. Named by the Russians.

Península Oca Balda *see* **Península Cubillos**

The *O'Cain*. A 280-ton, 93-foot Boston sealing ship, built on the North River, at Scituate, Mass., in 1802, for the Winship Family and named after her first skipper, Captain Joseph O'Cain, who, for three years took her sealing to China, Alaska, and the Pacific. She was registered on May 12, 1818, owned by the Winship brothers — Abiel, Charles, Jonathan, and Nathan — and Benjamin P. Homer, and took part in the Boston Expedition to the South Shetlands, in 1820-21, under the command of Capt. Jonathan Winship. She took home some of the crew of the wrecked *Clothier*. She also seems to be referred to as the *Esther O'Cain*.

Punta O'Cain *see* **O'Cain Point**

O'Cain Point. 62°16' S, 58°53' W. A point, 5 km NW of Duthoit Point, it forms the E entrance point of Edgell Bay, on the E side of Nelson Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. So named by UK-APC on Aug. 31, 1962, in order to preserve the name of O'Cain in this area. The old sealers from Stonington, Conn., had used the name O'Cain's Island for a while in 1820-21, for what became Nelson Island, naming it after the *O'Cain*. The point appears as O'Cain Point on a British chart of 1962, and that was the name also accepted by US-ACAN in 1965. There is a 1978 Argentine reference to it as Punta Miró, named by one of the Argentine Antarctic expeditions for Juan Miró, a sailor on the *Uruguay* in 1904-05. However, today, the Argentines tend to call it Punta O'Cain. Last plotted by the UK, in late 2008.

O'Cain's Island *see* **Nelson Island**

Paso Ocampo *see* **Paso Del Solar**

Ocean Camp. On Nov. 1, 1915, 3 days after Shackleton and his men had evacuated the dying *Endurance* during BITE 1914-17, they were forced to abandon their march to Robertson Island after only 1½ miles, and to set up Ocean Camp on the sea ice. Supplies were brought in from "Dump Camp," i.e., the place close to the ship where they had dumped most of their stuff in preparation for the aborted march. Three tons of material was brought to Ocean Camp, by dog sledge. Lumber salvaged from the ship was used for the new galley. The wheelhouse was taken out and used as a new storeroom, nicknamed "the rabbit hutch." There were also 5 tents as sleeping quarters. Tent #1: Shackleton, Hurley, Hudson, and James. Tent #2: Wild, Wordie, McIlroy, and McNish. Tent #3: a larger tent, with How, McCarthy, Bakewell, Vincent, Holness, McLeod, Stephenson, and Green. Tent #4: Crean, Hussey, Marston, Cheetham. Tent #5: Worsley, Greenstreet, Orde-Lees, Kerr, Rickinson, Clark, Macklin, and Blackborow. A total of 28 men. The floors of the tents were covered with wood from the ship and the dog kennels. It was very tight in the tents, so tight that snorer Orde-Lees was ejected and had to relocate to the "rabbit hutch." On Dec. 23, 1915 they left Ocean Camp, heading west (*see* **Patience Camp**).

Ocean currents *see* **Currents**

The *Ocean Explorer I*. She was an old ship, built in Kearny, NJ, in 1944, as the Navy troop ship *General R.M. Blatchford*. Before being launched, her name had been changed to the *General W.P. Richardson*. In the late 1940s she became the passenger liner *Laguardia*, and, over the years, she was bought and sold, becoming successively the *Leilani*, the *President Roosevelt*, the *Atlantis*, the *Emerald Seas*, the *Sapphire Seas*, and, finally, in 1998, the *Ocean Explorer I*. World Cruise Company, of Ontario, operated her for a 1999-2000 round-the-world cruise, which took

in Antarctica for a few days around Christmas 1999. After this expedition, she was taken out of service.

The *Ocean Nova*. A 2118-ton, 73-meter blue and white tourist ship with a yellow funnel, built in 1992 at the Ørskov Shipyard, in Frederikshavn, Denmark, for work in Greenland. Sister ship of the *Clipper Adventurer*, she was upgraded in 2000, and refurbished in 2006, when Quark Expeditions began operating her. Re-registered in Nassau, she left Ushuaia on Jan. 23, 2009, with 64 passengers and 41 crew, including Captain Per Gravesen (a Danish former naval officer), bound for the Antarctic Peninsula. A week after leaving Ushuaia she ran aground in Marguerite Bay, not far from General San Martín Station. It took 30 hours to get her off, but the passengers were all transferred to the *Clipper Adventurer*. She finally returned to Ushuaia on Feb. 10, trailing the *Clipper Adventurer*. She was due to take another bunch of passengers down on Feb. 22, but that was canceled.

The *Ocean Princess*. Tourist vessel belonging to Ocean Cruise Lines, in Antarctic waters in 1990-91 (captains Leif Skog and A.N. Berg), 1991-92 (Capt. Pierre de la Rey), and 1992-93 (Capt. Giorgios Zacharikis), the first of the larger cruise ships to go to Antarctica. She could take 480 passengers, but on her cruises to Antarctica she took between 250 and 400.

Île Oceana *see* **Oceana Nunatak**

Nunatak Océana *see* **Oceana Nunatak**

Nunataks Oceana *see* **Oceana Nunatak**

Roca Oceana *see* **Oceana Nunatak**

Oceana Nunatak. 65°08' S, 59°47' W. The easternmost of the Seal Nunataks, at the NW corner of the Robertson Islands, on the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. Discovered by Carl Anton Larsen on Dec. 11, 1893, roughly charted by him as an island, and later named by him as Oceana-Insel, for the Oceana Company of Sandefjord. This company had been formed in 1887 by the great Norwegian whaling magnate Chris Christensen and the German Carl Lindenberg, one of the two principal shareholders (the other was William Robertson) of the Hamburg ship chandlering company of Woltereck and Robertson (*see also* **Robertson Islands** and **Lindenberg Island**), and had despatched Larsen to the Antarctic not only for this expedition, but also for the previous one in 1892-93, in order to look into the possibilities of whaling in the frozen south. The maps of BelgAE 1897-99 refer to it is Île Oceana. SwedAE 1901-04 surveyed it on Oct. 8, 1902, found it to be a nunatak, and Nordenskjöld renamed it (variously as) Oceana-Nunatak, Oceanas Nunatak, Nunataks Oceana, and Oceanaberg. It appears as Oceana Nunatak on British charts of 1921 and 1938. It was re-surveyed by Fids from Base D in Aug. 1947. UK-APC accepted the name Oceana Nunatak on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the British gazetteer of 1955, and on a British chart of 1961. It appears on a Chilean chart of 1947 as Roca Oceana, but the 1974 Chilean gazetteer accepted the name Nunatak Océana, which is also what the Argentines call it (but without the accent).

Oceanaberg *see* **Oceana Nunatak**

Oceanainsel *see* **Oceana Nunatak**

Oceana-Nunatak *see* **Oceana Nunatak**

Oceanas Nunatak *see* **Oceana Nunatak**

Oceanography. Established as a science by John Murray on the *Challenger* expedition of 1872-76.

Mount Ochre. 78°14' S, 166°33' E. A partly eroded volcanic crater, 5 km E of Mount Aurora, near the SE end of Black Island, in the Ross Archipelago. Climbed by NZGSAE 1958-59, who used it for a survey and photographic point. They also named it, for the reddish-brown scoria covering much of its upper slopes. NZ-APC accepted the name, and US-ACAN followed suit in 1963.

Ochs Glacier. 76°30' S, 145°35' W. It flows to the head of Block Bay between Mount Iphigene and Mount Avers, in the Ford Ranges of Marie Byrd Land. Discovered in 1929 during ByrdAE 1928-30, and named by Byrd as Adolph Ochs Glacier, for Adolph Simon Ochs (1858-1935), publisher of the *New York Times* and a patron of Byrd's expedition. US-ACAN accepted the shortened name in 1947.

Punta Ocoa *see* **Ocoa Point**

Ocoa Point. 62°37' S, 61°08' W. A steep headland backed by raised beach terraces, at the head of New Plymouth, on the W coast of Byers Peninsula, Livingston Island, in the South Shetlands. Named Punta Ocoa by the ChilAE 1970-71, presumably for a member of the expedition. It was explored by BAS geologists in 1975-76. UK-APC accepted the translated name Ocoa Point, on Feb. 7, 1978, and US-ACAN followed suit. It appears as such in the 1980 British gazetteer.

O'Connell Nunatak. 84°43' S, 65°08' W. A peaked rock nunatak, rising to 1210 m, 10 km SSE of Mount Murch, in the S part of the Anderson Hills, in the Patuxent Range of the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, for Richard V. McConnell, USARP geophysicist and seismologist who wintered-over at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Roca O'Connor *see* **O'Connors Rock**

Rocher O'Connor *see* **O'Connors Rock**

O'Connor, Raymond David "Chuck." b. Dec. 30, 1905, Holyoke, Mass., son of lawyer Michael J. O'Connor and his wife Mary. His father died, and in the 1920s his mother took the family to Bridgeport, Conn., where Chuck went into the building trade as a metalstrip worker. He was a private in the National Guard when he went on USAS 1939-41, as carpenter at West Base. After the expedition, he was posted to Denver, married Cecel, moved to Palm Beach, Fla., was promoted to corporal, served 6 months in Panama with the Army Airways Communications Squadron, and on Nov. 20, 1945, when his time in the Guard was up, he enlisted at Chatham Army Air Field in the U.S. Army Air Corps as a technical sergeant. After the Army, he became a sales rep for an oil company, finally retired, and died in Queens, NY, in Dec. 1970.

O'Connor, William Henry "W.H." b. 1884, Summer Hill, Waterford, Ireland. He joined the merchant Navy as a teenager, and by the age of 20 was a 2nd officer plying the Atlantic. He was also with the RNR when he went as 1st officer on the *Discovery*, 1925-27. He retired immediately after this expedition, and met up with his wife Bridget and their two-year-old son William at Cape Town, where he caught the *Carnarvon Castle*, bound for Southampton, which he reached on Feb. 14, 1927.

O'Connor, William P. Midshipman, RNR, who went to the *Vidette* in Jan. 1925, and then was on the *Discovery*, 1925-27, as a cadet.

O'Connor Island. 66°25' S, 110°28' E. A rocky island, 1.5 km long, less than 1 km E of Holl Island, between that island and Ford Island, in the S part of the Windmill Islands. First photographed, aerially, in 1947, by OpHJ 1946-47, and then in 1948, by OpW 1947-48, and plotted from these photos. Named by US-ACAN in 1956, for Joseph J. "Jerry" O'Connor, USN, air crewman with the Eastern Task Group during OpHJ, and who assisted parties establishing astronomical control stations between the Wilhelm II Coast and the Budd Coast, during OpW.

O'Connor Nunataks. 76°26' S, 143°25' W. A group of rock exposures rising above the ice cap near the head of Balchen Glacier, 8 km NE of the Griffith Nunataks, in the Ford Ranges of Marie Byrd Land. Discovered aerially from West Base in 1940 during USAS 1939-41, and named by Byrd for Raymond O'Connor. US-ACAN accepted the name in 1947.

O'Connor Rock *see* **O'Connors Rock**

Roca O'Connors *see* **O'Connors Rock**

O'Connors Rock. 62°04' S, 58°23' W. A rock in water, rising to an elevation of about 1 m above sea level, about 150 m (the Chileans say about 350 m) SW of Stenhouse Bluff, in Visca Anchorage, in the N part of Admiralty Bay, King George Island, in the South Shetlands. Charted in 1909, by FrAE 1908-10. Named by the personnel on the *Discovery* in 1927 for W.P. O'Connor (q.v.), who assisted in a sketch survey of Visca Anchorage in 1927, during the Discovery Investigations. It appears on the Discovery Investigations chart of 1929, as O'Connor's Rock. It appears on a 1947 Chilean chart as Roca O'Connor's, on a 1948 British chart as O'Connor's Rock, on a 1949 Argentine chart as Roca O'Connor, and on a 1949 French chart as Rocher O'Connor. US-ACAN accepted the name O'Connors Rock in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such on a 1954 British chart, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Roca O'Connors, and that was how it was entered in the 1970 Argentine gazetteer and also in the 1974 Chilean gazetteer. In 1962, UK-APC changed the name to O'Connor Rock, despite which, it appears as O'Connors Rock on a British chart

of 1974, and also in the 1966 U.S. gazetteer. Last plotted by the UK, in late 2008.

Punta 8 de Octubre *see* **Cape Brown**

Lago Oculto. 62°28' S, 60°47' W. A lake hidden (hence the name—"oculto" being better than "escondido" under these circumstances) between the following hills: Morro Inach, Cerro Kaweshkar, Cerro Puelche, Cerro Jaña, Cerro El Toqui, Cerro Chonos, Cerro El Cóndor, Cerro Copihue, and Cerro Chungungo, at Cape Shirreff, in the N part of Livingston Island, in the South Shetlands. Named by the scientists of the Instituto Antártico Chileno during ChilAE 1990-91.

Odbert Island. 62°22' S, 110°33' E. A rocky island, 2.5 km long, between Ardery Island to the W and Robinson Ridge to the E, off the Windmill Islands, 11 km S of Wilkes Station, on the Budd Coast. First mapped from air photos taken by OpHJ 1946–47 and by OpW 1947–48. Named by US-ACAN in 1956, for Lt. Jack Alonzo Odbert (b. Sept. 18, 1912, Long Pine, Nebr. d. June 29, 1988, North Platte, Nebr.), USN, assistant aerological officer on OpW 1947-48 which established astronomical control stations in this area in Jan. 1948. Odbert retired from the Navy in 1962 as a commander. With Ardery Island this feature was made into an SPA because of the petrel life abundant here.

Odd Company. Norwegian whaling company founded in 1910, in Sandefjord, by Haldor Virik, which ran whalers in the Antarctic: the *Sobraon* (1910-13; the company had bought this vessel in 1910 from the Newfoundland Steam Whaling Company), the *Guvernøren* (1913-15), the new *Guvernøren* (1920-21), the *Pythia* (1922-29), and the *Torodd* (1928-31; this vessel also did pelagic whaling). Mr. Virik ran the company from 1910 to 1920; Thor Dahl owned it from 1920 onwards (Ingvald Bryde and Lars Thorsen managed it for Dahl between 1920 and 1924). The company merged with the Atlas Company in 1931.

The *Odd I*. Norwegian whale catcher owned by the Odd Company (Thor Dahl and his son-in-law Lars Christensen). She went south in 1920-21, catching for the *Thor I*, and in 1921-22, catching for the *Guvernøren*, but the *Guvernøren* foundered before arriving in Antarctic waters, and the *Odd I* went instead with the *Ronald*. She did whale reconnaissance in the Bellingshausen Sea in the summer of 1926-27, on an expedition led by Eyvind Tofte. Under the command of Capt. Anton S. Anderssen, she left South Georgia (54°S) on Jan. 4, 1927 and visited and charted Peter I Island, even though no one could actually make a landing. She also visited the South Shetlands and the Palmer Archipelago, and returned to South Georgia on Jan. 27, 1927. This was the first of several Lars Christensen-backed Norwegian whaling and scientific expeditions into Antarctic waters.

Odd I-revet. 68°45' S, 90°39' W. A reef outside the E point of Cape Eva (the N end of Peter I Island). Named by the Norwegians for the *Odd I*. Revet means "the reef."

The *Odd II*. A 177-ton Norwegian whale catcher, built by Nylands in 1911 for the Odd Company. She was on her way to Antarctic waters in 1921-22, to catch for the *Guvernøren*, but the *Guvernøren* foundered before she arrived in Antarctic waters, and the *Odd II* went with the *Falk* instead.

The *Odd III*. There were two Norwegian whale catchers with this name. The first one belonged to the Odd Company. She was on her way south in 1921-22, to catch for the *Guvernøren*, but the *Guvernøren* foundered before she arrived in Antarctica, and the *Odd III* was allocated to the *Pythia* instead, which was under charter that season to the Hvalen Whaling Company. The second one began life in 1923, as the *Thor Major*, and was bought in 1924 by the Odd Company, and renamed *Odd III*, replacing their previous catcher of that name. The new one was catching for the *Pythia* in 1924-25 (Christen R. Granøe was gunner) and 1925-26 (Alf Skontorp was gunner). In 1926 she was renamed *Torgny*, and in 1928-31 was catching for the *Torodd* in Antarctic waters, with Krogh Andersen and Edmund Evensen as gunners. She remained a whale catcher until 1935, when she was sold to the Saebjorn Brothers, in Steinshamn. As late as 1971 she was fishing off the coast of Africa.

Odde Nunatak. 72°02' S, 10°43' E. The most northerly of a small chain of nunataks at the E side of Glopeflya Plain, S of Gjeruldsenhøgda, close S of the E part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Oddesteinen, for Odde Gjeruldsen, scientific assistant on the 1956-58 part of the expedition. US-ACAN accepted the name Odde Nunatak.

Oddenskjera. 71°19' S, 12°50' E. A group of nunataks between the Östliche Petermann Range and the Gruber Mountains, in the Wohlthat Mountains of Filmbulheimen, in Queen Maud Land. Named by the Norwegians for Major Gudmund Odden, navigator and leader of the aircraft expedition to Antarctica in 1958-59, during NorAE 1956-60. The Russians call this feature Skaly Gubkina.

Oddera, Alberto José. b. Nov. 14, 1900, Buenos Aires, son of José Oddera and his wife Adalgisa. A radio communications specialist, he graduated from the Naval Academy in 1921, was captain of the *Primero de Mayo* in 1942, and leader of ArgAE of that year. In 1947-49 he was a naval attaché in London, and in 1956 became secretary of the Instituto Antártico Argentino. He married María Lygia Gómez. He died on Sept. 24, 1965.

Oddesteinen *see* **Odde Nunatak**

Oddesteinen Nunatak *see* **Odde Nunatak**

Oddvika. 69°38' S, 39°37' E. A cove between Kjukevågsodden and Skallen Glacier, in the inner part of Lützow-Holm Bay, on the Prince Olav Coast. Named by the Norwegians ("the point bay"), in association with Kjukevågsodden, which was, in turn, named in association with Kjukevåg Bay, which in turn was named in association with Kjuka Headland ("kjuka" meaning "a small cake" in Norwegian). On a 1946 map, the ice situation was different to what it is today. The bay was then bordered by the Skallen Hills and Skallen Glacier to the SW, and by Kjukevågsodden to the NE.

Ødegaard, Georg William. b. Sept. 16, 1894, Kristiania, Norway, son of lumberman Halvard Leonhard Ødegaard and his wife Sigrid. He went whaling in Antarctica, on the *Svend Foyn*, and died in the South Shetlands on Dec. 26, 1910, being buried in Whalers Bay Cemetery, on Deception Island, on Feb. 26, 1910. He had for some time been writing to his mother in Norway, and after his death, his friends continued to write to her, as if from Georg.

Ødegaard, Knut. He wintered-over as a meteorological assistant and radio operator at Norway Station in 1959, during NorAE 1956-60.

Ødegaardhøgda. 71°30' S, 12°56' E. A mountain in the SW part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Knut Ødegaard. *See also* **Knutsufsene**.

Odell Glacier. 76°44' S, 159°55' E. It drains NE from the SW side of Mount Brooke and the wide ice fields to the W, flowing between Allan Nunatak (in the the Allan Hills) and the Coombs Hills, into the upper part of Mawson Glacier, in Victoria Land. Named by NZ-APC for famous mountain climber Prof. Noel Ewart Odell (1890-1987), formerly professor of geology at Otago University. The Americans installed an automatic weather station here, at an elevation of 1592.9 m. ANCA accepted the name, but plotted it in 76°46' S, 159°47' E. US-ACAN accepted the name, but with different coordinates, in 1961.

Odell Glacier Field Camp. An American camp opened on Odell Glacier on Nov. 5, 2001.

Odell Glacier Station. 76°39' S, 159°58' E. An American automatic weather station established on Odell Glacier, in Victoria Land, at an elevation of 1592.9 meters.

The *Oden*. A 9438-ton, 108.8-meter Swedish icebreaker, built in 1988, and later modified to serve as a research vessel. She had a crew of 15, could take 80 passengers, and had her own helicopter. She was in Antarctic waters in 2006-07, when she helped relieve McMurdo. She was back in 2007-08, and again in 2008-09.

Oden Rock *see* **Ko-iwa Rock**

Península Odera. 64°19' S, 62°55' W. A small peninsula on Eta Island, projecting into Canal Borrowman, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines.

Odiddy. Name also seen as Odidie, Oediddee, Hodiddy, Hiti-Hiti, O-Hedidee, Tyai-Mai O-Hedidee. Native of Raiatea (not Bora Bora, as is sometimes claimed) on the *Resolution* from Sept. 1773 to May 1774, including a trip to 71°11' S on Jan. 30, 1774, during Cook's 2nd voyage. Biographical data on Odiddy is scant, but there is a painting of him by William Hodges.

Monte Odin *see* **[1]Mount Odin**

[1]Mount Odin. 66°26' S, 64°03' W. A saddle-top mountain consisting of twin ice-covered peaks of 1465 m (the British say 1440 m), close

SW of Frigga Peak, on the divide between Anderson Glacier and Sleipnir Glacier, at Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. In late 1947 the mountain was photographed aerially by RARE 1947–48, and surveyed from the ground by Fids from Base D, the latter naming it for the Norse god Odin, husband of Frigga. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and also in the 1955 British gazetteer. It appears on a 1963 Chilean chart as Monte Odin.

[2]**Mount Odin**. 77°35' S, 161°39' E. Rising to over 2000 m (the New Zealanders say 2100 m), just S of Lake Vanda, it is the most prominent, but not the highest, peak in the Asgard Range of Victoria Land. Named by VUWAE 1958–59 for the Norse god. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Odin Glacier. 77°35' S, 161°36' E. A small glacier that flows from the W slopes of Mount Odin, in the Asgard Range of Victoria Land. Named by NZ-APC in association with the mountain. US-ACAN accepted the name in 1976.

Odin Valley. 77°36' S, 161°43' E. An ice-free valley immediately E of Mount Odin, in the Asgard Range of Victoria Land. Named by NZ-APC in association with the mountain. US-ACAN accepted the name in 1976.

Nunatak Odinochnyj. 71°25' S, 65°37' E. A considerably isolated nunatak, due S of Mount Hay, in the Prince Charles Mountains. Named by the Russians.

Gora Odinokaja *see* **Odinokaya Nunatak**

Odinokaya Nunatak. 71°32' S, 6°10' E. A small, isolated nunatak, about 24 km NW of Jaren Crags, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped (but not named) by the Norsk Polarinstitutt from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition. Mapped by SovAE 1961, and named that year by the Russians as Gora Odinokaja (i.e., "solitary hill"). US-ACAN accepted the name Odinokaya Nunatak, in 1970.

Nunatak Odinokij. 70°20' S, 66°32' E. A somewhat isolated nunatak, due N of Mount McCarthy, in the Porthos Range of the Prince Charles Mountains. Named by the Russians.

Mount Odishaw. 84°42' S, 174°54' E. A high, prominent ridge- and gable-shaped mountain, rising to 3695 m, forming a distinctive landmark 14 km SSW of Mount Kaplan, in the Hughes Range, about 44 km E of Mount Deakin. It has a ridge running generally NW and SE. Discovered and photographed by Byrd on the base-laying flight of Nov. 18, 1929, during ByrdAE 1928–30. Surveyed and photographed by Bert Crary in 1957–58, and named by him for Hugh Odishaw. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Odishaw, Hubert "Hugh." b. Oct. 13, 1916, North Battleford, Saskatchewan, son of Persian-Canadian garage mechanic Abraham Odishaw and his wife Miriam. In the USA from June 1921, when he came to Gary, Indiana, and then on, still as a child, to Chicago. He was assistant to the director of the National Bureau of Standards, 1946–54, and executive director of the US-IGY Committee of the National Academy of Sciences. Known as "Mr. IGY," he died on March 4, 1984, in Tucson, Arizona.

Odlupek *see* **Splinter**

Gora Odnobokaja. 73°30' S, 64°52' E. A nunatak due E of Geysen Glacier, in the Prince Charles Mountains. Named by the Russians.

Odobenidae *see* **Walruses**

Pik Odoevskogo. 72°11' S, 2°18' E. A peak, just W of Mayr Ridge, in the SW extremity of the Gjelsvik Mountains of Queen Maud Land. Named by the Russians.

Ensenada Odom *see* **Odom Inlet**

Odom, Howard Talmadge. b. Feb. 24, 1912, Cranberry, NC, son of coal mine power house engineer James Wesley Odom and his wife Nola Gouge. When Howard was 7, the family moved to Brown's Creek, West Virginia. He joined the U.S. Navy, and was a radioman 1st class when he went to Antarctica as part of USAS 1939–41, wintering-over at East Base. He died on Jan. 3, 1986, in Saint Augustine, Fla.

Odom Bay *see* **Odom Inlet**

Odom Inlet. 71°30' S, 61°20' W. An ice-filled inlet, indenting the Black Coast for 14 km between Cape Howard and Cape MacDonald, or between Hilton Inlet and Steele Island, on the E coast of the Antarctic Peninsula. Discovered aerially by USAS from East Base in Dec. 1940, roughly surveyed from the ground by them, and named by them as Odom Bay, for Howard T. Odom. It appears as such on U.S. Hydrographic Office charts of 1943 and 1946. In 1947 it was re-surveyed by a joint sledging team of Fids from Base E and personnel from RARE 1947–48. It appears on a 1949 Argentine chart as Bahía Odom, and that was the name accepted by the 1970 Argentine gazetteer. US-ACAN accepted the name Odom Inlet in 1952, and UK-APC followed suit on Jan. 29, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1962 Chilean chart as Ensenada Odom, and that was the name accepted by the 1974 Chilean gazetteer. It was photographed aerially by USN in 1966.

O'Donnell, Maurice Joseph Paul. b. May 9, 1957, Ireland. He spent 1973 to 1979 in the Royal Navy, then joined BAS as a communicator. He wintered-over at Rothera Station, spending a total of 51 months there including other summers, and was on board two different research ships for 7 months as well. In 1990 he was working for the UN in the Middle East.

O'Donnell Peak. 72°24' S, 166°01' E. On the Polar Plateau, 8 km W of Joice Icefall, in the Millen Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Frank B. O'Donnell, meteorologist at Hallett Station in 1962.

Odontoceti *see* **Toothed whales**

Punta Odontoceto. 62°27' S, 60°46' W. A point E of the beach the Chileans call Playa Maderas, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990–91 because here they found remains of toothed whales (Odontoceti).

O'Dowd Cove. 72°30' S, 98°55' W. An ice-filled cove of the Abbot Ice Shelf, between Williamson Peninsula and Von der Wall Point, on the S side of Thurston Island. Named by US-ACAN in 2003, for Cdr. William O'Dowd, aviation officer on the *Pine Island* during OpHJ 1946–47.

Oehlenschlager Bluff. 75°03' S, 136°42' W. A steep rock bluff overlooking Hull Glacier from the N, it marks the SW extremity of Erickson Bluffs and McDonald Heights, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Richard J. Oehlenschlager, biologist here in 1971–72.

Oeschger Bluff. 76°24' S, 111°48' W. A flat-topped snow and rock bluff that projects from the SE part of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1975, for Hans Oeschger (1927–1998), Swiss (University of Bern) USARP glaciologist at Byrd Station, 1968–69 and 1969–70.

Arrecife Oeste *see* **West Reef**
